From the 1920s through the 1960s a consensus had developed that the Gospels were not to be identified as Greco-Roman biographies. G. N. Stanton (1974) offered the first notable attempt to criticize this consensus, arguing also that the Gospels were distinct from both Jewish and rabbinic literature and later Christian and Gnostic Gospels. But while maintaining that the Gospels should be considered biographical, he demurred from calling them biographies. C. H. Talbert followed Stanton's criticism of the formal view of the Gospels' uniqueness but went further by proposing that they be understood as Greco-Roman biographies. He argued (1977) that such biographies were of an unhistorical type, of which there were many in the ancient world, and that the Gospels shared their mythical structure, originating in cultic legends devoted to the religion's founder and possessing an optimistic worldview. Talbert has been criticized for his interpretation of some classical texts and his scant use of secondary literature (Aune in France and Wenham 1981; and Burridge, 84-86), though his classification of a type of Greco-Roman biography has been taken up in modified form by M. Hengel, D. E. Aune and R. A. Burridge. Hengel challenged the view that the Gospels contained little that was genuinely historical, maintaining that the Gospels should be compared with those forms of ancient biography that provide a "relatively trustworthy historical report" (Hengel 1979, 16, contra, e.g., Shuler, 36-37). In this, Hengel has spoken for an increasing number of scholars.

The strength of the work of Hengel, Aune and Burridge lies in their knowledge of the Greco-Roman world and its literature. This gives their views a greater credibility and historical value, steers them away from careless anachronisms and prevents them from inventing a genre to fit a theory. An example of the latter is P. L. Shuler, who proposed that Matthew be classified as an "encomium biography," failing to recognize that it is doubtful that such a genre ever existed (Burridge, 88). Burridge develops the line of argument suggested by Aune in his criticism of Talbert, using the idea of family re-

semblance (or group identity; see the essays in Stuhlmacher), focusing on the Gospels' similarities rather than their differences: "each [Gospel] is indeed different, unique and special in its own right, but intimate knowledge of them from the inside and comparison with others outside the family show their shared family features arising from a common ancestry." He concludes that the "increasing tendency among New Testament scholars to refer to the gospels as 'biographical' is vindicated; indeed, the time has come to go on from the use of the adjective 'biographical,' for *the gospels are βίοι* [lives]!" (Burridge, 243). More specifically, they form a subgenre of Gospels, or βίοι Ἰησοῦ (Burridge, 47; see *DJG*, Gospel [Genre], 276, 281-82).

2. John.

In the foregoing discussion it has been assumed that the classification of the Synoptics as a subgenre of the *bioi* genre applies also to John's Gospel (Burridge, 220-39). But is this justified? It should be noted that when titles were given to the Gospels the *kata* construction (*kata Iōannēn*, "according to John") shows that John's Gospel was understood to belong with and to be of the same literary type as the Synoptics.

Burridge supports this conclusion with the following arguments. (1) Like the Synoptics, John lacks any kind of biographical title, but it does begin with a formal prologue after which the subject's name is mentioned—a common feature of *bioi*. (2) Verbal analysis shows Jesus to be the subject of 20 percent of the verbs, a further 33 percent being credited to him, a dominance paralleled in the Synoptics and other *bioi*. Further, the 20 percent of which Jesus is the subject demonstrate that John has not abandoned narrative about Jesus. A similar proportion of space is allocated to the passion and resurrection as in the Synoptics. (3) John shares similar modes of representation, size, structure and scale to the Synoptics and *bioi*, using similar literary units, oral and written, to display Jesus' character through word and deed. (4) The four Gospels share similar internal features of settings, topics and atmospheres with *bioi* (Burridge, 222-39). J. D. G. Dunn (in Stuhlmacher, 322) highlights the "striking fact" that "the Fourth Evangelist obviously felt it necessary to retain the format of a *Gospel*. For all its differences from the Synoptics, John is far closer to them than to any other ancient writing."

3. Acts.

The church has traditionally understood Acts to be a history of the earliest church, but this has been challenged in recent years. It is now common to find Acts variously classified as one of the three primary genres of the Roman world—a novel, biography or history—and it has even been suggested that it is a scientific treatise. Much has depended on a writer's assessment of the historical content and worth of Acts, though this should be a separate matter: "Genre is not a question that can be settled simply on the grounds of how reliable or unreliable the material of a particular work may be" (Pearson and Porter, 143).

That Acts is an ancient historical novel intended to edify and entertain has been argued by R. I. Pervo. He believes that all attempts to characterize Luke as a historian have been mistaken, though the aim to edify and entertain was by no means peculiar to novels (see Lucian's *How to Write History* §53: historians should write "what will interest and instruct" their audience). Pervo believes that Luke's inclusion of exciting episodes, such as supernatural events (dreams and visions), imprisonments, trials and shipwrecks, and his use of literary devices, such as humor, pathos and oratory, means Acts resembles the unquestionably fictional and later apocryphal Acts (e.g., the *Acts of Peter* and *Acts of Paul*; see Bauckham in Winter and Clarke, 105-52), yet comparison of the canonical Acts with these later writings immediately shows their differences, the former lacking the triviality and clearly mythical content of the latter. S. M. Praeder also rejects the history genre and identifies Luke-Acts as an ancient novel, which category she also claims for Matthew, Mark and John. Due to their contents, setting and intention, for her they form a subgenre of Christian "ancient novel" (see *Romances/Novels, Ancient*).

D. E. Aune (1987, 80), however, has rejected Pervo's argument: while writing to entertain, ancient historians did not think this meant sacrificing truth and usefulness; "historical novel" should be used of novels following a historical sequence of events (e.g., Xenophon's *Education of Cyrus*), not for fictional narratives set in the real world; the factual accuracy of Acts is irrelevant to identifying its genre if Luke intended to narrate historical events, and Luke's adoption of historical prefaces and reference to use of sources are features absent from novels; Luke-

Acts is to be treated as a single genre, while Pervo examines Acts alone; many of the episodes and their constituent subjects and motifs can be found in both factual and fictional writings. We need only dissent with Aune on the necessity of the fourth point, as this need not be the case. To these must be added a sixth point: there does not appear to be such a genre as "historical novel" (Pearson and Porter, 145).

While no single figure dominates the narrative of Acts, a number of scholars have contended that Acts is a biography. C. H. Talbert (1974) argued that the two-volume Luke-Acts is a biographical succession narrative, the Gospel recording the life of the founder of Christianity, the Acts being a narrative about his disciples and successors and a summary of the teaching of the school, the church. Talbert cites Diogenes Laertius's *Lives of Philosophers*, written about A.D. 250, as its closest generic example. Again Aune (1987, 78-79) has criticized this view by questioning the existence of such a genre and noting discrepancies between the two works.

Burridge (245-46) has noted that the borders between historiography, historical monograph and biography are blurred and flexible and suggests the possibility that, like the Gospel, Acts belongs to *bios* literature, either as an example of lives of the main subjects or as a *bios* of the church, and that these three literary genres are all reflected in Acts. He qualifies this when he notes that it is possible that the Gospel and Acts belong to distinct though related genres. It seems that while Luke has been influenced by features of the biography genre (cf. Barr and Wentling), this does not necessitate its belonging to a biographical genre (see *DLNTD*, Acts of the Apostles §1.1). Criticism of a biographical genre for Acts is also offered by C. J. Heimer (91-94).

L. C. A. Alexander has adopted a different approach by noting the differences between Luke's preface (Lk 1:1-4) and those of Greek historiographers. Luke's is brief in comparison with the more elaborate Greek historians and lacks a number of characteristic features of the latter, not least its omission of general moral reflections. Such observations lead Alexander to identify the closest analogues to Luke 1:1-4 and Acts 1:1 in the scientific and technical manuals on medicine (such would be consonant with Luke the physician, Hemer, 35), mathematics and engineering. She proposes that Luke's narrative is scientific in the sense that it is con-

cerned to relate the tradition of accumulated teaching on Jesus and the early Christian movement. J. B. Green, for example, notes that the affinities between Luke and the scientific tradition do not negate the identification of Luke-Acts with historiography, adducing that Luke-Acts does not always match the formal features of Greco-Roman historiography because the genre was flexible. Luke, Green argues, has been influenced by OT and Jewish historiography (see also Hall, 171-208), and in describing his work as a "narrative" (Lk 1:1), Luke identifies his project as a long narrative of many events for which the chief discernible prototypes were the histories by Herodotus and Thucydides. Further, the many forms used by Luke (symposia, travel narratives, letters and speeches) provide a positive comparison with Greco-Roman historiography (see *DLNTD*, Acts of the Apostles, §1.1; Alexander is also criticized by Palmer in Winter and Clarke, 21-26).

Many recent studies have reinforced the earlier view of the church that Acts is an example of an ancient historiographical work (Pearson and Porter, 147-48). A variety of historiographical genres have been suggested. Aune (1987, 138-39) places Acts within the larger context of Hellenistic, Israelite and Jewish historiography and concludes that it is therefore a general history. R. Maddox (15-18) takes up the influence of OT and later Jewish histories and proposes the genre of theological history. G. L. Sterling (374) believes Acts is apologetic historiography, but while it may be granted that Acts has an apologetic function, its length, scope, focus and formal features suggest it is a short historical monograph (Palmer in Winter and Clarke, 1-18; see also Hengel 1979, 36; Berger, 1275, 1280-81; see *DLNTD*, Acts of the Apostles, §1.1). This classification, of all those explored, appears to be the one that does Acts the most justice, though a number of scholars, recognizing the strengths of the biographical and historical genres in describing Acts (both being genres concerned with history), nevertheless allow the theological subject matter of Acts to lead them to explore the possibility that Acts belongs to a unique genre (Marshall 1992, 22-23; this possibility was also explored by Hemer, 40-43, who conceded that Acts might be regarded "as in some aspects *sui generis*," but qualified the term differently "from the way Bultmann meant it about the Gospels," 42).

A final note needs to be made, recognizing that the question of the genre of Acts is greatly complicated by its relation to Luke's Gospel. Some scholars see the two volumes as generically linked, while others see them as belonging to different genres. Aune (1987, 77) is unwilling to separate the two volumes, which is why he cannot accept Luke as a biography, though there are no necessary reasons why the two volumes cannot belong to different genres without denying "their essential unity and continuity" (Hemer, 33; cf. Palmer in Winter and Clarke, 3; Burridge, 244-47).

4. The Letters.

The twenty-one NT letters have traditionally fallen into two categories: the Pauline letters and the General, or Catholic, letters. A. Deissmann drew the distinction between letters and epistles, contending that only the former were real letters in that they were nonliterary because they were occasional, neither intended for public readership nor for posterity, but only for the person or persons to whom they were addressed. In contrast, epistles were literary works intended for public reading, adopting various forms of rhetoric and intended for posterity (see Epistolary Theory).

While some scholars have accepted the usefulness of such classification, others have firmly rejected it (e.g., Aune 1987, 160; Longenecker 1990, ci-ciii; Pearson and Porter, 148-51). Contra Deissmann, it seems more than likely that the NT letter writers had various purposes in mind when they wrote, being situational, adopting forms of *rhetoric (the importance of rhetorical criticism is stressed by Aune 1987, 198-99; Porter 1991; see *DPL* Rhetorical Criticism; *DLNTD*, Rhetoric, Rhetorical Criticism) and intending them for posterity. In light of this, then, the two terms, "letters" and "epistles," will be used synonymously.

Ancient letters (see Stowers; Aune 1987, 158-82; White 1986; White in Aune 1988, 86-105) ranged from brief, intimate and informal notes to friends and family to carefully constructed treatises intended for a public readership. R. N. Longenecker reports that Demetrius listed twenty-one types of letter and Proclus forty-one. While none of the NT letters exactly corresponds to the types mentioned in these handbooks they nevertheless can be classified roughly according to one or other of the types of

contemporary letters, recognizing that differences arose out of their differing purpose, mood, style, structure and Christian content and also allowing for the fact that the NT writers were evidently eclectic in their use of other literary traditions that can be found within the letters, for example, rhetoric, liturgical elements, apocalyptic (Longenecker 1990, ciii).

Hellenistic letters followed broad compositional conventions that allowed a considerable degree of flexibility to the author (Aune 1987, 158). The general threefold pattern comprised an opening, a body and a closing (Aune 1987, 183-91; White in Aune 1988, 88-101). The opening/prescript comprised the following elements: the *superscriptio* (sender) to the *adscriptio* (recipient) with *salutatio* (greetings), often accompanied by a wish for good health. The body or text of the letter contained three parts: the body opening, body middle and body closing, and this was followed by the closing or postscript, which frequently included greetings to persons other than the addressees, a final greeting or prayer and sometimes a date. However, some scholars argue for a four-part structure (Weima, 11), in which a thanksgiving section was added between the opening and body, and even five-part letters, in which a paraenetic section was added before the closing (Doty, 27-43; on this debate see Pearson and Porter, 151-52).

The NT letters were constructed along the lines of this broad epistolary pattern and were clearly adapted to meet their authors' requirements, allowing them, at times, to expand elements or omit them and to combine Jewish with Hellenistic features (see Aune 1987, 174-80), such as combining Greek and Jewish salutations ("grace and peace"; see *DPL*, Peace, Reconciliation, §3, for a discussion of this) and expanding paraenetic material. (For examples of how the NT letters do these, see the overviews in *DPL*, Letters, Letters Forms, §2; *DLNTD*, Letter, Letter Form, §§2-3). Aune cautions that the NT letters tend to resist rigid classification in terms of ancient epistolary and rhetorical categories: "Most early Christian letters are multifunctional and have a 'mixed' character, combining elements from two or more epistolary types. In short, each early Christian letter must be analyzed on its own terms" (Aune 1987, 203).

Nearly two decades ago it was suggested that the letters could be classified as either pastoral or tractate letters (Longenecker 1983, 102-6). On

this reckoning, the former (1 and 2 Cor, Gal, Phil, Col, Philem, 1 and 2 Thess, 1 and 2 Tim, Tit, 2 Pet, 2 and 3 Jn, Jude) took their form from contemporary conventions and conveyed the apostolic presence, teaching and authority, and as such were to be read within the churches (see Col 4:16; 1 Thess 5:27). The latter (Rom, Eph, Heb, Jas, 1 Pet, 1 Jn), in content and tone, suggest they were intended to be more than strictly pastoral responses to specific situations in the churches of *Rome and *Ephesus. However, such classification lacks the refinement and precision that many scholars seek.

More recently, genre critics have classified letters either functionally or rhetorically. From the former perspective, 1 Thessalonians and 1 and 2 Timothy have been described as paraenetic letters, which seek to exhort to or dissuade from a specific course of action or attitude, often employing antithesis and personal example, while Philemon is seen as a letter of recommendation, as is, perhaps, 3 John. Rhetorical analysis has classified Galatians as a diatribe, or, with Philipians and Hebrews, as a deliberative letter (an attempt to persuade or dissuade from a certain future course of action), Romans and Hebrews as epideictic rhetoric (using praise or blame to argue the adoption of a particular position or set of values) and 2 Corinthians as an apologetic self-commendatory letter (see Blomberg, 43-44; for different classifications see Aune 1987, 204-22).

4.1. The Letters of Paul. There are thirteen Pauline letters, some of which are understood by many scholars to be pseudonymous or written by a member of a Pauline school (see *DLNTD*, Pauline Legacy and School). But if some of the letters (e.g., Ephesians and the Pastorals) are really pseudonymous writings, then this affects their interpretation, as they can no longer be read as genuine letters from the apostles but as literary creations that mimic genuine letters, thus raising ethical questions regarding their content, purpose and canonicity (see Porter 1995, 113-23; Ellis; Pearson and Porter, 136-37; for an alternative view of the Pastorals see Marshall 1996; see *DLNTD*, Pseudepigraphy). Here the whole Pauline corpus is understood as authentically Pauline.

J. L. White believes that "the common letter tradition, though certainly not the only tradition on which Paul depends, is the primary literary *Gattung* to which Paul's letters belong" (White

1972, xii). While we can agree that the Pauline corpus is comprised of letters, scholars are by no means agreed on the more precise classification of the letters, a debate that can only be hinted at here.

Some scholars have proposed genres for which there are no historical examples; therefore caution needs to be taken in the more detailed generic classification of individual letters. For example, it has been claimed that Galatians is an apologetic letter, though no other example of such a genre has been identified and it seems more likely that it is a letter of rebuke and request (Longenecker 1990, ciii-cv) or a deliberative letter (Aune 1987, 206-8).

Romans appears to be an occasional letter (Rom 1:7, cf. the specifics on the recipients in Rom 16:3-16), but is striking for its general and sustained theological argument in Romans 1:16—11:36 with its lack of any allusions to details peculiar to the Roman church, a situation that changes little in Romans 12:1—15:13, suggesting to some that the main body of the letter is a treatise incorporated within an occasional letter. This has led D. J. Moo (14-15) to argue that Romans is a tractate letter, rejecting claims that it is a diatribe, which he believes to have been a style rather than a genre. However, S. E. Porter (1991) has shown that *diatribe was a genre and that Paul has used the diatribe throughout the body of the letter (on the diatribe see Aune 1987, 200-202, and Stowers in Aune 1988, 71-83). Other proposed labels include epideictic, ambassadorial or protreptic letter and even letter essay, but while Romans has similarities to all these, perhaps Dunn's agnosticism about genre is nearer the mark: "The key fact here is that the distinctiveness of the letter far outweighs the significance of its conformity with current literary or rhetorical custom" (Dunn 1988, lix-lx).

Most of Paul's letters were addressed to Christian communities, were intended to be read within their liturgy and were clearly contextual, written to address the particular needs and circumstances of the recipients. At an early date the private letters (e.g., 1 and 2 Tim, Tit and Philem) were circulated and read among the churches, while even the most general of Paul's letters (Rom) includes material of limited interest (e.g., the greetings to individuals, Rom 16:3-16) and was also widely circulated among the churches in the same way as, though perhaps at

a later date than, the letters intended for more than one church (e.g., Gal and Col).

4.2. The General Letters. Many features of the General letters have caused scholars to doubt their classification as letters, though with the exception of Hebrews they were known as the "epistles called catholic" by Eusebius in the fourth century (Eusebius *Hist. Eccl.* 2.23.24-25). In contrast to the Pauline letters, which are identified by their recipients, the General letters (excluding Hebrews) are identified by their authors.

For the most part discussion of the genre of the General letters has suggested various epistolary subcategories: 1 Peter an apocalyptic diaspora letter (Michaels 1988, xlvi-xlix; see *DLNTD*, 1 Peter) or a circular letter to several churches; 2 Peter has been classified as both a letter and a testament (Bauckham 1986, 131-35; see *DLNTD*, 2 Peter); 1 John's genre is much debated, suggestions ranging from a general treatise, sermon or encyclical, while 2 John and 3 John are the most obvious letters in the NT; and Jude is a letter, more specifically an "epistolary sermon" (Bauckham 1986, 3). However, the bulk of scholarly interest has focused on Hebrews and James.

Hebrews has been classified as a Jewish Hellenistic and early Christian homily or sermon that has been greatly influenced by classical rhetoric, noting its self-description as a "word of exhortation" (Heb 13:22), but it has also been defined as a written speech of encomium (see *DLNTD*, Letter, Letter Form, §3.1; many of the suggestions are listed by Ellingworth, 60-61 n. 27). Strictly speaking it does not conform to the letter genre, having no formal prescript, though it does have a benediction within its postscript (Heb 13:20-21) and greetings from the sender and his companions (Heb 13:24) followed by a second benediction (Heb 13:25), which has led P. Ellingworth (62) to accept its epistolary character, which displays "both written and (indirectly) oral communication." In the earliest manuscripts Hebrews is always included among the Pauline letters (Lane, lxx-lxx), and this probably explains its traditional classification as a letter. However, the consensus still maintains that Hebrews is a sermon or a homily (see Lane, lxx-lxxiv; *DLNTD*, Hebrews, §5).

Some scholars have argued that James is a sermon or a collection of sermons (for various suggestions see Adamson, 110-13), yet it has a clear prescript (sender, recipients and greeting,

Jas 1:1), suggesting it is a circular letter to the numerous churches in the dispersion. Though it has no clear body, James 1:2-27 acts like the opening to a two-part body comprising James 2:1-5:12 and James 5:13-20, the latter replacing a formal postscript. On this basis it is seen as a letter (Martin 1988, xcvi-civ; Adamson, 113-18, believes it is a pastoral epistle, even "the first 'Papal Encyclical'").

5. Revelation.

The most common classifications for the genre of Revelation are an apocalypse, a letter or a prophetic book.

5.1. Revelation as an Apocalypse. The great majority of scholars regard Revelation as an apocalypse, particularly if the Society for Biblical Literature Genre Project's definition is accepted: "a genre of revelatory literature with a narrative framework, in which a revelation is mediated by an otherworldly being to a human recipient, disclosing a transcendent reality which is both temporal, insofar as it envisages eschatological salvation, and spatial, insofar as it involves another, supernatural world" (J. J. Collins, 9; cf. Aune 1997, lxxxi-lxxxii; this definition is not without its critics, e.g., D. Hellholm in A. Y. Collins, 26-27). This definition was subsequently modified, adding that apocalyptic was "intended to interpret present earthly circumstances in light of the supernatural world and of the future, and to influence both the understanding and the behavior of the audience by means of divine authority" (A. Y. Collins, 7).

While much of Revelation's contents comprise a series of visions, the author reports them in the first person (e.g., Rev 1:10; 4:1; 5:1), and since the book is accredited to John, suggestions of its pseudonymity (a characteristic of apocalyptic) are to be rejected because this John is not identified as a Christian worthy of the past. The recipients of the book evidently knew who John was: their "brother and companion in the persecution and kingdom" (Rev 1:9), a "servant of Jesus Christ" and one of the prophets (Rev 22:9).

In classifying Revelation's genre, much depends on whether *apokalypsis* in Revelation 1:1 is transliterated "apocalypse" or translated "revelation." Apocalypses were widely known in Jewish literature of the late centuries B.C. and early centuries A.D. and Christian circles of the post-apostolic period; however, the word is used only in Revelation 1:1 as a description of the book,

whereas "prophecy" is used in Revelation 1:3, then a further four times (Rev 22:7, 10, 18, 19; possibly a fifth in Rev 19:10). The juxtaposition of apocalypse and revelation in Revelation 1:1, 3 raises the possibility that to John the latter informs the former, and they are perhaps interchangeable, an equation also found in Paul (1 Cor 14:6, which also mentions knowledge and teaching; see also 1 Cor 14:26-38). In this case *apokalypsis* should be translated "revelation" (NIV), which means that the revelation is an oracle of God given to a Christian prophet and that the largest section of the book (Rev 4:1—22:9) comprises an otherworldly journey.

We can conclude, then, that while Revelation fits some definitions of an apocalypse, the author's self-references indicate he wrote as a Christian prophet. Since apocalyptic is widely believed to have developed out of the OT prophetic tradition this need be no surprise.

5.2. Revelation as a Prophecy. Not only is "revelation" a likely translation of Revelation 1:1, but also there is a great deal of internal evidence that supports the view that John was a Christian prophet (Rev 22:9) and a member of a larger group of Christian prophets (Rev 22:16a). If this is accepted, then Revelation is evidence that Christian prophecy adopted features characteristic of Jewish apocalypses at an early stage, a pattern also found in Daniel, Isaiah 25—27, Isaiah 40—55, Ezekiel 38—39 and Zechariah 9—14.

5.3. Revelation as a Letter. Both of the preceding suggestions have to take into account the fact that this apocalyptic prophecy has been set in the framework of a letter. Revelation 1:4-6 is clearly epistolary in form, referring to the sender, John, and the recipients, "the seven churches in the province of Asia" (Rev 1:4a), and is followed by a benediction (Rev 1:4b-5), ending with a brief benediction (Rev 22:21). In Revelation 1:11 John is commanded to write what he sees and send it to the seven churches in Asia, a command that relates to the whole book, not just the letters to the seven churches (Rev 2—3). These seven letters display some forms of ancient letters, but Aune has classified them as ancient royal or imperial edicts, which, as a collection, have no close analogies (Aune 1997, 130). These edicts never existed independently, as each church received the letters to the other churches and would have sent copies of the whole book to churches in other cities in the

province (Ephesus being the administrative center of the province; Aune 1997, 130-32; cf. Victorinus *Comm. in Apoc.* 1.7: "what he says to one, he says to all"). The whole book was intended to be read to the gathered congregations (cf. Rev 1:3 and the epilogue in Rev 22:6-21).

If Revelation is a letter, then it is best classified as a general, or catholic, letter (cf. Gal, Col, 1 Pet and Jas), not a personal one, and it was probably a circular letter intended for the seven churches in Asia Minor (Rev 1:4; 2—3). Adoption of first-person style, while compatible with prophetic or apocalyptic literature ("autobiographical form" according to Aune in A. Y. Collins, 86-87), most clearly resembles the style of a letter, though Revelation is a letter with a story line, "apocalyptic in detailing visions mediated by angelic figures and prophetic in exhorting the churches with words of warning and encouragement" (Michaels 1992, 31). However, though the epistolary form of Revelation was known in the early church (Eusebius *Hist. Eccl.* 7.25.9-10), this "was accorded little or no interpretive significance" (Aune 1997, lxxii; see also lxxxii).

There are, then, reasons to classify Revelation as a mixed genre; for example, J. R. Michaels (1987) classifies it as a letter, more specifically a prophetic letter because of the long title prefixed to the letter proper (Rev 1:1-3), or an apocalyptic letter on the basis of its content, noting that if it is a letter, or an apocalypse or a prophecy, then it is unlike any other examples we have of these genres (Michaels 1992, 31-32). R. Bauckham has similarly suggested that three different genres are evident in Revelation (1993, 3-33). However, recognition of the prophetic and epistolary forms within the book does not necessarily overturn the consensus view that Revelation is a Christian apocalypse. Nevertheless, there is perhaps more at work in Revelation on the level of genre than that of apocalypse" (Pearson and Porter, 159).

GEOGRAPHICAL PERSPECTIVES IN LATE ANTIQUITY

The study of geographical perspectives in late antiquity is fraught with difficulties arising from the nature of the evidence. Very few world maps survive from antiquity that might aid us in directly perceiving these geographical perspectives. The Babylonian world map (c. 700-500 B.C.) is a rare exception (Horowitz). This paucity of artifactual evidence can be explained either as an accident of preservation or as an indication that world maps were uncommon in the ancient world. In any case, we are largely reliant on often obscure textual sources for reconstructing the geographic perspectives of late antiquity. Without the controls of maps, however, we cannot be sure that we are reading the sources correctly rather than foisting distortions, modern or otherwise, onto them.

This problem is compounded by the fact that

NT scholars have shown little interest in studying ancient geographical perspectives, despite the fact that the geographic and ethnographic expansion of earliest Christianity from Jerusalem to the ends of the earth (Acts 1:8) could be greatly illuminated by these insights. Most attempts to write the history of early Christianity use the benefit of hindsight and global perspective to trace the larger patterns and developments of which individuals are a part. A classic example of this can be seen in the standard maps of the journeys of the apostle Paul included in most Bible atlases or appended to many modern Bibles. We are so accustomed to using such maps that we hardly stop to consider that the image of the world portrayed on them looks strangely modern in orientation, outline and scale. Thus we unwittingly read back into the biblical text our image of the world, an image that is the product of a centuries-long development (Whitfield).

In order to understand the NT on its own terms and in its own context, we need to engage with the geographical perspectives that were current in that day. Our task will not necessarily be straightforward and simple, for most NT writers moved freely between two worlds—the Greco-Roman and the OT/Jewish. To a certain degree these worlds overlapped, since Judaism had undergone extensive *Hellenization by the time of the NT. As a result, Greek and Roman conceptions of geography often permeate Jewish writings of the Second Temple period, including the NT.

1. Greco-Roman Background
2. Jewish Background

1. Greco-Roman Background.

Perhaps the best way to illustrate the interface between Greco-Roman and Jewish geographic conceptions in NT times is to take a specific example. The epigram of Philip of Thessalonica (*Anth. Gr.* 9.778) praises an artistic tapestry, which was made probably by Kypros, the wife of Agrippa I, the last king of Judea, and offered as a gift to a reigning "great Caesar," in all likelihood to Emperor Gaius (Scott). Woven into the fabric of the tapestry was an image of the world, which probably took the form of a disk-shaped earth encircled by ocean—a common Hellenistic conception (e.g., Homer *Il.* 18.399; *Odys.* 20.65; Herodotus *Hist.* 4.36; Strabo *Geog.* 2.5.17; Cicero *Somn.* 20).

It is probable that Kypros took as the model for her work the famous Agrippa map erected by Emperor Augustus in the Porticus Vipsianus in Rome. It is not impossible, however, that her inspiration was drawn from tapestries and textiles that were associated with the Jerusalem temple and its priesthood (e.g., Wis 18:24; Josephus *Ant.* 3.7.7 §§183-84). Insofar as both the Agrippa map and the high-priestly vestment were influenced by Hellenistic conceptions of the world, the two possible influences may stem from a common cartographic source. By the same token, Kypros may have blended both Roman and Jewish traditions into her representation of the world, resulting in a novel, hybrid form—an orientalized version of the Agrippa map. In any case, the Kypros map well illustrates both the limitations of our sources and their potential for unlocking the complexities of ancient worldviews. The fascinating interplay between Greco-Roman and Jewish geographical conceptions has only begun to be investigated, and close study may yield rich dividends.

2. Jewish Background.

The so-called table of nations in Genesis 10 (cf. 1 Chron 1:4-23), along with a few other biblical givens, provides the basis for subsequent Jewish tradition that seeks to represent the world and its inhabitants (e.g., *Jub.* 8-9; **Genesis Apocryphon* 12-17; Josephus *Ant.* 1.5 §§120-47; Pseudo-Philo *Bib. Ant.* 4). Among these texts, *Jubilees* 8-9 seems to have had a major influence on early Christian tradition, including the book of Acts, the Jewish-Christian source in the Pseudo-Clementine *Recognitions* 1.27-71, Theophilus of Antioch, Hippolytus of Rome and the highly ramified *Diamesismos* tradition. Hence, we shall focus our attention here on the **Jubilees* text.

Jubilees 8:11-9:15 consists of two interrelated parts that are based on Genesis 10 but go well beyond the biblical text. In the first part (*Jub.* 8:11-30), Noah divides the earth by lot among his three sons, Shem, Ham and Japheth. This is the same order as they are at first listed in Genesis 10:1, that is, the order of their priority and primogeniture. In the second part (*Jub.* 9:1-15), Noah's sons, still in the presence of their father, subdivide their portions among their own sons, according to the order Ham, Shem and Japheth, that is, from south to north. As a result the whole world is covered twice, first by the three

major lines of demarcation and then by the smaller subdivisions.

Whereas the original table of nations in Genesis 10 contains merely a list of Noah's descendants in which his grandsons appear directly after listing of each son, *Jubilees* 8-9 contains separate sections for the sons and the grandsons and provides explicit geographical boundaries between them. The procedure in *Jubilees* is thus more akin to the famous geographic work of Dionysius Periegetes of Alexandria, *Geographical Description of the Inhabited World*, written during the reign of Hadrian (A.D. 117-138), which first outlines the world by continents (Africa/Libya, Europe, Asia (line 9)) and then subdivides the continents by tracing lines according to major geographical landmarks and noting the nations along the way (lines 170-1165). Also otherwise *Jubilees* 8-9 and Dionysius's work have many points in common. It may be, therefore, that *Jubilees* is adapting a Hellenistic method of geographical description at this point.

The first section of the *Jubilees* account begins in 8:11 by setting the scene: "When he [Noah] summoned his children, they came to him—they and their children. He divided the earth into the lots which his three sons would occupy. They reached out their hands and took the book from the bosom of their father Noah." This mention of a book of Noah is important, for the rest of *Jubilees* 8-9 goes on to describe the lots contained in that book. Thus, beginning with Shem, we read: "In the book there emerged as Shem's lot the center of the earth" (*Jub.* 8:12). Unlike the book of Noah to which 1QapGen 5:29 refers, the book in *Jubilees* 8:11, 12 does not record Noah's autobiography but rather a title deed drawn up by Noah for distributing land among his sons that is analogous to the distribution of the promised land among the twelve tribes.

From this book of Noah it becomes clear that Shem receives the most favorable portion in the temperate center of the earth (*Jub.* 8:12-21), with Mt. Zion "in the middle of the navel of the earth" (*Jub.* 8:19; cf. Ezek 5:5; 38:12); Ham receives the hot southern portion (*Jub.* 8:22-24); and Japheth receives the cold northern portion (*Jub.* 8:25-30). The geographical extent of these portions and the natural physical boundaries between them are described in great detail, following a circular path in each case: the descrip-

tions of the territories of Shem and Japheth make a counterclockwise circuit beginning at the source of the Tigris River; and the description of Ham's territory makes a clockwise circuit beginning at a place beyond the Gihon River, to the right (south) of the garden of Eden. Each description ends with a formula indicating that the portion allotted to that son became a possession to him and his descendants "forever" (*Jub.* 8:17, 24, 29).

The second section of the *Jubilees* account describes the further subdivision of the earth among the sons of Ham (9:1), Shem (9:2-6) and Japheth (9:7-13). Again, the natural physical boundaries of the portions are set out. At the conclusion of the process, Noah compels his sons and grandsons in *Jubilees* 9:14-15 to "swear by oath to curse each and every one who wanted to occupy the share which did not emerge by his lot. All of them said: 'So be it!' So be it for them and their children until eternity during their generations until the day of judgment on which the Lord God will punish them with the sword and fire because of all the evil of their errors by which they have filled the earth with wickedness, impurity, fornication, and sin." This conclusion gives *Jubilees* 8-9 an *apocalyptic orientation. Here there seems to be a connection between violation of territorial boundaries and the future divine judgment. In that case, world conquerors such as the Macedonians and later the Romans would be particularly subject to the coming judgment.

Jubilees 8-9 helps us appreciate how completely different Jewish geographical conceptions are from our modern Western perspectives. Here we see an orientation on the east rather than the north; a recognition of Jerusalem as the *omphalos*, or navel, of the world; and a tripartite division of the world going back purportedly to the time of Noah. This text forces us to rethink our assumptions as we interpret the NT's view of the geographic and ethnographic expansion of earliest Christianity.

GNOSTICISM

Gnosticism is a term that designates a variety of religious movements that stressed salvation through *gnōsis*, or "knowledge," that is, of one's origins. Most scholars would identify as an essential of Gnosticism the element of cosmological dualism—an opposition between the spiritual world and the evil, material world.

1. Varieties of Gnosticism
2. Sources
3. Gnostic Doctrines
4. Gnostic Ethics
5. Gnostic Communities
6. Scholarship on Gnosticism

1. Varieties of Gnosticism.

Because of the variegated nature of Gnosticism, it is difficult to fit every gnostic teacher into a common framework. Marcion, who advocated the concept of two gods, the god of the OT and the god of the NT, has many affinities with the Gnostics, yet he lacked their mythology and emphasized faith rather than saving *gnōsis*. A major branch of Gnosticism, which followed the teachings of Valentinus, was heavily influenced by *Platonism. Scholars have recognized another branch of Gnosticism, which has been termed Sethianism, a more mythological system that exalted the OT figure Seth as a key revealer (see Layton).

It should be noted that the ancient sources of these movements and their Christian critics do not use the term *Gnosticism* and rarely used the term *Gnostics*. M. A. Williams has therefore called upon scholars to abandon the term. But it is not likely that his proposed substitution, "biblical demiurgical traditions," will be adopted. But his reminder that "Gnosticism" is a scholarly construct should always be borne in mind.

2. Sources.

Texts that are unambiguously gnostic date from the second century A.D. Those who maintain a

pre-Christian Gnosticism assume the early existence of Gnosticism and interpret the NT texts in the light of this assumption. Some of the Nag Hammadi treatises, though late in composition, have been adduced by some scholars as evidence of a pre-Christian Gnosticism.

2.1. Patristic Sources. Until recently scholars were entirely dependent upon the descriptions of the Gnostics found in the church fathers. In some cases the patristic sources preserved extracts of the gnostic writings. Our most important sources include Justin Martyr of Samaria (d. 165), Irenaeus of Lyons (d. c. 225), Clement of Alexandria (d. c. 215), Tertullian of Carthage (d. c. 225), Hippolytus of Rome (d. c. 236), Origen of Alexandria and Caesarea (d. 254) and Epiphanius of Salamis in Cyprus (d. 403) (see Grant).

Especially valuable is Irenaeus's account, which has been preserved in a Latin translation, *Adversus Haereses*. He refers to an *Apocryphon of John*, copies of which were found at Nag Hammadi. The *Philosophoumena* of Hippolytus was identified in 1842. Clement and Origen were in some ways sympathetic to the gnostic emphasis of a spiritual elite. Tertullian railed against Marcion and Valentinus. Though Epiphanius had some firsthand contact with Gnostics in Egypt, his *Panarion*, while comprehensive, is not very reliable.

As one would expect, the earlier sources are the most reliable and the later sources less so. Needless to say, these accounts were highly polemical. Nothing in the recently recovered gnostic sources from Nag Hammadi supports the patristic description of licentious Gnosticism.

2.2. Gnostic Teachers. The church fathers, including the historian Eusebius (fourth century), provide a list of prominent Gnostics and their teachings.

The church fathers were unanimous in regarding Simon of Samaria as the arch-Gnostic, though our earliest source, Acts 8, describes him only as someone who practiced *magic. According to the patristic sources Simon claimed to be divine and taught that his companion, a former prostitute, was the reincarnated Helen of Troy. Those who accept the patristic view of Simon believe that Acts has not given us an accurate portrayal of Simon. Most scholars, however, believe that the church fathers were mistaken (see Filoramo, 148).

According to the church fathers, Simon was followed by a fellow Samaritan, Menander, who

taught at *Antioch in Syria toward the end of the first century. He claimed that those who believed in him would not die.

Also teaching in Antioch at the beginning of the second century was Saturninus, who held that the "incorporeal" Christ was the redeemer. That is, he held a docetic view of Christ that denied the incarnation (cf. 1 Jn 4:3). He also taught that *marriage and procreation were from Satan.

Teaching in Asia Minor in the early second century was Cerinthus, who held that Jesus was but a man upon whom Christ descended as a dove at his baptism. As Christ could not suffer, he withdrew from Jesus before the crucifixion.

Another early gnostic teacher was Basilides, to whom we have attributed both a dualistic system by Irenaeus and a monistic system by Hippolytus. Basilides regarded the god of the Jews as an oppressive angel. He held that Christ did not suffer, but that Simon of Cyrene was crucified in his place, while the invisible Christ stood by laughing. Similar docetic concepts are now attested in two Nag Hammadi tractates, the *Second Treatise of the Great Seth* (CG VII,2) and the *Apocalypse of Peter* (CG VII,3).

An important though atypical Gnostic was Marcion of Pontus (northern Turkey), who taught at Rome from 137 to 144. He contrasted the god of the OT with the god of the NT. Marcion drew up the first canon or closed list of NT books, including a truncated Gospel of Luke. Jesus simply appeared; his body was a "phantom." Marcion's followers spread to Egypt, Mesopotamia and Armenia. His docetic teachings were sharply rebuked by Tertullian. A. Harnack hailed Marcion as the church's first great theologian and characterized Gnosticism as the acute *Hellenization of Christianity (see Helleman).

The most famous gnostic teacher was Valentinus, who came from *Alexandria to Rome in 140. He taught that there was a series of divine eons or emanations. He divided humankind into three classes: *hylics*, or unbelievers immersed in nature and the flesh; *psychics*, or common Christians who lived by faith; and *pneumatics* or spiritual Gnostics. The later Valentinians divided into an Italian and an Oriental school over the question of whether Jesus had a psychic or pneumatic body. The many outstanding Valentinian teachers included Ptolemaeus, Theodotus and Marcus. The earliest known

commentary on a NT book is Heracleon's on the Gospel of John, passages of which are preserved by Origen in his commentary.

A number of the Nag Hammadi tractates such as *The Gospel of Truth* (CG I,3 and XII,2), *The Treatise on the Resurrection* (CG I,4), *The Tripartite Tractate* (CG I,5), *The Gospel of Philip* (CG II,3) and *A Valentinian Exposition* (CG XI,2) have been identified as Valentinian. Contrary to the earlier impression that the Valentinians were only concerned with the pneumatics, who would be saved by the *gnōsis* of their nature, a study by M. R. Desjardins indicates that they were also concerned about the psychics, who would have to lead sinless lives to be saved.

2.3. Mandaic Sources. The Mandaean communities in southern Iraq and southwestern Iran are today the sole surviving remnants of Gnosticism. Their texts, though known only through late (seventeenth- or eighteenth-century) manuscripts, were used by the history-of-religions scholars to reconstruct an alleged pre-Christian Gnosticism. In addition to the manuscripts there are earlier magic bowl texts (A.D. 600) and some magical lead amulets, which may date to as early as the third century A.D. There is no firm evidence to date the origins of Mandaeanism earlier than the second century A.D. (see Yamauchi 1970).

2.4. Coptic Sources. Coptic is a late form of Egyptian written mainly in Greek letters. In the nineteenth century two Coptic gnostic codices were published: the Codex Askewianus containing the *Pistis Sophia*, and the Codex Brucianus containing the *Books of Jeu*—both relatively late gnostic compositions. A third work, the Codex Bezae Cantabrigiae (BG 8502), though acquired in the nineteenth century, was not published until 1955. It contains a *Gospel of Mary* (Magdalene), a *Sophia of Jesus*, *Acts of Peter* and an *Apocryphon of John*—the work mentioned by Irenaeus.

2.5. The Nag Hammadi Library. In 1945 a cache of eleven Coptic codices and fragments of two others were found by peasants near Nag Hammadi in Upper Egypt, 370 miles south of Cairo, where the Nile bends from west to east (see DLNTD, Gnosis, Gnosticism). The first translation of a tractate, that of *The Gospel of Truth*, appeared in 1956. Through the efforts of J. M. Robinson and his collaborators, an English translation of the fifty-one treatises was produced in 1977.

The Nag Hammadi Library, as the collection

is now called, contains a variety of texts: non-gnostic, non-Christian gnostic and Christian gnostic. The most famous tractate is *The Gospel of Thomas*, which contains 114 purported sayings of Jesus. In 1897 and in 1904 B. P. Grenfell and A. S. Hunt had discovered at Oxyrhynchus in Egypt noncanonical sayings or the so-called logia of Jesus. We now know that these papyri came from the Greek text that had been translated as the Coptic *Gospel of Thomas* (see Gospels, Apocryphal).

2.6. Hermetic Sources. The *Hermetica* are writings ascribed to Hermes Trismegistos ("thrice-great"), the Greek title for Thoth, the Egyptian god of wisdom (see Hermeticism). Composed in the second to third century A.D. in Greek in Egypt, they were highly esteemed in medieval times. The Greek *Corpus Hermeticum* was influenced by dualistic Platonism and pantheistic *Stoicism. Hermetic tractates have also been found in the Nag Hammadi Codex VI. Though there are affinities with Gnosticism, the *Hermetica* lack its radical dualism.

2.7. Syriac Sources. Some Syriac texts such as the **Odes of Solomon* and the *Hymn of the Pearl* from the *Acts of Thomas* have been cited by some scholars such as K. Rudolph as early gnostic sources. Other scholars, however, doubt their gnostic character.

2.8. Manichean Sources. Mani (A.D. 216-276) established a remarkably successful gnostic movement, which spread from Mesopotamia to the West, where Augustine became an adherent for nine years, and to the East, where it reached China along the Silk Road. Manicheanism was a highly syncretistic religion that combined materials taken from Judaism, Christianity, Zoroastrianism and Buddhism. The publication of a tiny Greek manuscript in 1970, the Cologne Codex, confirmed that Mani had emerged from a baptistic sect known as the Elchasaites. Manichean texts were written in many languages, including Coptic, Syriac, Persian, Uighur (a Turkish dialect) and Chinese (see Klimkeit).

3. Gnostic Doctrines.

Because there was no central authority or *canon of scriptures, the Gnostics taught a bewildering variety of views. Fundamental to clearly gnostic systems was a dualism that opposed the transcendent God and an ignorant demiurge (often a caricature of the OT Jehovah). In some systems the creation of the world

resulted from the presumption of Sophia (Wisdom). The material creation, including the body, was regarded as inherently evil. Sparks of divinity, however, had been encapsuled in the bodies of certain pneumatic or spiritual individuals, who were ignorant of their celestial origins. The transcendent God sent down a redeemer, who brought them salvation in the form of secret *gnōsis*. Gnostics hoped to escape from the prison of their bodies at death and to traverse the planetary spheres of hostile demons to be reunited with God. There was for them, of course, no reason to believe in the *resurrection of the body.

4. Gnostic Ethics.

According to the church fathers, Carpocrates urged his followers to participate in all sins, while his son Epiphanes taught that promiscuity was God's law. The Valentinians held a positive view of marriage, not so much for the sake of procreation but as a symbol of the archetypal unity of the sexes. Most Gnostics took a radically ascetic attitude toward sex and marriage, deeming the creation of woman the source of evil and the procreation of children but the multiplication of souls in bondage to the powers of darkness.

5. Gnostic Communities.

We know very little about the cult and the community of the Gnostics. As a general rule the Gnostics interpreted rites such as *baptism and the Eucharist as spiritual symbols of *gnōsis*. Several of the Nag Hammadi tractates contain violent polemic against water baptism. E. Pagels has argued that gnostic groups gave women a greater position in leadership than the orthodox church fathers such as Irenaeus and Tertullian. But D. Hoffman has shown that women were exploited by Gnostics.

6. Scholarship on Gnosticism.

Prior to the twentieth century scholars had uncritically accepted the patristic description of Gnosticism as a failed Christian heresy. Though S. Pétremont has attempted to defend this traditional view, most scholars now believe that Gnosticism is best understood as an independent religion. Whether it existed prior to the birth of Christianity or was roughly contemporary with its development is still a disputed issue.

The concept of a pre-Christian Gnosticism

was first proposed by W. Anz in 1897 and then forcefully promoted by the *religionsgeschichtliche Schule*, or history-of-religions school, most notably by W. Bousset (d. 1920) and R. Reitzenstein (d. 1931).

Inspired by the history-of-religions scholars as well as by publication of Mandaic texts, in 1925 R. Bultmann outlined a classic model of the pre-Christian gnostic redeemer myth. Bultmann and his influential students interpreted much of the NT on the assumption of a pre-Christian Gnosticism. An extreme application of this viewpoint has been promoted by W. Schmithals, who has interpreted all of Paul's opponents, even those in Galatia, as Gnostics.

With the discovery of the Nag Hammadi corpus, a renewed attempt has been made by J. M. Robinson and others to establish a case for a pre-Christian Gnosticism on the basis of a number of Nag Hammadi tractates.

One clear example of the appropriation of a gnostic text by a Christian editor is the recasting of the non-Christian *Eugnostos* (CG III,3 and V,1) by *The Sophia of Jesus Christ* (CG III,4 and BG 8502). But the alleged non-Christian nature of *Eugnostos* has been disputed as well as its Gnostic character.

Several scholars have contended that *The Apocalypse of Adam* (CG V,5) is a non-Christian work that provides evidence of a pre-Christian redeemer myth. One passage relates thirteen numbered kingdoms that are faulty explanations of the Illuminator. But the alleged non-Christian character of this tractate has been challenged because of a reference to the punishment of the flesh of the Illuminator upon whom the holy spirit came.

The Paraphrase of Shem (CG VII,1) has also been claimed to be evidence of a pre-Christian Gnosticism by F. Wisse, who first published studies on it. But more recent studies have concluded that its sharp polemic against water baptism is best understood as a sectarian protest against the dominant church.

G. (Schenke) Robinson has interpreted the *Trimorphic Protennia* (CG XIII,1) as containing evidence of a pre-Christian gnostic Logos hymn underlying the prologue of the Gospel of John. Verbal parallels to the prologue, however, convince others that this Coptic text bears evidence of a dependence upon John's prologue.

W. Bauer's seminal work, *Rechtgläubigkeit und Ketzerei im ältesten Christentum*, first published in

1934, was belatedly translated into English as *Orthodoxy and Heresy in Earliest Christianity* in 1971. His provocative thesis was that contrary to the triumphalistic history of Eusebius, earliest Christianity was quite pluralistic. In fact, in Syria, Asia Minor and Egypt the earliest Christians and the most numerous Christians were gnostic rather than orthodox. Orthodoxy was established only much later through the influence of the Roman church. Scholars such as T. A. Robinson have pointed out that many of Bauer's propositions were based on arguments from silence. The evidence of the papyri in Egypt and other texts speak against his revisionist view of early Christian history.

GRAMMARIANS, HELLENISTIC GREEK

Self-conscious and systematic study of the Greeks' own language came relatively late to their intellectual discourse. Nevertheless, the Greco-Roman period was important for advancements made in understanding of the Greek language, although the comments remain rudimentary by modern linguistic standards.

1. Classical Thought on Greek Grammar
2. The Hellenistic Greek Grammarians
3. Implications for Study of the Greek of the New Testament

1. Classical Thought on Greek Grammar.

Despite the formative influence of such *philosophers as *Plato and *Aristotle on many areas of intellectual investigation, their comments on language remained undeveloped, suggesting but not resolving fundamental issues. This was especially true in the area of formal grammar. In the area of semantics, more productive comments were made, but without systematizing their observations.

There are a number of early, incidental, linguistically sound comments in Greek writers. For example, Heraclitus (B 93) appears to have been the first to distinguish between saying and signifying, recognizing that the two are not synonymous. Some other thinkers who made revealing comments are Protagoras, who distinguishes gender and some types of sentences; Prodicus, who was concerned with usage; Hippias of Elis, who was interested in the power of letters and syllables; and Democritus, who was intrigued by the fact that a single item can have several names and that a word can refer to several different things (Wouters, 33).

Many of these comments reveal a curiosity with individual words and especially names—

where they come from and what they might mean. This is an understandable interest in the light of the oral culture out of which Greek thought developed (Sluiter 1997, 155-77). Homer makes the necessary temporal distinction between past, present and future (Homer *Il.* 1.70), as do Euripides (*Trö.* 468 and *El. frag.* 3.15) and Plato (*Rep.* 392D). (In none of these examples are the aorist, present and future tenses used in a way that equates them with past, present and future time.) Several authors also make distinctions in kind of action (e.g., Plato *Thaet.* 155BC; Aristotle *Eth. Nic.* 1179A34-B4). Despite their obvious fundamental understanding of linear time and kinds of action, however, the Greeks took much longer to formulate a theory of temporality and tense usage (an item of continuing debate regarding Greek language), and much longer still to formulate a grammatical theory.

It was Plato who offered some of the first descriptive categories of language, differentiating between the nominal and verbal components of sentences. Aristotle did likewise, adding a third category of conjunctions. Aristotle first explicitly posited that the verb is "the thing that indicates time" (Aristotle *Int.* 16B; however, some scholars believe that these statements are later additions to Aristotle) and developed the idea of predication. One of the major tensions in classical Greek linguistic thought was that between the perspectives that the correctness of names was because of their inherent nature (*physis*) or because of human convention (*nomos*). Plato's *Cratylus*, arguably the only ancient writing on general linguistic questions, is concerned to show that naming derives from nature rather than convention (see Sluiter 1997). This is consistent with Plato's concern for truth and reality, as opposed to opting for a philosophical and linguistic relativism. At one point, Plato offers this etymology of the word *anthrōpos* ("man"). He says that it comes from the verb *anathērei* ("look up") and *opōpe* ("he has seen"), because only man looks up and has seen. Although this example may sound ridiculous, it reveals his fundamental philosophical orientation being worked out in linguistic thought.

Aristotle's position on the meaning of language, found most fully in *On Interpretation*, which became probably the most discussed ancient work that treats linguistic questions, departs from the view of Plato that links words and things. Without working out a full theory of lan-

guage but being more concerned with how one makes judgments, Aristotle anticipated much later work by recognizing a functional dimension to language and by expanding the concept of the linguistic sign to encompass its symbolic rather than mimetic value (Sluiter 1997, 109-10).

2. The Hellenistic Greek Grammarians.

In the Hellenistic period, thought concerning language was divided into two branches, with philosophers (*Stoics and *Epicureans) concerned with larger issues and grammarians concerned with philology. The philological issues concern this article.

The only extant manual of Greek grammar, called the *Techne* of Dionysius the Grammarian, is attributed to the Alexandrian scholar Dionysius Thrax, who lived around 120 B.C. Some scholars, however, attribute this work to the third or fourth century A.D., and there is considerable question about the arrangement of the sections of the work, which indicates that the grammar underwent much alteration and editing. This is shown by the fact that Dionysius's grammar exists in several different manuscripts (Uhlig and Hilgard, vol. 1.1:3-101), including papyri from Egypt (Wouters, 93-124), and in several different languages (Syrian and Armenian), with fairly extensive scholia on various points as well (Uhlig and Hilgard, *Dionysii Thracis*, vol. 1.3). Dionysius's grammar is an exercise in classification and division for students, in which he claims to do an empirical study based upon what the poets and writers do. As a result he discusses how writing works, including such things as reading, sound, accentuation and recitation. He also discusses the components of language, such as the letters, syllables (by length) and the word, the smallest unit of syntax.

Under the category of the word, Dionysius distinguishes eight sections. The first is the noun, where he, for example, notes the three genders and three numbers, besides several categories regarding word formation and declension. He also lists meaning relations, such as homonyms, synonyms and antonyms. The second major category is the verb, where he distinguishes mood, voice, number and time, plus several subsections regarding word formation and declension. Perhaps of most interest and continuing relevance for scholarly discussion is what he says of the times or tenses. He distinguishes three times—present, past and future—and four kinds of past

tense, the imperfect, perfect, pluperfect and aorist. Dionysius is perhaps the first ancient author to use the term *aorist* to label a tense form. He also notes three relationships among the tenses: present to imperfect, perfect to pluperfect and aorist to future. His temporal categories do not equate with single tense forms, and although he notes relations between the forms, it is unclear whether these are based on form or function. Dionysius then has sections on the correspondence of certain letters, the participle (which shares characteristics of the noun and verb), the article, pronouns, prepositions, adverbs and conjunctions. Although his grammar is comprehensive, it does not go into detail, being content with classification and division at the level of the word. It was left to later writers to develop the categories further, although Dionysius gives a good idea of the kinds of terms and forms available for discussion.

The second category of grammarians is the Stoics. Although Stoicism itself predates the writings of Dionysius Thrax and there are a number of important comments regarding language that predate him (see for example comments recorded in such authors as Diogenes Laertius *Vit.*, esp. book 7), much of this work was governed more by philosophical interests than by linguistic concerns (see Sluiter 1990, 5-37). For example, the Stoics first differentiated between signifier and signified (Diogenes Laertius *Vit.* 7.62). As a result, the most important Stoic writing on grammar seems to be in response to the work of Dionysius Thrax.

Of the many Stoic grammarians, the later scholiast Stephanus is perhaps the most important. His comments, along with numerous observations of others on Dionysius's work, are found in a thirteenth-century codex now located in the Vatican (see Uhlig and Hilgard, vol. 1.3, 192-292 passim). Beginning with the letters, Stephanus makes comments on most parts of Dionysius's grammar. One of Stephanus's most important set of comments is upon the times or tenses. Although reflecting the Alexandrian terminology, Stephanus works from tense form oppositions and utilizes both temporal distinctions and kind of action. The present form is thus defined as present incomplete and the imperfect form as past incomplete, and these are clearly related to each other on the basis of completion and sound (they are formed around the same stem). For complete action, Stephanus refers to the

perfect and pluperfect forms. However, since they both deal with past accomplishment, the same scheme as above does not apply. The aorist is invoked to distinguish between the two: an act represented by the aorist as just occurring becomes the perfect, in the sense of "I just did" becomes "I have done," and an act in the distant past becomes the pluperfect. The aorist is defined as being related to the future on the basis of its indefiniteness. Despite the commendable attempt to reconcile time and kind of action, the Stoic view as represented by Stephanus is flawed by its failure to adequately define the aorist, future and perfect/pluperfect and by his retention of the time-based scheme.

The third category of grammarians is Apollonius Dyscolus, whose work is dated to the second century A.D. (see Sluiter 1990, 39-142). A number of works are ascribed to Apollonius Dyscolus, including several minor works on such topics as pronouns, adverbs and conjunctions (Uhlig and Schneider, vol. 2.1). Even though these are considered among his minor works, they go into far greater detail than those of any previous grammarian whose work is extant. His work moves beyond simple classification and division to include examples from earlier authors, such as Homer. Much of this work is derivative from Dionysius Thrax, however. Apollonius Dyscolus's most well known work, however, is his extensive syntax (see Householder; Blank). This is the only extant treatise of this sort from the ancient world. There is much terminology in common between Apollonius Dyscolus and the Stoic grammarians, for example regarding verbal structure, which commonality has led to questions of genetic relationship. Some scholars attribute the Stoic position directly to Apollonius Dyscolus, while others differentiate the two. The less systematic nature of Apollonius Dyscolus's treatment, and his greater inclusion of examples, tends to indicate later and derivative thought, in which he has provided examples for others' categories. According to tradition, Apollonius Dyscolus's son was Herodianus, who wrote an extensive treatise on Greek grammar. However, Herodianus's writings have not been preserved and must be reconstructed by compiling later references and quotations (as has been done in Lentz, 3.1 and 3.2).

The fourth and final category of Hellenistic Greek grammarians includes those unnamed

grammarians whose fragmentary writings have been discovered, especially in the papyri (see Wouters). Although no complete manual has yet been discovered in these papyri, there are a number of fragments of importance. Several of these fragments are portions of the manuals already known, such as fragments assigned to Dionysius Thrax (P.Hal. 55a; *PSI*.1.18), while others clearly have a relationship to his work (P. Yale 1.25; P.Lit.Lond. 182; P.Mich. 7.429; P.Lit. Lond. 184). Others, however, are unassigned, often having only a column or two of text (P.Heid. Siegmann 197, 198; *PSI*. 505 and 7.761, P.Brooklyn 47.218.36; P.Oslo 2.13; P.Iand. 83a and 5.83; P.Harr. 59; P.Amh. 2.21; P.Ant. 2.68). Nevertheless these fragmentary texts provide suggestive material. For example, they illustrate that there was difference of opinion among the ancient writers of grammatical manuals regarding the number of the parts of speech, their sequence and their definitions. The scope and arrangements of these works, as well as their use of examples, seem to have differed as well. The relationship of these manuals to more scholarly treatises, such as that by Apollonius Dyscolus, is also a matter of scholarly debate (see Wouters, 44-45). Insofar as grammatical treatises are concerned, there are fragments from a number of authors that have been found on papyri. These include Herodianus's work on prosody (P.Ant. 2.67, which according to Wouters provides a resume); several works on noun inflection, including one unknown (P.Oxy. 15.1801) and one a compendium of Herodianus's work (P.Firenze 3005); a number on verbal inflection, including one on participles (P.Rain. 1.19); one on irregular words by Heraclides of Miletus (P.Rain. 3.33A); one on augments (*PSI* 7.849); one on contracted verbs (P.Oxy. 3.469) and one on the perfect tense (P.Iand. 1.5); and a work on the Aeolic dialect (P.Bour. 8).

3. Implications for Study of the Greek of the New Testament.

Several comments can be made with regard to the value of studying the Hellenistic Greek grammarians for understanding the background to the NT. The first is that one gains a clearer picture of the kinds of linguistic questions being asked and the kinds of answers being provided by the ancients regarding the Greek that they used. Rather than idealizing the accomplishments of the ancients or unnecessar-

ily denigrating their failures, we need to realize that linguistic investigation was in its rudimentary forms. One should not be overly critical of their attempts, since every author's work must be seen in the context of its origins. However, despite their efforts, much has been learned since.

A second observation is that the foundational work that Dionysius Thrax and the Stoics performed, and to a lesser extent Apollonius Dyscolus and various unnamed grammarians, has perhaps had too much of a restrictive influence on subsequent thought. To a large extent, many of the categories of subsequent grammatical discussion of Greek and Latin have been formulated on the basis of this work (even up to the twentieth century), and this has had a retarding effect on much investigation. For example, because the Hellenistic Greek grammarians discussed tense forms primarily in terms of time and were unable to clearly formulate what they instinctively recognized about the role of kind of action, temporal categories—though they clearly failed to be explanatory then (and now)—were maintained as determinative (see Porter, 18-22).

The third observation is that the work of the ancients should provide impetus for continuing to gain a better understanding of Greek grammar. The ancients themselves lacked much understanding of their own language, but much has been learned since their work, and much more potentially can be learned in the future.

GREECE AND MACEDON

Ancient Greece was located on the southern portion of the Balkan peninsula, occupying much of the same area as it does today. Greek peoples could also be found on the islands of the Aegean, the coast of *Asia Minor, Sicily, Crete and sometimes Cyprus. Greece was a federation of loosely affiliated city-states during much of the biblical period. Macedonia was located on the northern portion of the Balkan peninsula bordering Greece.

1. Settlement Before 2000 B.C.
2. The Minoan Civilization (c. 2000-1400 B.C.)
3. The Mycenaean Civilization (c. 1400-1200 B.C.)
4. The Dark Age (c. 1200-800 B.C.)
5. The Archaic Period (c. 800-500 B.C.)
6. The Classical Period (c. 500-338 B.C.)
7. The Hellenistic Period (338-146 B.C.)
8. The Roman Period (146 B.C.-A.D.100)

1. Settlement Before 2000 B.C.

The first written source for the history of Greece is Homer's *Iliad* from about 800 B.C. Any discussion of the earlier period of Greek history must rely on archaeology and philology. Archaeology tells us that the earliest settlers came from Asia Minor in the Early Bronze Age (2600-2000 B.C.). These peoples settled in

Crete, Cyprus and Cyclades, establishing an agricultural and pastoral society of small farming villages. Archaeology indicates that they traded with Babylon and Asia Minor. Many of these immigrants were Greek-speaking, exhibiting different Greek dialects.

2. The Minoan Civilization (c. 2000-1400 B.C.).

During the Early Bronze Age the Minoan civilization thrived on Crete. Its chief cities were Knossos and Phaistos. Minoan civilization was highly developed. Homes were two stories with indoor plumbing. The Minoans worked extensively in copper to make tools and weapons and in gold to make jewelry. They were also skilled painters, weavers and workers in ceramics and bronze. Both genders participated in public sports, including the popular bull leaping—jumping over the back of charging bulls. The primary religion was devotion to the Mother Goddess (Demeter to the Greeks), perhaps owing to the influence of Anatolia in Asia Minor. The trading of the Minoans extended as far as Egypt and Syria, and they invented a pictographic writing system, presumably to facilitate this trade. The pictographic system was replaced about 1600 B.C. with a non-Greek, linear script known as Linear A that has never been deciphered. This civilization came to an abrupt end about 1400 B.C.; archaeology reveals that the palaces were destroyed. The causes for the demise of the Minoans are unknown, but invasion by the Myceneans or pirates are strong possibilities.

3. The Mycenaean Civilization (c. 1400-1200 B.C.).

From 1400 to 1200 B.C. Mycenaean civilization dominated parts of the southern Balkan peninsula as well as Crete, where the Myceneans established Knossos as a capital. The Myceneans had arrived as part of the migrations of Greek-speaking peoples beginning about 3000. They were greatly influenced by the Minoan civilization. This can be witnessed in the styling of their pottery, jewelry and religious symbols. In turn the Myceneans had a great influence on what became known as Greek civilization. The Mycenaean age was the heroic age of Greek mythology.

The Myceneans were great traders and warriors. Their warriors used horse-drawn chariots. One of their most unusual legacies is the grave

circles for the burial of their heroes, some measuring nearly 90 feet in diameter. The heroes within are buried with their weaponry and gold-foil death masks that show the skill of the Myceneans in gold-working. The Myceneans traded extensively with their neighbors, importing silver from Asia Minor, copper from Syria and gold and papyrus from Egypt. They exported timber and foodstuffs. The Myceneans created Linear B, a recognizably Greek language, written on clay tablets. Their language had previously been primarily oral, but as the clay tablets reveal they developed the written form for purposes of administration and trade. Extant tablets indicate that the Myceneans had an extensive bureaucracy for the administration of their peoples. Mycenaean religion is difficult to reconstruct, but a tablet from Pylos mentions offerings to seven Greek deities, including Hera, Hermes and Poseidon.

4. The Dark Age (c. 1200-800 B.C.).

The Dark Age of Greece designates the period between the collapse of the Mycenaean civilization in the twelfth century B.C. and the renaissance of the eighth century B.C. It was a time of great migration of nomadic, Greek-speaking peoples from central Asia Minor and the north, including the Dorians. These peoples destroyed the remnants of Mycenaean civilization and its great cities (e.g., Troy and Tarsus) and displaced other Greek peoples (e.g., the Aeolians and Ionians), who themselves traveled to Thrace, Asia Minor and the Greek islands, further destroying Mycenaean civilization. The Dorians settled in the southern portion of the Balkan peninsula, the Peloponnese, and were the founders of Sparta. The Ionians migrated to the east-central Balkan peninsula, Attica, and were the founders of Athens. They continued east to occupy also the western coast of Asia Minor and the island of Samos. They spoke Ionic, perhaps the oldest Greek dialect, the language of Homer and Hesiod. Homer's *Iliad* describes and preserves the Ionian traditions.

During this Dark Age writing ceased along with all traces of Linear B, but oral epic continued, as Homer's *Iliad* and *Odyssey* attest. Cultural endeavors like painting, carving and masonry ceased as well, but working in iron was discovered for making weapons and plows somewhere around 1100 B.C. This skill perhaps was borrowed from the Near East.

5. The Archaic Period (c. 800-500 B.C.).

The turning point into the Archaic Age is dated around 800 B.C., a time marked by many important changes. Trade was reestablished, as ivory from Syria and Phoenicia found in Crete, Athens and Sparta attests. The Phoenician alphabet was adopted, a verbal system was developed, and writing was reintroduced from the East. Greek literature was flourishing, as the works of Homer and Hesiod attest.

Such changes were made possible by the development of the *polis*, the Greek city-state, which provided stability. These city-states were independent units, often working in leagues with other cities for trade and protection. This was a period of great building. Cities were walled for defense, harbors built for trade and public buildings erected. Along with the *polis* the institutions that define the classical age were also established. These include the gymnasium for bodily and military training (see Education), *athletics and organized athletic events and the symposium for instilling values. The beginnings of science, *philosophy and lyric poetry date to this age. In sports, Hippias of Elis dates the first Olympic Games to 776 B.C. These games were one of the few occasions in which the Greeks put aside local interests and worked together to honor the chief god, Zeus.

*Religion was a key element in the new city-states. Families worshiped an assortment of gods and goddesses and were expected to maintain the family shrine. Political groups also had a religious element, worshiping the appropriate deity in their meetings. Individuals and the city as a whole worshiped Hestia, the goddess of the hearth. In the seventh century *temples were built as houses for the gods. By the sixth century mystery religions had arisen with Demeter, Dionysus and Orpheus as their gods and goddesses. Religion was centered at the sanctuaries of Olympia, the home of Zeus the king of the gods; Delphi; Delos; Isthmia; and Nemea. Regions competed for the allegiance of the people to their sanctuary, a competition that often led to war between city-states.

In the beginning the city-states were governed by local, landowning aristocrats, that is, kings, who received their power either from custom, religious sanction or constitution. About the mid-seventh century B.C. the city-states were often governed as tyrannies. Powerful individuals with their followers ruled the city-states, usu-

ally limiting freedom and incurring the indignation of the citizenry. Athens and Sparta were exceptions with their democratic process among the free citizens, although there were periods of tyrannical leadership in Athens in the late sixth century under Pisistratus and his sons and in Sparta later in the *Hellenistic period.

Athens was a walled city settled by Ionians displaced by the Dorian migrations. With better ports, Athens developed naval strength. The silver mines of Attica, the territory Athens controlled, helped sustain the Athenian economy. Athens replaced the monarch with first three and then nine archons or magistrates who performed defined functions for the city-state (e.g., military administration). After civil unrest broke out over diminished individual freedoms, Athens chose an aristocrat named Solon to reform its laws. Under Solon's reforms (594 b.c.), Athens abandoned the Draconian code devised by aristocrats and laid the foundation for democracy. Solon created two legislative bodies: the Council of the Areopagus composed of ex-archons, and a new Council of Four Hundred (*boulē*) composed of one hundred members of each of the four main tribes of Athens. For judicial work he also established an assembly whose members were chosen by lot from the citizenry of Athens. These reforms established wealth rather than birth as a criterion for important office. Citizens of low social status could now participate in government.

Sparta was a group of unwalled villages originally settled by Dorians, a Greek tribe, during the Mycenaean era. These banded together under one king about 800 B.C. and proceeded to expand. It subjugated its neighbors, Laconia and Messenia, and made its inhabitants its slaves or helots. Sparta stressed military defense, and its army was the strongest in Greece until the Hellenistic period. This military emphasis governed society. Men and women were segregated, even when married. Men left home at age twelve to live and train together, a state in which they lived all their lives, even when married. Homosexuality was common among both genders. Isolationism prevailed, with foreign travel prohibited and foreigners unwelcomed.

Colonization of areas of Greece by Greeks was intensified, including the southern Balkan peninsula, and in the north on the shores of the Black Sea. The Greek city-states set up trading colonies in areas of trade interest. These colo-

nies could be found in Spain, Sicily, Italy and North Africa and were competitors to Phoenician trade. This competitive trade created warfare between mother cities in Greece and between their colonies.

The only outside pressure at this time was from the Persians. Cyrus, king of Persia, controlled the Greek colonies of Ionia and Aeolia in Asia Minor after a war against Lydia, an ally of Sparta, in 546 B.C. Persia continued to expand as an empire. By 510 B.C. Sparta had formed an alliance with its neighbors for the purpose of dealing with Persia, an alliance accepting the leadership of Sparta in military matters. By 500 B.C. Darius I of Persia controlled all Greek territory except the Greek mainland of the Balkan peninsula. In 499 B.C. Ionian city-states in Asia Minor under Persian control revolted and asked Sparta and Athens in turn for support. Sparta refused, and Athens sent part of its fleet but eventually backed down; Persia regained the territory by 493 B.C. In 490 B.C. Darius launched the Persian wars when he sent his army and navy against Athens and the Athenians defeated the Persian army at the battle of Marathon despite Persia's naval capabilities. Anticipating another Persian attack Athens commissioned Themistocles to build a navy of two hundred ships. Athens was also ready in 480-479 B.C. when Xerxes, son of Darius, attacked. After losing many smaller land and sea battles and even seeing the population of Athens evacuated to the island of Salamis and the city burned, the Greeks, including Athenians and Spartans working together, defeated Xerxes and permanently repelled Persian control.

To the north other important developments were taking place. After centuries of dominance by the Phrygians, Perdiccas I founded the Argead dynasty about 650 B.C., a dynasty that lasted in Macedon until *Alexander the Great. Macedon remained relatively untouched during the Persian invasions by collaborating with the Persians, especially supplying the timber for their ships. However, Alexander I of Macedon did secretly supply the Greeks in their war with Xerxes. After the war the Persians allowed Alexander I of Macedon to expand his territory east and west.

6. The Classical Period (c. 500-338 B.C.).

The first major period of the classical age is often described as the Pentekontaetia or "period

of fifty years" (480-430 B.C.). It is the period between the last Persian war (479 B.C.) and the Peloponnesian war (431-404 B.C.). Due to conflict with Athens, Sparta withdrew from leadership of the league it had organized. Athens and its allies created the Delian League in 478-477 B.C. for the purpose of mutual protection, fighting piracy and controlling the Aegean for trade. Although an ally with Greece during the Persian wars, Sparta did not participate and grew resentful of Athens's growing influence, especially the influence that its new navy afforded it on the Aegean islands and with the colonies in Asia Minor.

Toward the mid-fifth century B.C., as the Persian threat waned, Athens's influence on the Delian League waned, and it retained power over its allies by force. Athens supported Egypt in its war with Persia, and the Persians destroyed Athens's fleet in 454 B.C. After anticipating conflict, Athens and Persia made peace in 449 B.C.; this peace entailed Athens giving up Cyprus and control of Ionia in Asia Minor. Seeing its weakness Athens's allies revolted shortly thereafter. Tension between Athens and Sparta escalated into the Peloponnesian war of 431-404 B.C. (two parts: 431-421, 416-404) in which Sparta defeated Athens and made it an ally. As the classical period ended, Athens, Sparta and Thebes fought among themselves for dominance. The end of the fifth century and the fourth century saw Greece and its colonies decreasing in power and engaging in repeated civil war as well as war with outside forces.

Athens moved toward full democracy as residual privilege of the aristocracy was eliminated through the efforts of Pericles, majority leader of the assembly in Athens (461 B.C.). Culture flourished after the Persian war in what has become known as the classical period. The great buildings of the Athenian acropolis were built at this time, including the Parthenon (447-438 B.C.), the temple of Athena Nike (427-424 B.C.) and the Erechtheion (421-407 B.C.). Great architects, painters, sculptors and potters were active. Literature in such subjects as *history, poetry, comedy and tragedy and philosophy flourished. Pindar wrote lyric poetry. For his history of the Persian wars, which was a first attempt to analyze the forces behind historical events, Herodotus came to be considered the father of history. Thucydides wrote a history of the Peloponnesian war. This was also the height of

Greek theater. The dramatists Aeschylus, Aristophanes, Euripides, Menander and Sophocles wrote plays, while stone theaters were erected for their performance. The philosophy of Pythagoras, Socrates, *Plato, and later *Aristotle laid the foundation for Western thought. Alexander I of Macedon and his successors in the Argead dynasty were patrons of Greek culture and brought Hellenization to Macedon.

7. The Hellenistic Period (338-146 B.C.).

Philip II became king of Macedon in 359 B.C. and created one of the first states where power did not reside in a city. He expanded into a weakened Greece, defeating the Greeks at the battle of Chaeronea in 338 B.C. and ruling the entire Balkan peninsula. He turned his attention to Persia but was assassinated in 336 B.C. by an aristocrat of Macedon. The campaign was carried out by his son and successor, Alexander the Great, who assumed power at the age of twenty. Alexander marched against Persia in 334 B.C., conquering Asia Minor, Syria and Egypt on the way. He eventually conquered Persia and the eastern territories all the way to India. He died in Babylon in 323 B.C. at the age of thirty-two. His most lasting achievement derived from his love of Greek culture instilled in part by his tutor, Aristotle. He built Greek cities and spread Greek culture throughout his conquered territories. This cultural influence has become known as *Hellenism.

After Alexander died having left no legitimate heirs, his successors vied for power throughout the conquered territories. In 276 B.C., after nearly a fifty-year series of rulers and civil war, Antigonos II Gonatas assumed power in Macedon and Greece, establishing the Antigonid dynasty (276-168 B.C.). Seleucus emerged as successor to Alexander in Asia Minor, Syria and Mesopotamia, founding the *Seleucid dynasty. Ptolemy was successor to Alexander in Egypt, founding the Ptolemaic dynasty (see Ptolemies). The Seleucids and Ptolemies were rivals throughout the period, often engaging in war in Syria.

Macedon returned to a kingdom similar to the one before Alexander the Great, but it still tried to exert its influence in all of Greece. For the remainder of the fourth and the third centuries Greece was a protectorate of Macedon. Piracy was a constant problem for Greek coastal cities in the third century B.C., and the need to

fight off this common enemy drew the Greeks into leagues as in their previous history. These leagues occasionally revolted against Macedon. After coming to the aid of Athens in its struggle with Macedon in 197 B.C., *Rome declared the city-states of Greece independent. Philip V of Macedon supported Hannibal of Carthage in his quest against Rome in the Second Punic War (218-201 B.C.). As a later consequence, Rome, in league with Athens, defeated Perseus, son of Philip V, at the end of the Macedonian war of 171-168 B.C. at the battle of Pydna, ended its royal dynasty, and divided the territory into four republics.

8. The Roman Period (146 B.C.-A.D. 100).

After an uprising in Macedon in 148 B.C. by Andriscus, who claimed to be Philip, the son of Perseus, Rome annexed the territory and created the province of Macedonia. The Achaean League of Greece arose against Rome, and Rome defeated the league in 146 B.C. and seized direct control of southern Greece, razing *Corinth to serve as an example of the consequences of defying Rome. From that point on Rome governed the affairs of Greece from Macedonia, although Athens and Sparta were permitted to remain free cities. Rome formed the province of Achaia in 46 B.C. During the Roman civil wars, Julius Caesar defeated Pompey in Thessaly (48 B.C.), and Antony and Octavian fought on Greek soil (42 B.C.). Greece supported Brutus in the civil wars, and as a consequence the victor, Octavian, made Greece the province of Achaia in 46 B.C.

In the first century A.D. Greece was composed of two provinces: Macedonia in the north and Achaia in the south. These two provinces were senatorial provinces, that is, their governor was appointed by the senate of Rome (see Roman Administration). In A.D. 15 Augustus combined these provinces with the province of Moesia, north of Macedonia, into an imperial province with their governor appointed by the emperor (see Roman Emperors). In A.D. 44 Claudius divided the province back into its component three provinces. The book of Acts refers to these two provinces as sites of Paul's ministry (Acts 19:21). Paul refers to these two provinces together as regions of his ministry that supported the collection for the Jerusalem church (Rom 15:26) and as regions evangelized in part by the Thessalonian church (1 Thess 1:7-8).

In the first century A.D., the term Greek re-

ferred less to a country and more to those who spoke Greek and accepted Greek culture. The word *Greece* (*Hellas*) appears only once in the NT, in the context of Paul's last journey to *Jerusalem, where it is used in conjunction with Macedonia to refer to the province of Achaia (Acts 20:1-2). References to Greeks (*Hellenēs*) are frequent in the NT, meaning those who spoke Greek and accepted Greek culture (Acts 16:1), and are often in contrast to "Jew," meaning "Gentile" (Acts 14:1). References to Greeks can also refer to Hellenized Jews who lived in the *Diaspora (Jn 12:20) or, as Luke calls them, Hellenists (*Hellenistai*, Acts 6:1; see Hellenistic Judaism).

Paul's second and third missionary journeys took him to Macedonia and Achaia (A.D. 50-55; Acts 16:11—20:6; 2 Cor 8:1-6). The Pauline churches of *Philippi, *Thessalonica and Berea were located in Macedonia and those of Athens and Corinth in Achaia. The book of Acts recounts Paul's imprisonment in Philippi, preaching at the Areopagus in Athens and his difficulties prying the Corinthian church away from its pagan worldview. The NT letters of 1 and 2 Thessalonians and Philippians are addressed to churches in Macedonia, and 1 and 2 Corinthians are addressed to Corinth in Achaia.

Although Greece was no longer a political power, its cultural influence—the Hellenization begun by Alexander the Great—was a powerful force molding not only Palestinian culture but Roman as well. Greece continued as a cultural and intellectual center during the Roman period, being the location of choice for upper-class Romans to finish their formal education. The influence of Hellenism upon the church was also marked. The early church used *rhetorical and other facets of a Greek *education in its preaching and teaching, modes of worship and ethical exhortation, among others things. This Greek influence is particularly seen in the fact that the early church used the *Septuagint, a Greek translation of the OT, and wrote the documents of the NT in Greek. This influence continued beyond the first-century church to play a role in interpretation and theological formulations.

GREEK OF THE NEW TESTAMENT

The NT, apart from a few *Aramaic and/or *Hebrew words and phrases, is written in a form of ancient Greek. This Greek, however, is not

the Greek of the classical writers, such as *Plato, Thucydides or the tragedians, but is that of the Greek of the Greco-Roman world of the first century. This Greek is represented by a number of different sources, including not only the NT but also the Greek of the papyri and other authors, such as *Epictetus, Appian and *Josephus.

2. The Greek of the New Testament
3. Issues in Recent Study of Greek
4. The Languages of Jesus
5. Conclusion

1. History and Development of the Greek Language.

Greek has a long and interesting history, virtually unparalleled among other languages (see Horrocks; Palmer; and Porter 1997, which is used for what follows). Greek is one of the Indo-European languages. Proto-Indo-European (PIE) is a scholarly reconstruction of the prototypical language from which all of the Indo-European languages descended. One of the branches of PIE developed into Proto-Greek, another hypothetical language that predates the settlement of the Balkan peninsula in the early second millennium B.C. but is the progenitor of nearly three thousand years of unbroken history of the Greek language. The earliest recognizable forms of Greek go back to the Mycenaeans, who came to occupy what we know as the Greek islands and mainland. Mycenaean civilization reached its greatest heights in the late second millennium on Crete and mainland Greece. This great civilization declined or was destroyed by approximately 1200 to 1100 B.C., which led to what has been called a Greek dark age, of which very little is known, especially linguistically. In the nineteenth century, a number of tablets and other inscriptions were found, especially at the remains of the city of Pylos on the Greek mainland. These tablets and inscriptions were written in what is called today Linear B, the written script of the Mycenaeans. Deciphered in 1952, Linear B is a syllabic form of writing that is recognizably Greek (Chadwick).

In approximately 800 B.C., the Greek islands and mainland emerged out of their dark age, and the extant evidence indicates that a number of different people groups used a number of different dialects of Greek. As a result, this period

has been linguistically referred to as the dialect period. The traditional view regarding the rebirth of Greek civilization was that several waves of settlement from outside the area resulted in different regional Greek dialects on the Greek islands and mainland. More recently, the idea has been promoted that the various regional dialects can be attributed to linguistic developments by indigenous people groups, originally perhaps divided into eastern and western Greek language varieties. The distribution of the various dialects, however, makes the settlement theory still seem more likely at this point. The major regional dialects of Greek discussed by scholars and described in different ways by them (see Horrocks, 6-16) are four: Attic-Ionic, in which Attic was a fairly conservative subvariety of Ionic (see below); Arcado-Cypriot; (often separated into two, Arcadian and Cypriot); Doric and other west Greek varieties (such as Boeotian); and Aeolic.

A number of different linguistic features distinguish these dialects. These features include differences in vowel length, varying sound changes, whether and how contraction of vowels occurred, differences in declensional endings for both nouns/adjectives and verbs, the use and variety of particles, occasional differences in case relations, and some differing vocabulary. In some instances, the dialects may have been unintelligible to each other due to significant sound changes, but it appears that the written forms of the languages were more easily understood. The early fifth-century B.C. historian Herodotus wrote that the Greeks were of one blood and of one tongue (Herodotus *Hist.* 8.144.2). The Homeric or epic dialect, in which Homer's *Iliad* and *Odyssey* were written, was a literary dialect based upon a form of Ionic but with influence from other dialects. Not a spoken language in the sense that people spoke it to each other, it was a poetic form of language regionally adapted as the poems were recited and later written down.

After the so-called archaic period (ninth to fifth centuries B.C.), there emerged during the fifth century what is called the classical period of Greek civilization. This period describes and reflects the ascendancy of the city of *Athens in its military and economic power, culture, *philosophy, literature and the arts. This relatively insignificant city, insofar as location and history would indicate, was transformed by economic

prosperity into a city of central importance. Along with its ascendant cultural and economic position came the significance of its language. Widespread and persistent Athenian cultural dominance led to its particular variety of the Ionic dialect of Greek being widely used, especially by significant writers and thinkers, with the result that much of the literature from this period is written in Athenian Ionic Greek. The conservative, and in some ways even archaic, earlier form of Attic gave way to a more progressive form of Greek. This form of language reflected many of the more innovative features of the Ionic dialect. This Greek became the literary and administrative language of Athens and had wider influence and use throughout Greece, especially in the fifth and fourth centuries. This variety of Greek formed the basis of the common written language of the Hellenistic world, or Koine Greek.

The rise to power of the Macedonian conqueror *Alexander III ("the Great") marked a major turning point in the development and dissemination of the Greek language (see Hellenism). As noted in the survey above, all languages develop under the influence of a variety of factors. This development is not predetermined, nor does it occur at a set rate. In any case, the influence of Alexander cannot be underestimated on the course and pace of development of Greek. Alexander's love of Greek culture, instilled by his father, Philip II of Macedonia, who saw that Alexander was educated by *Aristotle, undoubtedly was more instrumental in the NT being written in Greek than any other single factor. When Macedonia exerted its hegemony over the Greek mainland in the fourth century B.C., it adopted various Greek practices and characteristics, including the Greek language of Athens, which had become the administrative language of the mainland. With an army of fifty thousand Greek soldiers, Alexander's conquests, initially of the Persian Empire but soon extended to include much more, instigated an important linguistic movement at the same time as he inaugurated his military expedition. The result of Alexander's widespread conquests was that the Greek language went with him and was established as the common language of communication. It even came to dominate local and regional indigenous languages as various people groups were conquered and submitted to Alexander's rule.

This Attic-Ionic form of common Greek, which we now call Hellenistic or Koine Greek, was used both as a written and as a spoken language. The process of linguistic change was propelled by a number of factors. These include its widespread dissemination as Greek came into contact with a variety of other languages and as the various dialects of the soldiers and others mixed. As a result, regional peculiarities were leveled and a more universally used and recognized common dialect clearly emerged. There is much debate about the depth of Hellenistic cultural penetration. Undoubtedly in many areas this assimilation was widespread and profound (see Hellenistic Egypt; Hellenistic Judaism). Nevertheless, even in places where the cultural elements were nothing more than superficial, the use of Greek seems to have been one of the most consistently far-reaching Hellenistic elements. This pattern of domination in large part through linguistic unification was a pattern developed early and continued after the death of Alexander—the four succeeding Hellenistic kingdoms, including the *Ptolemies and the *Seleucids, and later the Romans, continued the same patterns. Greek thus became the *lingua franca*, or the language of common interaction, throughout the Greco-Roman world.

The result of Alexander and his conquests, and the subsequent political developments around the Mediterranean world, was that Hellenistic Greek became the prestige language of the Greco-Roman world. This remained the case even after *Latin established itself as a significant language of the empire, especially in the East, by the second century A.D. Being the prestige language does not mean that Greek was the first language of everyone, or even that it was the language of first choice. What it means is that Greek was the language that those who enjoyed political, cultural and economic superiority used and that those who wished to attain such status or to carry on effective interaction with such people had to know. The evidence for this status is found in a variety of authors and types of literature. Even though native languages continued to be used in a variety of places throughout the empire, such as in *Asia Minor, the *Roman East and Egypt, Greek was the language of commerce. This is evidenced by the thousands of ephemeral business contracts and receipts found in the documentary papyri from Egypt, as well as the papyri found more re-

cently in the Roman East, such as the Babatha archive (see Papyri, Palestinian). These documents, most of which were discovered in the nineteenth century and the early part of the twentieth century, comprise thousands of examples of the use of the Greek language over the span of the Hellenistic and Greco-Roman periods in a variety of contexts, most of which reflect day-to-day life.

Literary authors as well, including many of those writing histories of Rome, such as Dio Cassius and Polybius, also used Greek. Even the Jewish historian *Josephus wrote in, or had rendered into, Greek his history of the Jewish war and his account of his people. This level of usage is also exemplified by a wealth of nonliterary texts, one of the most important of which is the NT.

There were several perhaps understandable and predictable responses to the clear and widespread ascendance of Greek. One was that a number of people maintained the use of indigenous languages. During the classical, Hellenistic and Greco-Roman periods, Asia Minor was particularly rife with indigenous (or epichoric) languages, such as Lycian, Lydian, Sidetian, Carian, Phrygian and Galatian, besides Persian and Aramaic, as well as Greek (Blomqvist). The book of Acts notes that several of these dialects continued, even though Greek was the *lingua franca*. Some scholars have even contended that the result was a number of hybrid dialects of Greek that combined Greek with an indigenous language, such as demotic in Egypt or Aramaic in Palestine. The evidence for the persistence of such creole languages, in which two languages were mixed for temporary communicative purposes, is lacking (see below). Not all were as content with the developments that had occurred within Greek, however. There were two movements that reacted against the use of the Koine. As early as the third century B.C., several poets rejected the common form of the Greek language and wrote poetry in forms of earlier Greek dialects.

Similarly, in the third century B.C., there was the rise of what is called Asianism. This was a reaction against the balanced and measured style of the literary form of Hellenistic Greek, such as found in Polybius, and so these writers indulged in a more exuberant and ornate style. Some have thought that the book of 2 Peter reflects this Asianic style (see Watson). Somewhat in re-

action to Asianism, a movement called Atticism developed and reached its peak in the second century A.D. Atticistic writers rejected what they perceived to be the corruption or debasing of the Greek language and advocated a return to the standards of vocabulary and style of the best classical writers of Athens. Neither Asianism nor Atticism ever had much influence apart from on certain literary authors, including some later Christian writers.

As a result, one of the noteworthy—and in some ways perhaps surprising—features of the linguistic situation of the first century is the overall consistency and uniformity of Hellenistic Greek across the span of the Greco-Roman world. Even in Phrygia and Lycaonia, in the interior of Asia Minor, where regional dialects did a better job of surviving, Greek was the common language, although perhaps with some regional differences in pronunciation and phonetically based spelling variations (the papyri of Egypt attest to a number of phonetic spellings). L. R. Palmer says of this common language that it “smothered and replaced the ancient local dialects”: “Profound linguistic consequences might have been expected from the adoption of what was basically the Attic dialect by users of not merely non-Attic, but non-Greek speech. In fact the changes were remarkably slight” (Palmer 175, 176).

In distinction from earlier forms of Greek, the major linguistic features of Hellenistic Greek include the following (apart from instances of retention or revival of earlier features by Atticists, though rarely in the exact way that the earlier Attic writers used them):

- Regularized features of pronunciation;
- Vowel reduction;
- Declensional endings of nouns/adjectives and verbs regularized and simplified, with regular first aorists replacing irregular second aorist endings;
- Final *nu* used more frequently, especially in instances where the third declension was being formed like the first/second declensions;
- Increased use of certain prepositions;
- Disappearance of some particles;
- Mi* verbs regularized into *omega* verbs;
- Optative virtually disappearing;
- Dual number, already restricted, being eliminated;
- Middle voice being reduced in importance,

- often replaced by the passive;
- Subjunctive with *hina* beginning to replace the infinitive;
- Dative case under pressure as the role of the accusative case was expanded;
- Use of *an* increased;
- Periphrasis in a variety of contexts increased in frequency.

Many of these features are present in the Greek of the NT, as the standard reference grammars make clear (see Blass and Debrunner; Moulton; Robertson; cf. Porter 1989b, 143-56).

2. The Greek of the New Testament.

Despite the preceding evidence, the question of the kind of Greek found in the NT has been a contentious issue, because the complex theological, ethnic and cultural issues related to its composition has clouded linguistic analysis (see Porter 1991; 1996, 75-99). Before the beginning of the twentieth century—in large part because the discoveries of Egyptian papyri had not yet been profitably assessed in terms of the language of the NT (see Deissmann; Moulton)—there was a widespread and persistent belief in some circles that the Greek of the NT constituted a special biblical dialect, possibly even a divinely inspired or Holy Ghost Greek. Without these papyrus documents for reference, significant differences between the Greek of the NT and the Greek of literary writers—for example, the convoluted periodic style of Thucydides or the complex and artificial style of Polybius—seemed otherwise incomprehensible, if one wished to maintain the special qualities of the biblical documents. Similar views were formed regarding the unique vocabulary of the NT.

In the light of assessment of the papyri, however, a number of scholars, led by A. Deissmann and J. H. Moulton, began to recognize the common linguistic features of these ephemeral documents and the Greek of the NT. Important discoveries were made in terms of syntax and vocabulary. A number of features that had been thought to be unparalleled in the Greek of the NT were seen to be commonplace in the Greek of the papyri, and numerous words thought to be unique were found to have parallel senses in the papyri. After the deaths of Moulton, Deissmann, and others who had advocated the importance of the papyri, there was an apparent backlash against their position. The Jewish origins of Christianity made it understandable that

numerous scholars should assume that the language of the NT—even though it is Greek—was also Semitic in some ways, perhaps influenced by the *Septuagint or *synagogue worship.

Several different Semitic hypotheses were advanced to explain the Greek of the NT. Some early Semitic-language advocates argued that numerous books in the NT were direct translations from Aramaic (e.g., the Gospels and Acts, as well as Revelation), while a few others have claimed that Hebrew was the original language of composition for some of the books of the NT (e.g., John's Gospel). Most scholars did not go this far, however, making instead the much more modest claim that the Greek of the NT documents reflected the fact that their authors' first language was Aramaic, apart from the words of Jesus, which had been translated at some stage out of Aramaic, and still reflected an Aramaic substratum. This purported confrontation between Aramaic and Greek has led a few scholars once again to posit that the mix of the two languages led to the development of a special dialect of Semitic Greek, either a temporary language created when the two came into initial contact or an independent variety of Semitic Greek that continued to be used in the early church. Those wishing to claim special characteristics of the NT have occasionally welcomed this position, despite the lack of evidence for the creation and certainly the persistence of such a creole language.

The last two decades of the twentieth century saw a return to the Greek hypothesis. M. Silva has shown that the linguistic distinction between *langue* (the language system) and *parole* (a particular writer's use of it) helps to clarify the linguistic situation in Palestine in the first century. Although one's individual *parole* may have had peculiarities brought about through knowledge of a Semitic language, the *langue* in use was clearly Hellenistic Greek. G. Horrocks (92-95) maintains that most features of the Greek of the NT can be paralleled either in the Septuagint, seen as one of the most important examples of Hellenistic vernacular literature, or in low-level Koine (i.e., Hellenistic) Greek texts such as are found in Egypt. The Palestinian linguistic situation was not one of two languages, Aramaic and Greek, competing on an even footing. Greek was the prestige language of Palestine, and anyone wishing to conduct business on any extended scale, including any successful fisher-

men from the Hellenized region of Galilee and probably any craftsmen or artisans who would have come into contact with Roman customers, would have needed to have known—indeed, would have wanted to know—Greek (see Porter 2000a, 126-80).

3. Issues in Recent Study of Greek.

Despite the fact that Greek has a continuous history of three millennia and it has been studied for centuries, a number of issues regarding the language merit further discussion. These can only be mentioned in passing here (see Porter 1996, 7-20).

3.1. Modern Linguistics and the Tools for Study of the Greek New Testament. One of the major shortcomings in NT studies is the fact that virtually all reference grammars for the study of the Greek of the NT were written before the insights of modern linguistics were applied to analysis of the language. Only within the last twenty or so years has NT study benefitted from what can be considered a modern linguistic approach (see Porter 1989a, for what follows). Modern linguistics is a complex discipline in its own right, with a number of different competing models. There are features of a linguistic investigation that differentiate it from other forms of study. For example, an informed linguistic approach does not involve the ability to speak many languages, nor does it require that one know more languages than the one being studied (e.g., if one is studying Greek, one does not need to know the Semitic languages, unless comparative study is being done); it is not to be equated with historical linguistics or the study of the history of a language and its development (this includes etymologies, genuine or otherwise); it is not classical philology or the studying of a few select literary texts as the benchmark for evaluating other Greek (as do Blass and Debrunner in their grammar); and it is not to be equated with translational ability, a limited tool for showing linguistic knowledge.

A functional approach to the study of language has yielded significant insights in recent investigation of Greek. Functionalism emphasizes the function of various components of a language, treating the language as a system in which the various elements are interconnected and form a coordinated structure. This systematic and structural dimension to language is crucial to understanding the use of language in

context and hence its meaning. Description and analysis of the language should begin from empirical data and present these data in an explicit fashion, open to analysis by others. Thus estimation of the function of, for example, participles, is determined on the basis of a complex set of definable factors, such as tense form, case, syntax and especially context. Furthermore, synchronic analysis takes precedence over diachronic analysis, although the two are interrelated. That is, any given synchronic state is the result of diachronic change. For example, the Greek four/five case system (five, if one counts the vocative as an independent case, four if one does not) may earlier have had eight cases, but it is the four/five cases that must be defined in terms of their use in the NT. Diachronic information may be interesting and even informative, but it is not to be equated with or elevated above synchronic description and analysis of the use of the language at hand.

3.2. Written Texts and Literacy. Whereas much of the traditional emphasis of modern linguistic investigation has been upon the spoken forms of language, there is an obvious limitation when approaching an ancient language, where there are no native speakers of that form of the language. Adjustments must be made in linguistic method, especially when it is considered that, at the most, probably only 20 to 30 percent of the men of a classical city were able to read or write (Harris; see Literacy and Book Culture). In other words, the instances of linguistic usage come from a highly selective part of the population. Speculation about the relation of these written texts, even those of the papyri, as unself-conscious and lacking in artifice as they are, to the spoken language is limited by the fact that one cannot use a native informant to check the analysis.

Nevertheless, one does not wish to overstate the opposition between written and spoken forms of language. Some recent analysis across a broad spectrum of *genres has shown that there are greater similarities between these broad forms of text than has been realized (see Biber). One of the means of overcoming some of these limitations is by utilizing a greater corpus of material against which to check specific findings and broader generalizations. Corpus linguistics, in which corpora of texts selected for particular purposes and grammatically tagged in a machine-readable way, is providing a concep-

tual means of advancement. However, the limitation remains of not having an adequately tagged text for even the Greek NT, to say nothing of the language of the surrounding Greco-Roman world (O'Donnell).

3.3. Greek Verbal Structure. Study of Greek verb structure has undergone radical changes in the last almost two hundred years (see Porter 1989b; 1996, 11-17, 21-38). The rationalist period, represented by the influential grammarian G. B. Winer, analyzed Greek verbal structure in terms of a logical framework, in which, for example, tense forms were said to be equated with temporal values. This kind of rigid framework is still found in a number of elementary or teaching grammars. Great advances were made in the study of languages in the nineteenth century, when it was realized that many languages had family resemblances. As a result of this discovery, new categories of thought were applied to analysis of languages ancient and modern. K. Brugmann, who developed the theory of *Aktionsart*, stated that verb structure is related not only or exclusively to temporal categories but also to the kind of action or the way that an event occurs. *Aktionsart* theory stated that a language has various means, including the use of verb tenses, verbal roots, and affixing of prepositions, to express the ways in which action occurs.

This theory made its way into NT study through the work of F. Blass and J. H. Moulton and is still found in A. T. Robertson, C. F. D. Moule and N. Turner. The development of verbal aspect theory, a logical continuation of *Aktionsart* theory, recognizes that verbs are not primarily concerned either with time or with objectified action but with a subjective perspective on action. Major studies include those by B. M. Fanning, K. L. McKay and S. E. Porter (1989b). There is still significant disagreement among these three proponents, however. One of the major points of disagreement is whether the Greek verb carries any denotation of time when it is used in the indicative mood (grammarians of Greek, including that of the NT, already recognized at the beginning of the twentieth century that Greek verbs do not refer to time in the nonindicative moods). Various means of testing such a hypothesis have been tried. In recent discussion the issue of the relationship between verbal aspect and other grammatical choices has been analyzed (i.e., is choice of aspect dependent upon other grammatical choices, such as

mood). The argument has been put forward by critics of aspectual theory that verbal aspect is dependent upon the choice of other grammatical categories. Recent research has shown that choice of aspect in virtually all instances is made independent of other grammaticalized constraints (Porter and O'Donnell).

3.4. Register Analysis. Dialect is concerned with the variety of language by various users, especially as this use is reflected in their variations in pronunciation. Register is concerned with variety of language according to its use. Following the work of M. A. K. Halliday (Halliday and Hasan), some recent linguistic analysis of the Greek of the NT has attempted to incorporate the category of register. Register is concerned with various constraints on language usage created by the context of situation in which language is used. These constraints affect three major components of language: its mode, or the textual meaning component (written and spoken forms, the ways in which the text holds together, etc.); its tenor, or the interpersonal meaning component (who is addressing and being addressed in the text); and its field, or the ideational meaning component (who does what to whom about what). Isolating and analyzing these three components, rather than treating all data on the same plane, provides for a more detailed and nuanced analysis of a text and its context of situation.

Register analysis is proving to be a helpful tool with regard to several different areas of investigation of the Greek of the NT. The first is in the area of discussion of the various languages in use in the first century. The term *diglossia*, a subject of considerable discussion in linguistic circles for the last four decades of the twentieth century, has been used as a way of categorizing the uses of language in Palestine and elsewhere, noting that there were at least three languages—Greek, Aramaic and Hebrew—and that these languages were used in various ways on the basis of the speakers and their purposes. *Diglossia* does not appear to be the correct term to describe this situation, however, in which there are languages that are not the high and low forms of a single language (the sense in which *diglossia* is probably best used).

Instead, analysis of the various uses of language, including various registers of the use of Greek, has proved useful. Thus one can effectively describe differences in the registers that

Paul is using in his various letters (Porter 2000c). By extension, one can perhaps use register analysis to work from the text back to a plausible context of situation that would have generated a text of this sort. This kind of analysis has been applied to Mark's Gospel (Porter 2000b). One is able to overcome much of the dichotomous thinking regarding Semitic influence on the Greek of the NT through the use of register analysis. Rather than thinking in terms of whether Greek is or is not Semitized, one can consider a variety of contextual factors that may result in shifts of features of register, some of which may involve, for example, drawing upon features of the Greek of the Septuagint. A further extension of this method has recently been introduced in historical-Jesus research to attempt to formulate new criteria for authenticating sayings of Jesus. The various dimensions of register can be analyzed to see if a given discourse of Jesus reveals similar or different variables of register than the surrounding narrative (Porter 2000a, 210-37).

4. The Languages of Jesus.

A related question to the issue of the Greek of the NT is that of which language or languages Jesus spoke (see Fitzmyer). The vast majority of scholars rightly contend that Jesus' primary and first language was probably Aramaic (Casey). Many scholars also entertain the possibility that, at least in a religious context such as that indicated by Luke 4:16-20, Jesus may have spoken Hebrew as well. This linguistic scenario seems well founded. Jesus was born to a Palestinian Jewish family and was apparently well versed in the institutions of the Jewish people, including the use of Aramaic, the language of the Jews since their return under the Persians from exile in Babylon. Not only did Aramaic remain a low-level vernacular in Syria during the time of the Seleucids and after, but also Aramaic continued to be used by Jews during the first century, as is well attested from the *Dead Sea Scrolls finds and other related documents. Jewish worship during this time was often carried on in Aramaic, with an interpretative translation into Aramaic (known as a *targum) of the biblical text being offered.

A more contentious issue in recent scholarship, however, is whether Jesus knew and used Greek and possibly even taught in it on occasion (see Porter 2000a, 126-80 for discussion). Many

scholars recognize this possibility in theory but hesitate to specify particular instances where this may have occurred. Jesus came from an area that had been highly influenced by Hellenism. Nazareth was a small village, but it was on the same trade route as an excellent example of a Greek city in Palestine, Scythopolis, where both Greek and Aramaic were spoken, and near the primarily Gentile Decapolis, Hellenistic cities or villages in the region of Galilee. Jesus was involved in a trade where it is reasonable to assume that he would have had contact with others than his townspeople, possibly including Romans or others who spoke Greek. In the course of his itinerant ministry, Jesus also traveled to various parts of Palestine where he may have had contact with Greek speakers. Several of his disciples, including Andrew, Philip, and even possibly Peter, had Greek names, despite being Jewish.

On the basis of the linguistic context of first-century Palestine, as well as Jesus' background, a set of criteria have recently been developed to test whether Jesus spoke in Greek and whether any of the words of Jesus in the Gospels may record his actual words (see Porter 2000a, 126-237). The criteria that have been developed are three: the criterion of Greek language and its context, which determines the likelihood that in a given context Jesus would have spoken Greek; the criterion of Greek textual variance, which determines whether any of the words recorded can be attributable to Jesus; and the criterion of discourse features, which examines features of discourse, analyzing the words and actions of Jesus through the category of register.

This examination has shown that there is a plausibility that in a number of contexts Jesus may well have used Greek in conversing with others: (1) Matthew 8:5-13 par. John 4:46-54: Jesus' conversation with the centurion or commander (but the Johannine account diverges in terms of wording); (2) John 4:4-26: Jesus' conversation with the Samaritan woman; (3) Mark 2:13-14 par. Matthew 9:9; Luke 5:27-28: Jesus' calling of Levi/Matthew; (4) Mark 7:25-30 par. Matthew 15:21-28: Jesus' conversation with the Syrophenician or Canaanite woman; (5) Mark 12:13-17 par. Matthew 22:16-22; Luke 20:20-26: Jesus' conversation with the *Pharisees and Herodians over the Roman *coin of Caesar; (6) Mark 8:27-30 par. Matthew 16:13-20; Luke 9:18-21: Jesus' conversation with his disciples at

*Caesarea Philippi; (7) Mark 15:2-5 par. Matthew 27:11-14; Luke 23:2-4; John 18:29-38: Jesus' trial before Pilate. Furthermore, on the basis of Greek textual variance, in several of these contexts his actual words may be recorded (Jesus' conversation with the Syrophenician or Canaanite woman, his conversation with Pharisees and Herodians, his conversation at *Caesarea Philippi and his trial before Pilate).

5. Conclusion.

Despite the long history of discussion of the Greek of the NT, there remain many issues of contention and debate. Nevertheless, despite these areas of continuing disagreement, there have also been many important accomplishments in recent years, as modern linguistic principles have been applied to the study of the Greek NT. These studies have led in a number of different directions, some of them having the potential for shifting into more profitable areas of research what have become longstanding but stagnant positions.

GREEK OLD TESTAMENT.

GREEK PAPYRI, PALESTINIAN. See PAPYRI,
PALESTINIAN.

GYMNASIA AND BATHS

The gymnasium, a Greek institution that seems to have existed as far back as early classical times, went through various changes in its millennium-long history. During Greek and *Hellenistic times, the gymnasium formed the basis for the Greek *polis*, which itself formed the basis for the state. In Hellenistic times, the gymnasium was the center of *education, from primary education in letters through secondary education in Greco-Roman authors (Homer chief among them) to tertiary education in *rhetoric. Along with these intellectual pursuits came a variety of physical undertakings and training in sports and combat, performed in the nude. Attendance of a gymnasium was an essential prerequisite to citizenship in the *polis*, and hence membership was jealously guarded and brought with it heavy responsibilities. The two most important offices of the gymnasium, *gymnasiarch* and *kosmētēs*, both carried with them a financial load. The *gymnasiarch*, or ruler of the gymnasium, was usually elected for a year-long term and was responsible for the supply of the basic needs of the gymnasium—fuel for hot water and oil for anointing and lighting. The *kosmētēs*, or master of order, was also elected for a year and was responsible for the supervision of the procedures and routines through which the *ephebēs*, as students in the gymnasium were called, would pass (Lewis, 46-47).

1. Gymnasia

2. Baths

1. Gymnasia.

1.1. *Gymnasia in Greek and Hellenistic Life.*

The archaeological, inscriptional and papyrological evidence for gymnasia in the Hellenistic era is outstanding and has allowed us much in-

sight into the structure of this important Hellenistic institution (see Delorme for pictures and plans). The essential architectural features of the gymnasium were the *palaistra*, an open court for wrestling, and the *dromos*, a track for running. The *palaistra* was typically surrounded with colonnades, and a variety of other rooms opened off of it (cloakroom, anointing room, oil room, dusting room, ball-playing rooms, room for exercising with the punch ball, the usual rooms of a bathhouse [see below], teaching/conversation rooms and even sometimes lecture theaters [Jones, 220-26]). These various additions accrued over time to the original two-part structure, in varying degrees of complexity. The Attalid kings of Asia Minor are recorded as having built one gymnasium for each of the various levels of education, students moving from one to the other somewhat like the modern Western educational system (Jones, 220 and n. 20 [351]). Some gymnasia are even thought to have kept rather extensive libraries.

1.2. *Gymnasia in Roman Life.* The gymnasium eventually became part of the Roman world, but with a varying degree of change—in the highly Hellenized Egypt (see Hellenistic Egypt), only a certain amount of practical change took place, with the civic function of the gymnasium remaining virtually unchanged (Lewis, 35). In other places the change was so fundamental as to suggest that the gymnasium remained such in name only. On an athletic level, the gymnasium became a place of demonstration rather than involvement—physical training in Rome was confined to the Campus Martius and was essentially aimed at military activity (Bonner, 47). Gymnasia under Roman rule thus became largely educational institutions, and the architectural evidence points toward this change (Delorme; see also Yegul). Differences in Roman society necessitated this—rather than the highest citizenship being that of the *polis* or *metropolis*, Romans looked toward a more centralized *empire, and *citizenship of that empire was of more importance than individual citizenship of the city. City citizenship was still important, but its role had been fundamentally changed, and this change brought a similar change in the role of the gymnasium.

1.3. *The Gymnasium and the Jews.* First Maccabees 1:13-15 and 2 Maccabees 4 (see 1 and 2 Maccabees) record the famous episode of the establishment of a gymnasium in *Jerusalem. Apparently, in about 175 B.C., Jason asked Antio-

chus IV Epiphanes for two things: the right to refound Jerusalem as a Greek city, named Antioch in his honor, and to establish a gymnasium there. Some important points must be noted with regard to this episode. As A. H. M. Jones (220) has pointed out, "Any barbarian community which aspired to the status of a Greek city must found a gymnasium." Jerusalem was, in the eyes of its Greek overlords, such a barbarian city. However, the institution of a gymnasium could only have taken place, as M. Hengel (78, 244) has pointed out, with much support from his fellow Jerusalemites and at the end of a sufficient amount of Hellenization that would suggest to Antiochus that this would be a suitable city upon which to bestow this honor.

The largest problem with the foundation of such an institution in Jerusalem was the fact that athletic activities in the gymnasium were done in the nude, which was in itself unlawful to Jews. However, 2 Maccabees 4 and Josephus (*Ant.* 12.5.1 §§240-41) suggest that Jews were undergoing operations to undo the effects of circumcision so as to avoid embarrassment, and priests were even neglecting their duties in the temple to partake in the gymnasium activities. We have no way of knowing the veracity of the reports in the Maccabean literature, given its pro-Hasmonean stance (see Hasmonians) and outright vilification of its enemies. We also have no reason to imagine that the gymnasium as an institution fell out of use after the establishment of the Hasmonean state (see Hengel, 76-77). Jason's gymnasium foundation was, however, a flash point in an ever increasing movement toward the Hellenization of Judaism and Palestine. It was indeed a—perhaps *the*—decisive moment in the overt Hellenization of Jewish culture, and it brought with it all kinds of religious, cultural and political implications, so much so that we should not be surprised to see this particular event held up for contempt in the way that it is in the Maccabean literature (see Hellenistic Judaism).

Jews in *Alexandria seem to have been more at ease with the gymnasium, as *Philo seems to assume a gymnasium education for upper-class Alexandrian Jews (e.g., *Philo Som.* 69), and the edict of Claudius in A.D. 41 (*CPJ* 2 no. 153) to forbid gymnasium membership and hence citizenship to Jews was received with much consternation, until the so-called revolt of Quietus in A.D. 115 to 117 virtually wiped out the Jewish community in Egypt (Hengel, 68-69).

2. Baths.

The practice of regular bathing was very important in Roman culture. In the Roman period, the bathhouse in many ways took the place of the gymnasium, and it is not uncommon to have the two institutions connected architecturally as well as functionally. We have examples of bathhouses from the core to the furthest extents of the Roman Empire (the famous baths at Bath, England [of first-century origin] or the Herodian bathhouse on Masada [mid-first century B.C.]). The usual construction of a bathhouse included four rooms: the *apodyterium*, for changing; the *frigidarium*, with cold water; the *tepidarium*, with lukewarm water; and the *caldarium*, with hot water. One moved through the various rooms starting with the *caldarium*, and so one was able to progressively cleanse the body with various rubbings and scrapings. Bathhouses were variously segregated and unisex—even where they were formally separated into men's and women's sides, it is probable that these divisions were not always enforced. Depending on the size and relative wealth of a bathhouse, along with the various washings, patrons would have access to assorted other ministrations, such as massage, hairstyling or cosmetics. A bathhouse was not solely for these purposes of hygiene, however. It also formed a central focus for social life in the Roman city, and as such people often spent a great deal of time at the bathhouse, even conducting business in alcoves provided for the purpose (see Yegül).

HABAKKUK COMMENTARY (1QpHab)

One of the original Dead Sea Scrolls to be discovered in 1947, *Pesher Habakkuk* (the Commentary on Habakkuk) is of special significance in view of its early publication in 1951 and its relative completeness. This scroll has been the subject of several studies and is regarded as the paradigm by which other examples of the pesher genre are to be assessed.

1. Description
2. Facets of the Biblical Text and the Commentary

1. Description.

Copied in the second half of the first century B.C., this prophetic pesher was written in thirteen columns of seventeen lines each and ended with the conclusion of Habakkuk 2 in the middle of the thirteenth column. One interesting feature of this scroll is its presentation of the divine name or Tetragrammaton YHWH in paleo-Hebrew letters, with the rest of the text in the more regular square Hebrew script.

1QpHab may be outlined by its comment on Habakkuk as follows:

- Religious strife in Israel [On Hab 1:1-4]
- The Man of the Lie, the new covenant, and the last days [On Hab 1:5]
- The coming of the cruel and mighty Romans (the "Kittim") [On Hab 1:6-11]
- The need to remain faithful to God's law [On Hab 1:12-13]
- The Kittim, who sacrifice to their standards [On Hab 1:14-17]
- On the Teacher of Righteousness [On Hab 2:1-3a]
- Exhortation to remain faithful amidst suffering [On Hab 2:3b-4a]
- Escaping the final judgment by remaining loyal to the Teacher [On Hab 2:4b]

On the Wicked Priest [On Hab 2:5-6]

The fate and death of the Wicked Priest [On Hab 2:7-11]

The Man of the Lie or the "Spouter of Lies" [On Hab 2:12-14]

The Wicked Priest persecutes the Teacher of Righteousness [On Hab 2:15]

Further details on the fate of the Wicked Priest [On Hab 2:17]

Condemnation of Gentile idolatry [On Hab 2:18]

2. Facets of the Biblical Text and the Commentary.

The form of this pesher is citation of the biblical text, followed by commentary introduced by a citation formula (either "its meaning is" or "the meaning of the item is with respect to"). On occasion words that were quoted earlier but not commented on are introduced by formulas of secondary quotation ("for this is what it says" or "and as for what it says").

The scriptural text of Habakkuk quoted by *Pesher Habakkuk* is of some text-critical importance since it at times varies from the Masoretic Text. One example is found at Habakkuk 1:5 (1QpHab 2:1), where 1QpHab agrees with the *Septuagint in implying "traitors" (*hōg'dim*), as opposed to "among the nations" (*baggōyim*) in the Masoretic Text. However, in several instances 1QpHab cites a verse in one form but then comments on an apparently different form. For example, in 1QpHab 9:9-13 the citation of Habakkuk 2:16 reads "also drink (imperative) and stagger," whereas the pesher of this verse refers to one "who did not circumcise the foreskin of his heart" (apparently from "and he uncircumcised" in the Masoretic Text).

Several exegetical techniques are to be found in *Pesher Habakkuk*. In some cases the base text is simply paraphrased or expanded for purposes

of clarity; for example, in interpreting Habakkuk 1:17 ("he shall not have mercy") the commentator quotes Isaiah 13:18 ("they shall not have mercy on the fruit of the womb"). Another device is to make specific terms that are generic or vague in the base text: for example, specifying that the "wicked one" of Habakkuk 1:13 is the Man of the Lie (1QpHab 5:11) and identifying the "arrogant man" of Habakkuk 2:5 as the Wicked Priest (1QpHab 8:8).

In many instances a person or thing specified in the base text is interpreted as a completely different one. For example, the Chal-deans that were mentioned by the prophet Habakkuk are now identified as the Kittim (i.e., the Romans) of the peshar and of the author's own time. A similar approach is adopted by the NT writers, who frequently reinterpret earlier Scriptures, especially prophetic texts, as referring to the life, death or resurrection of Jesus. It is also interesting to note that the term *new covenant* is used in 1QpHab; in 2:3 the "traitors" of Habakkuk 1:5 are associated with "the traitors of the new covenant."

HASMONEANS

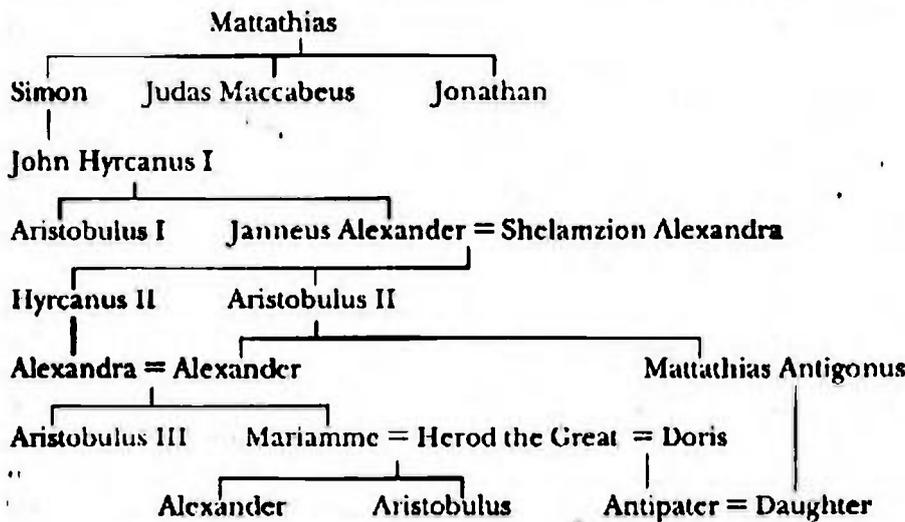

The Hasmoneans were a Jewish family that became instrumental in freeing Judea from

*Seleucid rule, beginning in 167 B.C. Several generations served as high *priests, governors and kings, until Roman intervention in 63 B.C. curtailed their role and *Herod the Great ousted the last Hasmonean king in 37 B.C. The origin of the family's name is obscure but is most plausibly related to an otherwise unknown eponymous ancestor by the name of *Hasmōnay* (*m. Mid.* 1:6 and elsewhere in *rabbinic literature; *Asamōnaios* in Josephus *J.W.* 1.1.3 §36; cf. Josephus *Ant.* 12.6.1 §265 and *passim*). Sometimes the term *Hasmonean* is restricted to John Hyrcanus I and his descendants, while here as in Josephus and in rabbinic literature it is used in reference to the preceding generations as well.

1. Background of the Family
2. Rebels and Rulers
3. Other Notable Hasmoneans
4. The Significance of the Hasmoneans

1. Background of the Family.

The family had its home base in Modein, northwest of *Jerusalem, where Simon is said to have built a grandiose family tomb (1 Macc 13:25-30; cf. 2:70; 9:19; Josephus *J.W.* 1.1.3 §36). It claimed to belong to the priestly course of Joarib (1 Macc 2:1; 14:29; cf. 1 Chron 24:7), but its Aaronite descent may not have been beyond doubt (Smith). Between 153/152 and 35 B.C., nine Hasmoneans served as high priests of the Jerusalem *temple. While Judas Maccabeus and his father Mattathias before him held only informal leadership functions, the Hasmonean high priests usually also held civil and military offices. They were gradually recognized as governors or local rulers by different Seleucid kings. A certain independence was proclaimed about 142 B.C. by Simon (1 Macc 13:41-42), but autonomy was not complete until the last decade of the second century (Barag). Beginning with John Hyrcanus I, the Hasmoneans issued their own *coinage, generally bronze coins of small denomination (Meshorer; Barag). By the end of the second century, they were able to claim the title of king, which they held until Roman intervention in 63 B.C. After that, Hyrcanus II was allowed to continue to hold the office of high priest and *ethnarch* ("ruler over a tribe or people"). The re-newed royal claim of Mattathias Antigonus (40-37 B.C.) quickly gave way to the rule of Herod the Great, who under political pressure named one last Hasmonean high priest for a short time (35 B.C.).

The Hasmoneans

The popularity of the Hasmoneans obviously changed over the years. Judas was considered a hero by people with different outlooks (cf. 1 Macc 3:1-9; 9:20-22; 2 Macc 15:11-17; 1 Enoch 90:9-16). His successors gradually gathered wider support, but their high priesthood did not remain uncontested. Opposition to it is expressed in a variety of circumstances in different sources (*Habakkuk Commentary [1QpHab] and elsewhere in the *Dead Sea Scrolls; 1 Macc 10:61; 11:21, 25-26; Josephus *J.W.* 1.2.1 §48; *Ant.* 13.10.5 §291; 13.13.5 §§372-73; *b. Qidd.* 66a). Yet the most severe blow to the Hasmoneans' position seems to have come through the internecine strife between the two sons of Shelamzion Alexandra, which led to Roman intervention. According to Josephus, who prided himself on being descended from the Hasmoneans (Josephus *Ant.* 16.7.1 §187; *Life* 1 §§1-4), even the last high priest from this family, Jonathan Aristobulus III, enjoyed great popularity, in part because of his ancestry (Josephus *Ant.* 15.3.3-4 §§52-57). The quest for dynastic legitimation seems to have played a role in Herod's marriage to Mariamme (Josephus *J.W.* 1.12.3 §§240-41), the granddaughter of Hyrcanus II and Aristobulus II, and in Antipater's marriage to a daughter of King Mattathias Antigonus (Josephus *Ant.* 17.5.2 §92). Herod did not rest until he had eliminated all male descendants of the Hasmoneans (Josephus *Ant.* 15.7.10 §266). Even after his death (4 B.C.), the Hasmonean house remained so popular that someone impersonating a son of Mariamme at least briefly attracted widespread

support among *Diaspora Jews (Josephus *J.W.* 2.7.1-2 §§101-10; *Ant.* 17.12.1-2 §§324-38).

2. Rebels and Rulers.

2.1. *Mattathias.* Mattathias (died c. 166 B.C.) is said to have refused to offer a pagan sacrifice in Modein and thereby to have initiated a revolt against the decree of Antiochus IV that forbade under threat of death the observance of Jewish law (1 Macc 2:1-28; cf. Josephus *J.W.* 1.1.3 §§36-37). He is compared to Phinehas (cf. Num 25:1-15) in his zeal for *Torah observance. The account of his actions in 1 Maccabees 2:1-70 seems to be greatly influenced by later dynastic concerns (Sievers 1990, 29-37).

2.2. *Judas Maccabeus.* Judas Maccabeus was the third son of Mattathias. His surname may be related to the Hebrew/Aramaic root *mqb* (perhaps "hammerlike"). It gave the title to books about him and his brothers (1-2 Macc). "Maccabees" is sometimes used as a quasi-synonym of "Hasmoneans" (3-4 Macc have no direct relation to him). Judas became the leader of a growing popular revolt against the Seleucid authorities and their Judean supporters. After initial victories, he was able to have the defiled temple of Jerusalem *purified and rededicated (1 Macc 4:36-59; 2 Macc 10:1-8; *Megillat Ta'anit*). This event was and is remembered in the Jewish *feast of Hanukkah ("dedication"; *b. Sabb.* 21b; cf. Jn 10:22). Despite this success and the revocation of Antiochus IV's decree the revolt continued. Judas seems to have sought support even in *Rome, through a formal alliance (1 Macc 8)

that was renewed by several of his successors. He was killed in battle after being abandoned by many of his earlier followers (161/160; 1 Macc 9:5-18; differently Bar-Kochva, 48-49, 399).

2.3. Jonathan. Judas's brother Jonathan took over as leader of the rebellion. After years of relative obscurity, he was courted by several contenders for the Seleucid throne and accepted the high priesthood from King Alexander Balas (153 or 152 B.C.). While maintaining a strong military force, Jonathan achieved more by diplomacy than by warfare, cooperating with Alexander Balas and fostering alliances with Rome and allegedly even with Sparta. He was killed by order of the Seleucid pretender Tryphon, after being captured through a ruse (143/142 B.C.).

2.4. Simon. Simon, the last surviving brother, took over a leadership position immediately after Jonathan's capture. He too became high priest, although the details of his appointment remain obscure. Only in his third year was he confirmed in office by a popular assembly (1 Macc 14:27-49; Sievers 1990, 119-27). In the meantime he had conquered Gazara (Gezer) and the *Akra* ("citadel"), a fortified quarter of Jerusalem that had remained in the hands of opponents of the Hasmoneans for more than twenty-five years. Like all his brothers, he died a violent death: he was killed by his own son-in-law, who sought in vain to gain power over Judea (spring 135 or 134 B.C.).

2.5. John Hyrcanus I. John Hyrcanus I (135/134-104 B.C.) succeeded his father, Simon, as high priest. However, the Seleucids still maintained their claim of sovereignty and taxation over Judea. Antiochus VII Sidetes attacked Jerusalem soon after Hyrcanus's accession. After a protracted siege Hyrcanus was able to work out a compromise that included payment of tribute and military support for Antiochus's eastern campaign but that left Jerusalem without a Seleucid garrison. Apparently only during his last years did Hyrcanus conquer additional territory for Judea in Idumea to the south and in *Samaria and lower *Galilee to the north. The destruction of the buildings on Mt. Gerizim, including the Samaritan temple precinct, has recently been confirmed by archaeological excavations. The numismatic evidence there and at other sites points to a conquest by Hyrcanus in 111 B.C. or shortly thereafter (Barag). Toward the end of his life, Hyrcanus had to deal with intra-Judean opposition. Whether this

meant a change of his allegiance from the *Pharisees to the *Sadducees, as Josephus reports (Josephus *Ant.* 13.10.5-7 §§288-99), cannot be otherwise confirmed (cf. *b. Qidd.* 66a).

2.6. Judas Aristobulus I. Judas Aristobulus I (104-103 B.C.) became high priest after his father's death. According to Josephus, he was the first Hasmonean to assume the title of king (Josephus *J.W.* 1.3.1 §70; *Ant.* 13.11.1 §301; 20.10.3 §§240-41). Power struggles within and around the family induced Aristobulus to put his mother and his brother Antigonos to death. He himself fell ill and died shortly thereafter.

2.7. Alexander Jannaeus. Alexander Jannaeus (103-76 B.C.) took over high priesthood and kingship after his brother. He made additional conquests, bringing the Hasmonean kingdom to its largest extent, including much of Galilee and Transjordan and the coastal region from the Carmel mountains to Rhinocorura, south of Gaza. Internal opposition to his rule was strong, especially during his later years. This led to bloody civil war, with the temporary intervention of one of the last Seleucid kings, Demetrius III, in 88 B.C., and repressive action by Jannaeus. According to Josephus, Jannaeus had eight hundred of his enemies crucified and their wives and children slain before their eyes (Josephus *J.W.* 1.4.6 §97; *Ant.* 13.14.2 §380). These events are also remembered in 4QpNah 3-4 i 2-8, where the name of Demetrius is partially preserved and Jannaeus is called "the Lion of Wrath." Another text from Qumran (4Q448) has been interpreted as a prayer for the welfare of Jannaeus (Eshel, Eshel and Yardeni), but this interpretation is disputed (Main).

2.8. Shelamzion Alexandra. Shelamzion Alexandra (76-67 B.C.) is probably to be distinguished from Salina or Salome Alexandra, the wife of Aristobulus I (Ilan 1993). She succeeded her husband after his death. Her name is given only as Alexandra by Josephus, but her true Hebrew name, Shelamzion, is now attested at Qumran (4Q922 2:4). Such female succession was nearly unprecedented in the history of Judea but was probably influenced by the practice in neighboring *Ptolemaic Egypt, where it had become quite common. The queen appointed the elder of her two sons, Hyrcanus II, high priest and associated herself with the Pharisees, who had been among the internal enemies persecuted by her husband. She allowed them to take action against her husband's supporters. She

was able to maintain external peace, relying on a largely mercenary army. Rabbinic literature generally views her in very favorable light. Josephus, whose work is here partly based on that of Herod's court historian Nicolaus of Damascus, gives contradictory evaluations of her reign (Ilan 1996, 237-42).

2.9. Aristobulus II. Aristobulus II, the younger of the two sons of Shelamzion, supplanted his brother Hyrcanus II, already high priest and designated to become king. Hyrcanus, however, was induced by Antipater, the father of King Herod the Great, to seek reinstatement. With assistance from the Arab king Artas they defeated Aristobulus and besieged his remaining supporters in Jerusalem. The siege was lifted by the threat of Roman intervention. When later both Hasmoneans asked the Roman proconsul *Pompey, then in Damascus, for his support, a third Judean delegation accused both of them of trying to enslave their people and petitioned that neither of them be king (Josephus *Ant.* 14.3.2 §§41-45; Diodorus Siculus *Bib. Hist.* 40.2 = M. Stern 1974-84, 1:185-87). When Aristobulus did not obey Roman orders and the fights between the brothers continued, Pompey advanced against Jerusalem and conquered it after a three-month siege in the summer of 63 B.C. He now assigned the high priesthood again to Hyrcanus II, while Aristobulus was sent to Rome as a prisoner. After escaping and being recaptured, he was sent by Julius Caesar to fight against Pompey but was poisoned by partisans of Pompey before he could go into action (Josephus *Ant.* 14.7.4 §§123-24).

2.10. Hyrcanus II. Hyrcanus II served as high priest during the reign of his mother, assumed royal power upon her death, was ousted almost immediately by his brother and reinstated as high priest and ethnarch by Pompey in 63 B.C. He is said to have been lacking initiative and to have been entirely under the influence of Antipater, the father of Herod the Great. Yet, Hyrcanus's active involvement in support of Julius Caesar and his allies is evidenced in Roman documents (Josephus *Ant.* 14.10.2-7 §§190-212) and in several Greek historians (Josephus *Ant.* 14.8.3 §§138-39 = M. Stern 1974-84, nos. 76, 79, 107). He was confirmed in office by Caesar in 47 B.C. but was ousted by his nephew Mattathias Antigonus (40 B.C.). The latter not only had him put into Parthian custody but also mutilated his ears, in order to disqualify him from high

priestly service (cf. Lev 21:17-21). After being freed by the Parthians Hyrcanus returned to Jerusalem. He was killed by Herod in 30 B.C., because his very existence was seen as a challenge to Herod's claim to royalty (Josephus *J.W.* 1.22.1 §§433-34; *Ant.* 15.6.1-4 §§164-82).

2.11. Mattathias Antigonus. Mattathias Antigonus (40-37 B.C.) briefly served as the last Hasmonean ruler, brought to power by the Parthians. On his coins, his titles are given as high priest (in Hebrew) and king (in Greek). He was besieged in Jerusalem by Herod, who conquered the city through brutal Roman intervention. Antigonus was taken into Roman custody and beheaded in *Antioch, apparently out of fear that his continued popularity might be dangerous to Herod's rule and thus might undermine Roman control (Josephus *J.W.* 1.18.1-3 §§347-57; *Ant.* 14.16.2 §470; 15.1.2 §10).

3. Other Notable Hasmoneans.

Among the Hasmoneans who did not reach official leadership positions, the best known are those who became part of Herod's court, in particular his wife Mariamme and her mother, Alexandra. Herod's sons by Mariamme, Alexander and Aristobulus, also prided themselves on their Hasmonean ancestry. All four were killed by order of Herod, because they too were perceived as a threat to his own dynastic aspirations. The prominence given by Josephus, especially in the *Antiquities*, to the above mentioned and other Hasmonean women is due in part to the biases of his main source for the period, Nicolaus of Damascus (Ilan 1996). Yet, it is clear that several Hasmonean women in addition to Shelamzion Alexandra became active in areas that had been largely male-dominated (Sievers 1989).

4. The Significance of the Hasmoneans.

During the course of more than a century, the Hasmonean family played a central role in the life of Judea and of Judaism. It was the tenacity of the martyrs and the courage of Judas Maccabeus and his companions that saved monotheism for Judaism and thus for humanity (Bickerman). The development of distinct Jewish groups, or Judaisms, in the late Second Temple period occurred partly in response to some of the later Hasmoneans. Thus the influence of the Hasmoneans reaches well beyond their own time.

HEAD COVERINGS

Among customs that invite a discussion of NT background, head coverings is one of the most quickly recognized because it is one most foreign to modern Western culture. For the same reason, however, this custom remains one of the more perplexing to many people. This article surveys the frequent assignment of women to the domestic sphere, a broader concept often held to be related to head coverings; various Mediterranean customs about head covering; the gender-specific head covering customs and possible class associations most likely in view in the NT passage that addresses them (1 Cor 11:2-16).

At the outset we should comment on the nature of head coverings probably presupposed in Paul's comments. Some scholars have argued that Paul addressed not genuine head coverings but merely hair piled up on the head (Hurley, 200, 214), but the best evidence for this hairstyle being widespread dates to a generation after Paul (see Balsdon, 24, 27). The arguments against this interpretation of 1 Corinthians 11:2-16 are compelling (Oster, 485-86; Fee, 496, 506-7, 528-29); a woman compelled to cover her head with only her hair was considered particularly destitute (ARN 17A). Rather, Paul presumably refers to the sort of head coverings widely used in the eastern Mediterranean. We should also note that except in Arabia and further east, women normally veiled only their heads, not their faces (MacMullen, 210 n. 4).

1. Women Assigned to the Domestic Sphere
2. Various Reasons for Covering Heads
3. Women's Head Coverings
4. Status and Class Differences
5. Conclusion

1. Women Assigned to the Domestic Sphere.

Many husbands expected their wives to cover their heads to preserve their beauty solely for their husbands, a rationale also prominent in the seclusion of women in many societies. In Islamic Middle Eastern villages today, a woman's head covering substitutes for seclusion when the latter ideal proves impractical (see Delaney, 41). Some segments of ancient Mediterranean society seem to have also used head coverings as a substitute for seclusion, inviting comment on the practice of seclusion.

In our earliest Greek sources, a respectable matron was ashamed to go by herself among men (Homer *Odys.* 18.184). Although the case has been overstated, sufficient evidence reveals an even higher degree of separation of genders in classical *Athens (Gould, 47; Dover, 145). Exceptions existed, such as in Greek drama (Foley, 161), but these do not represent the pervasive social custom among urbanites outside the elite.

Although women's relative seclusion diminished over time, it remained the norm; thus second- and first-century B.C. marriage contracts from *Hellenistic Egypt forbade the wife to leave the marital residence without permission (Verner, 38). In the romances, a groom-to-be was sometimes the first man to gaze on a modest virgin's face (Chariton *Chaer.* 1.1.4-6; *Jos. and As.* 15:1-2; 18:6). To force a husband to expose his wife's beauty in public was scandalous, even immoral (Chariton *Chaer.* 5.4.10).

In an earlier period conservative Romans also normally secluded wives (Dionysius of Halicarnassus *Ant. Rom.* 8.39.1) and virgins (Dionysius of Halicarnassus *Ant. Rom.* 9.21.2). Romans associated public appearances of women with sexual license and revolt against their husbands. When aristocratic matrons massed in public to beg for the repeal of the Oppian law in 195 B.C., they were said to ignore modesty and their husbands' orders to remain at home (Livy *Hist.* 34.1.5). Thus Marcus Porcius Cato complained that it was inappropriate for them to be in public speaking with other women's husbands (Livy *Hist.* 34.2.9; 34.4.18), or did they think themselves more attractive to other women's husbands than to their own (Livy *Hist.* 34.2.10)? If they gained their cause, he argued, these women would achieve not only equality but ultimately superiority over their husbands (Livy *Hist.* 34.3.1-3). The opposing speech, however, won, noting some precedents for women ap-

pearing in public (Livy *Hist.* 34.5.7-10).

Even in the late first century moralists might maintain that virtuous women stayed at home unless they were in their husbands' company (Plutarch *Bride* 9, *Mor.* 139C; 30-32, 142CD). At least in the western Mediterranean, however, this attitude was always an ideal rather than a custom strictly followed (Hallett, 245). By this later period Roman matrons could enter the front rooms of the house where guests were admitted, but the Greek custom continued to restrict them to the interior of the house (Cornelius Nepos *Preface* 6-7). Men might also refuse to be seen in public, but only for special reasons unrelated to their gender, for example, grief (Chariton *Chaer.* 2.1.1). A degree of gender segregation continues in some Mediterranean cultures, such as the Garrese of Sicily (Giovannini, 67).

*Diaspora Jewish fathers usually preferred to keep their virgin daughters secluded from men, who might prove promiscuous (4 Macc 18:7-8; *Pseud.-Phoc.* 215-16; Sir 26:10; 42:11-12; *Philo Spec. Leg.* 3.169; *Flacc.* 89). Palestinian Jewish women seem to have exercised more freedom in going to the marketplace. The Tannaim seem to make relative seclusion an ideal, to protect the wife's sexuality from the public domain (see Wegner, 18, 148-67), but this was probably difficult to implement in practice (Ilan, 128-29). Yet though they could go out, wives' official roles focused on the home (Goodman, 97).

2. Various Reasons for Covering Heads.

People in the ancient Mediterranean covered their heads for various reasons. Mourning, shame and Roman worship were among the most common reasons for covering one's head. We omit discussion of some more restricted customs such as the bridal veil (Lucan *Civ. W.* 2.360, 364) or shaving one's head to fulfill a vow (Num 6:18; Acts 18:18).

2.1. Mourning. People in the ancient Mediterranean world not only tore their hair in mourning (e.g., Euripides *Androm.* 1209-10; *El.* 150; Ovid *Met.* 11.682) but also expressed mourning in other intentionally masochistic manners. Often they would cut their hair in mourning (Homer *Il.* 23.46; Euripides *Alc.* 216, 427, 512; *El.* 241, 335; *Hipp.* 1425-26; Arrian *Alex.* 7.14.4; Herodian *Hist.* 4.8.5; Athenaeus *Deipn.* 12.523b); it was also customary to leave a lock of cut hair at the tomb of the deceased (Sophocles *Elect.*

900-1; Euripides *Alc.* 101-3; *El.* 91, 515, 520; *Or.* 96; Ovid *Met.* 13.427-28).

By contrast, one might let his hair and beard grow long with mourning (Diodorus Siculus *Bib. Hist.* 36.15.2; Lucan *Civ. W.* 2.375-76), also a likely masochistic expression (cf. Lev 21:1-5; Deut 14:1). Plutarch indicated that Roman men covered their heads for mourning and Roman women uncovered their heads and loosed their hair (Plutarch *Quaest. Rom.* 14, *Mor.* 267A), perhaps as self-inflicted suffering by reversing norms of honor. Others also recognized that Roman women had unloosed hair for mourning (Livy *Hist.* 1.13.1; 1.26.2; Ovid *Met.* 6.288-89; Petronius *Sat.* 111); typically this implied also disheveled hair (Hdn. 1.13.1).

But members of both genders often covered their own heads while mourning the deaths of others or their own plight (Virgil *Aen.* 12.312; Plutarch *Rom.* 26, *Mor.* 270D; Chariton *Chaer.* 1.3.6; 1.11.2; 3.3.14; 8.1.7; ARN 1A; *y. Mo'ed Qat.* 3:5 §20). In a much earlier period, David covered his head and walked barefoot when mourning Absalom's revolt (2 Sam 15:30). One who was sick might also cover his head (Petronius *Sat.* 101), and an ancient author might regard as noteworthy a woman going about with her hair hanging loose, signifying the urgency of the moment (3 Macc 1:4).

One's head would be veiled before execution (Livy *Hist.* 1.26.11; 23.10.9). Those about to die often veiled themselves or their head with their robe (Livy *Hist.* 3.49.5; 4.12.11; Appian *Civ. W.* 2.16.117; Dio Cassius *Hist.* 42.4.5), or asked another to cover them thus (Euripides *Hec.* 432-33; *Hipp.* 1458). One might cover the body of a fallen officer (Livy *Hist.* 3.18.9; perhaps 2 Sam 20:12). Perhaps these customs arose to keep others from viewing one's open-eyed corpse (a great shame; see Homer *Odys.* 11.426), but mourning may also be a factor in the custom; a woman might also keep her body covered while dying to guard her modesty and honor (Ovid *Met.* 13.479-80).

2.2. Shame. Shame functioned as a specific form of mourning; ancients recognized them as related emotions (e.g., Aulus Gellius *Noc. Att.* 19.6.1). Greeks sometimes covered their heads for shame (Homer *Odys.* 8.84-85, 92; Euripides *Hipp.* 243-46; *Herud.* 1198-1201; Epictetus *Disc.* 1.11.27), as did Jewish people (*m. Sofa* 9:15; ARN 9 §25B; *Gen. Rab.* 17:8). Covered heads may indicate subjugation (2 Macc 4:12), and walking

about bareheaded may symbolize respectability (Petronius *Sat.* 57). In Jewish sources one could uncover one's head also to show reverence (*Pesiq. Rab Kah.* 9.5); conversely, Enoch may cover his face to hide it from God's glory (1 *Enoch* 14:24; see Enoch, Books of).

2.3. Geography and Religion. Although geographical factors are important in some of the other examples in this article, we mention some general considerations here. In general, the further east one went the more of their skin men expected women to cover. Thus Persian women were completely covered (Diodorus Siculus *Bib. Hist.* 17.35.5). Head coverings were more in vogue in *Asia Minor and other parts of the East than they were in Roman *Corinth (see Thompson, 113). Other veiling customs also varied geographically; for example, men of Chalcedon veiled a cheek whenever they met others they did not know, especially if the other people were of superior rank (Plutarch *Quaest. Graec.* 49, *Mor.* 302E).

The geographical difference is most striking, however, in the area of Greek and Roman *religion; whereas Greeks uncovered their heads for worship, Romans covered their heads (Oster, 494; Moffatt, 149). Greek women typically let down their hair for worship (see Schüssler Fiorenza, 227). More sober Romans might take special note of Greek-style ecstasies; worshipers of Dionysus typically had disheveled hair (Ovid *Met.* 3.726-27; 7.257-58; Livy *Hist.* 39.13.12). Yet whereas in some mysteries a veil was forbidden (*Syllog.* 2.401-11), a Roman writer expects female Isis worshipers in Roman Corinth to have their heads covered (Apuleius *Met.* 11.10). Diaspora Jews could also portray female demons as having disheveled hair (*T. Sol.* 13:1). Even in Greek culture, exceptions existed; thus the priestess of a particular sanctuary must wrap her head with a white veil before entering the sanctuary (Pausanias *Descr.* 6.20.3).

Among Romans, both genders veiled their heads in the presence of the sacred (Ovid *Met.* 1.398), and some Roman priests and priestesses wore head coverings (Oster, 495-96, 503; also Varro *Ling.* 5.29.130); both men (Dionysius of Halicarnassus *Ant. Rom.* 15.9.2) and women (Plutarch *Rom.* 10, *Mor.* 266C) covered their heads for prayer and worship. Some exceptions did exist; Roman women worshiped Saturn and Honor with uncovered heads (Plutarch *Rom.* 11, 13, *Mor.* 266E-67A).

As a Roman colony in Greece, new Corinth included both descendants of original Roman settlers and Greeks who had settled after its foundation. Yet neither Greeks nor Romans segregated this custom by gender, however, probably making the distinction less relevant for interpreting women's head coverings in Roman Corinth (Keener, 28).

3. Women's Head Coverings.

Whereas people in the ancient Mediterranean covered their heads for various reasons, the gender-based coverings mentioned in 1 Corinthians 11:2-16 reflect a more specific custom that existed in Mediterranean antiquity, including in Palestinian *Judaism. Although various reasons may have supported the covering of women's hair, the primary one was to protect the wife's or future wife's beauty for her husband alone.

3.1. Head Coverings in the Greek and Roman World. The customs of women covering their heads were quite ancient in the Mediterranean; thus Penelope always kept a veil before her face when addressing the suitors (Homer *Odys.* 1.382-33; 16.416; 18.210; 21.65). Head coverings for women became a common practice (e.g., Chariton *Chaer.* 1.13.11); exposed hair became rare enough that on one occasion women with exposed hair reportedly threw guards into a panic, because the guards thought them night spirits (Dio Cassius *Hist.* 42.11.2-3).

The evidence that this practice continued in Asia Minor and in Greece includes both literary sources and funerary reliefs (see MacMullen, 209, esp. n. 4), and the practice was probably not limited to the East (see Petronius *Sat.* 14, 16). Plutarch even thinks Roman women were forbidden to cover their heads in earlier times (Plutarch *Rom.* 14, *Mor.* 267BC); by itself his argument might not be compelling, but it is supported by other evidence (Valerius Maximus *Fact. ac Dict.* 5.3.10-12; 6.3.10).

3.2. Jewish Use of Head Coverings. Later rabbis expected women to cover their hair (*Sipre Num.* 11.2.2; ARN 1A), although perhaps making an exception for middle and upper classes (Ilan, 129-32). The public loosening of a woman's hair produced shame (*m. B. Qam.* 8:6; ARN 3A). Jewish sources from the first century (Philo *Spec. Leg.* 3.56; Josephus *Ant.* 3.11.6 §270) through the Amoraic period (*Num. Rab.* 9:16; *Pesiq. Rab.* 26:1/2) attest the tradition of removing a wife's head covering when she was suspected of adul-

tery (Num 5:18), thereby assuming the pervasiveness of the wife's head covering in early Palestinian Judaism and Judaism further to the east.

Head coverings appear at least as early as the story of Susanna, whose face appears to have been covered to conceal her beauty from men's lust (Sus 13:32 = Dan 13:32 LXX). To be sure, *Judith does not appear to have been veiled (Schüssler Fiorenza, 116, correctly cites Jdt 10:7; 11:21), but Judith, unlike Susanna (Sus 1-4), is unmarried (Jdt 8:2-7), and even in Palestine it is not clear that unmarried women were expected to cover their heads, though they were not forbidden to do so.

3.3. Prostitutes and Head Coverings. A loose woman might have her hair cropped (Aristophanes *Lysis.* 89); prostitutes also typically exposed more of their legs as well as their hair (Gardner, 251). As early as the twelfth century B.C., Middle Assyrian laws associated veiling with marriage and prohibited prostitutes from wearing veils (tablet A 40); a third-century A.D. tradition in the eastern Mediterranean also presupposes that prostitutes normally avoid veils (*Gen. Rab.* 85:8). But the issue was not prostitution itself; rather, uncovered hair invited male attention, an attitude that could signify promiscuity whether or not it was connected with official, legal prostitution.

3.4. Head Coverings and Male Lust. A primary reason for head coverings in the ancient Mediterranean world resembles that followed in some traditional parts of the Islamic Middle East today, where hair becomes an object of male lust and must be covered at puberty (Delaney, 42) or after marriage (Eickelman, 165). In some areas women who go about uncovered are considered common sexual property, and a girl who is not covered might be deemed promiscuous and hence forfeit the possibility of marriage (Delaney, 42). This is less true among many peasants (see Eickelman, 165, 194); Greek customs may have also been less strict in rural areas (e.g., the nymphs in Longus *Daphn. Chl.* 1.4; 2.23).

Head coverings, like long hair² (1 Cor 11:14-15), might function as a symbolic gender marker. Beards functioned as a male gender marker (Phaedrus *Fables* 4.17.1-5; Aulus Gellius *Noc. Att.* 6.12.5). But a more basic purpose of the gender-based head covering was to shield married women from the gaze of men other than their husbands.

Women who purposely exposed any part of their body to gaze were thought to be intent on seduction. Greek women typically wore long robes (e.g., Homer *Il.* 18.385), and women usually kept their arms and legs concealed (Aulus Gellius *Noc. Att.* 6.12.2). Nevertheless, men lusted after whatever was sometimes uncovered: ankles (Homer *Odys.* 5.333); feet (Euripides *Bacch.* 862-64); arms (Ovid *Met.* 1.501; Chariton *Chaer.* 6.4.5; *T. Jos.* 9:5; cf. the frequent description of Greek women as "white-armed," e.g., Homer *Il.* 1.55, 195, 208; I have counted at least thirty-seven instances in Homer). Roman men might consider especially virtuous a wife who would not want other men to view even her bare arm (Plutarch *Bride* 31, *Mor.* 142CD).

But hair was the prime object of male lust (Apuleius *Met.* 2.8-9). Uncovering and loosing a woman's hair publicly revealed her beauty (Chariton *Chaer.* 1.14.1). Thus later rabbis warned that a woman uncovering her head could lead to a man's seduction (ARN 14 §85; cf. *Num. Rab.* 18:20), and the priests must beware when loosing the hair of a suspected adulteress (*Sipre Num.* 11.2.1-3; *y. Sanh.* 6:4 §1). A wife going in public with loosed hair appears in a list of promiscuous behaviors warranting *divorce without repayment of the marriage settlement (*m. Ketub.* 7:6; even more explicitly in *Num. Rab.* 9:12).

This was why married women in particular were expected to cover their hair. Women normally covered their heads after marriage, so being taken away "unveiled" (*akalyptos*) indicated the loss of their marriage (3 Macc 4:6). The Spartan custom was noteworthy but perhaps represented a more common sentiment: wives went into public veiled, but virgin daughters were unveiled because they needed to find husbands (Charillus 2 in Plutarch *Sayings of Spartans*, *Mor.* 232C).

4. Status and Class Differences.

Literary sources testify abundantly to women's head coverings in the eastern Mediterranean, but mosaics usually depict women with their heads uncovered. Naturally mosaics and busts, which represent upper-class women, reveal fashionable hairstyles rather than head coverings (see, e.g., photographs in Balsdon); who would pay to have a bust sculpted with her hair covered? Upper-class women, imitating fashion changes dictated by the imperial women and

concerned to display their expensive and stylish hair arrangements, probably frequently went uncovered, in contrast to their lower-class counterparts (MacMullen, 217-18; also Kroeger, 37; cf. 1 Tim 2:9). In the Corinthian house churches, where many people of lower status met in more well-to-do homes, such a culture clash could have created tension as it apparently did on other issues such as *rhetoric (1 Cor 1-4), Paul's activity as an artisan (1 Cor 9) and foods offered to idols (1 Cor 8, 10). (For further discussion of Paul's specific arguments in 1 Corinthians 11:2-16, see Keener, 31-46.)

5. Conclusion.

People in the ancient Mediterranean world covered their heads for a variety of reasons. The most important for the NT passage that addresses head coverings is the sort of head coverings worn by married women, especially in the eastern Mediterranean (though not limited to Asia and Judea as a sign of sexual modesty). Women of greater means and status may have disdained the confinement of such coverings, but head coverings appear to have been popular among women of lower social status.

HEALING AND HEALING MIRACLES. See APOLONIUS OF TYANA; HIPPOCRATIC LETTERS; RELIGION, PERSONAL.

HEAVENLY ASCENT IN JEWISH AND PAGAN TRADITIONS

The NT contains numerous references to heavenly ascent or rapture: for example, the transfiguration (Mk 9:2-8 par.); the ascension (Lk 24:50-53; Acts 1:1-12; cf. 2:34; Jn 3:13-14; 6:62; 20:17; Phil 2:6-11; Eph 4:8-10; Rev 12:5); the rapture of the church to meet the Lord in the air (1 Thess 4:17; cf. 1 Cor 15:51-52); Paul's ascent into third heaven/paradise (2 Cor 12:2-4); Enoch's rapture

(Heb 11:5; cf. Gen 5:24). The list grows longer if we include NT texts that presuppose the ascension (e.g., Mk 14:62).

It is possible in this article merely to adumbrate the enormous primary and secondary literature that may be relevant to the various NT texts (see most recently Zwiep). This situation is aggravated by the fact that heavenly ascent is a widespread motif in both Greco-Roman and Jewish sources of many different kinds. Hence the question frequently arises whether the NT references to ascent are to be characterized as Jewish, non-Jewish or a combination of both. A full discussion of the primary source materials, including ancient Near Eastern parallels (e.g., Assmann) and form-critical analysis, remains a desideratum. Additional work is also needed on cosmological assumptions on which the spatial orientation of ascent texts are based (Colpe). What accounts, for example, for the inverted orientation in the *Hekhalot* literature, where one is said to "descend to the Merkabah" (Kuyt; Stroumsa)?

1. Greco-Roman Background
2. Jewish Background

1. Greco-Roman Background.

K. Luck-Huyse's recent study on the dream of flying in antiquity includes ascent texts from the most prominent Greco-Roman sources. It will suffice here to mention only a few categories of this voluminous and diverse material.

1.1. Ascent as Apotheosis. In Greco-Roman sources, the gods are frequently portrayed as ascending into heaven. In the Rhapsodic Theogony, for example, Zeus is said to have been carried into heaven on the back of a goat (West). Euhemerios claimed that gods such as Uranos, Kronos and Zeus were humans who had subsequently been apotheosized (Diodotus Siculus *Bib. Hist.* 13.1-17.2). Deification of a mortal hero or ruler was a common idea in the *Hellenistic world. *Alexander the Great himself was thought to have been granted apotheosis. Later the idea was accepted by *Roman emperors as a posthumous ceremony, although Gaius emphasized his own divinity even before death. The deified emperor was endowed with the title *divus* (divine), and his ascent to heaven was symbolized by various signs, such as an eagle or a chariot (see *Ruler Cult). The Arch of Titus in Rome, for instance, depicts the emperor being carried into heaven on the back of an eagle (Pfanter).

Apollonius of Tyana, a Neo-Pythagorean holy man who has often been compared to Jesus, led the life of an ascetic wandering teacher, endured persecution under Nero and Domitian, and finally ascended into heaven (Philostratus *Vit. Ap.* 8.29-30). He was the object of a posthumous cult attracting the patronage of the Severan emperors (Koskenniemi).

1.2. Ascent and Shamanism. Shamanism is a widespread phenomenon in the ancient world. The shaman can be described as "a social functionary who, with the help of guardian spirits, attains ecstasy in order to create a rapport with the supernatural world on behalf of his group members" (Hultkrantz). This ecstatic state usually involves the perception that the soul of the shaman is ascending or descending to levels outside of mundane reality. For instance, Parmenides (DK 28 B 1) used shamanistic imagery in his philosophical poem, speaking of a cosmic chariot journey of the will, through the gates of Day and Night, to consult a goddess. The seven stages of the shaman's journey to heaven are represented by seven tiers or notches in a pillar or tree, which stood for an imagined column at the center of the world (Schibli; West).

1.3. Ascent of the Soul After Death. *Cicero's *Somnium Scipionis* regards ascent to the stars as the destiny of the good soul after death (Cicero *De Rep.* 6.9-26; cf. Plato *Tim.* 41d-e).

2. Jewish Background.

In Jewish sources, it is often difficult to ascertain whether an ascent text is the product of mystical experience, exegetical speculation or both. Sometimes an explicitly visionary experience can be described in terms of a bodily ascent (*1 Enoch* 14:8). Occasionally the texts themselves register doubt about whether the ascent is in the body or out of the body (2 Cor 12:2-4; Schäfer 1981, §680). The goal of heavenly ascent varies widely in Jewish sources—anything from apotheosis (see below) to reconnaissance of the inhabited world (*T. Abr.* 9:8) to understanding the inscrutable ways of God (4 Ezra 4:8). Sometimes the individual initiates ascent; at other times God or an angel does so. In the process of ascending, a person may receive priestly vestment (Himmelfarb), or one's body may undergo transformation into a purified angelic form of fire or light (Morrāy-Jones 1992). Ascension seems to be an exclusively male prerogative among humans.

2.1. Ascent in the Old Testament. Several texts

seem to refer to ascension in the OT (Schmitt). In Genesis 5:24, Enoch is said to have "walked with God," which may refer to an ascent prior to his final translation, when "God took him." This is how later Jewish and Christian sources interpreted the account (e.g., Philo *Quaest. in Gen.* 1.86; Wis 4:10-11; *1 Clem.* 9.3; *Tg. Neof.* to Gen 5:24; *1 Enoch* 71:16; 93:8; *2 Enoch* 68:1; Pseudo-Clementine *Recognitions* 1.52.5; see Enoch, Books of).

The builders of the tower of Babel wanted to build a tower whose top was in the heavens (Gen 11:4). This was frequently interpreted to mean that the builders wanted to ascend into heaven (e.g., *Jub.* 10:19; *Sib. Or.* 3:100; Josephus *Ant.* 1.4.3 §118).

According to the narrative in Exodus 24, Moses, together with Aaron, Nadab, Abihu and the seventy elders, "went up and they saw the God of Israel" (Ex 24:9-10). Moses was given "the tablets of stone, with the law and the commandment, which I have written for their instruction" (Ex 24:12). In Deuteronomy 30:12, Moses insists that the divine commandment is neither too difficult nor too far away: "It is not in heaven that you should say, 'Who will go up to heaven for us, and get it for us so that we may hear it and observe it?'" When we put these texts together, it is understandable why later Jewish tradition regarded *Moses' ascent to receive the law on Mt. Sinai as an ascent into heaven and an encounter with the Merkabah throne-chariot of God (cf. Ps 68:19 and the tradition based on it; Halperin).

Standing in the line of the greatest prophet Moses, the other Hebrew prophets are frequently said to have had visions of the divine throne, although their ascent into heaven is never described. These visions have a twofold purpose: to establish the authority and legitimacy of the prophet as an intermediary between heaven and earth and to provide revealed information.

Psalm 110:1 can be interpreted to mean that the Davidic king is exalted and enthroned in heaven next to God himself: "The LORD says to my lord, 'Sit at my right hand until I make your enemies your footstool.'" This passage, together with Isaiah 6, Ezekiel 1 and Daniel 7, later gave rise to further mystical speculation about the divine Merkabah, including accounts of individuals who ascended to heaven (e.g., *1 Enoch* 14; *Apoc. Abr.* 17; *Jos. and As.* 17:7-8; *T. Abr.* 11; Rev 4; *2 Enoch* 22; see further 4Q530 2:16-19). Eli-

jah's ascension into heaven and his expected return at the end of time also played a significant role in Jewish tradition (cf. 2 Kings 2:1-18; Mal 3:22-3; *1 Enoch* 89:52; Sir 48:9-12; 1 Macc 2:58).

2.2. Ascent of the Soul After Death. W. Bousset suggested that the ascent of the visionary is an anticipation of the ascent of the soul after death, an idea that is found in many apocalypses of the Christian era (Himmelfarb 1991). The language of IQH 3:19-20 is suggestive in this regard: "I thank you, Lord, for you have redeemed my life from the pit and from Sheol of the dead; you have raised me up to an eternal height." Possible parallels to the aforementioned Ciceronian passage can be found in Daniel 12:3 and Matthew 13:43. In the first-century Similitudes of Enoch (*1 Enoch* 71:16) and in the second-century, Jewish-Christian source in Pseudo-Clementine *Recognitions* 1.27-71 (1.52.5), Enoch is a model for all those who have pleased God and are similarly translated into heaven and are being preserved for the kingdom of God (see also Philo *Quest. in Gen.* 1.86).

2.3. Ascent as Apotheosis. The ascension and deification of a mortal is found in the early Jewish literature of both Palestine and the Diaspora (Collins 1995). The Egyptian Diaspora features the apotheosis of Moses in several writings. For example, the *Exagoge* of Ezekiel the Tragedian, written in the second century B.C., describes Moses' ascent to Mt. Sinai and his enthronement in heaven. The figure on the throne on high abdicates his throne and beckons Moses to sit on it (*Exag.* 68-76), thereby conferring upon Moses universal sovereignty (*Exag.* 77-78, 85-89). Philo of Alexandria also describes the apotheosis of Moses (Philo *Vit. Mos.* 1.158; cf. Borgen).

The apotheosis of Moses was evidently known also in Palestine. In a text from *Qumran (4Q491 Frag. 11 i 11-18; cf. Smith; Hengel), the author (not an angel) claims to have ascended into heaven, to have received the "mighty throne in the congregation of the gods" and to have been "reckoned with the gods." J. J. Collins suggests that this text was written by someone who held the office of teacher or interpreter of the law and who understood himself either as a new Moses or a complement of Moses. Like Moses, this teacher in the late first century B.C. saw himself enthroned in the heavens and issuing teachings and rulings of irresistible power. Related materials have been observed in 4Q427, 4Q458 and 4Q471 (cf. Abegg; Schuller).

According to Theophilus of Antioch (*Autol.* 2.24), a second-century, Jewish-Christian apologist who makes extensive use of Jewish traditions, apotheosis was God's original intention for humans. When God created man, he "transferred him out of the earth from which he was made into paradise, giving him an opportunity for progress so that by growing and becoming mature, and furthermore having been declared a god, he might also ascend into heaven (for man was created in an intermediate state, neither entirely mortal nor entirely immortal, but capable of either state), possessing immortality." Perhaps Theophilus viewed Jesus as a second Adam who follows a similar course of exaltation to that of the first (cf. Grant).

From another perspective, however, apotheosis can be seen as a presumptuous invasion of heaven. In Isaiah 14:12-20, the prideful king of Babylon, who wants to ascend to heaven and become like God, is cast down to the underworld (Is 14:11). D. J. Halperin discusses the rabbinic tradition based on this passage (e.g., *b. Hag.* 13a). P. Borgen finds the tradition of ascension as invasion of heaven already in Philo of Alexandria.

2.4. Ascent as Legitimation of a Revelatory Mediator. Ascent provides a vehicle for divine revelation and a means by which to legitimate the revelatory mediator. In the Book of Watchers (*1 Enoch* 1-36), for example, the heavenly ascent of Enoch to the divine throne (*1 Enoch* 14) has a revelatory aspect similar to the call visions of the Hebrew prophets. For *1 Enoch* the ascent establishes Enoch's legitimacy and authority as mediator between heaven and earth, as well as providing revealed information. 4QLevi^b ar (4Q213a) 2:13-18 describes a vision that Levi received after praying. This vision is not found in the Greek *Testament of Levi* (see Testaments of the Twelve Patriarchs). Instead, we find a more extensive ascent account in a dream vision (*T. Levi* 2:5-5:7), which is evidently designed to confirm the priesthood of Levi and to communicate divine revelation. Philo of Alexandria provides an autobiographical account of his own heavenly journey in *De Specialibus Legibus* 3.1-2 (Borgen). This ascent equips Philo not only to read the laws of Moses but also "to peer into each of them and unfold and reveal what is not known to the multitude" (Philo *Spec. Leg.* 3.6). The well-known story of the Four Who Entered Paradise, which is found both in the Talmud and in *Hek-*

halot literature (cf. Morray-Jones), tells how only Rabbi Aqiba was deemed worthy of beholding God's glory behind the curtain. J. R. Davila (1996) has recently suggested that this story is reflected in a Qumran text (1QH^a 16:4-26).

2.5. Ascent as a Periodization of History. In the *apocalyptic section of the *Apocalypse of Abraham* (9-32), which is a *midrash on Abraham's vision in Genesis 15, the length of time that the elect are expected to suffer under foreign domination is expressed in terms of a cryptic chronology of four "ascents" (*Apoc. Abr.* 28:2-5; cf. 27:3). We may compare the rabbinic interpretation of Jacob's dream in Genesis 28:12 (*Lev. Rab.* 29:2; *Pesiq. Rab Kah.* 23), according to which the angels of God ascending and descending on the ladder to heaven are the guardian angels of the nations of the world who preside over the rise and fall of their respective empires. The number of rungs ascended represents the number of years that each of these empires reigned before their decline. Thus, Jacob saw Babylon ascend 70 rungs; Media, 52 rungs; Greece, 180 rungs; and Edom (Rome), an unknown number of rungs (cf. Kugel; Gafni).

2.6. Communal Aspects of Ascent. J. R. Davila (1994) argues that the later *Hekhalot* literature, which developed in part from traditions found in Second Temple apocalyptic literature, functioned in the context of a community: the shaman intermediary ascended or descended to the Merkabah, in order to create rapport with the supernatural world on behalf of his group. Other evidence suggests perhaps a more direct participation of the community in heavenly ascent or at least contemplation of the Merkabah. Halperin emphasizes that Merkabah speculation was well established in synagogue worship. According to H. Schreckenberg and K. Schubert, the zodiac signs in the synagogues of Hammath Tiberias and Beth Alpha are symbols, as in *Hekhalot* texts, for the ascension of the worshiper through the seven heavenly "palaces" (*hehhalot*) to the throne of God. The **Songs of the Sabbath Sacrifice* from Qumran Caves 4 and 11 have demonstrated that participation in the heavenly liturgy was the goal of worshipers already in the Second Temple period (Newsom).

HEBRAISMS. See SEMITIC INFLUENCE ON THE NEW TESTAMENT.

HEBREW BIBLE

The Hebrew Bible, or OT, is the principal resource—together with the effect of experience of Jesus—used by those first-century Jews who followed him as they attempted to understand, categorize and articulate the character and significance of Jesus the Christ. It is the primary source for the religious foundations, vocabulary, concepts, motifs, roles, stories and theology of the NT. After considering the problem of terminology, this article will discuss the character of the text of the Scriptures and the extent of the collection of the Scriptures that were available for use by the NT authors, followed by an impressionistic sketch of the ways the Hebrew Bible was used as a resource in composing the books of the NT.

1. The Problem of Terminology
2. The Text of the Hebrew Bible in the New Testament Era
3. The Canon of the Hebrew Bible in the New Testament Era
4. The Hebrew Bible as a Source for the Composition of the New Testament
5. Summary

I. The Problem of Terminology.

No term for the Hebrew Bible (HB) is entirely satisfactory from all points of view for denoting this corpus of sacred literature. The exact contents of that Bible were not yet established and agreed upon at the time of the origins of Christianity, and so *Scriptures* as a not necessarily fully delimited collection might be a preferable term.

The Christians increasingly used the Greek translation of the HB, called the *Septuagint (LXX), and so neither Hebrew nor Bible seems satisfactory. *Tanakh* is the word used in *Judaism for the delimited collection of *Torah* (Pentateuch), *Nevi'im* (Prophets) and *Ketubim* (Writings) as transmitted in the Masoretic Text (MT); but that collection eventually established by the *rabbis was not yet fully delimited and accepted generally by Jews at the time of Jesus.

"Old Testament," in contrast, can be understood to imply that a New Testament is a logical complement to the Old or is even the necessary, inevitable fulfillment of the OT. Though this may be acceptable from the standpoint of Christian faith, it is at odds historically, literarily and religiously with the fact that other groups within Judaism found other complements or logical developments of the Hebrew Scriptures. Foremost among these is rabbinic Judaism, which finds in the *Mishnah and *Talmud the fuller exposition of *Tanakh*. "Old," paired with "New," also can imply that the "old" has been superseded by the "new" and is no longer necessary or valid; it should not be necessary to point out how dangerous are the consequences of such supersessionist thought or how odious is the anti-Jewish reading of the NT. "First Testament" versus "Second Testament" has also been offered as a solution, but that suggestion has not been accepted widely.

Despite the fact that "Hebrew Bible" is not a fully satisfactory term, it will generally be used here—since no other term is clearly more satisfactory—to denote the somewhat varying collection of books of Scripture, most of which were originally composed in Hebrew (though some with Aramaic portions and a few composed in Greek), whether used in their *Hebrew, *Greek or *Aramaic forms. But occasionally other terms will be used when appropriate for different perspectives. The emphasis throughout will focus on the situation during the period of Jesus and the composition of the NT, that is, the first century A.D.

2. The Text of the Hebrew Bible in the New Testament Era.

What was the character of the text of the Scriptures used by the NT authors? The textual form of the individual books was not always identical to that encountered in Bibles used today. The NT itself adequately demonstrates this, but it is

necessary to start from the correct perspective.

2.1. Earlier Views. Already in the opening chapters of Matthew, it is claimed that a prophetic statement was being fulfilled since Jesus "will be called a Nazorean" (Mt 2:23). This is the last of a set of five prophetic quotations cited to illustrate scenes narrating Jesus' birth, and the first four are readily found in the traditional HB; thus the fifth should also presumably have derived somehow from the HB. There are other quotations in the NT also not to be found in the traditional OT, among them John 7:38; 2 Corinthians 4:6; Ephesians 5:14. Various tortured explanations have been given. The form of the HB found in the MT is often considered to be the sole form of it, and if that is the starting assumption, then the NT will be interpreted as quoting it inaccurately. The *Dead Sea Scrolls, however, demonstrate that the incorrect element is the starting assumption. Rather, the biblical text was pluriform then, the MT preserves only one form of the ancient texts, and the NT generally presents quotations in the textual form that was being used by the author at that time. The most likely explanation of Matthew 2:23 is that the author was using and correctly quoting from a textual form of the prophetic books that did not survive the second century.

2.2. The Dead Sea Scrolls. A significant breakthrough in the second half of the twentieth century was the realization that the text of the HB had been pluriform in nature and that there had been two phases in the history of the text. The *Qumran scrolls provided the overwhelming evidence for this breakthrough, though clues had been available before that. It is important to note that, though the biblical scrolls were found at Qumran, most were probably copied at Jerusalem or other places in the land and brought to Qumran. They are not "sectarian" or "aberrant" or "vulgar" texts but represent the Scriptures of general Judaism as they existed at the close of the Second Temple period. They are our oldest, best, most authentic witnesses to the texts of the Scriptures in this crucial period. They demonstrate that there had been, prior to the phase of textual uniformity that scholarship has been accustomed to see in the MT, an earlier phase when the books of Scripture were still in their compositional development and thus were pluriform.

Scrolls from the entire spectrum of the Bible show that many of the books were available in

variant literary editions at the time—an edition of a book that had been intentionally expanded or developed beyond another earlier but still extant edition of that book. Just as a science textbook might undergo a second edition, and one person might use the earlier edition while another uses the revised and expanded edition, so too was the case for the biblical text. The biblical text was normally transmitted faithfully and accurately, but occasionally a religious leader would creatively re-edit a book in light of changed historical or theological circumstances. Examples would be the postdestruction Priestly edition of the preexilic pentateuchal traditions, and the Matthean re-edition of the Markan traditions. The Qumran scrolls offer many examples of variant literary editions of individual biblical books.

2.2.1. The Pentateuch. For the Torah, one extensively preserved scroll of Exodus (4Qpaleo-Exod^m) agrees in the main with the traditional MT form of Exodus, enough to make clear that it is a manuscript of the biblical book. At a number of points, however, it is amplified with verses that prove to be harmonizations, that is, supplementary passages drawn from elsewhere in Exodus or from related passages in Deuteronomy. On closer inspection, it is clear that all of these expansions were long since attested in the Samaritan form of Exodus (see Samaritan Literature). The two specifically Samaritan theological variants, however, were not present, and so the scroll represents a variant literary edition of the book of Exodus circulating in Judaism at the turn of the era; though it did not otherwise survive, it was the Jewish form of Exodus adopted by the Samaritans and minimally altered for their version of the Pentateuch. Eventually, an analogous manuscript of Numbers (4QNum^b) also emerged, in close agreement with the MT but much closer to the Samaritan Pentateuch except for the specifically Samaritan theological changes. These scrolls are sometimes labeled pre-Samaritan, but more accurate phraseology would be variant literary editions of the Jewish scriptural text also utilized by the Samaritans as the basis of their form of the Torah.

2.2.2. The Prophets. Similar manuscripts were found both for the Former and the Latter Prophets. A scroll of Joshua (4QJosh^a) shows an earlier literary version with a significant difference in the sequence of the narrative. This

scroll places the site where Joshua built the first altar in the newly entered promised land at Gilgal, immediately after crossing the Jordan (before Josh 5:1). Later theological claims apparently relocated it first at Shechem on Mt. Gerizim (cf. Deut 27:4 Sam.; VL) and then through a Judean counterclaim on Mt. Ebal (Josh 8:30-35 MT; after 9:2 LXX). Parallel to the NT authors using an alternate literary edition of a book, the first-century historian *Josephus must have used a biblical text like 4QJosh^a, for he also places the altar at Gilgal (Josephus *Ant.* 5.1.4 §20), exactly in the same place and in the same sequence as 4QJosh^a.

A fragment of Judges (4QJudg^a) shows that the MT has secondarily expanded the text of Judges 6 with a Deuteronomistic-sounding passage: Judges 6:7-10 (long suspected as a theological insertion) does not appear in this fragment, which moves smoothly from Judges 6:6 to 6:11.

An extensively preserved manuscript of Samuel (4QSam^a), again strongly confirmed by Josephus, shows repeatedly that it was a more influential text of that book than was the form transmitted in the MT. It attests the form of Samuel used by the Chronicler in composing 1-2 Chronicles, the form translated by the original LXX and the form used by Josephus when composing his *Jewish Antiquities*.

A scroll of Isaiah (1QIsa^a), the only scroll that preserves a biblical book in its entirety, displays more than a thousand variants from the MT form of Isaiah. Most are minor, with the preferable reading sometimes in the scroll, sometimes in the MT, sometimes in the LXX. But there are at least ten major variants where the MT adds a verse or even more beyond 1QIsa^a or the LXX (see Isaiah Scroll).

It has long been known that the LXX of Jeremiah transmits a text approximately one-eighth shorter than that of the MT. It is now clear that the edition in the LXX is earlier and that the MT preserves a subsequent edition that has been consistently expanded. A Hebrew fragment of Jeremiah (4QJer^b) now attests that the LXX was translated faithfully from an earlier Hebrew variant literary edition of the book.

The book of Daniel also shows two literary editions. This time the shorter edition is transmitted in the MT, and the longer edition with "the Additions" is in the LXX (see Daniel, Esther and Jeremiah, Additions to). To date, none of the eight Qumran manuscripts of Daniel point

toward the longer LXX edition, but it may nevertheless be safely presumed that the Old Greek translation of Daniel (as opposed to the dominant Theodotianic Greek recension) was faithfully translated from a Hebrew-Aramaic text circulating in its day, including the disputed chapters, Daniel 4-6.

2.2.3. The Writings or Poetic and Wisdom Books. It has long been known that the MT forms versus the LXX translations of Job and Proverbs differed in major ways, which we can now attribute to variant Hebrew editions. But the great *Psalms Scroll* (11QPs^a) best illustrates both the differences in textual forms for this section of the Bible and the gains recently made in understanding the history of the biblical text.

This well-preserved scroll has been the subject of debate since before its publication in 1965. It contains most of the psalms from the last third of the Psalter, but the order is repeatedly quite different from the traditional MT-LXX order. Furthermore, it contains ten compositions not found in MT Psalter, one of which is a prose summary totaling the 4,050 psalms and songs David wrote (see Psalms and Hymns of Qumran). Its editor published it as a Psalms scroll, though several major scholars denied its biblical status, considering it a postbiblical liturgical composition or library edition. But each of the reasons marshaled against its biblical status has fallen in the face of mounting evidence from other biblical manuscripts, including the MT.

2.3. Earlier Clues for the Compositional Phase. Clues for the earlier compositional phase of the biblical text had long lay in our sources. The Samaritan Pentateuch, had it been taken more seriously as attesting an ancient Jewish form of the biblical text, and the LXX, had it been studied objectively and not in the context of Jewish-Christian or Protestant-Catholic polemics, offered plenty of evidence for the history of the biblical text, as can be seen above. Similarly, Josephus's *Jewish Antiquities* are a more reliable witness to the form of the biblical text in the first century than is usually thought. Some of the details in his narrative that agree, for example, with 4QSam^a are judged as unscriptural details because they disagree with the MT, but they were derived from a biblical text circulating in Judaism at the time of the composition of the NT.

2.4. The Compositional Process of the Hebrew

Bible. Thus the new knowledge provided by the Qumran manuscripts attesting the pluriformity of the biblical text and the multiple literary editions for many of the biblical books dovetails perfectly with all our other textual data from the first century and earlier. It also dovetails with the results of the past two centuries of scholarship concerning the dynamic composition of the HB, which shows that the final forms of the biblical texts are the result of a long and complex developmental process of successive literary editions (see 2.2 above). The Qumran manuscripts, together with the Samaritan Pentateuch, the LXX and other sources such as Josephus, all witness to the final stages of that compositional phase of the HB. Sometime after the First Jewish Revolt (A.D. 66-74), and perhaps as late as the Second Revolt (A.D. 132-135; see Jewish Wars with Rome), creativity on the Hebrew texts ceased. Only the rabbinic form of Judaism survived under that name, and the rabbis eventually preserved only a single Hebrew form of each book that then became standardized and emerged as the MT collection. But the texts of the Scriptures, as circulating in Judaism at the time of Jesus and as available for NT authors, were pluriform.

3. The Canon of the Hebrew Bible in the New Testament Era.

What was the extent of the collection of books considered as Scripture by the NT authors? Just as the textual form of the individual books was not identical with the received MT, so too the collection of books viewed as Scripture was not entirely coterminous with later Jewish, Protestant or Catholic canons.

3.1. Terminology. The canon is a postbiblical reality, and thus the term is anachronistic in the NT period. Clear evidence of the canon dates from the fourth century, though its existence may predate that somewhat. The term *canon* is a technical term in theology with a long history, but it is sometimes used in a confused manner, vitiating its meaning and purpose. Three points are important.

First, the canon is a result of a reflexive judgment, a postfact confirmatory decision. Certain sacred books had been functioning as authoritative sources governing the community's life; but it was not until questions had been raised, matters considered and debated and official decisions made and generally accepted that selected

works and not others were judged henceforth essential to the identity of the community. There were acknowledged authoritative books at an early stage, and there was a long process that led toward canon, but properly canonical decisions probably happened only in the second century for Judaism and in the fourth for Christianity (see Canonical Formation of the New Testament).

Secondly, "canon" denotes a final, closed list. It is the result of an explicit decision, involving not only the inclusion of essential books that are in the official collection, but also importantly the exclusion of books that are out (Barr; Metzger; Ulrich; Barton). Thus there can be no open canon, although again there was from an early period a developing collection of authoritative books moving toward what would become the canon.

Thirdly, both in Judaism (until at least the end of the first century) and in Christianity the book, not the textual form of a book, was authoritative and became canonical (*m. Yad.* 3:5; 4:6). Thus, for example, the book of Jeremiah was authoritative, whether in its 4QJer^b-LXX form or its MT form, as was the book of Psalms, whether in its MT, LXX or 11QPs^a form.

3.2. The Sacred, Authoritative Books of Judaism.

Thus, at the time of Jesus and the composition of the NT, a number of books considered uniquely authoritative and essential were circulating among the diverse groups within Judaism. The most common term was the Law and Prophets. By at least the second century B.C. (see the Prologue to *Sirach) the Law and Prophets were certainly considered especially sacred and authoritative (see also 1QS 1:1-3; Josephus *Ag. Ap.* 1.7-8 §§37-43; and Lk 16:16; Acts 26:22 for Qumranic, *Pharisaic and Christian Judaism), except by the Samaritans and possibly the *Saducees, who held only the Law in this supreme category. The five books of Moses were undoubtedly included in the Law. But the boundaries of the prophetic collection were still flexible: the major prophetic books were included, but the evidence for certain books invites attention.

3.2.1. The Psalter and Daniel. The Qumran *Psalms Scroll* claims the status of a prophetic book for the Psalter: "all these [David] spoke through prophecy given to him from the Most High" (11QPs^a 27:11). This is an explicit affirmation of a view that was eventually accepted

generally: the Psalter, originally a collection of human hymns addressed to God, became Scripture, God's word addressed to humans through David. Luke 24:44 mentions "the Law of Moses and the Prophets and Psalms." This is sometimes interpreted as hinting at a tripartite canon already. But it is suspicious that such appears nowhere else in the NT. In fact, Luke-Acts usually has "the Law/Moses and the Prophets" (Lk 16:16, 29, 31; 24:27; Acts 26:22; 28:23), and the Psalms are being used in Luke 24:44 manifestly as a prophetic witness to Jesus. Prophetic use of the Psalter is common throughout the NT, especially in the letter to the Hebrews, and also at Qumran, where three *pesharim ("commentaries") on the Psalms occur. Such continuous pesharim were apparently written only on prophetic books.

Daniel seems to have been universally reckoned among the prophets (cf. the **Florilegium* [4Q174 2:3]; Mt 24:15; Josephus *Ant.* 10.11.4, 7 §§249, 266-67). It retained its prophetic status in Christianity (Melito, in Eusebius *Hist. Eccl.* 4.26.14), while the Talmud is the first Jewish source to classify it among the Writings, possibly to deemphasize the prophetic interpretation and emphasize the wisdom aspects of the book.

3.2.2. *Books Quoted in the New Testament.* Quotations in the NT, just as in the Dead Sea Scrolls, are frequent from the books of the Law and the Prophets (including Psalms and Daniel) but sparse or nonexistent from most of the Writings.

3.2.3. *Books Beyond the Law and the Prophets.* The Prologue to Sirach three times mentions the books of Scripture in a way that is often interpreted as the traditional tripartite canon (e.g., Beckwith). There are good reasons, however, to reexamine that interpretation. "The Law and the Prophets and the other books of our ancestors" may perhaps better be seen as the Scriptures ("The Law and the Prophets") plus other traditional religious writings that were not, or not yet, in that category. Among the reasons to support this view are the lack of literary attestation that a tripartite canon existed and the lack of use of the Writings in the literary evidence available. No other source in the next two centuries seems to know of a three-part canon; there appears no knowledge or discussion of such prior to the fall of the temple in A.D. 70. Moreover, the Writings (excluding Psalms and Daniel) are not significantly influential in either Jewish or Christian writings.

3.2.4. *1 Enoch, Jubilees, Tobit and Sirach.* Other books such as **1 Enoch*, **Jubilees*, **Tobit* and **Sirach* appear to have been considered by some groups as Scripture. The epistle of Jude 14-15 cites *1 Enoch* 1:9 as Scripture, explicitly saying Enoch "prophesied" (see Apocryphal and Pseudepigraphal Sources in the New Testament). Moreover, about twenty copies of the book were collected from Qumran, ranking with the books of the Torah in number found there, and it retained its status as Scripture in the Ethiopian church.

The book of *Jubilees* makes the arresting claim that it is divine revelation from God through an "angel of the presence" to Moses, rehearsing the biblical story from Genesis 1 to Exodus 24. At least fifteen copies were found at Qumran, and the **Damascus Document* cites its lengthy title, *The Book of the Divisions of the Times into Their Jubilees and Weeks* (CD 16:2-3), and gives a quotation from it as an authoritative book (CD 10:8-10).

A number of other works that have retained their status as Scripture in various communities were also found among the fragments in the Judean desert, including the Greek Epistle of Jeremiah, one Hebrew and four Aramaic manuscripts of Tobit and two manuscripts of the Hebrew of Sirach (plus another in the Cairo Genizah as well as the incorporation of the Hebrew poem from Sirach 51 in 11QP^a).

3.2.5. *The Witness of 4 Ezra and Josephus.* The passage in 4 Ezra 14:45-48 (see Esdras Books of), written toward the end of the first century, speaks of twenty-four books that are to be made available to the public, but interestingly of an additional seventy books presumably of a higher order to be reserved for "the wise." Josephus, writing about the same time, gives "twenty-two" as the number of books of Scripture: five books of Moses, thirteen books of prophetic histories, and four books of hymns and precepts (*Ag. Ap.* 1.7-8 §§37-43). It is important to note that neither his total of twenty-two nor his division between the prophetic and wisdom books match well with those of the traditional MT or LXX.

3.3. *The Collection of the Scriptures.* Thus the evidence suggests that during the period of the composition of the NT, the decisions concerning the collection of the books of Scripture into the canon as we know it had not yet taken place. There were uniquely authoritative scriptural books, but precisely which books were to be in-

cluded in that category and which were to be excluded from that essential list had not yet been decided. There is little evidence that such questions were yet being seriously debated, or needed to be. The Law was securely in the canon-to-be. There was also a collection of prophetic books acknowledged widely as divine revelation, but the exact contents of that collection were not yet delimited. And there was an abundant and widely varied assortment of religious writings to which different groups attributed different degrees of importance. It is likely that the disciples and early Christian writers would have found themselves amid these differing groups.

Materially, individual scriptural and other works in the first century would have been copied on discrete scrolls, not collected into a codex (a stack of pages bound together in book form). The Scriptures would have comprised a collection of separate scrolls; no single scroll could have contained the entire Law and the Prophets. Not until the third or fourth century, when the codex became common, was the practical decision required to determine the exact contents of the Bible to be included within the covers of a codex (see *Literacy and Book Culture*).

4. The Hebrew Bible as a Source for the Composition of the New Testament.

The HB is the primary resource used by early disciples of Jesus and early Christian authors for the religious basis, vocabulary, concepts, motifs, roles, stories, beliefs and theology of the NT. Only a brief, selective sketch can be provided here.

4.1. The Dead Sea Scrolls. Just as the biblical scrolls have illumined the text and canon of the HB, so have the scrolls—biblical, parabiblical and nonbiblical—illumined many aspects of the NT and the ways post-Tanakh literature was composed. The **Rule of the Community* (1QS, 4QS^{a-d}, 5QS), for example, is saturated with allusions to and phraseology from the Law and the Prophets, and much of the NT is similarly composed, in matter and in form.

4.2. Theological Themes. The major theological themes of the NT are principally derived from those of the HB: creation, covenant, torah, ethics, election, salvation. Moreover, many distinctly Christian developments in theology are re-adaptations of themes of the HB: new creation, new covenant, new or heavenly Jerusalem, the time of the end (see *Eschatologies*) and

resurrection of the dead. Moreover, J. A. Fitzmyer interestingly demonstrates that Paul's doctrine of justification by faith—also clearly based on elements from the HB—finds a transitional phase in the *Qumran Rule of the Community* (1QS) and **Thanksgiving Hymns* (1QH).

4.3. The Life and Portraits of Jesus. Virtually the entire narrative of the life of Jesus is modeled on the HB and its vocabulary drawn from there, from "In the beginning" (Jn 1:1 = Gen 1:1) to "Into your hands I commend my spirit" (Lk 23:46 = Ps 31:5) and even "Sit at my right hand" (Heb 1:13 = Ps 110:1). Moreover, many figures from the HB serve as models or prototypes of Jesus.

4.3.1. Origins and Birth. Just as John's Gospel makes use of creation allusions to express the divine origins of Jesus, the Matthean and Lukan Evangelists form their accounts of his human origins according to the literary form of the HB genealogies: Matthew 1:1-17 through Abraham and David, Luke 3:23-38 back through David and Abraham to Adam. Matthew further develops his birth narrative through five vignettes designed to show that "all this happened to fulfill what had been spoken by God through the prophet[s]" (Mt 1:22; 2:5, 15, 17, 23). Similarly, all the brush strokes in the opening scene painted for Luke's diptych are inspired by the HB: a priest in the temple, who had a "barren" wife and receives a message from a heavenly being, about a birth with Nazirite allusions (cf. Judg 13:2-5, 25; 16:17); and another heavenly messenger, announcing to a virgin who will bear a son to inherit the throne of David and who sings a canticle reminiscent of Hannah's (cf. 1 Sam 1:2, 11; 2:1-10).

4.3.2. Life, Ministry, Teaching, Miracles. The portraits of Jesus painted by the Evangelists and Paul are sketched against the background of the principal figures and roles of the HB. He is the "last Adam" (1 Cor 15:45; cf. 15:21-22; Rom 5:14), the one in whom "the blessing of Abraham passes on to the Gentiles" (Gal 3:14), and is "greater than our ancestor Jacob" (Jn 4:12).

Matthew paints him as the new lawgiver, the new Moses: from the scene of the slaughter of the innocent children (Mt 2:16 = Ex 1:16, 22) and "out of Egypt I have called my son" (Hos 11:1) to the restructuring of Jesus' teaching into five major discourses to symbolize a new Torah. And D. P. Moessner has noted that the composition of Luke 9 is influenced by Deuteronomy in

its parallel to the journey, out of Egypt and through the wilderness, of the "prophet like Moses" (Deut 18:15-18), with a strong correspondence in the calling, ministry and destiny of the chosen one who must die in the effort to bring his people to salvation.

Jesus teaches the Torah as the pinnacle of revelation: the greatest commandment (Mk 12:28-31) is selected from Deuteronomy 6:4-5 and the second greatest from Leviticus 19:18. The HB is the acknowledged basis for settling halakic disputes (Mt 15:4; 19:4-8 par. Mk 10:3-9; Mt 22:23-32 par. Mk 12:18-27 par. Lk 20:27-38), though in Paul it eventually yields to the supreme truth incarnate in Jesus Christ (Gal 3:21-26). The same shift is signaled when the saying "I have come not to abolish but to fulfill [the Law]" (Mt 5:17) moves into the revisory formula, "You have heard it said: *x*, but I say to you *y*" (Mt 5:21-22, 27-28, 31-34, 38-39, 43-44). Note also the periodization of salvation history in Luke 16:16: "It was the Law and the Prophets until John; since then it is the good news of the kingdom of God." His rootedness in, but especially his transcending of, the Law and the Prophets, symbolized by the figures of Moses and Elijah, is affirmed in his transfiguration (Mt 17:1-8 par. Mk 9:2-8 par. Lk 9:28-36; see also Heb 1:1-2).

Luke depicts Jesus as the new Elijah. After his inaugural reading from the scroll of Isaiah in the synagogue at Nazareth, where "today you have heard this scripture fulfilled" (Lk 4:16-21), he appeals to the examples of Elijah and Elisha (Lk 4:24-27) regarding his rejection. T. L. Brodie and C. A. Evans demonstrate close parallels to Elijah and Elisha, including several miracles, for example, the raising of the widow's son in Nain (Lk 7:11-17 = 1 Kings 17:17-24; see also Elisha's raising of a woman's son in 2 Kings 4:32-37). The healing of the centurion's slave (Lk 7:1-10; cf. Mt 8:5-13) may also find echoes in the Elijah and Elisha cycles (cf. 1 Kings 17:8-16; 2 Kings 5:1-14).

Like David, Jesus is God's son (Heb 1:2, 5, 8 = Ps 2:7; 2 Sam 7:14) but greater than David (Mt 22:42-45) and "greater than Solomon" (Mt 12:42; Lk 11:31). In addition to his role as king, he is also seen as surpassing the HB leadership roles of priest (Heb 4:14-5:14; 7:1-21) and prophet (Heb 1:1-2; Mk 9:4, 7 par. Mt 17:3, 5 par. Lk 9:30, 35), as well as guarantee of the new covenant (Heb 7:22; 8:8-13).

4.3.3. *Death, Resurrection and Glory.* Jesus' suf-

fering and death were foretold by Moses and the prophets (Lk 24:25-27). His death was interpreted with overtones of Abraham's sacrifice of Isaac (Gen 22:1-18; Jn 3:16; 1 Jn 4:9-10; Rom 8:32; cf. Heb 11:17-19), the Suffering Servant (Is 52:13-53:12; Acts 8:32-33; 1 Pet 2:21-25) and the Son of Man (Mt 26:64 = Dan 7:13). Psalm 22 provides details (Jn 19:24; Mt 27:39), and Passover regulations are fulfilled (Jn 19:36 = Ex 12:46). His dying utterances quote scriptural texts (Mk 15:34 par. Mt 27:46 = Ps 22:1; Lk 23:46 = Ps 31:5; Jn 19:28; cf. Ps 69:21). After his death he was buried for three days to rise on the third day (Mt 12:40 = Jon 1:17; Lk 24:46). Now glorified, he is "superior to the angels" (Heb 1:4) and sits enthroned as God's Son at his right hand (Heb 1:3-13 = Pss 2:7; 110:1).

5. Summary.

Thus the NT is thoroughly constructed from and saturated with the themes and motifs, the stories and prototypical figures, the terminology and theology of the HB. The Gospels are not retelling the HB but are retelling the Jesus story, but they do so by drawing principally and almost exclusively from the HB. Many minds and voices contributed to the composition of the NT (just as they did for the HB), and they were searching the ancient Scriptures in their attempt to understand and articulate what God was doing in Jesus. They did so from texts and from a collection of sacred books that did not necessarily coincide with the textual forms or the canons in use today. They did so from texts that were still in the pluriform compositional phase of the Scriptures and thus were not necessarily in agreement with our inherited texts, and they did so from a collection of sacred books that would largely, though not entirely, coincide with the later Jewish, Protestant, Catholic, Orthodox or Ethiopic canons.

HEBREW LANGUAGE

Aside from the Aramaic passages (Jer 10:11; Dan 2:4b-7:28; Ezra 4:8-6:18; 7:12-26) and two words in Genesis 31:47, Hebrew is the language of the OT (98.5 percent). It is a member of the language family known as Semitic (after Noah's son Shem, Gen 5:32), which has been the predominant language group in the Middle East for at least the last five millennia. Semitic languages range from Akkadian, the language of the Babylonians and Assyrians in the Northeast; Arabic and Ge'ez in the South; and Hebrew, Aramaic, Phoenician and various other Canaanite dialects in the Northwest. Hebrew is then a Northwest Semitic language.

The Hebrew language has shown a remarkable stability over the past three millennia. A modern Hebrew reader could with little difficulty understand literature ranging from the earliest biblical Hebrew, the Dead Sea Scrolls and medieval midrashim. The evident catalyst for such uniformity has been the Hebrew Bible.

1. Biblical Hebrew
2. Mishnaic Hebrew
3. Dead Sea Scrolls
4. Importance for New Testament Study

1. Biblical Hebrew.

Hebrew grammarians have discerned sufficient differences in the written record to describe Biblical Hebrew (BH), the language of the Hebrew Bible, and Mishnaic Hebrew (MH), the language of the Mishnah and other later rabbinic compositions. The first division is often further subdivided into Classical Biblical Hebrew (CBH; the Pentateuch and Former Prophets) and Late Biblical Hebrew (LBH; Ezra-Nehemiah, Esther, and the nonsynoptic portions of Chronicles). Practically speaking, however, differences used to make this distinction are minor, and due to pressures in antiquity to modernize (Ecclesiastes?) or archaize (Esther) the text, these disagreements are in large part only relative. As

Walke and O'Connor conclude, "The Hebrew of scripture, though far from uniform, is essentially a single language," and "The bulk of the Hebrew Bible . . . presents a single if changing grammar" (15).

2. Mishnaic Hebrew.

This picture alters to a somewhat greater degree in regard to MH. The Mishnah (c. A.D. 200) is the earliest and best example of this particular Hebrew idiom. Considered by grammarians of the nineteenth century to be an artificial construct rather than a spoken language, most now argue that it does indeed reflect the language of discourse in the third century A.D. and perhaps was even in use as early as the second century B.C. (Rabin). The distinction between BH and MH are clearly more substantial than the relative differences within BH. The following list is a sample of the more important differences between BH and MH.

(1) MH no longer uses the consecutive forms of the verb.

(2) The MH verbal system expresses three *tenses* (time of action), with the participle providing the present. BH verbs largely signify *aspect* (type of action), and the participle is used as a verbal adjective.

(3) MH distinguishes between genders only in the third singular pronoun, whereas BH expresses gender in both second and third persons, singular and plural.

(4) MH introduces relative clauses with *še* while BH regularly uses *šer*.

(5) The common construct relationship of BH is often expressed by the particle *šel* in MH (a combination of the relative particle *še* plus the preposition *l-*).

In addition to these grammatical changes there are noticeable shifts in vocabulary—MH uses many words that are unknown in BH but are common in *Aramaic—and stylistic changes (Segal).

Just when the transition was made from BH (LBH) to MH is one of the Holy Grails of Hebrew language research. That some form of Hebrew was spoken during the Second Temple period is clearly indicated by the ancient writers. According to Nehemiah 13:23-24 half of the Jewish children with mothers from Ashdod, Ammon and Moab could not speak Hebrew. That Nehemiah took steps to rectify this situation witnesses that an ability to speak Hebrew was ex-

pected in Jerusalem in the mid-fifth century B.C. In accordance with the Hebrew of the book itself, the language of Nehemiah would be LBH.

3. The Dead Sea Scrolls.

The next piece of evidence has only been known since 1947 and the discovery of the *Dead Sea Scrolls. In the ten years that followed the initial find, more than 900 scrolls were uncovered in eleven caves to the northwest of the Dead Sea. Fully 202 of these are biblical manuscripts. Of the remaining 700 texts, 120 are written in *Aramaic, and 28 in *Greek. The remaining 550 scrolls were written in Hebrew. E. Qimron has determined as the fruit of twenty years of intense personal research that, "Broadly speaking, the language of the Qumran sectarian literature is similar (especially in phraseology and syntax) to the language of those biblical books that were written in the post exilic period" (Qimron and Strugnell). The written language at Qumran thus represents a continuation of LBH.

3.1. The Copper Scroll. There are, however, two literary works from the Qumran caves that evidence MH characteristics. The first of these, the famous *Copper Scroll (3Q15), is a list of some sixty-five sites where treasure was to be buried (none has been found). This scroll is likely a product of the *temple *priesthood and very possibly a map to temple treasury to be hidden from the approaching Roman armies (c. A.D. 70). The surmise that this unique scroll is probably not a part of the Qumran sectarian collection (which is antitemple), but was only coincidentally hidden in the same vicinity, suggests that it represents the language of Jerusalem in the first century A.D.

3.2. 4QMMT. The second composition is **Miqsat Ma'asey ha-Torah* (Some of the Works of the Law), or 4QMMT, very possibly dating to the middle of the second century B.C. This text is a composite of six fragmentary manuscripts and was called 4QMishnaic by its original editor, J. T. Milik, because of MH characteristics. The final editors (Qimron and Strugnell) have concluded that although the "MMT's language appears to be closer to MH than to BH," especially in the way of vocabulary and style, "Its grammar . . . is mainly the grammar of Qumran, one which differs extensively from MH."

3.3. Qumran Hebrew and the Language of Judea. How the character of this text affects our understanding of the nature of Qumran Hebrew

(QH) and how it relates to the language of *Judea at large is dependent on the answer to two questions. First, is Qumran Hebrew antilanguage? In other words, is it a purposed reaction to the language (MH or Aramaic) of the nonsectarian Jews (Schmiedewind). There are several indications among the scrolls that this is the case. 1QH^a 12:16 reports that the people had corrupted the words of the prophets with "stammering speech and a strange tongue" (see also 1QH^a 10:19). CD 5:11-12 states that the Pharisees had taught the statutes of God's covenant with a "blasphemous language." On the other hand, the Qumran psalmist refers to his own language as the "tongue of one of your disciples" (1QH^a 15:10).

The second question concerns the identity of the recipient of 4QMMT. The current majority view is that the Jerusalem establishment and perhaps the high priest are the intended recipients (Qimron and Strugnell). Perhaps more defensible is the conclusion that it was a fellow covenanter (and the group he represents) who had fallen under the influence of Pharisaic thought (see *Miqsat Ma'asey ha-Torah* [4QMMT]). In either case 4QMMT very likely reflects the spoken language of the recipient.

If QH is an antilanguage, then 4QMMT represents either the spoken vernacular of the Qumran sect (recipient = fellow sectarian) or a concession to the language of the people (recipient = Jerusalem establishment). If QH is not an antilanguage, then 4QMMT represents the spoken language of Qumran and, if its recipient is of the Jerusalem establishment, the language of Jerusalem as well. Aside from these uncertainties of detail, when taken together the *Copper Scroll* and 4QMMT suggest that during the last couple of centuries B.C. and the first century A.D., LBH had begun the transition to the MH of the later rabbinic period. The Qumran sectarians, as is evidenced by the LBH-nature of the vast majority of the Hebrew scrolls and the presence of the MH characteristics in 4QMMT, may have practiced a form of *diglossia*, an upper language (LBH) for formal occasions and writing, and a lower language (with characteristics of MH) that was spoken in everyday life. The inhabitants of Judea and Jerusalem very likely spoke a Hebrew very similar to MH:

4. Importance for New Testament Study.

4.1. Language of Jesus. Having established that

the form of Hebrew spoken in the Jewish community of the first century A.D. was characterized by Mishnaic Hebrew (MH) grammar, a second question needs to be addressed: was the language of Jesus MH? That his legal discussions with the various Jewish parties (i.e., *Pharisees, *Sadducees, *scribes) were couched in MH is strongly suggested by 4QMMT and quotations of the early sages (Tannaim) preserved in the Mishnah and Talmuds. However, the multilingual nature of the Qumran manuscripts (79 percent Hebrew, 17 percent Aramaic, 4 percent Greek), in a setting where Hebrew was evidently preferred for theological reasons, warns against a simple solution to the question. There are additional indications that the Jewish community was largely multilingual.

4.1.1. *Evidence from Masada.* The Masada manuscripts would have been deposited just shortly after those of Qumran (c. A.D. 73-74) and provide the last manuscript evidence until the Second Jewish Revolt (A.D. 132-135; see Jewish Wars with Rome). Apart from *Latin and *Greek lists, pay stubs and letters which evidence occupation by the Roman army following the fall of Masada, there exist the remains of seven biblical manuscripts and a substantial portion of a Hebrew copy of Ben Sira (see *Sirach*). Ben Sira, a book exalting the wisdom of Jerusalem, was composed in Hebrew in 182 B.C. and translated into Greek in 117 B.C. by Ben Sira's grandson. Although a Greek version was later included in the Roman Catholic canon, it should be noted that the Hebrew text was preferred by the zealots who carried their copy to Masada. Of the eight remaining nonbiblical manuscripts, seven are Hebrew and one very fragmentary text may be Aramaic.

4.1.2. *Evidence from Josephus.* An interesting aside by the Jewish historian *Josephus at the end of *Jewish Antiquities* allows a quite different glimpse of the spoken languages of the first century A.D.

I have also taken a great deal of pains to obtain the learning of the Greeks, and understand the elements of the Greek language, although I have so long accustomed myself to speak our native tongue, that I cannot pronounce Greek with sufficient exactness. For our nation does not encourage those that learn the languages of many nations, and so adorn their discourses with the smoothness of their diction. . . . But they

give him the testimony of being a wise man who is fully acquainted with our laws and is able to interpret the meaning of the Holy Scriptures. (Josephus *Ant.* 20.11.2 §§263-64)

Josephus suggests that a knowledge of Greek was not much sought after by the Jews, but that facility in Hebrew was a sign of wisdom. As to the identity of his own "native tongue," most scholars have posited Aramaic, as is suggested by the Aramaic forms of religious terminology in the Greek text of his works. This also appears to be the meaning of his introductory statement to *Jewish War*, that he wrote in his "vernacular tongue" for his fellow Jews "beyond the Euphrates and the inhabitants of Adiabene" (Josephus *J.W.* Preface 1 §§3, 6). This region—the upper Tigris—was with little doubt populated by Aramaic-speaking peoples.

4.1.3. Evidence from the Bar Kokhba Caves. The last piece of evidence comes from the caves in Nahal Hever and Wadi Murabba'at, hideouts for Jewish rebels in the Second Jewish Revolt. The documents from these caves are of a different character, being contracts, inventories, genealogies and letters rather than the literary works of Qumran and Masada. But they provide a snapshot of the languages being used in the Jewish community of the early second century A.D. Among the fragments from Wadi Murabba'at which are large enough to determine language there are 17 Hebrew (16 percent), 16 Aramaic (15 percent), 75 Greek (69 percent) and 1 Nabatean text, an Aramaic dialect. The caves in Nahal Hever reveal the same languages with a slightly different profile: 17 Hebrew (14 percent), 40 Aramaic (33 percent), 51 Greek (41 percent), and 15 Nabatean (12 percent). One of the Greek letters (5/6Hev 52) is a request from *Bar Kokhba (or one of his lieutenants) to have provisions set aside for Succoth. In it he writes (dictates), "the letter is written in Greek as we have found no one to write it in Hebrew." Although the word translated "Hebrew" might also refer to Aramaic, the fact that XHev/Se 30, a letter written to Bar Kokhba, and Mur 43 and 44, letters from Bar Kokhba (Mur 42, 45-52 are likely from him as well) are all in written Hebrew makes the translation sure. It is clear that Bar Kokhba preferred to carry out his communications in Hebrew but turned to Greek when the evidently waning Hebrew literacy demanded (see Simon ben Kosiba).

4.1.4. Evidence from the Gospel Accounts. It is in

this context that Jesus ministered. The evidence reviewed suggests that the language among the Jews in Jerusalem and Judea in the early first century A.D. was Hebrew, communication with Jews outside of these environs was likely carried on in Aramaic, while business with the Roman government was conducted in Greek. It is of note, then, that some thirty instances of Jesus' Semitic speech in the NT are almost entirely in Aramaic. Most of these occurrences are single words (Passover, sabbath) and do not allow a certain judgment to be made as there was much sharing of vocabulary between Aramaic and MH. Thus two instances of longer verbal expressions are of special interest to scholars. Mark 5:41 records the episode of the healing of a young girl in Capernaum in which Jesus says in Aramaic, *tālita' qūm*, which translated means, "Little girl, get up." It is probable that the language among the natives of the Galilee and the hill country round about (including Nazareth) was Aramaic. The second instance is Jesus cry from the cross recorded at Matthew 27:46, *ēi, ēlī, lēma' s' bāqtāni*, "My Lord, My Lord, why have you forsaken me?" Matthew begins in Hebrew (Mark 15:34 with **lāhī*, **lāhū* is Aramaic) and finishes in Aramaic. The crowds of Jewish pilgrims in Jerusalem for the Passover from regions outside of Judea would have understood the Aramaic translation of Psalm 22:1 more readily than the Hebrew. A third verbal instance pointed out by scholars, *Ephphatha*, "Be opened" (Mark 7:34), is ambiguous and by form more likely Hebrew than Aramaic.

4.1.5. Conclusion. There is little doubt that Jesus spoke Aramaic when the context required. More speculative, but in agreement with the evidence from Qumran, Masada and the Bar Kokhba caves, is the likelihood that he also spoke Hebrew in his interactions with the scribes, Pharisees and Sadducees in and around Jerusalem. His intercourse with Roman officials (i.e., Jn 18:4) was probably carried out in Greek.

4.2. Necessity of Hebrew for New Testament Study. In this age of specialization, the student of the New Testament who also reads Hebrew has become somewhat of a rarity. The recent release of the Dead Sea Scrolls and their wealth of information toward the study of New Testament backgrounds, coupled with a growing realization that Christianity has roots deep within Judaism, should begin to mitigate this trend. Only a mature knowledge of the Hebrew Bible and its

subsequent use can provide the necessary context for understanding the ministry of Jesus, the beginnings of Christianity, and the collection of first-century Jewish texts known as the NT.

HEBREW MATTHEW

The complete text of a Hebrew Matthew has been preserved in a fourteenth-century Jewish polemical treatise known as the *Even Bohan* ("Touchstone") and authored by the Spanish rabbi Shem-Tob ben Isaac ben Shaprut (also referred to as Ibn Shaprut). G. Howard (1987, 225)

believes that this Hebrew text is not a translation of canonical Greek Matthew or a version of one of the Jewish Gospels (viz., the *Gospel of the Hebrews*, the *Gospel of the Nazarenes*, the *Gospel of Ebionites*) but an independent tradition that in its earliest form may reach back to the first century. Howard's text is based on Add no. 26964 (British Library) for Matthew 1:1-23:22 and Ms. 2426 (Jewish Theological Seminary of America) for Matthew 23:23-28:20.

The belief that the Evangelist Matthew produced a Hebrew Gospel was widespread in the early church. Papias remarks that the Evangelist "Matthew collected the oracles [of Jesus] in the Hebrew language [*hebraidi dialektō*], and each interpreted them as best he could" (Eusebius *Hist. Eccl.* 3.39.16). Irenaeus comments that "Matthew also issued a written Gospel among the Hebrews in their own dialect" (Irenaeus *Haer.* 3.1.1). The same opinion is expressed by Origen, who says that Matthew published his Gospel "for those who from Judaism came to believe, composed as it was in Hebrew letters [*grammasin hebraikōis*]" (Eusebius *Hist. Eccl.* 6.25.4). Eusebius himself says that "Matthew had first preached to the Hebrews, and when he was on the point of going to others he transmitted in writing in his native language [*patriō glottē*] the Gospel according to himself" (Eusebius *Hist. Eccl.* 3.24.6). Epiphanius also speaks of a Gospel "in Hebrew letters [*hebraikōis grammasin*]" (Epiphanius *Pan.* 30.3.7). Finally, Jerome also says Matthew "wrote the Gospel in the Hebrew language" (Jerome *Ep.* 20.5). Howard thinks Shem-Tob's Hebrew Matthew may be this Hebrew text, of which some early Fathers had heard.

Reviews of Howard's book have been mixed. W. L. Petersen has been the most critical, arguing that Shem-Tob's Hebrew Matthew "can only be regarded as a secondary work, based on earlier medieval traditions related to the *Vetus Latina* and *Vetus Syra*" (Petersen, 726). W. Horbury has also expressed skepticism, doubting that Shem-Tob's Hebrew Matthew has first-century roots. D. J. Harrington, however, thinks that Howard has succeeded in laying the foundation on which future study of Matthew's Hebrew substratum should build. Indeed, Harrington advises NT textual critics to take into account the readings of Shem-Tob's Hebrew Matthew.

Significant comparative textual evidence supports the conclusions of Howard and Har-

rington. Howard (1989, 1992) is able to cite examples where Shem-Tob's Hebrew Matthew agrees with readings found only in Codex Sinaiticus, while in more recent studies R. F. Shedinger (1997) is able to cite many readings where Shem-Tob's text agrees with readings found only in P⁴⁵. Some of these readings include: (1) At Luke 11:13, P⁴⁵ reads "good spirit" (instead of "Holy Spirit" or, in the parallel at Mt 7:11, "good things"), which agrees with Shem-Tob's "his good spirit." (2) Only P⁴⁵ at Luke 11:33 (par. Mt 5:15) and Shem-Tob omit "under a basket." (3) At Matthew 26:3, P⁴⁵ and Shem-Tob omit "and the scribes." (4) The variant word order in P⁴⁵ at Matthew 26:23a is in agreement only with Shem-Tob's Hebrew Matthew. Shedinger (1999) also cites a number of agreements between Shem-Tob's Hebrew Matthew and other old Greek texts and ancient versions. He finds some sixty-seven textual variants that agree with neither the Byzantine manuscript tradition nor the Vulgate and Latin tradition. He believes that this evidence "strongly suggests that [Shem-Tob's Hebrew Matthew] has roots going back to a much earlier time" (Shedinger 1999, 689). Some of these variants include: (1) Shem-Tob's omission at Matthew 7:27 of "and the winds blew," which agrees with N* 33; (2) Shem-Tob's omission of Matthew 10:37b-38, which agrees fully with P¹⁹ and partly with B* D; (3) Shem-Tob's plural "they ate" at Matthew 12:4 agrees with N B 481; (4) Shem-Tob at Matthew 15:36 omits "and giving thanks," which agrees with C*; and (5) Shem-Tob's surprising variant at Matthew 25:28, "give it to the one who gained five gold coins," agrees with and explains the reading in D, "give it to the one who has five talents." D's reading is confusing, because no one in the parable of the talents has five gold coins. Shem-Tob's reading makes it clear that the single talent was to be given to the one who had ten (i.e., the one who had "gained five").

HEKHALOT LITERATURE. See HEAVENLY ASCENT IN JEWISH AND PAGAN TRADITIONS; MYSTICISM.

HELLENISM

The term *Hellenism* has become popular since the early nineteenth century. It was then used of Greek civilization in the period after the death of *Alexander the Great (323 B.C.), but it is currently used to refer to the whole span of Greek history or more specifically to a set of values and practices attributed to the ancient Greeks. The Greek word *hellenismos* is first used of the adoption of or enthusiasm for Greek culture in 2 Maccabees (see 1 & 2 Maccabees). Greek ideas and customs penetrated most of the vast area encompassed by Alexander's eastern expedition and can be discerned in Palestine from the third century B.C. on. There was a violent reaction to Greek influence in the Maccabean period, but by the time of Jesus the Palestinian landscape included Greek architecture (*gymnasia, *theaters; see Art and Architecture: Greco-Roman) and Greek social institutions. The Gospels mention encounters with people of Greek culture. James the brother of Jesus, and probably Jesus himself, spoke Greek as well as Aramaic (and understood Hebrew). Paul and his companions met Greek civilization not only in Greece and Macedonia but also (often fused with native cultures) in Sicily, *Asia Minor, Cyprus, Syria and Palestine. The Hellenists of Acts were probably

not simply members of Greek-speaking synagogue congregations but people favorably inclined toward Greek practices.

1. Meanings of "Hellenism"
2. Historical and Cultural Background
3. Palestine and Greek Influence
4. Who Were the Hellenists?
5. Characteristics of the Hellenic Way of Life

1. Meanings of "Hellenism."

1.1. The Modern Term. The fundamental reference of "Hellenism" is to ancient Greek language and culture. It is used in its broadest sense by A. J. Toynbee, who gave to his Home University Library volume *Hellenism* (London: Oxford University Press, 1959) the subtitle *The History of a Civilization* for a book that embraced the whole period from the late second millennium B.C. to the seventh century of our era; similarly F. E. Peters used the subtitle *A History of the Near East from Alexander the Great to the Triumph of Christianity* for *The Harvest of Hellenism* (London: Allen & Unwin, 1972) to denote a period of eight centuries. However, the German word *Hellenismus* is commonly used in a more restricted sense, of the culture that resulted from Greek penetration into the lands of the Near East, particularly following the expedition of Alexander. J. G. Droysen's *Geschichte des Hellenismus* 1 (Hamburg: Perthes, 1836) gave currency to this focus (for his predecessors see R. Bichler, "Hellenismus": *Geschichte und Problematik eines Epochenbegriffs* [Impulse der Forschung 41; Darmstadt: Wissenschaftliche Buchgesellschaft, 1983] 34-48).

The tension between alluding to Greek culture generally and referring to a specific period has led to a certain fluidity of usage. Thus modern collections of essays such as *Studies in Classics and Jewish Hellenism*, edited by R. Koebner (*Scribner* 1; Jerusalem: Hebrew University, Magnes Press, 1954) or H.-D. Betz's *Hellenismus und Urchristentum* (Tübingen: Mohr Siebeck, 1990) refer to the content of Greek culture, albeit with a particular emphasis on the Hellenistic (or intertestamental) period.

The English word *Hellenism* can denote a preference, sometimes even an enthusiasm, for the Greek way of life. Matthew Arnold gave this usage a boost by writing of "the simple and attractive ideal which Hellenism holds out before human nature." He contrasted Hellenism, whose governing idea is "spontaneity of con-

sciousness," with Hebraism, in which the governing idea is "strictness of conscience" (*Culture and Anarchy: An Essay in Political and Social Criticism* [London: Smith, Elder, 1869] 147, 151). A recent study by L. C. Dowling of *Hellenism and Homosexuality in Victorian Oxford* (Ithaca, NY: Cornell University Press, 1994) is concerned not only with systematic study in the nineteenth century of the history, literature and philosophy of the ancient Greeks but also with a new ideal of Greek civilization (inter alia, as a means of establishing a transcendent value that forms an alternative to Christian theology). S. Prickett may overstate the case slightly in writing (in *Rediscovering Hellenism: The Hellenic Inheritance and the English Imagination*, ed. G. W. Clarke [Cambridge: Cambridge University Press, 1989], 147), "For the German Hellenists of the late eighteenth and early nineteenth centuries Greece had ceased to be a place and had become a permanent manifestation of the human spirit"; but there has been a wave of enthusiasm in western Europe for what were seen as Greek ideals.

1.2. Greek Vocabulary. The corresponding Greek noun, *hellēnismos*, is derived from the verb *hellēnizein*, which normally means "to speak Greek" (e.g., Dio Chrysostom *Or.* 4.55; 36.9; contrasted with *barbarizein*, "to speak Greek badly," in 36.26), though it can mean "to imitate the Greeks," "to become Greek" (similarly Will and Orrieux, 9-11). The noun was not used by the Greeks of the classical period, as far as the surviving evidence indicates. It can mean "pure Greek [language]," as when Diogenes of Babylon (second century B.C.) defined one of the five excellences of speech, *hellēnismos*, as "language faultless in its grammar and without vernacular usage" (in Diogenes Laertius *Vit.* 7.59). The first attested occurrence with a cultural overtone happens to be in a Jewish context: in 2 Maccabees 4:18 the epitomator of Jason of Cyrene speaks of "a climax in adoption of Greek customs and a rise in adoption of alien practices" (with parallelism between *akmē hellēnismou* and *prosbasis allophylismou*). The process is later referred to as "the change to Greek customs" (*ta Hellēnika*) (2 Macc 11:24).

After the adoption of Christianity as the state cult of the Roman Empire *hellēnismos* was used by patristic writers to denote paganism, that is, Greek cultic practice. Basil of Caesarea, for example, opens his twenty-fourth *Homily* (PG 31.600b) with the statement that Judaism is in

conflict with *hellēnismos* and both with Christianity, just as the Egyptians and Assyrians were enemies of each other and of *Israel. In the next century Socrates Scholasticus writes of Julian as emperor (A.D. 361-363) supporting the cause of paganism (*hellēnismos*; Socrates *Hist. Eccl.* 3.11.4 [PG 67.409b]). Philostorgius says that Gallus taught his half-brother Julian to lean toward *hellēnismos* in the period when his cousin Constantius II was still emperor (Philostorgius *Hist. Eccl.* 3.27 [PG 65.513c]). He reports the sufferings of men, one a bishop, who apostatized and turned to *hellēnismos* (Philostorgius *Hist. Eccl.* 7.13 [PG 65.549d-552a]). Sozomen speaks of a governor of Egypt and *Alexandria named Julian, who was especially favorable to paganism and prejudiced against the Christians (Sozomen *Hist. Eccl.* 5.7.9 [PG 67.1233c]) and of a city extremely favorable to paganism (Sozomen *Hist. Eccl.* 5.9.7 [PG 67.1240a]; *hellēnismos* with *chairin* in both passages).

Similarly, Licinius, when preparing for a battle with Constantine (c. 324), reverted to pagan cult (*hellēnismos*): Sozomen *Hist. Eccl.* 1.7.2 (PG 67.873c); the same phrase is used in 3.19.4 (PG 67.1097a) of the fear that Constantine, still unbaptized, might revert to paganism. Precisely the same usage can be seen from the pagan side, for Julian in 362 expressed his disappointment that *hellēnismos* (pagan cult) had not yet made the progress that it ought to have (Julian *Letter* 84 Bidez, 429c). (There is a unique instance in Epiphanius [PG 41.168a], who labels *hellēnismos* the third epoch, beginning after the tower of Babel with the time of Scrug [Gen 11:20-23]; but soon after [168c] the noun refers to pagan thought.)

In a brilliant move, Julian exploited the multivalence of the term in an attempt to prevent Christians who prayed and wrote in Greek from teaching Greek literature and thought; if they repudiated paganism (*hellēnismos* in one sense), they should repudiate Greek culture (*hellēnismos* in another sense).² Gregory of Nazianzus responded vigorously by pointing out that the same term has more than one meaning. If Julian means by "Hellenism" cultic worship (*thrēskeia*), he should show where and from which priests Hellenism received its rules, show what victims are to be sacrificed and to which deities. Rather, he refers to a people (*ethnos*) and to those who first discovered the resources of their Greek language (Gregory of Nazianzus *Or.* 4.103 [PG 95.637b-640a]; see Bowersock, 6-13,

27-28, 33-35, 72; Smith, 207-8, 212-14, 279 n. 108).

The primary reference of "Hellenism," then, is to a preference for, or at least an acceptance of, Greek culture and Greek practices, including use of the Greek language. The term is not restricted to the characteristics and values of Greek culture, but it may be applied to harking back to an idealized picture of ancient Greek civilization and literature, especially to enthusiasm for Greek culture in the classical period. There is a parallel phenomenon in Neo-Hellenism, whereby western Europeans and Greeks of the nineteenth and twentieth centuries have interacted with ancient Greek myth and literature (Leontis).

2. Historical and Cultural Background.

2.1. The Distant Past. Rhetorically trained writers such as Aelius Aristides, active in the middle of the second century A.D., repeatedly talk about events of the distant past as though they happened yesterday. This orator can, for example, refer the citizens of the leading cities of Asia—Pergamum, Smyrna and *Ephesus—to ancient Greece (since, he says, they are practically all colonists of the Greeks there), and specifically to the unity of purpose shown by the Spartans and Athenians in the face of Xerxes' invasion of 481/480 B.C., in order to promote harmony among the leading cities in his own time (Aristides *Or.* 23.42-48).

Other rhetorically trained writers of the movement known as the second sophistic made Greek culture and speech "the emblems of civilization" and "spent much of their time living in the same composite Greek world of the past" (Swain, 2, 101). The earliest Greek literature was particularly significant for Greeks of the first two centuries. Homer was the Bible of the Greeks in the sense that the educated classes habitually referred to the *Iliad* and the *Odyssey* for precedents and for understanding of the gods and human nature; by the Roman period the text and its interpretation were debated in much the same manner as modern commentators debate the interpretation of biblical passages (see Scholarship, Greek and Roman).

2.2. The Span of Pre-Hellenistic Greek History. Greek history can be traced back to the Bronze Age civilizations of Crete and Mycenae of the second millennium B.C., although the written evidence for them is so limited that they are sometimes regarded as prehistory. Use of the Greek

language is known to go back to the late Bronze Age on the Greek mainland and on Crete, thanks to the decipherment in the 1950s of the Linear B script on clay tablets. Writing was subsequently lost to the Aegean world, but when the Phoenician script was adapted to the Greek language the first literature was the Homeric poems, whose substantive composition belongs in the eighth century B.C., and the poems of Hesiod, including *Theogony*.

The period down to the Persian wars is known as the archaic period. The Greeks were involved in colonization in the eighth and seventh centuries. This planting of Greek settlements around the shores of the Mediterranean and Black Seas must have increased the Greeks' sense of what was peculiarly Greek. Subsequently a number of Greek cities (*poleis*) experienced takeovers of their governments by autocrats known as tyrants. A small number of cities had institutions that would later be looked on as democratic; this was true of *Athens in the later sixth century. The Greek *poleis* repelled (in the decade 490-479 B.C.) the raiding party of the Achaemenid king Darius and the full-scale invasion of the Greek mainland by his son and successor Xerxes.

The classical period (fifth and fourth centuries B.C.) saw the flourishing of Greek literature, including Athenian tragedy, comedy and oratory; of Greek art and architecture, including the work of Pheidias at Olympia and elsewhere; and of Greek philosophy, including the dialogues of *Plato. While historians might wish to treat each period of Greek history as valuable in its own right, popular perception today focuses attention on the artistic and literary achievement of Athens, especially in the fifth century B.C., which is taken to be the zenith of Greek culture.

2.3. The Rise of Macedon. Already by the middle of the fourth century, Macedon was starting to assert itself under its king Philip II. He and his son and successor Alexander the Great took over much of the Greek world and proceeded to invade Asia. In the decade 334-325 B.C. Alexander conquered most of the Persian Empire, and though he did not consolidate an empire of his own, he left numerous Greek-speaking settlements in his trail. After his death the massive empire that superficially he had won broke into three parts (*see* Diadochi): apart from his base in Macedonia, the *Seleucid kingdom was established in Syria, with influence extending at vari-

ous times as far west as the Aegean and as far east as modern Afghanistan, and the Ptolemaic kingdom was established in Egypt (it similarly tried to gain possessions as far northwest as the Greek mainland; *see* Hellenistic Egypt). In the third and second centuries B.C. the Attalid kings carved out a fourth empire from their base at Pergamon (Bergama) in northwestern Turkey.

3. Palestine and Greek Influence.

3.1. The Hellenistic Period. The Hellenistic period is generally considered to begin with the death of Alexander in 323 B.C., but there is some point in dating it back to about 360 B.C. in order to include earlier penetration of the East by Greeks and Macedonians. It can be shown that Greek culture spread to inland areas of Anatolia, for example in Caria, in the fifty years before Alexander (*see* S. Hornblower, *Mausolus* [Oxford: Clarendon Press, 1982]). In Palestine the period should not be considered to have ended with the death of Cleopatra VII in 30 B.C. but about A.D. 100, with the end of the kingdom of Agrippa II and the Nabateans (*see* Hengel 1974). That there was an element of deliberate purpose on the part of Roman rulers in the growth of Hellenism is suggested by the Jewish writer *Philo from Alexandria, who speaks of Augustus "Hellenizing the barbarian world in its most important regions" (*Philo Leg. Gai.* 21.147, using a compound of the verb *hellenizein* [*see* 1.2 above]; *see* Hellenistic Judaism).

Because of the multiplicity of Eastern languages, cultures and thought, the process of fusion was a complex and varied one. It continued and reached its climax under Roman rule of the East. Later there was a counterrevival by languages such as Syriac and Coptic (Hengel 1989, 1). Judaism similarly was not monolithic: not only were Jews of the Diaspora subject to varied Greek influences, but also there was variation and tension in Palestine itself, although it must be admitted that the evidence for Syria and Palestine in the Hellenistic period is extremely uneven (*see* F. G. B. Millar in Kuhrt and Sherwin-White).

As E. J. Bickerman (79-80) pointed out, it is hard to evaluate the impact of Greek civilization in third-century Palestine. We cannot draw any conclusions from the Greek borrowings (names of musical instruments) in the Aramaic of the book of Daniel (Dan 3:5, 7, 10, 15). Nor is it clear that banquets in Greek Jerusalem, run on Greek

lines, were imitating Athens rather than competing with Damascus or Sidon. But naked athletes and images of naked goddesses must have offended Jews (cf. Gen 3:21; *see* Athletics).

3.2. The Maccabean Revolt. Antiochus IV Epiphanes took over the Seleucid throne in Antioch in 175 B.C. (1 Macc 1:10). The most obvious ways in which Jason, his appointee as high priest, "brought his compatriots over to the Greek way of life" (2 Macc 4:10) were the construction of a gymnasium at the foot of the Temple Mount in Jerusalem and the establishment of a body of aristocratic youth educated as ephēbes for citizenship of a Greek polity (1 Macc 1:14; 2 Macc 4:9, 12; *see* Education: Jewish and Greco-Roman). The priests put the highest value on Greek forms of prestige and Greek ways of living (2 Macc 4:15-16). There was also, then or subsequently, refusal to circumcise boys and concealment of circumcision and construction of pagan altars (1 Macc 1:15, 47; 2:45-46). In 169 B.C. Antiochus entered the sanctuary and removed sacred objects and two years later erected a "desolating sacrilege" (NRSV) on the altar of burnt offering (1 Macc 1:20-61; 2 Macc 5:11-23). Under the leadership of Judas Maccabeus and his brother Jonathan, the Jews in 161 B.C. became "friends and allies" of *Rome (1 Macc 8:20; 2 Macc 4:11; renewal in 1 Macc 12:1-4, 16) and later of the Nabateans (1 Macc 9:35) and managed to choose the victor between rival claimants to the Seleucid throne. The Maccabeans continued their efforts to remove the Hellenizers from Jerusalem, but they did not succeed until 141 B.C. (1 Macc 13:49-52), despite the fact that in 150 B.C. Jonathan became provincial governor and one of the First Friends (1 Macc 10:65) of the victor, Alexander Balas. The decree (1 Macc 14:26-27, 48) recognizing Simon as high priest and head of the nation (140 B.C.) was engraved and set up in a distinctly Greek manner (T. Rajak, in *CAH* 9 [2d ed., 1994], 285).

3.3. Palestine After the Maccabean Revolt. Despite the success of the Maccabean revolt against Seleucid control and the boost to national and cult renewal resulting from it, Greek habits remained strong. The Jewish homeland was surrounded by Greek cities, not only on the Phoenician coast but also to the north and east. According to Josephus (*Ant.* 13.11.3 §318) the son and successor of John Hyrcanus, Aristobulus (104-103 B.C.), styled himself Philhellene (*see*

Hasmoneans). His brother Alexander Jannaeus (103-76 B.C.) issued bilingual *coins, as did the latter's grandson Mattathias Antigonus during his war against Herod and the Romans (40-37 B.C.; details in Meshorer, 118-23, 155-59 with plates 4-7, 54-55).

The incorporation of Judea into the Roman Empire following the campaigns of Pompey the Great (64-63 B.C.) increased the degree of Hellenism. Herod the Great is reported to have had stronger connections with the Greeks than the Jews (Josephus *Ant.* 19.7.3 §329; *see* Herods). He fostered the construction of Greek-style buildings (*see* Archaeology of the Land of Israel; Art and Architecture: Jewish), was patron of some distinguished Greek writers, wrote his own memoirs in Greek and staged Greek entertainments. One of his sons, Herod Antipas, in the principate of Tiberius (A.D. 14-37), founded a largely Jewish city in Galilee, Tiberias, with the constitutional machinery typical of a Greek *polis* (*see* Cities, Greco-Roman). His ties with Greek islands in the Aegean and with Athens are attested by inscriptions (*OGIS*, nos. 416-17). By this time not only had Jewish writings, most notably the OT, been translated into Greek (*see* Septuagint), but also original works were being written in Greek, such as those by Ezekiel the Tragedian and *Philo (*see* esp. Schürer, 3.1-2). While the *Talmud (*m. Soṭah* 9:14) attests attempts to ban the learning of Greek from the beginning of the second century of our era (the war of Quietus, A.D. 117/118; Sevenster, 47-49), earlier Jews read the Homeric poems and studied Greek philosophy. Certainly Greek education was available in Jerusalem (e.g., Josephus *Ant.* 12.4.6 §191; 15.10.5 §373).

4. Who Were the Hellenists?

The tensions within Judaism affected the early church. Groups described as Hellenists appear in the records of the earliest Christian communities: Acts 6:1-6; 9:29; 11:20. One would naturally assume that Hellenists (Gk *Hellenistai*) are distinct from Greeks (*Hellēnes*), were it not that *Hellēnes* as well as *Hellenistai* occurs in the manuscript readings of Acts 11:20. But the conclusion can still be drawn that Hellenists are people of non-Greek origin who adopt and promote Greek customs.

Part of the difficulty lies in the fact that the word *Hellenistēs* is first attested in Greek literature in Acts of the Apostles. A working defini-

tion, given its formation from the verb *hellēnizein* (see 1.2 above), is one who uses Greek customs or the Greek language. There have been strong but unjustified statements (e.g., Hengel 1989, 7) that the difference is purely one of language, so that the contrast between the Hellenists and the Hebrews in Acts 6 refers to members of different synagogues, one group holding services in the Greek language and the other in (probably) Aramaic. The word *Hellēnistēs* is not attested after Acts for three hundred years, and then it appears in passages dependent on that book (see Cadbury, 59-60). Little assistance is to be gained from patristic literature, where there is a divergence between John Chrysostom's exegesis of Acts 6:1 (Chrysostom *Hom. Act.* 14.1; PG 60.119) and 9:29 (Chrysostom *Hom. Act.* 21.1; PG 60.164), interpreting *Hellēnistai* as referring to Greek speakers, and the use of the word to mean "pagan" or "supporter of paganism" (so Philostorgius *Hist. Eccl.* 7.1 [PG 65.537a-b] of Julian allowing pagan activists everywhere to torture and kill Christians; Sozomen *Hist. Eccl.* 5.5.7 [PG 67.1228c] of Julian favoring like-minded *Hellēnistai*). The latter usage is also seen in Julian (*Letter 84 Bidez*, 430d).

At their first appearance (Acts 6:1) the Hellenists complain in the rapidly growing Christian community in Jerusalem that their widows were being overlooked in the daily distribution of money or food. On the assumption that the men chosen to attend to the problem came largely from the group making the complaint, we may examine the names of the seven chosen. Given that Parmenas is an abbreviation of Parmenides, the names (Acts 6:5) are all standard Greek names, not adaptations of Semitic names. Nicolas, however, is described as a proselyte from *Antioch; since Antioch attracted many immigrants (cf. Acts 11:19; 13:1; Josephus *J.W.* 7.3.3 §45), he could have come from any of several ethnic backgrounds before being attracted to Judaism. By implication*the other six were born Jews (see Barrett).

The first man listed, Stephen (*Stephanos*), is introduced in a manner suggesting that he will be important in the ensuing story (as he is). We may note that the people outside the Christian community with whom he debates (Acts 6:9) are Greek speakers, including, one may assume, the ex-slaves whose inclusion is signaled by the Latin loan word *libertini*. The Hebrews against whom the Hellenists complain in Acts 6:1 were

Aramaic-speaking Jews who were members of the Christian community. I. H. Marshall (278) raised the possibility that Paul's Hebrews could include both Luke's Hebrews and his Hellenists. Recent scholarship (Barrett; C. C. Hill in Witherington; see *DLNTD*, Hellenists) is no doubt right to insist that the Hellenists and the Hebrews are not factions but loose groupings, each containing people with divergent beliefs and practices. Acts 6:1-6; 15:1-35 and Galatians 2:1-14 suggest that there was debate within as well as between the churches in Jerusalem and Antioch.

The Hellenists with whom Saul of Tarsus (Paul) argued in Jerusalem following his conversion cannot have been the same as those in Acts 6 (Simon, 14-15). They are contrasted with "the believers" of Acts 9:30; they were so strongly opposed to the teaching that Jesus was Lord that they attempted to kill Saul (Acts 9:29). At the least they were Jews who belonged to Greek-language synagogues. M. Simon (12-19) may well be right in suggesting that the term *Hellenistai* was used by Greek-speaking Jews, who were themselves in a literal sense Hellenists, to disparage other Greek-speaking Jews who promoted Greek ways. The nuance of the word may be captured by the English epithets *paganizing* or *godless*. The basic verb *hellēnizein* (see 1.2 above) may also be used in a derogatory sense of aping Greek customs (see Mann, 301-2).

We have further information about two of the named Hellenists, Stephen and Philip. Stephen's fresh review of Israelite history (Acts 7) leads to the conclusion that God's presence cannot be localized in one place; his accusers represented it as a constant theme of Stephen's (Acts 6:13-14) that the *temple would be destroyed. He drew the conclusion that the current Jewish leadership was "stiff-necked and uncircumcised in heart and ear" and disobedient to the law, largely (it seems) because they did not recognize the murdered Jesus as the righteous one who was to come (Acts 7:51-53). Philip's message was similar (Acts 8:5, 12), but he showed he was ready to proclaim the good news to unusual audiences. It seems that, apart from their belief that Jesus was the Messiah, these two Hellenists were on the progressive side of Palestinian Judaism. They both participated in practical service to the disadvantaged, spoke bluntly to those who rejected the Christian message and seized unique opportunities to spread the gospel.

It remains to explain the usage in Acts 11:20. There is evidence of either incomprehension or carelessness in both Codex Alexandrinus and the first hand of Codex Sinaiticus that suggests that their testimony at this point should be set aside. The weight of the manuscripts favors "Hellenists" (*Hellenistai*), and as B. M. Metzger observes (*A Textual Commentary on the Greek New Testament* [London: United Bible Societies, 1971], 388), there was a temptation for editor or scribe to replace the unfamiliar word *Hellenistai* with the easy and familiar word *Greeks* (*Hellenes*), and no countervailing temptation.

In any case *Hellenes* might well carry the idea of support for Greek culture, for it would have to be admitted that the related term *Hellenis* (lit. "Greek woman") has cultural overtones when it is immediately followed by an ethnic description: "a *Hellenis* of Syro-Phoenician origin" (Mk 7:26). In Acts 11:20 the author modifies his report that those scattered by the persecution that took place over Stephen spoke the word of God only to Jews (Acts 11:19) with the statement that some of them, who originated from Cyprus and Cyrene, came to Antioch and spoke also to the Hellenists. The contrast indicates that the Hellenists in question were not Jews, but they can have been people of non-Greek origin who, like the Jewish Hellenists, favored Greek language and customs. We may conclude that the distinction between the Hellenists and the Hebrews does not simply refer to a difference of language use but to a wider cultural divergence. Perhaps the best critique of alternative views is that by E. Ferguson, who takes the primary meaning of "Hellenists" to be "people who follow the Greek manner of life."

5. Characteristics of the Hellenic Way of Life.

The constructed environment obviously had an impact on Jews and early Christians, but one needs to ask also whether Greek social conventions exercised significant influence.

5.1. The Architectural Landscape. Jews and Christians in the eastern half of the Roman Empire in the first century were familiar with the buildings of Hellenistic cities: an open space surrounded by shops and public buildings (the *agora*), a council house (*bouleuterion*), a ceremonial headquarters (*prytaneion*), a theater such as the great one at Ephesus, a range of temples and (under Roman influence) baths. Even in Palestine many cities had these features. Thus

Herod's buildings at *Caesarea Maritima (previously Strato's Tower) included a theater and an amphitheater (Josephus *Ant.* 15.9.6 §341; *J.W.* 1.21.8 §415) and at Ascalon baths (Josephus *J.W.* 1.21.11 §422). The coastal cities from Ptolemais to Gaza in the first century "functioned publicly as Greek cities" (Millar 357). Inscriptions show that Gerasa had a gymnasium. The theater at Sepphoris, less than 6 kilometers from Nazareth, was probably built by Herod Antipas. Paul's use of athletic imagery (e.g., 1 Cor 9:24-26) strongly suggests he had experience of the gymnasium if not also of the athletic festivals.

5.2. Women. *Women did not have the vote in any of these cities. Officially they needed a male guardian in order to make legal transactions, unless they had three children. But, especially in elite society, they could be very influential (e.g., Herod's wife, Mk 6:17-28; or the women stirred up against Paul and Barnabas in *Pisidian Antioch, Acts 13:50). Wealthier women provided for Jesus and his team in Galilee "out of their own resources" (Lk 8:1-3; Mk 15:40-41). The women who acted as patrons of Paul (e.g., Lydia in *Philippi, Acts 16:13-15, 40; the mother of Rufus, Rom 16:13) had a parallel in Jewish women *benefactors. Benefaction was a means by which wealthy women generally were given public office and honors, at least in Asia Minor, though the offices were largely nominal (see van Bremen). Presumably poorer women were very restricted in freedom of movement and legal activity.

5.3. Slavery. *Slaves performed domestic tasks in many households as well as working in agriculture, the civil service, industry and mining, where slave gangs were often leased. The institution was part of the social fabric in Palestine as well as elsewhere in the Roman Empire. Hence it is not unexpected that Jesus told parables about slaves, including slaves in charge of other slaves or of the whole estate (e.g., Lk 12:41-48). Paul also was a product of his age, using the legal realities of slavery in argument (e.g., Rom 8:15-17; Gal 4:6-7, 21-24; 4:30-5:1) and maintaining a slave while he was a prisoner (Philem 9-13). But while he and other NT writers enjoined submission on slaves (e.g., Eph 6:5-8; Col 3:22-25; 1 Pet 2:18-21), Paul also made statements (e.g., 1 Cor 7:22; Gal 3:28; Eph 6:8-9) that encouraged later Christians to question the institution of slavery.

5.4. Patronage. The system of *patronage

meant that poorer people were able to feed their families on handouts from wealthy or influential patrons. Paul and his companions were beneficiaries of Publius's *hospitality on Malta (Acts 28:7). This might be considered ritualized or guest friendship, but J. H. Neyrey (in Witherington) has argued that Paul be located in the sociological category designated "the retainer class." In *Thessalonica the Jews employed ruffians from the agora to form a mob and create uproar in the city (Acts 17:5). In Jerusalem a violent demonstration was stirred up against Paul (Acts 21:27-30) in a similar manner to the outcry against Jesus (Mk 15:11-15 par.). Faction leaders could also form an alliance, as did Gentiles and Jews at Iconium in an attempt to assault and kill Paul and Barnabas (Acts 14:5-6).

5.5. *Education.* Greek *education, or *paideia*, was available in Jewish Palestine from at least the second century B.C. (Hengel 1989, 20, cites Meleager of Gadara and others). Already in the fourth century the Athenian orator Isocrates asserted that "Hellenes" designated those who shared in Greek education, whether or not of Greek descent (*Or. 4 Paneg.* 50). In the second century after Christ Dio Chrysostom linked Hellenism closely with *paideia*, though he does recognize that non-Greek teachers can have something to offer (see Bowie). *Lucian of Samosata, on the upper Euphrates, tells of his struggle to gain *paideia* (Swain, 308-12).

Some *letters in the NT fit the pattern of contemporary Greek letters (see the formal openings of Jas 1:1; Acts 15:23; 23:26). But many Pauline letters are longer and more complex, though they have some affinities with the short letters in 2 Maccabees 1:1-10a and 2 Maccabees 1:10b—2:18. Attempts to assimilate the Gospels and Acts either to the Hellenistic *biography, especially that of the holy man, or to the romance show that the parallels are far from close. Moreover, making the genre of the Gospels the basis on which every passage must be interpreted is too rigid (see R. A. Burridge, *What Are the Gospels?* [SNTSMS 70; Cambridge: Cambridge University Press, 1992], esp. chaps. 4 and 10; idem, "About People, by People, for People: Gospel Genre and Audiences," in *The Gospels for All Christians: Rethinking the Gospel Audiences*, ed. R. Bauckham [Grand Rapids, MI: Eerdmans, 1998] 113-45).

5.6. *Philosophical Schools.* Philosophical training must also have been a feature of higher edu-

cation, though here the evidence for Palestine is weaker. Qoheleth seems aware of currents in Greek philosophy, such as universalism and individuality (e.g., Eccles 2:18-21; 3:19-22; 4:7-11), and the Epicurean philosopher Philodemus came from Gadara and the *Stoic-inclined Platonist Antiochus from Ascalon. The parallels between the Christian communities founded by Paul and the Hellenistic schools of philosophy—moral exhortation, the respect for the founder, the exegesis of canonical texts (see Nock)—are stronger than the parallels with traditional Roman religion or many of the Oriental cults (L. Alexander in Engberg-Pedersen, 60-83). There are also, as E. A. Judge pointed out (*JRH* 1 [1960] 4-15, 125-37), parallels between the "retinue" of Paul and that of traveling sophists (see 2.1 above), but the latter did not leave behind groups like Paul's that in his view required pastoral care.

H. Maccoby claimed (*Paul and Hellenism* [London: SCM, 1991] esp. chap. 3) that Paul derived a central element in his doctrine of salvation—that the death of Jesus was the indispensable means of atonement for human sin—from the mystery religions (e.g., the violent death of Dionysus or Attis). But Maccoby's view minimizes the strong connections of Paul's doctrine with the Hebrew Bible (whether interpreted in a Hellenized way or not) and seems to entail rejection (H. Maccoby, *The Mythmaker: Paul and the Invention of Christianity* [London: Weidenfeld & Nicolson, 1986] esp. chaps. 6 and 15) of Paul's unambiguous claims that he was born a Jew and had a strictly *Pharisaic training.

5.7. *Language.* *Greek was already spoken in Palestine in the third century B.C. Inscribed sherds (ostraca), *inscriptions on stone and the Zenon *papyri found in Egypt all testify to this. (The Greek language we are talking about is not classical Greek but the common dialect, based largely on the dialect spoken in Athens, which was spread throughout the East in the Hellenistic period. For a recent survey of documents on perishable materials, written predominantly in Greek, from the Roman provinces of Syria, Mesopotamia, Arabia and Judea see Cotton, Cockle, and Miller). Some scholars have sought to minimize the amount of Greek spoken, but the fact that Greek was used even by those who promoted Hebrew for ideological reasons (e.g., Hasmonean moneyers [see 3.3 above], supporters of the Bar Kokhba revolt) is telling. Josephus

may have had an accent in speaking Greek and may have had assistants, but he was undeniably a fluent writer of the language, even in *Antiquities* (pace Feldman, 83, 91, 98-99). We may conclude that by the time of Jesus areas such as Galilee and Judea were trilingual, with *Aramaic the language used for many day-to-day activities, Mishnaic *Hebrew used for religious worship and learned discussion and Greek the normal language for commerce, trade and administration. Some synagogues were presumably for Jews who spoke only Greek (these people would be candidates for Hellenists), while others were for the Hebrews who had only a general familiarity with Greek and spoke Aramaic at home.

It remains controversial (see *NewDocs* 5, 19-23; and *DJG*, Languages of Palestine) whether Jesus spoke Greek as well as Aramaic and presumably Hebrew, but there is no evidence against it. If he did not speak Greek, we have to accept an immediate layer of interpretation in the translation of his sayings into Greek in the Gospels. The Gospel narratives assume that Jesus could converse with Pilate or a centurion from Capernaum. Most probably the language of such interchanges was Greek. Jesus may have adapted a Greek proverb to the Semitic form "Blessed it is . . ." (Acts 20:35). James seems to have been bilingual, for his speech in Acts 15:13-21 must have been intelligible to those who spoke only Greek while his exposition of Amos 9:11-12 betrays understanding of the Hebrew text (so R. Bauckham in Witherington, 156-57, 182-84). Greek was probably Paul's first language, with fluency in Aramaic and Hebrew being attained during his education in Palestine. He was exposed to Greek institutions from birth and knew sufficient Greek *poetry to quote it on occasion (Acts 17:28; 1 Cor 15:33; Tit 1:12).

G. R. Stanton

HELLENISTIC EGYPT

The unopposed incursion of *Alexander the Great and his army into Egypt in 332 B.C. inaugurated a new phase in the history of Egypt. The midpoint of the period was marked by another encroachment: the calculated Roman involvement and assumption of control after the death of Cleopatra in 30 B.C. The period ended with

the beginning of the Byzantine age, generally dated to the reign of Diocletian, A.D. 284-305. Hellenistic Egypt divides into two parts, the first ruled by the *Ptolemies, and the second by the *Romans. The designation *Hellenistic* refers to an era of Greek influence after the time of Alexander the Great.

Hellenistic Egypt was a flourishing kingdom with wide-ranging influence in the Mediterranean world, especially under the first three Ptolemies. Given its proximity and similarities to life in Palestine and given the unusual amount of evidence for its culture, Egypt is an important region for comparison with the Jewish homeland: "The condition of Palestine as depicted in the New Testament strikingly recalls that of Ptolemaic Egypt" (Rostovtzeff, 1:350). This classic statement alludes to the value of the better documented Hellenistic Egypt for understanding the less well documented Palestine. The evidence from the papyri largely preserved in the sands of Egypt—but rarely preserved in Palestine—provides valuable background to the NT.

1. People.

Egypt in the Hellenistic period was impacted by the phenomenon affecting all of the eastern Mediterranean civilizations to some degree: the intrusion of Greek culture and politics. Modern scholarship's assessment of the acculturation of this age has sometimes been exaggerated, but for Egypt the extent of the change was significant. Though the impact of the Greeks and their ways had been felt centuries before Alexander the Great marched his armies throughout and beyond the Persian Empire, when the dust settled after Alexander's untimely death, the Greek and Macedonian invaders were there to stay and to rule. In Egypt, that would last for almost three centuries. And on the heels of the Greek rulers, high-ranking governors known as prefects were sent out from *Rome to rule the land for the next several centuries.

These rulers from Greece and Rome were not the only foreigners present. Many immigrants made their way into the lands of opportunity, especially in the decades following Alexander the Great's conquests, attracted pri-

marily to the cities. Egypt had long appealed to the Greeks for its wealth and mystery, which brought the curious and the fortune seekers to the brave new world. The Ptolemies needed soldiers and skilled artisans as well as people of education, so they sent recruiters to various areas around the Mediterranean, promising good wages, land holdings and in some cases royal patronage. The result is evident in the papyri: people were residing in Egypt from more than two hundred places outside Egypt, including Palestine. This mixture of peoples and composite of cultures (Greek plus native) gives this period in the history of the Mediterranean world the title *Hellenistic* (see Hellenism). The concept of Hellenization, however, can easily be misunderstood. It was a process that was more incidental than intentional, to the extent that substantial mergers of culture even took place. The notion of the people of the Near East being mesmerized by the wonderful culture from Hellas (i.e., Greece) is a carryover of an earlier prejudice among scholars in favor of the learning and literature of the classical age. While *Hellenization* can be a misleading term, it can also be misleading to subsume these six centuries of life in Egypt under the single heading *Hellenistic*. For there are ample exceptions to a continuity of culture throughout the Greco-Roman period.

2. Sources.

Egypt is the best documented of the Hellenistic kingdoms, and in one sense Ptolemaic and Roman Egypt are better documented than are any of the ancient Mediterranean civilizations. That is attributed to the unique topography and climate that allowed extensive though uneven samples of the day-to-day written records to be preserved in moisture-starved sand. Places where flooding did not occur—such as the edges of the desert on the fringes of the Nile Valley—were especially conducive to the preservation of papyri (see Inscriptions and Papyri).

Papyrus was the ancient paper of the Mediterranean world, used everywhere for almost everything that was put in writing—from great works of literature to school exercises, from government records to personal love letters. Judging by the extant papyri, the government created the majority of the paperwork: laws and regulations, tax lists, internal correspondence. In addition the people needed proofs of ownership and records of various transactions. These papyri

are called documentary, in contrast to the literary papyri, which contain poetry, history, Scripture, and so on. The documentary papyri are the unofficial and unintentional records of the past that happened to be preserved, usually just small snatches of information about individuals and about specific circumstances—all of which must be painstakingly deciphered and pieced together to get any sense of the whole. But they expose everything from the earthiness of people's personal lives to the often high-handed bureaucracy of the central offices.

It would have been rare for anyone living at that time not to be mentioned somewhere in a written record, except perhaps in the case of a newborn who died before its existence was recorded. The third century B.C., particularly the reigns of Ptolemy II and Ptolemy III, has an unusually large number of extant papyri, partly because of some long government documents (e.g., the revenue laws) and because of the files of *Zenon papyri found at Philadelphia.

Papyrus was the primary writing material but not the only one. Others included wooden tablets, ostraca (pieces of broken pottery), pieces of bone, parchment (carefully prepared animal skins) and stone—the last two generally used for things intended to be more lasting and/or more public. All these written records of the daily lives of the Egyptians do not, however, require a conclusion of a high degree of *literacy. For the majority of people, writing was a secondhand experience—dependent on professional scribes to create the document, in some cases with the author's signature included at the end. Even so, probably every household had some written documents in their possession, whether or not they could read them.

In addition to the papyrological sources, which are largely unique to Egypt, the material remains and archaeological finds have provided much to enhance knowledge of the region, true for the other Hellenistic kingdoms as well. Major museums now house significant Hellenistic artifacts from excavations. Numismatic evidence (*coinage) and epigraphic evidence (*inscriptions) provide important clues to chronology, the economy and the affairs of government. Unfortunately, there are no extant literary sources specifically written as histories of Ptolemaic or Roman Egypt (except for a few fragments). The history of Hellenistic Egypt must be carefully patched together from authors whose works are

fragmentary, flawed in method or heavily biased, such as Polybius and Diodorus Siculus and Justin's abridgment of Pompeius Trogus; and Jewish authors, such as *Philo and *Josephus. An interesting exception to this is Callixenus's description of the grand procession of Ptolemy II, quoted in Athenaeus.

3. Language.

Throughout the Hellenistic kingdoms, there were native languages and there was *Greek, the universal language. The same had been true in the Persian Empire, where the communication barrier among disparate cultures was solved by speaking *Aramaic. In the Roman Empire, Greek remained the common language, though Latin was also used, but primarily only in the army and politics. In Egypt, resolving the language barrier was up to the Egyptians: if they wanted to communicate with the government, they needed to learn Greek. But alongside Greek, the Egyptians continued to speak and write their own language. When written it could be in one of three forms: hieroglyphic, hieratic and demotic, the last reflecting the final stage in the shift from a script based on pictograms to one based on an alphabet. In the Hellenistic age, the Egyptians still occasionally used the hieroglyphic script for special circumstances, and in the religious community they often used hieratic, a derivative from hieroglyphic. But the common form of Egyptian in use was demotic. The Rosetta Stone, a trilingual inscription from 196 B.C. with the same text in hieroglyphic, demotic and Greek, provided the key to deciphering the ancient hieroglyphs. Though numerous demotic papyri are extant, the data available on them are only recently being combined with the data from the Greek papyri to give a fuller picture of life in Hellenistic Egypt.

Among the papyri, Greek and demotic are the most common languages, with Greek outnumbering Demotic by a large ratio. But there are others. As a result of a Jewish military colony stationed at Elephantine in Upper Egypt near the close of the Persian period, there is a group of Aramaic papyri. Very few Latin papyri have been found. In the third century, Egyptians began using Coptic, a derivative of demotic but written largely with the Greek alphabet. Until after the Roman period, the only Coptic papyri that have been found are Christian.

4. Ptolemaic Egypt.

From the death of Alexander in 323 B.C. to the death of Cleopatra in 30 B.C., Egypt was under the control of a single dynasty, the Ptolemies (though Ptolemy I did not officially take the title of king until 305 B.C.). Of the Hellenistic kingdoms, Ptolemaic Egypt and Seleucid Asia were the great powers, and both showed evidence of territorial ambitions. Unfortunately for Palestine, the area the two superpowers most often clashed over was Palestine, resulting in six major wars, with most of the battles fought in this quasi-buffer zone between the two kingdoms. For more than a century Egypt maintained control of Palestine, and the papyri that reflect the activities of Egyptian agents there provide important insights into Palestine in the third century B.C.

The Ptolemaic success in maximizing Egypt's natural resources and manpower was achieved with remarkable speed, a still imponderable accomplishment given their recent arrival in a strange land. Within fifty years, the economy in Egypt was strong, the land was producing more-than-ample crops, the army was achieving success, the cities were bustling with activity, intellectual life was expanding—but things were about as good as they would get during the Ptolemaic period. During the second century, things deteriorated rapidly. Between 245 and 50 B.C. there were at least ten native revolts against the government, indicative of internal problems. The quality and numbers of Greek soldiers were declining, making native draftees essential to the protection of the state. Externally, Egypt was losing control of valuable territories, such as the loss of Palestine to the Seleucid kingdom in 200 B.C.

When the Seleucid king Antiochus IV successfully invaded Egypt and set up a governor in Memphis in 168 B.C., the Romans came to Egypt's rescue, though it was largely for their own self-defense. It marked a growing involvement of Rome in affairs in Egypt, from protection to managing financial affairs, even to becoming legal guardian for the young Ptolemy XIII. Cleopatra VII, the last and most capable of the end of the Ptolemaic dynasty, became intricately involved with Julius Caesar and Mark Antony, leading to Octavian's takeover of Egypt after defeating Cleopatra and Antony in a naval battle (see Roman Emperors).

Key to the Ptolemaic success, especially of

the early Ptolemies, was the careful management of all aspects of the economy. From banking to agriculture, from imports to exports, from mercenaries to markets, the Ptolemies sought to make the most of Egypt's potential. A carefully monitored but independently operated system of taxation was very effective at generating the revenue the government needed. But the Ptolemies left much of the local culture intact. Separate legal systems—one for the natives and one for the Greeks—encouraged the Egyptians to maintain their identity, though it also gave favored status to the Greeks. The Ptolemies were tolerant and supportive of native religious practices and the temples. In addition to being Greek rulers, the Ptolemaic dynasty portrayed themselves as Egyptian Pharaohs.

One of the remarkable accomplishments of the Ptolemies was the city of *Alexandria. Founded by Alexander the Great, it was not only the capital and principal port of the Ptolemaic kingdom but also quickly became the intellectual capital of the ancient world, with its library and museum (*see* Alexandrian Library; Alexandrian Scholarship). The monumental lighthouse erected at the entrance to the port was considered one of the seven wonders of the world. Within a century of the founding of the city, Alexandria had become the greatest city of all the countries surrounding the Mediterranean. It maintained that position until it was superseded by Rome.

A defining factor of life in Hellenistic Egypt was ethnicity. If you were Greek or Macedonian, you were privileged—in the tax system and socially. With the swelling population of immigrants who were primarily from the Greek world, this privileged class was growing rapidly. If you were Egyptian, you were second-class and likely exploited. There would be no chance for upward mobility except by *marriage or exceptional ability in the Greek language. And the only examples known of intermarriage were of Greek men with Egyptian women. Some of the natives solved this issue of identity by taking on both nationalities. Double grave markers for the same family—one in Greek using Greek names and titles and the other in hieroglyphics using Egyptian names and titles—illustrate the increasing evidence for dual identities (Bagnall 1995, 18-20). A debated issue among scholars is the extent to which the different ethnicities cooperated and interacted with one another. Was

it coexistence or coalescence (Lewis 1986, 4)? D. J. Thompson's careful study of Ptolemaic Memphis clearly supports the latter.

5. Roman Egypt.

From the victory of Augustus over Antony and Cleopatra and annexation of Egypt to Roman control, it was clear that the valley of the Nile would become a vital part of the success and prosperity of the early empire (*see* Roman East). The changes the Romans introduced affected many aspects of life. Though some of the terminology and functions of the former Ptolemaic administrative structure were carried over, on the whole the similarities were more superficial than substantial. The new rulers granted full ownership to land that the previous administration had granted use of only in exchange for military service. Thus in the second and third centuries large estates became common, contributing to class distinctions between the aristocracy and the peasants. The more significant cultural division, however, was between the primarily Greek-speaking residents of the cities and the primarily Egyptian-speaking residents of the villages.

Part of the Roman administrative strategy (*see* Roman Administration) to see Egypt achieve its potential was to institute an extensive system of liturgies—public services to supervise agriculture and public works, to maintain dikes, to collect taxes. These liturgies were supposedly voluntary, but in that they were tied to land ownership, they were more often obligatory. The Romans also adapted to Egypt a form of local government common to Hellenistic cities in the eastern provinces, creating town councils to rule local affairs. The liturgies together with the self-governance of the cities had advantages and disadvantages, but in general the papyri reveal a tendency to dissatisfaction in the populace. Nevertheless, Egypt's potential for agricultural productivity reached its optimum in the Roman period, and the arrival of Alexandrian shipments of grain in the port of Rome were essential to the strength of the empire's economy. Whereas under the Ptolemies the revenue generated by the productivity of Egypt largely remained in the country, under Roman rule the fiscal interests of Rome determined what happened in Egypt, and the wealth of Egypt was exploited by the emperor.

One of many problems that surfaced during

the Roman period was the large Jewish population (see Diaspora; see *DLNTD*, Diaspora Judaism). Jews had been immigrating into Egypt for centuries, particularly during the Ptolemaic period, making Egypt the largest concentration of Jews living outside their homeland. The best documented place and time period for the Jewish presence is first-century Alexandria, with reportedly two of the five quarters of the city being exclusively Jewish, plus other Jews living throughout the city. Like native Egyptians, Jews were not allowed to be citizens, though they could have their own legal and political systems. For reasons not always clear, the Romans initiated vicious pogroms against the Jewish community, resulting in much loss of life and appeals to the emperor. By the end of the second century the Jewish presence in Alexandria had all but disappeared.

The relationship between the Jewish community and the growing Christian presence beginning in the middle of the first century is largely unknown. Though Christianity in Egypt would later tend to be unorthodox, the evidence suggests that the early Christian community in Egypt was similar to Christians living in other areas around the Mediterranean—characterized by rapid growth, theological diversity and persecution.

In the third century the Roman Empire began to show signs of weakness: the costs of government were exceeding revenues, the gap between upper and lower classes was increasingly wider and the frontiers were more vulnerable. The result was internal splintering complicated by external threats. In the fourth century those problems were less acute, but the era known as Hellenistic Egypt had come to a close.

HELLENISTIC JUDAISM

"Hellenistic Judaism" is a modern designation for the various forms of ancient Jewish religion and life that can be distinguished in some way by their involvement with the phenomenon of *Hellenism. Hellenism refers to the multiform interactions of Greek civilization with the cultures of innumerable indigenous populations in the eastern Mediterranean basin and the ancient Near East, beginning in the late fourth century B.C. (in the wake of *Alexander the Great's conquests) and extending into the first

few centuries of the Christian era, the time of Roman imperial rule throughout the Mediterranean world. As such, over its long history Hellenism showed signs of Greek, Roman and native influence, though it was in fact a dynamic convergence of old and new elements, one that varied from place to place and was constantly developing over time. The terms *Hellenized* and *Hellenization* can be used to describe the different processes by which members of the indigenous populations assimilated to varying degrees the social patterns and practices that emerged from this confluence, including especially the use of the Greek language, or *koiné*, and the conventions of *literature, *philosophy, *religion, *art, *education, government and technology associated with the cultural legacy of ancient Greece.

1. Judaism and Hellenism
2. Palestinian Judaism and Hellenistic Judaism
3. Varieties of Hellenization
4. The Status of Jewish Communities in Greco-Roman Society

1. Judaism and Hellenism.

It appears that Jewish people, dispersed as they were throughout the ancient world, were unavoidably caught up in the forces of Hellenism, and, like other populations, their reaction to these forces was complex. The available historical information, taken as a whole, testifies to a wide-ranging and fluid exchange between Hellenism and Judaism during this time; rather than invariably resisting each other in some sort of mutual ideological or cultural antagonism, it seems that Judaism and Hellenism frequently interacted in many different spheres and with many different results.

To be sure, Jewish people shared a number of essential commitments and characteristics that distinguished them from their non-Jewish neighbors: a common religious, ethnic and historical heritage, written and oral traditions preserving that heritage and different institutions embodying that heritage, such as circumcision, *sabbath observance and the *synagogue. No doubt allegiance to this heritage could create certain social boundaries for Jews, certain impediments to full participation in Hellenism, especially since many Hellenistic practices proceeded according to polytheistic religious assumptions that were offensive to Jewish sensibilities.

At the same time, many Jews of the era spoke *Greek and learned the elements of Hellenistic culture, some out of political or economic necessity, some as a means of social mobility and others in the interests of Jewish apologetic. Like other indigenous peoples, Jews could both accept and reject elements of the host culture, all the while preserving their own heritage and identity, exploring ways to be both Jewish and Greek. On the Hellenistic scene, coexistence and mutual influence were the norm for the majority of Jewish people, not self-isolation or confrontation. This would have been in keeping with the spirit of Hellenism, where the distinguishing aspects of one's particular beliefs were for the most part expressed and interpreted in an environment of religious pluralism and innovation.

The example par excellence of this development in Judaism would be *Philo of *Alexandria. An elite, educated, urban Jew of the first century A.D., Philo in his impressive corpus exhibits a mastery of the concepts of Hellenistic philosophy, especially *Platonism, and the methods of Hellenistic literary interpretation, especially allegory. His chief interest, though, was not to promote the achievements of Greek learning but to usurp them, to use them to show how Judaism was "the best philosophy," the purest expression of piety and virtue, conceived in terms comprehensible to any Hellenized person, Jewish or otherwise (Philo *Virt.* 65). Even as he moved with confidence in the highest levels of Greco-Roman society, Philo remained fiercely loyal to the Jewish community and convinced of the Torah's sacred and binding authority. In all this he exemplifies how Hellenistic Jews went about determining their identity as part of a critical dialogue with ideas and methods appropriate to their Greco-Roman context; this is the manner in which they established the plausibility of their traditions, seeking to cultivate both the respect of outsiders and the allegiance of insiders in a changing world.

2. Palestinian Judaism and Hellenistic Judaism.

To the extent that Jews residing in both Palestine and the *Diaspora, especially those in the Mediterranean Diaspora, lived during the Hellenistic era and were part of the Hellenistic world, all were in some sense Hellenistic, though important differences between these two broad geographic areas can be noted. Diaspora Jews,

who belonged to communities dominated by Hellenized Gentiles, were under constant pressure to participate in Hellenistic life, and it stands to reason that our most important evidence for Hellenized interpretations of Judaism originates from Diaspora regions like Egypt and Asia Minor (*see* Jewish Communities in Asia Minor). Palestinian Jews, owing to the different social and political realities of the Jewish homeland, were less exposed to the forces of Hellenism, less likely to interact with Hellenized people, and *Hebrew and *Aramaic functioned as the vernacular for the large majority of the population, which was overwhelmingly Jewish.

These differences, however, should not be overestimated, especially in our assessment of the dynamics of Jewish religious thought during this era. Indeed, the distinction, once commonly drawn by scholars, between Palestinian Judaism (i.e., Hebrew-speaking, *rabbinic or orthodox Judaism) and Hellenistic Judaism (i.e., marginal forms of Judaism corrupted by Greek influence) has lost much of its value in the light of recent reevaluations of Jewish history and literature. There have been at least two important and related reasons for this development.

It is evident that from even early on in the Hellenistic period and on all levels of society Palestine felt the impact of Hellenistic culture and that this impact continued, gradually expanding, under *Ptolemaic, *Seleucid, Hasmonean and Roman rule. The work of M. Hengel in particular has conclusively demonstrated this fact. In his book on the Hellenization of Judea, for instance, Hengel has assembled extensive archaeological, inscriptional and numismatic data pointing to the presence of a multilingual society in Palestine during the first century A.D., where Greek played an important role alongside Hebrew and Aramaic. In connection with this, we know of some thirty Greek cities in Palestine during this time, some (like Gadara) centers of Hellenistic intellectual life, others (like *Caesarea Maritima) with substantial Jewish communities. And even in *Jerusalem and its environs Hengel concludes that "we have to assume an independent Jewish Hellenistic culture," consisting of Jewish families who spoke Greek as their primary language, representing approximately 10 to 20 percent of the total population.

It comes as no surprise, then, that the impact of Greek culture is discernible also in Palestinian Jewish religious literature. The didactic

poem *On the Jews*, for example, authored by a certain Jew named Theodotus, was probably written in Palestine during the late second century B.C. (preserved in Eusebius *Præp. Ev.* 9.22). Here we have a biblically inspired epic poem (*see* Poetry, Hellenistic) in Greek hexameters, rendered in a superior Greek style and with apparent knowledge of Greek epics like Homer's *Iliad*, intended for a Jewish audience, justifying Jewish aggression against *Samaria (under John Hyrcanus, a Jewish leader of the Hasmonean era) and urging acceptance of the Jewish law. The text presupposes a reading audience that would appreciate a typical and sophisticated form of Greek literature, even as it serves as an expression of Jewish nationalistic propaganda and insists on the need to uphold distinctively Jewish practices, such as circumcision and the prohibition of exogamy. In this and many other cases, the appropriateness of the distinction (at least as traditionally conceived) between Palestinian Jewish literature and Hellenistic Jewish literature would appear to be suspect.

Furthermore, the forms of Judaism accessible to us are far too diverse ideologically and stylistically and overlap in too many complex ways to be neatly classified according to one of these two categories, Palestinian or Hellenistic. Here it needs to be emphasized that the distinguishing aspects of Jewish identity during this era were never expressed with respect to anything like a normative Judaism. Jews exercised considerable freedom in terms of how they defined their Jewish heritage, how they determined appropriate allegiance to that heritage and how they negotiated the relationship between that heritage and Hellenism. This was possible in part because there was nothing like a generally recognized authority to establish standards of belief and practice for all Jewish communities. As a consequence, there was nothing univocal or monolithic about Jewish thought during this time, something that the simplistic distinction between Hellenistic Judaism and Palestinian Judaism does not adequately address. This diversity was due in no small part to the various ways that Jewish people interacted with the forces of Hellenism.

3. Varieties of Hellenization.

The different manifestations of Hellenization that we discover in ancient Judaism correspond to the different avenues available to Jewish peo-

ple for manifesting their identity, including literary, religious, political, economic and artistic forms of expression. The Jewish varieties of Hellenization include diverse efforts to reconfigure Judaism according to Hellenistic categories, to capitalize on the resources of Hellenistic civilization for Jewish purposes or to carve out a place for Jewish people in a world in which they were often socially and politically vulnerable. The four examples that follow will give some idea of the various ways in which these efforts could proceed.

3.1. *The Septuagint.* Among the earliest and most influential projects of Hellenistic Judaism was the *Septuagint, or LXX, the Greek rendering of the Hebrew Bible, compiled mostly in the third and second centuries B.C. Especially for Diaspora Jews, who knew little or no Hebrew, the LXX would have been accorded the same sacred authority for Jewish life and worship as the original; for them, the host of Greek terms, concepts and expressions employed in the LXX were understood as biblical. While the lion's share of the LXX's contents were, naturally enough, translated in the Diaspora, at least a few of its texts (e.g., Esther) may instead be of Palestinian origin. Indeed, according to the legend preserved in the *Epistle of *Aristeas* (a Greek text of the late second century B.C., possibly penned by a Jewish member of the Ptolemaic court), the LXX as a whole was translated by seventy-two fully bilingual Judean elders, working in Alexandria at the behest of Ptolemy II Philadelphus. While the translation on the whole is quite literal, there are numerous points where the LXX appears to diverge from its source (e.g., in Proverbs) or where significant additions have been made (e.g., Daniel). We also discover in the LXX a number of new, *apocryphal books added to the Scriptures, some, like the *Wisdom of Solomon, composed originally in Greek, others, like 1 *Maccabees, translated into Greek from Hebrew originals. All of this suggests something of the fluidity of the biblical canon at this time.

3.2. *Herod.* The Jewish king Herod the Great (reigned 37-4 B.C.) was a tireless agent of Hellenization whose manner of rule was practically indistinguishable from that of other Hellenistic monarchs, with whom he frequently fostered political and economic ties. Herod used purely Greek inscriptions for Jewish coins and weights and sponsored numerous Hellenistic building projects, including impressive temples to his po-

litical patron, the emperor Augustus. Even improvements to the *Temple Mount made during his tenure were in the style of Hellenistic architecture, part of broader efforts to transform Jerusalem into a center of Greco-Roman culture. In the same vein, Herod welcomed Greek intellectuals, politicians and artisans to live at the royal court (most notably the Peripatetic philosopher and historian Nicolaus of Damascus) and encouraged Greek education among the Judean upper classes. All of this Hellenizing activity was tightly bound up with the national and religious identity of Judaism, as a way of advancing Jewish interests on an international stage. These policies were continued under Herod's sons, especially Philip and Herod Antipas (see Herods).

3.3. *Josephus.* In the life and writings of *Josephus we have in a single individual a bridge between the social contexts and conflicting loyalties of a Judean priest of the *Pharisaic party and a privileged, Greek-speaking client of the Roman imperial household. Captured while leading Jewish revolutionary forces in Galilee during the Jewish-Roman War (A.D. 66-70; see Jewish Wars with Rome), he defected to the Roman side and assisted his former adversaries during the siege of Jerusalem. He was subsequently granted Roman *citizenship and provided with a pension while residing in his adopted home, the imperial capital. Two of his major works, the *Jewish War* and the *Jewish Antiquities*, both written in Greek, are modeled after the style of Hellenistic historians like Polybius and Dionysius of Halicarnassus. Published for a broad reading public, these writings have mixed aims. Josephus wants to exonerate the Romans from responsibility for the war or for the devastation that it caused in Palestine, especially the destruction of the *temple, arguing that they were simply reluctant instruments of divine providence. Simultaneously he wants to sway Roman opinion in favor of Jewish rights, to elicit sympathy for the plight of the Jewish people and to accommodate Jews to the postwar political situation, in order to abet some kind of reconciliation between the two groups.

3.4. *Dura-Europos.* In the city of Dura-Europos a major synagogue has been excavated, originally built in the mid-third century A.D. on the Roman frontier with Parthia and decorated with numerous painted and mosaic images. While all the murals on the sanctuary walls contain bibli-

cal subject matter of some type and the message of certain pictures even conveys a critique of pagan idolatry, the Jewish community that built and used this structure found fit also to incorporate symbols and motifs derived from pagan religious art, including representations of pagan deities. This fascinating artistic fusion suggests among other things that the second commandment's rejection of iconic cult could be variously interpreted by Hellenistic Jews. While the significance of the Dura synagogue for our understanding of Jewish worship continues to be much debated, the paintings seem to represent a form of religious expression that differs not only from contemporaneous rabbinic Judaism but also from forms known to us from other Hellenized Jewish sources (e.g., Philo *Rer. Div. Her.* 169).

4. The Status of Jewish Communities in Greco-Roman Society.

As with the Jewish response to Hellenism, it is difficult to generalize about the response of pagan, Hellenized society to the Jews and their religion. Anti-Judaism, like Hellenism itself, was largely an urban phenomenon; our main examples for violent anti-Jewish outbreaks, for instance, come from major metropolises like Alexandria and Rome. The refusal of Jewish communities to renounce their own customs and commitments sometimes meant that they could not take their fair share of civic responsibilities or recognize the pagan religious foundations of civic life (see Civic Cults). This must have been a source of irritation and resentment among the Gentile majorities, who took these responsibilities and foundations seriously. A corpus of anti-Jewish propaganda developed in the Greco-Roman world, libeling Jews as misanthropic and lazy people with peculiar, superstitious practices and questioning their loyalty to the state (e.g., Tacitus *Hist.* 5.1-13).

At the same time, in many Hellenistic circles the Jews were highly regarded, even being depicted as philosophers preserving a special legacy of wisdom comparable to that of the Greeks (e.g., Josephus *Ag. Ap.* 1.161-212 §22). The monotheism and high moral standards observed by the Jewish community were admired by many non-Jews, especially by educated people, as was the antiquity of their religious traditions. *Moses in particular won respect among Gentiles as a valiant founder figure and virtuous lawgiver (e.g., Diodorus Siculus *Bib. Hist.* 40.3).

There is ample evidence for pagan sympathizers and supporters of Judaism during this time, for whom different forms of partial attachment to the Jewish community were available; stories of pagan converts to Judaism are not uncommon either (e.g., Juvenal *Sat.* 14.96-106). Elements of the Jewish way of life (e.g., some manner of sabbath observance) also appear to have enjoyed a degree of popularity in pagan communities (e.g., Josephus *Ag. Ap.* 2.282 §38).

In this context it should be noted that the rights of Jews to follow their "ancestral customs" were generally protected by local and imperial authorities. There is substantial though scattered documentation that in some cities at least (e.g., *Ephesus) Jews could win for themselves certain legal privileges, though these could be subject to subsequent modification or revocation (e.g., Josephus *Ant.* 14.213-264 §§8-25). They might, for example, enjoy exemption from civic religious duties or from military service; they might also have the right to hold communal meetings and meals, to adjudicate internal legal disputes, to own sacred property (officially recognized and protected as such) and to collect, hold and transport financial contributions (e.g., for the annual temple tax). Similarly, some Jews were both Roman citizens and citizens of their own cities. In some places (e.g., Berenice), Jews were granted permission to incorporate as a *politeuma* or something similar, a semiautonomous civic association. All this suggests the extent to which Jews were not only integrated into Hellenistic political culture but also able to play an influential and public role in the civic life of many of the major urban centers of the Hellenistic world.

HERMETICISM

Hermeticism is closely associated with the *Hermetica*, or Hermetic literature, preserved in manuscripts of the fourteenth century and later. This literature includes materials that are astrological, magical, philosophical and religious. Scholars think that some of this material may clarify the background of certain themes and writings in the NT.

1. Hermetic Literature
2. Hermeticism, New Testament and Early Christianity
3. Hermetic and Jewish Literature

1. Hermetic Literature.

1.1. Definition and Origins. Hermetic literature is that which claims the authorship of Hermes Trismegistos—Hermes the three-times great, also identified with the Egyptian god Thoth, who in turn is identified with the Greek god Asclepius. Interest in this literature in late antiquity was great and widespread: "The books of Hermes . . . enjoyed wide dissemination in the Roman empire, while their doctrine typified and combined the Roman world's literary and religious orientalism, and its yearning for revealed knowledge" (Fowden, 213); and the appeal of this literature continued to be felt throughout the following centuries, culminating in Hermetic influence in Renaissance thought (see Yates).

The content of this literature is diverse, and its mythological origins complex. In the Byzantine period, when Hermetic scholarship was perhaps at its height, it was thought that "there were two gods named Hermes. The first was Thoth, who originally carved the sacred writings on stelae in hieroglyphics. The second Hermes, named Trismegistus, was the son of Agathodaimon and the father of [the Egyptian god] Tat; after the flood he transferred the carvings to books, which came to be translated from Egyptian to Greek" (Copenhaver, xvi). However, despite this obvious Egyptian connection, the *Hermetica*, for the bulk of the twentieth century, were thought to be of Greek extraction, with "very few Egyptian elements beyond the personnel" (Nock, 1:v). This was largely the result of the immense influence of A.-J. Festugière and A. D. Nock (cf. Festugière 1949-54 and multiple essays in Nock), whose important Budé critical edition and French translation of the *Hermetica* (see below), together with hundreds of essays on the topic, set the tone for scholarship on the *Hermetica* for several decades. The continuing influence and importance of their work (and others who followed the Greek line) is not to be underplayed.

The early theory of Reitzenstein (1904) that, rather than simply *seeming* to have an Egyptian setting, the *Hermetica* were actually of Egyptian origin was dismissed as "Egyptomania" (Zielinski). However, it is now widely thought that the *Hermetica* stem from a Hellenistic- or Greco-Egyptian context. This is in part because of the discovery in codex VI of the Nag Hammadi codices (see Gnosticism) of several Hermetic writ-

ings, which suddenly put Hermetic writings not only in Egypt at an early date, but also written in *Egyptian*. Coupled with this is the evidence, in Hellenistic Egypt, of devotion to Thoth/Hermes in keeping with the texts which have come down to us as the *Hermetica* (cf. Ray; Copenhaver, xiii-xvi). Although support for the Egyptian hypothesis had been gathering since 1949, it was the Nag Hammadi finds that finally broke the dominance of the Greek hypothesis (see esp. Mahé and now Fowden; see Copenhaver, xiii-xxxii and lvii for further bibliography). The important work by Mahé on the Coptic *Hermetica* has a tendency toward the same sort of extremism that characterized the Greek paradigm, and at several points he argues too exclusively for an Egyptian provenance.

Now, though, much like religion-historical work on early Christianity, this swing from one extreme to the other seems poised at a middle position. The important work of Fowden (1986) and the support that his position has gained in the following decade and a half suggests that "neither of the extreme positions occupied by Festugière or Mahé are likely to be justifiable, since we are dealing with a syncretistic culture whose elements . . . were not easily separable" (Fowden, 68).

1.2. Collections and Texts. The Hermetic literature is available to us today in seven different places: (1) the seventeen Greek treatises of the *Corpus Hermetica* (which, in the individual treatises' current forms, probably date roughly to the second to fourth centuries A.D., but whose origins may be somewhat earlier, cf. Mahé); (2) the probably fourth-century A.D. Latin *Asclepius*; (3) the, at the earliest, fourth-century A.D. Coptic *Hermetica* of Nag Hammadi Codex VI (*The Discourse on the Eighth and Ninth*, VI.6; *The Prayer of Thanksgiving*, VI.7; the *Scribal Note*, VI.7a; and *Asclepius 21-29*, VI.8); (4) the probably sixth-century Armenian *Hermes Trimegistus to Asclepius: Definitions* (though cf. Mahé, who assigns them an early, even first-century B.C. date); (5) the forty early-sixth-century A.D. Hermetic texts and fragments found in the *Anthology* of John of Stobi (or Stobaeus); (6) many of the Greek and demotic magical papyri; and (7) the papyrus fragments of the Vienna collection (PVindob Graccae 29456 recto and 29828 recto, dated at the earliest to the late second century A.D.).

The standard Greek and Latin texts for the *Corpus Hermetica* (*CH*), the *Asclepius* and the Sto-

baeus excerpts (along with other fragments) is the four-volume Budé edition, compiled and edited by A. D. Nock and A.-J. Festugière from 1946-54 (now in a third edition, Nock and Festugière 1972). This also includes a French translation of these works, but Copenhaver's recent English translation of the *Hermetica* (including *CH* and the *Asclepius*) is now widely available, as are the English translations of the Nag Hammadi codices (Robinson) and the Greek and demotic magical papyri (Betz).

1.3. Theoretical and Technical Hermeticism. One of the chief elements of controversy in the discussion of the *Hermetica* is the division between so-called theoretical, or philosophical, and technical, or popular, Hermeticism. The treatises of the *CH*, as they are now available to us, are largely lacking in magical, astrological, alchemical or generally "occult" features. "They deal instead with theological or, in some loose sense, philosophical issues: they reveal to man knowledge of the origins, nature and moral properties of divine, human and material being so that man can use this knowledge to save himself," and this same "blend of theology, cosmogony, anthropogony, ethics, soteriology and eschatology" also characterizes the rest of the Hermetic literature we have available to us, except the magical papyri (Copenhaver, xxxii-xxxiii). This broad thematic unity has led to the designation *theoretical* Hermeticism, which stands over against a long tradition of Hermetic texts whose interest is primarily in astrology, divination, magic and alchemy (cf. the list in Copenhaver, xxxiii-xxxvi). Once despised as "rubbish" (see Scott) and dismissed as "popular" (Festugière 1967, 30), Fowden's recent analysis suggests that both varieties of Hermetic writing, though taking different approaches, seek to address the same issues. In keeping with this recognition, he prefers the title *technical* Hermeticism to describe this latter genre (Fowden, 1-4, 140-41, 161-213).

2. Hermeticism, New Testament, and Early Christianity.

In 1935 C. H. Dodd published *The Greeks and the Bible*, followed eighteen years later by the publication of *The Interpretation of the Fourth Gospel*. Both of these works give a great deal of attention to the relationship between the *Hermetica* and the Septuagint, other works of *Hellenistic Judaism, and the NT. Others have also pursued

this course, but primarily in investigating the influence of Hermeticism on Gnosticism and, in turn, the Christian and Jewish influence on Hermeticism.

3. Hermetic and Jewish Literature.

While it is unlikely that Hermeticism, at least as we have it in the literature now available to us, influenced early Judaism to any noticeable extent, there is something to be gained by a comparison of the two. On the one hand, during the Hellenistic period, Judaism experienced many different challenges as a result of interaction with Hellenistic cultures and kingdoms. These challenges—cultural, economic, military and perhaps most significant in this connection, religious—brought about many different responses. Perhaps the most important body of evidence for uncovering these responses is the Jewish literary works either written in Greek during this period (e.g., the works of *Josephus, *Philo, [Pseudo-]Eupolemus, the *Letter of Aristeas), or translated into Greek from earlier documents (esp. the *Septuagint, but also many of the OT pseudepigrapha now available only in Greek translation; see Apocrypha and Pseudepigrapha), or even in those works not written in Greek, but yet interacting with many of the materials now current in the Hellenistic period in a way hitherto not experienced in Jewish culture (e.g., the *Dead Sea Scrolls).

As a result of the varying levels of interaction with Hellenism in this literature, debate surrounding the influence of Hellenism on Judaism is no new thing. One missing strand in this ongoing area of research, however, is systematic comparison of Judaism of the Hellenistic period with the ways in which other oriental cultures interacted with Hellenism. If nothing else, a striking comparison can be drawn between the history of scholarship relating the "background" of Jewish literature and earliest Christianity and the history of scholarship traced above with regard to virtually exclusive Greek or Egyptian origins for the Hermetic literature. The recent realization that it is only in the mixture of the two—a "Hellenistic Egyptianism"—that understanding of the Hermetic literature can be gained has a parallel development in the investigation of early Judaism and, indeed, earliest Christianity.

However, there are more striking comparisons to be drawn. Despite the relative lack of in-

terest among contemporary NT scholars in anything but the Jewish background of earliest Christianity, it is in a complex play of cultures that not only this Judaism of the Hellenistic and Greco-Roman periods developed, but it was also within this complicated cultural milieu that Christianity began and spread. Although there were many religions spread across the Greco-Roman world with which early Christianity must have interacted, the Egyptian cults had a predominance within the Roman Empire and its capital not enjoyed by many other oriental cults. That the Hermetic literature currently available to us is of a somewhat later date by no means undercuts its value as the remains of a cultural intermixture not unlike that of the Judaism out of which Christianity sprang, and it also has links with one of the more important cults in the world into which Christianity spread.

HEROD THE GREAT. See HERODIAN DYNASTY.

HERODIAN DYNASTY

The Herodian family ruled over the Palestinian area from 40 B.C. until around A.D. 100. In order to understand the political and social setting of Jesus' ministry, it is important to understand the story of the Herods up through the first four decades of the first century A.D.

1. Herod the Great (47-4 B.C.)
2. Archelaus (4 B.C.-A.D. 6)
3. Philip the Tetrarch (4 B.C.-A.D. 34)
4. Herod Antipas (4 B.C.-A.D. 39)
5. The Herodians

1. Herod the Great (47-4 B.C.).

1.1. Herod's Family Origins. The demise of the *Hasmonean dynasty, the transference of Syria and Palestine to Roman rule, and the civil wars that marked the decay of the nation all created confusion, which opened the way for the Herodian family to come into prominence. Upon her death Alexandra Salome's eldest son, Hyrcanus II, succeeded as king and high priest (see Priests and Priesthood) in 67 B.C. only to be displaced three months later by his aggressive brother, Aristobulus II.

Antipater II, father of Herod the Great, was an Idumean (Josephus *J.W.* 1.6.2 §123; cf. also *Ant.* 14.1.3 §9; Justin Martyr *Dial. Tryph.* 52.3; Eusebius *Hist. Eccl.* 1.6.2; 7.11; *b. B. Bat.* 3b-4a; *b. Qidd.* 70a). He realized he would not be able to be king and high priest, but he knew he could become the power behind the throne, and thus he sided with the weak Hyrcanus II. Antipater II convinced Hyrcanus II that he was unjustly deprived of his right to rule by Aristobulus II. Furthermore, Antipater II promised to help him regain that position. With the help of the Arabian king, Aretas, Aristobulus II was defeated in 65 B.C.

With the advent of Roman power in the East (see Roman East), each brother (Hyrcanus II and Aristobulus II) asked Pompey, the Roman general, to side with him against the other. After having some trouble with Aristobulus II, Pompey joined forces with Hyrcanus II (Josephus *Ant.* 14.3. §§46-47) and after three months, in the autumn of 63 B.C., they defeated Aristobulus II. This marked the end of the Jewish independence that had first been gained in 142 B.C. (see Jewish History: Greek Period). Pompey entered the holy of holies of the temple but did not plunder it. In fact, he ordered its cleansing, the resumption of the *sacrifices, and he reinstated Hyrcanus II as high priest (Josephus *Ant.* 14.4.4 §§69-73; *J.W.* 1.6.5-7.6 §133-53; Tacitus *Hist.* 5.9; Appian *Mith. W.* 106, 114; Florus 1.40.30; Livy *Hist.* 102; Plutarch *Pomp.* 39; cf. Dio Cassius *Hist.* 37.15-17).

In 48 B.C., with the defeat of Pompey by Julius Caesar, Hyrcanus II and Antipater II attached themselves to the new ruler, who in turn reconfirmed Hyrcanus II as high priest, giving him the title of Ethnarch of the Jews, and recognized Antipater II as administrator of Judea (Josephus *Ant.* 14.8.1-5 §§127-55; 10.2 §191; *J.W.* 1.9.3-10.4 §§187-203). Although publicly Antipater II enjoined the people to honor Hyrcanus II, he began to show his dynastic ambitions in 47 B.C. by appointing his son, Phasael, as governor of *Jerusalem and his second son, Herod, as governor of *Galilee (Josephus *Ant.* 14.9.1-2 §§156-58; *J.W.* 1.10.4 §§201-3).

1.2. Herod's Rule.

1.2.1. Herod's Governorship of Galilee (47-37 B.C.). Although only twenty-five years of age, Herod was admired by the Galilean Jews and the Romans for the leadership he demonstrated in removing the brigand leader Ezekias and his followers (47-46 B.C.). Some in Hyrcanus's court felt that Herod was becoming too powerful, and he was brought to trial before the *Sanhedrin. However, Sextus Caesar, governor of Syria, forced Hyrcanus II to acquit him. After that Herod joined Sextus Caesar in Damascus, where he was appointed governor of Coele-Syria and thus became involved with Roman affairs in Syria (Josephus *Ant.* 14.9.2-5 §§158-84; *J.W.* 1.10.5-9 §§204-15; *b. Qidd.* 43a). He again proved himself to Rome as an able leader in collecting taxes and suppressing revolts.

After Cassius and Brutus murdered Julius Caesar in 44 B.C., Cassius went to Syria and as-

sumed the leadership there. In need of money, he reappointed Herod as governor of Coele-Syria to collect more revenue. He promised to make Herod king after he and Brutus defeated Octavian and Antony. New disturbances in Judea were quelled by Herod (43-42 B.C.), and he received praise from the people and from Hyrcanus II (Josephus *Ant.* 14.11.3—12.1 §§277-99; *J.W.* 1.11—1.12.3 §§220-40).

In 42 B.C. Antony defeated Cassius. About this time Herod and Phasaël were accused by the Jewish leaders of usurping governmental powers and leaving Hyrcanus II with only titular honors. But Herod was acquitted (Josephus *Ant.* 14.12.2-6 §§301-23; *J.W.* 1.12.4-6 §§242-45; Plutarch *Anton.* 24; Dio Cassius *Hist.* 48.24; Appian *Civ. W.* 5.30-38). In 41 B.C. new accusations were made against Herod, and he was tried in *Antioch with Antony present. Antony asked Hyrcanus II who would be the best qualified ruler, and Hyrcanus II suggested Herod and Phasaël. As a result, Antony appointed them as tetrarchs of Judea (Josephus *J.W.* 1.12.5 §§243-44; *Ant.* 14.13.1 §§324-26).

New troubles arose in 40 B.C. when the Parthians arrived in Syria. The Parthians were joined by Antigonus (the son of Hyrcanus II's deposed brother Aristobulus II), who wanted to remove Hyrcanus. Jerusalem was besieged and the Parthians asked for peace. However, Herod was suspicious of the offer while, on the other hand, Phasaël and Hyrcanus II met the Parthians but were betrayed by them and put in chains. On hearing this, Herod and his family fled to Masada and then Petra. Antigonus was made king, and he mutilated his uncle Hyrcanus's ears in order to prevent him from being restored as the high priest and then carried him off to Parthia. Phasaël died either of suicide or poisoning (Josephus *Ant.* 14.13.3-10 §§335-69; 15.2.1 §12; *J.W.* 1.13.2-11 §§250-73; Dio Cassius *Hist.* 48.26, 41).

Herod went to Rome, where Antony, Octavian and the senate designated him king of Judea (Josephus *Ant.* 14.14.6 §§381-85; *J.W.* 1.14.4 §§282-85; cf. Strabo *Geog.* 26.2.46; Appian *Civ. W.* 5.74; Tacitus *Hist.* 5.9). Herod returned to Palestine, recaptured Galilee and finally captured Jerusalem in the summer of 37 B.C. Just before capturing Jerusalem, he married Mariamne I, niece of Antigonus, to whom he had been betrothed for five years. Not only was this a contemptuous move against Antigonus, but also

since she was a Hasmonean, it strengthened his claim to the throne. Herod beheaded Antigonus, thus ending the Hasmonean rule and ensuring his position as king of the Jews (Josephus *Ant.* 14.15.8—16.2 §§439-80; *J.W.* 1.16.7—18.3 §§320-57; Dio Cassius *Hist.* 49.22; Plutarch *Anton.* 36).

1.2.2. Herod's Kingship (37-4 B.C.). The reign of Herod is divided into three periods: (1) consolidation from 37 to 25 B.C.; (2) prosperity from 25 to 12 B.C.; and (3) the period of domestic troubles from 14 to 4 B.C.

The period of consolidation lasted from his accession as king in 37 B.C. to the death of the sons of Babas, the last male representatives of the Hasmonean family, in 25 B.C. The first adversaries, the people and the *Pharisees, objected both to his being an Idumean, a half-Jew, as well as his friendship with the Romans. Those who opposed him were punished, and those who took his side were rewarded with favors and honors (Josephus *Ant.* 15.1.1 §§2-3; *J.W.* 1.18.4 §358).

The second adversaries were those of the aristocracy who sided with Antigonus. Herod executed forty-five of the wealthiest and confiscated their properties, thereby replenishing his own coffers (Josephus *Ant.* 15.1.2 §§5-6; cf. 14.9.4 §175; *J.W.* 1.18.4 §358).

The third group of adversaries was the Hasmonean family. His mother-in-law Alexandra was the main problem. She forced him, through Cleopatra's influence, to appoint her son Aristobulus as high priest even though he was only sixteen years old. After officiating a successful Feast of Tabernacles (see Festivals and Holy Days), Aristobulus supposedly accidentally drowned at Herod's palace in Jericho—a story never believed by Alexandra (Josephus *Ant.* 15.3.2-4 §§42-61; *J.W.* 1.22.2 §437). Alexandra told her friend Cleopatra of Herod's misdeeds, and thus Herod had to appear before Antony at Laodicea (on the coast of Syria). Not knowing what his fate might be, he ordered his uncle Joseph to kill Mariamne if he were sentenced to death. Mariamne heard of Herod's order for her execution and resented it. But through gifts and eloquence Herod was able to convince Antony that he was not guilty (Josephus *Ant.* 15.3.5-9 §§62-87; *J.W.* 1.22.4-5 §§441-44).

Herod's final adversary was Cleopatra. She had cooperated with Alexandra in the matter of Aristobulus. Next she asked Antony to increase

her territory by eliminating Herod and Malchus of Arabia in order to possess their land. Antony did not permit this but did give her the rich district of Jericho and a part of Arabia (Josephus *Ant.* 15.4.1-2 §§88-103). When in 32 B.C. civil war erupted between Antony and Octavian, Herod wanted to help Antony, but he was prevented by Cleopatra for she wanted Herod to make war against Malchus, who had failed to pay his tribute to her. When she saw Herod winning, she ordered her troops to help Malchus, hoping to weaken both parties so that she could absorb both. In the spring of 31 B.C. there was a devastating earthquake in Herod's land, killing 30,000 people. Malchus took advantage of the situation and attacked. But in the end Herod won (Josephus *Ant.* 15.5.2-5 §§121-60; *J.W.* 1.19.3-6 §§369-85).

Soon after, on September 2, 31 B.C., Antony was defeated by Octavian in the battle of Actium. Herod now had to ingratiate himself to Octavian and persuade him that he was the rightful ruler of Judea. In the spring of 30 B.C. he set out for Rhodes and persuaded Octavian that he had not actually fought Octavian because of his skirmish with Malchus and that he had been loyal to Rome for many years. Octavian was convinced and confirmed Herod's royal rank. When Octavian came through Palestine on his way to Egypt, Herod met him at Ptolemais and gave him 800 talents, a gesture much appreciated by Octavian (Josephus *Ant.* 15.6.6-7 §§188-201; *J.W.* 1.20.1-3 §§387-95). Following Octavian's defeat of Antony in Egypt, Herod went to Egypt to congratulate him, and Octavian returned Jericho (which Cleopatra had taken) to Herod, adding to it Gadara, Hippos, Samaria, Gaza, Anthedon, Joppa and Strato's Tower (which later became Caesarea Maritima) (Josephus *Ant.* 15.7.3 §§215-17; *J.W.* 1.20.3 §396).

During this time Herod continued to have domestic problems. While he was at Rhodes, his wife Mariamne discovered that Herod had again ordered that she be killed if he did not return. Her bitterness toward Herod was increased, and when it became evident to Herod, he placed her on trial for adultery and had her executed toward the end of 29 B.C. (Josephus *Ant.* 15.7.1-5 §§202-36). In 28 B.C. he had his mother-in-law, Alexandra, executed. And Herod's sister Salome, wanting to get rid of her husband Costobarus, convinced Herod that

Costobarus was concealing and protecting the influential sons of Babas, who were loyal to Antigonos and who spoke ill of Herod. Herod executed Costobarus and the sons of Babas in 25 B.C., making it impossible for any of Hyrcanus's descendants to become king (Josephus *Ant.* 15.7.6-10 §§237-66).

The second period of Herod's reign was one of prosperity, lasting from 25 to 12 B.C. The first thing Josephus mentions of this period is Herod's violations of the Jewish law in introducing the quinquennial games in Caesar's honor as well as the fact that he built theaters, amphitheaters and hippodromes (Josephus *Ant.* 15.8.1 §§267-76; 17.10.3 §255; *J.W.* 2.3.1 §44). Herod rebuilt many fortresses in the land and temples in Gentile territories, including the rebuilding of Strato's Tower, which was renamed Caesarea Maritima. In 24 B.C. he built for himself a royal palace in Jerusalem (Josephus *Ant.* 15.8.5-9.6 §§292-341). According to Josephus the most notable achievement of Herod was the building of the temple in Jerusalem, which was begun in 20/19 B.C. and finished in A.D. 63, long after his death (Josephus *Ant.* 15.11.1-6 §§380-425). The rabbis are recorded saying, "He who has not seen the temple of Herod has never seen a beautiful building" (*b. B. Bat.* 4a), and they saw its construction as an "atonement for having slain so many sages of Israel" (*Midr. Num. Rab.* 14:8).

Herod acquainted himself with Greek culture by surrounding himself with men accomplished in Greek literature and art (see Hellenism). In 22 B.C. Herod sent his sons by Mariamne I, Alexander and Aristobulus, to Rome for their education. They were personally received by Caesar. About this time Augustus (Octavian's newly acquired title) gave Herod the territories of Trachonitis, Batanea and Auranitis (Josephus *Ant.* 15.10.1-2 §§343-49; *J.W.* 1.20.4 §398). Two years later (20 B.C.) Augustus came to Syria and bestowed on Herod the former territory belonging to Zenodorus that lay between Trachonitis and Galilee (containing Ulatha and Paneas) and the adjacent area north and northeast of the Lake of Gennesaret. Augustus also made the procurators of Syria responsible to Herod for all their actions (Josephus *Ant.* 15.10.3 §§354-60; *J.W.* 1.20.4 §§399-400; Dio Cassius *Hist.* 54.7.4-6; 9.3). In addition Herod obtained the tetrarchy of Perca for his brother Pheroras (Josephus *Ant.* 15.10.3 §§362; *J.W.* 1.24.5 §488). In a show of gratitude for Augustus's generosity, Herod built

a beautiful temple (*see* Temples, Greco-Roman) for Augustus in the territory of Zenodorus, near the place called Pancion (Josephus *Ant.* 15.10.3 §§63; *J.W.* 1.21.3 §§404-6). It was around this time that Herod reduced the taxes by a third under the pretext of a crop failure, but in reality it is more likely he did this to promote goodwill among those who were displeased with his emphasis on Greco-Roman culture and religion (Josephus *Ant.* 15.10.4 §§65-72). In 14 B.C. Herod again reduced taxes by one-fourth (Josephus *Ant.* 16.2.5 §§64-65). In conclusion, this period was marked by prosperity in building and success in ruling the country.

The third period of Herod's reign was characterized by domestic problems (14-4 B.C.). Many of the problems arose because he had ten wives, each wanting her son(s) to succeed him (Josephus *Ant.* 17.1.3 §§19-22; *J.W.* 1.28.4 §§562-63). His first wife, Doris, had only one son, Antipater (Josephus *Ant.* 14.12.1 §300). In 37 B.C. Herod repudiated Doris and Antipater and married Mariamne I, permitting Doris and Antipater to visit Jerusalem only during the festivals (Josephus *J.W.* 1.22.1 §433). Mariamne was the granddaughter of Hyrcanus II, and she had five children: two daughters and three sons. In late 24 B.C. Herod married his third wife, Mariamne II, by whom he had Herod (Philip). His fourth wife, Malthace, was a Samaritan who bore Archelaus and Herod Antipas. His fifth wife, Cleopatra of Jerusalem, bore Philip the tetrarch. Of the remaining five wives, only Pallas, Phaedra and Elpsis are known by name, but they play an insignificant role (Josephus *Ant.* 17.1.3 §§19-22; *J.W.* 1.28.4 §§562-63).

Of all the sons of Herod, Alexander and Aristobulus, the sons of Mariamne I, were his favorites. However, they were hated by Salome, Herod's sister, even though her daughter Bernice was married to Aristobulus. The reason for her hatred is that she wanted her son to succeed her brother, Herod the Great. Salome spread rumors that Alexander and Aristobulus had never forgiven Herod for his murder of their mother and they were seeking to avenge it by bringing charges against him before Caesar, which would lead to his losing the throne (Josephus *Ant.* 16.3.1-2 §§66-77). Because of this, Herod recalled his exiled son Antipater to show Alexander and Aristobulus that there could be another heir to the throne (14 B.C.). Antipater took full advantage of the situation and used ev-

ery means to acquire the coveted throne.

In 13 B.C. Herod made his second will, whereby he designated Antipater as the sole heir. Herod sent Antipater with Agrippa (a friend of Augustus) to Rome to have this will ratified. While in Rome Antipater wrote slanderous letters against Alexander and Aristobulus. Herod became more aggravated with these two sons, and finally in 12 B.C. he brought them before Augustus in Aquileia (near Venice) to be tried. Rather than being executed, the two brothers were reconciled to their father.

Herod made his third will, naming all three sons as successors (Josephus *Ant.* 16.3.9-4.6 §§86-135; *J.W.* 1.23.2-5 §§451-66). Shortly thereafter (c. 11/10 B.C.) Herod again became suspicious of Alexander and Aristobulus when the slanderous accusation that they were going to kill and succeed Herod was brought against them by Antipater and Herod's sister Salome. Herod imprisoned Alexander, but Alexander's father-in-law, the king of Cappadocia, being concerned about his daughter's welfare, interceded and was able to reconcile Herod and Alexander (Josephus *Ant.* 16.7.2-8.6 §§188-270; *J.W.* 1.24.2-25.6 §§467-512). This brought peace to the Herodian household only temporarily. A certain Eurycles from Lacedaemon and other troublemakers aroused in Herod's mind new suspicions against Alexander and Aristobulus. Consequently, Herod imprisoned them and sent a report to the emperor of their involvement in treasonable plots (Josephus *Ant.* 16.10.1-5 §§300-24; *J.W.* 1.26.1-27.1 §§513-35; cf. also Pausanias *Descr.* 2.3.5; Strabo *Geog.* 8.5.1; Plutarch *Anton.* 67).

Herod had lost favor with the emperor because of the accusations of Herod's Arab neighbor, Syllaeus, that Herod had invaded his territory for no reason. However, Herod's teacher, friend and counsellor, Nicolaus of Damascus, went to Rome and convinced Augustus that Syllaeus's case was false, and Herod regained the emperor's favor. Nicolaus also presented Herod's accusations against his two sons, and Herod was given permission to have them tried outside of Herod's territory. Herod had them tried at Berytus (Beirut) before a Roman court. They were found guilty and were executed by strangulation in Sebaste (Samaria) c. 7 B.C. It was there that Herod had married their mother Mariamne I thirty years earlier (Josephus *Ant.* 16.10.6-11.8 §§324-404; *J.W.* 1.27.1-6 §§536-51).

Herod made his fourth will by naming Antipater as the sole heir. But becoming impatient to gain the throne, Antipater attempted to poison Herod. However, this plot failed when Herod's brother, Pheroras, drank the poison by mistake. Herod imprisoned Antipater and reported this attempt on his life to the emperor (c. 5 B.C.). Becoming very ill, Herod drew up the fifth will in which he bypassed his oldest sons, Archelaus and Philip, because Antipater had turned Herod's mind against them, and chose his youngest son, Antipas, to succeed him as king (Josephus *Ant.* 17.1.1—6.1 §§1-146; *J.W.* 1.28.1—29.32 §§552-646).

It is against this background of palace intrigue that Matthew recounts the circumstances surrounding the birth of Jesus. Matthew relates that shortly before Herod's death, magi arrived in Judea, looking for the newborn king of the Jews. Herod instructed them to inform him of the location of this child. But being warned in a dream, they did not report back to Herod but returned to their homes via another route (Mt 2:1-8, 12). God warned Joseph (husband of Jesus' mother) to flee to Egypt because of Herod's intention to kill Jesus (Mt 2:13-15). Soon after Joseph left Bethlehem, Herod killed all the male children in Bethlehem who were two years old and under (Mt 2:16).

Herod steadily grew more ill. He received permission from Rome to execute Antipater, which he promptly did. Herod then wrote his sixth will, making Archelaus king, Antipas tetrarch of Galilee and Perea, and Philip tetrarch of Gaulanitis, Trachonitis, Batanea and Paneas. In the spring of 4 B.C., five days after Antipater's execution, Herod died at Jericho. The people made Archelaus their king. Herod's reign of thirty-three or thirty-four years had been marked with violence, not unlike those of most of his contemporary rulers.

1.2.3. Herod's Wills. Herod had written six wills, and the sixth will was only a codicil of the fifth. Since the sixth will was made only five days before Herod's death, it did not have the ratification of the emperor. When Herod died, Archelaus assumed leadership but refused to be crowned king (Josephus *Ant.* 17.8.4 §§202-3; *J.W.* 2.1.1 §3). Immediately after the Passover, Archelaus and Antipas went to Rome to contest the will while Philip took care of the home front. Archelaus felt that Augustus should ratify Herod's sixth will because it expressed Herod's wish immediately preceding his death. On the other hand,

Antipas argued that Herod had not been of sound mind when he wrote the sixth will. To further complicate the situation, a revolt broke out in Palestine and a Jewish delegate went to Rome asking for national autonomy and a union with the province of Syria. After much discussion, Augustus formulated a compromise whereby Archelaus was designated ethnarch of Idumea, Judea and Samaria, with the promise to be made king if he proved worthy; Antipas was made tetrarch of Galilee and Perea; and Philip was appointed tetrarch over Gaulanitis, Trachonitis, Batanea and Paneas (Josephus *Ant.* 17.11.4 §§317-20; *J.W.* 2.6.3 §§93-100). Thus Antipas, while losing his claim to be king, did prevent Archelaus from becoming king over the entire realm.

2. Archelaus (4 B.C.-A.D. 6).

2.1. Archelaus's Rule. Archelaus (born c. 22 B.C.), the son of Herod the Great and Malthace (a Samaritan), was made ethnarch over Idumea, Judea and Samaria with the promise to be made king if he ruled with prudence. But Archelaus got off to a bad start. Even before he left for Rome to contest Herod's final will, he overreacted to an uprising in the temple at Passover by sending in his troops and cavalry and killing about three thousand pilgrims. While he was in Rome, a revolt broke out again in Jerusalem at the feast of Pentecost, this time against Caesar's procurator Sabinus, and spread to Judea, Galilee and Perea.

Archelaus's brutal treatment of the Jews and the Samaritans (Josephus *J.W.* 2.7.3 §111) is in keeping with what Matthew tells of Joseph, who heard that Archelaus was ruling Judea and was afraid to go there. Being warned in a dream on his return from Egypt, Joseph, Mary and Jesus went to live in Nazareth in Galilee (Mt 2:20-23).

Soon after his return from Rome, Archelaus removed the high priest, Joazar, blaming him for siding with the rebels. He replaced him with Joazar's brother, Eleazar, and later replaced Eleazar with Jesus, son of See. Around this same time Archelaus divorced Mariamne and married Glaphyra, daughter of King Archelaus of Cappadocia. She was the former wife of Alexander, Herod's son and Archelaus's half-brother. This was a transgression of ancestral law (Josephus *Ant.* 17.13.1, 4-5 §§399-41, 350-53; *J.W.* 2.7.4 §§114-16). Either or both of these last two incidents may have caused the unrest that erupted. Archelaus used oppressive measures to quell the opposition.

Archelaus followed his father's example in building projects. He rebuilt the royal palace at Jericho in splendid fashion and diverted half of the water of the village of Neara into the newly planted palm trees in the plain of Jericho. He also created a village and honored himself by naming it Archelais (Josephus *Ant.* 17.13.1 §340).

2.2. Archelaus's Demise. Because of his continued oppressive rule, he was finally deposed in A.D. 6. A delegation of Jews and Samaritans complained to Augustus about Archelaus's brutality and tyranny. For these two enemies to cooperate in this matter indicates the seriousness of the complaint. Also, Archelaus's brothers, Antipas and Philip, went to Rome to complain about him, presumably resenting his oversight of them in his role as ethnarch or Roman representative for Palestine. As a result, Archelaus was banished to Vienna in Gaul (modern Vienne on the Rhône, south of Lyons). Antipas and Philip retained their domains while Archelaus's territories were reduced to an imperial province under the rule of prefects (Josephus *Ant.* 17.13.1-5 §§342-55; *J.W.* 2.7.3-8.1 §§111-18; Strabo *Geog.* 16.2.46; Dio Cassius *Hist.* 55.27.6).

3. Philip the Tetrarch (4 B.C.-A.D. 34).

Philip the tetrarch was the son of Herod the Great and Cleopatra of Jerusalem and was born around 22/21 B.C. As a result of the debate over Herod's will, Augustus made him tetrarch over the northeastern part of Herod the Great's domain, Gaulanitis, Auranitis, Batanea, Trachonitis, Paneas and Iturea (Josephus *Ant.* 17.9.4 §319; *J.W.* 2.6.3 §95; cf. Lk 3:1). His subjects were mainly Syrian and Greek (i.e., non-Jewish), and hence he was the first and only Herodian to have the emperor's as well as his own image on his coins.

Philip built two cities (Josephus *Ant.* 18.2.1 §28; *J.W.* 2.9.1 §168). The first city was a rebuilding and enlarging of Paneas (near the source of the Jordan), which he renamed Caesarea Philippi in honor of the Roman emperor and to distinguish it from the coastal Caesarea. It was there that Peter made his confession of faith to Jesus (Mt 16:13-20; Mk 8:27-30). The second city was the rebuilding and enlarging of the fishing village of Bethsaida (where the Jordan flows into the Sea of Galilee). Philip gave it the status of a Greek *polis* and renamed it Julias in honor of Augustus's daughter Julia. There Jesus would heal the blind man (Mk 8:22-26), and in a

nearby desert place Jesus would feed the five thousand (Lk 9:10). Also, it may have been in the southern portion of Philip's territory that Jesus fed the four thousand.

Philip did not possess the ambitious and scheming character of his brothers. He ruled his domain with moderation and tranquility and was well liked by his subjects (Josephus *Ant.* 18.4.6 §§106-8). He married Herodias's daughter Salome, whose dance led to the beheading of John the Baptist (Mt 14:3-12; Mk 6:17-29; Lk 3:19-20; Josephus *Ant.* 18.5.2 §§116-19). They had no children (Josephus *Ant.* 18.5.4 §§137). When Philip died in A.D. 34 the emperor Tiberius annexed his territory to Syria, and when Caligula became emperor in A.D. 37, Philip's territory was given to Herod Agrippa I, brother of Herodias.

4. Herod Antipas (4 B.C.-A.D. 39).

4.1. Antipas's Realm. Herod Antipas, the younger brother of Archelaus, was born c. 20 B.C. He was made tetrarch of Galilee and Perea and ruled from 4 B.C. to A.D. 39. These were the territories where both Jesus and John the Baptist concentrated their ministries. On his return from Rome, Antipas had to restore order and rebuild what had been destroyed at the Feast of Pentecost in 4 B.C. Like his father, he founded cities. He rebuilt Sepphoris (c. A.D. 8-10; see Galilee), which was the largest city in Galilee and was the capital of his territories until he built *Tiberias. Joseph, Mary's husband, living in Nazareth only four miles SSW of Sepphoris may well have used his skill as a carpenter (Mt 13:55; Mk 6:3) during its rebuilding. The second city Antipas rebuilt was Livias (or Julias) of Perea in honor of Augustus's wife Livia. This was completed c. A.D. 13 (Josephus *Ant.* 18.2.1 §27). Although the Herodian family had built twelve cities, Tiberias was the first city in Jewish history to be founded within the municipal pattern of the Greek *polis*. In the process of building the city an ancient cemetery was struck, and subsequently Antipas had difficulty in populating it because the Jews regarded it as an unclean area. Antipas offered free houses and lands as well as exemption from taxes for the first few years for anyone who would move into the new city. Named in honor of the emperor Tiberius, it was completed around A.D. 25 and served as Antipas's capital (Josephus *Ant.* 18.2.3 §§36-38).

4.2. Antipas's Reign. As far as Rome was con-

cerned, Herod Antipas was a good ruler who reigned over the territories of Galilee and Perea from 4 B.C. to A.D. 39.

4.2.1. Antipas and Archelaus. The only important recorded event early in Antipas's reign was the deposition of his brother Archelaus in A.D. 6. Together with his half-brother, Philip the tetrarch, and a Jewish and Samaritan delegation, he went to Rome to complain about Archelaus to Tiberius (Josephus *Ant.* 18.13.2 §§342-44; *J.W.* 2.7.3 §111). Although Antipas hoped to receive the title of *king*, Tiberius allowed Antipas to have the dynastic title of *Herod* (cf. Josephus *J.W.* 2.9.1 §167; *Ant.* 18.2.1 §27), which was significant for both his subjects and the political and social circles of the Roman world.

4.2.2. Antipas and John the Baptist. In the Gospels Herod Antipas is best known for his imprisonment and beheading of John the Baptist (Mt 14:3-12; Mk 6:17-29; Lk 3:19-20; Josephus *Ant.* 18.5.2 §§116-19). Antipas had been married to the daughter of the Nabatean king Aretas IV, a marriage probably arranged by Augustus in order to gain peace between Jews and Arabs and provide a buffer zone between Rome and the Parthians. This marriage would have taken place before Augustus's death in A.D. 14. When Antipas traveled to Rome in c. A.D. 29, he visited his brother Herod (Philip), who apparently lived in one of the coastal cities of Palestine. While there he fell in love with his niece, who was also his brother's wife, Herodias. She agreed to marry Antipas when he returned from Rome provided that he divorce his first wife (Josephus *Ant.* 18.5.1 §§109-10). Antipas's first wife learned of the plan and fled to her father, Aretas IV, who considered the matter a personal insult and later retaliated against Antipas.

When Antipas married Herodias, John the Baptist boldly criticized him for marrying his brother's wife, and as a result John was imprisoned by Antipas. The Mosaic law prohibited a man from marrying a brother's wife (Lev 18:16; 20:21) except in the case of levirate marriages (Deut 25:5; Mk 12:19; see Adultery, Divorce). Since Antipas's brother had a daughter Salome and, more pointedly, his brother was still living, the levirate marriage did not apply.

There is a problem in identifying Herodias's first husband. The Gospels designate him as Philip (Mt 14:3; Mk 6:17), but Josephus lists him as Herod, son of Herod the Great and Mariamne II, daughter of Simon the high priest (Jo-

sephus *Ant.* 18.5 §109). Since the Herodian family line is complicated, many think that the Gospel writers confused this Herod with Philip the tetrarch, who later married Herodias's daughter Salome. However, although this may seem plausible at first, it is untenable for several reasons.

First, the Gospels would be guilty of three historical blunders, namely, (1) confusing this Herod with his half-brother Philip the tetrarch, (2) making Philip the tetrarch the husband of Herodias instead of the husband of her daughter Salome and (3) assuming that Salome was the daughter of Philip the tetrarch, who, according to Josephus, had no children. These errors would be incredible in the light of the Gospel writers' familiarity with other historical details of the era. Furthermore, the early Christian community included people like Joanna, wife of Chuza, Antipas's financial minister (Lk 8:3), and Manaen, a close friend of Antipas (Acts 13:1), who would have known the details and would have prevented such historical error.

Third, some argue that Herod the Great would not have two of his sons with the same name. But this is untenable because, although the two sons had the same father, they had different mothers. This is substantiated by the facts that Herod the Great did have two sons named Antipas/Antipater and two sons named Herod, all of whom had different mothers.

Fourth, it is highly probable that Herodias's first husband was called both Herod and Philip or, in other words, Herod Philip. Although some would argue that double names were not used, no one argues that Herod of Acts 12:1, 6, 11, 19-21 is the Agrippa of Josephus nor that Archelaus is Herod Archelaus. Double names were used of emperors like Caesar Augustus.

Fifth, if the Evangelists intended that Herodias's former husband was actually Philip the tetrarch, why did they not call him "Philip the tetrarch" as they had called Herod Antipas first "tetrarch" and then "king" within the same pericope (cf. Mt 14:1, 9; Mk 6:14, 26)?

Therefore, it seems most reasonable to conclude that the Philip in the Gospels and the Herod in Josephus are one and the same person, otherwise it would be hopelessly confusing.

Antipas's imprisonment of John the Baptist was not enough for Herodias. At the appropriate time, probably Antipas's birthday, at Machaerus in Perea, Herodias arranged for a

banquet for Antipas in order to eliminate John the Baptist. When Herodias's daughter danced before the guests, Antipas was overwhelmed and promised under oath to give her anything she wanted, up to half of his kingdom. With the advice of her mother, Salome asked for the head of John the Baptist on a platter. Although Antipas was sorry for his rash promise, he granted the request to save face before his guests. John was beheaded in A.D. 31 or 32.

4.2.3. Antipas and Jesus. Antipas's relationship to Jesus is seen in three events. First, Antipas heard of Jesus' ministry and concluded, with some irony, that Jesus was John the Baptist resurrected (Mt 14:1-2; Mk 6:14-16; Lk 9:7-9). Antipas had silenced John the Baptist's movement, and now there appeared to be a more successful people's preacher on the horizon. Hence, Antipas concluded that it was John the Baptist all over again. Antipas wanted to see Jesus, but Jesus withdrew from Antipas's territories. Antipas did not want to use force, fearing that his citizens would again resent his treatment as they had with his treatment of John the Baptist.

The second incident was Jesus' final journey to Jerusalem. While Jesus was in Antipas's territories, some of the Pharisees came to warn Jesus that he should leave because Antipas wanted to kill him (Lk 13:31-33). Jesus told them to "Go tell that fox" that he would continue his ministry of casting out demons and healing for a short time longer, and when he had finished, he would then go to Jerusalem to die.

The third event was Jesus' trial by Antipas in A.D. 33 (Lk 23:6-12). Although some scholars think this pericope is legendary because it is not mentioned in the other Gospels, its occurrence in Luke's Gospel makes historical sense. Luke was writing to Theophilus, probably a Roman official, who would have been interested in the relationships between the Herods and the prefects of Judea, especially since this pericope reports the reconciliation between Antipas and Pilate (Lk 23:12). Since the account reports no progress in the trial, it is understandable why the other Gospel writers left it out. Some scholars think the source for this incident is from the *Gospel of Peter*. But that Gospel presents no real parallel with Luke's account of Antipas's trial of Jesus. In fact the *Gospel of Peter* holds Antipas responsible for Jesus' death, whereas there is nothing of this in Luke.

In Luke's account, Pilate, knowing Antipas

was in Jerusalem for the Passover and hearing that Jesus was from Antipas's territory, Galilee, sent Jesus to him. Pilate was not legally obligated to do so, but he wanted to extricate himself from an awkward situation in which the Jews wanted to crucify Jesus while Pilate felt that he was innocent. Furthermore, Pilate needed to improve his relationship with Antipas. The relationship had been strained by Pilate's massacre of some of Antipas's subjects (Lk 13:1), and it was further aggravated when Antipas reported to Tiberius the trouble Pilate had caused the Jews when he brought votive shields to Jerusalem. Subsequently Tiberius had ordered their immediate removal in c. A.D. 32 (Philo *Leg. Gai.* 299-304). Hence Pilate had overstepped his bounds and needed to appease Antipas. On the other hand, Antipas did not want to give Pilate any reason to report him to the emperor, and so after mocking Jesus, he sent him back to Pilate without comment, thereby paving the road for reconciliation between the two leaders from that day forward (Lk 23:12).

4.2.4. Antipas and Exile. In A.D. 36 Aretas IV attacked and defeated Antipas's army. The Jews considered this divine punishment for Antipas's execution of John the Baptist (Josephus *Ant.* 18.5.1-2 §§116-19). Tiberius commanded Vitellius, governor of Syria, to help Antipas against Aretas. However, before this could be accomplished Tiberius had died and Vitellius withheld his aid until he received orders from the new emperor Caligula.

When Caligula became emperor (A.D. 37), he gave his friend Agrippa I, brother of Herodias and nephew of Antipas, the land of Philip the tetrarch as well as the tetrarch of Lysanias with the title *king* (Josephus *Ant.* 18.6.10 §§225-39). Later Agrippa went to Palestine (c. August of 38) to see his newly acquired domain. His presence in the land provoked Herodias's jealousy because he had obtained the much-coveted title *king*, which Antipas had never received, although he had ruled well and faithfully since 4 B.C. Finally, under Herodias's persuasion, Antipas and Herodias went to Rome in A.D. 39 to seek the same honor. Agrippa heard of this and sent an envoy to Rome to bring accusations against Antipas. This action resulted in the banishment of Antipas and Herodias to Lugdunum Convenarum, now Saint-Bertrand de Comminges in southern France, in the foothills of the Pyrenees. Caligula learned that Herodias

was the sister of Agrippa I and excused her from the exile, but she chose to follow her husband. As a result, Agrippa I obtained Antipas's territories of Galilee and Perea (Josephus *Ant.* 18.7.1-2 §§240-55; *J.W.* 2.9.6 §§181-83).

5. The Herodians.

The Herodians were influential men who were partisans of the Herodian dynasty. They are mentioned three times in the NT, dealing with two incidents where they joined with the Pharisees in their opposition to Jesus. The first incident took place in Galilee immediately after Jesus healed the man with the withered hand, and the Herodians and the Pharisees sought to destroy Jesus (Mk 3:6). The second episode was in Jerusalem when the Pharisees and the Herodians tried to incriminate Jesus regarding the lawfulness of paying taxes to Caesar (Mt 22:16 par. Mk 12:13). The Herodians are not mentioned in Luke or John.

The origin of the name has been debated. Some think that the ending of their name reflects the Latin suffix *-ianus*, which is appended to adjectives, thus making it a substantive meaning that they were of the household of Herod, that is, domestic servants. Others think that it is a Greek suffix meaning that they were officers or agents of Herod. However, in the Gospel narratives they are not portrayed as either domestic servants or officers of Herod but as influential people whose outlook was friendly to the Herodian rule and consequently to the Roman rule upon which it rested.

The issue comes to the forefront in Mark 8:15 and Matthew 16:6, where in Mark we read of the "leaven of Herod" and the Matthean parallel refers to the "leaven of the Sadducees." This problem becomes more critical if the secondary Markan reading, "leaven of the Herodians" (P^{1b}, W, Θ f¹³), is the correct one. The problem with this passage is not the interpretation but the question of whether the *Sadducees and the Herod(ians) are the same? At first this seems impossible because Herod the Great tried to discredit the Hasmonean house. Furthermore, he and his grandson Agrippa I never selected a high priest from among the Sadducees, who were pro-Hasmonean, but rather from the house of Boethus. However, a reversal of this policy occurred between Herod's son Archelaus's deposition in A.D. 6 and Agrippa I's acquisition of Judea in A.D. 41.

At that time most of the high priests came from the Sadducean house of Annas because the province of Judea was not under Herodian rule but under direct Roman rule of the prefects. It seems probable, then, that the Boethusians, being pro-Herodian, were really the Herodians and the Sadducees were pro-Hasmonean. Actually, later rabbinic sources used the Boethusian name interchangeably with that of the Sadducees (*m. Menah.* 10:3). It may well be that the Sadducees and the Herodians would have been close if not identical religiously and economically. Thus the Herodians were politically affiliated with the Herodian house, but they were religiously and economically affiliated with the Sadducees. However, the political distinctions between the Sadducees and Herodians were blurred with the marriage of Herod Antipas and Herodias (a Hasmonean on her mother's side). It could be that Herod Antipas married Herodias to gain Sadducean support. Hence the Herodians and the Sadducees would have been on the same side politically, against the *Pharisees, the Herodians being pro-Herodian government while the Pharisees were both anti-Hasmonean and anti-Herodian. This is borne out in Mark 8:15 and Matthew 16:6, 12, where the Pharisees and the Sadducees/Herodians are contrary parties opposing Jesus.

In summary, the Herodians were theologically in agreement with the Sadducees, and politically both of these parties would have been the opposite of the Pharisees, who were anti-Hasmonean, anti-Herodian and anti-Roman. The Pharisees looked for a cataclysmic messianic kingdom to remove the rule of the Herods and Rome, whereas the Herodians wanted to preserve the Herodian rule. However, the Herodians and the Pharisees worked together to oppose Jesus because he was introducing a new kingdom that neither wanted.

HERODIANS. See **HERODIAN DYNASTY.**

HERODOTUS OF HALICARNASSUS. See **HISTORIANS, GRECO-ROMAN.**

HEROES

Every civilization and culture has its heroes of the past. These renowned dead are the prominent characters of a given culture's traditional narratives (written and/or oral, fictional and historical) that provide stories of origins, explain national identity and religion and may express many of its moral and civil virtues. The heroes

of these narratives stand out from others for many reasons: moral, religious or intellectual superiority, great deeds of courage and faith, and celebrated accomplishments on behalf of their nation and descendants. As societies use and reuse such traditional narratives, the stories themselves are evaluated, repeated, edited and supplemented. In manifold ways the hero traditions are thus reflected and refracted in light of contemporary knowledge, intellectual currents, and social and religious needs of later generations.

1. Greek Heroes
2. Jewish Heroes
3. Heroes in the New Testament

I. Greek Heroes.

The centuries preceding the turn of the era, and the first century itself, saw among Jewish authors a great outpouring of literature concerning their own culture's traditional heroes. It was also a time of great intellectual ferment in the Greco-Roman world and of expanding interaction among Hellenistic, Roman and Jewish cultures. Such cultural intercourse encouraged the practice of relating and comparing the narratives and heroes of one culture to those of another. For some Greek historians, this intellectual enterprise of the *Hellenistic era saw Greek historians writing universal histories and taking a keen interest in foreign peoples and cultures (Momigliano 1975, 1-6). Within this dynamic climate early Christians lived and the books of the NT were composed.

Some Greek authors used the sobriquet *heroes* with reference to a particular class of characters from Greek tradition. For Hesiod (seventh century B.C.) the heroes were the Fourth Age of men who fell prior to the destruction of Thebes and Troy and who were superior in all ways to the current race. For Pindar (fifth century B.C.), heroes were identical to demigods. Much later, the word *hero* came to be used popularly to refer to minor local deities or city founders. But Jewish heroes are not best thought of with these specific associations.

In more general historiographic terms, at least since the fifth century B.C., Greek historians divided history into two eras, the prehistoric age of heroes and myth prior to the mid-twelfth century B.C. and the historical time to the present. The age of heroes, of whom Heracles (Lat. Hercules) was the most prominent, was not

formally abandoned by historians; it was left to individual writers to make of the confusing and improbable legends what they would (Fornara, 7-10). In the popular and not strictly historical mind, the hero stories, such as those of Homer, still functioned either as general history or as source material for sundry forms of allegorical or didactic interpretation.

2. Jewish Heroes.

*Judaism looked to its sacred and traditional writings for its heroes. Though distinctions were not made between a heroic age and a historical period, Jewish writers did not just repeat their hero stories. In a variety of manners they too were reading and rewriting their narratives in light of later times and interests. In Israel's sacred literature, many figures exhibited heroic qualities, but certain ones tend to stand out: Noah, Abraham, *Moses, Elijah, David and Solomon. In the Hellenistic period there was an increased interest in such ideal figures (Nickelsburg, 4).

Though the eponymous ancestors of the Jews were Eber (Gen 10:24; 11:14-17), Israel and Judah, Abraham was considered the father of the nation and by many its greatest hero. The Abraham stories of Genesis 12-25 were repeated orally in synagogue readings and many other settings. They were also embellished in works such as the **Genesis Apocryphon* (1QapGen), found among the **Dead Sea Scrolls*. In that work, Abram's sojourn in Egypt, elliptically narrated in Genesis (Gen 12:10-20), is expansively rewritten to include chronological detail, justification of Abram's lie, explicit description of Sarai's beauty and unequivocal protection of her chastity. Such stories reveal careful interaction with the biblical text, as well as contemporary concerns for chronography and exegetical solutions for various problems raised in Genesis. The terseness and elliptical nature of many a biblical story invited speculation and attempts to read between the lines so as to fill out the tantalizing narratives.

Some Jewish Hellenistic authors wrote with distinctly Hellenistic concerns about Jewish heroes. For example, in the context of the Hellenistic historiographic efforts to trace the origin and spread of philosophy and science, Abraham is presented as a member of a class of international intelligentsia, a wise sage who taught the Egyptians the art of astronomy (Pseudo-Eupole-

mus; Artapanus; Josephus *Ant.* 1.8.2 §165). In the context of another contemporary issue, the recording of universal genealogy, Abraham is related to the Greek hero Heracles by the marriage of his granddaughters to this most famous of all Greek heroes. It is clear that in much Jewish Hellenistic literature, including Josephus (Feldman, 143) Abraham, like other biblical figures, was transformed into a hero particularly suited for the Hellenistic environment of the authors.

Other contemporary texts, not written for a Greek audience, are more traditional in their depiction of biblical heroes, in that they focus on the religious aspects of the biblical characters. In the literature often grouped under the rubrics deutero-canonical or **Apocrypha* and *Pseudepigrapha*, the hero Abraham is primarily represented as the covenant-making ancestor, the incessantly faithful-to-God father of the nation and the revelation-receiving sage. In Genesis and the rest of biblical literature, Abraham's faith in and covenant with God are the dominant themes with which he is associated. These emphases and the picture of Abraham as an ideal religious figure continue in the **Testaments of the Twelve Patriarchs*, **Jubilees*, the **Apocalypse of Abraham*, the **Damascus Document* (CD, 4Q266-272) and other **Qumran* texts (Sandmel, 37-38, 49).

The process of idealization, intrinsic to heroic literature, began in canonical texts, as one can easily see by comparing the figure of David in Kings with the highly idealized and pious David of the Chronicler. For the community using the Qumran Psalter (11Q5 27), David is said to have been "wise, and bright as the sun, a scribe, and discerning man, blameless in all his ways before God and men." He is then credited with composing 4,050 songs and psalms. In the most extensive catalog and description of heroic figures of Israel, Ben Sira (= **Ecclesiasticus*, **Sirach*) 44-50, the ancestors of Israel are praised usually for their piety, faithfulness and wisdom in a great hymn that begins: "Let us now laud famous men, and our ancestors in their generations. The Lord appointed to them much glory, his greatness from eternity. There were those who ruled and were famous men because of their valor; those who counseled because of their understanding; those who proclaimed prophecies" (Sir 44:1-3). Finally, even obscure figures in the biblical text, such as **Enoch* and

*Melchizedek, were to become heroes in their own right, inspiring an extensive literature (1-3 *Enoch*, 11QMelchizedek).

Another interesting feature of the Jewish appreciation of its heroes was the popularity of *pseudepigraphic works composed in the name of Jewish heroes during the Greco-Roman era. This literary device was extremely common as witnessed in the mass of literature claiming the authorship of some ancient worthy, such as Adam, Enoch, Abraham, Jacob, Joseph, David, Solomon, Ezra, and many others.

*Philo, the prolific Jewish exegete and philosopher of *Alexandria (first century A.D.), displays a different side of the Greco-Jewish appreciation of heroes. Utilizing common Hellenistic interpretive conventions used first for the works of Homer, Philo allegorized the biblical text and thus made Abraham in his departure from Ur a philosopher's hero, a symbol of the soul that rejects the lower physical world as the ultimate reality and seeks the higher world of the mind (*Philo Abr.* 66, 84).

3. Heroes in the New Testament.

NT authors frequently look back to their national narratives and in so doing they generally fall in line with the deuterocanonical or apocryphal and pseudepigraphic literature as appreciators of Israel's heroes primarily for their religious qualities, albeit sometimes with distinctly Christian concerns. The famous catalog of heroes in Hebrews 11 hearkens back to Sirach 44-50. Abraham retains his prominence among NT authors, particularly for his faith and thus as the spiritual father even of Christians (Rom 4:13-25). James 2:23 uses an epithet for Abraham ("God's friend"), which apparently arose in the traditions developing around the person of Abraham (see Is 41:8; 2 Chron 20:7). But the heroics of the obscure were also considered, as is shown in the case of Melchizedek in Hebrews 7. The pseudepigraphic tradition that grew up around heroes is represented in the NT by the author of Jude (14-15), who quotes as authoritative the work of Enoch (*1 Enoch* 1:9).

The heroic David influenced profoundly *messianic notions of Christians, as can be seen in the Gospel narratives of Jesus' entry into Jerusalem (Mt 21:1-11; Mk 11:1-10). But stories about David could also be put to other uses. For example, David's procurement of the sacred bread of the presence (1 Sam 21:1-6) becomes

Jesus' example of the legitimate breaking of the sabbath code of Exodus 20:8-11 (Mt 12:3-4 par.). All of the NT writings reflect the appreciative and creative use of Jewish heroic traditions within the contours of emerging Christianity.

HILLEL, HOUSE OF

Hillel the Elder flourished in the time of *Herod the Great. He is the founder of one of the principal houses or schools that laid the foundation on which later rabbinic Judaism would build and is famous for his seven rules of exegesis. He was regarded as the ideal sage.

1. Hillel the Person
2. The House of Hillel

1. Hillel the Person.

Hillel was born in Babylonia and as a young man went to Israel to study Scripture and the oral law. Very little is known of his life and personality. The earliest materials, mostly found in

the Mishnah and Tosefta, record his legal opinions on various topics (see Rabbinic Literature: Mishnah and Tosefta). Stories about his life, usually with a moral lesson, are found in later sources and should be viewed with skepticism (Neusner, 286). The claim that Hillel was a descendant of David is in all probability an invention intended to enhance the great scholar's reputation.

That Hillel emerged as a major figure in Jewish law cannot be denied. He is regarded as *nasi'*, "prince" (cf. *b. Pesah*, 66a), which is probably a title retroactively applied to him. But this tradition accurately reflects Hillel's leadership and prominence. Later generations compared him with *Moses and Ezra. Another important indication of his leadership is seen in the enduring House of Hillel that continued to defend and develop his teaching.

2. The House of Hillel.

Hillel was well known for his teachings on the rules of *sacrifice and the *prozbul*. In the case of the former, he taught that the paschal lamb may be slaughtered on the *sabbath (*t. Pesah*, 4:13; *y. Pesah*, 6:1; *b. Pesah*, 66a) and that one must lay hands on the sacrificial animal before presenting it to the priest (*b. Besa* 20a-b). In the case of the latter, he taught that one could circumvent the Jubilee remission of debt, for the Jubilee law induced people not to lend as the Jubilee drew near (*m. Seb.* 10:2-4; contrast the teaching of Jesus in Luke 6:35: "Love your enemies, and do good, and lend, expecting nothing in return"). It is conceivable that Hillel's teaching that one must lay hands upon the animal of sacrifice before presenting it to the priest may shed light on Jesus' action in the *temple precincts, an action that appears to have been centered on the sellers of sacrificial animals (Mk 11:15-18; Jn 2:13-22).

Hillel is remembered to have enjoined his students, "Be among the disciples of Aaron, who loved peace and pursued it" (*m'Abot* 1:12) and to have told a pest who demanded that Hillel teach him the whole of Torah in a single statement: "Do not do to another what you would not wish done to yourself; that is the whole Torah. The rest is commentary; go and study" (*b. Sabb.* 31a). Hillel's negative formulation of this principle finds a parallel in the somewhat older Tobit 4:15a: "And what you hate, do not do to any one" (see Tobit). In Jesus' teaching, the principle

is expressed positively: "Whatever you wish that people would do to you, do so to them; for this is the law and the prophets" (Mt 7:12). The admonition to "go and study" is also found in Matthew 9:13 ("Go and learn"). Another saying credited to Hillel may parallel dominical tradition: "If I am not for myself, who is for me?" (*m'Abot* 1:14). One is immediately reminded of Jesus' saying: "He who is not with me is against me, and he who does not gather with me scatters" (Mt 12:30 par. Lk 11:23).

Following the *destruction of Jerusalem and the temple in A.D. 70, the House of Hillel gained ascendancy over the House of *Shammai. We are told that the academy at Usha decided that the legal rulings of the House of Hillel were to be followed (*y. Ber.* 1:7). Often the rulings of the House of Hillel stand alongside (almost always following) the rulings of the House of Shammai. The editing of rabbinic literature suggests that the Shammaite rulings are older and at one time held sway and that the Hillelite rulings are later and came to hold sway.

Tradition has held that the House of Hillel, following the lead of its founder, taught more lenient views than did the House of Shammai. However, that is not always true. It has been estimated that in about 20 percent of their rulings, the House of Hillel ruled more stringently. Seven rules of exegesis, or *middot* ("measurements"), are attributed to Hillel (cf. *t. Sanh.* 7:11). These rules probably took their formal shape after Hillel's time, though it is possible some of them derive from the famous sage (see Biblical Interpretation, Jewish).

C. A. Evans

HIPPOCRATIC LETTERS

In his life of Hippocrates, the second-century A.D. Greek physician and historian Soranus refers to Hippocrates as the father of medicine and dates his birth to the equivalent of 460 B.C. He notes that Hippocrates was a member of a guild or a society known as the Asclepiades (= sons of Asclepius). Asclepius may have been a historical figure, since he is mentioned as a physician in the *Iliad* of Homer, but he came to be regarded as a deity, as attested by the renowned Temple of Asclepius on the island of Cos. Those with diseases offered sacrifices to him, and many slept in his temple, expecting the deity to visit and heal them. Hippocrates was said to have been descended from Asclepius on his father's side and from Heracles on his mother's side. Hippocrates' many writings on medical subjects resulted in his being venerated as a descendant of Asclepius. He was clearly regarded with respect by some ancient intellectuals, as is evident from his being mentioned twice by *Plato (in the *Protagoras* and the *Phaedrus*) and once by *Aristotle (in *Politics*).

The various editions of the Hippocratic collection of writings attributed to this man run from seventy to one hundred treatises, and the scholarly opinions about their authenticity has been a matter of debate since ancient times. In addition to treatises on explicitly medical sub-

jects—such as *Epidemics*, *Fractures*, *Ulcers*, *Sacred Disease* (epilepsy)—there were letters from and to Hippocrates, including communications from rulers and officials. The latter convey assumptions about supernatural and miraculous actions in human experience, such as overcoming plagues and healing monarchs.

Galen (A.D. 129-195) traced to Asclepius his call to medicine and built on the main body of the Hippocratic tradition but regarded the letters as spurious. Born in Pergamum, he spent time at the medical school in *Alexandria and settled in *Rome. While he affirmed the perceptions of Hippocrates and traced their history in his own writings, he acknowledged that there were many works falsely attributed to him. Paracelsus (1493-1541), who taught medicine in Basel, reacted in the opposite way. He affirmed that God had revealed the truth about nature through such men as Hippocrates, while rationalists, such as Aristotle and Galen, had turned away from nature. He was drawn particularly to the Aphorisms, attributed to Hippocrates, which he saw as offering timeless truth, rather than to the Hippocratic analyses of human ailments. What one can see taking place in these shifting attitudes and strategies for handling the Hippocratic tradition might well be called the quest for the historical Hippocrates.

W. D. Smith has traced the historical evolution of the literature attributed to Hippocrates. By the seventeenth century, for example, there developed skepticism concerning the reports of supernatural achievements of Hippocrates, as is evident in the opinion of Jean Baptist van Belmont (1571-1644), who dismissed as spurious the letter of Hippocrates in which he reports how he had accomplished the cure of a plague. In the post-Enlightenment era, however, the conceptual and methodological issues concerning the Hippocratic tradition came into sharper focus. This is evident in the mid-nineteenth-century edition of the complete works of Hippocrates prepared by M. P. E. Littré, with the Greek text, translation in French and interpretive notes, published in 1861; it includes *Letters*, *Decrees* and the *Harangue*. Littré characterizes these writings, attributed to Hippocrates, as apocryphal and pseudonymous. He says that they are ancient, but the date and author(s) of them are unknown (308), and they probably range from the late fifth century B.C. down into the third century B.C.

Similarly, in the introduction by E. C. Kelly to F. Adam's translation of *The Genuine Works of Hippocrates* there is offered a reconstruction of the evolving role of medicine in Greek culture (v-viii). He states that in the fifth century B.C., "in the Golden Age of Greece," medicine began to sever its direct connection with religion and its control by the priesthood. Health resorts were developing on the shores of the Aegean and on islands, resembling modern spas. Hydrotherapy was taught, and relaxation from worry was encouraged. These resorts were controlled by priest-physicians: Asclepiads, who had dedicated their lives to *Aesculapius*, the god of medicine. Knowledge was passed on to sons and to a few disciples.

One such figure was Hippocrates, at the health resort/medical hospital on the island of Cos. Little was known about his life, but stories emerged that he was the son of a physician and the pupil of Gorgias the Sophist and Democritus the philosopher. He traveled widely but achieved his greatest fame by bringing to an end a plague in *Athens. The king of Persia, Artaxerxes, tried to lure him there as court physician, but Hippocrates was loyal to the Greek tradition and declined the invitation. He was said to have died in Thessaly at the age of 104.

When the writings of the ancients were being assembled for the library in Alexandria (see Alexandrian Library) two hundred years after Hippocrates' death, many writings attributed to him were found. Characteristic of works by him or attributed to him was the direct, personal study of disease, including the appearance of the stricken and an account of the course of the disease. This mode of analysis was in sharp contrast to the description of disease in religious terms and as a consequence of divine rebuke. In his translation of the works of Hippocrates, Kelly grouped those attributed to Hippocrates according to the probability of their being genuine or at least representing accurately the point of view of Hippocrates and his immediate successors. The epistles, however, and other public documents included in the Hippocratic collection he perceived to be almost certainly spurious, although they were probably composed within a century or so after his death.

The powerful factor that united these diverse documents was the high esteem in which Hippocrates was held, and—although Kelly does not make the point—the link of

Hippocrates with the sacred figure of *Aesculapius*, the god of healing. His fame was enhanced by these letters purporting to have been sent to him by royal and political leaders, such as the *Letter from the Senate and People of Abdera to Hippocrates*. The expansion of the works attributed to him and the extension of reports of contacts with him by leaders who were his contemporaries are analogous to what happened in the evolution of the Jesus tradition. In the apocryphal Gospels the miraculous actions of Jesus are expanded and his alleged contacts with religious and political leaders of his time, as well as their recognition of his extraordinary powers, are set forth in this ongoing evolution of the Gospel tradition. Analogously, the emergence in the post-Enlightenment era of critical views concerning the authenticity and reliability of works attributed to Hippocrates parallel in time and intent the development of critical methods for evaluating and interpreting the traditions concerning Jesus.

HISTORIANS, GRECO-ROMAN

Greco-Roman historians are important for the understanding of Christian origins in several ways. They provide *geographical, topographical and historical information that enables us to reconstruct the larger world in which Second Temple Judaism and early Christianity flourished. They also provide the basis for understanding the conventions of Jewish and early Christian historians upon whose works our understanding of early Christian origins is founded.

1. Origins
2. Classes of History
3. Conclusion

1. Origins.

The origins of historical writing must be reconstructed from limited fragmentary evidence and the testimonia of later authors. Its origins are bound up with the beginning of prose, as are

many other genres of writing.

1.1. Precursors. The first prose author was Anaximander of Miletus (c. 610-540 B.C.), who applied the insights of Ionian philosophy to the world as he knew it. According to ancient testimonia, Anaximander made a map of the world and wrote a summary of its geography (e.g., Diogenes Laertius *Vit.* 2.1-2). His project was advanced in the second half of the sixth century B.C. by Hecataeus of Miletus, who also made a map of the world (FGrH 1 T 1) and wrote a commentary on it. Fragments of *The Geographical Description of the World* (*Periēgēsis gēs*) have come down to us from two volumes: one devoted to Europe and the other to Asia. These probably represent Hecataeus's perception of the world in two continents. The work is an ethnographic survey of the Mediterranean basin. It moves along the seacoast, describing the coast, the interior, major cities and points of interest, the history of the people and their customs.

1.2. The Development of "Historical" Genres. Since the work of F. Jacoby (*Fragmente der griechischen Historiker* [FGrH], 1923-), most scholars have recognized four related genres of writing that evolved out of these early Ionian works. In addition to *The Geographical Description of the World*, Hecataeus wrote a *Genealogies* in which he attempted to determine the mythical and historical periods (FGrH 1 FF 1-35). Genealogy dealt with the mythical period by attempting to work out the relationships among the heroes. Others followed suit, for example, Acusilaeus of Argos (FGrH 2) and Pherecydes of Athens (FGrH 3). Other prose authors drew their inspiration from *The Geographical Description of the World* and developed the ethnographic treatments of individual peoples by writing ethnography. The works were typically entitled by the adjectival form of the name of the people, such as Charon of Lampsacus, who wrote an *Ethiopica* and a two-volume *Persica* (FGrH 262 T 1), and Xanthus of Lydia, who wrote a four-volume *Lydiaca* (FGrH 765 FF 1-30). Still others began writing horography, or local histories, chronicling the stories of a city year by year, such as the local historians of Athens (Athidographers): Hellanicus, Cleidemus, Androtion, Phanodemus, Melanthius, Demon and Philochorus (FGrH 323a-28). The attempt to write a sequential narrative led to the development of chronology. The most famous figure is Eratosthenes (275-194 B.C.), the head of the *Alexandrian library, who was the first to at-

tempt to provide specific dates for literary and political figures (FGrH 241).

1.3. The Development of History. There is a fifth genre that Jacoby was reluctant to acknowledge but which most contemporary scholars recognize: history. The most famous successor to Hecataeus was Herodotus of Halicarnassus (c. 484-c. 430 B.C.). Herodotus knew Hecataeus's work (e.g., FGrH 1 F 305/Herodotus *Hist.* 2.155.2-156.2). He used some of the same methodology as his predecessor and incorporated at least eighteen ethnographic treatments of different peoples. At the same time, his work is far more than an extension of the Ionian's. Herodotus focused on people rather than geography. He not only related the events of the Persian wars but attempted to explain the conflict between the East and the West. The first sentence of his work is justly famous: "This is the publication of the research [*historia*] of Herodotus of Halicarnassus so that human affairs will not fade in time and the great and marvelous deeds that were displayed by both Greeks and barbarians will not lack renown, especially the reason why they fought with one another" (Herodotus *Hist.* 1.1). It is for this reason that *Cicero properly called Herodotus the *pater historiae* (Cicero *De Leg.* 1.5).

1.4. History and Related Genres. The relationships between history and other genres was not firm. There are several reasons for this. History was not a firmly defined discipline in antiquity. Cicero thought of history as a subset of *rhetoric (Cicero *De Orat.* 2.62). The distinction between history and the four genres of prose above are often vague: horography can be considered a subgenre of history and is conflated with history in some instances; ethnography was often a constituent element of history, e.g., Thucydides (*Hist.* 6.2-5) provided a sketch of Sicily, Hieronymus of Cardia regularly inserted ethnographies in his history of Alexander's successors (FGrH 154), and Polybius devoted one book to an ethnography (*Hist.* 34). The issue is what is placed in the foreground and what is set in the background. Even the distinction between history and other more distant genres can be problematic. For example, it is not always easy to distinguish history and *biography (although see Polybius *Hist.* 10.21.5-8; Plutarch, *Alex.* 1.2). At the same time, the ancients were aware of the task of the historian. Some wrote treatises on the principles that should govern historical writing

(e.g., Dionysius of Halicarnassus, *Letter to Gnaeus Pompeius* 3-6; Lucian, *How to Write History*). Historians often made observations about their task, particularly in critiques of fellow practitioners.

2. Classes of History.

Among these observations are a number of comments that indicate the types of historical writing that ancient historians recognized. Dionysius of Halicarnassus distinguished three types: histories of individual cities or peoples, universal histories and histories of wars (Dionysius of Halicarnassus *Thuc.* 5-6). Content is the basic criterion in his assessment. Others distinguished between writing about antiquity and contemporary events (e.g., Polybius *Hist.* 9.2.1-7; Diodorus Siculus *Bib. Hist.* 4.1.1-4), making scope the decisive criterion. Still others distinguished between histories written by Greek authors and histories written by Easterners (e.g., Josephus, *Ag. Ap.* 1 §27), championing perspective as the normative criterion. While these distinctions do not constitute a full-scale analysis of the historical works from the Greco-Roman world, they do provide us with a scheme of classification that permits us to group many of the histories that have come down to us or about which ancients inform us.

2.1. *Histories of Individual Cities or Peoples.*

The first group which Dionysius mentioned is the histories of individual cities or peoples. In other words, he lumped horography and ethnography together. While this lacks the precision of modern analyses, it has the advantage of providing a large category for works that deal with specific groups.

2.1.1. Local Histories. Local histories developed the possibility latent in the annals of cities by attempting to write the history of a specific city year by year. Most are characterized by parochialism: they were written by individuals who admired the city and wanted to set out its records. Like the annals they used, their works are simply written: they lack the rhetorical flourish that would characterize so much of Greek historiography. One of the best examples is Hellanicus of Lesbos (fl. fifth century B.C.). Hellanicus was a prolific author who is credited with more than twenty different works. He was the first to write an *Atthis*, or history of Attica (FGrH 323a). Hellanicus's effort was more than an expression of admiration for Athens: he attempted to use a scientific spirit to extend state records

back into the remote past and bring them down to his own time, a reconstruction that earned Thucydides' stricture (*Hist.* 1.97.2).

The use of annals appealed to the Romans, who began writing horographies at least as early as Cassius Hemina (fl. second century B.C.). Hemina traced the history of Rome from the earliest period down through the Second Punic War (218-201 B.C.) and perhaps beyond. Pliny called him the oldest annalist (*Nat. Hist.* 13.84). There was, however, a difference between the Greek and Roman practices. The Greeks kept horography and history proper separate; the Romans did not. While the Romans used annals as a basis for their works, they did not feel bound by the conventions of Greek horography that simply chronicled the events of a year; rather, they chose to write about human affairs more freely but to do so in an annalistic form.

2.1.2. Histories of Peoples. The other group consists of ethnographies and histories of specific people. These were distinct, even though Dionysius did not address the differences. Ethnographies were written by Greeks who were interested in other peoples. They continued to use the Ionian method of reporting hearsay. They were obligated to cover the standard topics of the genre: geography, history, wonder and customs of the people. Histories were different. Historians were required to analyze causes, not simply report. They did not follow the fourfold pattern of ethnography. Finally, their perspective is quite different from that of ethnographies; they are Greeks writing about Greeks, not Greeks writing about non-Greeks.

The works in this subcategory are known as *Hellenica*. They are continuations of Thucydides' *History of the Peloponnesian War*, which ended abruptly in 411 B.C. The anonymous Oxyrhynchus historian, Theopompus, and Xenophon changed the scope of Thucydides' work by enlarging it to the affairs of the Greeks generally rather than focusing on a single war. The identity of the historian who wrote the 900 lines that were discovered on a papyrus at Oxyrhynchus in 1906 has never been solved (FGrH 66). The lengthy fragment is characterized by a sobriety of judgment and critical acumen that is rare in antiquity. It is not unfair to say that the Oxyrhynchus "historian, Thucydides and Polybius are the ancient world's closest analogues to modern historians and constitute an exception rather than a rule in ancient historiography.

Theopompus was a student of Isocrates who thought that history should be subordinated to politics (FGrH 115). Xenophon's work is a roughly united work that consists of three major sections that set out the affairs of the Greeks from 411 to 362 B.C. The significance of these works is that they broadened history from the war monograph (see below) to the larger story of a people.

2.1.3. Archaic Histories of Peoples. The next subgroup is problematic. F. Jacoby considered the histories of Sicily to be ethnographies (FGrH 554-77). However, C. Fornara has made a reasonable case for considering them as a separate subgroup. Unlike *Hellenica* that addressed recent events, the *Sialica* contained *archaeologiae*, or accounts of the earliest period. Since a number of historians considered *archaeologiae* to be distinct from works that concentrate on recent history, we may place these in a separate subgroup.

The most important of these historians was Timaeus of Tauromenium (c. 356-c. 260 B.C.). Timaeus's thirty-eight volume history extended the perspective of the *Hellenica* both chronologically and geographically (FGrH 566). He argued that the Greeks in the West had made notable contributions to Hellenism. The work thus had an apologetic edge: the Greek west was important and should not be ignored (see FF 40 and 94). It was natural that a work that dealt with Sicily, Italy and northern Africa would have an impact on Roman historians and those Greeks who were interested in Rome. It was significant enough that Polybius felt compelled to engage in a major polemic against Timaeus (Polybius *Hist.* 12.3.1-16.14; 23.1-28.10).

2.1.4. Apologetic Histories. The apologetic dimension of Timaeus reflects an inside debate among Greeks. What happened when the debate was extended to non-Greeks? In the course of a major polemic against Greek historians, Josephus claimed that groups from the East had a superior historiography (Josephus *Ag. Ap.* 1 §§6-56). While the Greeks were superior rhetors, they did not record ancient history accurately. Josephus claimed that Eastern historians did. The three most important representatives were Berossus (c. 350-c. 280 B.C.), who wrote a *Babylonica* (FGrH 680); Manetho (fl. c. 280 B.C.), who wrote an *Aegyptiacus* (FGrH 609); and Josephus (A.D. 37/38-c. 96), who wrote a twenty-volume *Jewish Antiquities*. All were priests who used the records of their own people to write their histo-

ries. In each case they recast their indigenous stories in Hellenic form in an effort to offer a self-definition that would win higher respect and acceptance for the group in the Greco-Roman world.

2.2. Universal Histories. The second category that Dionysius used was universal histories. These were works that had a geographical/ethnographical scope that extended beyond specific cities or peoples to incorporate the world as it was known. There are at least two forces that helped to create a worldwide perspective.

2.2.1. Persia. The first was Persia's encroachment on Greek soil. The expansion of Persia made the Greeks aware of other peoples in ways that they had not been prior to the end of the sixth century B.C. The work of Hecataeus of Miletus is at least indirectly indebted to Persia. The decisive step was taken by Herodotus, whose *Histories* are Dionysius's parade example of a universal history. While we might consider them a war monograph, they do describe the world as Herodotus knew it.

The real honor for writing the first universal history should go to Ephorus (c. 405-330 B.C.). At least Polybius claimed that he was his only predecessor (Polybius *Hist.* 5.32.2), and Diodorus of Siculus considered him an important model (Diodorus Siculus *Bib. Hist.* 5.1.4). Ephorus wrote a thirty-volume history of the world from the return of the Heracleidae in the eleventh century B.C. to 341 B.C. (FGrH 70). One of the most pressing difficulties Ephorus had to address in such an undertaking was the organization of diverse and independent material. He solved the problem by aligning topics with specific books (Diodorus Siculus *Bib. Hist.* 5.1.4). This topical arrangement was a break with the chronological arrangement of his predecessors, but its practical utility was apparent enough to his successors that they adopted it.

2.2.2. Rome. The second power that forced the Greeks to think in universal terms was Rome. The impact of Rome was not lost on a Greek military officer who had been captured during the Third Macedonian War. Polybius wrote: "For what human being is so small or indifferent that he or she would not want to know how and by what type of government almost the entire world came under the single rule of the Romans in less than fifty-three years—something that had never happened before" (Polybius *Hist.* 1.1.5; cf. also 6.2.3 and 39.8.7). In

particular, he felt compelled to explain Rome's rise to his fellow Greeks, a compulsion he answered in a complex work of forty books. He thought that the uniqueness of the events necessitated a new synthesis: "For what is unique in my work and what is amazing about our time is this: just as Fortune has bent almost every historical event in the known world into one direction and has compelled everything to incline to one and the same goal, so," he continued, "it is necessary to bring the administration of Fortune which she has used for the completion of her universal tasks, under one synoptic perspective for the readers through a history" (Polybius *Hist.* 1.4.1-2).

Polybius's most important successor was the Middle Stoic philosopher, Poseidonius (c. 135-51/50 B.C.). Poseidonius began where Polybius left off at 146 B.C. and continued to c. 80 B.C. Like Polybius, he believed in the unity of history. However, he worked out his understanding of history in a more philosophically sophisticated form than his military predecessor had. For Poseidonius, the Roman Empire represented the unity of humanity and reflected the cosmopolis of God.

Polybius's and Poseidonius's perspectives were universal spatially but not temporally. Polybius began his narrative proper in 220 B.C., providing a preface of the Punic Wars in the first two books (see Polybius *Hist.* 1.3.8), while Poseidonius began in 146 B.C. Another Greek thought that this gap should be filled. Like Polybius, Dionysius of Halicarnassus spent an appreciable part of his adult life in Rome. Dionysius agreed with Polybius that the accomplishment of Rome merited special attention (Dionysius of Halicarnassus *Ant. Rom.* 1.2.1-3.6). Unlike Polybius, he had not come to Rome as a captive; rather, he had been well received. He saw a cultural unity in the Greco-Roman world that he attempted to demonstrate in both his rhetorical treatises and his history. Dionysius believed that the Greeks did not know the early period of Rome adequately. For this reason he wrote his *Roman Antiquities* in twenty books (Dionysius of Halicarnassus *Ant. Rom.* 1.4.1-6.5, esp. 4.1-3; 6.1-2). One of his basic arguments was that the Romans were originally Greeks (Dionysius of Halicarnassus *Ant. Rom.* 1.5.1-4; 7.70.1-73.5). While we might be tempted to smile at such an argument, we should remember that Greek culture had so pervaded Rome that his argument was

not without power.

Not all Greeks were so enthralled by Rome. Diodorus Siculus (fl. first century B.C.) wrote a forty-volume *Bibliothēkē* that covered the known world. For years, Diodorus's excessive dependence on sources led modern scholars to devalue his work. More recently a number of studies have argued that the *Bibliothēkē* is not a pastiche of sources but a work that has been shaped by definite ideas. This has led to a reassessment of Diodorus's attitude toward Rome. Diodorus lacks the notion of the inevitable rise of Rome. While he includes praise of Rome, these statements are probably those of his sources; his own view appears to be much more guarded if not negative.

These Greek efforts were not without a corresponding tradition among the Romans. The most famous Latin historian of Rome is Livy (64/59 B.C.-A.D. 12/17). His 142-book *Ab urbe condita libri* covered Rome from the origins of the city to his own period. Unlike Polybius and Dionysius, who were concerned about the impact of Rome on Greeks, Livy was unnerved by the end of the republic. While he has often been called an "Augustan historian," his sympathies were with the republic. His work depends heavily on sources that are often incorporated without adequate critical analysis.

The later story of Rome has an interesting twist. The story of early imperial Rome is told by Tacitus (A.D. c. 56-c. 115). While his approximately thirty-volume *Histories* and *Annals* that relate the history of Rome from A.D. 14 to 96 are not universal histories, they serve as the predecessor for the important universal history of Ammianus Marcellinus (A.D. c. 390-395). Ammianus's thirty-volume history began where Tacitus left off at A.D. 96 and continued to A.D. 378. While a great deal of his work has been lost, what we have suggests that he worked carefully with a great deal of attention to detail. It is fitting that a Greek who wrote a history of Rome in Latin should write the last great universal history of the Greco-Roman world.

2.3. *Histories of Wars.* The third and final category that Dionysius mentioned was the war monograph. The paradigm is Thucydides (c. 460/455-c. 400 B.C.), the Athenian general who wrote an incomplete eight-volume history of the Peloponnesian War (431-404 B.C.). Thucydides took the theme of war introduced by Herodotus, but reduced Herodotus's global perspective to a

limited time and place. He matched the intensification of his scope with the rigor of his analysis. He is open about his preferences, thorough in his research and critical in his analyses. Perhaps the most famous example is his comments about the speeches of his characters (Thucydides *Hist.* 1.22.1; cf. also Polybius *Hist.* 12.25a.5-25b.1). This does not mean that he is without fault, but it does indicate that he set a new standard in historical writing.

He was followed by many successors. Two of the most important from the standpoint of the NT are the Roman senator Sallust, who wrote two monographs, *Cataline's Conspiracy* and *Jugurtha's War*, and the Jewish priest-general-historian *Josephus, who wrote an account of the First Jewish Revolt (A.D. 66-70) in seven volumes, *The Jewish War*. In all of these cases, the author was either a participant or eyewitness of the events that he describes.

3. Conclusion.

There are several caveats that we should keep in mind when reading ancient historians. We still lack all of the texts. It has only been in recent years that the task of completing Jacoby's monumental collection of Greek fragments has been undertaken. While scholarship has studied the major historians in detail, it has not explored many of the less significant historians adequately. The result is that we often work with generalizations that were created by the prejudices of an earlier generation of scholars without the benefit of full-scale analyses. There is still a good deal of work to do in the field of Hellenistic historiography.

HOLY MEN, JEWISH

Several Jewish holy men in the time of Jesus were well known for mighty acts and remarkable answers to *prayer. The lives and activities of five of them compare in various ways with the life and ministry of Jesus. These five are Honi ha-Me'aggel (first century B.C.); Abba Hilqiah, grandson of Honi (late first century B.C., early first century A.D.); Hanan ha-Nehba, grandson of Honi (late first century B.C., early first century A.D.); Hanina ben Dosa (first century A.D.) and Eleazar the Exorcist (first century A.D.).

1. Honi ha-Me'aggel
2. Abba Hilqiah, Grandson of Honi
3. Hanan ha-Nehba
4. Hanina ben Dosa
5. Eleazar the Exorcist

1. Honi ha-Me'aggel.

In the rabbinic literature Honi is called ha-Me'aggel ("the circle drawer"). *Josephus refers to him as "Onias, a righteous man beloved by God." He was remembered for praying for rain during a time of severe drought. When his prayer initially went unheeded, he drew a circle on the ground and told God that he would not leave it until rain came (perhaps following the example of Habakkuk; Hab 2:1). Soon it did rain. The story is found in the *Mishnah (*m. Ta'an. 3:8*; cf. *b. Ta'an. 23a*) and is mentioned by Josephus.

The earliest account is provided by Josephus, who is primarily interested in the Jewish civil war, not Honi's answered prayer. His allusion to the holy man and to the belief that through his prayer God sent rain attests to the antiquity of the tradition and offers an important measure of support for its authenticity. According to Josephus (*Ant. 14.2.1 §§22-24*):

Now there was a certain man named Onias, who was righteous and beloved of God, who at one time during a rainless period prayed to end the drought; and hearing, God sent

rain. This man hid himself because he saw that the civil war continued unabated, but taken up to the camp of the Judeans he was asked, just as he ended the drought through prayer, similarly to place a curse on Aristobulus and his partisans. But though refusing and trying to beg off, he was compelled by the mob. Standing in their midst, he said: "O God, King of the universe, since those who are now standing with me are Your people and those who are besieged are Your priests, I beseech You neither to hearken to those men against these nor (to hearken to) what these men are asking (You) to perform against those." And the wicked among the Judeans who stood by stoned him for praying these things.

The Mishnaic account shows no interest in the political issues; its interest is much more theological. According to *m. Ta'anit 3:8*:

Once they said to Honi the Circle-Drawer, "Pray that rain may fall." He said to them, "Go out and bring in the Passover ovens that they may not be softened." He prayed, but rain did not come down. What did he do? He drew a circle and stood within it and said, "Lord of the universe, Your sons have turned their faces to me, for I am as a son of the house before You. I swear by Your great name that I will not move from here until You have mercy on Your sons." Rain began dripping. He said, "Not for this have I prayed, but for rain [that fills] cisterns, pits, and caverns." It began to come down violently. He said, "Not for this have I prayed, but for rain of goodwill, blessing, and plenty." It came down in moderation until Israel went up from Jerusalem to the Mount of the House because of the rain.

What is of concern to the Mishnaic tradition is Honi's apparent familiarity with heaven. We are told that a certain Simeon ben Shetah expressed disapprobation: "Had you not been Honi, I would have pronounced a ban against you! For were these years like those concerning which Elijah said no rain should fall—for the keys to rainfall were in his hands—would not the result of your action have been the desecration of God's name? But what can I do with you, since you importune God and he performs your will, like a son that importunes his father and he performs his will."

Honi's life and activities present a few points

of comparison with the life and ministry of Jesus. Honi's persistence in praying for rain parallels Jesus' similar teaching, as seen in the parables of the persistent friend (Lk 11:5-8) and the importunate widow (Lk 18:1-8). Honi's filial relationship with God is also interesting. Jesus taught his disciples to pray to God as "Father" (Mt 6:9; Mk 14:36) and was regarded as God's Son (Mk 1:11).

2. Abba Hilqiah, Grandson of Honi.

Abba Hilqiah, grandson of Honi (son of Honi's son), was a very pious and poor man who worked for hire, wore a borrowed coat and had insufficient food for guests. He was requested by the rabbis to pray for rain. He and his wife went upstairs and, from opposite corners, prayed. Soon clouds began to form (*b. Ta'an.* 23a-23b). Part of the story reads:

He said to his wife, "I know that the rabbis have come on account of rain. Let us go up to the roof and pray. Perhaps the Holy One, blessed be He, will have mercy and rain will come down, without credit given to us." They went up to the roof. He stood in one corner; she [stood] in another corner. At first the clouds appeared over the corner where his wife [stood] . . . They said to him, "We know that the rain [has come] on your account."

Poverty is a feature common to most of the traditions of the holy men. Jesus' lifestyle was also one of poverty: "Foxes have holes, and birds of the air have nests; but the Son of Man has nowhere to lay his head" (Mt 8:20 NRSV; Lk 9:58).

3. Hanan ha-Nehba.

Hanan ha-Nehba (i.e., Hanan "the hidden"), grandson of Honi (son of Honi's daughter), was a modest man who used to hide from public view. Like his famous grandfather, Hanan gained a reputation for bringing down rain through his prayers (*b. Ta'an.* 23b):

Hanan ha-Nehba was the son of the daughter of Honi the Circle-Drawer. When the world needed rain the rabbis would send school children to him and they would seize the hem of his cloak and say to him, "Father, Father, give us rain!" Then he would petition the Holy One, blessed be He, "Master of the universe, give rain for the sake of these children who do not even know enough to distinguish between a Father who gives rain and a father who does not."

The action of the little children who come to Hanan ha-Nehba, seize the hem of his cloak and make a request parallels Synoptic tradition: "They . . . begged him that they might touch even the fringe of his cloak; and all who touched it were healed" (Mk 6:56 NRSV).

4. Hanina ben Dosa.

Hanina, probably the most famous of the holy men, lived in the town of Arab, a small Galilean village about 10 miles north of Nazareth. In *m. Soṭa* 9:15 he is remembered as one of the "men of deeds": "When Rabbi Hanina ben Dosa died, the men of [great] deeds ceased." The description "men of deeds" (*'ansē ma'aseh*) refers to the miracles that were effected through his prayers. Hanina was especially famous for his prayers that resulted in healing (*m. Ber.* 5:5):

They say about Rabbi Hanina ben Dosa that he used to pray over the sick and say, "This one will live," or "That one will die." They said to him, "How do you know?" He said to them, "If my prayer is fluent in my mouth, I know that he is accepted; and if it is not, I know that he is rejected."

On one occasion he prayed for the son of Gamaliel II (or possibly Gamaliel the Elder). Because the words of his prayer in this instance came fluently, he knew he had been answered. Gamaliel's disciples noted the time and returned to their master to discover that the boy had recovered at the very hour Hanina had spoken (*b. Ber.* 34b; cf. *y. Ber.* 5:5):

The Rabbis taught: Once the son of Rabban Gamaliel became ill. He sent two scholars to Rabbi Hanina ben Dosa to ask him to pray for him. As soon as he saw them, he went up to an upper room and prayed for him. When he came down, he said to them, "Go, the fever has left him." They said to him, "Are you a prophet?" He said to them, "I am neither a prophet nor the son of a prophet. But this I have accepted: If my prayer is fluent in my mouth, I know that he is accepted; and if not, I know that he is rejected." They sat down and wrote down the exact time. And when they came to Rabban Gamaliel, he said to them, "[By] the [temple] service! You are neither short nor long, but so it was. At that exact time the fever left him and he asked us for water to drink."

The healing of Gamaliel's son at the very "hour" that Hanina announced to the disciples that he

would recover parallels the Jesus tradition: "The father realized that was the hour when Jesus had said to him, 'Your son will live'" (Jn 4:46-53 NRSV; cf. Mt 8:5-13; Lk 7:1-10). The statement itself, "Your son will live," parallels Hanina's alternating pronouncements, "This one will live" or "That one will die."

Another early story tells of Hanina's encounter with a poisonous lizard (*t. Ber.* 3:20; cf. *m. Ber.* 5:1):

They say about Rabbi Hanina ben Dosa that once while he was standing and praying, a poisonous lizard bit him, but he did not interrupt [his prayer]. His disciples went and found it dead at the mouth of its hole. They said, "Woe to the man who is bitten by a lizard. Woe to the lizard that bit ben Dosa!"

The Talmudic gemara richly embellishes the Hanina ben Dosa tradition. He stretches boards, bans the "queen of the demons" from the land, daily hears the heavenly voice cry out, "My son" (cf. *b. Ber.* 34b; *y. Ber.* 5:5; *b. Pesah.* 112b; *b. Ta'an.* 24b-25a).

5. Eleazar the Exorcist.

Josephus tells us of a certain Eleazar who followed the incantations of Solomon and could draw out demons through a person's nostrils, through the use of the Baaras root (further described in *J.W.* 7.6.3 §§180-85). Josephus explains that God gave Solomon "knowledge of the art used against demons for the benefit and healing of humans. He also composed incantations by which illnesses are relieved, and left behind forms of exorcisms with which those possessed by demons drive them out, never to return" (Josephus *Ant.* 8.2.5 §45). Josephus says that Eleazar "adjured the demon, speaking Solomon's name and repeating the incantations which he had composed, never to re-enter him" and proved the success of his exorcism by commanding the departing spirit to upset a cup of water or a foot basin (Josephus *Ant.* 8.2.5 §§46-49).

A few of the details recounted by Josephus parallel certain features that appear in the stories of Jesus' exorcisms. Like Eleazar, Jesus was well known for his ability to cast out "demons" (Mk 1:34), though in the specific Gospel episodes themselves "evil spirit" and "unclean spirit" are the preferred terms (e.g., Mk 5:8; Lk 7:21). The possessed falls down (Mk 3:11; 9:20). The exorcist adjures the demon (Mk 5:7) and warns it not to return or reenter (Mk 9:25; Mt 12:44-45 par. Lk

11:24-26). The demon is cast out in Jesus' name (Mk 9:38-39). Eleazar commanded the demon to tip over the washbasin; Jesus ordered the demon to be silent (e.g., Mk 3:12).

HOLY SPIRIT

This analysis is intended to expose the most significant issues related to NT conceptions of the Holy Spirit with respect to their Jewish and Greco-Roman milieus. In the first century the expression *holy spirit* was not a *terminus technicus* but an expression that could be construed in a variety of ways, from *nepes* to an *eschatological agent of purification. Jews during the first century did not uniformly believe that they lived during an era bereft of the Holy Spirit. Jewish concepts of *pneuma* were extraordinarily flexible during the first century, due in no small measure to the Greco-Roman milieu that inevitably influenced large segments of early *Judaism. The spirit, however its nature was construed, was associated with a wide variety of effects, including but not limited to prophecy; inspired exegesis; creation; purity, conversion, and initiation; and an eschatological figure.

1. Diverse Conceptions of the Holy Spirit
2. The Alleged Absence of the Holy Spirit
3. A Variegated Milieu
4. Varieties of Effects

1. Diverse Conceptions of the Holy Spirit.

In the NT the word *spirit* (*pneuma*) is to be understood as the spirit of God approximately 275 times; in as many as 92 of these occurrences, the expression is "holy spirit" (*pneuma hagion*). This

impressive frequency of references should not lead, however, to the incorrect inference that the words *pneuma* or *pneuma hagion* were *termini technici* to which were attached a relatively established cluster of meanings. The scenario is to the contrary.

Even references to "holy spirit" in the *Hebrew Bible (MT Ps 51:13; Is 63:10, 11) suggest widely varying applications of this designation. In Psalm 51, the holy spirit is that which vivifies individual human beings. The psalmist therefore implores, "Do not cast me away from your presence/Do not take your holy spirit away from me" (Ps 51:13). In Isaiah 63:7-14, in contrast, the holy spirit is similar to the angel of Exodus 23 that guided Israel through the wilderness. The prophet's recollection that Israel "rebelled and grieved his holy spirit," in a context permeated by exodus and wilderness imagery, is reminiscent of the command that Israel "not rebel against" the angel sent to guard Israel on its wilderness sojourn (Ex 23:20-23). The further recollection that "the spirit of the LORD gave them rest" (Is 63:14) is reminiscent of Exodus 33:14, according to which God's presence gave Israel rest.

During the centuries preceding the first century A.D., this flexibility with respect to conceptions of the holy spirit persisted, as the Dead Sea Scrolls illustrate. In the **Damascus Document* (CD 7:4; 5:11-13) the term "holy spirit" replaces the biblical term *nepes* to describe that which can be defiled. While Leviticus 11:43 and 20:25 contain the command not to defile the *nepes*, CD 7:4 describes sinners who defile "their holy spirit, for with blasphemous tongue they have opened their mouth against the statutes of God's covenant" (see CD 5:11-13; 12:11). Compare this with the hymn writer's thanks to God that he is "strengthened by the spirit of holiness" (IQH 16:15; see Thanksgiving Hymns) or the words of praise that God has chosen "to purify me with your holy spirit" (IQH 16:20).

Still further afield from the anthropological interpretation of the term "holy spirit" in CD 7:4 is the belief expressed in the **Rule of the Community* (1QS 4:21), according to which the holy spirit is the eschatological agent of purification. The scrolls provide, therefore, a window into the diversity that characterized the era that gave birth to Christianity. The holy spirit could be conceived as a constituent dimension of human life (*nepes*) from birth to death, as that power

that strengthens and purifies those who join themselves to the community of *Qumran covenanters and as that which will bring eschatological purification.

2. The Alleged Absence of the Holy Spirit.

Much of NT scholarship has adhered to the hypothesis that Jews during the NT era believed that the holy spirit had departed from Israel in the distant past and would return only in the eschatological future. J. Jeremias, for instance, subtitled a portion of his *New Testament Theology* (New York: Scribner's, 1971) "The Return of the Quenched Spirit," and aptly summarized this view: "With the death of the last writing prophets, Haggai, Zechariah and Malachi, *the spirit was quenched* because of the sin of Israel. After that time, it was believed, God still spoke through the 'echo of his voice' . . . a poor substitute" (Jeremias, 81).

The earliest literature that allegedly espouses this position belongs to a *rabbinic compilation known as the Tosefta, which was compiled possibly in the fourth century A.D. but no doubt contains earlier traditions (see Rabbinic Literature: Mishnah and Tosefta). The text reads:

When Haggai, Zechariah, and Malachi, the last of the prophets, died, the Holy Spirit ceased in [from] Israel. Nevertheless, a Bath Qol was heard by them: It once happened that the sages entered a house in Jericho and they heard a Bath Qol, saying, "There is a man here who is worthy of the Holy Spirit, but there is no one in his generation righteous." Thereupon, they set their eyes upon Hillel (*t. Sofa* 13:2-4).

Interpreted alongside other texts of disparate provenance and date of composition (Ps 74:9; Pr Azar 15; 1 Macc 4:46; 9:27; 14:41; Josephus *Ag. Ap.* 1.8 §§§7-41; 2 *Bar.* 85:3), this text is alleged to state that with the end of the succession of the canonical prophets, the holy spirit was replaced by an inferior voice, the *bath qol* (*bat qol*). The *bath qol* informs the sages who are gathered together that *Hillel is worthy of the spirit but cannot receive it because of the evil generation to which he belongs.

The problem with this interpretation is that it ignores the literary context of *t. Sofa* 13:2-4 and therefore violates the straightforward principle this text is intended to illustrate: "When a righteous person comes into the world, good comes into the world . . . and retribution departs from

the world" (*t. Sota* 10:1). The compiler illustrates this principle by means of a historical survey that extends from Noah to the *Sanhedrin (*t. Sota* 10:1—15:7).

If *t. Sota* 13:2-4 be interpreted in light of this principle, according to which the presence of the righteous in the world brings the presence of good, then the word that Hillel is worthy of the holy spirit should be interpreted to mean that the holy spirit which withdrew with the death of Haggai, Zechariah and Malachi has now returned because someone—Hillel—is again present who is worthy to warrant the return of the spirit. Interpreted within its literary context, *t. Sota* 13:2-4 is an affirmation that with the presence once again of the righteous in the first century A.D., the holy spirit could reappear following its temporary withdrawal after the death of the latter prophets.

The advent of the Spirit at the baptism of Jesus ought not then to be construed as the beginning of Christian spiritual vitality in the midst of an arid Judaism (see *DJG*, Holy Spirit). Rather, this Tosefta text corresponds to the situation portrayed in the Synoptic Gospels (Mt 3; Lk 3): in both there appears one who is worthy of the Holy Spirit in the midst of an evil generation. In the Tosefta, this one is Hillel; in the Gospels, Jesus.

3. A Variegated Milieu.

Essential to any study of conceptions of the Spirit in the NT is the realization that many of the forms of Judaism that birthed Christianity were indelibly impressed by Greco-Roman conceptions of inspiration.

A dominant philosophy during the first centuries B.C. and A.D. was *Stoicism, which inherited specific conceptions of the spirit. The Roman statesman *Seneca devoted one of his letters to this *sacer spiritus*: "a holy spirit indwells within us, one who marks our good and bad deeds, and is our guardian. As we treat this spirit, so are we treated" (*Seneca Ep. Mor.* 41.2). Seneca's subsequent discussion (*Ep. Mor.* 41.8) indicates that this spirit "is soul, and reason brought to perfection in the soul." Seneca could espouse this view because he, like many of his Stoic forebears, believed that the soul was a portion of the rational and divine *pneuma*, "which wholly pervades it [the cosmos] and by which the universe is made coherent and kept together" (Alexander of Aphrodisias *On Mixture*

216.14-17, summarizing the view of Chrysippus). This point of view had an impact upon the Alexandrian author of *Wisdom of Solomon, according to whom "the spirit of the Lord has filled the world, and that which holds all things together knows what is said" (*Wis* 1:7). This impact is evident as well in *Philo of Alexandria's interpretation of Exodus 31:3. While the biblical text describes Bezalel as filled with the spirit of wisdom, Philo employs Exodus 31:3 as a point of departure for defining that spirit in Stoic terms as "susceptible of neither severance nor division, diffused in its fullness everywhere and through all things" (*Philo Cig.* 27).

Another example of the early Jewish assimilation of Greco-Roman conceptions of inspiration concerns the ancient and auspicious shrine at Delphi. Several explanations were proffered to account for the power of this shrine, as well as the first-century realization that prophetic activity at Delphi had decreased. Cleombrotus, in Plutarch's *On the Defection of Oracles*, attributes the lessening of oracular activity in Delphi, compared with earlier centuries, to the withdrawal of the angelic beings (*daemones*) who, he believed, utilized the Delphic prophetesses as passive instruments of inspiration. He argues: "coincidentally with the total defection [withdrawal] of the guardian spirits assigned to the oracles and prophetic shrines, occurs the defection of the oracles themselves; and when the spirits flee or go to another place, the oracles themselves lose their power" (Plutarch *Def. Orac.* 418C-D). He later explains, "For what was said then [i.e., earlier], that when the demigods withdraw and forsake the oracles, these lie idle and inarticulate like the instruments of musicians" (Plutarch *Def. Orac.* 431A-B).

Josephus and Philo appear to have adopted a conception of inspiration similar to this in their interpretations of Numbers 22—24, in which the angel promises to place words in Balaam's mouth (*Num* 22:35), and the spirit of God subsequently comes upon Balaam (*Num* 24:2). Philo draws an integral relationship between the prediction of the angel and its fulfillment by the spirit. In an expanded version of Numbers 22:35, the angel predicts: "I shall prompt the needful words without your mind's consent, and direct your organs of speech as justice and convenience require. I shall guide the reins of speech, and, though you understand it not, employ your tongue for each prophetic utterance"

(Philo *Vit. Mos.* 1.274). This prediction is fulfilled when Balaam "advanced outside, and straight-way became possessed, and there fell upon him the truly prophetic spirit which banished utterly from his soul his art of wizardry" (Philo *Vit. Mos.* 1.277). In Philo's version the angel who had promised to prompt Balaam's words accomplished this when it reappeared, designated appropriately in this new context as the prophetic spirit.

Josephus arrives at a similar identification of the angel and spirit of Numbers 22–24. In *Antiquities* 4.6.3 §108, he carefully draws a parallel between the initial approach of the divine angel and the ass's perception of the divine spirit: "But on the road an angel of God confronted him in a narrow place, enclosed by stone walls on either side, and the ass whereon Balaam rode, conscious of the divine spirit approaching her, turning aside thrust Balaam against one of these fences, insensible to the blows with which the seer belabored her." In this summary, Josephus shows no reluctance to use the expressions "angel of God" and "divine spirit" interchangeably.

In addition to this identification of the angel with the inspiring spirit, the interpretations of Philo and Josephus underscore the passivity of Balaam. Philo's angel predicts Balaam's experience with such words as "without your mind's consent . . . though you understand it not . . . employ your tongue." Balaam in Josephus's version explains to Balak: "that spirit gives utterance to such language and words as it will, whereof we are all unconscious" (Josephus *Ant.* 4.6.5 §119).

This coalescence of ingredients—an angelic spirit and the loss of mental control—may well be the product of interpreting the biblical text in light of Greco-Roman discussions of Delphic inspiration. This scenario seems best to explain the transformation that the spirit of Numbers 24:2 undergoes in the interpretations of Philo and Josephus.

Still further evidence of the combustion of biblical and Greco-Roman elements is apparent in Philo's autobiographical reflections on the inspiration he alleges to receive in order to interpret the Scriptures. In *De Somniis* 2.252, Philo refers to the invisible voice that he hears: "I hear once more the voice of the invisible spirit, the familiar secret tenant, saying, 'Friend, it would seem that there is a matter great and precious of which thou knowest nothing, and this I will ungrudgingly shew thee, for many other

well-timed lessons have I given thee.'" This form of inspiration is different from Balaam's, for Philo's experience involves instructing, rather than bypassing, his mind.

Moreover, Philo regards the spirit as a "familiar" or "customary" figure. This designation is evocative of Socrates' inspiration, for Socrates referred to "the customary prophetic inspiration of the daemon" (Plato *Apol.* 40A), "the daemonic and customary sign" (Plato *Phaed.* 242B) and "my customary daemonic sign" (Plato *Euthyd.* 272E). Further, in a discussion of the nature of Socrates' inspiration, in Plutarch's *On the Genius of Socrates*, Simmias explains that "the messages of daemons pass through all other people but find an echo in those only whose character is untroubled and soul unruffled, the very people in fact we call holy and daemonic" (Plutarch *Gen. Socr.* 589D). The affinities between the renowned Socrates and Philo, in his own estimation, include an untroubled mind that is taught by the presence of a customary friend. Once again, then, the inspiring spirit has undergone a transformation through its coalescence with Greco-Roman conceptions of inspiration.

The inspiration of Joshua in the first-century Palestinian version of Genesis—1 Samuel, known as *Liber Antiquitatum Biblicarum* (see Pseudo-Philo) provides still another example of the melding of biblical and Greco-Roman ingredients by early Jewish writers. To the straightforward text of Deuteronomy 34:9a, "Joshua son of Nun was full of the spirit of wisdom," Pseudo-Philo adds, "And when he clothed himself with it [the garments of wisdom], his mind was afire and his spirit was moved, and he said" (Pseudo-Philo *Bib. Ant.* 20.3). These elements have no place in Deuteronomy 34. They echo rather the juxtaposition of images that characterize the ecstatic soul in Cicero's *On Divination* 1.114: the winged soul is "inflamed and aroused." This juxtaposition of frenzy and fire reappears in Plutarch's discussion of enthusiasm, according to which the "soul becomes hot and fiery and throws aside the caution that human intelligence lays upon it" (Plutarch *Def. Orac.* 432E-F). Cicero's *On Divination* and Plutarch's *On the Detection of Oracles*, then, contain the conceptions of prophetic inspiration that explain Pseudo-Philo's expansion of Deuteronomy 34:9.

The century that spawned early Christianity was characterized by enormous diversity with respect to conceptions of inspiration. The inspir-

ing spirit (*pneuma*) could be interpreted as an angelic spirit that ousts thought, as a customary friend that instructs the untroubled mind and as a catalyst to prophetic oracles that inflames and arouses. Studies of the NT therefore must acknowledge that references to the holy spirit are not homogeneous but reflect rather the complex situation of the milieu of the NT, in which various adherents of early Judaism conceived of the spirit differently from one another, due often to the nature of their indebtedness to a diverse and influential Greco-Roman milieu.

4. Varieties of Effects.

The explosive diversity associated with the divine spirit in first-century Judaism can best be grasped by an exploration of the various effects that were attributed to the spirit, even when the particular nature of that spirit is left unexplained. The spirit could be so construed as to bring about effects as diverse as the ascent of a philosopher's mind (Philo *Plant.* 18-26); the ascent of a prophet's mind (Pseudo-Philo *Bib. Ant.* 28.6-10); a coalescence of internal and external beauty characteristic of kingship and rhetorical prowess (Philo *Virt.* 217-19); extraordinary military capabilities (Pseudo-Philo *Bib. Ant.* 27.9-10); and praise (Pseudo-Philo *Bib. Ant.* 32.14). The others, which are here outlined in more detail, include the association of the spirit with prophecy; creation; purity, conversion, and communal initiation; and a messianic figure.

4.1. Prophecy. Although the spirit produces an assortment of effects, prophecy is the most pervasive of them. The postexilic author of the book of Nehemiah had already incorporated a "prayer in which God is said to have been patient with Israel for many years and to have "warned them by your spirit through the prophets" (Neh 9:30). This conviction is echoed by the Qumran sectarians: "This is the study of the law which he commanded through the hand of Moses, in order to act in compliance with all that has been revealed from age to age, and according to what the prophets have revealed through his holy spirit" (1QS 8:15-16).

In the book of *Jubilees*, "a spirit of truth descended upon the mouth" of Rebecca so that she could bless her children (*Jub.* 25:14), and Jacob blessed Levi and Judah when "a spirit of prophecy came down upon his mouth" (*Jub.* 31:11). A section of *1 Enoch* begins when Enoch commands, "Now, my son Methuselah, [please]

summon all your brothers on my behalf, and gather together to me all the sons of your mother; for a voice calls me, and the spirit is poured over me so that I may show you everything that shall happen to you forever" (*1 Enoch* 91:1; see Enoch, Books of). In a humorous portion of the **Testament of Abraham*, in which the archangel Michael cannot find the resources to convince Abraham that he will die, God says to Michael: "And I shall send my holy spirit upon his son Isaac, and I shall thrust the mention of his death into Isaac's heart, so that he will see his father's death in a dream" (*T. Abr.* A 4:8).

According to Philo, Balaam became possessed when "there fell upon him the truly prophetic spirit which banished utterly from his soul his art of wizardry" (Philo *Vit. Mos.* 1.277). *Moses cannot be excluded from this prophetic race, for he too spoke "when possessed by God and carried away out of himself" because he experienced "that divine possession in virtue of which he is chiefly and in the strict sense considered a prophet" (Philo *Vit. Mos.* 2.191). The experience that the false diviner Balaam and the truest of prophets Moses have in common is characteristic of the prophetic race: "This is what regularly befalls the fellowship of the prophets. The mind is evicted at the arrival of the divine Spirit, but when that departs the mind returns to its tenancy" (Philo *Her.* 265; see *Spec. Leg.* 1.65; 4.49; *Quest. in Gen.* 3.9).

Josephus also closely associates the work of the spirit with prophecy. On some occasions, Josephus adds references to prophecy in contexts that focus upon the effects of the spirit. For example, while 1 Samuel 16:13 recounts that "the spirit of the Lord came mightily upon David from that day forward," Josephus relates that David, "when the divine spirit had removed to him, began to prophesy" (Josephus *Ant.* 6.8.2 §166). While Zedekiah, the false prophet, asks Micaiah in 1 Kings 22:24 (LXX), "What sort of spirit of the Lord speaks in you?" Josephus explicitly relates the spirit with prophecy: "But you shall know whether he is really a true prophet and has the power of the divine spirit" (Josephus *Ant.* 8.15.4 §408). Although he reduces the number of references to the spirit in his version of the book of Daniel, he does nonetheless preserve a reference to the spirit and emphasizes Daniel's place as "one of the greatest prophets" (Josephus *Ant.* 10.11.7 §266). On other occasions, Josephus preserves the element of proph-

ecy that is already included in a biblical narrative, such as in the story of Saul's pursuit of David (Josephus *Ant.* 6.11.5 §§222-23).

This association between the spirit and prophecy is evident as well in the *Liber Antiquitatum Biblicarum* (Pseudo-Philo). In extrabiblical additions, the spirit comes upon Miriam to be the recipient of a dream in which the birth of Moses is predicted (Pseudo-Philo *Bib. Ant.* 9.10), and Deborah is said explicitly to have predicted Sisera's demise by the inspiration of the spirit (Pseudo-Philo *Bib. Ant.* 31.9). Pseudo-Philo also creates *de novo* the association of prophecy and the spirit in a biblical text, Judges 3:9-10, in which the spirit is associated only with judging Israel. According to Pseudo-Philo's version, "when they had sat down, a holy spirit came upon Kenaz . . . and he began to prophesy" (Pseudo-Philo *Bib. Ant.* 28.6). The attentiveness of Pseudo-Philo is evident, furthermore, in his interpretation of Deuteronomy 34:9, where an explicit reference to the spirit of wisdom is thoughtfully supplanted by allusions to 1 Samuel 10:6 and Judges 6:34, other biblical texts that refer to the spirit, and followed by a prophetic utterance of Joshua (Pseudo-Philo *Bib. Ant.* 20.2-3). Even in a highly abbreviated account of Saul's pursuit of David, Pseudo-Philo preserves the explicit association of prophecy and the spirit: "And [a] spirit abided in Saul, and he prophesied" (Pseudo-Philo *Bib. Ant.* 62.2).

Rabbinic literature, though it was composed later than the first century A.D., maintains as well this association between the spirit and prophecy. In a discussion of Miriam in *Mekilta de-Rabbi Ishmael*, tractate *Shirata* 10:58-73, for example, the question is raised concerning where in Torah Miriam is said to have been a prophetess. The biblical text quoted, Exodus 2:1-3, has nothing to do with prophecy. Nevertheless, the rabbis are able to detect a reference to prophecy in an alleged reference to the holy spirit in the vocabulary of Exodus 2:4, such as the words "afar off," which are said to express the holy spirit's presence because, in Jeremiah 31:2, it is said, "From afar the Lord appeared to me." Miriam's prophetic abilities in Exodus 2:1-4 are evident in a veiled reference to the holy spirit in Jeremiah 31:2 by means of the exegetical principle *gezerah shawah*, an argument from analogy drawn from two passages that contain similar expression. This association of the spirit with prophecy is characteristic as well of the *targumim; the des-

ignation "spirit of prophecy" occurs consistently in *Targum Onqelos*, while in *Targum Pseudo-Jonathan* the expression "holy spirit" occurs fifteen times and "spirit of prophecy" eleven times.

4.2. *Inspired Exegesis.* Although the association of the spirit with the ability to interpret Scripture is implicit in several texts (Ezra 9:20; Josephus *J.W.* 3.8.3 §§351-53; IQS 5:9; IQH 12:11-13), three discussions in particular adhere to the conviction that interpretation requires the inspiration of the spirit.

First, prior to the Maccabean rebellion, Ben Sira espouses a conception of inspired interpretation when he, in self-conscious reflection upon his scribal calling, writes: "he [the scribe] will be filled by a spirit of understanding/he will pour out his own words of wisdom. . . . He will make known the instruction of what he has learned" (Sir 39:6-8). The importance of the Scriptures in the encomium on the scribe, of which this text is a part, is evident in references to elements of the three portions of scripture: the Torah (Sir 38:34); prophecies (Sir 39:1); and elements of the Writings, namely, wisdom, such as parables and proverbs (Sir 39:2-3). Against this sort of inspiration, which requires a mind alert and scriptural texts, Ben Sira sets the false knowledge of omens and *dreams (Sir 34:1-2, 5).

Second, we observed already that in *De Somniis* 2.252, Philo claims to be taught by his customary friend, the spirit. In this autobiographical reflection, Philo lets the reader know that the immediate task is to solve an exegetical dilemma, such as why the biblical text refers to two cherubim rather than to one cherub that the spirit teaches him; and that this teaching is directed toward his mind (see also Philo *Spec. Leg.* 3.1-6; *Cher.* 27-29; *Som.* 1.164-65; *Fug.* 53-58).

Third, the conviction of 4 Ezra 14 is that Ezra's mind is inspired in a wakeful state to write ninety-four books in response to his prayer for the holy spirit (4 Ezra 14:22; see Esdras, Books of). Prior to this inspiration, Ezra is given the promise that the lamp of understanding will remain lit throughout his experience. The process itself begins as he drinks the cup given to him, his heart pours forth understanding and wisdom increases within him. Following his experience, it is said that these ninety-four books contain "the spring of understanding, the fountain of wisdom and the river of knowledge" (4 Ezra 14:47). The conviction that Ezra is inspired in a conscious state is confirmed by the

significant detail that Ezra's understanding and wisdom overflowed because his own spirit retained its memory. From start to finish, then, Ezra composed ninety-four books by means of a form of inspiration that heightened his intellectual capacity.

4.3. Creation. The spirit is associated with creation. The influence of Genesis 1:2 is apparent in 2 *Baruch* 21:4 and 23:5, Baruch's address to God, "you who created the earth, the one who fixed the firmament by the word and fastened the height of heaven by the spirit," and God's response to this prayer, "For my spirit creates the living." Ezra in 4 Ezra 6:39 similarly recalls the earliest creative activity of God: "And then the Spirit was hovering, and darkness and silence embraced everything; the sound of a human voice was not yet there. Then you commanded that a ray of light be brought forth." In *Judith* 16:14, it is not Genesis 1:2 but Genesis 2:7, mediated through Psalm 104:29-30, that influences the depiction of the spirit's relation to creation. *Judith* praises God: "You sent forth your spirit, and it formed them/there is none that can resist your voice."

The spirit's function vis-à-vis creation is, according to *Wisdom of Solomon* 1:7-8, not only to grant life but also to convict wrongdoers: "the spirit of the Lord has filled the world/and that which holds all things together knows what is said." In the words of the Sibyl composed by another Egyptian author, "Nor is anything left unaccomplished that God so much as puts in mind/for the spirit of God which knows no falsehood is throughout the world" (*Sib. Or.* 3:696-701).

4.4. Purity, Conversion and Initiation. In many other early Jewish texts, the spirit is related to *purity, individual conversion and communal initiation. In the *Rule of the Community* from Qumran the spirit is integrally tied to purification, which transpires upon entry into the community: "by the spirit of holiness which links him with the truth he is cleansed of all his sins. And by the spirit of uprightness and of humility his sin is atoned" (3:7-8; see 9:3-4). The association of the spirit with initiation into the Qumran community is evident, moreover, in the Qumran hymns, the vocabulary of which can be understood to indicate drawing near to God through initiation into the community, such as in *1QH* 14:13-14: "in your kindness toward humankind/you have enlarged his share with the spirit of

your holiness./Thus, you make me approach your intelligence,/and to the degree that I approach/my fervor against all those who act wickedly." The sixteenth hymn is particularly rich with such language: "to be strengthened by the spirit of holiness/to adhere to the truth of your covenant/to serve you in truth, with a perfect heart . . . to purify me with your holy spirit/to approach your will according to the extent of your kindnesses" (*1QH* 16:15, 19-20).

Far from the shores of the Dead Sea, the spirit was associated with conversion to Judaism. In the romantic tale **Joseph and Aseneth*, Aseneth, the daughter of Pentephres (the biblical Potiphar), is converted to Judaism. In this story, Joseph places his hand upon her head and prays, "and renew her by your spirit/and form her anew by your hidden hand/and make her alive again by your life" (*Jos. and As.* 8:9). Later Aseneth is led by a heavenly man to a room with a marvelous honeycomb. He says to her, "Happy are you, Aseneth, because the ineffable mysteries of the Most High have been revealed to you, and happy [are] all who attach themselves to the Lord God in repentance, because they will eat from this comb. For this comb is [full of the] spirit of life" (*Jos. and As.* 16:14). Finally, at a climactic moment, "Joseph kissed Aseneth and gave her spirit of life, and he kissed her the second time and gave her spirit of wisdom, and he kissed her the third time and gave her spirit of truth" (*Jos. and As.* 19:10-11). In this lovely romance, then, the spirit purifies and draws people into the sphere of the faithful.

This purifying power does not conclude with admittance to the community of faith. In the *Mishnah* (tractate *Soṭa* 9:15), "Heedfulness leads to cleanliness, and cleanliness leads to purity, and purity to abstinence, and abstinence leads to holiness, and holiness leads to humility, and humility leads to the shunning of sin, and the shunning of sin leads to saintliness, and saintliness leads to [the gift of] the Holy Spirit, and the Holy Spirit leads to the resurrection of the dead." Rabbi Nehemiah, in *Mekilta de-Rabbi Ishmael*, tractate *Beṣallah* 7:134-36, associates obedience with reception of the spirit: "For as a reward for the faith with which Israel believed in God, the Holy Spirit rested upon them. R. Nehemiah says: Whence can you prove that whosoever accepts even one single commandment with true faith is deserving of having the Holy Spirit rest upon them." In the **Testaments of the*

Twelve Patriarchs, Benjamin attributes sexual purity to the spirit: "He has no pollution in his heart, because upon him is resting the spirit of God" (*T. Benj.* 8:3).

This association of the spirit with purity is invested with a communal dimension in *Jubilees* 1:20-21, where Moses, echoing Psalm 51, intercedes for Israel, "O Lord, let your mercy be lifted up upon your people, and create for them an upright spirit. . . . Create a pure heart and a holy spirit for them. And do not let them be ensnared by their sin henceforth and forever." God responds (*Jub.* 1:22-25) by echoing Psalm 51 and Ezekiel 11:19-20: "And I shall create for them a holy spirit, and I shall purify them so that they will not turn away from following me from that day and forever. And their souls will cleave to me and to all my commandments."

4.5. Wisdom and Messiah. A particularly focused association of the spirit with wisdom emerges from the prediction of a just Davidic ruler who will bring in the wake of his reign both human and cosmic peace (*Is* 11:1-9): "The spirit of the LORD shall rest on him/the spirit of wisdom and understanding/the spirit of counsel and might/the spirit of knowledge and the fear of the LORD" (*Is* 11:2). Although later developments of this figure in Isaiah preserve the relationship between justice, mercy and the knowledge of God, the defining feature that predominates is justice. Wisdom is supplanted by justice in the exilic description of the so-called messianic servant in whom God delights: "I have put my spirit upon him; he will bring forth justice to the nations" (*Is* 42:1b-c). This servant will not grow weary "until he has established justice in the earth" (*Is* 42:1d). The elusive yet related prophetic figure of Isaiah 61:1-7 also holds justice rather than wisdom to be the fundamental project of his calling: "The spirit of the Lord GOD is upon me/because the LORD has anointed me/he has sent me to bring good news to the oppressed" (*Is* 61:1).

Despite the ascendancy of justice at the expense of wisdom in Isaiah, early Jewish appropriations of these texts preserve the original association of the spirit with wisdom. The spirit that dwells upon the Elect One, the central eschatological character of the Similitudes of *Enoch*, is depicted principally, in language reminiscent of Isaiah 11, as a spirit of wisdom: "The Elect One stands before the Lord of the Spirits; his glory is forever and ever and his power is

unto all generations. In him dwells the spirit of wisdom, the spirit which gives thoughtfulness, the spirit of knowledge and strength, and the spirit of those who have fallen asleep in righteousness" (*1 Enoch* 49:2-3).

Poetic depictions of the anticipated *messianic deliverer, redolent of the images of Isaiah 11, emerge as well in the literature of Judaism. The author of the **Psalms of Solomon* preserves the association of the spirit and wisdom: "And he will not weaken in his days, [relying] upon his God/for God made him powerful in the holy spirit/and wise in the counsel of understanding/with strength and righteousness" (*Pss. Sol.* 17:37). So too does the author of the *Testament of Levi*: "And the glory of the Most High shall burst forth upon him./And the spirit of understanding and sanctification/shall rest upon him . . . / And he shall open the gates of paradise/he shall remove the sword that has threatened since Adam/and he will grant to the saints to eat of the tree of life./The spirit of holiness shall be upon them./And Beliar shall be bound by him./ And he shall grant to his children the authority to trample on wicked spirits" (*T. Levi* 18:7, 10-12). In the *Traditions of *Melchizedek* (11QMelch), the figure of Isaiah 61 is transformed into a warrior figure who will destroy *Belial and his entourage of evil spirits. These texts project an emphasis upon strength or power, which, though consistent with their own eschatological expectations of deliverance, cannot be said to arise genetically from Isaiah 11, 42 or 61.

HOMILY, ANCIENT

While there is evidence for the existence of the homily in both the *synagogue and the church prior to the second century A.D., its nature during this period is disputed. However, there is firm evidence for the homily in both Jewish and Christian circles from the second century A.D. onward. These homilies show a Greek *rhetorical basis with Jewish motifs.

1. The Jewish Homily Before A.D. 70
2. The Christian Homily in the First Century
3. The Jewish Homily After A.D. 70
4. The Christian Homily After the First Century
5. Conclusions

1. The Jewish Homily Before A.D. 70.

Before A.D. 70 there is little purely Jewish evidence for the homily that is not based on extrapolation from later *rabbinic literature. The major exception is the homiletic form identified by P. Borgen (51) in *Philo, especially in *Legum Allegoriae* 3.162-68 and *De Mutatione Nominum* 253-63, although wrongly called the poem form (Segner, 67). During this period the *synagogue

(i.e., Jewish community gathering) existed as a less formal institution, sometimes meeting in homes and sometimes in structures (at times an adapted house) devoted to study and *prayer (Oster; cf. Levine, 426-48, who argues that it developed from communal gatherings in the city gate as the architecture of city gates changed). The degree to which such meetings were religious or liturgical versus the transaction of communal business is debated. Some scholars argue for a developed service complete with something like the triennial lectionary cycle (Heinemann), but such a portrait depends upon accepting the historical reliability of a number of later talmudic and midrashic references to the first century, which may in fact have read later patterns back into earlier material.

There is firmer evidence that one of the synagogue activities, wherever the gathering met, was *Torah reading and exposition (Levine, 431-32, 439-41). Thus one can argue with reasonable certainty that Jews in both Palestine and the *Diaspora did meet and that in those meetings Scripture was read and discussed. This discussion or exposition is the earliest form of the Jewish homily; unfortunately, no undisputed examples survive from the pre-A.D. 70 period. While some scholars have pointed to *4 Maccabees as an example, its lack of a scriptural text makes this unlikely; Philo's *Quaestiones in Genesim* has a better claim in that each short exposition is built around a Torah text, although the brevity makes it difficult to judge whether they demonstrate a specific homiletic form (Schürer, 3:539, 818, 830; Borgen, 28-58).

At a later date, in the more formal liturgical setting of Jewish worship, questions could be put to the speaker and congregational reaction is recorded. Thus it is likely that the early Jewish homily was at least somewhat interactive. However, the practice of commenting on a text of Scripture and developing this exposition through the citation of other Scriptures according to accepted rules of exegesis (e.g., the seven rules of Hillel, which probably reflect practices of the first century and earlier) characterized the homiletic form from an early date (Philo *Spec. Leg.* 2.15 §62; *Omn. Prob. Lib.* 12 §§81-82; Schürer, 2:424-27, although the citation of Ps 74:8 is questionable, 448).

There are also a number of early Christian references to the exposition of Scripture in Jewish synagogues during the pre-70 period (Mk

1:21; 6:2; Lk 4:16-22, 31; 6:6; 13:10; Acts 13:14-16, 27, 42, 44; 15:21; 16:13; 17:2; 18:4). While this Christian evidence has been disputed as a reading of post-70 developments into the earlier period (Kee), none of these passages claim more than that in both Palestine and Diaspora settings Jews gathered on the *sabbath to read and expound the Scriptures. In this these passages are consonant with both *archaeological data and the meager literary data that we possess (Oster). However, all of these references, with the exception of Luke 4:16-22, either give no evidence as to the form of the Jewish homily or else present Christian missionary preaching in a synagogue context.

2. The Christian Homily in the First Century.

Early Christian evidence for the homily is of two types. First, there are reference to Christian preaching. Most of this is missionary preaching taking place within the synagogue setting (e.g., Acts 13:15-41) and thus is Luke's example of preaching within the synagogue service. The most important of these references is in Acts 13:15, in which the invitation requests a "word of exhortation" (*logos paraklēseōs*) and connects it to the reading of "the law and the prophets," which is the relationship to Scripture that many homilies had in later synagogue worship. This suggests that later Jewish homiletic forms may have found their roots in the pre-70 synagogue.

Second, there are Christian sermons, both those embedded in Acts (although the degree to which these reflect pre-70 Christian preaching is debated) and those observed in other works, for example, John 6 (Borgen), James 2 (Wessel, 78-91; Davids, 28, 105-34) and Hebrews as a whole (see Attridge; Lane; Wills). Hebrews designates itself as a "word of exhortation" (*lou logou tēs paraklēseōs*) which, as comparison with Acts 13:15 (cf. Acts 13:16-41) indicates, was one way to refer to a homily.

Examination of this Christian material gives us our best evidence for Jewish and Christian homiletic forms. J. W. Bowker, for example, sees the *yelammedenu* form in Acts 13, while P. H. Davids points out that James 2:1-13 and James 2:14-27 each contain a similar structure of opening statement, short narrative, theological argument, two OT citations (one of which at least is from the Pentateuch) and final summary, which is similar to later Jewish homiletic material. In particular this structure is similar to the *ye-*

lammedenu form minus the formal introduction, which starts with a question and moves through a series of texts to the Torah reading of the day (*seder*; see 3 below).

However, while there are similarities to the later Jewish homily, it is clear that these passages are also dependent upon Greco-Roman rhetorical forms. The homily in Acts 13 can be analyzed in this way (Black); the passages in James have often been described as diatribes, although the *diatribe was not a formally recognized rhetorical form; and while the exact type of rhetoric (deliberative or epideictic) in Hebrews has been debated, modern commentators are quick to point out how closely the work conforms to rhetorical structures (e.g., deSilva). This observation raises the probability that the Jewish homily itself developed under the influence of Greek rhetoric, especially in the Diaspora synagogue, but also in Palestine, where *Hellenistic influence was far more pervasive than was once thought. The content (for example, the use of Scripture and the principles of exegesis) would be distinctively Jewish, but the rhetorical form likely came from the surrounding culture. This is H. W. Attridge's explanation for our inability to decisively identify the form of rhetoric in Hebrews.

The picture that emerges, then, is that of the synagogue as originally a gathering and then a gathering place of the local Jewish community for numerous purposes, but chief among them was instruction in Scripture (Levine). As leaders began to give discourses on Scripture, they utilized both their Jewish tradition and the forms of discourse that were in the air, namely, Greek rhetoric. The resultant homiletic form was adopted by the church, which at first was a synagogue that believed Jesus was the Messiah. It is not that the leaders of either the first-century synagogues or the early church were highly trained in rhetoric, although some of them were, but that this rhetoric shaped the speeches that they heard and whatever schooling they had, resulting in their absorbing some of the principles and methods, formally or informally.

3. The Jewish Homily After A.D. 70.

There is abundant later Jewish evidence for the use of the homily, especially after A.D. 200 (Wessel, 79-89, although there is far more data now than when he wrote). The proem (*petihta*) begins with a text from the hagiographa that is

then linked by haggadic interpretation with the first verse of the *seder* and thus gives a specific example for the general idea of that verse (cf. Bowker, 100, for more detail). The *yelammedenu* (which begins with halakic questions rather than a specific text, although it often moves toward a specific text through intermediate citations, Stegner, 54-55) forms are clearly in evidence, as well as a form beginning with a benediction and a simple expositional form (a verse of the Torah reading [*seder*] followed by a verse from elsewhere in the Scripture, which is used to interpret the first verse). Generally the materials we have are not complete sermons, especially since the proem form appears to have functioned as either the peroration to the sermon (its function in some of the homiletical *midrashim*) or more likely originally an introduction to the Torah reading. Instead we have outlines or parts of sermons later edited into larger units by the editors of the homiletic *midrashim*. Complete sermons, such as the one found in *b. Sabbat* 30 a-b, are rare (Heinemann).

All of these forms assume congregational interaction. The *yelammedenu* form begins with the term (*yelammedenu* = "Let [our rabbi] teach us") plus a halakic question, which appears at times to have been a question from the congregation. As the sermon progressed it was responded to, positively or negatively. This fits with a major original function of the synagogue as a gathering for communal study.

The proem was used extensively between 200 and 500 and thus is reflected in the NT only to the extent that it illustrates some of the same traditional exegetical principles found in both bodies of literature (see *Biblical Interpretation, Jewish*). The *yelammedenu* form is found mostly in *Tanhuma* and thus is very late (post-sixth century) in its present form. However, its basic structure has been argued to exist in the NT (Bowker) and other first-century Jewish literature (Wills), perhaps because the developed form is built on earlier, simpler expositional forms known at least by the time the NT books were composed.

4. The Christian Homily After the First Century.

The systematic study of the Christian homily begins with some of the *apostolic fathers and develops from that point. While much of the focus of this study has been on the fourth century and later (e.g., Chrysostom), Melito of Sardis (see

DLNTD, Melito of Sardis) and other second-century writers are significant in the development. What is clear in examining these writers is that Greek rhetoric came to play an increasingly explicit role in the formation of the Christian homily. While this would lead to conflict within the church by the end of the second century, it was also a mark that the church fit into its cultural setting (Overman).

In this case also the homily meant not simply communication of information but also interaction with the congregation, who expressed their approval or disapproval of the preacher verbally or via facial expressions. Homiletic development took place more in urban than in rural settings, and a variety of rhetorical types suited to various church occasions were used. Given that the homily was an adaptation of Greek forms, it is not surprising to discover that the forms of judicial, deliberative and epideictic rhetoric were often mixed (Allen and Mayer).

5. Conclusions.

It is likely that the origins of the homily can be traced to the synagogues of the Second Temple period, when culturally available Greek rhetorical forms were adapted to the purpose of scriptural exposition for the Jewish community. This cultural form was taken over by the church, which continued in contact with the synagogue for more than two centuries and thus may have had some continuing influence. The oldest homiletic literature we possess is that embedded in Philo and the NT, but its similarity to later Jewish homiletic material indicates that some form of the Jewish homily existed before A.D. 70. Yet the Christian homily soon diverged under the direct influence of the Greek rhetorical tradition (e.g., dropping some of the characteristics of Jewish exegetical practice), reaching its high point in the fourth and fifth centuries. However, it would be anachronistic to retroject this developed homily into the formative period of the first century.

HONOR AND SHAME

Honor refers to the public acknowledgment of a person's worth, granted on the basis of how fully that individual embodies qualities and behaviors valued by the group. First-century Mediterranean people were oriented from early childhood to seek honor and avoid disgrace, meaning that they would be sensitive to public recognition or reproach. Where different cultures with different values existed side by side, it became extremely important to insulate one's own group members against the desire for honor or avoidance of dishonor in the eyes of outsiders, since only by so doing could one remain wholly committed to the distinctive culture and values of the group. This struggle is particularly evident in the NT, as church leaders seek to affirm the honor of Christians on the basis of their adherence to Jesus while insulating them from the disapproval they face from non-Christian Jews and Gentiles alike.

1. Honor and Group Values
2. Honor Discourse Among Competing Cultures
3. Honor Discourse in the Early Church

1. Honor and Group Values.

A person born into the first-century Mediterranean world, whether Gentile or Jewish, was trained from childhood to seek honor and to avoid disgrace. Honor is essentially the affirmation of one's worth by one's peers and society, awarded on the basis of the individual's ability to embody the virtues and attributes that his or her society values. Certain of these attributes are ascribed and are frequently beyond the individual's control (e.g., birth into a powerful or wealthy family); other attributes or virtues, such as piety, courage and reliability, are accessible to all, and individuals will strive to achieve honor by pursuing them (Malina and Neyrey 1991b). The definitions of which behaviors are honorable and which disgraceful vary among cultures and over time, but honor remains an abiding concern. In most cultures, male honor and fe-

male honor are defined differently, with shame (in the sense of modesty and chastity) being presented as a primary female virtue (cf. Sir 26:10-16; 42:9-12; 4 Macc 18:6-8; Thucydides *Hist.* 2.45.2; Moxnes 1999).

Honor and dishonor represent the primary means of social control in the ancient Mediterranean world (Aristotle *Rhet.* 2.6.26: "there are many things which [people] either do or do not do owing to the feeling of shame which [their neighbors] inspire"). A society upholds its values by rewarding with greater degrees of honor those who embody those values in greater degrees. Dishonor represents a group's disapproval of a member based on his or her lack of conformity with those values deemed essential for the group's continued existence. Since people are reared in a world where honor is of great importance to a person's sense of worth, the social group is in a strong position to motivate conformity among its individual members. An individual has self-respect on the basis of his or her perception of how fully he or she has embodied the culture's ideals (Williams); that individual has honor on the basis of the society's recognition of that person's conformity with essential values (Pitt-Rivers).

The threat of dishonor supports a society's prohibitions of socially disruptive behavior. For example, *adultery—the violation of the sanctity and peace of a bond that is foundational to society—often carries the threat of disgrace (cf. Prov 6:32-33). Agreement and unity, essential values for the orderly life of a city, are lauded as honorable, while dissensions and strife bring the threat of disgrace for the city (cf. Dio Chrysostom *Or.* 48.5-6; Phil 1:27—2:4). Similarly, courage in battle, necessary for a city's survival, wins honor and lasting remembrance (cf. Thucydides *Hist.* 2.95-42). In a society that has as its basic building block the patron-client relationship (Seneca *Ben.* 1.4.2; see Patronage), the demonstration of gratitude to one's patron is supported by the threat of irrevocable dishonor and therefore exclusion from future patronage (Dio Chrysostom *Or.* 31; Heb 6:4-8; 10:26-31).

Honor becomes the umbrella that extends over the set of behaviors, commitments and attitudes that preserve a given culture and society; individuals reared with a desire for honor will seek the good of the larger group, willingly embodying the group's values, as the path to self-fulfillment. It is the first principle in discussions

of ethics, for "the honorable is cherished for no other reason than because it is honorable" (Seneca *Ben.* 4.16.2). Ancient collections of advice, from Pseudo-Isocrates' *Ad Demonicam* to the more familiar Proverbs, label actions either with the positive sanction "noble" or with the negative sanction "disgraceful." By such means, the author sets before the reader a model of existence that acts always in the best interest of the public trust, honors the established authorities on which the state rests (gods, parents, laws) and restrains the expenditure of resources on that which brings pleasure only to the self and not benefit to others as well. Those who follow such a model are promised society's approval and affirmation, that is, honor.

Greco-Roman manuals on *rhetoric attest to the importance of honor and to the way an orator would play on the audience's desire for honor in order to achieve persuasion (deSilva 1995a; 1995b; 1999). An audience could be won to the orator's recommended course of action (deliberative rhetoric) if the orator demonstrated that it would lead to honor or to greater honor than an alternative course being promoted by a rival (Aristotle *Rhet.* 1.9.35-36; *Eth. Nic.* 2.3.7; Quintilian *Inst. Orat.* 3.7.28; 3.8.1; Pseudo-Cicero *Rhet. Ad Herren* 3.2.3). Conversely, showing how a certain course of action would result in dishonor created a strong deterrent. Another rhetorical genre, epideictic rhetoric, was associated with the praise and censure of particular individuals or groups. Orators reinforced society's values by holding up as praiseworthy those people who had exemplified a particular value. Hearing others praised—that is, honored—led the hearers to recommit themselves to the virtue or behavior that led to praise. Similarly, hearing some person censured or reproached would lead hearers to beware of falling into those behaviors that led to reproach and loss of honor. The two genres often work together, as orators, including the NT authors, use examples to illustrate the benefits of following or dangers of departing from the course they promote.

2. Honor Discourse Among Competing Cultures.

The first-century Mediterranean was far from monolithic: within a dominant Romanized Hellenistic culture, one found the ethnic subculture of Judaism, *philosophical schools and the

Christian minority culture, among others. All of these groups defined what was honorable or dishonorable in different ways. Even if groups agreed that piety was an essential virtue and component of honor, different groups defined piety quite differently (respect for the traditional gods and the *emperor; worship of the God of Israel through observance of *Torah; worship of the God of Jews and Gentiles through obedience to Jesus). Even within groups, there would be differences (e.g., Paul's conflicts with Christian Judaizers).

In such a world, it became essential to define carefully who constituted one's group of significant others—those people whose approval or disapproval mattered—and to insulate group members from concern about the honor or dishonor in which they were held by outsiders (Seneca *Const.* 13.2, 5; Epictetus *Ench.* 24.1; Moxnes 1993). If one seeks status in the eyes of the larger society, one will seek to maintain the values and fulfill the expectations of the dominant (pagan) culture. If one has been brought into a minority culture (e.g., a philosophical school or a voluntary association like the early Christian community) or has been born into an ethnic subculture (such as Judaism), then one's adherence to the group's values and ideals will remain strong only if one redefines the constituency of one's circle of significant others. The court of reputation must be limited to group members, who will support the group values in their grants of honor and censure (Plato *Cri.* 46C-47D). Including some suprasocial entity in this group (e.g., God, reason or nature) offsets the minority (and therefore deviant) status of the group's opinion. The opinion of one's fellow group members is thus fortified by and anchored in a higher court of reputation, whose judgments are of greater importance and more lasting consequence than the opinion of the disapproving majority or the dominant culture (Plato *Gorg.* 526D-527A; Epictetus *Diss.* 1.30.1; Sir 2:15-17; 23:18-19; Wis 2:12-3:5; 4:16-5:8; 4 Macc 13:3, 17; 17:5). Both Greco-Roman philosophers and Jewish authors routinely point to the opinion of God as a support for the minority culture's values. Both admonish group members to remain committed to the group's values, for that is what God looks for and honors in a person.

Where the values and commitments of a minority culture differ from those of a dominant or other alternative culture, members of that mi-

nority culture must be moved to disregard the opinion of nonmembers about their behavior (Seneca *Const.* 11.2-12.1; Epictetus *Diss.* 1.29.50-54). All groups will seek to use honor and disgrace to enforce the values of their particular culture, so each group must insulate its members from the pull of the opinion of nonmembers. Those who do not hold to the values and the construals of reality embodied in the group are excluded from the court of reputation as shameless or errant—approval or disapproval in their eyes must count for nothing, as it rests on error, and the representative of the minority culture can look forward to the vindication of his or her honor when the extent of that error is revealed (e.g., at a last judgment; 4 Macc 11:4-6; 12:11-13). When, for example, the dominant Greco-Roman culture holds a group like the Jews in contempt, the effect is a constant pressure upon individual Jews to give up their Jewishness and join in those behaviors that will then be greeted as honorable by the members of the dominant culture. Jewish authors will urge their fellow Jews to set their hearts on the opinion of the congregation and the opinion of God and so be able to resist the pull of the Gentile world.

Members of this clearly defined court of reputation must have frequent and meaningful interaction within the group. They must encourage one another to pursue group values and ideals and honor one another on that basis. Those who begin to show signs of slackening in their commitment to the values of the group out of a growing regard for the opinion of outsiders must be made to feel ashamed by the members of the group and thus pulled back from assimilation. Such people will need reminders that the realm outside the group is also outside the sphere of God's approval (Moxnes 1988). Encouragement within the group must outweigh the discouragement that comes to the individual from outside the group. Relationships within the group—the sense of connectedness and belonging so essential to the social being—must offset the sense of disconnectedness and alienation from the society that, in the case of converts, formerly provided one's primary reference group. The negative opinion of outsiders may even be transformed into a badge of honor within the group, often through the use of *athletic metaphors: insult and abuse become a competition in which the minority culture's members must endure unto victory (4 Macc 16:16; 17:11-16;

Heb 10:32). Group members are still encouraged to fulfill their desire for honor, but in terms of how the group defines honorable behavior. Thus Jews, for example, are encouraged to seek honor through obedience to Torah and enabled to resist the pressure exerted upon them by the dominant culture's contempt (Sir 10:19-24; 25:10-11; 41:6-8; deSilva 1996a).

3. Honor Discourse in the Early Church.

Honor is depicted in the NT as the result of a life of loyalty to Jesus and obedience to his teachings and example (Mt 10:32-33; Jn 12:26; 2 Tim 4:7-8). Commitment and service to fellow believers (Mt 20:25-28), witnessing to the favor of God in Christ (Rev 20:4-6) and embodying the mind of Christ, which seeks the interest of others (Phil 2:5-11), are promoted as the path to honor. The approval of God and God's Messiah, typically announced at a last judgment but also affirmed in the present by early Christian authors, alone matters for the establishment of one's honor (Mt 25:14-46; 2 Cor 5:9-10). Believers are urged to encourage and honor one another as each embodies the attributes of Christian discipleship (Phil 2:29-30; 1 Thess 5:12-13; Heb 10:24-25) and are reminded frequently of the honor they have inherited as "children of God" (Jn 1:12-13; Rom 8:14-17; Gal 3:26; Heb 2:10; 1 Jn 3:1-2) and "partners of Christ" (Heb 3:6, 14). They were called as well to honor their divine Patron and their Mediator in their lives (1 Cor 6:20) and to take care not to show contempt for the Giver by undervaluing the gift as this would result in their own dishonor before God's court (Heb 10:26-31).

The Greco-Roman society frequently reacts against these communities, often informally by insulting, reproaching, abusing and harassing the Christians (Heb 10:32-34; 1 Pet 2:11-12; 4:1-4). These represent society's attempts to draw the believers back to a life in line with traditional Greco-Roman virtues (e.g., piety, expressions of civic loyalty through cult). Similar pressures could be brought to bear on Christian Jews by the *synagogue (Jn 12:42-43; Acts 5:40-41; Rev 2:9). Christian authors, however, sought to insulate the believers from these attempts at shaming by presenting persecution as expected (Mt 10:24-25; 24:9-10; Jn 16:2-4; 1 Thess 3:3-4), as a contest in which an honorable victory may be won (Heb 12:1-4; Rev 2:26-28; 12:10-11) or as an imitation of the passion of Jesus that held the

assurance of the same vindication Jesus enjoyed (Mt 5:11-12; Rom 8:17; Phil 1:29; 2:5-11; 3:10-11; 2 Tim 2:11-12; Heb 12:1-2; 1 Pet 3:18-22; 4:13-14). Close bonds between believers (e.g., as "brothers and sisters") were essential, for relationships within the group had to be of greater importance for the individual than relationships outside the group. Exhortations directed at augmenting love, encouragement and support within the group (1 Thess 4:9-10; 5:11, 14; Heb 3:13; 10:24-25; 13:1-3) aim at making the Christian court of reputation stronger than the opinion of the outside world, so that individual believers might remain committed to the way of the cross.

HOROGRAPHY, ANCIENT. See HISTORIANS, GRECO-ROMAN.

HOROSCOPE TEXT (4Q186). See DEAD SEA SCROLLS: GENERAL INTRODUCTION.

HOSPITALITY

Hospitality is a universal phenomenon, practiced to varying degrees by all the world's cultures (Pitt-Rivers). Of the various types of hospitality that existed in the ancient Mediterranean world, five receive emphasis in the following survey. The first is public hospitality, which was practiced by states as part of their foreign policy. The second is temple hospitality, which was designed to facilitate pilgrimages to holy places. The third is commercial hospitality, which enabled travelers to obtain food and lodging for a fee. The fourth is private hospitality, which was widely esteemed and encouraged throughout the ancient world as a moral virtue. The fifth is theoxenic hospitality, in which humans were said to provide hospitality to gods, heroes and various semi-divine guests. All five types are attested in Greek, Roman and Jewish sources.

1. Greek and Roman Hospitality

2. Jewish Hospitality

1. Greek and Roman Hospitality.

The basic Greek word for hospitality is *xenia*, which is cognate with *xenos* (*xeinos*), the Greek word for "stranger" (Baslez; Stählin). This suggests that *xenia* originally designated hospitality to strangers, that is, guests not previously known by the host. One of the chief conventions of the Homeric hospitality scene is the revelation of the anonymous guest's identity, a disclosure that

properly occurs only after the consumption of the meal and in response to the host's inquiries about the guest's name, homeland and parentage (Homer *Odys.* 1.123-24; 3.69-74; 4.60-62; 7.226-30; 14.45-47; 16.54-59). Some instances of hospitality are thus theoxenies, with the unknown guest later revealed as a god in disguise. In such cases the visit constitutes a divine test of human character, with the virtuous receiving a reward for their hospitality and the unworthy meriting punishment because of their inhospitality (Homer *Odys.* 17.484-87; Plato *Soph.* 216A-B; Ovid *Met.* 8.611-724; Silius Italicus *Pun.* 7.162-211; Acts 13:2).

Another Greek term for hospitality is *philoxenia*, which indicates that the host is friendly to the guest, treating the stranger as though he were a friend (*philos*). In Homeric times the host's friendly treatment of the guest created a formal bond of friendship between them (Fitzgerald). The establishment of this pact of guest friendship was cemented and symbolized by a gift that the host bestowed on the departing guest (Homer *Odys.* 1.311-13). The acceptance of the gift obligated the guest to remember the host (Homer *Odys.* 4.589-92; 8.430-32; 15.51-55) and to reciprocate his hospitality and generosity at a later time (Homer *Odys.* 1.316-18; 24.284-86). The resulting alliance between host and guest was transgenerational, so that even descendants of the original guest and host were bound by the obligations of guest friendship (Homer *Il.* 6.119-236). Hereditary ties of hospitality (*hospitium*) likewise existed between prominent Romans and non-Romans (Caesar *B. Civ.* 2.25; Cicero *Rosc. Am.* 6.15; Livy *Hist.* 1.1.1; 42.1.10), and both Greek and Roman travelers frequently carried tokens of hospitality (*symbola*, *tesserae hospitales*) that served to identify them to former hosts and their descendants as guest friends entitled to hospitality (Scholiast on Euripides *Med.* 613; Plautus *Poen.* 958, 1045-55; Gauthier). Only a formal renunciation of the relationship, sometimes accompanied by the breaking of the token (Plautus *Cist.* 503), terminated the obligations of guest friendship (Cicero *Verr.* 2.2.36 §§88-89; Livy *Hist.* 25.18.4-5).

From the beginning, therefore, the practice of hospitality was linked to *friendship, serving originally to establish a reciprocal relationship between individuals previously unknown to one another and later extended to nurture both affective and nonaffective associations between

known parties. Such friendly treatment of strangers stood in vivid contrast to *xenophobia*, a fear of strangers that often resulted in them being neglected or abused (Bolchazy 1978). The wayfarer in a foreign land was in a highly vulnerable situation. Consequently, to extend hospitality and friendship to a stranger was a magnanimous act by the host; conversely, for a stranger to abuse or take advantage of the host was an egregious act that utterly violated the pact of guest friendship. The most notorious instance of such a violation of a host's hospitality was Paris's seduction of Helen, which was so outrageous that it resulted in the Trojan War.

Hospitality played a major role in aristocratic circles in ancient Greece, so that it is not surprising that it appears as an important theme in the Homeric corpus; the latter contains eighteen major scenes in which the rituals of hospitality are prominent. S. Reece has identified thirty-eight conventional elements that occur in the Homeric hospitality scenes. Among the more important conventions are the guest's arrival and waiting at the threshold, the reception by the host, seating, feasting, toasting, revelation of the guest's identity, exchange of information, entertainment, the guest's blessing of the host and participation in a libation or sacrifice, bed and bath, the giving of gifts to the guest, departure meal and libation, farewell blessing and escort to the guest's next destination. Many of these ritualized actions, such as the meal and farewell blessing, remained characteristic features of hospitality in the following centuries.

As an aristocratic institution, guest friendship (also known as ritualized friendship) created strong alliances between families living in different lands (Herman). In addition, it contributed to the rise of proxeny (*proxenia*), an official pact of friendship and hospitality with certain individuals as part of the foreign policy of a number of Greek states (Walbank; Wallace). Whereas modern states typically appoint their own citizens to reside in foreign lands and represent their national and commercial interests, many ancient Greek states formed alliances with citizens from other states for this same purpose. The local individual with whom this pact was formed was known as a *proxenos* ("friend of a foreign state"), and he promoted the interests of the foreign power within his own country and provided hospitality to envoys and distinguished visitors from the state that he represented

(Herodotus *Hist.* 8.136, 143; Plato *Leg.* 1.642B-C; 12.953B-C; Xenophon *Hell.* 5.4.22; *Symp.* 8.40; Athenaeus *Deipn.* 13.603F). In some cases, Greek states also appointed a *proxenos* in their own lands to provide public hospitality to foreign residents and guests (Herodotus *Hist.* 6.57). A similar kind of public hospitality (*hospitium publicum*) existed in the Roman world (Cicero *Balb.* 18.41; *Div. in Caecil.* 20.66-67; Livy *Hist.* 5.28.4-5; Diochorus Siculus *Bib. Hist.* 14.93.4-5), which in various ways emphasized state hospitality (Livy *Hist.* 1.45.2; 5.50.3; 32.27.4; 37.54.5; 42.1.7-12).

There were also *proxenoi* at important religious sites in Greece, especially Delphi (Euripides *Ion* 551, 1039; *Androm.* 1103; Gauthier, 46-52), and religious pilgrimages to various holy places prompted the establishment of inns in or near temples where pilgrims could find lodging (Thucydides *Hist.* 3.68.3; Plato *Leg.* 12.953A).

Most travel, however, was not religiously motivated, and the number of travelers increased greatly as a result of Rome's rise to power. Rome's establishment of an elaborate network of roads and sea routes made travel relatively easy, and an extensive system of hostels and inns offering commercial hospitality developed in response to this enhanced physical mobility. Although the accommodations offered by some of these commercial establishments were pleasant (Epictetus *Diss.* 2.23.36), most were far from ideal (Livy *Hist.* 45.22.2; *Acts Jn.* 60) and some were no more than brothels (Strabo *Geog.* 12.17; 17.1.17; see also Theophrastus *Char.* 6.5; Plutarch *Demetr.* 26.3; Pollux *Onom.* 9.34). In addition, they posed a number of dangers, including robbery and murder (Cicero *De Inv.* 2.4.14-15; *De Div.* 1.27.57).

Many, especially the wealthy, thus preferred to lodge with friends, who often entertained them in grand style (Xenophon *Oec.* 2.5; Vitruvius *De Arch.* 6.7.4); as a result, private hospitality was widely practiced despite the proliferation of inns in the Greco-Roman period. It was common for people to write letters of recommendation on behalf of friends who were traveling to places where other friends lived; these letters commended the travelers and requested hospitality and other favors for them (Kim, 76-77; see also Plato *Cri.* 45C). Yet the practice of extending hospitality to complete strangers also continued (Aelian *V.H.* 4.9), strongly encouraged by the conviction that hospitality was not only a sign of a generous (Cicero *De Offic.* 2.18.64) and philan-

thropic nature (Acts 28:7) but also a religious act by which one paid homage to the divine (esp. Zeus Xenios = Jupiter Hospitalis) as the protector and avenger of the stranger (Homer *Odys.* 9.270-71; 14.57-58, 283-84, 389; Plato *Leg.* 5.729E-730A; 12.953E; Apollonius of Rhodes *Arg.* 2.1131-33; Cicero *Deiot.* 6.18; *Q. Fr.* 2.12; Aelian *VH.* 4.1; 2 Macc 6:2; see also Pausanias *Descr.* 7.27.4; Cicero *Verr.* 2.4.22 § 48; Ovid *Met.* 5.45; Livy *Hist.* 39.51.12; Tacitus *Ann.* 15.52). Only in exceptional cases was a violation of the code of hospitality defended and celebrated (Livy *Hist.* 1.9.1-16).

2. Jewish Hospitality.

The ancient Israelite practice of state hospitality (1 Kings 10:1-13; 2 Kings 20:12-13) was noted by *Josephus (Josephus *Ant.* 7.1.4 §30; 8.15.3 §398; 9.3.1 §§30-31; 9.4.3 §59; 10.9.4 §§168-69; see also 4.6.2 §105; Philo *Vit. Mos.* 1.275), who likewise emphasized the importance of this practice in subsequent Jewish history (Josephus *Ant.* 12.4.2-3 §§165-74), especially during the Roman period when Antipater (Josephus *J.W.* 1.8.9 §181; 1.9.3 §187; *Ant.* 14.5.1 §81; 14.7.3 §122) and his descendants used public hospitality and guest friendship to form strong political alliances with prominent Romans, including Marc Antony (Josephus *J.W.* 1.12.5 §244; 1.14.4 §282; *Ant.* 14.13.1 §326; 14.14.4 §381), Augustus (Josephus *J.W.* 1.14.4 §283; *Ant.* 14.14.4 §383; 15.6.7 §§199-200; 16.4.5 §128), Marcus Agrippa (Josephus *Ant.* 16.2.1 §12) and Vespasian (Josephus *J.W.* 3.9.7 §§443-45). Although this practice created a number of problems for the *Herodians (Josephus *J.W.* 1.13.3 §254; 1.26.1-2 §§513-25; *Ant.* 14.13.4 §341), Herod's commitment to it is evident from the fact that his palace was built with bedchambers for one hundred guests (Josephus *J.W.* 5.4.4 §177; see also *Ant.* 15.6.7 §199). Like the Romans, the Jews used letters to request hospitality for various people (Josephus *J.W.* 2.21.6 §615), including Roman generals and their armies (Josephus *Ant.* 14.8.1 §131).

Following the exile, most Jews lived outside of the Holy Land, and many of these made pilgrimages to *Jerusalem. At least one of the *synagogues in Jerusalem was built in such a way as to address this situation; in an inscription (*CIJ* 1404), Theodotus claims that he built "the guest-house and the rooms and the water supplies as an inn for those who have need when they come from abroad" (Barrett, 54).

Roman roads were built in Palestine, and inns offering hospitality for a fee appeared soon thereafter (Luke 10:34-35; see also 2:7). Yet the emphasis in Judaism remained on the exercise of private hospitality, especially to aliens and strangers, as an obligation that was enjoined by the *Torah (Lev 19:33-34) and underscored by the depiction of Yahweh as the protector of strangers (Deut 10:17-19; Philo *Abr.* 96; *Vit. Mos.* 1.36). Hospitality was viewed as a byproduct of personal piety toward God (Philo *Abr.* 114), and Josephus's depiction of the pious *Essenes accordingly gave emphasis to their hospitality (Josephus *J.W.* 2.8.4-5 §§125, 132).

To practice hospitality, therefore, was worthy of praise, even self-praise (Job 31:32), whereas the failure to do so evoked condemnation (Job 22:7), especially in circles where hospitality was regarded as superior to fasting (Is 58:6-7). For models of hospitality and inhospitality, Jews of the Greco-Roman period drew heavily on the OT. Particularly important was the theoxeny of Genesis 18:1-8, where Abraham is praised as an extraordinarily attentive and gracious host (Philo *Abr.* 107-67; Josephus *Ant.* 1.11.2 §196). Lot's theoxenic hospitality (Gen 19:1-11) was also noted (Josephus *Ant.* 1.11.3 §200), including his placement of the security of his guests above that of his own daughters (cf. Aulus Gellius *Noc. Att.* 5.13.2, 5). Others singled out for their hospitality included Melchizedek (Gen 14:17-24; Josephus *Ant.* 1.10.2 §181), Rebekah (Gen 24:16-25; Josephus *Ant.* 1.16.2 §§246, 250-51), the prostitute Rahab (Josh 2), whose house, in view of her profession, was called an inn (Josephus *Ant.* 5.1.2 §§7-8, 10, 13; see also 3.12.2 §276), Manoah (Judg 13; Josephus *Ant.* 5.8.3 §§282-84), Boaz (Josephus *Ant.* 5.9.2 §323) and the Shunammite woman (2 Kings 4:8-17).

Models of OT inhospitality included the Sodomites (Gen 19:1-11; Wis 19:14-15; Philo *Conf. Ling.* 27), the Egyptians (Gen 12:10-20; Ex 1-2; Wis 19:13-16; Philo *Abr.* 94, 107; *Vit. Mos.* 1.34-36; *Spec. Leg.* 2.146; Josephus *Ant.* 1.8.1 §164), Abimelech (Gen 20; Josephus *Ant.* 1.12.1 §208), Jethro's daughters (Ex 2:20; Philo *Vit. Mos.* 1.58) and the Gibeonites (Judg 19:22-30; Josephus *Ant.* 5.2.8 §§136-49). Celebrations of a breach of hospitality were extremely rare (Judg 4:17-22; 5:24-31). *

In practice the guest-host relationship was not without its problems. *Sirach (Sir 29:21-28), for example, complains of rude treatment of

guests by hosts, and Joseph's brothers were recalled as those who had been falsely accused of mistreating their host (Gen 44:4; Philo *Jos.* 163-257; Josephus *Ant.* 2.6.7-8 §§128, 136). Despite problems and abuses, hospitality remained a highly esteemed practice and was enthusiastically commended in later *rabbinic literature (e.g., *m. 'Abot* 1:5).

I

IDOLATRY, JEWISH CONCEPTION OF

The religious use of icons, or idols, as they are often called in biblical literature, was offensive to Jews, for any image of God or a divine being violated the second of the Ten Commandments (cf. Ex 20:4-5), and by implication violated the first as well (cf. Ex 20:3). In the course of Israel's history, controversy and polemic developed in response to the idolatry that was part of the ancient Near East.

1. Key Passages in Jewish Literature
2. Jewish Anti-Idolatry in the Setting of the Greco-Roman World

1. Key Passages in Jewish Literature.

The Hebrew Bible frequently dwells on an anti-idolatry theme, though the most developed and later influential form of this polemic is to be found in prophetic texts such as Isaiah 44—46 and Jeremiah 10. Numerous other passages are worthy of mention, including, but not limited to, the following: Epistle of Jeremiah; Wisdom 11:15-16; 12:24, 27; 13:10-14; 14:8; 15:18—16:1; *Epistle of Aristeas* 138; *1 Enoch* 99:6-10; *Sibylline Oracles* 3:6-95; *2 Baruch* 54:17-22; and Philo *De Decalogo* 76-80 and *Bel and the Dragon*. These texts are not all of a kind. Some of them seem to be directly related to OT prophetic anti-idolatry texts such as those mentioned from Isaiah and Jeremiah (e.g., *Ep Jer*; *1 Enoch* 99:6-10 [*Wis* 13:10-14; 14:8-29 also have strong parallels with *Is* 44—46, but there is reason to judge that there are additional elements accrued to this tradition which merit further investigation, as argued below]). The clearest reflection of the biblical castigation of idolatry is that found in the general attitude of later rabbinic literature (e.g., *b. Sabb.* 72b-73a; 82a-b; *b. Ketub.* 45b). Yet many of the other texts we have mentioned above seem to be more fully situated within the setting of the

Greco-Roman world and its concerns than they are within the purview of concerns expressed in the Hebrew Bible/Old Testament.

2. Jewish Anti-Idolatry in the Setting of the Greco-Roman World.

Despite the assumption on the part of most students and scholars of biblical texts that Judaism is simply by nature anti-idolatry, much of this is an impressionistic rendering of the OT's rhetorical program and owes little to a developed understanding of *Judaism in the Greek and Roman periods. A more developed understanding might help to illuminate more clearly some of the reasons for the continuation and development of Jewish anti-idolatry in the Second Temple period. Typically, NT scholars discussing the phenomenon of idol worship in the Greco-Roman world make little distinction between kinds of idol-worship. However, this unfortunate conflation is not indicative of the state-of-play in the Greco-Roman period. The import and export of religious ideas throughout the Mediterranean basin in the wake of *Alexander the Great's conquest of the Persian world brought to the fore not just similarities between the cultures of this area but also differences. One source of conflict in the Roman period revolved around such a difference, namely, the differences between ancient Roman religious sensibility and the equally ancient Egyptian zoolatry (worship of animal gods). For the purposes of this brief article, and because of its important place within the history of religion in the Roman period, we will focus on the Jewish interaction with both Egyptian idolatry and the Roman attitudes toward it as a test case to help develop an understanding of the Jewish attitude toward idolatry in this period.

2.1. Roman Attitudes Toward Egyptian Idolatry. The Roman author Diodorus Siculus's discussion of Egyptian zoomorphic (i.e., animal-shaped)

idolatry provides a striking backdrop for discussion (Diodorus Siculus *Bib. Hist.* 1.86-87). One of the most interesting passages in this discussion is a section discussing the *reasons* for the worship of the individual animals. In this context, Diodorus apparently reflects a typical Roman confusion regarding the *reasons* for worshipping each of the various animals, and records three explanations. The first two are mythical, but the third is quite practical: "The third cause which they adduce in connection with the dispute in question is the service which each of these animals renders for the benefit of community life and of mankind" (Diodorus Siculus *Bib. Hist.* 1.87.1, LCL). He proceeds to explain how the following animals are useful to humankind and hence worthy of honor (Diodorus Siculus *Bib. Hist.* 1.87-88; cf. Witt, 27-35 for the identification of various gods/goddesses and their animal forms).

Clearly this rationalistic, euhemeristic approach is the most acceptable form of explaining Egyptian animal worship for Diodorus. However, "useful" animals are not the only animals worshiped by the Egyptians. In addition, the crocodile and lion, among other less savory characters, were also accorded worship. Diodorus deals with only one of these—the crocodile. He suggests that, as "these beasts eat the flesh of men," the worship of the crocodile is "a subject regarding which most men are entirely at a loss to explain how . . . it ever became the law to honor like the gods creatures of the most revolting habits" (Diodorus Siculus *Bib. Hist.* 1.89.1). He presents two explanations, one mythical (with the primeval king, Menas, being carried on the back of a crocodile to escape an angry pack of dogs, Diodorus Siculus *Bib. Hist.* 1.89.3), and one practical—the Nile, infested with crocodiles, formed a naturally impenetrable frontier for most of Egypt's eastern border (Diodorus Siculus *Bib. Hist.* 1.89.2). The mythical explanation is given by Diodorus to explain certain monuments that have obviously been attached to the legend of the crocodile ferry-ride by Menas; yet it is clear by his "strange though it may seem [this is what they say]" (Diodorus Siculus *Bib. Hist.* 1.89.3) style of language that he is clearly in favor of the first explanation. Regardless of the rationality of Diodorus's first explanation, however, the fact that he tries to unravel this problem "which most men are entirely at a loss to explain" shows that there must exist in both his sources and his contemporaries' minds

some question concerning the worship of these animals.

In contrast to Diodorus's detached, scholarly approach to the explanation of Egyptian idolatry, another author of importance is Plutarch, who, in his *Isis and Osiris* (377D-378A; 379B-D), has an extended discussion of idols, atheism and superstition, and then, in 379D-382D, of animals and idols (esp. 382B-C, regarding the equality of animate and inanimate representation of the gods). Although Plutarch does not try to explain the reasons for the worship of each of the animals as do Diodorus and Philo (see below), opting instead for mythical explanations, his reasoned discussion regarding the nature of idolatry stands in contrast to the kind of vitriol we find in Jewish literature of the period. It also highlights the need that many Jewish authors must have felt to make their point regarding idolatry, and perhaps one of the reasons for overstating their case (cf. the passages listed above in section 1).

2.2 Jewish Attitudes Toward Egyptian Idolatry. Like the Roman literature briefly surveyed here, various Jewish authors treat the idea of idolatry differently. Wisdom 11:15-16 reflects a reasoning similar to Diodorus's concerning the reasons for the worship of various animals: "In return for their foolish and wicked thoughts, which led them astray to worship irrational serpents and worthless animals, you sent upon them a multitude of irrational creatures to punish them, that they might learn that one is punished by the very things by which he sins" (see also Wis 12:24, 27). Philo's discussion in *De Decalogo* 76-80, specifically anti-Egyptian, is also relevant in this regard. Like Diodorus, he is (grudgingly) able to understand the deification of domestic animals, but not of the vicious beasts like the crocodile or lion: "the Egyptians are rightly charged not only on the count to which every country is liable [i.e., idolatry], but also on another peculiar to themselves. For in addition to wooden and other images, they have advanced to divine honors irrational animals, bulls and rams and goats, and invented for each some famous legend of wonder. And with these perhaps there might be some reason, for they are thoroughly domesticated and useful for our livelihood" (Philo *Decal.* 76-77, LCL). Philo goes on to describe the various uses of these animals, then resumes his discussion of the various Egyptian animal divinities: "But actually the Eyp-

tians have gone to a further excess and chosen the fiercest and most savage of wild animals, lions and crocodiles and among reptiles the venomous asp, all of which they dignify with temples, sacred precincts, sacrifices, assemblies, processions and the like" (Philo *Decal.* 78, LCL). He continues his polemic against zoolatry with those animals he can neither understand nor ridicule as vicious, and records the reaction of foreigners to the Egyptian predilection for animal worship:

Many other animals too they have deified, dogs, cats, wolves and among the birds, ibises and hawks; fishes too, either their whole bodies or particular parts. What could be more ridiculous than this? Indeed strangers on their first arrival in Egypt before the vanity of the land has gained a lodgement in their minds are like to die with laughing at it, while anyone who knows the flavor of right instruction, horrified at this veneration of things so much the reverse of venerable, pities those who render it and regards them with good reason as more miserable than the creatures they honor, as men with souls transformed into the nature of those creatures, so that as they pass before him, they seem beasts in human shape. (Philo *Decal.* 79-80, LCL)

The extensive success of Egyptian cults both in Hellenized Egypt itself and throughout the rest of the Greco-Roman world makes this kind of argument on Philo's part unsurprising. That many of the visitors to Alexandria in Philo's time would be Romans goes without saying, and the existence in a Roman author such as Diodorus of similar argumentation (although dispassionate in comparison to Philo) suggests that this kind of argumentation was more widespread than simply these two authors. It seems that neither of them is actually furnishing new arguments, but, rather, each makes use of a generally accepted way of speaking about Egyptian religion.

Why, though, focus on Egyptians and Romans like this? On the surface, a simpler answer to the question, What were Jewish attitudes to idolatry in the Greco-Roman period? would be to simply point out the OT passages relevant to this concern and be done with it. This, however, is not an exclusively sufficient basis for study of Jewish attitudes in the Greco-Roman period. Although it is obvious that the anti-Egyptian levels of discourse in, for instance, Wisdom, are partly

structured on the story of the plagues visited on the Egyptians in Exodus, it should be noticed that this new application of this discourse emerged in a very different historical and cultural situation.

2.3. *Roman Religious Xenophobia and Jewish Attitudes Toward Idolatry.* While space precludes a full examination of the characteristics of this period, the phenomenon of Roman religious xenophobia calls for attention. While Rome enjoyed its status as the center of the known world, it seems relatively clear that the implications of this hublike position were not always well received by the Romans themselves. Rome was full of different people groups and all of their accompanying elements: ethnic dress, cultural practices, religions, food, work habits, languages, etc. We read of Roman suspicion of especially religious practice on multiple occasions, the most obvious for the NT being the expulsion of all Jews from Rome under Claudius (Priscilla and Aquila, who left Italy and came to Corinth [Acts 18:2] were probably part of this expulsion; cf. Cicero *Flac.* 28.66-67; Horace *Sat.* 1.4.142-43; 1.5.100; 1.9.67-72 for Roman anti-Semitism or -Judaism). Roman xenophobia was not limited to the Jews, however. We have many examples of alien cults receiving stringent criticism (e.g., Livy 39.15.3, regarding alien cults in general; and Dionysius of Halicarnassus *Ant. Rom.* 2.19, regarding worship of the Phrygian mother, who was, in an expression of the Roman equivocation on these matters, later highly honored by the Claudian emperors; cf. La Pi-ana, 397-402). But the Egyptian cults seem to have received special attention (cf. Rouillet, 1-12). This was probably due to a variety of factors: some religious and cultural, others economic (especially with regard to the dependence of Rome upon the grain supply from Egypt).

From a religious and cultural perspective, however, Egyptian zoolatry seems to have been particularly repugnant to the Roman mind. When visiting Egypt, Augustus is recorded to have refused to visit the temple of Anubis, since the worship of a dog was completely beneath him (Dio Cassius *Hist.* 51.16). Juvenal, in his *Satires* 15.1-8, 11-13, presents a particularly scathing attack and mockery of the Egyptian predilection for animal worship. In addition, in *Satires* 6.489, 526-41, he specifically connects the worship of Egyptian gods with illicit sexual license (cf. Grant, 35). We also have evidence that there was

official resistance to the importation to Rome of the Egyptian gods as well as popular support for them (cf. Tertullian, *Ad Nat.* 1.10; *Apol.* 16; Valerius Maximus 1.3.4). Still, it seems that the Romans could also display respect for the dedication with which the Egyptians (and non-Egyptian initiates of the Egyptian religions) viewed their zoomorphic gods. In the mid-first century, the remaining members of the first Triumvirate, in need of public support after the death of Caesar, built the people of Rome a temple of Isis and Sarapis (Dio Cassius *Hist.* 47.15).

The dominant political and military power in the Mediterranean world had a tradition of anti-Egyptian sentiment. In this cultural-semantic context we may very well have precedents in the OT that lend themselves to reinterpretation in light of the current cultural situation, but as components in other thematics of fresh origin. It is unlikely that it was the OT/Jewish critique of Egyptian religion that spurred the Romans into their anti-Egyptian polemic. We must not forget that the Jews themselves came under the same Roman prejudicial judgment as did the Egyptians. They were even ridiculed by Juvenal in the same context as the Egyptians (Juvenal *Sat.* 6.542-47, directly after the passage mentioned above with regard to the Egyptians). Moreover, this conflation of Jews and followers of the Egyptian cults is reflected in a series of expulsions which took place in the late republic and early imperial periods. As Tacitus records in *Annals* 2.85, relating the "expulsion of Egyptian and Jewish rites [under Tiberius in A.D. 19; on the dating here, cf. Slingerland, 50-51 n. 42] the senate declared that four thousand adult ex-slaves tainted with those superstitions should be transported to Sardinia. . . . The rest, unless they repudiated their unholy practices by a given date, must leave Italy."

The trend towards intercultural quarrels between the conquered people groups of the *Roman East is likely the motivating factor in this regard. First under the Greeks, then under the Romans, the various groups were forced to vie for respect in the eyes of their overlords (both of which were notoriously "young" culturally, at least in comparison to their Eastern subjects) (cf. [pseudo]Eupolemus frag. 1 [Eusebius *Praep. Ev.* 9.17.8-9]; and Bickerman, 218-36). It follows from this presuppositional perspective that one people group would make use of the overlord's own denigration of another threatening people

group both to obtain favor in the eyes of the overlord and to position themselves above the other group. This is an effective—if sycophantic—strategy. While we would not suggest that this is the only motivation for Jewish attitudes toward idolatry, its consideration is lacking in modern scholarship.

INSCRIPTIONS AND PAPYRI: GRECO-ROMAN

Inscriptions and papyri are two of the most important sources for study of the background of the NT, yet they remain widely neglected and misunderstood by many NT scholars. An understanding of their place within the ancient world, as well as some of the basic principles of their interpretation, is a desideratum for NT scholarship.

1. Inscriptions
2. Papyri
3. Implications for Study of the New Testament

1. Inscriptions.

Inscriptions in many ways served the same purpose as the mass media do for modern culture and society. There are major flaws with this analogy in terms of the process required for dissemination, but inscriptions were widely used as a means of propagating news. They included

edicts by rulers, correspondence between distant potentates and a local population, laws and proscriptions regarding behavior, and general information regarding individuals and groups, including information about their lives and deaths.

1.1. Discovery and Classification. The nineteenth century has been described as the century for inscriptions. This pronouncement by the historian and epigrapher T. Mommsen accurately captures the climate of academic discovery during that century (van Minnen, 5). In conjunction with the building of modern empires and the resulting power and economic influence that such empire building entailed, a number of countries were able to sponsor various archaeological ventures and to support scholars in exploration of the territory around the Mediterranean. During this time major archaeological excavations occurred in *Greece, *Asia Minor and elsewhere in the greater Mediterranean area, with the result that numerous sites were dug, their contents cataloged and the findings published for wider dissemination.

Among the major findings were numerous inscriptions (many inscriptions were already known and housed in museums around the world, but this marked the advent of serious and widespread scholarly interest in them). Inscriptions consisted of various texts that were inscribed on stone or other similar hard surfaces, often with the intention of the stone providing a permanent and nonportable record of what was written. Inscriptions, however, are also written on a number of other surfaces, such as pottery, metal and wood. Although there are inscriptions from a range of people groups, dating back to earliest times, those of greatest interest to NT scholars are those in Greek and Latin and possibly in several local languages of the regions related to NT study such as Asia Minor and Palestine. Because of their prominence, travelers have long been interested in inscriptions, with the first collections of Greek and Latin inscriptions made in the ninth or tenth centuries A.D. During the nineteenth century, as well as into the twentieth century, numerous inscriptions were found and/or recorded and then disseminated in a wide range of publications, many of them established during the nineteenth century. One of the most important categories of inscriptions is grave inscriptions, of which thousands have been discovered in the greater

Mediterranean area. These could range from a simple stone marking a place of burial to an elaborate and highly decorated family mausoleum (see van der Horst for Jewish epitaphs; see Burial Practices, Jewish; Art and Architecture: Jewish).

Inscriptions have been, and continue to be, published in a wide variety of places (see Woodhead, 94-107). The three major venues are the collections of inscriptions from a given site or collection, anthologies of inscriptions (often thematically arranged) and individual inscriptions published in various archaeological or classical studies journals. Several of the major publishing projects of inscriptions related to sites or collections include the inscriptions from *Athens in the *Inscriptiones Graecae (IG)*, now being revised in multiple volumes. There is also the *Collection of Ancient Greek Inscriptions in the British Museum* (4 vols.). For a collection from Asia Minor, one should consult *Monumenta Asiae Minoris Antiqua*. Many of the major sites have their own publications, including collections from such places as *Corinth, Cos, *Ephesus, Magnesia, Olympia, Pergamum and Priene, among many others. Useful and standard collections of inscriptions include the *Corpus Inscriptionum Graecarum (CIG)* and the *Corpus Inscriptionum Latinarum (CIL)*, as well as several volumes made by the German scholar W. Dittenberger, including *Orientis Graeci Inscriptiones Selectae (OGIS)*, and the second and third editions of *Sylloge Inscriptionum Graecarum (SIG)*, and one by H. Dessau, *Inscriptiones Latinae Selectae (ILS)*. There is also a valuable collection of inscriptions related to the Jews and Judaism in *Corpus Inscriptionum Judaicarum (CIJ)*. C. B. Welles's *Royal Correspondence in the Hellenistic Period* is also an important collection for the period.

Useful for students of the NT in particular are the recently published texts in L. Boffo, *Iscrizioni Greche e Latine*, the occasional inscriptions with commentary treated in *New Documents Illustrating Early Christianity (NewDocs 1-8)*, and A. Deissmann's classic *Light from the Ancient East*. A number of volumes have inscriptional material relevant to the time (Ehrenberg and Jones; Charlesworth; McCrum and Woodhead). The range of journals to consult is vast. Some of the more important are the *Journal of Hellenic Studies*, the *Journal of Roman Studies* and *Gnomon*, among many others. One should also consult *Supplementum Epigraphicum Graecum (SEG)*,

which attempts to chronicle recent publications in this area, and the relevant sections in the *L'Année Épigraphique* and *L'Année Philologique*. The proliferation of finds and the undertaking of numerous publication projects, as well as personal finds and publications, has resulted in a wealth of information, much of it difficult to access, since there is no systematic referencing system for inscriptions yet devised. Even several of the sources noted above have conflicting referencing systems, and some inscriptions are found in several different, overlapping sources.

1.2. Process of Inscribing a Stone. Once an edict or pronouncement had been passed by a city council or proclaimed by a ruler, or a person had died and an epitaph had been written, and it was determined that these needed fixed proclamation, the process of creating an inscription took place. This would involve selecting a stone suitable in terms of size and material. Many of the ancient inscriptions from Greece and Italy are on marble, no doubt due to its availability as well as its beauty and permanence. But other kinds of stone were used as well, including granite, obsidian, chalk and limestone. The stonecutter employed could range in skill from the very good to the very poor, as indicated by the quality and consistency of the letters cut in the stone. A declaration regarding the accomplishments of a city in battle might involve an expert stonecutter employed by the city, but a grave inscription might involve someone who did not take as much care or even have the necessary skill.

The cutting of the stone can be evaluated along several different lines. These include the size and shape of the letters (there was a difference in technique required to inscribe larger as opposed to smaller letters); the regularity with which they are cut into the stone, both in terms of the shape of the letters and their depth; the alphabet and style of letters used; and the ability to accurately judge the spacing of the letters, lines and text on the stone. Regional and temporal distinctions can also be made on the basis of the kind of lettering used by the stonecutter. S. V. Tracy's recent study shows that different stonecutters can be recognized by the way in which they inscribed their letters.

Once the text to be inscribed was established, the stonecutter proceeded to cut the stone (see Woodhead, 24-34). Many early Greek inscriptions used a technique called boustrophedon, in which the inscription is to be read line by line

left to right and then right to left. This practice seems to have ended during the sixth to fifth centuries B.C., with subsequent inscriptions written to be read left to right. Many of these inscriptions, certainly in Attica, are written in what is called *stoichedon* or *semi-stoichedon* style, with the same number of letters in each line and each letter lined up vertically with the one above. Early Latin inscriptions used the Greek forms of letters and had peculiarities such as writing right to left or up and down. The Augustan age marked a high point in the formal presentation of Latin inscriptions, when a standard monumental alphabet was often used (see Sandys, 34-57). Less formal Greek and Latin inscriptions, and especially some from outlying areas, are often not written in such regular and well-spaced lettering, with some tending toward a cursive style.

If in the process of cutting the stone there was a change made in the text or the stonecutter made an error, he would need to chisel away the old letter or inscribe the new letter more deeply into the stone. Even with careful attention to detail by the stonecutter, it is not uncommon to discover errors in inscriptions. These can include incorrect but also incomplete letters (e.g., the crossbar of a letter has been overlooked). When the lettering was complete, sometimes the letters were highlighted in paint or by filling them in with a contrasting material to make them stand out. Many of the features of the process of creating an inscription must be taken into account in interpreting them.

1.3. Process of Reading and Interpreting Inscriptions. As for any ancient document, interpretation of an inscription is not an easy task. It assumes knowledge of the language that is being used. Earlier inscriptions in the Greek dialects have a number of peculiarities particular to the dialect involved, including letters not familiar to students of later Greek. However, even with a knowledge of this language, reading an inscription is often more difficult than reading the text of a standard author, as found in a modern printed edition. The reasons for this are several and can be divided into three major categories. The first is with regard to the conventions of writing an inscription, the second is with regard to the state of preservation, and the third is with regard to the language and context.

The conventions of writing an inscription in Greek follow those of many ancient texts. In

other words, they are usually written in a continuous lettering, without word division, punctuation or accentuation, in capital letters. Usually inscriptions are to be read left to right line by line, but some earlier inscriptions are written left to right and right to left and even in circular fashion. All of these standard features of inscriptions require that the reader master these details before reading and interpreting the text. In printed editions of Greek inscriptions the editors have often regularized and standardized these texts by writing *boustrophedon* lines all left to right and even standardizing to the Ionic alphabet. This practice obviously helps the reader, but it also involves the editor in making a number of interpretive judgments, including those related to word division, accentuation and punctuation, and even interpretation of the meaning of the text.

The second set of difficulties concerns the state of preservation of the inscription. Many inscriptions are fragmentary, with only part of the inscription to be found. It is fortunate if a number of fragments of an inscription can be found and joined—although even here one must be careful that the reconstruction has been done accurately. Often, however, what is found of an inscription is incomplete. For example, since inscriptions are often inscribed on stone, these stones have often been reused, sometimes for other inscriptions but more often simply as stone for building material. Inscriptions have been found embedded in walls as rubble or forming the part of another structure (e.g., the Rosetta Stone). It is not unknown for parts of the same inscription to be found widely separated from each other. In their fragmentary state, often the beginning and ending of the inscription is missing, as well as the beginnings and endings of lines. All of these difficulties must be addressed in deciphering the inscription.

The third factor to consider in deciphering inscriptions is the language and context. *Literacy was very limited in the ancient world at the best of times, with probably not much more than 20 percent of the male population of a city being literate. There has been much scholarly debate regarding whether most of these literate people would have been able to read the inscriptions erected around the city. One of the major reasons for raising this question is that many inscriptions, especially those from classical Greek times, are written in a highly artificial dialect.

The suspicion by many scholars is that many inscriptions used a form of literary or inscriptional language, perhaps seen to be appropriate to the solemnity of the subject matter, rather than the kind of language that the average person was accustomed to speaking and possibly reading and writing. It is true that inscriptions often use formulaic language. Therefore, there have been a number of analyses of the language of the Greek inscriptions, noting its particular linguistic features (see Meisterhans; Threatte). These include variations at all levels, including phonological/morphological features and syntactical features. Some of these are related to the Greek dialect in use, and others are related to the peculiarities of the language of the one erecting the inscription.

A further difficulty is that inscriptions often lack a context. Scholars have been fortunate to find a number of inscriptions that make reference to historical figures of interest (such as Pilate [see Roman Governors of Palestine], Gallio and possibly Erastus [Rom 16:23]), but many inscriptions do not have such clear indications. They may refer to unclear events or to people (such as in grave inscriptions) who are now lost in time. This makes it more difficult to establish the significance of the inscription. Nevertheless, just because historically unknown or now unimportant people and events are apparently referred to in inscriptions does not mean that they are not of importance for interpreting the NT.

1.4. Important Inscriptions for Interpreting the NT. There are numerous inscriptions of importance for interpreting the NT. Some of these have interest because they help to establish the identity or certainty of particular people or events. Others are important because they offer other insights into the world or culture of the time, including the language and conventions of public discourse. Here only a small number of important inscriptions can be cited to give some idea of their larger importance. For each inscription a reference to an accessible standard edition is given, but they are found elsewhere as well.

1.4.1. Rosetta Stone (OGIS 90). The Rosetta Stone, an irregular slab of black basalt now housed in the British Museum, is one of the most well-known and also one of the most important inscriptions from the ancient world (see Wallis Budge for history, text and translation). Discovered in 1799 by the French in Rosetta,

Egypt, the stone was taken to Britain in 1802 after the defeat of the French in Egypt. The importance of the Rosetta Stone was recognized from the time of its discovery. This fragmentary stele, which at the turn of the twenty-first century was reconstructed in its entirety for an exhibit at the British Museum, contains an inscription written in three languages: Egyptian hieroglyphics, Egyptian Demotic and Greek. When this stone was discovered, Egyptian hieroglyphics were indecipherable by scholars, although ancient Greek was widely known. The assumption used was that these three inscriptions were the same in content. This proved to be a well-founded assumption, since it was commonly known that rulers often propagated their decrees to their people in several languages to ensure that everyone was aware of it. The Romans typically had their decrees translated from Latin into Greek, and the assumption was that the *Ptolemies as Greek rulers did the same for the local population. The French scholar Jean Francois Champollion, basing his work on that of the Englishman Thomas Young, went through a process of discovery in which he rejected the alphabetic character of the language and instead focused on the royal names and titles (these pictograms were encircled in what is called a cartouche). This led to the cracking of the code of the hieroglyphs.

The inscription itself is interesting for several other reasons, including the clear attestation of deification of oriental rulers (in this case Ptolemy V Epiphanes, 203-181 B.C., who made the decree), as well as some features of the language and the customs of the time, but the major importance is the fact that this inscription led to the decipherment of Egyptian hieroglyphics.

1.4.2. *Priene Inscription* (OGIS 458). The so-called Priene Inscription, now housed in the Berlin Museum, is one of several versions of a bilingual (Greek and Latin) calendar inscription promulgated in Asia Minor in celebration of the birthday of Augustus in 9 B.C. (see Roman Emperors). The several versions of the inscription (from Priene, Apamea, Eumeneia and Dorylaeum) have various interesting differences among them, including differences of crucial wording (see Ehrenberg and Jones, 81-83). Often the several versions are used synoptically for reconstructing the entire inscription, since the individual inscriptions are fragmentary. What is noteworthy about this inscription, however, is

what it says regarding Augustus. The inscription says, so far as the Greek reconstructions can be relied upon (see Ehrenberg and Jones, 82), that it seemed good to the Greeks of Asia to give thanks for providence sending Augustus as a savior (*sōtēr*) and that his appearance (*epiphanein*) surpassed expectations, since the birthday of the god (*tou theou*) was the beginning of the good news (*euangelia*) for the world. This inscription is consistent with a number of other inscriptions, as well as papyri, that use language of divination with regard to the emperors (see Ruler Cult). The words of significance have been noted above, and their resonance with the wording at the beginning of Mark's Gospel and the opening section of Romans cannot be missed.

1.4.3. *Jerusalem Temple Inscription* (OGIS 598; CIJ 1400; Boffo, 284). The Jerusalem Temple Inscription exists in two versions in Greek, one being housed in Istanbul and the other in Jerusalem. *Josephus also reports that the inscription was written in Latin (Josephus *J.W.* 5.5.2 §§193-94), but this version has not been found. That it was written in Latin is consistent with the way that official decrees were promulgated during Roman times. This inscription was written in the early Roman imperial period as a warning to non-Jews of the death penalty for entry into the inner court of the *temple. There is some question of whether the Jews or the Romans erected the inscription and whether it was written only for non-Jews. Although it is apparently complete, the inscription contains the edict, not information regarding who erected it, such as is often contained on other inscriptions. It is likely that the Jews had it erected, in the language that those who were not Jewish would be expected to read or have read to them, as well as it being available in a language that numerous Jews, especially those from outside of Palestine, would have been able to read as well. This inscription offers insights into some of the linguistic and cultural issues at play in first-century Palestine. Besides the historical interest that this inscription holds, it also reflects a number of linguistic features of interest, including phonetically based spelling and the imperatival use of the infinitive.

1.4.4. *Gallio Inscription* (SIG³ 801; Boffo, 248-49). The Gallio Inscription is highly fragmentary, with at least seven different pieces that need to be reassembled. This Greek inscription was found at the Greek city of Delphi and is

housed in the museum there. The significance of this inscription is less in what the inscription says than in the fact that it mentions in lines 5-6 a person named Lucius Junius Gallio, proconsul of Achaia. The inscription records an edict by the Roman emperor Claudius (A.D. 41-54) referring to Gallio as proconsul. The significance of this inscription for establishing certain facts and dates in early Christian chronology, especially in the book of Acts, cannot be overlooked. Unfortunately, placing this inscription within its chronology is dependent upon other temporal calculations. However, most scholars are confident that, on the basis of this inscription, as well as the fact that proconsuls usually served one-year terms, it is possible to date Gallio's term of office as proconsul of Corinth to A.D. 51/52.

1.4.5. *Theodotus Inscription* (CIJ 1404; Boffo, 275). No inscription related to NT study has generated so much interest lately as the Theodotus Inscription. This inscription, found at the end of the nineteenth century, had suffered the misfortune of someone attempting to cut it into three pieces in ancient times and being placed at the bottom of a well. It contains an inscription commemorating a Greek-speaking Jew named Theodotus. Theodotus was a son of Vettanos, a *priest and head of the *synagogue, the son and grandson of the head of the synagogue, who himself built a synagogue for the reading of the law and study of the commandments. Even though this inscription is well preserved, as with many inscriptions the context of where and when it was originally erected is unknown. The vast majority of scholars, from those who first discovered it to the present, have accepted that it was probably erected before A.D. 70, since this is the best explanation of what the inscription says, why it would have been written and why it was found in the condition it was. (Some experts have argued that the inscription was placed in the well as a sort of storage place for such sacred items, thus accounting for its being carefully cut into three pieces.) Recently this dating has been called into question by several scholars, but this response is probably predicated on their wishing to see the usage of the term *synagogue* for a building as a late development, rather than on their firsthand study of the inscription (see McKay for references to recent discussion on this and related issues).

1.4.6. *Pilate Inscription* (Boffo, 219). This Latin inscription of only four lines was found in 1961

in the Roman *theater in *Caesarea Maritima and attests to the fact that Pontius Pilate was prefect of Judea. This inscription is important because it is the only direct evidence from the time that Pilate was the Roman governor of Judea, apart from references in the NT and other writers such as Josephus and *Tacitus. It also confirms the title of the governor of this region as a prefect (*praefectus*), as well as providing evidence possibly for the word *Tiberium*, or at least that a building project occurred in *Tiberias (Boffo, 220).

1.4.7. *Jerusalem Inscription of the Tenth Legion* (Boffo, 315). This Latin inscription on a pillar attests to Vespasian and Titus as emperors. The fifth line of the inscription was erased in antiquity. The original editors thought that it attested to L. Flavius Silva, the governor who captured Masada, but more recent scholarship has shown that this reconstruction is not possible and that it probably read L. Antonius Saturninus, referring to the governor of Judea from A.D. 78-81 who led a failed rebellion in A.D. 89, thus leading to his name being erased (*NewDocs* 3 [1978] no. 95).

This survey of inscriptions has obviously excluded a large number of important ones that merit discussion and could easily have been introduced and surveyed here. The above are offered as opening gambits for those needing to be introduced to the important world of inscriptions for understanding the NT.

2. Papyri.

Whereas the nineteenth century was the century for inscriptions, to a large extent the twentieth century was the one for papyri (see van Minnen). Interest in the papyri ran high for NT scholars in the early part of the century, especially in light of the work of such scholars as J. H. Moulton and A. Deissmann, among others, but this interest was not as pronounced in the second part of the century. Yet there is much to learn from these documents, and they are in many ways vital for the study of the NT.

2.1. *Discovery and Classification*. Although the majority of papyri were discovered in the mid-nineteenth century to early twentieth century and many of the major collections were begun at that time, most of the major publication series did not get underway until around the turn of the twentieth century. Since then, there has been a steady stream of publication. It depends

upon how one counts the fragments available, but there are probably somewhere around two hundred thousand papyri in total that have been discovered, with roughly about 40 percent of those discovered having been published. The vast majority of the papyri have been discovered in Egypt, where the geological and climatological conditions are ideal for preservation of the papyri. We know from other evidence, including comments by ancient writers, that papyrus was used throughout the larger Mediterranean world at the time of the NT, and some of the Egyptian papyrus documents originated outside that area.

One of the first major discoveries of papyri took place in the eighteenth century, when carbonized papyri were discovered in Herculaneum, in Italy, the result of the eruption of Vesuvius in A.D. 79. There have also been a number of other finds of papyri outside of Egypt, including a number of significant finds in Palestine (e.g., the Bar Kokhba letters [P. Yadin*], the Minor Prophets Scroll [DJD 8] and the Babatha archive [P. Yadin], among others [see Papyri, Palestinian]). The *Dead Sea Scrolls constitute a papyrus archive in which there are mostly *Hebrew and *Aramaic manuscripts, as well as *Greek. Whereas the vast majority of papyri are in Greek, with a significant number also in *Latin, the term is not limited to manuscripts in those languages and includes manuscripts relevant for the study of the NT in such languages as Nabatean, Arabic, Coptic, Syriac and others.

Whereas referencing inscriptions is often quite difficult, there is much more order to the classification system for papyri. Most papyri are referred to by the abbreviation of their place of publication or archive and an accession or catalog number. Thus, P.Oxy. 1 refers to the Papyrus Oxyrhynchus collection, papyrus one (found in volume 1, which is sometimes also indicated; this is the famous Oxyrhynchus Sayings of Jesus papyrus, published in 1898). Many papyri, however, may also be known by popular names or by other identifying numbers. For example, all of the NT papyri have their own identification in terms of the collection of which they are a part (e.g., P.Ryl. Greek 457), but also by a Gregory-Aland number, given to each NT papyrus (e.g., 52, which is the same as the Rylands papyrus noted above). As with the inscriptions, there are a number of important series of papyri, some

named according to their archive (e.g., P.Oxy.) but most named after the library that houses the archive (e.g., MPER from the Austrian National Library; *PSI* from Florence, Italy; BGU from Berlin).

A number of other collections of papyri have been made for various specific purposes, such as the *Corpus Papyrorum Judaicarum*. Many of the collections mentioned above under inscriptions, such as A. Deissmann's *Light from the Ancient East* and *New Documents*, also contain papyri important for NT study, as does J. L. White's *Light from Ancient Letters*, the most recent collection of this type. Most of the Latin papyri are contained in the *Corpus Papyrorum Latinarum* (the numbers are much smaller than those in Greek).

Whereas the term *inscription* is used to refer to any inscribed material (though usually stone) designed to have lasting value, the term *papyrus* is used to describe portable documents that were not designed for longevity and that are written on a number of different surfaces. The kinds of writing materials included under the term *papyri* are papyrus, an ancient form of paperlike writing material made from pressed strips of the papyrus plant, found in abundance in Egypt; parchment, the cured skins of animals; ostraca, shards of broken pottery, of which there was an abundance; wood, often used for identity tags; leather; bone; small stones of various types, upon which ink was used (rather than the stone being inscribed); and similar kinds of materials (see Bagnall; Kenyon).

2.2. Literary Papyri. Two major types of papyri are to be mentioned, although the categories are not watertight. The first are literary papyri. Literary papyri consist of works of some kind of literary merit. Some of the most important literary papyri to have been discovered include biblical manuscripts of both the OT and NT; *apocryphal biblical works such as Gospels (see Apocryphal Gospels) and other writings; other sacred and religious writings, such as those by the church fathers and devotional works of various sorts; and ancient secular authors, such as Homer, the Greek tragedians and other poets, the Latin writers *Cicero and Virgil, as well as a number of other Greek and Latin authors. Most of the literary papyri have provided further and for the most part earlier texts for known authors, although a number of previously unknown authors and works have been discovered as well. Some of these documents in-

clude those of unknown authors of apocryphal Gospels (e.g., the Fayyum fragment housed in the Vienna collection [P.Vindob. G 2925], the Egerton Papyrus in the British Library [P.Egerton 2], and the Oxyrhynchus Sayings of Jesus, now identified as part of the *Gospel of Thomas* [P.Oxy. 1, as well as 654, 655]), some previously unknown works by known authors (e.g., the *Athenian Politics* by *Aristotle [London Papyrus CXXXI]) and works by previously unknown authors (e.g., the Oxyrhynchus Historian, who continues the account of the Peloponnesian war [P. Oxy. 842]).

Literary papyri are categorized according to content, but there are other characteristics as well. Although the texts as discovered are often fragmentary, they come from larger documents. Many papyrus documents were originally written on scrolls, which consisted of various pieces of papyrus (*kollemata*) connected together to form a long strip. There were obvious limitations in terms of reference (if one was at one end of a papyrus and wanted to check something at the other end of the text, one had to wind through the entire scroll) and ease of handling associated with the scroll. In large part motivated by the Christian writings, the codex, or bound book, was developed. Rather than connecting pieces of papyrus end to end, the codex consisted of a number of sheets of papyrus folded over to form a quire, or gathering. The size of the codex would be determined by the number of sheets in a gathering and the number of gatherings put together. These were then bound on the end, much like a modern book. If more sheets were needed, other gatherings could be added. Some codices were quite small in size, while others were large. As opposed to scrolls, on which one wrote on only one side, writing could be done on both sides of a sheet in a codex, although there are differences in the quality of the writing surface of the front and back of a sheet of papyrus, as well as the front and back of a parchment sheet. Some of the most noteworthy codices are those of Codex Sinaiticus, Codex Alexandrinus, and Codex Vaticanus, fourth- and fifth-century biblical manuscripts.

The hand used in writing these literary documents is often distinguishable as following a particular literary style of handwriting, as well as being more carefully done than nonliterary documents. A number of styles of writing are found

even on literary papyri, reflective of developments in the Greek bookhand, including the influences of other languages, such as the use of Coptic from the fifth century on. What distinguishes at least the early literary papyri, however, is the continuous form of writing without word division, with very little punctuation and accentuation. The punctuation and accentuation tend to increase the later the papyri are dated. Some Christian manuscripts were also used as liturgical texts, and these manuscripts sometimes carry what is called ekphionetic notation (this began in the sixth century and reached its full form in the tenth century; see Wellesz). This notation consists of various diacritical marks made on the manuscript to guide those who read or chanted the manuscript so that they would know how to phrase or intone the text. Christian manuscripts also made use of what has been called *nomina sacra*. These are shortened forms for such words as Jesus, Lord, Christ and God, and over time they were extended to include such words as heaven, man, cross and the like (see Paap). Although these shortened forms look like abbreviations, there is some question whether they should be treated as such, since considerations of length do not seem to have been important. Perhaps a better way to classify them is as a particular form of Christian script.

It should be clear from what has been said above that the literary papyri are essential for NT study, since the NT manuscripts themselves are a subcategory of these manuscripts. Thus NT textual critics are quite familiar with these literary documents (see *Textual Criticism*).

2.3. Documentary Papyri. The documentary papyri are less well known to NT scholars but in many ways are just as important. The documentary papyri cover those documents that were not written with literary intentions in mind, in terms of a wider reading public or for posterity. These documents cover a wide range of types of texts, including such things as personal letters, business accounts, receipts, wills, personal identification documents, census reports, student exercise books, and other such documents.

Perhaps the most important collection of documentary texts, and the largest to have been found, is the *Zenon papyrus collection. This collection of texts is not to be found in any one library but has been published in a number of different papyrus collections, united by the fact

that they all involve Zenon and his correspondence. Zenon was the estate manager for Apollonios, the state treasurer for Ptolemy II Philadelphus (282-246 B.C.), and managed holdings that extended as far as Palestine. The archive contains letters sent between Zenon and others, recording various transactions and other business necessary to the management of a huge estate. However, many other collections of smaller size, as well as a huge number of random documents, have been found as well.

The documentary papyri give insight into not only the personal characteristics of those involved but also the economic situation of the time, the terminology used to transact such business (some of it with application to categories in the NT) and the language used by various people who had no notion of creating documents that would be read two thousand years later. Many of these documents are brief. It has been estimated, for example, that the average personal letter in Greco-Roman times was only about 250 words in length. That is, the average letter was significantly shorter than any letter in the NT, including Philemon, which has about 325 words. Receipts are often not only quite brief but highly elliptical, since they may only refer in abbreviated sentences to the items being recorded. Other documents were considerably longer, however, extending to many sheets of papyrus.

The writing to be found on the documentary papyri varies considerably (see Thompson). The papyri were written in a continuous hand, often with letters that formed almost a kind of cursive script. An extensive set of abbreviations also was used. These abbreviations included not only such things as units of measure but also various common words and terminology. The quality of the writing often varies depending on the educational level and amount of training of the one writing. Writing on papyrus was a skill that had to be learned, so there was an industry in being a professional scribe, who was trained in the mechanics of preparing a papyrus and stylus for writing and mixing various types of ink as well as in the proper forms and formulas to be used in writing such documents as letters. Often scribes were hired to write for those who were illiterate. One of the conventions of letter writing was to note at the end of a letter that one had written the letter for another, because of the illiteracy of the one who signed the letter.

Nevertheless, even if one is aware of all of the conventions of writing documentary texts in the Greco-Roman world, the difficulties in deciphering a papyrus can still be immense. The manuscripts themselves are often fragmentary and have suffered severe damage through abrasion or weathering. Often pieces are broken away, or there are holes where insects have eaten them. There is the further difficulty of deciphering the hand and then attempting to read a text that may well have characteristics of other texts but also have features unique to itself that provide further difficulties. Several grammars have been prepared to help in studying the Greek of the papyri (see Mayser; Gignac).

2.4. Important Papyri for Interpreting the NT. A number of papyri could be discussed in this section because of their importance for NT study. The following selection of one literary and one documentary papyrus is for the sake of illustration.

2.4.1. Fayyum Fragment (P. Vindob. G 2925). This apocryphal Gospel fragment was the first discovered and the first to be published (1885). It is a small fragmentary text (4.5 cm x 3.6 cm) of only seven incomplete lines, written on only one side of the papyrus (and thus possibly from a scroll rather than a codex). The text is a conflation of Mark 14:26-30 and Matthew 26:30-34, and it has been dated to the third century A.D. Several of the peculiarities of this document, besides its conflation of the biblical texts, is its use of the *nomen sacrum* for Peter in line 5 in red ink, rather than the black ink used for the rest of the text. This small document offers much insight into the processes of textual transmission in the early church, including the tendency to harmonize traditions and the early veneration offered at least in some places to such figures as Peter. The use of the red ink for Peter's name is consistent with the tendency in Egyptian religious texts to use red for divine names.

2.4.2. Letter from Theon to His Father Theon (P. Oxy. 119). This rightly well-known papyrus letter is from young Theon to his father, also named Theon. It was written in the second or third century A.D. and offers rare insight into interpersonal relations. If nothing else, it shows that human personality has been consistent from ancient times to the present. In the letter, young Theon, using sarcasm, exaggeration and threats, attempts to make his father feel guilty for not taking him with him to Alexandria. The letter

is written in conformity with the Hellenistic letter form. It begins with the formulaic "A to B, greetings" (Theon to Theon his father, *chairein*). The health wish is abbreviated to a reprimand regarding not taking him to Alexandria. The body of the letter is taken up with Theon's threats not to speak to his father again. The letter then closes with a form of the standard health wish ("I pray that you be well"). This letter is only about 110 words in length, but it captures so much, in terms of both personal relations and the conventions of the Greco-Roman world. One can recognize in this letter the basic model from which Paul took his letter form and expanded it into the Christian letter form that it became.

3. Implications for Study of the New Testament.

The implications for study of the NT of knowledge of inscriptions and papyri are great (see Bagnall; Cary, regarding method in using these types of documents). Three merit brief mention. The first is that these documents are roughly contemporary with the NT. Whereas the original NT documents are no longer extant, many of the documents mentioned above are the actual document that was created in the world of that time. These documents offer a window into the ancient world by providing direct and immediate access to those who lived, worked and wrote during that time.

The second is that these documents help to remind us of the interpretive difficulties in dealing with an ancient civilization that wrote in another language or languages. It is easy, with the wealth of secondary literature available today, and reasonably widespread biblical knowledge, to take for granted that interpreting the NT as an ancient text is a relatively straightforward exercise. When confronted by a previously unread or untranscribed papyrus from the same time period, however, one is brought back to the reality that our fortunate state of current interpretive ease has been built on much hard work involving the study of primary sources. These papyri and inscriptions are essential documents in that storehouse of primary texts.

The third implication is that these documents, since they are primary texts often unsanitized by subsequent scholarship, provide a fund of useful information regarding a range of important issues. These include indications of the kinds of personal, social and religious relations

that existed in the ancient world; the kinds of values that were important to its inhabitants; and even the kinds and types of language that they used to communicate these ideas. There is much still to be learned from ancient inscriptions and papyri regarding the world of the NT.

INSCRIPTIONS AND PAPYRI: JEWISH

Jews, like all the inhabitants of the *Roman Empire and its surroundings, used inscriptions to create a written record of events that they wished to be remembered indefinitely and papyri and ostraca to record matters of more temporary importance. Inscriptions are mainly epitaphs, written on the walls of tombs or (in Judea) on ossuaries (see Burial Practices, Jewish), but they can also record the erection or refurbishment of communal buildings, honors for individuals and the emancipation of *slaves. A number of inscriptions that were presumably displayed in synagogues honor the reigning *emperor; all datable ones are from the Severan period. Papyri may include deeds of sale and gift, leases and contracts, petitions to officials and records of tax payments. Most inscriptions and papyri are in *Greek, the lingua franca of the eastern Mediterranean. Some are in *Aramaic or *Hebrew, but Latin was rarely written by Jews before the third century A.D.

The identification of such documents as Jewish or not can be problematic, since distinctively Jewish symbols such as the menorah were not normally used before the second century A.D.

The following criteria are usually accepted as indicating the presence of a Jew: the use of descriptions such as *Ioudaios* or *Hebraios*; reference to specifically Jewish institutions such as the *synagogue, usually called *proseuchē*, or Mosaic law; the use of Hebrew; the presence of distinctively Jewish names such as Joseph or Salome. Inscriptions and papyri that were never intended for a Jewish audience can still illuminate Jewish history: the epitaph from Rome of a procurator for the Jewish tax (*JJWE* ii 603) or a letter from a woman to her son who was serving in the Egyptian militia fighting the Jewish revolt of A.D. 115-117 (*CJ* 437).

1. Inscriptions
2. Papyri

1. Inscriptions.

1.1. Publications. The main corpus of Jewish inscriptions from the Roman Empire (*CJ*) has now been partially superseded by regional or local corpora and studies (*BSh*, *CJZC*, *JIGRE*, *JJWE*, *Trebilco*, *Levinskaya*) but remains the most accessible collection for Judea and Syria.

1.2. Judea. The practice of *burial in ossuaries flourished in the Jerusalem area in the first centuries B.C. and A.D. Although they are often elaborately decorated, ossuaries rarely have more than a name and patronymic inscribed on them. Members of priestly or high-priestly families might also have their rank given, allowing occasional identification with people known from the NT or *Josephus (van der Horst, 140-43). An ossuary found on the Mount of Olives (*JIGRE* 153) commemorates "Nicanor the Alexandrian who made the gates," presumably a reference to the bronze Gate of Nicanor in the *temple.

At Jerusalem, a man named Theodotos son of Vettenu put up an inscription recording his refurbishment of a synagogue founded by his "fathers," in order to provide room for the reading of the law, teaching of the commandments and accommodation for visitors from abroad (*CJ* 1404). Theodotos was "priest and *archisynagōgos*," and his father and grandfather both held the title of *archisynagōgos*. This inscription is presumably from before A.D. 70, but the title, attested in Mark, Luke and Acts, was a common one for the leaders of Jewish communities for centuries afterward.

1.3. Europe. Most identifiably Jewish epitaphs from Europe are from the third century A.D. or later. There are, however, earlier manumission

inscriptions from Greece and the Crimea. At Stobi in Macedonia, probably in the second century A.D., Ti. Claudius Polycharmus built a synagogue, reserving for his family the right to live in the upper story (*CJ* 694). The donation to the synagogue at Ostia of an "ark for the holy law" was also recorded in a second-century inscription (*JWE* 113).

1.4. Asia Minor and North Africa. There are also synagogue inscriptions from Egypt, Cyrenaica and western and southern *Asia Minor. A full publication of the numerous inscriptions from the Sardis synagogue is still awaited. At Acmonia, the first-century A.D. synagogue was built by a woman named Julia Severa (*Trebilco*, 58-60), who was also high priestess of the imperial cult. An inscription from Berenice in Cyrenaica records honors given by the Jewish community to the Roman governor M. Tittius (*CJZC* 71).

A number of epitaphs come from the area of Leontopolis in the southern Nile Delta, where Josephus records the existence of an alternative Jewish temple founded in the second century B.C. and closed in A.D. 73/74. The genuineness of Josephus's account (*Josephus Ant.* 13.3.1 §67) may be supported by the fact that he makes the founder Onias IV promise to build the temple *hyper* ("on behalf of") the king and queen, exactly the formula used in the dedicatory inscriptions of a number of Egyptian synagogues of the third and second centuries B.C., although the formula was long obsolete in Josephus's day. While the epitaphs say little of how the community was organized and nothing of the running of the temple beyond the epitaph of a *hierisa* (either "priestess" or "woman of priestly family"), they show a Jewish society well integrated into its surroundings, producing epitaphs similar to those of its pagan contemporaries, even to the extent of using references to Hades and Charon.

1.5. Godfearers. The existence of a group of people on the fringes of Judaism is shown by the recurrence of the term *theosebēs* ("God-fearer") in a long inscription from Aphrodisias, probably third or fourth century A.D., listing the contributors to some sort of Jewish communal institution, possibly a soup kitchen (*see* Proselytism and Godfearers). There are epitaphs for people described as *theosebēs* from various dates and places, and the term is now generally accepted to be synonymous with the descriptions in Acts of people who "feared God." Other in-

scriptions record the worship of *Theos Hypsistos* ("Most High God"), a term used for the Jewish God in the *Septuagint but perhaps of epigraphic use to Godfearers and even pagans as well. There are also epitaphs for proselytes (sixteen are listed by Levinskaya, 25).

2. Papyri.

2.1. Publications. Jewish papyri and ostraca from Egypt were collected in *CPJ*. There have been few Egyptian additions since then but many from Judea (one group is published by Lewis).

2.2. Jewish Tax and the Revolt of A.D. 115-117. After the destruction of the temple in A.D. 70, Vespasian imposed an annual Jewish *tax of two denarii (two drachmae) on all Jews in the Roman Empire. Ostraca from Egypt, particularly from Apollinopolis Magna (Edfu), are the main source of information about how the tax worked: it was paid by both males and females over the age of three, slaves as well as free. Its scope was thus much greater than that of the temple tax, which it nominally replaced. Payment is first recorded in A.D. 71/72, and it ceased in May A.D. 116 during the revolt against Trajan (*CPJ* 160-229). Papyri give some idea of how Egypt was affected by that revolt, and the defeat of the Jews was still being celebrated annually at Oxyrhynchus in A.D. 199/200 (*CPJ* 450). The devastating effects on the Jews of Egypt are illustrated by the dearth of papyrological evidence after A.D. 117.

2.3. Edict of Claudius. One exception to the rule that papyri record information of less lasting importance than inscriptions is *CPJ* 153, a papyrus record (which was presumably converted into or taken from a now lost marble inscription) of the edict of Claudius of A.D. 41 dealing with relations between Greeks and Jews at *Alexandria. This document is paraphrased by Josephus (*Josephus Ant.* 19.5.2-3 §§278-85), and the selective nature of Josephus's reporting is clear: he records Claudius's confirmation of the Jews' existing rights but not his drastic warnings about their future conduct.

2.4. Babatha. At Nahal Hever near the west shore of the Dead Sea, a collection of thirty-five papyri carefully hidden in a cave proved to belong to a wealthy woman named Babatha who took refuge there at the start of the Bar Kokhba revolt in A.D. 132. Most are in Greek, with a few in Aramaic or Nabatean; Babatha came from

Maoza at the southern end of the Dead Sea, part of the Nabatean kingdom, which became the Roman province of Arabia in A.D. 106. These papyri record property transactions, petitions to Roman officials and dealings concerning the guardianship of Babatha's son. Babatha's second husband, Judah, appears (although this interpretation is not universally accepted) already to have had another wife at the time of their marriage, and at his death in c. A.D. 130 complications ensued about the rights of the two women. Babatha and her relatives had numerous dealings with non-Jews, and their lives and transactions were heavily influenced by Greek custom and Roman law, but there are occasional signs of distinctively Jewish practice: her Aramaic marriage contract says that her marriage was "according to the law of Moses and the Jews."

2.5. Bar Kokhba Letters. Slightly further north, at Wadi Muraba'at, a number of letters from Bar Kokhba himself were discovered (listed with bibliography by Millar, 545-52). These illustrate, among other things, that his "official" name was Simeon bar Kosiba, that he took an interest in the observation of religious *festivals (one letter makes arrangements for the supply of palm branches and citrons for Tabernacles) and that his followers included people who could write Hebrew, Aramaic and Greek (see Simon ben Kosiba).

INTERTEXTUALITY, BIBLICAL

The literature of the NT was shaped within a Jewish interpretive culture whose teachers sought to clarify and make relevant God's intended meaning of the Scriptures for current audiences. The present result is a Christian Bible that resonates with echoes of earlier texts, forming reflexive intertexts that enable today's interpreter to understand more fully the theological meaning of a biblical text.

1. Definition: Intertextuality
2. The Formation of Biblical Literature: The Intertextuality of Midrash
3. The Final Form of the Christian Bible: The Intertextuality of Scripture
4. Case Study: The Function of Habakkuk 1:5 (LXX) in the Book of Acts

1. Definition: Intertextuality.

A technical definition of intertextuality is difficult to state with precision. In part this is be-

cause the term was only recently coined by poststructuralist literary critics (Kristeva; Barthes) to describe every literary text whose existence and meaning is predicated in relationship to other texts, whether spoken or written, earlier or later. At its essence, literature's constant recourse to other literature merely confirms that no text is an island, composed in isolation from a preexisting body of other texts. Further, it is supposed that every writer employs "rhetorical phenomena known since antiquity (e.g., citations of or allusions to antecedent texts) not merely to repeat them as important markers and makers of meaning but also to amplify and even to revise their original meaning in order to reconstitute different texts as parts of one continuous written text of shared images, stories and meanings.

Poststructuralist reading strategies, however idiosyncratic, suppose the intertextuality of a particular text (or intertext) subverts the essentially historical boundaries that modern interpreters tend to place around it to facilitate conversation about the normative meaning of a text, or the identity of the author and the intended readers or the precise date when it was written and the real reasons why. According to postmodern convention, however, to speak of a text as an intertext posits meaning in the text qua text, not at its point of origin, and so within a much wider literary field constituted by other texts that are related together by literary pattern, linguistic correspondence or thematic similarity. Rather than constricting the plausible meaning of a single text to a single or thin conception as determined by reconstructing what it might have first meant, this field of related texts establishes a more complex matrix of interconnected textuality, the *via media* by which its current reader thickens a text's (multivalent) meaning.

The term *intertextuality* has since entered the vocabulary of biblical scholarship as a broad reference to the various ways by which biblical writers presume the continuing authority of their Scripture that is cited or "echoed" (Hays) when it is exegeted to amplify the meaning of this sacred tradition (*traditum*) as the word of God (*traditio*) for new readers or auditors (Fishbane). J. A. Sanders's cautionary distinction between the "stability" and "adaptability" of biblical tradition, envisaged by Scripture's own "unrecorded hermeneutics," is helpful in qualifying what M. Fishbane means by the transforming and gener-

ative powers of "inner-biblical exegesis." On the one hand, it is no longer disputed that biblical writers found new and different meanings in the texts and stories of their Scripture from those originally scored by their authors for their first audiences. The existential necessity and eschatological urgency of God's word, mediated by this textual *traditum*, is formative of theological understanding yet constantly requires talented interpreters (= biblical writers) to seek out from the old, old gospel story those new meanings (*traditio*) that are "adaptable to the life" of today's believers who continue to submit to their inspired Scriptures as the word of the Lord God Almighty.

On the other hand, this same biblical tradition is canonical, a persistent and stable rule of faith and life for all God's people in each age and every place. The essential theological subject matter of the biblical word does not change: Scripture in all its parts bears witness to one God, one Lord Christ, one Holy Spirit. The inherent subjectivity of the interpretive enterprise, by which the individual interpreter seeks out the meaning of Scripture for a particular situation, is constrained not by consistent application of certain hermeneutical rules but by certain core convictions about God disclosed through Scripture's narrative of God's salvation of all things through Christ. Biblical texts do not bear witness to the interpreter but to the interpreter's God, "who was and who is and who is to come."

In this sense, the canon consciousness of NT writers obligates them to pick up again and again their biblical texts and stories to repeat them as integral to their compositions, not only to demonstrate the *traditum's* continuing authority as *via medium* of God's word to their audiences but also to give it new meaning and different relevance for still other congregations of believers. This interpretive act hardly subverts the Bible's witness to God but rather intends to confirm the church's rule of faith that the God of Israel to whom his biblical tradition bears witness is the same God who is incarnate in the Lord Jesus Christ. The purpose of this article is to draw out and illustrate the most important implications of this textual phenomenon for NT interpretation.

2. The Formation of Biblical Literature: The Intertextuality of Midrash.

Even a cursory reading of the NT discloses the

routine use the writers made of their own biblical witness. Earliest Christianity retained Jewish Scriptures as the word of God, the symbolic universe within which its faith and life took shape and found direction. Its own literature naturally reused, reinterpreted and reapplied their sacred writings to bring clarity and direction to the new period that dawned with Jesus. Earliest Christian interpreters inherited the OT from Jesus and with Jesus; they were compelled in submission to their risen Lord to use his Bible to interpret his messiahship and themselves in relationship to it. Thus, every NT writing quotes or echoes texts or stories from antecedent biblical (together with Jesus) traditions in order to help believers understand what it means to believe as Jesus did and to behave as he did.

2.1. Jewish Community of Interpretation. What remains perplexing for the modern interpreter is why NT writers appropriated Scripture so creatively, without due consideration of its original meaning. In response to this problem and in keeping with critical scholarship's historical interest, standard discussions (Longenecker; Ellis; Vermes; Pate; Bruce) are careful to locate the hermeneutics of NT writers and writings within an ancient Jewish interpretive culture (see *Biblical Interpretation, Jewish*). The study of sacred Scripture, especially *Torah, was central to the different parties of religious Jews, who sought out God's requirements for every aspect of life and faith although with different methods to support different theological beliefs. This guiding perspective toward Scripture, especially envisaged by the *Pharisaic interpretation of Scripture, coupled with appropriate exegetical strategies used to search out God's will from the biblical text, were more or less followed by NT writers.

Most recent discussions of the NT interpretation of the OT follow this more historical and descriptive interest and typically seek to relate NT writings to extant Jewish literature under two rubrics: writings from Second Temple (pre-A.D. 70) *Judaism, including the *Septuagint, the OT *Apocrypha and Pseudepigrapha, the *Dead Sea Scrolls, early rabbinical midrashim; and writings from rabbinical (post-A.D. 70) Judaism (*Talmud, Aramaic *targumim and *midrashim), all of which reflect first-century oral interpretation of the Jewish Bible and are therefore contemporary with the writing of the NT (Evans). Well-known interpretive strategies (or

hermeneutical *middoth*; see *Biblical Interpretation, Jewish*) of Jewish scribes as well as the various genres of this literature are also summarized, which are then compared favorably to NT writers who use these same exegetical methods and literary conventions when appropriating their Scriptures for a new (i.e., Christian) situation. According to these genres and techniques, then, the two essential purposes of Jewish interpretation are clarified as halakah (how to live) and haggadah (what to believe). Further, by comparing the subject matter of midrashim from different teachers, certain schools of interpretation are defined, whether *Alexandrian (Philo) or *Pharisaic (Hillel) or *Qumran (DSS) or Christian (NT) as well as different theological tendencies within each (e.g., Samaritans or Pauline Christianity).

Two qualifications should be added to make this connection between Jewish Scriptures and the NT even more precise. While evincing the literary conventions and hermeneutical interests of Jewish exegesis, NT literature, like earliest Christianity, emerges from a *Hellenistic world as well. "The Christianity of the New Testament is a creative combination of Jewish and Hellenistic traditions transformed into a *tertium quid* ('a third something'): that is, a reality related to two known things but transcending them both" (Aune, 12). NT writings, then, envisage neither Jewish nor Hellenistic contexts exclusively but are in every case creative combinations of both literary and interpretive cultures. It is doubtful that any rhetorical device of the Second Temple period is any longer considered a uniquely Jewish literary convention.

The same can be said of the Hellenized Judaism from which earliest Christianity emerged. The Judaism of the NT is hardly a monolithic movement, but is in Sanders's phrase, a "pluralizing monotheism." The fluidity of Jewish culture and of its canonical Scriptures, not yet stabilized in the first century, is generally reflected in its biblical tradition, still fluid, and exegetical practice, still experimental. Text-centered exegesis became the norm within the early church only after the canonical process resulted in a fixed text (see *Canonical Formation of the New Testament*). Thus, what the reader of the NT will sometimes find is more like the *re-written Bible of apocryphal literature, where the focus of the writer's use of a cited text is not the received text but a modified or supplemented

one and where perceived gaps in the biblical narrative are filled in by the writer in an attempt to complete the historical record. T. L. Brodie has even argued, for example, that the author of Luke-Acts narrates the story of Jesus and his apostolic successors by imitating or rewriting the story of his Bible (LXX).

2.2. Canon Consciousness of New Testament Writers. Even if the boundaries around the biblical canon of its writers were not yet fixed when the NT literature was written, clearly they use their Bible as a normative guide to faith and witness; it is for them a sufficient and trusted medium of God's word that communicated what it means to be God's people and to do as God's people ought. At no time is it possible for the interpreter to divorce the writer's citation of or allusion to Scripture from these core convictions about Scripture: the authority of the biblical text and the act of interpreting it are joined together. While demonstrating considerable creativity in adapting the meaning of their biblical texts to every new situation, biblical writers also reveal considerable selectivity in which texts are used and show meticulous care in doing so—characteristics of what G. Sheppard has referred to as the writer's "canon-consciousness" (Sheppard, 109-19).

Further, the canon consciousness of the NT writers must be a factor in determining the deeper logic of their exegetical activity. The interpreter should not presume that NT writers thought of their stories or letters as literary creations, which arise *ex nihilo* as if every new historical event obligates a brand new text to narrate or interpret it; rather, this literature is written in conceptual continuity with or mimesis of extant biblical tradition because its writers and audiences believed that the "things that have happened among us" continue Israel's history and God's revelation, witnessed to by that tradition, into a new dispensation of God's promised salvation.

NT writers are heirs of a sacred tradition, whose mind-set and methods are also nurtured within a living, dynamic interpretative culture. We make a mistake supposing that they picked up biblical texts to find a new meaning for another audience in isolation from the prior interpretations of earlier tradents. The Tanakh supplies the literary texts of a sacred tradition that is always received from others who have already found it to be the Word of God for their

own communities of believers. Usually implicit in a writer's use of Scripture is his profound regard for these earlier tradents. That is, NT writers typically interpret an interpreted Scripture, especially interpretations received from their rewritten (e.g., OT Pseudepigrapha and Apocrypha) or translated (e.g., Aramaic targums and Greek Septuagint) Bibles. Even the midrashim of early rabbinical Judaism, which postdates the NT, recalls interpretations from an earlier period that is shared by NT writers.

The precious memories of Jesus and perhaps certain writings from his apostolic successors (2 Pet 3:15-16) form yet another deposit of sacred tradition that NT writers reinterpret for new situations. The phenomenon of interbiblical exegesis that Fishbane recognizes in the OT may well be true of the NT, especially if certain writings are read as pseudepigraphical (see Pseudonymity and Pseudepigraphy). For example, does the author of 1 Timothy rewrite Pauline tradition, already accepted as normative for Gentile Christianity, for the catholicizing church of a post-Pauline situation? Does its author compose Acts as a narrative setting for a community's reading of Paul's Romans and in particular his interpretation of God's faithfulness to a spiritual Israel? Even though lacking in explicit references to Jesus, are portions of James written in conversation with authoritative Jesus tradition? Perhaps. In any case, the interpreter should listen for echoes of an emerging *traditum* of Christian texts as a sacred complement to those inherited from Judaism.

2.3. The Intertextuality of Midrash. The NT writings are midrashic literature in this sense: they are written in response to the urgent needs and questions of the present moment under the light shed by antecedent texts, which writers deemed normative for faith and divine in origin (Bloch). In particular, biblical writers find meaning in these canonical texts that not only coheres around the core convictions of a Christian theological tradition but also enters into a sometimes playful conversation with other interpretations of these same texts (Sanders). This broader definition of midrash follows current literary theory, which terms midrashic any interpretive act that interprets earlier texts by means of narrative or discursive augmentation in a way that renders meaning in culturally and ideologically determined ways. Midrash is no longer limited by this definition to a particular exegetical

method or literary genre (e.g., *haggadoth* or *halakoth*) that transmits determinate and timeless interpretations of specific, biblical texts to no particular audience. NT interpreters are increasingly more apt to draw comparisons between the texts and topics of OT literature with those of NT literature, ever more sensitive to the subtle and clever ways biblical writers appropriated these sacred traditions to make clearer and more authoritative their own words.

According to D. Boyarin the essential characteristic of midrash, understood in its broader sense, is its intertextuality (Boyarin, 12). He posits three senses to his definition of the "intertextuality of midrash." (1) A literary text is always a "mosaic" of conscious and unconscious citation of earlier discourse; no single text carries a self-contained meaning. (2) Therefore, a text is always in conversation with other texts; no single text is the objective mimesis of truth. Meaning is funded by all relevant texts, one glossing the other texts, which in turn add sublayers of meaning to the one. (3) A new text is produced within and for a new culture of readers; the writer "slips" into the gaps of antecedent texts to interpret and "re-code" them for his own day and audience. The more important these antecedent texts, the more important is the interpretive task of slipping into and filling their evident gaps. NT writers believed that their Scriptures mediated the word of God to their audiences; their conscious or unconscious citation of biblical texts or types is in demonstration of this belief but also to invite an intertextual reading of what they have written as the context for readers to reflect upon the fuller, more textured meaning of what is written.

3. The Final Form of the Christian Bible: The Intertextuality of Scripture.

To this point the NT has been described as a collection of hermeneutical writings, each shaped by the interpretive strategies and theological conceptions of their authors as much as by the historical circumstances and literary conventions to which each responds and by which each is composed. That is, the intertextuality of NT writings is the literary precipitate of a Jewish interpretive culture in which these NT texts were written in conversation with a writer's antecedent sacred tradition in order to support and add an inherent depth of understanding to his reinterpretation of God's word

for the theological crisis of his day.

This next section shifts focus from the NT's Jewish *Sitz im Leben* to its current address in the Christian biblical canon. Even as intertextuality is an important feature in the production of different NT writings, it is currently an important feature of the NT canon. Scripture's special role within the life of the church qualifies to some extent the value we posit for Scripture's inherent intertextuality. In saying this, I contend that Scripture's authority for the faithful is not only as a revelatory word by which one acquires theological understanding; it also supplies its readers with interpretive models that continue to facilitate their reading of Scripture as God's Word. In this light, I want to press for the importance of the NT's intertextuality as a salient feature of Scripture's own unrecorded hermeneutics and therefore its importance for the alert exegete who aims at the theological formation of those who in faith seek understanding.

To read a biblical text on its own terms requires its current exegete to construct meaning in light of the writer's conception and use of Scripture. An interest in Scripture's intertextuality tilts the interpreter to a particular approach to NT interpretation that presumes that every NT book is a midrashic writing, the textual precipitate of its writer's own interpretation of his biblical canon, rendered in ways to address a new situation with a word from God. In recognizing this the clarity of our perception of the audience's spiritual crisis is sharpened and our understanding the author's theological response to this crisis is deepened. In most cases we can hardly understand the theological subject matter of a particular NT composition apart from a critical analysis of the persistent interplay of ancient texts with the text as well as its rhetorical design and theological aim.

3.1. Old Testament and New Testament as a Canonical Intertext. The ultimate referentiality of the biblical canon, however, is not historical, with meanings posited at the point of origin, but theological, with meanings that result from Scripture's performance as the word of God for its canonical audience. The stakes of this discussion of the NT's intertextuality acquire greater importance if they are framed as a feature of Scripture's ongoing mediation of God's word. That is, the intertextuality of Scripture's final literary (or canonical) form is an inherent feature of its revelatory powers and must be understood

by its current interpreters in terms other than a particular writer's exegetical strategy or the intended meaning of his writing for his first readers or auditors (however, see Childs, 76).

The intertextuality of the NT does not simply add a new and interesting angle to the historical-critical enterprise; it points us toward a hermeneutical model in which OT and NT are an interdependent (or intertextual) medium of the word of the Lord. The current reductionism of interpreting the OT or NT in isolation from the other, thereby regarding the NT's relationship to the *Hebrew Bible as insignificant, is subverted by the NT's appeal to and exegesis of the OT. Sharply put, the Scriptures of the NT writers are "neither superseded nor nullified but transformed into a witness of the gospel" (Hays, 157). On a canonical level of authority, this point funds our hermeneutical model, rather than our exegetical methods per se, for our ongoing consideration of the relationship between OT and NT within the church's Christian Bible.

Several features of this interpretive emphasis should be noted. The OT is the *via medium* of God's Word, which is now "brought near" to God's people through its christological interpretation, and its current authority for God's people is constantly demonstrated by the confession "Jesus is Lord" that it evokes from them (Rom 10:8-9). The theological authority of the OT presumes its trustworthy witness to the God who is now incarnate in Jesus; as such, and only as such, can the OT function as Christian Scripture. The theological subject matter and perspicuity of OT and NT cohere around this single christological confession that brings to maturity the interpreter's perception of Scripture's own intertextuality.

This same Jesus refuses to decanonize the OT (Mt 5:17-18); rather, we have received the OT from and with him as the normative context in which his people deepen their faith in him as Lord (see Watson, 181-85).

Paul's difficult claim that Christ is the *telos* of the biblical law (Rom 10:4; Gal 3:24) may provide another biblical analog for relating NT (Christ) and OT (law). In this statement, both Christ and law function as Pauline metaphors for particular patterns of salvation, the one worked out in the history of Israel and the other on the cross. For Paul, the Christ event is the climax of God's redemptive purpose for Israel, and this Christ event insinuates itself upon the sa-

cred writings that bear authoritative witness to that divine intent. The function of law is no longer the object of the community's devotion to God; Christ is. The role of law in this new age is rather to reveal the hard beginnings of God's redemption of creation, which now has its climax in Christ. In a similar way, the NT is the *telos* of the OT within the Christian Bible.

That is, in a narrative sense, the OT and NT are incomplete without the other, and together they form an irreducible and self-sufficient whole: we expect no third testament beyond these two. Thus, what is new about the NT's testimony to the Messiah's *kairos* and kerygma can be adequately discerned by the biblical interpreter only in relationship to what has become old about the OT as a result. From this perspective, the Christ event is the climax of a variegated history whose beginning is narrated by the OT.

The Christian Bible, which narrates the beginnings of God's reconciliation of all things (OT) that climaxes with Jesus' messianic mission (NT), heralds the consummation of this history with the coming triumph of God on earth as now in heaven, to which all Scripture bears prophetic witness.

In a kerygmatic sense, the theological subtext and deeper logic of NT proclamation is the OT narrative of God's response to a fallen creation and to an elect people, Israel, whom God has called out of this broken and sinful world as a light to all the nations. Every redemptive *typos* claimed by the OT prophets is embodied by Jesus, and every promise made by God through them is fulfilled through him.

While it is nowhere about Jesus, the OT must be understood entirely in relationship to this gospel typology about him. That is, the "truth and grace" now disclosed in the messianic event, to which the NT bears normative witness, establishes a theological and historical continuity with the truth and grace disclosed in the Israel event, to which the OT bears normative witness.

The intertextuality of OT and NT, then, is this: the OT supplies the NT with its normative theological and historical markers, while the NT witness to the risen Messiah supplies the subject matter for a Christian hermeneutic by which the OT is rendered as Christian Scripture. The old meaning of the OT is now relativized and made new by this christological midrash.

3.2. *The Simultaneity of Scripture.* Recalling that the aim of Scripture is theological understanding and not historical reconstruction and that hermeneutical practice is constrained by one's theological commitments rather than by adherence to accepted exegetical rules, two other related features of this hermeneutical model are advanced for NT exegesis. Even as NT writers approach Scripture as the revelation of God's Word, their formulaic references to particular prophets to introduce citations of Scripture do not envisage a modern historical-critical concern for authorial identity and intent; rather, they presume these OT figures were those who gave voice to the word of the Lord. God is the actual author of their sacred tradition; their midrashim of Scripture presume only to clarify and contemporize what is God's intended meaning for a new, post-Easter address and for their particular audiences who struggle to remain faithful to their Lord.

In this restricted sense, I would argue that the anonymity of the OT and the insinuation of divine authorship by the NT writers are useful tools in shifting the locus of normative meaning from the text's human author to the inspired text itself as the *via medium* of God's Word (Levenson). By divine authorship I do not mean that God mechanically produced biblical texts, whether by dictation or some other literary process whereby the production of Scripture is by God's direct and miraculous intervention; rather, the purpose of approaching biblical texts in terms of their divine authorship postulates a theological norm that subverts the modern tendency to posit a text's normative meaning in the mind of a text's "real" author.

In this sense, the authorship concerns of the modern critic are theologically laden projects, having to do with the location of a text's normative meaning for today's readers. The stated historical problematic of the modern critic is to identify the one who should take responsibility for the production of a particular text; the unstated theological problematic is to posit the place and time for the normative meaning of that text. The authorial fallacy is to suppose that the meaning of a text and the basis of its continuing authority resides with its human author. The preoccupation with these questions extends to the postcritical interpretive culture, which has shifted focus from authorship to interpreter, who now is the principal broker, even

locus, of a text's meaning.

The normative meaning of Scripture for the church is not fixed in the author's mind for all time; nor in the constantly shifting locations of various interpreters. Scripture is special precisely because we recognize its revelatory power to convey God's intended meaning to the current readers via the canonical text. If the meaning of Scripture is divinely intended and mediated by the inspired text itself, then it is the task of every faithful interpreter to seek after it. The act of reinterpreting Scripture as God's Word, however provisional and seemingly tentative, is the courageous act of finding God's intended meaning for a community who in faith seeks theological understanding.

If God's intended meaning is posited in the whole of the text itself, OT and NT, then the intertextuality of Scripture suggests their simultaneity. Rather than signifying common meanings, the simultaneity of OT and NT conveys rather a sense that there is no perceived chasm between what Scripture meant and what it now means. The text received and a text that reinterprets it for theological understanding are equally valued texts in the dynamic process that seeks to hear and then submit to the Word of the Lord God Almighty—a Word that Christians believe is incarnate in God's Son, Jesus of Nazareth, and is made ever new by God's Spirit.

4. Case Study: The Function of Habakkuk 1:5 (LXX) in the Book of Acts.

4.1. *Theology of Scripture According to Acts.* The function of Scripture within a particular NT writing is first of all discerned by the writer's own theology of Scripture: the exegesis of antecedent tradition is constrained as much by prior theological commitments as by current exegetical technique or methodological interests. Although it is also shaped by the concerns and conventions of the Greco-Roman world, Acts is substantially Jewish in theological conception (Jervell), in historical methodology and literary design (Evans and Sanders). Not only does its author follow Jewish exegetical practices when using Scripture; his understanding of Scripture's importance for theological understanding is also Jewish. His canon consciousness results in a narrative written in the style of his Bible (Brodie) and in reflexive conversation with its texts, all of which promise a salvation that he now recognizes is being fulfilled in those events follow-

ing from Jesus' resurrection. Luke's commitment to composing a narrative in the idiom and ideology of his own sacred text leads J. Jervell to call him "the fundamentalist within the NT."

The use of antecedent tradition in Acts is distinctive within the NT, not only in form (Jervell, 62-63) but also in substance (Bock). According to its narrator, Scripture is authored by a living God who continues to address God's people by its prophetic interpreters, who render its true meaning in public proclamation under the light of Jesus' suffering and resurrection (Acts 17:3). Not only does the Spirit of God produce what Scripture says, but also the Spirit continues to inspire its right interpretation—a continuity of divine activity that ensures the perspicuity of Christian theological understanding: the promises God intended Scripture to make, these Spirit-filled interpreters rightly discern, are now being fulfilled in the "events that are fulfilled among us" (Lk 1:1).

Luke's belief in the simultaneity of these sacred texts is made clear by the several formulae that claim all Scripture is rightly interpreted by a Christian theological typology (Acts 24:14; 26:22) or, similarly, that all Scripture speaks about the Christ event or those events that follow after him (Acts 3:18, 24; 10:43; 17:3; 18:28; 24:14; 26:23). Luke's composition, then, is itself a Christian midrash of selected biblical texts, a synecdoche for all Scripture, which demonstrates this is the case: not only are all the prophecies of Scripture being fulfilled, but also their intended meaning is now being interpreted by the history of Jesus and his apostolic successors according as "reported" (see *diēgēsis*, Lk 1:1) by the Evangelist. The tragic irony for Luke is that even though Scripture belongs to Israel, Israel fails to understand its true, christological meaning. The salvation of Israel is at stake when Scripture is not understood by the messiahship of Jesus and the experiences of his converted people who now live under the aegis of the Spirit. Likewise, the identity of a true Israel, constituted by those Christian converts, is disclosed by a believing response to Scripture's prophetic message.

4.2. *The Function of Habakkuk 1:5 in Acts.* The important use of Habakkuk 1:5 (LXX) in Acts 13:41 to conclude Paul's inaugural speech in Acts typifies how Luke uses biblical tradition. Paul's appeal to Scripture settles two theological problems that continued to provoke controversy

in the church's Jewish mission. The first problem participated in a wider intramural debate within Judaism between messianic and non-messianic Jews and is envisaged in Acts by the fact that Paul's interpretation of Scripture is typically located within the Jewish synagogue of the Diaspora and with Jewish conversation partners. Within this Jewish setting, Paul's strategy is to posit as a proof from prophecy that it is necessary (*dei*) that the Christ should suffer and that God would raise him from the dead and that this prophesied Christ is realized in the suffering and resurrection of Jesus of Nazareth. Besides this christological meaning, Scripture is used to explain the conflict and conversion that result from the christological midrashim of Jesus' apostolic successors. This speech not only is programmatic of Paul's message in Acts but also introduces the motif of Israel's misunderstanding as a justification project for the Gentile mission, which results in Paul's declaration in Acts 13:46 that unbelieving Jews "judge yourselves unworthy of eternal life; therefore, we now turn to the Gentiles" (cf. Acts 18:6; 28:28).

The original prophetic setting issues God's warning of imminent destruction of disobedient Israel. This text begins an oracle of judgment addressed to the prophet's Judean community by observing with fearful "astonishment" that the Chaldeans have become a national enemy of considerable power and resolve. The prophet notes in particular the execution of a violent "work" about to be experienced in Judah—a "report" of coming calamity that they in their pride and unrighteousness will not "believe" (Hab 2:4). The prophet's intent is to bring about the repentance and faith that will avert the imminent disaster.

The new meaning given to this oracle by the Lukan Paul does not entirely subvert its original meaning and function. The intertextuality of Scripture presumes the interdependence of its theological subject matter: following Habakkuk, then, the text functions in Acts as a warning to a Jewish community, whose pride results in the rejection of God's work in their midst (Acts 13:45), even though faith would have resulted in eternal life (Acts 13:38-39). Moreover, Paul and the prophet share this similar vocation: they are reporters of God's work, which stands as the rule of faith for this community prone by pride to disbelieve. In this essential way the theological meaning of the antecedent text has insinuated

itself upon Acts to make more clear to its reader that the stakes for hearing the prophetic word of God remain as high as ever.

In Acts, however, the earlier prophetic text has an expanded role. Critically, Luke has re-written Scripture by adding another "work" to indicate more clearly its current role as a theological catchword in his narrative, linking this citation to an earlier use of "work" in Acts 13:2 while anticipating a subsequent echo in Acts 14:26. The same Spirit who spoke the prophetic text speaks again in calling Paul to begin the work that would fulfill his commission (Acts 9:15-16). In this new setting, the work of Habakkuk is reinterpreted in reference to its most controversial element: the innovations of Paul's Gentile mission, where clean goes out among unclean. This new work of God goes to the heart of a Jewish identity, which Paul's mission among the Gentiles seems to imperil and for which he is ultimately arrested and tried.

The prophetic warning of God, mediated through the biblical word, has a new object—namely, Paul's mission—that will "astonish" Israel and will provoke their unbelief. The subsequent repetition of "work" in Acts 14:26 supplies with Acts 13:2 the other bracket that frames the prophetic citation. In this case, both the Spirit's earlier word, which commissions Paul's work, and the biblical citation, which warns another Jewish community of the peril of its unbelief, are said to have been fulfilled.

The texture of the citation's meaning is thickened when the alert reader hears the resonance of its language in earlier texts of Acts. The repetition of prophetic catchwords within Acts is also reflexive in intent; earlier texts gloss subsequent texts in the dynamic unfolding of a story's meaning and theological importance. That is, earlier allusions to the prophet's cited vocabulary add layers to the full meaning of his oracle in Acts as it unfolds piecemeal throughout the narrative. The deeper logic and coherence of Scripture cited and echoed for a new setting (intertext) are discerned by the interpreter who is ever attentive to the sequence and sum of language within a text (intratext). No text is an island.

Consider, for example, the antecedent uses of "wonder" in Acts (Acts 2:7; 3:12; 4:13; 7:31), which may supply an important subtext that glosses the prophecy from Habakkuk in Acts 13:41. In every case, the word is used in Acts to characterize an affective and ambivalent re-

sponse of outsiders to the Spirit's activity when empowering the apostolic witness to the risen Christ. Here is Paul, whom this same Spirit has charged to proclaim the risen Christ in Jewish synagogues. By reading the citation within Acts, the interpreter slips into a gap to anticipate before the text narrates it that Scripture's prophetic warning will not be heeded by all: some who listen have already responded to Paul in "wonder" rather than in faith, and the reader knows perhaps before they do that their response has marked them out as outsiders to the salvation of God.

Similarly the phrase "in your days" recalls the opening formula "in these last days" that Luke adds to the critical citation from Joel (Acts 2:17) to frame its prophecy of the Spirit's outpouring as heralding the day of the Lord as a day of universal salvation. This implicit interplay between Joel and Habakkuk presumes that Israel's misunderstanding of Paul's mission and message is a feature of the last days, which are days not only of conversion but of conflict as well.

Finally, the biblical reader should note that the citation's "believe" recalls its prior and positive use in Acts 13:38-39, which echoes Habakkuk 2:4 and anticipates its programmatic interpretation by Paul in Romans 1:17 (Wall 1998). Important here is the implicit conflict between Moses and belief in Christ in matters of salvation; Habakkuk supplies a fuller biblical setting in which Paul's interpretation of God's salvation, promised to David, is rendered by Acts. That is, through their belief that Jesus is God's Messiah and not through their observance of Torah alone, Israelites experience God's forgiveness. As will soon be evinced in Acts 15, this conflict between faith and law stands at the center of Paul's continuing conflict with the Jews.

4.3. Hearing an Echo of Habakkuk 1:5 in Acts 15:3. The importance of Acts 15 in this narrative of earliest Christianity can hardly be exaggerated, and it remains a storm center of Acts criticism. On the face of it, the success of Paul's first mission, which concludes with a grand declaration of all that God had done among the Gentiles (Acts 14:27), provokes a protest in *Antioch between teachers of the Jewish church and Paul's supporters there (Acts 15:2). The apparent conflict is over the continuing status of the Torah and circumcision within these new Gen-

tile congregations founded by the Antiochean mission (Acts 15:1).

This disagreement is repeated in Jerusalem (Acts 15:4), where Paul and Barnabas have come to meet with the church's apostles and elders to bear witness to their mission and in particular to their direct experiences of Gentile conversion (Acts 15:12). However, after they relate all that God has done with them (Acts 15:4 par. Acts 14:27), a faction of Jewish believers, in this case from the Pharisees, assert that Gentile proselytes, like those Gentiles who convert to Judaism, must be circumcised and observe the Torah. Most interpreters suppose that this Jewish protest against Paul's mission among the Gentiles stems from their perception that Paul circumvents the protocol of Judaism, which constitutes a political threat to the future of a Christian mission among Gentiles (since Judaism did not sponsor one) as well as undermines Judaism's pattern of salvation. For these reasons most think that the eventual resolution of this conflict is critical to the eventual expansion of the Christian mission to Rome and beyond. This criticism of Paul's Gentile mission is already subverted when it is glossed by Peter's earlier Pentecostal citation of Joel's prophecy of the day of the Lord (cf. Acts 2:17-21). According to this prophecy, interpreted by Luke's subsequent narrative of conversion, any person, whether Jew or Gentile, who calls upon the name of the Lord Jesus in faith will be saved from his or her sins (cf. Acts 2:21).

Yet modern interpreters of Acts fail to note the importance of Luke's brief travel summary sandwiched between his repetition of the conflict thematic, which notes that on their way Paul and Barnabas "reported the conversion of the Gentiles" (Acts 15:3). Critically, this phrase echoes the final phrase of the earlier citation of Habakkuk 1:5, "even if someone reports [a work] to you," an intertext the reader recognizes by their common verb, *ekdiēgevmai* ("report"). The repetition of this unusual verb, used only in these two NT texts, suggests that Luke's description of the Jewish church's protest over Paul's mission among the Gentiles continues his exegesis of Habakkuk 1:5; the meaning and function of this prophetic citation in its earlier setting in Acts 13 informs Luke's handling of this watershed moment in the history of earliest Christianity.

In its earlier setting in Acts the "work" cited by Habakkuk now refers to Paul's mission and message (Acts 13:2), the success of which among

the Gentiles is reported by Paul and Barnabas on their way to Jerusalem (Acts 15:3). The echo of Habakkuk 1:5 underscores what the reader already knows: Paul's work among the Gentiles, which has provoked protests from certain groups within the Jewish church, is commissioned by the Spirit to broker the saving grace of God for the Gentiles (Acts 14:26-27). Paul's mission demonstrates the radical extent to which God's promise of universal salvation is now being fulfilled.

The primary function of Habakkuk 1:5 in Acts is to issue a stern warning to Paul's Jewish audience to heed his report of God's work or face God's imminent judgment. The echo in Acts 15:3 recalls this same prophetic function but in another setting for another Jewish audience—this one Christian. The urgency of the present situation is framed by Luke's rhetorical shaping of its rejection thematic in Acts. Recalling a conventional formulation of rejection, God's messenger is sent twice to visit the people; a people are graciously given two chances to accept God's saving word. The first time the people reject the prophet, only then to return again in greater power to determine once for all the redemptive status of his people (Acts 7:35-39; cf. Acts 3:15-20). Consistent with this narrative thematic in Acts, Paul's poor reception by the Jews in Pisidia on "the next sabbath" (Acts 13:44-45) leads Paul to condemn them as "unworthy of eternal life" (Acts 13:46).

The currency of the prophecy from Habakkuk in this new narrative setting adds another layer of meaning to our perception of the real crisis settled at the Jerusalem council. The rhetorical effect of placing the echo (Acts 15:3) between a repetition of the conflict thematic (Acts 14:27—15:2; 15:4-5) is to stress the urgency of Paul's report for those very Jewish believers who protest the terms of his mission. Recall also that Peter's conversion of the Gentile Cornelius, rehearsed again at the Jerusalem council (Acts 15:6-11), has already been criticized by a similar group in the Jerusalem church (Acts 11:2). The apparent resolution of this earlier intramural conflict in Jerusalem is obviously short lived; the volume of their protest seems to have escalated from "criticism" (Acts 11:2, *diakrinomai*) to outright "conflict" (Acts 15:2, *stasis*). In effect, the importance of the Jerusalem council is to give this particular group of Jewish believers another chance to respond favorably to Peter's second

report of what God is doing among the Gentiles (Acts 15:6-11), which is strengthened by Paul's direct testimony (Acts 15:12). The subtext of the Jerusalem council according to Acts comes to light by this echo of the prophetic text: the failure of certain Jewish believers to accept the divinely appointed work of Paul among the Gentiles, which he along with other witnesses reports to them, will surely result in divine judgment and perhaps even the forfeiture of eternal life (cf. Acts 13:46).

ISAIAH SCROLLS (1QISAIAH^{a,b})

The manuscripts 1QIsaiah^a and 1QIsaiah^b are two Hebrew scrolls of the book of Isaiah found in Cave 1 at *Qumran, near the northwestern shore of the Dead Sea in 1947, and they are two of the most important and dramatic scrolls discovered. 1QIsaiah^a is the only biblical scroll completely preserved. These two scrolls were among the first ones published, thus exerting great influence in biblical studies, and they provided with abundant and unmistakable evidence two of our principal insights into the biblical text in antiquity. Moreover, the discovery of these scrolls was important because Isaiah served the NT authors as one of the richest resources for understanding and portraying Jesus. Finally, the numerous Isaiah scrolls recovered at Qumran showed that the NT's heavy and pervasive use of Isaiah fit into a larger context shared by other Jewish groups at the time.

The discussion that follows will examine the character of these two manuscripts, their place within the context of other Isaiah scrolls, what

they have taught us about the development of the biblical text and their significance for NT studies.

1. The Character of 1QIsaiah^a and 1QIsaiah^b
2. The Other Isaiah Scrolls
3. History of the Biblical Text
4. Significance for New Testament Studies

1. The Character of 1QIsaiah^a and 1QIsaiah^b.

1.1. 1QIsaiah^a. Except for a few minor lacunae here and there 1QIsaiah^a preserves the full sixty-six chapters of the biblical book in their entirety; no other biblical manuscript is even half so well preserved. This scroll also can claim to be the oldest manuscript of the book of Isaiah, dating from about 125 B.C. Its text differs in more than a thousand instances from the received Masoretic Text (MT) of Isaiah, though mostly in minor ways. Although many of these differences are of minimal significance, some are dramatic, showing that the MT has incorporated whole sentences or more as the text developed through history.

1.1.1. Types of Variants. The most frequent type of difference is in orthography (i.e., alternate legitimate spellings of the same word, parallel to "honor"/"honour" or "catalog"/"catalogue"). But every category of text-critical variant is displayed: differences in person, gender or number; misspellings, accidental omissions or additions; different word, phrase or verse division; synonyms, minor clarifications, euphemistic or derogatory substitutes, attempts at smoothing or harmonizing. In all these categories, sometimes the traditional MT has the correct form, but sometimes 1QIsaiah^a has the correct form and offers valuable evidence for Bible translators.

1.1.2. Examples of Significant Variants. Two of the many large variants illuminated by 1QIsaiah^a are these:

Isaiah 2:9b-10: Do not forgive them! Enter into the rock and hide in the dust before the terror and glorious majesty of the Lord.

This verse and a half are not yet in 1QIsaiah^a and show that the MT and the *Septuagint (LXX) have incorporated a secondary addition.

Isaiah 2:22: Cease dealing with humans, who have only breath in their nostrils, for of what account are they?

This verse is in 1QIsaiah^a and the MT but

not in the LXX, showing that the Hebrew text behind the Greek version had not yet incorporated this secondary reflection.

1.2. 1QIsaiah^b. Dating from the turn of the era and surviving only in fragments, 1QIsaiah^b is much closer to what scholars at mid-century expected (see 4.1 below). It agrees with the consonantal text transmitted in the MT much more closely than 1QIsaiah^a does; it is often described as virtually identical with the MT. But there are more than a hundred differences in orthography and more than another hundred textual variants, mostly minor. There are also more variants than usually thought because its (twentieth-century) editor apparently supplied from the MT letters that were minimally preserved; often they are correct, sometimes not.

2. The Other Isaiah Scrolls.

2.1. Scrolls from Other Caves. The main cave at Qumran, Cave 4, provided eighteen more fragmentary copies of Isaiah (4QIsa^{a-f}). A couple of small fragments of one more copy were found in the adjacent Cave 5, and a cave at Murabba'at to the south yielded fragments of yet another. These twenty-two manuscripts of the book of Isaiah comprise about 10 percent of the approximately 227 biblical scrolls, and they show a spectrum of variants that range between the many of 1QIsaiah^a and the comparably few of 1QIsaiah^b.

2.2. Scrolls with Commentaries on Isaiah. Already at Qumran the concept of commentaries on books of Scripture is documented. The *Rule of the Community mandates study of the biblical texts one-third of the nights (1QS 6:6-8), and the community attests its obedience to this rule in the form of *pesharim ("commentaries"). Short portions of a prophetic text are quoted sequentially, each followed by an interpretation of that passage unique to the particular circumstances of the community and its history or destiny; the interpretation is generally not interested in the original meaning intended by the *prophet but in the application of the prophetic word to the events taking place in the end time in which they were living (see Pesharim). One such commentary was found in Cave 3 (3Q4) and five in Cave 4 (4Q161-165), for a total of six commentaries on Isaiah—more than on any other book.

3. History of the Biblical Text.

3.1. The Text of Isaiah and Other Individual

Books. The textual form displayed by 1QIsaiah^b and especially by 1QIsaiah^a demonstrated immediately upon their discovery that the biblical text in antiquity had been pluriform (see Hebrew Bible). Some scholars reacted by labeling 1QIsaiah^a "a vulgar text," relegating it to the margins in understanding the history of the biblical text. The assumption was that the MT was the real text and variation from it meant aberrance. But as scroll after scroll of other books was analyzed, it eventually became clear that there had been two phases in the development of the text. The overwhelming amount of variants, especially variant literary editions of many books, illustrated the earlier phase of textual pluriformity, when creativity was still at work. Qumran shows us the compositional process of the biblical texts still in their developmental phase. Clues for this first phase had been available all along in the Samaritan Pentateuch (see Samaritan Literature), the LXX and other sources, such as *Josephus's recasting of the biblical narrative in his *Antiquities*. The biblical text was pluriform when the NT authors were using it and quoting from it. 1QIsaiah^a and many other scrolls amply document and illustrate this first phase.

Then a second phase set in around the second Jewish revolt (A.D. 132-135; see Jewish Wars with Rome), a time that saw very little development in the Hebrew textual forms adopted by the rabbis. These latter became the texts eventually standardized and transmitted to modernity as the basis of most Bible translations. From the second century until the emergence of extant Masoretic manuscripts at the end of the ninth century, no evidence remains of growth in the Hebrew text, and it appears that the text preserved in that tradition transmitted the rabbinic text with amazing accuracy. But it must be kept in mind that only one form of the text as it existed in NT times has been transmitted. 1QIsaiah^b illustrates the form that has been transmitted by the rabbis.

3.2. The Collection of Books of the Law and the Prophets. During the life of Jesus and the composition of the NT, just as the text of the Scriptures (i.e., the OT) was still pluriform, so too the collection of Scriptures (what would become the canon) was largely but not fully established. The NT term for the collection is "the Law and the Prophets," the latter probably including more than is now placed in that category. Only in

Luke 24:44 does there begin to be a mention of more: "all must be fulfilled that is written in the law of Moses and the prophets and psalms about me."

4. Significance for New Testament Studies.

4.1. Apocalyptic Thought. The book of Isaiah was a major source for the Jewish *apocalyptic thinking that pervades the NT. Deutero-Isaiah had attempted to raise the morale of the Babylonian *exiles for salvation and return by promising salvation from their oppressors through God's "messiah" Cyrus (Is 45:1), heralding that God was planning a "new creation" (Is 65:17) and was about to do "new things" (Is 42:9; 43:19; 48:6). When read in subsequent centuries in similar situations of oppression, these appealing promises (Is 46:11) in the face of intolerable oppression provided fuel for the apocalyptic mindset. Moreover, it is not difficult to appreciate that the early Christians saw the promises as being actualized in their day (cf. Mt 1:22-23; 3:3).

4.2. Quotations of Isaiah in the New Testament. Just as the books of Psalms, Deuteronomy and Isaiah are the books with most manuscripts attested at Qumran, so too those three books rank the highest for NT quotations. Also, like the *Rule of the Community* at Qumran, all four Gospels (though with application to John the Baptist) quote Isaiah 40:3 for self-identity. NT authors and other Christians would probably find no difficulty with the statement in *4QFlorilegium 1:15: "as it is written in the book of Isaiah the prophet for the End of Days"; Luke lacks only the last element: "as it is written in the book of the words of Isaiah the prophet" (Lk 3:4).

4.3. Reliability of the Septuagint. The LXX was the form of the OT predominantly used by NT authors. Frequently 1QIsaiah^a and other scrolls provide readings in Hebrew that confirm the LXX as a faithful translation of its ancient Hebrew parent text, though it may differ from the form transmitted in the MT. The reputation of the LXX had suffered when compared with the MT due to the assumption that the MT was the single, original Hebrew text. But 1QIsaiah^a provides a much more realistic image of the Hebrew text and its challenges which the Greek translator worked with than does *Biblia Hebraica Stuttgartensia* with its clear print, accents, verse divisions and stichometric arrangement.

4.4. Pervasiveness of Isaiah in the Portrait of Jesus. In composing the kerygma, from before

his birth (cf. Mt 1:22-23) to after his resurrection (cf. Lk 24:44-45), the NT authors found in the book of Isaiah one of the most potent resources and illustrations that "God does nothing without revealing his plan through his servants the prophets" (Amos 3:7). From antiquity God had foreshadowed through the prophet's words: his birth from the virgin who would name him Emmanuel (Is 7:14 = Mt 1:22-23); John the Baptist as "the voice of one announcing in the wilderness" to prepare his way (Is 40:3 = Mt 3:3; Mk 1:3; Lk 3:4-6; Jn 1:23; cf. 1QS 8:13-14); the Spirit of God upon him and the voice at his baptism (Is 11:2; 42:1 = Mt 3:16-17); the reading from the scroll of Isaiah (which would have looked much like 1QIsaiah^a) in the Nazareth *synagogue, inaugurating his ministry (Is 61:1-2; 58:6 = Lk 4:16-21); and numerous similar features up to his death as the Suffering Servant (Is 52:13-53:12); and after his death and resurrection, for the two disciples on the road to Emmaus, undoubtedly playing a prominent role in their "opening of minds to understand the Scriptures" (Lk 24:44-46).

ISRAEL, LAND OF

The land of Israel evokes thematic and theological concepts, quite apart from mere geographical issues. The "land" alludes to God's promise to Abraham and becomes a symbol of Israel's covenant. This tradition is rooted in Scripture itself, but is extended in important ways in later traditions.

1. Hebrew Biblical Evidence
2. Apocrypha and Pseudepigrapha
3. Qumran Scrolls
4. New Testament
5. Rabbinic Literature

1. Hebrew Biblical Evidence.

The term *Israel*, Hebrew *Yisra'el*, was used in the Hebrew Bible as the collective name for the twelve tribes who traced their ancestry to Jacob. His name was changed to Israel after he wrestled with an angel (Gen 32:28; 35:10). The Israelites were also known as "children of Israel,"

often translated "people of Israel." While this term often designated the nation as a whole, during the period of the divided monarchy (924-721 B.C.), it referred only to the northern kingdom, as distinct from Judah, the southern kingdom. After the destruction of the North, the term *Israel* was again used for the entire people. In accord with this usage, the land occupied by the people of Israel was termed the land of Israel in the Prophets and the Writings. In Second Temple Jewish sources, Israel was synonymous with the Jewish people (or with the nonpriestly and nonlevitical members of the Jewish people), and the term *land of Israel* (Hebrew *Eretz Yisrael*) was used to denote its ancestral homeland.

In the biblical account, God promises Abraham a land that will be given to his descendants. Genesis 15:18-21 states that Abram's descendants, who had previously been likened to the stars of the heavens in number, will inherit the land between the Nile and the Euphrates (Gen 15:18), which was then in the hands of various Canaanite peoples. In fact, in Genesis 12:5 and 23:2 it is known as the land of Canaan. Numbers 34, however, excludes the territory of Transjordan, following the borders of the Egyptian province of Canaan. Abraham is assured that the land will be his and his descendants' "for an everlasting possession" (Gen 17:8). Deuteronomy further confirms this promise (Deut 4:40). The commandments given at Sinai are to be scrupulously observed in the land that the Israelites will enter. In fact, the commandments are the means by which the land will be governed, and they include laws directly relating to the land such as sabbatical (Ex 23:10-11) and Jubilee years (Lev 25:8-55).

Abandonment of the commandments will cause the land to expel its inhabitants (Lev 22-26), a judgment that was meted out to the undeserving nations that preceded the Israelites (Deut 9:45). Joshua 23:13-14 states that one such severe transgression would be the intermarriage of Israelites with the people who inhabit the land. Leviticus cites contact with unclean beasts (Lev 20:22-26) and harlotry (Lev 19:29), and Deuteronomy adds the shedding of innocent blood (Deut 21:69) and the prohibition of leaving a corpse hanging overnight (Deut 1:22-23). All of these things, and other transgressions, defile the Holy Land.

The concept of the holiness of the land is intrinsic and is not linked merely to the biblical

commandments. The *Torah understands the Israelite victory as succeeding in part because the land itself was so holy that it vomited out the inhabitants who defiled it by their abominable practices (Lev 18:28; Deut 9:45). Yet Moses assures the people that even the neglect of the commandments will not utterly negate God's promise. The children of Israel cannot be destroyed, and the land is a heritage for all time (Deut 9:24-29).

The land belongs to God himself, who states in Leviticus 25:23: "The land shall not be sold in perpetuity; for the land is mine; for you are strangers and sojourners with me." God demands the tithes and the firstfruits as owner of the land. In fact, God himself conquered the land for the Israelites. He helped Joshua win each and every military victory, but in Exodus 23:29-30 he also allowed the Canaanites to be driven out gradually so that the land would not suffer for lack of inhabitants. Indeed, in Joshua 24:13 we are reminded that the land given to the Israelites already had cities, vineyards and olive groves on it which the people were able to take advantage of although they did not construct them. As described in Numbers 26:52-56; Joshua 11:23; 13:78 and Ezekiel 48:29, when the tribes of Israel had taken possession of the land, they were to divide it up and distribute it by tribe. Only the tribe of Levi did not receive this property, but instead they were given certain levitical cities, ministered in the temple and received tithes.

The Hebrew Bible often refers to the promised land as the "land of milk and [date] honey" (Ex 3:17). The presumption here is that God bequeathed to his people a land blessed with abundant produce. In Deuteronomy 11:10-12 we are told that it is a well-irrigated land with ample crops, blessed also with natural resources in the form of metals.

The period of the judges was a struggle, mainly with the Philistines, over the land, and Israel's victories were understood to depend on their obedience to God. Judges 1:1-2:5 accuses the Israelites of failure to dispossess the Canaanites and subsequent intermarriage with them (Judg 3:5-6). In Samuel and Kings the empire of David and Solomon is established, and later kings are measured by David's faithfulness. When they fall short, it is inevitable that the land will suffer devastation and its inhabitants will be exiled. The prime example of injustice in distrib-

uting the land and its produce is Ahab's confiscation of Naboth's inheritance (1 Kings 21).

The prophets Amos, Isaiah and Micah castigate the people for abuse by the powerful against the small landowners and announce that God will punish his people with exile. Hosea and Jeremiah add the sin of idolatry. Jeremiah 38:2 depicts the exile as God's will, for most Israelites are forced to live in Babylon, and the minority who remain in Jerusalem perish.

Nevertheless Jerusalem will not be forgotten, and the promise to return to her will not be abnegated. The children of Israel will yet return to their land. Several prophets foretold restoration—Hosea, Isaiah, Ezekiel and Amos. Amos 9:14-15 expresses a vision of the restoration of Israel, of rebuilt cities and fruitful gardens, in which Israel is God's plant: "I will plant them upon their land, and they shall never again be plucked up out of the land which I have given them," says the Lord your God." The dispersed and exiled of Israel will be reunited in their own land, and the land shall be cleansed of its abominations which caused the dispersion. Furthermore, Israel and God shall be reconciled, and the land will become fertile, peaceful and secure. Isaiah 9:7 would restore the house of David to rule over the newly established kingdom.

The restoration of Israel to its land redounds to the honor of God whose promises must be fulfilled before the nations. One of the themes of Ezekiel is the ingathering of the dispersed from the lands to which they were taken by their captors. In Ezekiel 17:22-23 God takes a sprig from the top of a cedar and plants it on the mountain to become a noble tree representing the reestablishment of the people of Israel on their land. Ezekiel 48:18, 23-27 sets out an idealized view of the reallocation of the land to the tribes of Israel which differs from that in the book of Joshua. Ezekiel assumes that each tribe occupies an east-west strip of land so that the entire country is covered.

In every prophetic message the prophecy of judgment and doom is tempered by the prophecy of consolation and restoration. Like the dry bones in Ezekiel's vision (Ezek 37:1-14), the old community of Israel will be restored, and from it the future generations will grow and flourish. The land will be cleansed of its pollution and sin, and it will welcome home its scattered people and become repopulated. Isaiah announces

a second exodus through the wilderness to the promised land. God, who had "exiled" himself along with his people, returns to dwell in Jerusalem (Is 52:8), the center of the earth. The primary emphasis turned to the restoration of the temple and its cult and the rebuilding of the city of Jerusalem.

2. Apocrypha and Pseudepigrapha.

The connection of the people of Israel and the land of Israel in the *Apocrypha and pseudepigrapha is strong. The term *Holy Land* appears in Wisdom of Solomon 13:3, 4, 7 and 2 *Baruch* 65:9-10, and the land is praised for its goodness (Tob 14:45; *Jub.* 13:2, 6), pleasantness (*1 Enoch* 89:40) and beauty (*Ep. Arist.* 107). *Jubilees* makes the connection between the failure to obey God's commandments and the punishment of forfeiture of the land (*Jub.* 6:12-13). Wisdom 2:7 and *1 Enoch* 90:20 associate the punishment of the Canaanite inhabitants for their sins with the conquest of their land by the Israelites. The Apocrypha and pseudepigrapha strengthen the idea that God will be vindicated in the sight of the nations of the world by the restoration of his people to the land. *Psalms of Solomon* 17:26-28 prophesies that God will fulfill all his promises by gathering his people together, planting them in the land according to tribe, and since they are all righteous, he will banish the aliens and wicked from among them. The land itself will protect its inhabitants, and that land will be surrounded by God's presence (2 *Bar.* 9:2; 71:1). 4 *Ezra* 9:79 and 13:48 states that at the end of days, the saved shall be those who dwell within the borders of the land of Israel. There will be erected the throne of God (*1 Enoch* 90:20) to stand for all time.

3. Qumran Scrolls.

The biblical usage of the expression *land of Israel* (*Eretz Yisrael*) became increasingly prominent in the Second Temple period and is used in the scrolls. This expression occurs only rarely in the preserved Qumran scrolls (cf. 4Q382, para-Kings frag. 1 4 [restored]). Often the area of Judea is termed "land of Judah" in the scrolls, apparently a reference to the political realities of the Greco-Roman period. In 4QMMT B, *land of Israel* serves as a legal term for the area which is subject according to Jewish law to the laws of tithing of produce and the offering of fourth-year produce. While this legal usage certainly in-

dicates a geographical entity, it need not assume a governmental or administrative significance. In the *Temple Scroll* (11QTemple 58:6) it is used as a geographical and governmental term for the area under the sovereignty of the ideal king of Israel, whose constitution is set forth in the law of the king (11QTemple 56—59).

The *Temple Scroll* presents an ideal vision of how the people of Israel should live in the land of Israel. Throughout, the author is informed by a notion of concentric spheres of holiness, as well as by distinct concern for the sanctity of the entire land of Israel as sacred space. The preserved portion of the *Temple Scroll* begins with the assertion of God's covenant with Israel regarding the land of Israel (11QTemple 2), a motif that was common in the Hebrew Bible, as noted above. This section, adapted from Exodus 34:10-16 and Deuteronomy 7:5, 25, relates that God will expel the Canaanite nations from the land of Israel. The Israelites, in turn, are commanded to destroy pagan cult objects and to avoid any covenants with the Canaanite nations since such alliances would lead to *idolatry and intermarriage. The laws of war in the scroll (11QTemple 60:9-16) concern the destruction of the pagan inhabitants of the land as well.

The notion that Israel is given the land conditionally also appears in the scroll. Bribery and corruption in judgment must be avoided, "in order that you might live, and come and take (or retain) possession of the land which I am giving you as a possession for ever" (11QTemple 51:15-16). In other words, judicial corruption will result in the destruction of the land and exile. Only after repentance will Israel return to its land (11QTemple 59:2-11).

For the *Temple Scroll*, the central point of the land of Israel was the temple and the surrounding complex. The scroll provides for a temple plan of very different proportions from that which existed in First or Second Temple times. This new temple plan would be characterized by the enclosure of the temple building itself by three concentric courtyards. This entire plan has behind it the assumption that the temple is the center of sanctity for the entire land. The scroll makes clear repeatedly that it is the indwelling of the divine presence in the temple which imparts to the land this level of sanctity.

Beyond the temple city which, for the scroll, symbolized the desert camp, was located the hinterland of Israel. Ezekiel had adopted an

ideal view of the land but for its author it is most likely that the tribes were to dwell outside the respective gates through which they were to enter the temple precincts. Indeed, it was through these gates that the tribal territory was to be tied to the sanctity of the central shrine and the divine presence which dwelled there.

The *Temple Scroll* envisaged the people, including priests and Levites, as living in the cities of Israel, which were to be scattered about the central sanctuary, each tribe opposite its respective gate. Burial in the cities was forbidden (11QTemple 48:11). Burial places were to be set aside one for each four cities (11QTemple 48:11-13). The limitation of burial to specified places was designed to avoid rendering the land impure (11QTemple 48:10).

All in all the authors of the various sectarian texts found at Qumran saw both the people and land of Israel in ideal terms. They expected that as the true Israel, separated from both errant Jews and from the non-Jewish world, they could live a life of perfect holiness and sanctity in their ancestral land. Yet in the eyes of the author/redactor of the *Temple Scroll*, this land, even before the end of days, had to be reconfigured and idealized in order to represent the level of holiness to which the sectarians aspired.

4. New Testament.

The land of Israel is not a major theme in the NT (see *DLNTD*, Land in Early Christianity). In fact, the exact phrase, "land of Israel," occurs only in Matthew 2:20-21, where the angel directs Joseph to return to Israel. However, there are important allusions in Hebrews 3—4, where the author warns Jewish Christians not to fall away from faith in Christ and so fail to enter God's "rest." This exegesis is based on Psalm 95:7-11, which itself is a reflection on Israel's wilderness wanderings. The implication is that if God's people obey the voice of the Lord, they will enter God's "rest," which is a theologized development of the promised land (see Davies).

5. Rabbinic Literature.

Rabbinic literature presumes a close connection between the land of Israel and the people who called it their ancestral land. *Mishnah Halla* 4:78 debates the borders of the land subject to the tithe. The halakic relevance of the Torah's commandments pertaining to agricultural produce in the land of Israel continued to occupy the

sages throughout late antiquity.

Although Philo had said that Jewish "colonies" were established because the land of Israel was overpopulated, some rabbis strongly condemned those who left the land, even to perform a commandment (*y. Mo'ed Qat.* 3:81c). Demonstrations of love of the land, such as kissing the ground on arriving there, are found in rabbinic literature, and praises of the land point to its superior attributes. The ritual and historical centrality of the land for many early rabbinic sages was a major part of their religious outlook.

Nevertheless, statements by tannaim who lived before the Bar Kokhba revolt (see Simon ben Kosiba), Yohanan ben Zakkai, R. Joshua, R. Eliezer, R. Eleazar ben Azariah, and R. Akiba, actually express minimal praise of the land in supernatural terms and do not allude often to the centrality of the land and Jewish commitment to live there. Babylonia is even mentioned as another possible Jewish homeland. But Eleazar ha-Moda'i states that the land of Israel is a reward for keeping the sabbath (*Mek. Beshalah*).

The disciples of Rabbi Akiba, who lived after the Bar Kokhba revolt, however, begin to stress the requirement to live in the land of Israel and not to leave it, it being preferable to live in the land in a town inhabited mostly by Gentiles than in a Jewish town outside the land (*t. 'Abod. Zar.* 4:3). A statement attributed to Shimon Bar Yohai (*t. 'Abod. Zar.* 4:4) derives the necessity of staying in the land of Israel from Ruth 1:1. There we read that Elimelech left during the famine, but he and his sons died in exile while the inhabitants of the land were ultimately sustained. *Tosefta Ketubbot* 12:5 rules that in a *marriage the law is on the side of either party who wishes to force the other to stay in the land or to immigrate there. Laws concerning the possession of confiscated land (*sararicon*) listed in Mishnah tractate *Gittin* 5:6 also are constructed to try to maintain the Jewish presence in the land after the devastation of the Bar Kokhba revolt. These laws made it easier for a Jew to purchase property when the original Jewish owner was illegally dispossessed of his land and was no

longer present. It was known that even some significant *rabbis went abroad after the revolt. *Tosefta 'Aboda Zara* 4:3 declares that "dwelling in the land of Israel is equivalent to (observing) all the commandments." Their opinions were an expression of commitment to the land for fear that the majority of its inhabitants would no longer be Jewish, and the Jewish claim to the land would be whittled away. According to *Sifre Deuteronomy* 333, "he who lives in the land of Israel, recites the Shema morning and evening, and speaks in the holy tongue is assured of his place in the next world."

While these statements applied to times of economic distress, *Tosefta 'Aboda Zara* 4:5 emphasizes that it is even more important to live in the land in times of relative well-being. *Tosefta Berakot* 3:15 teaches that those who live abroad must direct their prayers toward the land of Israel, and within its boundaries toward Jerusalem, the site of the temple.

All of these texts refer to an actual land, not a spiritualized land. This is the case even in passages that refer to idealized schemes or messianic times. This land would have at its center the Jerusalem temple, which was for classical Judaism a symbol of God's eternal spiritual presence among them.

JEREMIAH, ADDITIONS TO. See DANIEL, ESTHER AND JEREMIAH, ADDITIONS TO.

JERUSALEM

Jerusalem, the Holy City, is sacred to Judaism, Christianity and Islam, three of the world's monotheistic religions. Located in Israel 25 miles east of the Mediterranean Sea, Jerusalem is perched atop the central north/south mountain range at an elevation of approximately 800 meters and is not on a major trade route. Near the Judean desert, the climate is arid; the land is poor for agriculture and without valuable minerals. However, the limestone has for thousands of years provided excellent building material. The limited fresh water for the ancient city came from the Gihon Spring in the Kidron Valley to the east. Numerous cisterns supplemented this supply.

1. Early History
2. Hellenistic Period
3. Roman Period
4. Jerusalem in the New Testament

1. Early History.

The oldest literary mention of Jerusalem is in the Egyptian Execration Texts (nineteenth to eighteenth centuries B.C.) and in the Amarna Tablets (fourteenth century). Assyrian texts record Sennacherib's siege of Jerusalem (*Ursalimmu*) in 701. The first specific biblical reference to Jerusalem is in Joshua 10:3, where King Adonizedek organized a coalition of five Amorite kings to attack Gibeon. Joshua defeated them. Also, Genesis 14:18 identifies Melchizedek as the king of Salem, probably an abbreviated reference to Jerusalem (see Ps 76:2).

The etymology of the name *Jerusalem* (Heb. *y'rūsālayim*) is disputed but appears to be Western Semitic or Canaanite and means "founded

or established by the god Salem," a god mentioned in the Ugaritic texts (fourteenth century B.C.).

Pottery dated to the Early Bronze Age indicates that the earliest settlement of Jerusalem was on the Ophel ("bulge") west of the Gihon Spring between 3000 and 2000 B.C. It is difficult to reconstruct the history of the city from archaeological evidence due to several destructions and continuous rebuilding and expansions. David captured the Jebusite city in 1000 B.C. and made Jerusalem the capital of his kingdom, combining political and religious authorities. The City of David initially included about 12 acres with a population of one thousand but was soon enlarged to 15 acres to accommodate the growing number of residences. Solomon extended the city limits to incorporate 32 acres in order to provide adequate space for the temple and his own palace as well as other major constructions.

The civil war following Solomon's death (922 B.C.) divided the united kingdom into northern and southern kingdoms with Jerusalem continuing as the capital of the south and the seat of the Davidic dynasty. In 598 B.C. the Babylonians, led by Nebuchadnezzar, captured and plundered Jerusalem and subsequently destroyed the city in 587 B.C., taking the most influential and skilled people into Babylonian captivity. A half century later (539 B.C.) Babylon fell before the onslaught of Persia. The new ruler, Cyrus II, issued an edict (538 B.C.) granting permission for the Jews to return and rebuild Jerusalem. The importance of the city derived primarily from its religious heritage rather than its political influence. Zerubbabel, the governor and a descendant of the royal house of David, rebuilt the temple (Second Temple) and dedicated it in 515 B.C. Jerusalem under enlightened Persian rule

enjoyed political stability and prosperity, although tensions sharpened between the Jews who returned from Babylonian exile and those who had stayed behind in Jerusalem (see Jewish History: Persian Period).

2. Hellenistic Period.

The capture of Jerusalem by *Alexander the Great (332 B.C.) ushered in the Hellenistic period (332-63 B.C.). Following Alexander's death (323 B.C.), Jerusalem came under the successive control of two dynasties established by his generals, the *Ptolemies in Egypt (c. 320-198 B.C.) and the *Seleucids in Syria (198-135 B.C.). The pervasive and attractive influence of Hellenization precipitated a conflict between the Jews who embraced Greek culture—building a stadium (see Athletics) and *gymnasium in Jerusalem and renaming the city Antioch—and those Jews violently opposed to Hellenization (see Jewish History: Greek Period).

The Seleucid rulers initially tolerated Jewish customs and religious practices, even providing financial support to restore the temple and rebuild Jerusalem. Taxes were suspended for three years. Jason, the high priest, promoted Hellenization and reorganized Jerusalem as a Greek city-state (*polis*). The Seleucids did not force Hellenization on the Jews, but those who welcomed Hellenistic culture, adopting Greek styles and values, provoked the open antagonism of the anti-Hellenists.

Smoldering resentment flared into open rebellion when Mattathias, an old Jewish priest, aided by his five sons, initiated a revolt in 167 B.C. to prevent the spread of Hellenization. Antiochus IV Epiphanes, the Seleucid king, attempted to crush the insurrection and end Jewish religious practices. He captured Jerusalem, confiscated the temple gold and dedicated the temple to Olympian Zeus. Leadership of the resistance movement fell to Judas, one of the five sons who received the name Maccabeus (the "hammer") because of his successful guerrilla tactics. In 164 B.C. he recaptured Jerusalem, purified the sanctuary and reinstated *sacrificial rites—an event commemorated at Hanukkah. For a century Jerusalem remained the capital of Judea enjoying political and religious freedom under *Hasmonean rule. The Hasmoneans were a dynasty of priest-kings named for Hasmon, the tribal surname of Mattathias. In 63 B.C. the Roman general Pompey settled a dis-

pute between rival Hasmonean factions by annexing Judea to Rome, thus bringing Hasmonean rule under Roman protection (see Jewish History: Roman Period).

3. Roman Period.

The Roman senate appointed *Herod the Great king of Judea in 40 B.C. Herod returned to Judea, gathered an army and captured Jerusalem in 37 B.C., sending the last Hasmonean king, Antigonus, to Antony to be executed. Once in control of Jerusalem Herod launched several massive and extensive building projects (see Archaeology of the Land of Israel). He extended and fortified the city walls. The Baris, the Hasmonean fortress north of the Temple Mount, was renovated and named The Antonia in honor of his friend and benefactor Marc Antony. Herod constructed his own secure and luxurious palace, the Citadel, in the Upper City near the present-day Jaffa Gate, where the wealthiest and most prominent people resided. A new aqueduct brought water from pools near Bethlehem, greatly improving Jerusalem's water supply.

Following Octavian's (Augustus's; see Roman Emperors) defeat of Antony and Cleopatra on September 2, 31 B.C., in the naval battle fought off the western coast of Greece near Actium, Herod skillfully switched his loyalty and support from Antony to Octavian. To commemorate this decisive victory, Herod celebrated the Actium Games in Jerusalem. He constructed the necessary buildings—a *theater, amphitheater, hippodrome and even a zoo—and awarded lucrative prizes to the winners of competitions. The elaborate spectacles greatly pleased the Romans and Hellenists but further alienated the more conservative Jews.

Courting Jewish favor, Herod began in 20 B.C. to rebuild the temple, the centerpiece of his vast urban renewal project (see below). He doubled the size of the temple platform to 34 acres by constructing massive retaining walls of huge embossed ashlar laid without mortar. The western wall (*kolle*) stands today as a silent witness to the skill of Herod's architects and engineers.

Following Herod's death in 4 B.C., his son Archelaus became ethnarch (ruler of a people) of Judea and Samaria and ruled ineptly for a decade until he was removed from power and replaced by Roman prefects who transferred the capital to *Caesarea Maritima, Herod's seaport on the

Mediterranean. Pontius Pilate, who condemned Jesus to crucifixion, was one of a series of prefects (see Roman Governors of Palestine). The last prefect, Gessius Florus, stole from the temple treasury and provoked a revolt (A.D. 66) that resulted in the destruction in A.D. 70 of Jerusalem and the temple by Roman troops led by Titus (see Jewish Wars with Rome). The Tenth Legion was stationed in Jerusalem to enforce the peace.

Hadrian visited Jerusalem in A.D. 129-130 and rebuilt the city on the plan of a Roman military camp. On the Temple Mount he erected a temple dedicated to Jupiter Capitolinus and nearby a second temple honoring the goddess Aphrodite. Hadrian renamed Jerusalem Aelia Capitolina, a designation that combined one of his names with Rome's Capitoline triad: Jupiter, Juno and Minerva. Hadrian's actions and policies provoked a second revolt by the Jews in A.D. 132. Led by Bar Kokhba, the Jewish troops succeeded in taking control of Jerusalem briefly but were soon (A.D. 135) crushed by the superior Roman army. After this decisive defeat it became a capital offense for a Jew to set foot in Jerusalem.

4. Jerusalem in the New Testament.

In Jerusalem Jesus meets his fate, a possibility that he evidently anticipated: "Behold, we are going up to Jerusalem; and the Son of Man will be delivered to the chief priests and the scribes, and they will condemn him to death and deliver him to the Gentiles" (Mk 10:34; cf. Mt 23:37: "O Jerusalem, Jerusalem, killing the prophets and stoning those who are sent to you!"). The Christian church begins in Jerusalem, having awaited the empowerment of the Holy Spirit (Acts 1:4-5, 8; 2:4, 17-18) and having begun the proclamation of the resurrection of Jesus on the day of Pentecost (Acts 2:14-38). (See *DJG*, Archeology and Geography.)

Paul refers to Jerusalem ten times in his epistles. In Romans 15:19 he claims that "from Jerusalem and as far round as Illyricum I have fully preached the gospel of Christ." The apostle is especially concerned with the Gentiles' gift of aid for the church of Jerusalem (cf. Rom 15:25-26, 31; 1 Cor 16:3). But in Galatians he refers to Jerusalem in an allegorical sense (Gal 4:25-26).

Jerusalem is the venue for one, possibly two important church councils, concerned with the question of the admission of Gentiles into the Church (Acts 11) and of how Gentiles should be-

have (Acts 15). James, the brother of Jesus, emerges as the leader of the church centered in Jerusalem. With the destruction of Jerusalem in A.D. 70 the Jewish branch of the church begins to decline and is eventually eclipsed by Gentile Christianity.

JESUS BEN ANANIAS

According to *Josephus (*J.W.* 6.5.3 §§300), during the Feast of Tabernacles in the year A.D. 62 "one Jesus son of Ananias, an untrained peasant" stood in the *temple precincts and "suddenly began to cry out, 'A voice from the east, a

voice from the west, a voice from the four winds, a voice against Jerusalem and the sanctuary, a voice against the bridegroom and the bride, a voice against all the people." Jesus' words are based on Jeremiah 7:34: "I will bring to an end the sound of mirth and gladness, the voice of the bride and bridegroom in the cities of Judah and in the streets of Jerusalem; for the land shall become a waste." The citizens of *Jerusalem were incensed, especially those of the upper class. Jesus was seized and beaten but still continued his plaintive cry. Finally, the "rulers" (by which Josephus probably means ruling *priests) brought Jesus before the Roman governor Albinus, who questioned and flogged the prophet of doom. Convinced that the man was a harmless lunatic, the governor released him (see Roman Governors of Palestine). Jesus ben Ananias continued his gloomy ministry for seven years, especially crying out during the *feasts, until he was struck and killed by a Roman siege stone in A.D. 69, less than a year before the city was captured and destroyed (see Destruction of Jerusalem).

There are several important parallels between the temple-related experiences of Jesus of Nazareth and Jesus son of Ananias. Both entered the precincts of the temple (*to hieron*: Mk 11:11, 15, 27; 12:35; 13:1; 14:49; Josephus *J.W.* 6.5.3 §301) at the time of a religious festival (*heortē*: Mk 14:2; 15:6; Jn 2:23; Josephus *J.W.* 6.5.3 §300). Both spoke of the doom of Jerusalem (Lk 19:41-44; 21:20-24; Josephus *J.W.* 6.5.3 §301), the sanctuary (*naos*: Mk 13:2; 14:58; Josephus *J.W.* 6.5.3 §301) and the people (*laos*: Mk 13:17; Lk 19:44; 23:28-31; Josephus *J.W.* 6.5.3 §301). Both apparently alluded to Jeremiah 7, where the prophet condemned the temple establishment of his day ("cave of robbers": Jer 7:11 in Mk 11:17; "the voice against the bridegroom and the bride": Jer 7:34 in Josephus *J.W.* 6.5.3 §301). Both were "arrested" by the authority of Jewish (Horsley, 451)—not Roman—leaders (*syllambanei*: Mk 14:48; Jn 18:12; Josephus *J.W.* 6.5.3 §302). Both were beaten by the Jewish authorities (*paiein*: Mt 26:68; Mk 14:65; Josephus *J.W.* 6.5.3 §302). Both were handed over to the Roman governor (*ēgagon auton epi ton Pilato*: Lk 23:1; *anagousin . . . epi ton . . . eparcho*: Josephus *J.W.* 6.5.3 §303). Both were interrogated by the Roman governor (*eperōta*: Mk 15:4; Josephus *J.W.* 6.5.3 §305). Both refused to answer the governor (*ouden apukrinesthai*: Mk 15:5; Josephus *J.W.* 6.5.3 §305). Both were scourged by the gov-

ernor (*mastigoun/masti*: Jn 19:1; Josephus *J.W.* 6.5.3 §304). Pilate apparently offered to release Jesus of Nazareth but did not; Albinus did release Jesus son of Ananias (*apolyein*: Mk 15:9; Josephus *J.W.* 6.5.3 §305).

The experience of Jesus ben Ananias provides independent corroboration for the juridical process described in the NT Gospels. It also reveals how little tolerated were appeals to Jeremiah 7 and talk of judgment upon the temple. The initial reaction of Jewish and Roman authorities to Jesus of Nazareth is scarcely different from their reaction to Jesus son of Ananias. Had Albinus found the son of Ananias sane and dangerous, in all probability he would have had him executed as well. But in the case of Jesus of Nazareth, who entertained *messianic ideas and spoke of a new kingdom, who had a following, who challenged the polity of the chief priests and who evidently was found sane and dangerous, execution was deemed expedient.

JEWISH COMMUNITIES IN ASIA MINOR

By the NT period, there were numerous Jewish communities in *Asia Minor that testify to the diversity and strength of this part of the Jewish *Diaspora. We have evidence for Jewish communities in more than fifty places in Asia Minor, and doubtless there were many more. Some of these communities seem to have thrived, while others were small. Yet many were at home in Asia Minor while still exhibiting a strong Jewish identity. These communities provide significant evidence concerning Jewish identity, the importance of the synagogue, the place of Godfearers, the position of women in the community, the interaction between the community and the wider city and relations with Christians. Given the early and significant growth of Christian communities in Asia Minor, the literature of the NT

that is probably associated with Asia Minor in some way (John, Galatians, Ephesians, Colossians, the Pastoral Epistles, 1 Peter, the Johannine epistles and Revelation) and that Jewish communities were a significant feature of the context of early Christianity, our understanding of the NT will be enriched by a greater understanding of these Jewish communities in Asia Minor.

1. Sources
2. The Beginnings and Extent of Jewish Settlement in Asia Minor
3. Synagogue Buildings in Sardis and Priene
4. Facets of Jewish Identity
5. Other Facets of the Life of the Jewish Communities
6. Conclusions

1. Sources.

Our main sources of evidence for Jewish communities in Asia Minor are literary, archaeological and epigraphic. *Sibylline Oracles* 1—2, written around the turn of the era, is the only literary document to be preserved whose provenance can be assigned to a Jew from Asia Minor. Other literary texts also provide evidence, particularly *Josephus, *Philo, Greco-Roman authors such as *Cicero and Strabo, the NT and early Christian writers such as Ignatius, Justin Martyr, Melito and the *Martyrdom of Polycarp*. Synagogue buildings have also been discovered in Sardis and Priene, and we have more than 135 Jewish *inscriptions from Asia Minor. Seven of these are in Hebrew, but the vast majority are in Greek and are grave epitaphs or concern donations to synagogues, although in some cases we cannot be certain of their Jewish provenance. This evidence is limited and often problematic, and much of it comes from after the first century A.D. The matters that are dealt with here are those for which we have the most significant evidence.

2. The Beginnings and Extent of Jewish Settlement in Asia Minor.

The earliest probably reliable evidence of Jewish settlement in Asia Minor comes from Josephus, who informs us that Antiochus III transferred two thousand Jewish families from Mesopotamia and Babylonia to Lydia and Phrygia as military settlers sometime between 210 and 205 B.C. (Josephus *Ant.* 12.3.4 §§147-53). These Jews were settled on favorable terms, such as being allowed to use their own laws,

which probably gave these new communities an opportunity to become well established.

First Maccabees 15:16-23 may indicate that by 139-138 B.C. Jews lived in the kingdom, cities and areas listed in Asia Minor, but this is disputed. We have evidence for a Jewish community in Pergamum between 139 and 95 B.C. from a decree of the city cited by Josephus (Josephus *Ant.* 14.10.22 §§247-55). Shortly after 88 B.C. Mithridates seized a huge amount of money on Cos; Josephus claimed the money had been deposited there for safe keeping by Asian Jews. If Josephus is correct about the origin of the money, then the Jewish communities in Asia had by this time accumulated significant financial resources (Josephus *Ant.* 14.7.2 §§110-14). In *Pro Flacco* 28.66-69, Cicero writes that in 62 B.C. the Roman governor Flaccus seized the Jewish *temple tax from Apamea, Adramyttium, Laodicea and Pergamum; in some cases the amounts were considerable. Josephus and Philo also preserve some generally authentic documents that provide evidence for a number of Jewish communities in Asia Minor. These were written by emperors, Roman administrators (see Roman Administration) or the cities themselves and are generally to be dated from 49 B.C. to A.D. 2/3 (Josephus *Ant.* 14.10.1-26 §§185-267; 16.6.1-8 §§160-78; Philo *Leg. Gai.* 315; cf. Josephus *Ant.* 16.2.3-5 §§27-61). They show that there were Jewish communities in *Ephesus, Halicarnassus, Laodicea, Miletus, Sardis and Tralles (cf. Philo *Leg. Gai.* 245, 281-82). A speech by Nicholas of Damascus shows some Jews in Ionia had a reputation for prosperity (Josephus *Ant.* 16.2.4 §§31-57; see Barclay, 268-69).

From the NT we have information about Jewish communities in Pisidian *Antioch, Iconium, Ephesus, Smyrna, Philadelphia and perhaps Lystra (Acts 13—14; 16:1-5; 18:19—19:41; Rev 2:9; 3:9), and Acts 2:9-10 and 6:9-15 indicate that Jews lived in Cappadocia, Pontus, Asia, Phrygia, Pamphylia and Cilicia. From some passages written by Ignatius early in the second century, we can probably infer the existence of Jewish communities in the vicinity of Philadelphia and Magnesia ad Maeander and their influence on local Christians (Ign. *Phld.* 6.1-2; 8.2; Ign. *Magn.* 8.1; 9.1-2; 10.1-3). Passages in the *Martyrdom of Polycarp* and the *Martyrdom of Pionius* give evidence for the Jewish community in Smyrna in the second and third centuries A.D.

• Synagogues have been discovered in Sardis

and Priene, and inscriptions often provide us with evidence for communities about which the literary sources are silent. We have particularly significant inscriptional evidence from Acmonia, Apamea, Aphrodisias, Corycus, Hierapolis and Sardis.

P. W. van der Horst (166-67) estimates that about one million Jews lived in Asia Minor in the first century A.D., and although this is only an estimate, it may be compared with the general estimate of the total Jewish population of the Diaspora at this time of five to six million.

3. Synagogue Buildings in Sardis and Priene.

Josephus preserved three decrees concerning the Jewish community in Sardis that suggest that in the first century B.C. the community was well established and had some autonomy and its own building (Josephus *Ant.* 14.10.17 §§235; 14.10.24 §§259-61; 16.6.6 §171). In 1962 the largest synagogue building extant from antiquity was discovered in Sardis. It was an integral part of the bath-gymnasium complex, which occupied a central position on a major thoroughfare. The building was begun in the late second century A.D. and originally served as a Roman civil basilica. Around A.D. 270 it was remodeled and probably became a synagogue. We do not know exactly when or how the Jewish community acquired this notable building. Further remodeling was done by the Jewish community between A.D. 320 and 380. An atrium-like forecourt, colonnaded on all four sides and with a central fountain, led into the main hall, which was 59 x 18 meters and could accommodate more than one thousand people. The hall contained two shrines, which were probably used for the *Torah and for a menorah, a large apse lined with semicircular benches and a large marble table flanked by Lydian stone lions in reuse. Elaborate mosaics covered the floor, and the walls were decorated with marble revetments. The overall effect of the building must have been impressive. Despite the growing strength of Christianity in Sardis, the community continued to use the synagogue until the destruction of the city in A.D. 616. This shows the enduring vitality of the Jewish community.

The building differs considerably from other synagogues. Its style has been determined by the building's previous history, by local architectural idioms and by the local community. The building contained more than eighty inscriptions,

some in Hebrew, but the vast majority in Greek, which mainly concern donations and date from the fourth century A.D. and later. These inscriptions and the building itself reveal a large, prosperous and influential Jewish community that had considerable social status and was active in civic and political affairs. The community seems to have been integrated into the economic, social and political life of Sardis to an unusual degree. Yet the strength of the Jewish identity of this community is also clear from the building itself. We can also note that Melito, the bishop of Sardis in the latter part of the second century, was strongly polemical toward Israel in his *Peri Pascha* (see *DLNTD*, Melito of Sardis). This work can be seen in part as a reaction to the Jewish community in the city.

The only other synagogue that has been discovered in Asia Minor is a remodeled house at Priene, probably to be dated to the third century A.D. A small forecourt led into the main room, which was 10 x 14 meters. The main features in the otherwise plain room were a bench and a Torah niche in the Jerusalem-facing wall. The contrast between this building and the Sardis synagogue is striking. The two buildings show the diversity of Judaism in Asia Minor and also indicate that the local history of the community and local factors had a formative influence on Jewish communities. Early in the twentieth century von Gerkan identified a small building in Miletus as a synagogue, but positive evidence that it was ever a synagogue is lacking.

4. Facets of Jewish Identity.

Factors that enabled Diaspora Jewish communities to retain their identity include ethnicity, the life of the local Jewish community, links with Jerusalem and other Diaspora communities, the Torah and key Jewish practices and beliefs such as worship of the one God of Israel, dietary laws, circumcision and *sabbath observance (see Barclay, 399-444). Although our evidence is limited, we can suggest that many of these key facets of Jewish identity were important for the communities in Asia Minor.

Jews in Asia Minor regarded themselves as belonging to a "people" or a "race," and this was also recognized by their cities and by the Romans in their documents about Jewish communities (see, e.g., Josephus *Ant.* 14.10.24 §§259-61; cf. Acts 16:1-3 for one example of exogamy). The importance of the local Jewish community

for the preservation of identity is clear, for example, from the fact that communities petitioned the Roman authorities for the right to assemble and to govern their own communal life (Josephus *Ant.* 14.10.8 §§213-16). Synagogue buildings, *festivals (e.g., Josephus *Ant.* 14.10.23 §§256-58; *CJ* 777) and sabbath gatherings also played a part in fostering community life.

Links were maintained by Jews in Asia Minor with Jerusalem. Communities in Asia Minor seem to have faithfully paid the annual temple tax to Jerusalem; on one occasion some Jewish communities were willing to defy Roman law in order to obey their own law on this matter (Cicero *Flac.* 28.66-69), thus showing the significance of the temple and its worship and of Jerusalem to these communities (see also Josephus *Ant.* 16.6.4 §§167-68). Other evidence also points to the significant links between Jewish communities in Judea and Asia Minor (e.g., Josephus *Ant.* 14.10.20 §§241-42; cf. Acts 2:9-11).

The Torah was vital for Jewish identity in Asia Minor. The importance of the law and the temple is shown by the opposition of Jews from Asia and Cilicia, as well as elsewhere, to Stephen (see *DLNTD*, Stephen) when they thought he was attacking the temple and the unalterable nature of the law (Acts 6:9-15). Jews in Asia Minor almost certainly opposed Paul (Acts 13:45, 50; 14:2-5, 19) because he did not require Gentiles to come under the law (cf. Gal 5:11; 6:12), showing the significance of the law for the Jews who opposed him (cf. Acts 21:27-29). A number of Jewish epitaphs contain grave curses (see *Burial Practices: Jewish; Art and Architecture: Jewish*) that often draw on or allude to passages in the *Septuagint. Thus, a group of third-century A.D. inscriptions from Acmonia speak of the curses that "are written in Deuteronomy," which refers to Deuteronomy 27-29, and others speak of "the sickle of the curse," referring to Zechariah 5:1-5 (LXX, although this inscription could perhaps be Christian; see Trebilco, 60-76). These inscriptions suggest that the Scriptures functioned as an authority and guide for these communities. Further, at Aphrodisias in the early third century A.D. there was a Jewish group of "students [or disciples or sages] of the law," which shows the importance of study of the law for a group of Jews there. In both the Sardis and Priene synagogues, provision for the Law were significant features.

We have evidence that key Jewish practices

and beliefs were important for the identity of the Jewish communities in Asia Minor. Worship of the one God of Israel was a feature of these communities (Josephus *Ant.* 12.3.2 §126). Further, there is no clear evidence that these Jewish communities were syncretistic, as has sometimes been suggested, and the link that earlier scholars saw between the Sabazios cult and Jewish communities is unfounded (see Trebilco, 127-44). The importance of the sabbath (Josephus *Ant.* 14.10.24 §§259-61), food laws (Josephus *Ant.* 14.10.12 §§225-27) and of following their "ancestral tradition" (Josephus *Ant.* 14.10.25 §§262-64) for Jews in Asia Minor is shown by the fact that Jews sought permission from the Roman authorities with regard to these matters. Jews at times sought to gain exemptions from military service and from other activities that would make observance of the Jewish law impossible (Josephus *Ant.* 14.10.11-12 §§223-27), showing their commitment to Jewish practices.

Clear evidence for the retention of Jewish identity by these communities begins in the first century B.C. and continues through the fourth century A.D. and later. Thus these communities clearly understood themselves as being Jewish. We can note that we lack clear evidence that Jewish communities in Asia Minor knew or followed *rabbinic teaching, which in any case was not the normative form of Judaism in this period.

5. Other Facets of the Life of the Jewish Communities.

5.1. Women Leaders in Jewish Communities.

Some inscriptions tell us about women leaders of Jewish communities. In the second or third century A.D. Rufina was *archisynagōgos*, or ruler of the synagogue, in Smyrna, and in the fourth century or later Theopempte held the same office in Myndos. The *archisynagōgos* was a leading official who had a role in making arrangements for the services of the synagogue (Acts 13:15) and was often a wealthy person of influence and standing in the community, was a *benefactor or *patron (see Rajak in Lieu, North and Rajak, 22-24). Although some scholars have argued that a woman held this title in an honorary sense, there is no evidence for this, and it seems most likely that they actively fulfilled the office.

In Aphrodisias in the early third century A.D. a person named Jael, who was probably a woman (although some argue the name is here used of a man), held the title of *prostatēs*, which

means Jacl was either president or patron of a group. At Phocaea in Ionia in the third century, Tation built a synagogue for the community and was given a golden crown and the privilege of sitting in the seat of honor. We also know of nineteen women who made other donations to synagogues, either by themselves or jointly with their husbands. Thus women had a significant degree of involvement and leadership in some of the Jewish communities in Asia Minor (see Trebilco, 104-13). One reason for this was probably the prominence of women as benefactors and leaders in social and political life in Asia Minor in general. Thus the Jewish communities were probably influenced by their environment in their openness to the leadership of women.

5.2. Godfearers. A recently discovered inscription to be dated early in third century A.D. from Aphrodisias lists, along with a number of Jews (as is evident from many of their names), fifty-four Gentiles who are called *theosebēs*, or "pious" (see Reynolds and Tannenbaum). Although some scholars argue that the title here means the Gentiles concerned have simply expressed their support for the Jews as fellow townspeople, it seems much more likely that the term indicates that these Gentiles were associated in some formal way with the Jewish community, without being proselytes. They seem to come into the category of Godfearers, that is, Gentiles who could be formally associated with the Jewish community, were involved in at least some facets of synagogue life and adopted some Jewish practices without becoming proselytes who joined the community (see Trebilco, 145-66).

Other inscriptions from Asia Minor in which there is a strong probability that *theosebēs* designates a Godfearer come from Tralles, Sardis and Miletus, and Godfearers are most likely mentioned in Asia Minor in Acts 13:16, 26, 50; 14:1, although Luke uses different terms (see also Josephus *Ant.* 14.7.2 §110). Although Diaspora Jews in general do not seem to have been involved in an organized, active mission to convert Gentiles (see Goodman in Lieu, North and Rajak, 53-78), they do seem to have welcomed Gentiles who were attracted to the Jewish community, either as Godfearers or proselytes, and this seems to have occurred most notably in Asia Minor. The existence of Godfearers points to the attractiveness to Gentiles of some Jewish communities in Asia Minor and the openness of Jews to the involvement of

Gentiles in their communities.

5.3. Jewish Communities in the Greek City in Asia Minor. We have no clear evidence that Jews in Asia Minor possessed citizenship as a body in any Greek city. Josephus's statements that suggest they did have citizenship (e.g., Josephus *Ant.* 12.3.1 §119; 12.3.2 §§125-26; 16.6.1 §160; *Ag. Ap.* 2.4 §§37-39) are historically dubious or ambiguous (see Safrai and Stern, 440-81). However, some individuals did obtain citizenship in their cities (e.g., Paul [Acts 21:39]; Trebilco, 172). Some Jews in Asia Minor were also Roman citizens, "sufficiently many to make it worthwhile to issue special directives about them" (Barclay, 271; see Josephus *Ant.* 14.10.13-19 §§228-40). Jews in Asia Minor, as elsewhere, generally organized themselves into communities, although the constitutional position of these communities varied from place to place and over time. The position of the Jewish community within any city probably depended on local factors such as when, how, and for what purpose the Jewish community became established in that locality. Generally, the position of the Jews in a city is best compared with that of other associations of immigrants who lived as foreign people in a city. The form of communal life probably varied from place to place, as is shown by the variety of terms used to express the notion of community, including the terms "the Jews," "the people," *synodos*, *katoikia*, "the *ethnos*" and "the *synagōgē*."

The documents preserved by Josephus and Philo concerning Jews in Asia Minor, to be dated from 49 B.C. to A.D. 2/3 (Josephus *Ant.* 12.3.2 §§125-28; 14.10.1-26 §§185-267; 16.2.3-5 §§27-61; 16.6.1-8 §§160-78; Philo *Leg. Gai.* 315) reveal that the Jewish communities in view experienced a significant degree of ongoing hostility from the cities in which they lived during this period, concerning matters such as synagogue assembly, the temple tax and observing the sabbath. At least three factors seem to have caused such hostility (see Barclay, 270-77). First, that prosperous Jewish communities (see Josephus *Ant.* 16.2.3-4 §§28-41) wished to export the temple tax to Jerusalem at times when cities in the province of Asia were experiencing severe economic problems led to hostility. Second, hostility grew from a lack of tolerance on the part of the city toward communities that were distinctive and did not worship pagan gods and so were seen as unpatriotic. Third, that, for example, sabbath observance by Jews became an issue

suggests that some Jewish communities were a significant group within the city, with some members being of social and economic importance. A city can ignore or coerce small and insignificant communities, but "one senses the presence of Jews sufficiently prominent in city life for it to be exceptionally awkward when they refuse to attend court or do business on the Sabbath" (Barclay, 271), and this led to hostility. Yet the Jewish communities concerned were also well organized and sufficiently well connected to have been able to lobby the Roman authorities, who granted them various rights and privileges that enabled them to live according to their own laws.

However, we have no evidence for hostility after A.D. 2, and the marked improvement of social and economic conditions in Asia during the Augustan era may have eased the pressure against Jewish communities from their cities. Further, positive evidence for good relations begins in the mid-first century A.D. (Julia Severa's benefaction and the evidence from Acts; see below) and continues through the end of the third century and shows a marked degree of coherence and consistency. We should also note that Jewish communities in Asia Minor did not support the Jews of Palestine in the war of A.D. 66-70 or in the Bar Kokhba war of A.D. 132-135 (see Jewish Wars with Rome). Further, the Diaspora revolt of A.D. 115-117 against the local authorities and Rome did not occur, as far as we know, in Asia Minor. We can suggest that the hostility experienced by the Jewish communities in the first century B.C. was confined to that period and that after that time Jewish communities in Asia Minor lived peaceably and interacted positively with their wider communities, which was one factor that enabled them to flourish. In contrast to the situation in Palestine and Jewish communities in Egypt, Cyrenaica and Cyprus, the situation in Asia Minor seems to have been marked by peace and respect rather than ongoing tension and hostility. The reduction in hostility in Asia Minor probably advanced the integration and social assimilation of Asian Jews into the life of their cities. We will now review the evidence for good relations.

Some Jews and some Jewish communities took an active part in city life, into which they were integrated and socially assimilated to quite some degree. As we have noted, J. M. G. Barclay (271-78) argues that in the first century B.C. one

of the reasons that Jews experienced hostility from their cities was because they were a significant group within the city, with some members being socially and economically prominent. The opposition Jews encountered thus testifies to the significance and influence of the Jewish communities in their cities, even in the first century B.C. Barclay (276-77) suggests: "The controversies which arose in these Asian cities reflect the significant integration of such Jews into civic life: it is as business-partners, litigants, market-users, even potential 'liturgists' that the Jews are noticed and their peculiarities resented."

We also know of Jews from the third century A.D. onward who held significant offices, such as being presiding officer of the city council, a member of the governing committee of the city council, the controller of the market, city councilor, official public doctor and controller of the weight of money in Acmonia, Corycos, Ephesus, Hypaepe, Sardis and Side (e.g., *CII* 745, 748, 770; Trebilco, 37-103). We note also that the prominent position of the Sardis synagogue and its inscriptions suggest relations between the city and the Jews were harmonious and that the community was a respected element in the city. Since the epigraphic record always gives us only a partial picture, we can suggest that there were many more Jews similarly involved in the civic and political affairs of their cities.

There is also evidence of Jews being what may be called good residents who participated in the civic and cultural life of their cities. In 12 B.C. Jews of Asia passed a resolution in honor of the emperor Augustus (*Josephus Ant.* 16.6.2 §165; see Roman Emperors), thus showing themselves to be his loyal supporters. At Acmonia some Jews made a donation to the city and in doing so called Acmonia their *patris*, or home city, which shows both their involvement in the life of the city and a strong sense of "at homeness." In Miletus, probably in the second century A.D., some Jews had the privilege of good reserved seats in the city's *theater, which suggests that they were prominent members of the theater audiences and regularly attended this center of the social and cultural life of the city. At Iasos and Hypaepe some Jews were involved in the *gymnasium (Trebilco, 173-77).

A unique series of *coins minted in Apamea from the end of the second century A.D. suggest the local Jewish community was influential in the city. These coins portray Noah, his wife and

the ark and are the only known coins that portray a biblical scene. They suggest that the city of Apamea accepted the Jewish flood story as its own; the Jewish community seems to have been influential and respected in the city and able to convince the city of the validity of its own traditions (Trebilco, 86-95). *Sibylline Oracles* 1.261-67 also locates the place where the ark landed after the flood as Apamea.

Further evidence of relations with the wider society is provided by the fact that important non-Jews acted as patrons of or were involved in or influenced by Jewish communities. In Acmonia in the mid-first century A.D. the Gentile Julia Severa, who belonged to a nexus of leading families, built a synagogue for the Jewish community. She can be seen as a Gentile patron of the Jewish community, and this fact shows that they had friends in the highest social circles. According to Acts, some Jewish communities were able to stir up opposition to Christian preaching among Gentiles, including some in high places, which suggests the Jewish communities concerned had influential contacts in their city (Acts 13:50; 14:2, 5, 19). The Godfearers mentioned in Acts might suggest that at this time the Jews were a respected group in their cities (Acts 13:16, 48-50; 14:1). At Aphrodisias nine Godfearers were city council members and thus had significant social standing, which suggests that the Jewish community was a respected and influential group. These nine Gentile Godfearers were involved in the synagogue while also holding important positions in the city. That there were Godfearers in some synagogues also suggests that these communities had not withdrawn into themselves but were open to Gentiles attending the synagogue.

Another area that points to strong relationships between Jewish communities and the wider society is provided by the number of ways in which Jewish communities were influenced by the customs of their local city. In a number of areas we can see that Jews in Asia Minor did certain things or adopted a particular practice because of the influence of their environment. These include the way benefactors were honored, the way graves were decorated, the form of some grave curses, the formation and practices of a burial society, some of the symbolism used in the Sardis synagogue and openness to the leadership of women. Taken with the evidence of involvement in city life, these points suggest

the Jewish communities had strong links with the wider society in which they lived.

We conclude that in Asia Minor Jewish communities were not isolated, insular groups but rather interacted regularly with Gentiles and were involved to a significant degree in city life. Some Jewish communities in Asia Minor were influential and respected in their cities, where they were very much at home and made a significant social contribution. They were part of the social networks of the city and shared in many of the characteristics of everyday life. This seems to have occurred more in Asia Minor than in most other Mediterranean centers where Jews lived. It seems also that local factors were a strong formative influence on these Jewish communities. Yet the evidence suggests the Jewish communities generally did not abandon an active attention to Jewish tradition or compromise their Jewish identity. Proximity with pagan neighbors both sprang from and led to clarity in the definition of Judaism and to an inner self-assurance and not to syncretism or assimilation to paganism. It was as Jews that they were part of the life of the city.

We can note that one consequence of the degree of Jewish communities' integration in and interaction with their cities is that it is sometimes difficult to determine if an inscription is Jewish or not, since Jews and non-Jews could share a great deal in common, including grave formulas that have been used to identify inscriptions as Jewish.

5.4. Relations with Christians. Some members of Jewish communities in Asia Minor responded to Paul's preaching (Acts 13:43; 14:1; 18:27; 19:8-10; cf. 1 Cor 9:20), while others rejected his message and on some occasions stirred up opposition to Paul among Gentiles (e.g., Acts 13:45, 50; 14:2-5, 19; 19:9; 20:19; cf. 2 Cor 6:4-5; 11:24). Revelation 2:9 and 3:9 suggest that around A.D. 95 the Jewish communities in Smyrna and Philadelphia actively opposed Christians. In some difficult passages written early in the second century, Ignatius seems to refer to Gentile Judaizers in Philadelphia and Magnesia ad Maeander (Ign. *Phld.* 6.1-2; 8.2; Ign. *Magn.* 8.1; 9.1-2; 10.1-3). It seems likely that these Gentile Christians were tempted to go to the synagogue and adopt Jewish customs because of the influence of Jewish communities in the area. In these cases, the

Jewish communities were probably attractive to Christians and had an impact on the churches.

According to the *Martyrdom of Polycarp*, the Jews of Smyrna had a part in Polycarp's death, sometime between A.D. 156 and 167 (see *Mart. Pol.* 12.2; 13.2; 17.2—18.1) The Jews in the city may have had contacts in high places in the city and have been prepared to work with Gentiles against the Christians. The *Martyrdom of Pionius*, set in Smyrna around A.D. 250, suggests that the Jewish community in the city had a continuing interest in attracting Christians to Judaism and was involved in polemic against the Christians about Jesus and his resurrection.

6. Conclusions.

The strength and vitality of many of the Jewish communities in Asia Minor is clear from the evidence. The Sardis community, with its impressive synagogue, is perhaps the most revealing. And yet some communities, such as the community at Priene, were undoubtedly small. This underlines the diversity of the communities. Some flourished; others did not. Local factors, such as the date and conditions under which the communities were founded, the attitudes of the local cities and the size of the community were significant in determining the nature of these communities.

We have also shown that rather than forming introverted groups, these communities were at home in their local cities and interacted with the wider society. Some communities were influential and respected in their cities, and some attracted Godfearers; many were influenced by their environment. Yet in many cases there is strong evidence for the retention of Jewish identity. It was as *Jewish* communities that they were a part of the life of their cities. These communities can be seen as worthy and legitimate but distinctive heirs of OT faith.

Finally, the evidence suggests the presence of local Jewish communities was often a real factor in the life of the early Christian churches in Asia Minor, and Jewish communities often had a significant influence on the churches. Christians often formed and preserved their identity in the context of visible and attractive Jewish communities that were rival interpreters of the Jewish tradition and competitors for supporters. We can suggest that, given their significance, Jewish communities in Asia Minor were often much part of the

foreground of the life of the early churches.

JEWISH HISTORY: GREEK PERIOD

The Greek period of Jewish history extends from the conquest of *Alexander the Great until the taking of *Jerusalem by Pompey (333-63 B.C.), a period of more than two and a half centuries. This encompasses the initial conquest by Alexander and the period of his successors, the time of *Ptolemaic rule, the transfer to *Seleucid rule and the *Maccabean revolt and the *Hasmonean kingdom. Each of these periods will be treated separately, since the sources and characteristics are often different. Each section will begin with a discussion of historical sources and the problems involved in trying to reconstruct a history of the period.

1. Alexander and the Diadochi
2. The Ptolemaic Period
3. Seleucid Rule and the Hasmonean Kingdom

1. Alexander and the Diadochi.

1.1. Sources. The first half century of Greek rule is well documented by the historians, mainly Arrian of Alexander, and by the writers about the wars of the successors (Gk *diadochoi*, usually given in its Latin form as *Diadochi), mainly Diodorus Siculus. Our knowledge of the Jews, however, has to be inferred from a few miscellaneous pieces of data whose interpretation is often uncertain. *Josephus gives us some bits of information. The most extensive is the legend that Alexander visited Jerusalem and bowed to the high priest (Josephus *Ant.* 11.8.1-6 §§304-45). Modern scholars have been practically unanimous in rejecting this as fictional. There was not time between the siege of Tyre and the siege of Gaza for such an expedition to Jerusalem; in any case, other historians would have mentioned it since they had no hesitation in recording Alexander's visits to shrines or his other religious undertakings.

Apart from this story Josephus gives us only a few quotes (Josephus *Ag. Ap.* 1.22 §§183-204). One of these is from Agartharchides of Cnidus and states that at some point during the fighting, Ptolemy I was allowed to enter Jerusalem because the Jews would not fight on the sabbath. No date is given, but if this is historically accurate, this was probably the period 315 to 301 B.C. He also claims to quote Hecateus of Abdera to the effect that the high priest Hezekiah (Ezekias in Greek) was allowed by Ptolemy to migrate to Egypt with a great many Jews who settled there.

This was after the battle of Gaza in 312 B.C. The authenticity of Josephus's quotations of Hecateus are suspect and probably come from a Jewish writer around 100 (Bar-Kochva).

1.2. Historical Reconstruction. On the whole, all we can do is make some intelligent guesses about the Jews through this period. Alexander crossed into Asia Minor in 334. The next year he defeated Darius III at Issus and then laid siege to Tyre. After taking Tyre he moved rapidly south along the coast, taking Gaza and reaching Egypt, where he wintered. It is reasonable that representatives of the Jewish state met Alexander or his lieutenants and gave their formal submission while he was on his way to Egypt, as would have been normal for a new conqueror, though the story of Alexander's visit to Jerusalem after the siege of Tyre can be considered only legendary in the light of present evidence. The next year Samaria revolted and was destroyed, bringing Greek troops into central Palestine, but they would not necessarily have gone into Judah. Alexander himself continued his conquests for another several years, possibly with Jewish recruits among his soldiers (Josephus *Ag. Ap.* 1.22 §§192, 201-4). Darius III was finally defeated and killed in 331, but Alexander continued to march east, reaching northern India; however, his soldiers had had enough, and he reluctantly returned to Babylonia to consolidate his empire. There he died in 323 B.C.

For the next forty years the *Diadochi fought among themselves for control of Alexander's empire, eventually splitting it three ways: Ptolemy got Egypt, Palestine and southern Syria; Seleucus controlled most of Asia Minor, northern Syria, Mesopotamia and the rest of the eastern empire; the Antigonids held mainland Greece, Thrace and some other territory. Judah may well have been affected by the march of armies through Palestine during this time, though we hear of little specific. The story that Ptolemy I took Jerusalem may be true, but Josephus gives no context or explanation why this should have happened. What we do know is that in 301 B.C. Ptolemy took Palestine and, despite legal claims by the Seleucids, held the territory for the next century. The settlement of Jews in Egypt (apart from those at Elephantine) may have begun at this time, though we have no precise information.

2. The Ptolemaic Period.

2.1. Sources. In some ways the Ptolemaic pe-

riod is almost as unknown as the Persian period. We know little about the day-to-day events and life of the Jewish people. What we do have are three invaluable sources, though the evaluation of the last one is not an easy task. First is the account of Hecateus of Abdera, a Greek writer about 300 B.C., who produced a work on the Egyptians (his work is now lost but a portion is quoted in Diodorus Siculus *Bib. Hist.* 40.3). In it he mentions the Jews in Palestine in a positive way and briefly describes their society, giving a short glimpse of it at a crucial time. A second source is the archive of *Zenon, an agent of Apollonius the Egyptian finance minister. He took a tour of Palestine and southern Syria about 259 B.C. and continued to correspond with some of those he met for a good many years afterward. Finally, we have the Tobiad family history or romance as used by Josephus (Josephus *Ant.* 12.4.1-11 §§157-236). It contains novelistic elements that may be entertaining to readers, but it does not resolve the question of how much of it is historical. Although scholars recognize that the account has been embellished, the general view is that the story is credible in its main outline.

2.2. Historical Reconstruction. Hecateus of Abdera describes the Jewish community as it apparently was in his time. Whether he knew it directly is uncertain, but his account shows some evidence of inside knowledge and is positive in its description. It has been suggested that he used a Jewish source, possibly an oral description by priests. He says that the country was founded by *Moses, who led a group of disaffected Egyptians out of the country to Judea, where he founded the city of Jerusalem and a *temple. He asserts that the Jews have never had a king (showing that he knows nothing of the contents of Samuel and Kings) but elect the wisest of the priests to lead them. They have a law that they follow faithfully. They have no images of their God but worship the heavens. This description fits well the other sources we have for the community in Palestine in the Persian and Greek periods, showing the structure of a theocracy in which the high priest was the main leader of the people and its representative to the Greek overlords.

Apart from Hecateus, who describes the community but no historical events, we have almost no information until about 260 B.C., when Zenon comes on the scene. The Zenon papyri are

invaluable because they represent genuine, original sources; their worth is mainly not for historical events but for social and economic data. Thanks to them we know much more about the social and economic situation in Egypt during this period than in many other areas. On his journey through Palestine Zenon's entourage was given *hospitality by a Tobias in the Transjordanian area. This Tobias headed a cleruchy, or military colony, and was a power on the local scene. He later sent a gift of *slaves to Apollonius (Zenon's superior) and even a gift of exotic animals to the king himself. His letters are in good Greek. Since he would have used a Greek scribe, we cannot be sure that he knew Greek himself, but he may well have.

Judging by his name and the location of his estate, Tobias was a part of an old aristocratic family, one of whose ancestors was the Tobiah opposed by Nehemiah. This inference is confirmed by the Tobiad romance. According to it the high priest Onias II refused to pay a tribute to the Ptolemaic government. Since punishment for this could have affected the province as a whole, an individual of the Tobiad family named Joseph borrowed money and paid the tribute himself. (Joseph was the nephew of the high priest, showing that the Tobiad family had intermarried with the high-priestly family.) Ptolemy II was impressed by Joseph and, according to one interpretation, even took away the financial office for Judea from the high priest and gave it to Joseph. More importantly Joseph was able to bid for and win the tax-farming rights to the whole region of Palestine and southern Syria. The Ptolemies had found that it was most efficient to put the collection of certain taxes out to tender to the highest bidder. The tax farmer agreed to pay a certain amount to the king. If he collected more tax than this, he kept it as profit; if he collected less, he had to make it up from his own resources. When Joseph secured the tax-farming rights for the region, he became an important and eventually a wealthy man.

Joseph had eight sons, the last of whom was Hyrcanus. This son turned out to be a clever and entrepreneurial individual who managed to wrestle the regional tax-farming rights from his father. This instigated a quarrel with Hyrcanus on one side and Joseph and his other sons on the other. However, the matter went deeper than business practices. Based on the general

history of the period, it has been concluded that Joseph and his other sons had become pro-Seleucid, taking the view that the Seleucids would soon take over the region; Hyrcanus remained pro-Ptolemaic. Despite his astuteness, Hyrcanus was the one who miscalculated. In 200 Antiochus III defeated the armies of Ptolemy V and took over Palestine and southern Syria, territories for which the Seleucids had originally been given title a century earlier.

3. Seleucid Rule and the Hasmonean Kingdom.

3.1. Sources. Our major sources for the period from about 200 to 135 B.C. are the books of *Maccabees. First Maccabees covers mainly the period 175 to 135 B.C. and is usually taken to be the most trustworthy. Second Maccabees covers a shorter period (about 175 to 162 B.C.) and has novelistic and theological elements. For this reason, scholars have generally preferred 1 Maccabees. They are probably right in this, but 2 Maccabees gives the most detail on the period leading up to the Maccabean revolt; also the straightforwardness of 1 Maccabees is sometimes deceptive, masking the prejudices and agenda of the writer. Both books must be used critically. The book of Daniel gives brief but important information, especially in Daniel 11. Josephus quotes a decree of Antiochus III on behalf of the Jews, which looks genuine. In the *War* he gives a brief account of the Maccabean revolt to which scholars have not given much credence. In the *Antiquities*, however, he gives a close paraphrase of most of 1 Maccabees. Both the *War* and the *Antiquities* give the only detailed account of Hasmoncan history and are extremely important sources for this period. The source seems to be mainly Nicolaus of Damascus, who was secretary to *Herod the Great, though the lost histories of Strabo were also used in the *Antiquities*.

3.2. Historical Reconstruction. Many Jews welcomed the new Seleucid rulers. A decree of Antiochus III (221-187 B.C.), quoted by Josephus (Josephus *Ant.* 12.3.3-4 §§138-46) and generally accepted as genuine, grants certain concessions to the Jews because they opened the gates of Jerusalem to him. There had apparently been fighting, perhaps even with pro-Ptolemaic Jews, leaving damage in Jerusalem. Antiochus gave a temporary remission of taxes to assist in paying for repairs. The one who carried out these repairs was the high priest Simon II, who was probably the son of the Onias who was uncle to

Joseph Tobiad and had refused to pay the tribute to Ptolemy (Sir 50:1-21).

From all the information we have the Jews were content with the first part of Seleucid rule. Second Maccabees 3 records an incident in which Seleucus IV (187-175 B.C.) sends his financial minister to confiscate the temple treasury. The reasons for this are not clear, though one seems to be that Hyrcanus Tobiad had a large sum deposited in the temple. The exact sequence of events is also unclear, though it seems that the treasury was spared (2 Macc ascribes it to a miracle). Apart from this we hear of no incidents until the reign of Antiochus IV (175-164 B.C.). Much nonsense has been written about Antiochus IV and the Jews. The first thing to remember is that Antiochus was not a rabid Hellenizer, and he seems to have had no interest in the Jews initially. He got involved in Jewish affairs because they approached him.

When Antiochus came to the throne, the high priest was Onias III. Shortly afterward the high priest's brother Jason (Heb Jeshua) approached the king and offered to pay a certain sum to be given the office in place of his brother. Jason also paid a further sum to make Jerusalem into a Greek city (*polis*). Antiochus agreed to both these requests, and thus began what has been called the *Hellenistic reform. A good deal written on this subject is not based on a critical reading of the sources or the most recent studies.

First, it should be noted that Hellenization had been going on for more than 150 years when Antiochus IV took the throne. The Jews had been as much influenced as were any other Near Eastern peoples. That is, the upper classes would have been most affected, but the average Jew who was a peasant or laborer or craftsman saw little change in lifestyle, only in the overlord to whom taxes were paid. A few Jews obtained a Greek education (e.g. Joseph Tobiad and his sons evidently spoke Greek and seem at home in the Greek world), many more learned some Greek in order to trade or deal with the administration, but Greek did not displace the native languages of *Aramaic and *Hebrew. Much of the administration at the lower level was carried out in the native languages. The process of Hellenization was not the displacement of native culture by Greek but rather the addition of Greek to the cultural mixture that already existed. The Greek and the native coexisted for

centuries in a happy partnership (*see* Hellenistic Judaism).

Second, Jason's reform was a cultural one and did not affect the religion. The books of Maccabees, especially 2 Maccabees 4, allege that *Judaism was abandoned and great sins committed. But when their bias is taken into account and the reader cuts through the rhetoric, no specific breaches of the law are named. No pagan practices were introduced, the daily *tamid* offering continued, individual sacrifices were still brought, and the cult functioned as normal. It was not in Jason's interest to interfere with the cult that was both his power base and financial support. His Hellenistic reform caused changes to the city government, introduced an institute of Greek *education (the *gymnasium) and changed the lifestyle of many citizens of Jerusalem (apparently for the better, in their view), but the practice of religion continued as before.

Third, Jason's reform was widely welcomed. Many of the inhabitants of Jerusalem became citizens, and no opposition is mentioned. Readers may have read that "the orthodox Jews were appalled" at this. Not only does this beg the question of what is orthodox, but it is also speculation. There may have been a variety of reactions to Jason's actions, but if there were negative reactions, we do not know of them. The negative view comes from the books of Maccabees, which were written decades later, after the bitter events of the Maccabean revolt.

Having taken the high priesthood, Jason was displaced by Menelaus, who offered Antiochus even more money. Unlike Jason, Menelaus does seem to have broken the law, apparently even selling off vessels from the temple. When this happened, the people of Jerusalem (i.e., the citizens of Jason's Hellenistic city) rioted and killed Menelaus's brother, who tried to quell the riot, showing that the citizens were not indifferent to religion. However, the situation was overtaken by events: Antiochus invaded Egypt in 170 B.C. and was highly successful, but the regime he established quickly collapsed, and he invaded again in 168 B.C. This time the Romans forced him to withdraw. In the meantime, Jason attacked Menelaus in Jerusalem to take back the office of high priest, and Antiochus sent an army to put down what he thought was a rebellion.

We now enter one of the most puzzling episodes of Jewish history. Not only did Antiochus suppress what he thought was a revolt, but he

then went on to order the suppression of Judaism as a religion. Why this happened has not been satisfactorily explained, even though there have been many suggestions. It has even been suggested that Menelaus instigated the religious measures. Whatever the reason, the temple was desecrated with a pagan cult (called the "abomination of desolation"), and any who practiced Judaism were persecuted. The Jews rebelled. Whether the family of the Maccabees began the revolt, as alleged by the pro-Hasmonean books of Maccabees, is not certain, but they eventually took it over. In the short space of three years they managed to retake the temple and restore the cult (probably in December 165 B.C.), and Antiochus's decree against Judaism was withdrawn. At this point many Jews were content to stop fighting, but the Maccabees had now shifted their goal to national independence.

What followed was a long battle in which the Maccabees had initially only small support. Judas Maccabeus was killed in 162 B.C. His brother Jonathan took up the leadership but began to gain success only when a rival Seleucid dynasty arose, a situation that he exploited by playing one side against the other. He was given the office of high priest and other concessions but was eventually killed by trickery in 143 B.C. The third brother, Simon, now took the leadership; in the third year of his office (c. 140 B.C.) a decree was issued on behalf of the Jewish people that declared their freedom from foreign rule. This was highly symbolic, and the reality was that Seleucid claims had not been given up. Simon was assassinated, and his son John Hyrcanus I took over.

John Hyrcanus (135-104 B.C.) was quite successful, establishing the theory of Jewish independence as a fact, and he began to take over neighboring territories. Although he had only the title of high priest, he acted like a king over what was now called the Hasmonean state (after Hasmon, an ancestor of the Maccabees). His son Aristobulus I ruled only briefly (104-103 B.C.) but according to some sources took the title of king. Alexander Jannaeus (103-76 B.C.) expanded the Hasmonean kingdom to its largest extent but was troubled by a good deal of internal opposition, including from the *Pharisees. On his deathbed, he turned the kingdom over to his wife, Alexandra Salome (76-67 B.C.), who was dominated by the Pharisees. She made her eldest son Hyrcanus II high priest, but her younger son, Aristobulus II, re-

belled. Her death left them to fight each other for the throne, which led to disastrous consequences (see Jewish History: Roman Period).

JEWISH HISTORY: PERSIAN PERIOD

The Persian period is probably the most unknown period in the history of the Jews for the past three thousand years. This is for two reasons: our sources are skimpy for this period, and what sources we do have are of doubtful historical value in some cases. There are few Persian sources; thus, for much of our knowledge of chronology and political events of the Persian Empire in general we are dependent on the Greek historians. For the history of the Jews we have a few brief references in external sources. Otherwise we have to depend on the biblical material, which sometimes has little that relates to actual events and in other cases poses historical problems.

1. Extrabiblical Sources
2. Biblical Sources

1. Extrabiblical Sources.

The extrabiblical sources include the papyri left

by a Jewish colony in Egypt at Elephantine. This provides valuable original material, especially in the way of legal documents and references to the colony itself, but little of it throws direct light on events in Palestine. The Wadi Daliyeh papyri are also mainly legal documents (with only two so far published), though there are references to important persons in the documents and the seal impressions. A number of *coins were issued in Judah itself and mention the name of the province (Yehud); a few mention Hezekiah the governor, and there is one with the name of Johanan the priest.

A Jewish military colony lived on the island of Elephantine in southern Egypt. It may have been founded before the fall of Jerusalem in 587 B.C., though its origins are obscure. They worshiped Yahweh but did so in their own local temple. When this was destroyed as a conspiracy of the priesthood of the local Egyptian cult, they wrote to the governor asking permission to rebuild it. They also wrote to "the high priest and his companions the priests who are in Jerusalem and to Ostan the brother of Anan and the nobles of the Jews" and "to Deluiah and Shemai-ah sons of Sanballat governor of Samaria" (Porten and Yardeni, 68-71). Their letter indicates that the high priest, the other priests and the Jerusalem nobility were in charge of the community even though a Persian governor had also been appointed over the province. It also shows, in contrast to the book of Nehemiah, that Sanballat was an important official in the Persian local government. Interestingly, the Jerusalem establishment did not reply, perhaps because they were opposed to the Elephantine temple. The only record of an answer is a memorandum jointly from Bagothi and Delaiah, permitting the temple to be rebuilt and resume some offerings but not those of blood *sacrifice (Porten and Yardeni, 76-77).

For the last century of Persian rule, we have almost nothing relating to Jerusalem. The Wadi Daliyeh papyri seem to have been left by refugees from Samaria fleeing from *Alexander the Great's soldiers. These relate to the last days of Persian rule but are mainly legal material, concern only Samaria and have been only partially published. They do show that a second Sanballat was governor of Samaria around the middle of the fourth century. It has been suggested that in about 350 B.C. Judah was involved in a widespread rebellion against Persian rule known as

the Tennes rebellion; however, the arguments for this are not well founded (Grainger, 24-31; Grabbe 1992, 99-100).

2. Biblical Sources.

Of the biblical sources, the most important are the prophets Haggai and Zechariah 1-8 and the books of Ezra and Nehemiah. Chronicles are often dated to the Persian period (though the Greek period seems more likely), as are a number of other books or sections of books such as Isaiah 56-66, Job, Jonah, Malachi, and possibly Esther, Ruth and the Song of Songs. Many scholars think the framework parts of Haggai and Zechariah may have been written much later, but in any case each is set to a narrow period of time around 520 B.C. It is widely accepted that at the core of Nehemiah is a writing of Nehemiah himself (the Nehemiah Memoir/Memorial, found mainly in Neh 1-2, 4-6 and portions of 12; whether 13 belongs is debated). The extent of historicity in Ezra is fiercely debated at the moment, and many find little or nothing reliable in the book.

Although the decree of Cyrus (Ezra 1:1-4) is widely regarded as an invention of the editor, most scholars think there was a return of some Jews to Palestine fairly soon after Cyrus took Babylon in 539 B.C. This seems to have been led by Sheshbazzar, who may have been appointed governor of the province and who supposedly laid the foundations for rebuilding the temple (Ezra 5:14-16). Yet we are told that almost twenty years later nothing had happened (Hag 1:1-19). Ezra 3 credits Joshua and Zerubbabel with the rebuilding and says nothing about any building work having been done by Sheshbazzar. Ezra 4-6 is also a narrative about the opposition of unspecified enemies. A peculiar feature is the use of letters from the time of Artaxerxes, at least three quarters of a century later, to stop the building work in the time of Darius. Supposedly the temple was finished within four years and completed in the fifth year of king Darius's reign. However, it is doubtful that sufficient resources were available to rebuild it in so short a time.

The books of Haggai and Zechariah give a somewhat different picture. They say nothing of opposition from foreigners but suggest that the people themselves are to blame. They also show local materials being used rather than imported wood from Lebanon and the like (Hag 1:8 vs.

Ezra 3:7). The one fact that seems reasonably secure is that the temple was rebuilt in the early Persian period.

One particular feature of Ezra is puzzling and looks like an attempt to blacken the descendants of the Jews who had remained in the land. In a number of places, but especially Ezra 4-6, the book speaks of enemies who are the "people[s] of the land[s]." The "peoples of the land" is a term well known and widely in use in later Judaism, but it always has Jews as its object (Oppenheimer). But Ezra does not seem to recognize anyone as legitimate who is not a part of the returnee community. Yet we know a large number of Jews—probably the majority—were left in the land by the Babylonians. Their descendants continued to live in the land and to bear the name Jews (Barstad). For some reason, the writer of Ezra does not want them to be a part of the Jewish community in Palestine.

The figure of Ezra becomes harder to pin down the closer one looks (Grabbe 1998a, esp. chap. 6). Nehemiah knows nothing of him even though he was supposed to be there at the same time. He appears to be a high priest, but he does not preside over the temple. He comes across as a governor—even a satrap—but when a crisis arises, he can only mourn and pray while others take action. He comes to Jerusalem with a law that was already being observed; with priests and Levites, when there were already plenty there; and temple vessels and great treasure for the temple, when it had been functioning there for six decades. Some scholars have tried to resolve the problem by dating Ezra to 398 B.C. (the seventh year of Artaxerxes II), but the basic enigma remains.

Nehemiah is different, however, since it looks as if a genuine writing of Nehemiah lies at the core of the book. Like Sheshbazzar and Zerubbabel before him, he was governor of the province. He seems to have been a difficult figure to work with. Many of the local people saw no reason why they should cut their ties with such figures as Tobiah, who was a Jew from an old, aristocratic family. Two books that are frequently dated to the Persian period take a rather different point of view from Nehemiah's: Jonah argues for tolerance toward Gentiles, and Ruth traces David's own ancestry to a Moabite. These and other sources from the next couple of centuries indicate that Nehemiah's vision of an isolated community refusing to have anything to do

with the surrounding peoples did not prevail (Grabbe 1998b), though after the fall of Jerusalem in A.D. 70, this attitude helped to preserve the Jewish community from assimilation).

Nehemiah's mission may be partially explained in the light of the Egyptian revolts of 460 to 456 B.C. (Hoglund). From the archaeological evidence for Persian fortifications constructed all over the eastern Mediterranean seaboard at this time and from other data, it is inferred that the Persians were concerned about threats from a Greek-led coalition. According to this interpretation, Nehemiah's mission was to fortify Jerusalem to maintain Persian interests and policy, though the biblical writers interpreted events from their own theological perspective.

JEWISH HISTORY: ROMAN PERIOD

The Jews in Judea came under Roman rule in 63 B.C. and remained so until the Arab conquest in the seventh century. The most dramatic events in Jewish history took place in the first two centuries or so, however, including the loss of nationhood, the destruction of the *temple and the final revolt that sealed any hope of national revival for many centuries. This article will tell the story to about A.D. 200, which is the period of most interest to students of the NT.

1. The Hasmoneans and Rome
2. Palestine and the Roman Republic
3. Herod the Great
4. A Province, Then a Kingdom
5. Revolts and Religious Regrouping

1. The Hasmoneans and Rome.

The intervention of Rome into Jewish affairs was inevitable, given the steady expansion of the Roman sphere of influence and control (see Roman Empire). The early *Hasmoneans had already made contact with Rome, perhaps even as early as the time of Judas Maccabeus (1 Macc 8, though not everyone accepts this statement). The treaty with the Romans was renewed several times (cf. 1 Macc 12:1-4; 14:16-19). Yet the immediate cause for Rome to take a hand in Judea was a request by the Jews themselves. After the death of Alexandra Salome (67 B.C.), her two sons fought over the succession, the younger son Aristobulus II seeming to get the upper hand at first but the elder Hyrcanus II fighting back with the aid and advice of Antipater, governor of Idumea and father of *Herod the Great. Eventually, they both appealed to *Pompey, the Roman legate in Syria. When Pompey decided in favor of Hyrcanus, Aristobulus at first refused to yield. When he finally gave in, some of his followers still held out in *Jerusalem, which was then besieged and taken by the Romans in 63 B.C. This marked the official end of the Hasmonean state.

2. Palestine and the Roman Republic.

In the next thirty years the Jews of Palestine were caught up in the final throes of the Roman

republic, in which the civil war raged over the whole of the Mediterranean. Pompey died fighting Julius Caesar in 48 B.C., a fact the **Psalms of Solomon* 17:7-18 record with some satisfaction. After the death of Caesar, one of the Roman triumvirate of leaders, Cassius, was in control and extracted a great deal of money in a special taxation to support his fight against Marc Antony and Octavian. The Jewish leader was nominally Hyrcanus II, though Antipater and his two sons Phasael and Herod impressed the Roman leadership of the region with their vigorous administration. The Hasmonean family had not given up its claim to rule, however, and first Aristobulus and then his sons Alexander and Antigonus led rebellions periodically. In 41 B.C. Antigonus allied with the Parthians, who invaded the eastern Mediterranean and took Judea. By this time Antipater was dead, and the Parthians captured Phasael by trickery; he then committed suicide. But Herod escaped and made his way to Rome, where he was made king by Octavian and Marc Antony in 40 B.C. He returned to Judea, which had been quitted by the Parthians, leaving Antigonus in control. Herod took the city in 37 B.C. and had Antigonus executed.

Marc Antony was in charge of the east. Herod served him faithfully, but Cleopatra made life difficult for him. She persuaded Antony to remove various areas from Herod's possession and put them under her control. She also attempted to maintain a Hasmonean presence near the throne by making Antigonus's son high **priest* (Hyrcanus II had been mutilated by the Parthians and was thus now ineligible to be high priest). However, he was soon drowned under suspicious circumstances while swimming. It was probably only Herod's usefulness to Antony that let him keep his throne under such determined opposition. Herod happened to be fighting the Nabateans in the final confrontation between Octavian and Antony at Actium in 31 B.C. Although he was officially Antony's man and on the losing side, he took the bold step of going to Rhodes to meet Octavian and declaring that he would serve him as faithfully as he had served Antony. Octavian (Augustus; see Roman Emperors) was an astute leader and recognized the value of a person of Herod's caliber. He confirmed Herod in his position.

3. Herod the Great.

Herod's reign has often been seen and judged

through the polemic of the NT and the negative statements of **Josephus*. However, a proper historical evaluation must see him in all his complexity, recognizing his positive as well as negative achievements, and also apply the standards of other rulers of his time. Herod ruled as friendly king of Rome; that is, he was ultimately responsible to the Romans and restricted in actions on the international scene, but within his own realm he was absolute ruler. He countenanced no opposition and was ruthless with those who seemed to present a danger to his rule, but in this he hardly differed from other rulers. He was no doubt hated by many Jews—but then so were the Hasmonians.

What is clear from our perspective is that Herod did much good for the Jews, and his rule was much preferable to direct Roman rule. He spoke up for the Jews of the **Diaspora* on more than one occasion. His many building activities brought a certain prestige to his kingdom and employment for many local people (see Art and Architecture: Jewish; Archaeology of the Land of Israel; Caesarea Maritima; Caesarea Philippi). This especially applies to his refurbishment of the temple, which seems to be almost a rebuilding of it. Many of these activities were paid for by **taxes*, but his taxes do not seem to have been more burdensome than those of previous or later rulers, and he reduced them in times of economic problems for the people. Herod's precise ancestry is debated (the statement that he was a "half Jew" was made by enemies), but he lived as a Jew and strictly observed Jewish law, at least in his own kingdom. His bad characteristics are obvious, but his positive accomplishments are often overlooked.

Herod's last years were troubled by ill health and by difficulties within his own family. He accused some of his sons of treason and even had several executed; it looks as if there was a basis for the charges brought against them in some cases. He died in 4 B.C., and his remaining sons immediately rushed to Rome, each with a claim to the throne. Augustus decided not to bestow kingship on anyone immediately. Instead he appointed Archelaus ethnarch of Judea; Herod Antipas tetrarch of the Galilean area; and Philip tetrarch over the territory in southern Syria, which had few Jews among its inhabitants. Philip ruled his area until his death in A.D. 34, and Herod Antipas held office until A.D. 37. Archelaus might have hoped eventually to gain

the title of king, but after a reign of ten years Augustus removed him from office and exiled him for reasons that are not entirely clear, though his own subjects apparently complained to Rome about his rule.

4. A Province, Then a Kingdom.

In A.D. 6 Judea was turned into a Roman province with a Roman governor (*see* Roman Administration; Roman Governors of Palestine). It was now brought under the Roman tax administration, which required a census. This census was carried out by Quirinius, the Syrian legate, and seems to lie behind the event mentioned in Luke 2:1-3. Some Jews opposed this as contrary to their religious beliefs, but the high priest of the time helped to calm the people. We know almost nothing about the twenty years between this event and the governorship of Pontius Pilate, a significant gap from the point of view of NT study. Pilate was governor for ten years, and even the Roman writers seem to think he was not very successful. He caused several confrontations with the Jewish leadership over religious matters. When he was finally recalled by Tiberius, he reached Rome only after Tiberius's death.

Tiberius was succeeded in office by Gaius Caligula (A.D. 37-41). Caligula has become notorious in history, some of his reputation being deserved and some of it probably due only to senatorial slander. However, he had been a childhood friend of Agrippa, the grandson of Herod the Great. Agrippa had been imprisoned by Tiberius. Caligula released him and made him king over the realm of Philip. Shortly afterward, Herod Antipas was removed from his rule (Agrippa is alleged to have had a hand in bringing this about), and his territory also given to Agrippa (now Agrippa I). In A.D. 41 Agrippa helped to avert one of the gravest crises since the time of Antiochus Epiphanes: the attempt by Caligula to set up his statue in the Jerusalem temple.

Misunderstanding surrounds the episode of Caligula, partly because modern historians have not always known what to make of the emperor. It was easy to dismiss his actions as those of a madman and as simply a capricious anti-Semitic action. Neither of these suggestions is likely to be correct. Recent studies of Caligula have indicated that he was far from being insane and that his reign of terror among the Roman ruling

class is a gross exaggeration. His background had not prepared him to be emperor, and his personality was not suited to the task (he seems to have had a strange sense of humor), but the Roman historians who wrote of his reign have indulged a strong class bias. The same applies to writers such as Philo and Josephus with regard to the episode of the statue in the temple.

It was most likely not mere whim that made Caligula act as he did. Rather, it was a response to the actions of some young Jewish activists who destroyed a pagan altar in a non-Jewish part of Palestine. Rome tolerated most religions, including Judaism, but they required them to be law-abiding. Pagan altars were not allowed in Judea proper in deference to Jewish sensibilities; in return it was expected that Jews would not interfere with lawful cults outside their own territory. This reciprocal understanding was broken, and Caligula intended to inflict punishment. Why he chose to do so by putting his statue in the temple is not clear, but he probably saw this as an appropriate reaction.

The description of events is somewhat parallel in our two main sources, Josephus (who has two rather different accounts) and Philo. Apparently the local people nonviolently resisted Petronius, the Roman commander who came to do the deed. Philo led a delegation to the emperor (originally for another purpose, but this crisis came up in the meantime) and claimed to be in fear of his life, but his description of the meeting belies this interpretation. Evidently Agrippa, as a close friend of the emperor, had a large hand in persuading him to give up the plan. Although the sources report that Caligula abandoned the plan only reluctantly and even secretly planned to go ahead anyway, there is no real evidence for this claim. In any case, Caligula's assassination in early A.D. 41 put paid to any further repercussions.

The new emperor, Claudius (A.D. 41-54), made Agrippa I king over Judea, as well as the territories he already ruled, and his kingdom now became as large as that of his grandfather Herod the Great. All the reports from antiquity are positive, which seems a bit odd since Agrippa was not particularly a good manager—before becoming king he kept spending large amounts of money and was constantly needing to borrow—and his tax burden was no less than Herod the Great's. Perhaps the reason for his reputation is that he lived to rule only another

three years. But this short reign was welcomed by the Jews, and it made the return of direct Roman rule even more difficult. According to Acts 12 (unaccountably called "Herod" here—his other names were Julius Marcus, and the frequent designation of him as "Herod Agrippa" is incorrect), Agrippa persecuted Christians, but there is no confirmation of this in other sources. The description of his death in Acts 12:19-23 is similar to that in Josephus, though it is given a Christian interpretation.

Claudius decided not to give the kingdom to Agrippa's young son Agrippa II, and Judea became a Roman province once again. The description of the next twenty years in our sources is one of deteriorating relations between Jews and the Roman administration and considerable violence against Romans and, especially, those Jews in leadership positions who tried to cooperate with Roman administration, with the sect called the Sicarii ("assassins") targeting even members of the high priest's family for assassination or kidnapping. The Roman governors are all described as of poor quality and generally corrupt. However much this picture may be something of a caricature, it could not have been a very happy time and was no doubt a contributing cause to the war.

5. Revolts and Religious Regrouping.

In many ways the revolt that began in A.D. 66 was inevitable since it was only a matter of time and the right circumstances before the inhabitants of Judea would try for independence once again. In other ways, it is surprising that intelligent people could think that they could defeat Rome (*see* Jewish Wars with Rome).

The A.D. 66-70 war with Rome was one of the most significant events in Jewish history. The fall of the temple in A.D. 70 marks a watershed that affects all aspects of Jewish history, whether political or religious. Although Judea was no longer a kingdom ruled by a native king, it was not impossible that it could have become such again under Roman rule. The A.D. 66-70 revolt confirmed to the Romans that the Jews had to be ruled with a firm hand. The year A.D. 70 also serves as a significant benchmark in the religious history of Judaism. In retrospect we see great changes after A.D. 70, despite an undoubted continuity in many areas. A large number of the strands in the multifaceted religious scene were cut off, the centrality of the *temple

cult in worship came to an end, and the whole set of power relationships in religious leadership changed. The power of the priesthood and dependent groups (the *Sadducees?) whose power base was the temple quickly waned. Some of the important pre-70 religious sects seem to have been destroyed by the war itself (the *Essenes, the Fourth Philosophy, many of the revolutionary groups). Sects with a religious system that did not depend on an active temple cult were in a good position to thrive in the new environment. This applied particularly to the *Pharisees and the Christians.

The period between A.D. 70 and the Bar Kokhba revolt was a time of great religious regrouping. The indication is that the traditional Judean leadership, the priests and the Herodian family, attempted to reassert itself but was unsuccessful (Schwartz). Instead a new religious entity was born in the small coastal town of Yavneh: *rabbinic Judaism. Rabbinic Judaism had its roots in the pre-70 religious situation, apparently drawing heavily on Pharisaic tradition but also incorporating ideas or mentalities of scribalism, the priesthood and perhaps even groups such as the Essenes. Thus, many of the elements of rabbinic Judaism were not new, but it represented a new synthesis that did not correspond to any pre-70 group. The frequent assumption that rabbinic Judaism is interchangeable with Pharisaism is mistaken. Many of the traditions that are likely to have gone back to the Pharisees are found in early rabbinic Judaism, but they occur in a new context. Especially important is the centrality of *Torah study as a religious act in rabbinic Judaism, which does not seem to have been the case with Pharisaism, though it might have been more so with the *Qumran community, the Essenes and that strange group called the scribes.

The reconstruction of Judaism going on in Yavneh did not have an immediate effect on the Jews as a whole. Looking back from modern times, one can see the importance of the Yavnean period as the place of seminal development for what became the dominant form of Judaism, but this took centuries. The Jews as a whole seem to have recovered from the A.D. 66-70 war fairly quickly. The destruction of Jerusalem and its surroundings was great, but much of the rest of the country had got off relatively lightly. The Jews in many of the regional cities had suffered, and some had been wiped out;

however, the Jewish communities outside the Palestinian area had generally been affected only indirectly. The extent of the recovery both in the economic situation and the general morale is attested by the revolts in the first part of the second century A.D.

A widespread set of revolts took place beginning in A.D. 115 in Egypt and Mesopotamia, including Cyrenaica and Cyprus. We do not have a lot of details since no Jewish author describes these, but they seem to have been bloody and, whatever the initial successes, ultimately a disaster for the Jewish communities that participated. The great synagogue and much of the large Jewish community in *Alexandria were destroyed. According to the Roman source, many thousands of non-Jews were killed in Cyprus before the revolt was crushed. Archaeology in Cyrenaica has partially confirmed the literary sources.

Palestine does not seem to have participated in the A.D. 115-117 revolts, but a decade and a half later the Jews tried again to throw off the Roman yoke (see Jewish Wars with Rome for the details of this revolt and the possible reasons for it). It seems to have devastated the country and people to a much greater degree than the 66-70 war. Jerusalem was turned into a Roman city, and Jews were forbidden to enter it. It was now clear that no national entity or temple would be possible for centuries. The energies of the people, such as there were, went into the development of their religion.

The site of the new reconstruction was a village in Galilee called Usha. Most of the leaders of the Yavnean period were dead, many of them killed in the Bar Kokhba revolt. The developments of the Yavnean period continued, but Usha also had a different perspective, as was inevitable after the Bar Kokhba revolt. One of the traditional strands of Judaism—belief in an *apocalyptic intervention by God to exalt his people and destroy their enemies—seems to have been dropped or suppressed (the messianism of later rabbinic literature has a different nature [Neusner]). After two crushing defeats that were at least in part inspired by *eschatological speculations, this is hardly surprising. The new rabbinic worldview was quite different from that of many of the pre-70 strands of Judaism (Judaisms).

JEWISH HOLY MEN. See HOLY MEN, JEWISH.

JEWISH LITERATURE: HISTORIANS AND POETS

The Jewish historians and poets dealt with here are all authors writing in Greek who lived in the period from the third century B.C. to the first century A.D. Most of them were Diaspora-based Jews; some of them, however, were of Palestinian provenance. *Josephus and the books of the *Maccabees are left aside here, as is the *Letter of *Aristeas*. The works of most of these authors have been preserved only fragmentarily, in the form of excerpts by the first-century B.C. pagan scholar Alexander Polyhistor. Polyhistor's work (*On the Jews*) is lost as well, but Christian authors, primarily Clement of Alexandria and Eusebius of Caesarea, preserve extensive quotes from it. They are the main sources for our knowledge of these authors. The complex tradition history of the text of their works creates many uncertainties, especially in prose works—poetry is less subject to alteration—but what has been handed down to us suffices to give a clear idea of a fascinating variety of ways in which these writers appropriated the biblical tradition and tried to reshape it in Greek literary modes.

1. Historians
2. Poets

1. Historians.

1.1. *Demetrius*. *Demetrius the chronographer is almost certainly the earliest Jewish author (in the last decades of the third century B.C.) we know to have written in Greek. While dealing with biblical material, he tries to com-

bine two Hellenistic genres: *erotapokriseis* and description of the history of a non-Greek people in Greek by one of its own members. The first is a genre in which a topic is dealt with in a question-and-answer format, popular in exegesis of Homer (cf., e.g., Philo's *Quaest. in Gen.*); the second is a genre known from the works of the Egyptian Manetho, the Babylonian Berossus and the Roman Fabius Pictor (cf. Josephus's *Ant.*). In the latter genre the emphasis is often on matters of chronology (the older a tradition of a nation, the better; see Aristotle *Metaphysics* A 3, 983b32), and this explains why in the six fragments of Demetrius there is so much computation of years and attention to genealogy (e.g., in fragment 2 we find a calculation of the number of years from the creation until Jacob's arrival in Egypt, a genealogy from Jacob to Moses, a calculation of the length of Israel's sojourn in Egypt and of the time lapse between Abraham's departure from Ur and the exodus). The main emphasis in Demetrius is on the credibility of the Bible as a historical record. His style is sober and dry, and there is no evidence of syncretism.

1.2. Eupolemus. Eupolemus is probably identical with the priest called Eupolemus mentioned in 1 Maccabees 8:17-18 as the man sent by Judas Maccabeus to Rome in order to conclude a Roman-Jewish friendship treaty in 161 B.C. (see *Jewish History: Roman Period*). He is important in that he shows that being an adherent of the Maccabees did not necessarily imply a rejection of anything Greek and that a member of an important priestly family in *Jerusalem could be critical of the biblical traditions and did not hesitate to rewrite them in order to glorify the great figures of Israel's past, Solomon in particular. He represents Moses not only as the first lawgiver but also as the inventor of the alphabet (the Jews passed it on to the Phoenicians). But the largest fragment (2) focuses on Solomon's building of the *temple as the religious and political center of the Jewish people. It contains among other things a detailed description of its construction that is at variance with the biblical account, but his outlook is clearly a priestly one. The biblical story is interspersed with the letters exchanged between Solomon and Pharaoh Ouaphres and King Suron (= Hiram) of Tyre. Solomon writes severely, as to client kings; the others submissively, to "the great king." The builder of the Jerusalem temple is presented by this Jerusalem priest as if he were an emperor

with subordinate vassal kings. The center of the Jewish religion deserved nothing less.

1.3. Pseudo-Eupolemus. Pseudo-Eupolemus is the name given by modern scholars to the author of two fragments, one of which is attributed by Alexander Polyhistor (or Eusebius) to Eupolemus and the other to an anonymous writer. They need therefore not derive from the same author. The first fragment deals primarily with Abraham, and it intersperses the biblical stories with Greek and Babylonian mythological elements. For example, Kronos is incorporated into the genealogy of Genesis 10, Enoch is identified with Atlas and is the inventor of astrology (see Enoch, Books of), and Abraham is received (by Melchizedek?) in the temple at Mt. Gerizim, here explicitly identified as "mount of the Most High." This syncretistic concoction most probably derives from a second-century B.C. Samaritan author in view of the emphasis on Mt. Gerizim. The second fragment has Babylon built by the giants (see Gen 6:4; 10:8-10; 11:1-9), to whom Abraham traced his pedigree. Since it says that these giants were destroyed by the "gods," a reference to the pagan myth of the *gigantomachia* ("battle of the giants" [against the gods]) may be implied here. In both fragments the openness to non-Jewish traditions is remarkable.

1.4. Artapanus. Artapanus is the most curious of these Jewish historians. He goes further than any of his co-religionists in deviating from the Bible in his portrayals of the patriarchs and especially of Moses as inventors and founders of human civilization and culture in general. Abraham invented and taught astrology, and Moses was the inventor of ships, quarrying instruments, hydraulic machinery, weapons of war, hieroglyphs, *philosophy, even of the Egyptian animal cult, and for that reason the Egyptian priests called him Hermes (= Thoth). Moses is here not so much a lawgiver as a great teacher to whom the Egyptians owe their culture, their religion, their arts and their economy. One senses here a counterattack on the account of Moses given by the Egyptian priest Manetho (or similar anti-Jewish Greco-Egyptian writers), who depicted the Jewish leader as the embodiment of hostility to Egypt. In order to make his point this author goes so far as to make it difficult for us to draw a sharp line between what is Jewish or Jewish syncretistic or pagan.

1.5. Cleodemus-Malchus. The only surviving

fragment of Cleodemus-Malchus presents not only a reshuffling of the data of the genealogy in Genesis 25:1-6 but also an expansion of it with pagan personalities. The most striking feature is the attempt to forge a genealogical link between Abraham and Heracles, who marries Abraham's granddaughter. There is a clear tendency to make several peoples descend from Abraham and so to create kinship between the Jews and these other peoples.

1.6. Aristeas. Aristeas presents us in the only fragment preserved with a small piece of post-biblical Job haggadah. He identifies Job with the Edomite king Jobab, who is Esau's son (cf. Job 42:17b-e LXX), thus placing Job in the patriarchal period, a tradition also found elsewhere (Pseudo-Philo *Bib. Ant.* 8.8; *T. Job* 1:6).

2. Poets.

2.1. Ezekiel the Tragedian. Ezekiel the Tragedian is the name of a second-century B.C. playwright who wrote a classical Greek drama on the exodus from Egypt, called *Exagōgē*. Only 269 iambic trimeters have been preserved. It is the only Jewish play known to us from antiquity, and it was probably intended to be staged, not just read. The drama follows the *Septuagint version of Exodus 1-15 fairly closely but adds several interesting haggadic motifs, such as the appearance of the mythical phoenix, which heralds the inauguration of a new era in salvation history. The most striking and controversial scene is a dream of Moses in which he sees God upon his throne on the top of Mt. Sinai; God beckons Moses to come to his throne, hands him his regalia and, leaving the throne himself, seats Moses upon it, whereupon all heavenly powers prostrate before Moses. It would seem that this indicates that according to Ezekiel all power in heaven and on earth has been handed over to Moses, who acts here as the viceregent or plenipotentiary of God (cf. Mt 28:18). The synthesis of biblical story, Greek literary form, postbiblical haggadah and theological speculation makes this play into one of the most typical products of Jewish *Hellenism.

2.2. Philo the Epic Poet. Philo is a second-century B.C. epic poet who wrote a lengthy epos on Jerusalem in what is sometimes almost unintelligible Greek. He has a tortuous style and obscure diction, but the 24 hexameters extant show that the author identified the land Moriah (Gen 22:2) with the Temple Mount (cf. 2 Chron 3:1)

and that he felt a great admiration for the complex water supply systems in the holy city. Philo is the first to apply the Hellenistic genre of an epic poem on the history of a city to a biblical city.

2.3. Theodotus. Theodotus is a representative of the same genre, but he employs it for a Samaritan city, Shechem. It is highly likely that the author was a *Samaritan. The 47 lines extant (in six fragments) describe the surroundings and walls of Shechem in the framework of a summary of Jacob's history, but the most extensive part is a free rendering of the story of the murdering of the Shechemites by Levi and Simeon (Gen 34). Even though the Bible is very critical of these brothers' behavior (Gen 34:30; 49:5-6), Theodotus justifies their act by stating that God himself commanded them to kill the Shechemites, because they were godless. This kind of whitewashing of the Jewish patriarchs or Moses is found more often in postbiblical haggadah. The poem can be read as a piece of Samaritan propaganda in which the author presents the ancestors of his co-religionists as zealous Israelites.

2.4. Pseudo-Orpheus. Pseudo-Orpheus is the name given to a piece of Jewish hexametric poetry, in which Orpheus gives esoteric information to his son Musaeus. There are three or four different recensions, varying in length from 36 to 46 lines, all of them known only from quotations by patristic authors. Eusebius of Caesarea asserts that he found the poem in a work by the Jewish philosopher Aristobulus, who lived in *Alexandria. The oldest version of the poem therefore may go back to the second century B.C., but the dating of the recensions is a controversial matter. The poet emphasizes the oneness and greatness of God, who is the invisible creator and ruler of everything, and says that of all humankind only Abraham (or Moses, in the later recensions), owing to his great astrological knowledge, has been able to see God. The importance of the text lies in the Jewish appropriation of Orpheus and language from the mystery cults in order to serve as vehicles of Jewish monotheism. There are several points of similarity with the Areopagus speech in Acts 17.

2.5. Pseudo-Phocylides. Under the mask of the sixth-century B.C. Greek gnomic poet Phocylides, renowned for the wisdom of his ethical maxims, around the turn of the era a Jewish author wrote a gnomic wisdom poem of 230 hexa-

metric sentences in the old Ionic dialect (see Pseudo-Phocylides). It shares the characteristics of both Greek gnomologies and Jewish wisdom literature and is as such a typical example of cross-cultural didactic poetry. A striking characteristic of this poem is that on the one hand it draws heavily upon the Pentateuch (esp. Lev 18–20 and the Decalogue), but on the other hand it consistently avoids references to specifically Jewish precepts such as *sabbath observance, circumcision and kashrut. All cultic precepts are passed over in silence; only moral precepts for daily life are presented, with a strong emphasis on sexual ethics. Mixed with biblical rules are precepts of originally pagan Greek provenance, which are also presented as God's law, exactly as in the "summaries of the Law" in Philo's *Hypothetica* and Josephus's *Against Apion* 2.190-219 (with which Pseudo-Phocylides has significant overlap). The author's purpose is unclear and debated. Maybe he wanted to prove to strongly Hellenized Jews that biblical and Greek ethics could go hand in hand; that for that reason even the famous pagan poet Phocylides could promulgate biblical ethics; and that it therefore made sense to remain attached to Judaism. Maybe he intended his sentences for schoolroom instruction, as was often the purpose of gnomologies.

Other pseudonyms used by Jewish Hellenistic poets include Homer, Hesiod, Pythagoras, Aeschylus, Sophocles, Euripides and Menander. Church fathers quote various fragments that proclaim the unity and transcendence of God and the reality of divine justice while emphasizing the futility of pagan worship and mythology.

By way of conclusion it can be noticed that these early examples of Judeo-Greek literature, in spite of all their variety of form and outlook, have several things in common. Their literary level is not very high, but they were pioneers in the difficult task of putting a Greek dress upon biblical materials. Their concern was to bolster Jewish self-consciousness and self-confidence in an often inimical environment by repeated assertions that several inventions of major cultural importance (such as astrology and the art of writing) were made by Abraham or Moses and were therefore Jewish discoveries. Many cultures, including Greek civilization, were thus ultimately dependent upon Moses. For that reason their co-religionists *Aristobulus (frag. 3) and Pseudo-Aristeas (30.313-16) state explicitly that

the great Greek philosophers derived all their insights from the books of Moses.

Yet there is little emphasis on the significance of the *Torah as a book of commandments. Moses is not so much presented as the one to whom God revealed his Torah but rather as the first sage, a cultural benefactor, an inventor, a great king, even a cosmic ruler. This absence of emphasis on the centrality of the Torah makes these early Jewish writings so different from later *rabbinic literature. As far as we can judge from the few fragments, these writers focused on the nonhalakic parts of the Torah (Genesis and the first half of Exodus), whereas the rabbis focused on the other parts of the Pentateuch. Even so we can see that several haggadic motifs in rabbinic literature find their first attestations in these Judeo-Greek authors and may even derive from them.

JEWISH WARS WITH ROME

For many centuries after the fall of the first *temple and the end of the kingdom of Judah, the Jews seem to have been essentially peaceful under the rule of various Near Eastern empires. Perhaps the reason is that they had no other choice: rebellion would have gained nothing. There are reports that some Jews served in *Hellenistic armies, either as mercenaries or because they were required to do so (Josephus *Ant.* 13.10.4 §§284-87; *Ag. Ap.* 1.22 §§192, 201-4; *CPJ* 1.11-15, 118-21, 147-78), but the Jews as a people do not appear as a war-making community in the sources. This changed with the Maccabean revolt. Threatened with the suppression and destruction of their religion, the Jews of Palestine revolted against their *Seleucid rulers and eventually gained sufficient autonomy to form an independent Jewish state with a standing army and a policy of expansion.

The *Hasmonean state was brought to an end by the Roman general *Pompey in 63 B.C., and the Jews were under Roman rule (see Jewish History: Roman Period). Over the next two centuries, they tried in three major encounters and several minor ones to throw off Roman rule—without success. These wars with Rome shaped Jewish history in a significant way, and the defeats that resulted had a great effect on the Jewish communities.

1. From Pompey's Intervention to Herod's Rule (63-31 B.C.)
2. From the Death of Herod to the First

Revolt (4 B.C.-A.D. 66)

3. The First Revolt (A.D. 66-70)
4. Revolts Under Trajan (A.D. 115-117)
5. The Bar Kokhba Revolt (A.D. 132-135)

1. From Pompey's Intervention to Herod's Rule (63-31 B.C.).

The initial military encounter between the Jews and Romans happened almost by accident, though with the continued expansion of Rome into the Near East it was perhaps bound to happen (see Roman East). At the end of the Hasmonean kingdom, Alexandra Salome took the throne as queen (76-67 B.C.). Since she could not be high *priest as previous Hasmoneans had been, she appointed her eldest son, Hyrcanus II, as high priest. His younger brother, Aristobulus II, did not accept this but bided his time; when his mother became ill, he seized a number of the country's fortresses and began a rebellion. After her death, the two brothers struggled with one another for the throne. Aristobulus prevailed at first, but Hyrcanus fought back successfully. Pompey was in Syria as legate of the Roman senate, fighting the Armenians, and each of the Hasmonean brothers appealed to him to adjudicate, seeking to influence his judgment with substantial bribes. Pompey eventually sided with Hyrcanus, at which point Aristobulus left in such a manner as to suggest that he was prepared to resist implementing the Roman decision. Pompey pursued him. Aristobulus himself then surrendered to Pompey's troops, but some of his followers took charge of Jerusalem and shut the gates in the face of the Roman army.

Pompey besieged the city for three months. In the final onslaught the priests continued to carry out their cultic duties, and many were slain around the altar. Pompey went into the temple itself. However, this was probably a matter of curiosity, because the treasury was not touched, and the next day he told the priests to ritually purify the sanctuary and continue with the regular cult. Many of the Jews regarded Pompey's actions as an insult to God and rejoiced a few years later when he was killed and his body cast out into the open (*Pss. Sol.* 17:7-18).

For the next quarter of a century the last of the Hasmoneans attempted to regain some ground against the Romans but with little success. During this period Aristobulus and his sons Alexander and (somewhat later) Antigonus

staged revolts and attempted revolts. It was not difficult to gather a large following in a short period of time, indicating the Hasmoneans were still popular among the Jewish people. Aristobulus was initially taken captive to Rome, but Alexander escaped and in 57 B.C. gathered an army sufficiently large to take Jerusalem. Defeated by the Romans, he was taken to Rome. But then the next year both Aristobulus and Alexander escaped and fostered another revolt. They were defeated and Aristobulus returned to Rome, but his sons were left free to promote further revolts. Caesar attempted to use Aristobulus when the Roman civil war began in 49 B.C., but the latter was poisoned by Pompey's followers, who also executed Alexander.

In 40 B.C. the Parthians invaded, taking over Palestine and setting Antigonus on the throne. Herod escaped and fled to Rome, where he was made king of Judea by the Romans. His first task was to establish his rule over Antigonus, who was still in control of Jerusalem, though the Parthians had withdrawn. Although taking not only his own troops but also a Roman force, Herod found retaking Palestine a far from easy task, and one of his brothers was killed in the fighting. He besieged Jerusalem for a number of months in the summer of 37 B.C. The city finally fell about the beginning of September, though Herod managed to prevent the looting of the city by the Roman soldiers (which would have been considered their right of conquest) by paying them from his own resources. Herod had Antigonus executed. This was the last investment of Jerusalem by Roman troops for a century, though Roman troops were often involved in police actions in the city.

2. From the Death of Herod to the First Revolt (4 B.C.-A.D. 66).

Herod kept a tight rein on those under his rule, and there were no significant internal rebellions while he was alive. However, as soon as he died in 4 B.C. a series of revolts broke out in Judah over demands about the reduction of taxes and the release of prisoners. After a quick show of force, Archelaus and the other sons of Herod rushed to Rome to try to obtain the throne, leaving the Roman Sabinus in charge. The unrest did not quiet down but increased, with a full-scale revolt developing. Even some of Herod's Idumean veterans participated. This was not a coordinated rebellion but rather a se-

ries of individual movements with separate, independent leaders. Some of the leaders seem even to have had certain messianic pretensions. The revolt grew so extensive that the governor of Syria, Varus, was sent to suppress it, which he did with the expected efficiency and ruthlessness. Nevertheless, some groups continued to cause trouble for years, and the "war of Varus" was still remembered in later Jewish literature (e.g., the *Seder Olam Rabbah*).

Archelaus reigned for about a decade before being removed, and Judea turned into a Roman province in A.D. 6. Rather than a native ruler, the country now had a Roman governor and came under the Roman system of taxation, which required a tax census to be made of the region (see Roman Administration; Roman Governors of Palestine). The memory of that census probably gave rise to Luke's "census in the time of Augustus" (Lk 2:1-2). Some Jews resisted this with the slogan that only God could rule them. Two leaders in particular were Judas the Galilean and Simon the Pharisee, who founded what Josephus calls the "fourth philosophy," a sect that he places alongside the *Sadducees, *Pharisees and *Essenes (Josephus *Ant.* 18.1.1 §§4-10; 18.1.6 §23; cf. Acts 5:37). . . .

Throughout the next decades there seem to have been various *revolutionary groups who resisted Roman rule at different times. These do not always seem to have been organized groups, and they did not often last long. For example, we hear of Theudas, who gained a following but apparently was short-lived (Josephus *Ant.* 20.5.1 §§97-99; cf. Acts 5:36). The members of these groups are often called "bandits" (Gk *lēstēs*), and it is not always clear whether those referred to as bandits or robbers should be literally so designated or whether we should think rather of revolutionaries (the distinction was not always clear-cut, however). The Gospels mention that a certain Barabbas, who seems to have been a political rebel, was released (Mk 15:7) while two "thieves" (members of revolutionary groups?) were crucified with Jesus (Mk 15:27).

Especially in the period after the death of Agrippa I (A.D. 44), various resistance groups seem to become even more prominent. One of the tasks faced by each new Roman governor was to try to clear the country of the bandits who were threatening the social order. These include the Sicarii ("assassins"), who, according to Josephus, arose from the fourth philosophy,

though this is not certain. The Sicarii targeted Roman officials in a few cases but mainly Jewish officials who cooperated with the Roman regime. In a manner reminiscent of some modern terrorist groups, they financed their activities by kidnaping members of leading families and holding them for ransom. They are also said to have been hired both by the Roman governors and by the high priests—the very authorities supposedly trying to get rid of them—to carry out certain nefarious actions.

3. The First Revolt (A.D. 66-70).

The A.D. 66-70 revolt against Rome did not begin suddenly but was preceded by a long series of incidents, including the revolutionary activities mentioned in the preceding section and a line of bad governors. Then in A.D. 66 occurred in succession a major incident regarding the synagogue in Caesarea, the seizure of the temple treasury to help make up for the arrears of tribute and the halting of the traditional *sacrifices for the emperor and his family (see Ruler Cult). This eventually led to Agrippa II's being driven from Jerusalem and finally a massacre of Roman soldiers in August. The Romans responded by sending Cestius with two legions to Jerusalem. He came within sight of the city and, according to Josephus, could easily have taken the city; however, he suddenly decided to withdraw, laying himself open to harassment by Jewish guerrilla tactics and losing a considerable number of his troops. It also gave the Jews time to set up a revolutionary government and make plans for defense.

Josephus wants us to believe that the war was caused on the Jewish side by a handful of unrestrained, hotheaded bandits who forced a reluctant leading class of priests and nobles, as well as the people at large, into the conflict. This picture has been questioned by a number of scholars in recent times, but a full study has now demonstrated the extent to which Josephus has painted a false picture (Price). Although a few members of the leading classes did oppose the war, Josephus's own data show that the leadership of the country as a whole was overwhelmingly in favor of the fight against the occupying forces, even those who had earlier cooperated with the Romans. Josephus alleges that he was against the revolt, yet all his actions on the contrary argue much louder than words for an enthusiastic supporter of the rebellion. The

leaders of the new revolutionary government were overwhelmingly from the upper-class priests and lay nobility.

This does not mean that the leadership was united. On the contrary, old feuds persisted, and the previously existing revolutionary groups, whom the leaders tried to control and use for their particular purposes, often pursued their own objectives. Josephus's detailed account of his activities in Galilee illustrates how enmity with other Jewish leaders was more important than the Roman threat. Thus, much energy was expended in fighting each other. This continued to be true until the final siege of Jerusalem, when they fought bravely and even unitedly—but by then it was too late.

To put down the revolt Nero appointed Vespasian, who took a systematic approach to the task. He assembled three legions and many other troops and began his attack in Galilee. His main opponent here was Josephus, who was besieged in the city of Jotapata and taken prisoner in July 67. After subduing the rest of Galilee, Vespasian advanced south, quickly taking the defended areas outside of Jerusalem. Many refugees fled to Jerusalem, which Vespasian surrounded in the summer of 68. But then news of Nero's death came, and Vespasian felt unable to carry on the war until the political situation in Rome was clarified. He had been appointed by Nero, who was now dead, and Nero's successor might issue new orders. Over the next year there were several different claimants to the office of emperor; the year 69 has sometimes been referred to as the year of the three emperors (see Roman Emperors). In the summer of 69 Vespasian decided to get on with the siege of Jerusalem. But when word came that Vitellius had overcome Galba, Vespasian was declared emperor by his troops, though this was clearly stage managed. He set out for Rome to confront Vitellius, leaving Titus with four legions to finish conquering Jerusalem.

Josephus describes the final siege of Jerusalem in great detail (Josephus *J.W.* 5-6). We know that by this time the city was divided among three factions with three different leaders: Eleazer son of Simon, John of Gischala (Josephus's old enemy), and Simon son of Gioras. Each was in control of a different part of the city, and each was willing to kill other Jews to retain and extend his power. A group called the Zealots had emerged at some point. (Some writers have

used the term *Zelot* incorrectly to describe any revolutionary group, but Josephus is clear that it was a specific group, though we are not given its history.) By this time, the Zealots seem to have become divided among the various factional leaders. Interestingly, the Sicarii seem to have left the city toward the beginning of the revolt and to have made Masada their base (see *Revolutionary Movements*).

Titus besieged Jerusalem through the spring and summer of 70. The city was well defended, and the fighters—now working in concert—fought well, but the Romans had the resources and the technical skill needed. When the city fell in August, Josephus claims that it was Titus's intent to spare the temple but that the actions of soldiers and rebels set it on fire. However, another source gives the more realistic story that Titus met with his commanders to discuss the destruction of the temple, since it was seen as the root of much of the revolutionary feeling. Three fortresses continued in rebel hands. Herodium surrendered without much resistance, but Machaerus decided to hold out and had to be taken after a siege. Masada did not fall until 78 in a remarkable feat of siege warfare by the Romans. Most of the defenders committed suicide before the final assault, however.

4. Revolts Under Trajan (A.D. 115-117).

One of the purposes of Josephus's *War* was to deliver the message that Rome could not be defeated and revolt was useless. This might seem a strange thing to write about only a few years after a devastating war, yet his perspicacity became evident when less than fifty years later another series of revolts caused great suffering to Jewish communities in a number of places. The areas mainly affected were Cyrenaica, Egypt, Cyprus and Mesopotamia. We have only a few fragments of information that are subject to more than one explanation.

The prevailing hypothesis has been that the revolt began in Egypt in A.D. 115; that this may not have had any connection with Mesopotamia, which revolted after Trajan's conquest of certain areas; that Palestine was not involved; and that peace was finally established in 117. The study by T. D. Barnes has now challenged that. He argues that the revolt did not begin until 116 and originated in Mesopotamia. The revolt here was not of the Jews alone; they were only part of a broader group, including the

Parthians and other natives of the region.

We know most about the situation in Egypt and North Africa, where we have some *papyri and also archaeology. The revolt in this region apparently began in Cyrenaica and only then affected Egypt. We know of civil disorder in *Alexandria in 115, but it may not have been directly connected with the revolt, if Barnes is right. There was a great deal of destruction in both areas, and it took the arrival of a second legion to quell the disturbances in Egypt.

As in Cyrenaica, the revolt in Cyprus was apparently led by an individual who declared himself king. The huge numbers of those said to have been killed by the Jews (a quarter of a million) are probably exaggerated but indicate the massive slaughter. After the defeat of the Jews, a decree was passed forbidding them to settle on Cyprus.

5. The Bar Kokhba Revolt (A.D. 132-135).

The Bar Kokhba revolt was apparently a devastating war from both the Jewish and Roman point of view; no Josephus recorded it, and our knowledge is made up of incomplete information. We now know from a Greek letter written by the leader himself that his name was *Simeon ben Kosiba. *Rabbinic and Christian sources indicate that Simon was proclaimed the messiah and took the title "Bar Kokhba" (Aramaic "son of the star"), in a play on Numbers 24:17. If so, a religious motivation and expectation may have blinded the participants to the military realities. Yet the finds of correspondence from and with Simeon give no such indication of messianic claims. Only the symbols on some of the *coins may suggest messianic pretensions.

The cause(s) of the revolt are uncertain. The popular explanation, that Hadrian forbade circumcision, has been rejected in several recent studies. Hadrian may have intended turning Jerusalem into a Romanized city called Aelia Capitolina; we know this happened after the revolt, but this may have been only the realization of what was planned earlier and sparked a violent reaction. The skiminess of our sources makes it difficult to be sure.

The territory held by Simon seems to have been primarily south and southeast of Jerusalem, centering on the Judean desert west of the Dead Sea. Some scholars have argued that he took and held Jerusalem for a time, but this now

seems unlikely. A favorite fighting tactic was to build secret underground hiding places from which quick attacks could be made on the enemy (Kloner; Gichon). A final stand seems to have been made at Bethar, 6 or 7 miles southwest of Jerusalem. An enormous number of Jews were killed by the fighting, famine and disease, but the Roman losses were also so severe that Hadrian dropped the customary greeting in his report to the senate, "I and the legions are well." Jerusalem was turned into a Roman city, and Jews were excluded for many centuries.

JOSEPH AND ASENETH

Interest in this book has grown considerably over the last fifty years, and critical studies of its genre, new translations and attempts to date it and place it in its environment have all brought about a consensus, although not unanimity. Critical to the discussion is finding a

date for the book. Conclusions range from 100 B.C. to A.D. 200. Persuasive arguments have been made by R. D. Chesnut that it was written in Egypt prior to A.D. 115 and likely before A.D. 38. Since it betrays a heavy dependence on the *Septuagint it must have been written after 100 B.C. Its locale is likely Egypt. Once a date has been established it is easier to determine to what extent Christian writers may have been influenced by this fundamentally Jewish book. A few scholars, like T. Holtz, find Christian interpolations in the book. The manuscript tradition, especially their dating, is also critical to our understanding of the book's relation to Jewish and Christian history.

1. Structure of the Book

2. Significance for New Testament Studies

1. Structure of the Book.

The book is divided into two distinct parts. Chapters 1—21 are a touching love story describing what brought Joseph and Aseneth together and how they overcame the obstacles to their union. Joseph could not marry a pagan, and that obstacle is removed by Aseneth's conversion. Aseneth displays a streak of independence and occasionally apologizes for her *parresia* ("boldness"), a trait for which, according to *Josephus, one of *Herod's wives paid with her life (Klassen 1996), and Aseneth is not about to allow her father to select a mate for her sight unseen. Her resistance is removed once she sees how handsome Joseph is. Beyond the romantic motif is clearly the issue of, How can this famous Jewish patriarch have married a non-Jewish woman, and how does this apply to the men in our community who are also tempted to marry outside the Jewish community? Aseneth not only emerges as a strong person in her own right but also becomes a genuine convert to *Judaism and an eloquent defender of its values.

The second part of the book deals with the jealousy that Joseph and Aseneth have to deal with from Pharaoh's son, who recruits Joseph's brothers to murder both Joseph and Aseneth. The plot draws on the popular motif that God is a warrior who defends them at critical times. Pharaoh's son is mortally wounded, and when Pharaoh himself dies of grief, Joseph becomes king of Egypt.

Throughout the book the motif "it is not proper for the one who worships God" is used

frequently to convey Jewish law and customs. That applies to whether a good male can kiss a pagan female (*Jos. and As.* 8:5), retaliate against an attacker or eat certain foods. The book is one of the strongest affirmations of the role of a pagan female convert in Judaism and was designed to rebut those who felt that Jews should not marry outside the faith. There remain insoluble mysteries in the book, such as the scene of Aseneth eating the honeycomb (*Jos. and As.* 16:17-23) and the unusual behavior of the bees. Most likely these are symbolic ways of describing or summarizing Jewish life.

2. Significance for New Testament Studies.

The current prominence of the book as a resource for studying the NT derives from the fact that it is almost certainly coterminous with the time during which the NT was written or slightly before. It sheds light on such important issues as the teaching on vengeance by this circle of Jews from which it emerged, and it puts some balance into the widespread portrayal of Joseph's gentleness, kindness and moderation. It portrays a powerful and sensitive woman who is worthy of being considered a Jew. By choosing the model of a love story or a romance it joins the book of Ruth in assuring itself an immortal place not only in Jewish literature but also in world literature. Moreover, it balances stories like that of *Judith, in which her strength comes from her doing manly things such as cutting the head off the enemy. Aseneth has to instruct the patriarchs that it is not right to harm an enemy; rather it is incumbent upon them to heal and to forgive the enemy. Simon asks in disbelief: "Why does our mistress speak good on behalf of her enemies?" (*Jos. and As.* 28:12).

Nowhere in Jewish or Christian literature of that early period is the issue of love of enemies, retaliation and revenge more clearly faced than here (Zerbe, 72-97). There are also strong indications that the application of this mandate goes far beyond relations between two people and also applies to group attitudes and religious competitors. The impetus for this came not only from direct conflicts between both Jews and outsiders but also from conflicts within the Jewish community. But the answers were drawn from their careful reading of the Septuagint and their use of both the wisdom tradition as well as the haggadah. Later definitions of the enemy included "the enemy is one who hasn't spoken to

the neighbor for three days" (*m. Sanh.* 3:5). This story is more specific and has the traditional enemy of Jews, the Egyptians, trying to give Jews a lesson on how important it is that goodness can overcome evil when the enemy's healing is considered important. Most important, however, is the religious and spiritual undergirding that this ethical action receives, since it derives its ultimate sanction from God, who also provides strength to carry it out.

JOSEPHUS: INTERPRETIVE METHODS AND TENDENCIES

There are three major reasons why Josephus (A.D. 37-c. 100) is important for students of the background of the NT. First, he presents by far the most comprehensive and systematic history of the Jewish people from their beginnings to his own day and is especially full for the period just before, during and immediately after the lifetime of Jesus, especially concerning such personalities as *Herod and such events as the census of Quirinius. Second, he is the earliest non-Christian writer who mentions John the Baptist, Jesus, James the brother of Jesus, Judas the Galilean, Theudas and the Egyptian prophet. Third, he presents the earliest systematic and comprehensive paraphrase and interpretation of the Bible.

Whereas the overwhelming majority of classical works have been lost, everything that Josephus wrote has come down to us. This is because the Christian church found him extremely useful in filling in the gap of history between the chronological close of the Jewish Scriptures in the fifth century B.C. and the birth of Christianity. In particular his work was useful in confirming the historicity of Jesus and John the Baptist and in establishing the view that the terrible sufferings of the Jews during the war against the Romans and of the destruction of the *temple were in fulfillment of the prophecies of Jesus and were inflicted by God upon the Jews for their rejection of Jesus.

1. Josephus as Historian
2. Josephus and the New Testament
3. Josephus as Interpreter of the Bible

1. Josephus as Historian.

Josephus is the author of four works: the *Jewish War*, in seven books, covering the period from the reign of Antiochus IV Epiphanes (175 B.C.) to the aftermath of the fall of Masada (A.D. 74) and concentrating on the war against the Romans culminating in the destruction of the temple in Jerusalem (A.D. 70); the *Antiquities of the Jews*, in twenty books, covering the period from creation to the outbreak of the war against the Romans in A.D. 66; the *Life*, in one book, the earliest extant autobiography from antiquity (see Biography, Ancient), concentrating on Josephus's role as general in Galilee in the war against the Romans; *Against Apion*, in two books, attempting to refute the anti-Jewish charges of Manetho,

Lysimachus, Chaeremon, Apion and others.

Josephus was, to judge from his autobiography, excellently equipped to write his histories. He was descended on his mother's side from the *Hasmonean kings (Josephus *Life* 1 §2) and was a personal friend of Agrippa II, the last Jewish king, who is said to have written no fewer than sixty-two *letters testifying to the accuracy of Josephus's history of the Jewish war (Josephus *Life* 65 §§64). On his father's side he belonged to the first of the twenty-four courses of *priests (Josephus *Life* 1 §2) in an era when priestly status was a source of great prestige.

Josephus received an excellent *education in traditional Jewish learning and at the tender age of fourteen was already consulted by the chief priests and other leaders for interpretations of Jewish law (Josephus *Life* 2 §9). He spent three years gaining first hand experience of the three leading sects of Jews—*Pharisees, *Sadducees and *Essenes (Josephus *Life* 2 §§10-11). At the age of twenty-seven he was chosen to go to *Rome to secure the freedom of some priests and proved successful (Josephus *Life* 3 §§13-16). Though he had no first hand experience as a soldier he was chosen at twenty-nine to be general of the Jewish forces in *Galilee (Josephus *J.W.* 2.20.3 §563; *Life* 7 §§28-29). He gained the favor of the Roman generals—later *emperors—Vespasian and Titus, whose family name, Flavius, he adopted and who presumably gave him a good deal of first hand historical information; and he spent the last thirty years of his life living in Rome on a pension granted to him by them (Josephus *Life* 76 §423).

In Rome he had a *patron, Epaphroditus, who is said to have had a library of some thirty thousand books. He also gained a good knowledge of Greek literature, particularly Homer, Thucydides, *Plato and the Greek tragedians. Scholars are generally suspicious of his accounts of events in which he directly participated, such as the siege of Jotapata; but for other events, notably his account of the siege of Masada, where we can compare his account with the excavations of Y. Yadin in 1963 to 1965, he has generally proven to be accurate. The fact that in the introduction to his *Jewish War* he is so critical of his predecessors who wrote the history of that war (Josephus *J.W.* 1.pref.1 §§1-2) and that in his essay *Against Apion* (1.2-5 §§6-27) he is so critical of Greek historians would indicate that he himself had to make a special effort to be fair and

accurate lest he be laughed out of court.

2. Josephus and the New Testament.

Few scholars have doubted the authenticity of the reference to John the Baptist (Josephus *Ant.* 18.5.2 §§116-19), since the language is particularly typical of this part of the *Antiquities*. If a Christian had interpolated it, it is hard to explain why he would have made it almost twice as long as the passage about Jesus, why he should have contradicted the Gospels' account as to why John was put to death (Josephus says that he was condemned by Herod Antipas because the latter saw that John was attracting such large crowds, and he feared that this would lead to sedition) and why he should have said nothing about the connection of John with Jesus. As to the passage about the condemnation by a *Sanhedrin of James (Josephus *Ant.* 20.9.1 §200), who is referred to as the brother of Jesus, who was called the Christ, virtually all scholars have accepted its authenticity.

As to the passage (the so-called *Testimonium Flavianum*) about Jesus (Josephus *Ant.* 18.3.3 §§63-64), which is found in all 42 of the extant Greek manuscripts containing this portion of the *Antiquities* (the earliest of which dates from the eleventh century), as well as in all 171 extant manuscripts of the Latin translation, which was done in the sixth century under the sponsorship of Cassiodorus, scholars have increasingly concluded that it is authentic in part. It says that during the procuratorship of Pontius Pilate "there lived Jesus, a wise man, if indeed one ought to call him a man." It notes that he wrought miracles and won over many Jews and many of the Greeks and then bluntly states that "he was the Messiah." It reports that Pilate had him crucified upon hearing him accused by men of the highest standing among the Jews. It then adds that on the third day Jesus appeared to his followers restored to life, in accordance with the prophecies of the prophets.

Such a passage, as it stands, should have been vital for Christian apologists, such as Justin Martyr, seeking to answer the charge that Jesus was a figment of imagination. And yet, of eleven Christian church fathers who lived prior to or contemporary with the fourth-century Eusebius of Caesarea and who cite passages from Josephus, including the *Antiquities*, none refers to this passage. Moreover, Origen, who knew book 18 of the *Antiquities* and who cites five passages

from it, expresses wonder that Josephus did not admit "Jesus to be the Christ" (Origen *Comm. Mt.* 10:17) and states that Josephus "disbelieved in Jesus as Christ" (Origen *Cont. Cels.* 1.47).

A clue to the original wording may be found in Jerome (Jerome *Vir.* 13), who cites Josephus as saying not that Jesus was the Messiah but that "he was believed to be the Messiah." A further clue may be found in a tenth-century history of the world in Arabic by a Christian named Agapius. He omits "if indeed we ought to call him a man," as well as the reference to Jesus' miracles and to the role of the Jewish leaders in accusing Jesus; and he says not that Jesus appeared to his disciples on the third day but that his disciples reported this event. Most important, his version declares not that Jesus was the Messiah but that "he was perhaps the Messiah." Two centuries later a twelfth-century chronicle in Syriac by a Christian named Michael the Syrian, in its version of the *Testimonium*, has language similar to that of Jerome: "He was thought to be the Messiah."

3. Josephus as Interpreter of the Bible.

Josephus solemnly assures his readers that he has set forth the precise details of the Scriptures, neither adding nor omitting anything (Josephus *Ant.* 1.proem.3 §17), whereas in fact he adds, subtracts and modifies, usually in minor respects but sometimes in major shifts as well. One such case is that of Jehoash, who in the Bible (2 Kings 13:11) is said to have done evil in the sight of the Lord. Yet in Josephus he is described as a good man (*Ant.* 9.8.6 §178). Again, Josephus goes so far as to transform Jehoiachin, who in the Bible is said to have done evil in the sight of the Lord (2 Kings 24:9; 2 Chron 36:9), into a king who is described as kind and just (*Ant.* 10.7.1 §100).

It seems hardly convincing, in view of the highly competitive nature of the craft of historian, to say that Josephus is not telling the truth or that he is careless or that he depends upon the ignorance of his readers, knowing how difficult it would be for them to check up on him, with manuscripts being relatively scarce and with there being no indices. Apparently this kind of programmatic statement, as we see in other historians of the era (e.g., Dionysius of Halicarnassus *Thuc.* 5 and 8), is intended to assure the reader that the historian has done his research honestly.

Moreover, in taking such liberties, Josephus

had the precedent of the Bible itself, namely, the book of Chronicles, which often differs in attitude and in specific details with the corresponding treatments in the books of Samuel and Kings. Other precedents were to be found in the *Septuagint, in such historians (usually regarded as Jewish) as Demetrius, Artapanus, Eupolemus, Pseudo-Eupolemus, Cleodemus Malchus and Pseudo-Hecataeus (see *Jewish Literature: Historians and Poets*); in such *Dead Sea Scrolls as the **Genesis Apocryphon*; in the book of **Jubilees*; in *Pseudo-Philo's *Biblical Antiquities*; and in traditions embodied in the **targumim* and **midrashim*. The practice of rewriting the Bible was apparently well established among the Dead Sea sect, so that it is frequently impossible to tell whether a given fragment represents an alternate reading of a text or an interpretation of it (see *Rewritten Bible in Pseudepigrapha and Qumran*).

In addition, as we see in *Cicero's famous letter to his friend Luceius (*Cicero Fam.* 5.12), there is precedent even in the much admired historian Polybius for exaggerating and for disregarding the canons of history when writing a monograph. Apparently Josephus has extended this to writing the history of a whole people, the Jews.

Finally, in his rewriting of the sacred text, Josephus has the precedent of the Greek tragedians, with whom he was well acquainted. Even at the religious festivals of the god Dionysus, they did not hesitate unabashedly to remold the familiar myths as they saw fit. Even Plato (*Plato Rep.* 2.377) and the **Stoics*, who object to the degrading portrayal of the gods, do not object to the fact that the myths are interpreted with such latitude and seek to have them interpreted even more liberally.

Among the factors that influenced Josephus most in his rewriting of the Bible in the first half of the *Antiquities* we may note his audience. That his audience consisted primarily of non-Jews is clear from the statement that his work was undertaken in the belief that the whole Greek-speaking world would find it worthy of attention (*Josephus Ant.* 1.proem.2 §5). Josephus states as the precedent for his work the translation of the Pentateuch known as the Septuagint, which was undertaken at the behest of a non-Jewish king, Ptolemy II Philadelphus (*Ant.* 1.proem.3 §10).

To be sure, his secondary audience consisted of Jews, as we see from his apology for rearrang-

ing the order of the biblical narrative; he states that perhaps "any of my countrymen who read this work should reproach me" (*Josephus Ant.* 4.8.4 §197). Moreover, he is apparently addressing Jews in his audience in his accounts of the Israelites' sin with the Midianite women, which he has increased in length from nine verses (*Num.* 25:1-9) to twenty-five paragraphs (*Ant.* 4.6.7-12 §§131-55), Samson's affairs with non-Jewish women (*Ant.* 5.8.5-11 §§286-313) and Solomon's excesses of passion (*Ant.* 8.7.5 §§191-98), all of which stress the dangers of assimilation and intermarriage. Finally, only Jews would appreciate the cryptic references to the fall of the Roman Empire in Balaam's prophecy (*Ant.* 4.6.5 §125) and in Nebuchadnezzar's dream (*Ant.* 10.10.4 §210), and in the latter passage's invitation to read the book of Daniel.

Because eminent intellectuals, such as Apollonius Molon and Apion, had accused the Jews of not having produced any outstanding inventors in the arts or eminent sages and of not having added anything useful to human civilization (*Josephus Ag. Ap.* 2.12 §135; 2.14 §148), Josephus felt a need to prove, through his delineation of biblical personalities, that the Jews had indeed produced such virtuous and outstanding leaders. Thus he elevates the genealogy of Abraham (*Ant.* 1.6.5 §148), Rebekah (*Ant.* 1.16.2 §247), Jacob (*Ant.* 1.19.4 §§288-90), Joseph (*Ant.* 2.2.1 §9), Amram (*Ant.* 2.9.3 §210), Moses (*Ant.* 2.9.6 §229), Aaron (*Ant.* 4.2.4 §26), Gideon (*Ant.* 5.6.2 §213), Jephthah (*Ant.* 5.7.8 §257), Samson (*Ant.* 5.8.2 §276), Saul (*Ant.* 6.4.1 §45), Shallum (*Ant.* 10.4.2 §59), Gedaliah (*Ant.* 10.9.1 §155) and Esther (*Ant.* 11.6.1 §185). Among biblical figures whose precocity he emphasizes are Moses (*Ant.* 2.9.7 §233), who, though only an infant, throws down the crown placed upon his head by Pharaoh, and Josiah (*Ant.* 10.4.1 §50), who, though only twelve years old, showed his piety by endeavoring to have the people give up their belief in idols.

Moreover, the importance for the Greeks of beautiful appearance may be discerned from Plato's remark that the philosopher-kings in his ideal state should, if at all possible, be the most handsome persons (*Plato Rep.* 7.535). To Josephus it is Joseph's handsomeness that made him especially beloved to his father (*Josephus Ant.* 2.2.1 §9) as well as to Potiphar's wife (*Ant.* 2.4.2 §41). Pharaoh's daughter is enchanted with the beauty of the infant Moses (*Ant.* 2.9.5 §224).

Likewise Josephus calls attention to Saul's and David's handsomeness (*Ant.* 6.4.1 §45; 6.8.1 §164). Absalom's beauty, we are told, surpassed even those who lived in great luxury (*Ant.* 7.8.5 §189).

In particular Josephus aggrandizes the cardinal virtues possessed by his biblical heroes. Abraham is a veritable philosopher (Josephus *Ant.* 1.7.1 §154) who presents an original proof of the existence of God (*Ant.* 1.7.1 §156). Jacob shows wisdom in understanding the significance of Joseph's dreams (*Ant.* 2.2.3 §15). Joseph's wisdom is likewise manifest in his interpretation of the dreams of the butler, the baker and Pharaoh (*Ant.* 2.5.1-2 §§63-65; 2.5.6-7 §§84-87). Moses is said to have surpassed all others in understanding (*Ant.* 4.8.49 §328). Among others whose wisdom is stressed are Saul (*Ant.* 6.4.1 §45), Abner (*Ant.* 7.1.5 §31), David (*Ant.* 7.7.4 §158) and especially Solomon (*Ant.* 8.2.2 §34).

Josephus felt a particular need to emphasize the courage of his biblical heroes because Jews had been reproached with cowardice by such influential intellectuals as Apollonius Molon (Josephus *Ag. Ap.* 2.14 §148). Furthermore, Josephus himself had been similarly accused (*J.W.* 3.8.4 §358). Hence he expatiates the description of the courage of Abraham in his fight against the Assyrians (*Ant.* 1.9.1 §172), of Abraham's sons (*Ant.* 1.15.1 §§239-41) in their joint effort with the renowned Heracles and in the long account of Moses' expedition against the Ethiopians (*Ant.* 2.10.1-2 §§238-51) and in Moses' conduct of war after the exodus from Egypt (*Ant.* 2.15.3-16.3 §§320-44).

The stress that the Greeks placed upon temperance may be seen in the motto inscribed in Delphi: *mēden agan*. Moses is praised for his command of his passions (Josephus *Ant.* 4.8.47-49 §§318-29). The Bible has an embarrassing scene in which Elisha loses his self-control and curses some little boys who jeered him for his baldness (*Ant.* 8.15.5 §414); Josephus, who clearly admires Elisha, omits the incident. In the case of Jehu, whom Josephus seeks to rehabilitate, both the Hebrew and Septuagint texts (2 Kings 9:20) indicate that he drove his chariot madly; Josephus says that he drove slowly and in good order (*Ant.* 9.6.3 §117). The virtue of modesty, which is allied with that of temperance, is particularly to be seen in Moses (*Ant.* 4.8.49 §§328-29), Gideon (*Ant.* 5.6.6 §230), Saul (*Ant.*

6.4.5 §63), David (*Ant.* 7.15.2 §391) and Solomon (*Ant.* 8.5.3 §§146-49), the last most remarkably in recognizing that he had proven inferior to a Tyrian lad, Abdemon, in proposing and in solving riddles.

The fact that justice is the subject of the most famous and most influential of Plato's dialogues, *The Republic*, is an indication of the importance of this virtue, which is central in Josephus's depiction of most of the major personalities of the Bible, such as Abraham (Josephus *Ant.* 1.7.2 §158), Moses (*Ant.* 3.4.1 §§66-67), Samuel (*Ant.* 6.3.3 §36; 6.13.5 §294), Saul (*Ant.* 6.11.2 §212), David (*Ant.* 6.13.4 §290; 7.5.4 §110), Solomon (*Ant.* 8.2.1 §21), Josiah (*Ant.* 10.4.1 §50), Gedaliah (*Ant.* 10.9.1 §155), Daniel (*Ant.* 10.11.4 §246), Ezra (*Ant.* 11.5.1 §121) and Nehemiah (*Ant.* 11.5.8 §183).

The presence of *philanthropia* ("humanity"), which is so closely connected with justice, is particularly important to Josephus in his answer to the charge that Jews hate other peoples (Josephus *Ag. Ap.* 2.10 §121; 2.14 §148). Hence this virtue is ascribed to Rebekah (*Ant.* 1.16.2 §250), Joseph (*Ant.* 2.6.3 §101; 2.6.8 §§136, 145), David (*Ant.* 6.13.6 §299; 6.13.7 §304; 7.6.1 §118; 7.8.4 §184; 7.15.2 §391), Solomon (*Ant.* 8.4.3 §§116-17), Gedaliah (*Ant.* 10.9.3 §§163-64) and Zerubabel (*Ant.* 11.4.3 §87). In the case of Gedaliah, for example, the returnees to Judea are so impressed with his kindness (*chrēstotēs*) and friendliness (*philanthrōpia*) that they develop a very great affection for him. Indeed, generosity is a prime quality of Samuel (*Ant.* 6.10.1 §194), Jehonadab (*Ant.* 9.6.7 §133), Jehoiada (*Ant.* 9.8.3 §166) and Hezekiah (*Ant.* 9.13.1 §260).

One aspect of *philanthrōpia* that was of special significance for the ancients was *hospitality, as we see, for example, in the concept of guest-friendship as enunciated in the meeting of Glaucus and Diomedes in book 6 of Homer's *Iliad* and in the reception accorded Odysseus by the Phaeacians in books 6-8 of the *Odyssey*. Josephus is particularly eager to answer the charge of inhospitality, as found in such writers as Juvenal (Juvenal *Sat.* 14.103-4), that the Jews show the way or a fountain to none except fellow Jews. Hence he stresses the presence of this quality in such key figures as Moses (Josephus *Ant.* 3.3.1 §63), Boaz (*Ant.* 5.9.3 §330) and David (*Ant.* 7.2.2 §54). It is particularly prominent in Gedaliah, who, when warned of the plot against his life by Ishmael, responds that he prefers to

die by Ishmael's hands rather than to put to death a man, namely, Ishmael, who had taken refuge with him and had entrusted his very life to him. Likewise, we see the importance of regard for a suppliant in Josephus's expansion (*Ant.* 8.14.4 §386) of the reception Ahab gave to Ben-hadad.

Another important aspect of justice is gratefulness. This is displayed, in extrabiblical additions, by Joseph (Josephus *Ant.* 2.6.8 §152), Jethro's daughters (*Ant.* 2.11.2 §262), Moses (*Ant.* 2.11.2 §262), Joshua (*Ant.* 5.1.7 §90; 5.1.25 §95), Saul (*Ant.* 6.7.4 §145), David (*Ant.* 7.3.3 §69; 7.5.5 §111; 7.7.5 §160; 7.11.4 §§272-74), Jehoshaphat (*Ant.* 9.1.1 §2) and Mordecai (*Ant.* 11.6.13 §294).

That piety is to be regarded as the fifth of the cardinal virtues is clear from Plato (*Protag.* 330B, 349B). Moreover, that *pietas* is the great Roman virtue is clear from the fact that it is the key quality of Aeneas in the great national epic of the Romans, Virgil's *Aeneid*. It was particularly important for Josephus to stress this virtue in his biblical heroes inasmuch as the Jews had been accused of teaching impiety (Josephus *Ag. Ap.* 2.41 §291). Thus Josephus makes a point of stressing that it is especially in piety that Moses trained the Israelites (*Ant.* 1.proem.2 §6). Again, Jehoshaphat shows his piety in that he tells his people that they must show their faith in the prophet Jahaziel by not even drawing themselves up for battle (*Ant.* 9.1.3 §12). Conversely, because it clearly implies impiety, Josephus is careful to omit the account of Gideon's making of an ephod out of the earrings formed from spoils of war (*Ant.* 5.6.7 §282).

Above all, in his rewriting of the Bible, Josephus preaches a realistic attitude and even a high regard for the superpower of the day. Thus, in his reworking of the narrative of Gedaliah, the client governor of Judea appointed by Nebuchadnezzar, and with clear implications for the contemporary position of Jews vis-à-vis the Romans, Josephus stresses that it is a matter of military necessity for the Jews to remain subservient to the superpower. Again, despite the Bible's strongly positive view of Hezekiah, Josephus is clearly critical of Hezekiah for not realistically accommodating himself to the superior power of that day, Assyria; and, drawing a parallel to the situation of the Jews vis-à-vis the Romans, Josephus is less than enthusiastic about him, even going to the point of asserting that it

was cowardice that influenced Hezekiah not to come out himself to meet the Assyrians (Josephus *Ant.* 10.1.2 §5). The fact that Hezekiah was encouraged by the prophet Isaiah to resist the Assyrians may help to explain Josephus's relative downgrading of Isaiah's importance.

Josephus, in contrast to the Bible (2 Kings 14:9; 2 Chron 36:9), presents a very positive view of Jehoiachin (Josephus *Ant.* 10.7.1 §100), presumably because he saw a striking parallel between the events surrounding the destruction of the two temples and because Jehoiachin, as Josephus himself did later, realized the power of the enemy and surrendered to him in order to save the temple from destruction; significantly, in his address to his fellow Jews urging the Jews to surrender, the one precedent he cites is that of Jehoiachin (*J.W.* 6.2.1 §§103-4). Josephus justifies the subservience of Gedaliah to the Babylonians, where Gedaliah is a thinly veiled version of Josephus, and Ishmael, his assassin, is a thinly veiled version of John of Gischala (*Ant.* 10.9.3 §§164-66). Significantly, the same damning epithets are applied to Ishmael, the assassin of Gedaliah, as are used of John (*Ant.* 10.9.2 §160 = *Life*; 16 §85; 21 §102; *J.W.* 2.21.1 §585; 4.3.13 §208; 4.7.1 §389; 5.10.4 §441).

One of the recurring charges against Jews was that they had an implacable hatred of non-Jews. To answer this charge, as made by Apollonius Molon and Lysimachus (Josephus *Ag. Ap.* 2.14 §145) and repeated by Tacitus (Tacitus *Hist.* 5.5.1), Josephus goes out of his way to stress that Jews show compassion for non-Jews. Joseph sells grain to all people and not merely to native Egyptians (*Ant.* 2.6.1 §94; 2.6.3 §101). Jethro is seen in a most favorable light; when he wishes to criticize the way in which Moses is administering justice, he shows remarkable sensitivity in taking him aside so as not to embarrass him. Again, Solomon, in dedicating the temple, asks that God grant the prayers not only of Jews but also of non-Jews (*Ant.* 8.4.3 §§116-17). Furthermore, when Mesha, the king of the Moabites, sacrifices his own son to his god, the Bible says nothing about the reaction of Jehoshaphat and Jehoram (2 Kings 3:27); Josephus calls attention to their humanity and compassion (*Ant.* 9.3.2 §43).

Philanthrōpia is a quality that Josephus ascribes to Cyrus (Josephus *Ag. Ap.* 1.20 §153) and Xerxes (*Ant.* 11.5.1 §123). The other non-Jewish leaders whom Josephus presents in a more fa-

avorable light include Balaam, Eglon the king of Moab, Nebuchadnezzar, Belshazzar, Darius, Ahasuerus, and even the various pharaohs (especially the one connected with Joseph) that are mentioned in the Bible. For example, Josephus stresses Ahasuerus's undeviating respect for law (*Ant.* 11.6.2 §195), portrays his relationship with Esther as a lawful marriage (*Ant.* 11.6.2 §202), stresses his tender concern for her (*Ant.* 11.6.9 §236) and depicts him as the ideal ruler who is totally concerned with peace, good government and the welfare of his subjects (*Ant.* 11.6.6 §216; 11.6.5 §213). Where he does criticize non-Jewish leaders he usually puts the blame on their advisers.

Moreover, in an interpretation of Exodus 22:27 [28], wherein he follows the Septuagint, Josephus declares that Jews are forbidden to speak ill of the religion of Gentiles out of respect for the very word *god* (Josephus *Ant.* 4.8.10 §207; *Ag. Ap.* 2.33 §237). Thus Josephus omits the passage in which Gideon, upon instructions from God, pulls down the altar of Baal and the Asherah tree that was worshiped beside it (*Judg* 6:25-32). Inasmuch as *mystery cults were held in such high regard by many non-Jews, it is not surprising that Josephus omits the statement, as found in the Septuagint translation, that Asa ended the mystery cults (1 Kings 15:12). Furthermore, he omits the statement that Jehoshaphat removed the pagan high places and Asherahs (2 Chron 17:6 vs. *Ant.* 9.1.1 §1). He likewise omits Jehu's conversion of the temple of Baal into an outhouse (2 Kings 10:27).

Furthermore, in his effort to establish better relations between Jews and non-Jews Josephus emphasizes that Gentile nations are not motivated by hatred of the Jews. Thus Balak and Balaam are motivated not by hatred but rather by a desire to defeat the Jews militarily (Josephus *Ant.* 4.6.4 §112). In Josephus's view, Balaam's readiness to curse the Israelites is due not to hatred for them but rather to his friendship with Balak (*Ant.* 4.6.5 §§120-21). Again, Haman's hatred for the Jews is presented not as part of an eternal Jewish-Gentile conflict but rather as a personal grudge, since he is an Amalekite (*Ant.* 11.6.5 §212).

It is particularly effective to have the Jews complimented by non-Jews. Jethro is so impressed with Moses that he even adopts him as his son (Josephus *Ant.* 2.11.2 §263). Again, Balaam, who has been sent to curse the Jews, de-

clares that they have been invested by God with superior bravery (*Ant.* 4.6.4 §117). Finally, the supreme example of compliments directed toward Jews by non-Jews is to be found in connection with Solomon. Thus we read that the Queen of Sheba's strong desire to see Solomon arose from the daily reports that she received about his country (*Ant.* 8.6.5 §165). Furthermore, we read of the compliment paid to Solomon by a certain Dios, who wrote a history of Phoenicia and who reported how honest and modest Solomon was in acknowledging that he had been bested in the solving of riddles by a Tyrian lad named Abdemon (*Ant.* 8.5.3 §149; *Ag. Ap.* 1.17 §§114-15).

Thus Josephus's second edition of the Bible, so to speak, is particularly designed at once to answer critics of the Jews and to instill in Jews a sense of pride in their history and to teach them how to avoid the mistakes of the past and to learn from them.

JOSEPHUS: VALUE FOR NEW TESTAMENT STUDY

The writings of Flavius *Josephus (A.D. 37-c. 100) constitute by far the most important body of literature for the background of Christianity. It is Josephus who tells us almost everything we know about the non-Christian figures, groups, institutions, customs, geographical areas and events mentioned in the NT. He is the only surviving contemporary writer, for example, who describes John the Baptist, the Jewish high *priests of the first century, the *Pharisees and *Sadducees, the various regions of Judea, *Samaria and *Galilee, *Herod the Great, Agrippa II and Berenice, the Jerusalem *temple renovated by Herod and its destruction in the revolt of 66-74, the census under Quirinius, Judas the Galilean, Theudas and the Egyptian prophet (see Revolutionary Movements). Although his older contemporary *Philo mentions Pontius Pilate and Agrippa I, even there Josephus's evidence is critical for reconstruction.

These pieces of information may not, however, turn out to be the most important contributions of Josephus to the study of NT backgrounds. For scholars are coming to realize that Josephus writes about these matters because he has stories to tell. And those stories represent the most fully articulated statements of first-century Judaism in Judea that we possess. They are told by a contemporary of the first and second Christian generations who came from circles very different from Jesus' followers: from a member of the governing aristocratic priesthood. Josephus's narratives are important, then, both because they represent a different view of the same conditions that the NT mentions and

because they provide the indispensable context for understanding what Josephus says about Herod, Pilate, the temple, and so on. We cannot use this information without first understanding what it means as Josephus tells it.

This article will first introduce each of Josephus's surviving works in their social and literary contexts in Rome. Then we shall consider the suggestive parallels between Josephus and Luke-Acts.

1. Josephus's Writings
2. The Life and Character of Josephus
3. Josephus and the New Testament

1. Josephus's Writings.

1.1. Jewish War. We first encounter Josephus in his seven-volume account of the *Jewish War*, the core of which he wrote between A.D. 75 and 79 but which he completed during the reigns of Titus (A.D. 79-81) and Domitian (A.D. 81-96; see Roman Emperors). We are fairly confident of the following sketch. He led one group of Galileans in the revolt against Rome. He surrendered to the Romans in July 67. After serving as a Roman prisoner and intelligence assistant, he was liberated (late 69) and taken back to Rome in 71. There he first wrote an account of the war in Aramaic, for Parthians and the Jews living among them. Then he wrote a Greek account of the war, which was an essentially new work in relation to the Aramaic. He was treated decently, but not conspicuously well, by successive Flavian rulers in Rome. Although he was given space to live in Vespasian's former private house, along with Roman *citizenship, a stipend, some tax relief and land in the conquered Judea, neither he nor his sons received any of the standard Roman benefits for exceptional service or *friendship (e.g., land in Italy, equestrian or senatorial status).

Post-70 Rome was evidently a difficult place for members of the expatriate Judean community there. They witnessed the spectacular *triumphal marches commemorating the submission of Jerusalem, the minting of celebratory *coins ("Judea Captal"), the erection of a massive arch memorializing Titus's victory and the aggressive collection of the Jewish tax, now diverted for the support of the temple to Jupiter Capitolinus in Rome. Roman writers reveled in the Judean defeat on two grounds: first, the revolt seemed to embody what they saw as the Jews' national character, bellicose and oddly

withdrawn from the rest of the world's culture; second, the Roman triumph represented the obvious victory of Roman virtue over Judean misanthropy and of the Roman gods over the Judean God, who had made his people so hostile to other deities.

This was the situation in which Josephus wrote the *War*. Although many scholars have read this work as pro-Roman propaganda, there is considerable evidence in the book's context and content for a different reading. Josephus claims that he writes in order to counter anti-Judean and pro-Roman accounts already in existence (Josephus *J.W.* pref.1.3 §§1-3, 7-9). And his two main theses directly challenge the two accusations that the Judeans are hated by the gods (or serve a defeated God) and that the revolt confirmed their hostility toward the rest of the *Roman Empire. Josephus counters, first, that the revolt was engineered by a small handful of power-seeking tyrants who by various means were able to lead the people away from their historic and legitimate priestly-aristocratic leadership, with catastrophic results (see Jewish Wars with Rome). The argument is not simplistic but allows that loyalty of the Judeans was sorely tested by corrupt and incompetent governors. Nevertheless, the ancient Judean tradition favored peaceful good citizenship and faithfulness.

In support of this claim Josephus provides detailed examples of the national character: the early *Hasmoneans, who fought off a vicious oppressor (and the Romans' old enemy) and quickly made an ally of the Romans (Josephus *J.W.* 1.1.4 §38); Herod, whose friendship with several Roman rulers was famous and full of consequence, for he won guarantees and exemptions for all Jews in the empire; the *Essenes, who led exemplary lives as models of peace and order (Josephus *J.W.* 2.8.2-13 §§119-61); and several members of the upper priesthood and royalty, who courageously spoke out for peace against the lickleness of the masses (e.g., Josephus *J.W.* 2.15.4—17.4 §§321-421).

The reason why Jews can tolerate the rule of various powers, as Josephus says in speeches attributed to several characters, is that they have a profound belief in God's control of human history (*pronoia heimarmenē*). Convinced that no nation achieves power without divine aid (Josephus *J.W.* 2.8.7 §140), they are willing to observe the rise and fall of world powers under the sov-

ereignty of God (Josephus *J.W.* 2.16.4 §§365-87), and they know that they themselves would only ever achieve freedom if God brought it to pass—that their own militancy would be doomed to fail (Josephus *J.W.* 5.9.3—9.4 §§362-419). This view of history has many affiliations with biblical Jeremiah and Daniel, and Josephus sees himself as a latter-day Jeremiah (Josephus *J.W.* 5.9.4 §§392-99). So, against the position that the Judean God now stands defeated, Josephus declares that the Romans too serve him, in this case as instruments for cleansing his temple from the pollutions created by the rebel leaders.

Although Josephus unquestionably includes in his narrative the flattery of Vespasian and Titus that was unavoidable in Flavian Rome, his *War* appears to be mainly a bid for recognizing the Judeans as good citizens of the empire and so for the cessation of any hostilities toward them. He evinces much concern about reprisals in various places around the Mediterranean (Josephus *J.W.* 2.18.1-7 §§457-99). Rather than serving as Roman propaganda, therefore, the *War* may well have been intended as a courageous presentation in behalf of his people. It is not clear exactly who first read or heard him recite his account, although King Agrippa II, who seems to have been involved in the development of the book, may have been his primary patron. The imperial family received copies after its completion and endorsed it; presumably its message of peace, good citizenship and avoidance of reprisal was also in their interests. As with all ancient texts, we should probably assume that Josephus expected a friendly or at least malleable first audience, so that his aim would be not so much to convince the powerfully disaffected but to give well-wishers a way of conceiving the conflict that would help them answer critics.

1.2. Antiquities and Life. We next encounter Josephus in his twenty-one-volume magnum opus, the *Antiquities of the Jews* and *Life*, which he completed during the last years of Domitian's reign (A.D. 93), the years that were most difficult for many in the senatorial aristocracy. In the prologue, Josephus claims that those interested in Judean culture have pressed him to provide an account of the Judean constitution (*politeia*; Josephus *Ant.* 1.pref.2-3 §§5-17). These "lovers of learning" are led by one Epaphroditus, whose identity is uncertain. His name and what Josephus says about him, including the form of ad-

dress "most excellent" (*kratiste*), suggest a freedman of some wealth and social prominence who has experienced marked turns of fortune. This description would best suit Nero's former correspondence secretary of that name, who would die at Domitian's hand in 95, but we cannot be sure. Another candidate is a grammarian who died in about 97. The latter half of the prologue (Josephus *Ant.* 1.pref.4 §§18-26) begins to develop the philosophical underpinnings of the Judean constitution. Josephus sets out to show that this constitution is unique in the world: more ancient than others, philosophically purer and universally effective in its punishment of vice and reward of virtue, in contrast to the codes of other nations.

The *Antiquities* engages directly, therefore, a long-standing Greek and Roman debate about the best kind of constitution: monarchy, aristocracy or democracy. The problem was not abstract but of immediate import in Josephus's Rome. The old aristocratic republic of the Roman city-state had begun to falter as the empire grew so rapidly in the second century B.C. Various individuals came to unusual positions of great prominence over their fellows, thus straining to the limit the collegial model of leadership. From Augustus onward, a sort of compromise was reached between republican forms and the real executive power of the *princeps*, but the problem persevered. In Josephus's Rome, where Domitian had taken on many trappings of monarchy, where many senators longed silently for the older system, constitutional questions were on the minds of all educated people.

In presenting the Judean constitution, Josephus displays little caution, again assuming a friendly audience. The Judeans have a senatorial priestly aristocracy that is older and purer than any other, one that does not tolerate monarchy (Josephus *Ant.* 4.7.17 §223; 6.3.3 §36). He begins with the antecedents in creation and the patriarchs: Abraham set the stage by deducing that God was one and by bringing the sciences to the Egyptians, whence they reached the Greeks. The constitution itself is elaborately presented in volumes 3 and 4, as a uniquely just but humane code. *Moses entrusted this to the college of priests, led by the high priest, in whose care it has remained ever since. The priests formed a senate, consulted by the best leaders. Although the constitution called for aristocracy, the Judeans experimented with monarchy from

time to time, but this was always disastrous. Even Herod the Great now appears as an illegitimate king who departed from the laws (Josephus *Ant.* 14.15.2 §403). And Josephus pointedly uses the case of Gaius Caligula to include a Roman discussion of constitutions and the pitfalls of monarchy (Josephus *Ant.* 19.2.5—4.6 §§201-62).

Although it is not ideal, monarchy could be tolerable for a time when the ruler was also a philosopher. Thus Solomon was a remarkable ruler, a man wiser than any other in his understanding of nature and people, though he too went astray by placing his own wishes above the laws. All of the Judeans' famous figures, whether military leaders, kings, prophets or priests, lived philosophical lives: Abraham, Joseph, Moses, Joshua, David, Solomon, Jeremiah and Daniel.

This Greek primer in the Judean constitution falls neatly into two halves. The former ten volumes describe the first commonwealth, the regimes that led to the building of the first temple and then its destruction; the latter ten volumes describe the second commonwealth—to the eve of the Second Temple's recent destruction. The halfway point, significantly, is taken by Josephus's ruminations on the exilic prophet Daniel. Completely unaware of the later date that would be ascribed to Daniel by the *Platonist philosopher Porphyry (and by modern scholarship), Josephus appears deeply impressed by the fact that Daniel accurately predicted events under Antiochus IV Epiphanes so long before the fact. He takes this as decisive proof of his basic thesis: that the God of the Judean constitution not only controls all of history but also has encoded that history in the sacred Judean books (Josephus *Ant.* 10.11.7 §§277-81). From beginning to end, the *Antiquities* demonstrates the efficacy of these laws: the peril of those who violate them and the reward of those who follow them. He even includes near the end a compelling story concerning a prominent Gentile family who converted to adopt these laws as their own; they were especially protected and honored by God (Josephus *Ant.* 20.2.1—4.3 §§17-96).

At the end of the *Antiquities*, Josephus introduces an appendix on his own life and character. The main significance of this appears to be that he wishes to illustrate the Judean constitution by his own ancestry, public career (*Life* 2 §12: *polis, politeuesthai*) and character (Josephus *Ant.* 20.12.1 §266; *Life* 76 §490). A full member of the ancient Judean priestly aristocracy himself,

and fully trained in the constitution's philosophical principles, he naturally led a stellar, albeit brief, public life in the period preceding his surrender. He experienced divine favor and protection, along with the friendship of important people; although assailed by unworthy, envious challengers who resorted to bribery and all sorts of other vices (John of Gischala, the delegation from Jerusalem, Justus of Tiberias), he succeeded where they failed miserably. His audience in Rome can take comfort from his credentials as a representative of this attractive Judean constitution.

1.3. Against Apion. Josephus's final two-volume work is traditionally known as *Against Apion*, although only about a quarter of it deals with Apion; Josephus apparently called it something like *On the Antiquity of the Judeans*. This is an effort to restate in much more systematic form the theses of *Antiquities*: extreme Judean antiquity, the nobility of Judean origins, the purity of the priestly line that preserves the constitution, the peerless moral excellence of the constitution and Judeans as the primary source of the world's best values. In the course of this systematic presentation, however, Josephus devotes the middle half of the book to refuting the Judeans' more prominent Egyptian slanderers, in order and by name.

Although scholars often take this argumentative focus as evidence that the work has a defensive aim, we note that as a sequel to the *Antiquities*, it appears to expect the same, already favorable audience; it is hard to imagine a real social context in which this work would reach the Jews' literary detractors; many of Josephus's particular arguments assume uncritical, well-disposed hearers; and ancient *rhetoric called for rebuttal and challenge even where there was no serious threat. On balance, then, it seems preferable to take *Against Apion* as a further composition for Gentiles interested in Judaism, so that they would have ready answers to common slanders. The book further encourages the interest of such Gentiles and even celebrates the reception given to converts (Josephus *Ag. Ap.* 2.28, 36, 38 §§209-10, 261, 282).

2. The Life and Character of Josephus.

The foregoing presentation differs from many in that it deals primarily with Josephus's writings, whereas most begin with his life. The common judgment that he was a traitor and

informer strongly colors assessment of his writings—as propagandistic, opportunistic and perhaps even shamed attempts at rehabilitation. It makes better sense methodologically, however, to begin with what we have—his writings—and move only cautiously from there to the events of his life. He tells the story of his life quite differently in the *War* and in the *Life*, just as he tells most other stories differently in the parallel sections of *War* and *Antiquities*. This retelling of the same story with entirely new moral points and emphases, even contradicting what one had said before, was commonplace in Roman rhetoric, and there is no evidence that Josephus was embarrassed by it. In particular, we probably ought not to take his happy stories of duplicity, ruses, lies and dissembling as if it were incriminating. He tells these stories only to win points within the rules of the ancient rhetorical game. In the process, he has rendered much of his life unrecoverable to us.

3. Josephus and the New Testament.

In the NT, the most suggestive parallels with Josephus's writings are to be found in Luke-Acts. That work, too, is self-consciously historical (Lk 1:1-4) and addresses itself to an interested and somewhat informed *patron, who appears also to be an equestrian freedman: Theophilus. The author has the similar broad aim of conveying what is trustworthy or reliable about his group's way of life. Most interestingly, the author of Luke-Acts, when making reference to outside figures, happens to choose many of the people and events featured by Josephus: the watershed census under Quirinius, which sparked Judas the Galilean's revolt; Pilate; Herod Antipas; Theudas; and the Egyptian. It is an old debate whether the author knew Josephus's writings, and most scholars think that he did not. If he did, the writings in question would include *Antiquities* 18-20, which would put the composition of Luke-Acts after A.D. 93.

In any event, Josephus's works are extremely useful for reading along with Luke-Acts. Josephus writes from the inner circle of the ancient priestly aristocracy, the only legitimate leadership, for whom the Pharisees occupy an outer circle of tolerable but often disliked demagogues; they are still preferable to the various popular leaders, messiahs, false prophets and bandits with their ad hoc constituencies (see *Revolutionary Movements*). The Gospel of Luke looks

at things from the other end: popular leader Jesus, though critical of the influential Pharisees, is able to converse with them as a fellow teacher, whereas the powerful Jerusalem priesthood appears as the very heart of darkness.

JUBILEES

The book of *Jubilees* is a rewriting of Genesis 1—

Exodus 19 (see *Rewritten Bible in Pseudepigrapha and Qumran*). A prefatory chapter indicates that the "pseudepigraphic setting for the work is the scene in Exodus 24, with *Moses on Mt. Sinai. There the Lord predicts Israel's apostasy, and Moses intercedes for the people. After he describes what will happen at the end, the Lord tells an angel of the presence to dictate the contents of the heavenly tablets to Moses. The angelic dictation begins with the creation story and continues with the biblical account until the Israelites arrive at Mt. Sinai. By having Moses record the biblical narrative, the writer indicates that Mosaic authorship of Genesis and the first part of Exodus was an idea known already when *Jubilees* was composed.

1. Date
2. Versions
3. Characteristics
4. Jubilees and the New Testament

1. Date.

There is reason to believe that *Jubilees* was written in Hebrew in approximately 150 B.C. Before the *Dead Sea Scrolls were found, it was thought that the original Hebrew form of the book had not survived, but among the scroll fragments fourteen or fifteen copies of the book have been identified. Two of these were found in Cave 1 (1Q17-18), two in Cave 2 (2Q19-20), one in Cave 3 (3Q5), eight or nine in Cave 4 (4Q176 frags. 19-21; 4Q216, 4Q218, 4Q219, 4Q220, 4Q221, 4Q222 and 4Q223-224; 4Q217 may be another copy, but this is uncertain) and one in Cave 11 (11Q12). The most ancient of these copies is 4Q216, which can be dated on the basis of its script to approximately 125-100 B.C.

Another indicator of the book's date is the fact that the **Damascus Document* (CD 16.2-4) cites *Jubilees* as an authority, and the earliest copy of this dates from the early to middle first century B.C. The author of *Jubilees* does seem to know the Enochic Animal Apocalypse (1 *Enoch* 85-90), which was written in the late 160s B.C. (see *Enoch, Books of*). *Jubilees* was thus composed between the late 160s B.C. and the time of the earliest surviving copy of it (125-100 B.C.). It appears to have been written before the *Qumran community went to the wilderness; the number of copies found there and the influence *Jubilees* exercised on Qumran thought suggest that it was considered an important work by the members of that group and probably a highly authoritative one.

2. Versions.

At some point Hebrew *Jubilees* was translated into Greek. No manuscript of the Greek version is available, but a number of ancient writers cited from it and thus verify that it once existed. From Greek the book was rendered into Latin (one manuscript with part of the translation has survived) and Ge'ez, the classical language of Ethiopia, the only version in which the book is fully extant. In the Christian church of Ethiopia *Jubilees* (called *kufāle* [Divisions]) was regarded as one of the books of the OT. It is possible that a Syriac translation was made from the Hebrew; it has, however, survived only in a series of quotations in other Syriac texts. Comparison of the Hebrew fragments of the book with the versions, especially the Ethiopic, shows that the ancient translators did their work very accurately. Because of this and because *Jubilees* cites Genesis and Exodus so frequently, the book has become an important witness to the wording of the biblical text in the second century B.C.

3. Characteristics.

Jubilees presents itself as a divine revelation: God speaks directly with Moses in *Jubilees* 1, and in the remaining chapters an angel of the presence dictates the contents of the book to him. The source for the angel's revelation is the tablets of heaven.

3.1. Chronology. The book provides a complete system of chronology for the first books of the Bible. For the author a Jubilee was a forty-nine-year period; each of these he divided into seven "weeks" of years. He uses this system to date a long series of events in biblical history. His entire chronology covers the initial forty-nine Jubilees and the first few years of the fiftieth; the fiftieth Jubilee, which begins just before the exodus, is the time when the Israelite *slaves are freed from Egypt and when they will enter the promised land that had been assigned to their ancestors in the division of the earth after the flood (*Jub.* 8:12-21). By including these two events in the fiftieth Jubilee the author transfers onto a national level the two events that, according to biblical legislation, occurred for the individual in the Jubilee year: release of Hebrew slaves and repossession of alienated family property.

3.2. Calendar. A related feature is the annual solar calendar that underlies the Jubilee calculations. The writer claims that God had revealed

to Enoch before the flood that the year consisted of 364 days (*Jub.* 4:17-18, 21) and that only the sun, not the moon, was to be used for calendrical purposes (*Jub.* 6:28-38). The 364-day solar year includes four quarters of 91 days each, and within a quarter the first and second months contain 30 days each and the third lasts 31 days. In this system, there are exactly 52 weeks in a year, so that in every year a particular date will fall on the same day of the week; as it turns out, no *festival ever falls on the *sabbath.

3.3. Earlier Laws. *Jubilees* also regularly antedates biblical legislation by claiming that laws and festivals that in the Bible were not revealed until Moses' time had already been disclosed to the patriarchs of Genesis. For example, the laws about a woman's purification after childbirth (*Lev.* 12) are traced to the time of Adam and Eve (*Jub.* 3:8-14). Also, the pilgrimage festivals of Unleavened Bread, Weeks and Tabernacles are said to have been practiced long before the time of Moses (by Noah for the Festival of Weeks [*Jub.* 6:17-22] and by Abraham for all three [*Jub.* 18:17-19; 15:1-10; 16:15-31]). Although there is usually a textual trigger in Genesis that gives some justification for the writer to place the origins of the laws where he does, his larger purpose seems to have been to stress that the law was not a later accretion to biblical religion but an integral part of it from earliest times.

3.4. Covenant. *Jubilees* reserves a central place for the one eternal covenant that governs the relations between God and his people. The covenant was first made with Noah after the flood and renewed with Abraham, Isaac, Jacob and Israel. It embraced a set of laws that grew with time, and the author insists on strictest obedience to them. All of the covenantal ceremonies in *Jubilees* take place in the third month of the year. Several are specifically dated to the middle of this month, that is, the fifteenth day. This was the date on which the Festival of Weeks was celebrated in *Jubilees*, with the result that it became associated with remembering and renewing the covenant. Covenant ceremonies in *Jubilees* are accompanied by oaths; the Hebrew words for "oaths" (*šhū'ôt*) and "weeks" (*sābū'ôt*) are very similar and may have encouraged the association. *Jubilees* is the earliest text to document this dating of the Festival of Weeks; the same date is also found in calendar texts among the Dead Sea Scrolls. *Jubilees'* strong condemnation of a calendar based on lunar observation, however,

does not agree with the Qumran calendars, which correlate both lunar and solar arrangements.

3.5. Exegesis. *Jubilees* is one of the oldest witnesses to the expository methods used by Jewish experts in interpreting Genesis and Exodus, and in a number of places the writer shows his knowledge of how they solved some problems in the text (see *Biblical Interpretation, Jewish*). For example, one of the most important topics is sabbath law, which, as in the Bible, is introduced in connection with the seventh day of creation (*Jub.* 2:17-33; the book also ends with a section on sabbath legislation [*Jub.* 50:6-13]). One biblical passage that could prove disconcerting in this regard is Genesis 2:2: "on the seventh day God finished the work that he had done" (NRSV). From it one could conclude that God had violated the first sabbath by completing his creative work on it. The solution to this difficulty in *Jubilees* and in other sources is to change the ordinal so that God finishes his work on the sixth day (*Jub.* 2:1).

It is important to note that the author, as he rewrote and interpreted Genesis and Exodus, felt free to add and subtract passages. He adds lengthy sections on topics such as the calendar and festivals and omits details that might diminish the reputations of biblical heroes (e.g., he omits Abram's lie about his wife's identity [*Jub.* 13:11-15]). One of the longest additions in *Jubilees* is the section that deals with Jacob's son Levi (much of *Jub.* 30:1-32:9). According to biblical legislation, the male descendants of Levi served as *priests in Israel, but Genesis had little to say about their eponymous ancestor other than to criticize him for his part in the slaughter at Shechem (Gen 49:5-7). *Jubilees* rehabilitates Levi, making him into a model patriarch who is appointed priest and carries out priestly functions for his father and other family members. Levi is also presented as a member of a long priestly line through whom the writings of the ancestors were transmitted and preserved (see *Jub.* 45:16). It seems likely that the author of *Jubilees* was himself a priest.

3.6. Purity of the Chosen Line. *Jubilees* adds the names of many women to the biblical text (e.g., for the wives of the antediluvian patriarchs in Gen 5) and gives details about their genealogies. The concern was to document and guarantee the purity of the elect family and to show that when marriages outside acceptable limits took

place, serious problems resulted (Halpern-Amaru).

4. Jubilees and the New Testament.

There is no clear evidence that NT writers were aware of the book of *Jubilees*, but some passages could be illumined from the information contained in it. One possibility is the notion mentioned in three places in the NT (Acts 7:38; Gal 3:19; Heb 2:2) that angels revealed the law on Mt. Sinai, as the angel of the presence reveals almost all of *Jubilees* to Moses. It was once thought that *Jubilees*' 364-day calendar might provide a solution to the problem that, while the Synoptic Gospels make Jesus' last supper a Passover meal, John places it on the day before Passover. A. Jaubert proposed that the Evangelists assumed different calendars, with John using the standard lunar-solar calendar of the time and the Synoptic Evangelists employing *Jubilees*' system. However, it is more likely that John's desire to present Jesus as the Passover lamb who was slain (they were being *sacrificed at the time he was crucified) led to the differing chronologies for the passion week. *Jubilees*, with its insistence on precise and full obedience to the law, may serve as an example of the kind of legal *piety that the apostle Paul opposed (see, for example, Col 2:16).

JUDAISM AND THE NEW TESTAMENT

Judaism in antiquity is a complex phenomenon, involving religious, social, economic, historical and ethnic aspects of the life of a people whose influence has greatly exceeded their power.

That influence is most obvious today in the literary remains of ancient Judaism, canonical and noncanonical, which continue to have a formative impact upon the very definition of human culture. But Judaism itself must not be equated directly with the religions of those Judaic sources that happen to remain; in order to assess those sources, to appreciate the significance of Judaism within the task of understanding Jesus and the NT and to gauge its influence more generally, a different approach is necessary. We need to uncover those religious systems of beliefs, reactions, social conventions, ways of thinking and habits of feeling that the literary sources and the history of the people manifest; moreover, those systems must be appraised with reference to their dramatic transitions over time, or not at all. The present article is to deal with Judaism through the time of the NT, that is, prior to the emergence of *rabbinic Judaism (see *DJG*, Rabbinic Traditions and Writings §1). Judaism in the time of the NT can be appreciated only on the basis of its procession from earlier forms. Accordingly, we must first turn our attention to the root of Judaism, the religion of *Israel, taking account of the delay between the emergence of that religion and the probable dates of its sources.

Judaism in every period is rooted in the notion that Israel is chosen. The perennial paradox in the study of Judaism is that the notion of

election is more persistent than any definition of what Israel might be. We might be thinking of an extended family of Arameans that departed from Mesopotamia in order to settle westward, of their initial settlement in Canaan, of the migrant group in Egypt, of those who departed from Egypt, of those who struggled for control of the land of Canaan, of the nation and its eventual monarchy and consequent civil war, of the dispossessed peoples in Babylonia, of the ideal Israel that the Scriptures of the exile project and/or of those people both in the land and in the Diaspora who read those Scriptures as their own, for whom Israel was and is an identification of self.

Each of the moments of the development of Israel named above and each of several other stages has been the object of particular, scholarly attention. But we may, as a convenience, cope with the topic of Judaism under four stages: the period of prehistory, between the scriptural Abrahamic family and the scriptural people led by judges; the period of nationalization and monarchy; the period of dispossession and the canonization of Scripture; and the period of radical pluralization, which is widely referred to today as early Judaism.

1. The Prehistory of Israel: From Family to People
2. Nationalization and Monarchy
3. Dispossession and Canonization
4. Radical Pluralization
5. Early Judaism and the New Testament

1. The Prehistory of Israel: From Family to People.

If the conviction of being divinely elect is a condition *sine qua non* of Judaism, then the traditional notion that Abraham is the father of all Jews is a useful point of departure. After all, he is remembered as being partner to the covenant involving both God's gift of the land that would be called Israel and the sign of circumcision (Gen 15:1-21; 17:1-14). But the assumption of Genesis is that Abraham and the patriarchs are seminomadic, in the sense that they migrate and cultivate land. Just that style of living is what brings Israel, the children of Jacob, who was renamed in a struggle with God (Gen 32:22-32), down to Egypt. The emphasis throughout the patriarchal cycle is upon the literal kinship of the entire group that may be called Israel.

*Moses is particularly associated with the lib-

eration of Israel from Egypt, but, just as the quality of the sojourn in that land changed (cf. Exod 1:8-10), so did the constitution of the people. The estimate of more than a half million warriors in Numbers 1:45-46 may well be hyperbolic, but an increase of population during a period described biblically as of more than four centuries (Ex 12:40) meant that any system of strictly familial lineage was out of the question. Moses was therefore responsible not simply for the liberation from Egypt but also for the reconstitution of Israel as a people, rather than simply a family, on the basis of his revelation.

The Mosaic constitution or covenant would become paradigmatic for every age of Judaism that followed. Tribal lineage, on the assumption that the tribes were descended from the sons of Jacob/Israel, replaced familial lineage as the operative definition of the group, and that was an evolution that the weight of numbers alone probably effected. But the tribal arrangement by itself was unsystematic and needed to be balanced by a centripetal impulse in order for Israel to emerge as a functional entity. Moses is the emblem of centralized *sacrifice and judgment. His claims upon Pharaoh are predicated upon sacrifice (Ex 3:18), and his relation to Jethro (or "Reuel," in the passage in question), the Midianite priest, makes his cultic interests manifest (Ex 2:15b-22). The notion of "the people" sacrificing creates the notion of the people; apart from some common action, there would be families, extended families, villages and "stems" (or "staves," as the tribes are called in the *Hebrew Bible), but no organic whole.

The Mosaic constitution established the stem of Levi as the guardians of the sanctuary (cf. Num 4:1-49) and also assured that the conception of one God would be coextensive with the conviction of one people. If sacrifice was the charter of liberation, then a declension into multiple gods would return Israel to the division of Egypt (cf. Ex 20:2, 3, 22-26). A corollary of the unity of God and his people is that there should be a single sanctuary, but in the premonarchical phase we can speak only of the preeminence of the pan-tribal shrine, since worship at other sites is also attested. At the same time, the tribal stems of Israel were coordinated at the cultic center in a system of judgment (Ex 18:13-26), so that disputes could be regulated and the appropriate integrity of Israel could be maintained. That Israel should be whole, an integer of di-

vine revelation, becomes the central imperative of the Mosaic covenant.

Sacrifice, within the Mosaic system, is the place of meeting between God and Israel (Ex 24:1-11), such that only what is clean may be involved (cf. Lev 11-15), and much of it passes to divine ownership (cf. Lev 3:1-17). Not only parts of things offered but the cultic instruments themselves (Ex 25-31) and the entire tribe of Levi (cf. Num 3:45) are God's. Moreover, the declared aim of entry into the land of promise is to cleanse it of what is not acceptable to God. Everything else, people, beasts and property, is to be "devoted," that is, extirpated (cf. Josh 6, 7). The pentateuchal emphasis upon that "devotion" (*herem*) has confused some modern discussion. There has been a tendency to refer to the conquest of Canaan, but much of the language of destruction—which is undoubtedly present—needs to be understood in its sacrificial context, as a cleansing of the land.

Joshua and Judges reflect the situation in Canaan much more directly, in their stories of intertribal rivalries and wars, accommodations with the indigenous populations, the desire for booty and the problems inherent in the tendency to erect local shrines. Those glimpses into the turmoil in the midst of which the nation emerged have led to the evolution of distinct, scholarly theories concerning how Canaan was settled by Hebrew-speakers. M. Noth is associated with the theory of an amphictyony (such as existed in ancient Greece), an association of twelve tribes for cultic purposes. The number twelve is problematic, however. Greek amphictyonies of other numbers are known, and the number within Israel was largely theoretical, perhaps derived from sacrificial practice (cf. Josh 4:9, 20).

Levi was left out from the point of view of a geographical inheritance, and Joseph in standard lists could be counted three times, as Ephraim and the two half-tribes of Manasseh (cf. Josh 17:17, 18; 22:1-6). Unusual lists, such as Judges 1:16-36, have the tribes deviate from the number, names and kinship presupposed ordinarily in the Mosaic covenant. In addition, the point of Levi within Israel is to provide a fixed arrangement of cultic personnel for a moving sanctuary, while in Noth's Greek analogy tribes took turns in providing for a settled sanctuary. But with those crucial allowances, Noth's theory has been the most influential of the twentieth century. Crucial changes, however, have been

suggested by G. Mendenhall and by N. Gottwald. The former envisages the occupation of the land as an instance of peasants' revolt, while the latter thinks in terms of a union between disenfranchised local elements and migrants from Egypt in opposition to Canaanite hegemony.

The Israel that (dis)possessed the land of Canaan, then, was an amalgam of groups that claimed such affinity with Abraham, pursued the worship of God laid down by Moses and on that basis sought to rid the land of Canaan of all but its own. Its destruction of other material cultures, particularly urban cultures (as in the case of Jericho; Josh 6), was its hallmark. Leadership consisted in the intervention of judges who defended the possession of a given stem or stems, rooted out elements of Canaanite worship or attacked non-Israelite powers. The authority of the judges seems to have resided in their success in pursuing one or more of those aims, which success might be attributed to possession by the Spirit of God (cf. Judg 11).

2. Nationalization and Monarchy.

Judges takes a particularly dim view of the institution that obviously would have provided greater stability: the monarchy. The removable ark of the covenant, which provided the center of Israel's loyalty and devotion, was vulnerable to attack, and the unsystematic convention of judges, while it might answer to the occasional onslaught of disorganized foes, was no answer to the centralized attack of even a petty kingdom. But the book of Judges casts monarchy as an essentially apostate institution, in that it implicitly involves denying the sovereignty of the Lord (cf. Judg 8:22—9:57).

The prophet Samuel is portrayed as intimately connected with the rise of the monarchy in Israel. He is closely associated with the ark of the covenant and the priesthood of Eli. Evidently worship effects the proximity of the Lord, whose will Samuel is then held to interpret (1 Sam 3:1—4:1). Samuel is a fully priestly figure (and a judge, 1 Sam 7:15—8:2), in that he offers sacrifice himself, and it is notable that he does so in sites other than the central shrine (1 Sam 7; 9:3—10:24; 16). Assertions about the future are involved in his interpretation of God's presence in sacrifice, but interpretation is by no means limited to prediction. Samuel's period of prophecy corresponds to the capture of the ark in war and its removal to Ashdod, a city with a

fixed temple for its god, Dagon (1 Sam 4, 5). The ultimate release of the ark, after it was held to cause harm to the inhabitants of any city in which it was held, ends the regular practice of bringing it into battle (1 Sam 7:1-2; cf. 14:18-22), and a desire for monarchy grows thereafter (1 Sam 8:4-22). Samuel resists but ultimately gives in, on God's behalf, to popular desire and anoints Saul (1 Sam 10). Saul is a physically big man (1 Sam 9:1-2), in the tradition of the judges, but also a failure. He usurps the function of sacrifice (1 Sam 13:8-15; 14:31-35); fails to devote what he should (that is, destroy captives and spoil that was incompatible with God's sanctity; 1 Sam 15); he also becomes ambitious for his own family (1 Sam 18—20). God, by means of Samuel, rejects Saul and anoints David (1 Sam 16:1-13).

2.1. The Davidic Monarchy. The Davidic monarchy itself becomes the object of a solemn oath in 2 Samuel 7, where the prophet Nathan promises God's protection of David's progeny. It is notable that the promise is occasioned by David's undertaking to build a *temple. The offer itself is accepted but deferred: Solomon is to accomplish the task (2 Sam 7:13). But the function of the king in protecting, not leading, worship is established, and the role of prophecy as the guide of the king is confirmed. Precisely in those aspects, David differs from Saul, and the promise to David is integrated within the covenant generally.

The centralization of the sacrificial cult in David's city, *Jerusalem (2 Sam 6), had both positive and negative effects, from the point of view of faithfulness to the covenant. Positive, because the new center became the focus of codification. In addition to the court history, an account of David's reign produced shortly after his death (2 Sam 9—1 Kings 2), the source known to scholarship as J was produced. J (named after its putative author or authors, the "Yahwist" [earlier spelled with a "j" in the Latin manner]) first linked in literary form the people of the Davidic kingdom with creation, the patriarchs, the exodus and the possession of the land. Earlier, shorter books had been compiled to be recited at cultic centers, so that a treaty, or regulations of purity or ethics, or alleged genealogical connections or victories or other formative events might be remembered in association with sacrifice. But a single center involved a collection of such materials during the tenth century, and an

early attempt to present them more coherently, for presentation at Jerusalem for the *feasts that were primarily celebrated there. But there is also a negative side to the settlement in Jerusalem. With monarchy there came the pressure to trade and compete with other cities: the multiplication of cults—and the de facto acceptance of their deities—was a feature of Solomon's otherwise auspicious reign (1 Kings 11).

First Kings lays the blame for the division of united Israel into Israel in the north and Judah in the south upon Solomon's apostasy (1 Kings 11:29-40), and there is a thematic link in Scripture between marriage to non-Israelite women and idolatry. But the kings, north and south, undermined their own authority by their recourse to *slavery and their conspicuous consumption, not only their idolatry. The last aspect is nonetheless an especially emphasized feature in the careers of the worst kings. Ahab in the north, with his wife Jezebel, fomented the worship of Baal and was opposed by the prophet Elijah (1 Kings 16:29—22:40); in the south, Ahaz renovated the temple to look like the one in Damascus and may even have practiced human sacrifice (2 Kings 16:1-20). It is evident that the alliance of Ahab with Sidon and of Ahaz with Damascus was a formative influence in their respective religious policies.

2.2. The Prophetic Movement. Prophecy found its voice as a movement in its opposition to the monarchs it regarded as apostate. Prior to the crystallizing impact of that opposition, prophets appear to have been identified as those who spoke for God, often in association with worship in particular sanctuaries. Their prophetic ministry might to a greater or lesser extent involve unusual states of consciousness or atypical behavior, sometimes with the use of music and dance. But first the association with David, and then the antagonism of kings in the north and south, made of prophecy a startlingly coherent movement.

The emergence of prophecy as a literary genre is to be dated to the eighth century and the message of Amos. Fundamentally a prophet of doom against the northern kingdom, Amos foretold judgment against Israel's apostate kings, and the prophet Hosea vividly generalized that theme to include the nation as a whole. They were quickly followed in the south by Micah and Isaiah, and an urgent appeal for social justice became a hallmark of

prophecy in the south.

The doom announced against the north by an Amos or a Hosea must have appeared idle during periods of prosperity, but when, in 722 B.C., the capital of the north was taken and the northern kingdom was subjected to a policy of exile, the prophetic message appeared to have been vindicated. The works of the northern prophets were preserved in the south, together with extensive pentateuchal traditions of Israel's beginnings that had been treasured in the north. There were those in the north, priests and prophets and scribes, who were not taken in by the royal attempt at syncretism. Nonetheless, the prophetic attack upon deceitful prophets and cultic hypocrisy is eloquent testimony to the power of that attempt.

Spurred on by the demise of Israel in the north, whose people were lost to history, the prophets in Judah attempted to purify the life of their people. Isaiah urgently argued against foreign alliances and insisted that fidelity to God alone would save Jerusalem; Jeremiah ceaselessly denounced faithlessness and was prosecuted for his trouble; Ezekiel's enactments of coming disaster won him a reputation as a crank. But in the reign of Josiah, a royal reformation backed much of the critique of the prophets (2 Kings 22:1—23:30; 2 Chron 34:1—35:27). Josiah restored worship in the temple according to covenantal norms; he centralized sacrifice, even of the Passover, in Jerusalem; he tolerated no foreign incursions. In his program he was guided by a scroll of the law, which was found in the temple during the restoration, a scroll that has since antiquity been associated with the present book of Deuteronomy, which presses an agenda of radical centralization and separation from foreign nations such as impelled Josiah. But in 609 B.C., Josiah was killed in battle in an attempt to block the alliance between Pharaoh Neco and the Assyrians at a place called Megiddo. The impact of his death may be gauged by the impact of that name upon the *apocalyptic tradition (see 4.1.1 below), in the form Armageddon (Rev 16:16; cf. Zech 12:11).

3. Dispossession and Canonization.

3.1. Exile and the Vision of Classic Israel: The Pentateuch. The end of the kingdom of Judah came quickly after the death of Josiah. Culminating in 587/586 B.C., the Babylonian Empire,

which had succeeded the Assyrians (see the prophetic book of Nahum), implemented a policy of exile, subsequent to their siege of Jerusalem and their destruction of the temple. Had the course of events then followed what happened to Israel, there would today be no Judaism to study. Paradoxically, however, the forces that must have seemed sure to destroy the religion of the covenant with the Lord instead assured its survival and nurtured its international dimension. During the Babylonian exile, priestly and prophetic movements joined forces to form a united program of restoration that put a form of Israel back on the map within a generation. Out of this restoration a vision of an ideal Israel, memorialized in the Pentateuch as we know it, emerged as a truly canonical standard for Judaism.

3.2. Restoration and New Visions for the Future: The Prophets. The dispossession of Judah to Babylon set up the priestly and prophetic hegemony that made restoration possible. But just as the Pentateuch sets out particularly priestly concerns, the prophetic movement also brought a distinctive message to the canon. The prophets generally agreed with their priestly confederates that the land was to be possessed again, and postexilic additions to the books of Isaiah (Is 40—55), Jeremiah (Jer 23:1-8; 31) and Ezekiel (Ezek 40—48) constitute eloquent motivations for return to the land.

But the previous abuses of the kings and their sanctuaries made the prophetic movement insist that righteousness was the prior requirement of sacrifice and that the events of the recent past were a warning. A Zechariah might be happy to set out the hope of a priestly messiah beside the Davidic king who was to rule (Zech 3; 4), but the predominant emphasis fell on the crucial necessity of loyalty to the worship of God (Zech 8). Moreover, *eschatology became characteristic of the prophetic movement, both in additions to biblical prophets, such as Isaiah and Ezekiel, and in fresh works, such as Joel and Malachi. The contemporary governance, whether *Persian, *Ptolemaic or *Seleucid, and the present temple were provisional, until an anointed king and an anointed priest would rule properly. Just the image of a priestly orientation redefined by the prophets is seen in the career of Ezra in the books of Ezra and Nehemiah: prophet, priest and scribe become one in their insistence on the vision of classic Israel, centered on the restored *temple.

The temple as restored (beginning in 520 B.C.) was, however, far from anyone's ideal. Some who remembered the splendor of Solomon's edifice are reported to have wept when they saw the results of the efforts under Ezra (Ezra 3:10-13). That imperfect focus nonetheless served to attract a permanent priesthood, and the notion of a canon provided focus to the prophetic movement. Now a body of literature, which could be interpreted, was held to provide the guidance that individual prophets formerly gave. It is notable that Ezra's own ministry involved guiding Israel on the basis of scriptural interpretation. The scribe emerges as something of a judge: the dominant, religious personality, as the warrant of true prophecy and the arbiter of priestly conduct (Neh 8—13).

3.3. Voices from Outside the Priestly-Prophetic Hegemony: The Writings. But the appearance that scribal leadership was settled is more superficial than representative. Battles concerning the proper conduct of the cult and the proper personnel of the priesthood raged during the period of restored Israel, and powerful movements produced literatures outside of scribal control. While the final form of the Pentateuch and what are called the Former Prophets (Joshua—2 Kings) and the Latter Prophets within Judaism may be attributed to the hegemony of priestly and prophetic interests that has been described, the category of Writings (the last in the three biblical divisions of traditional Judaism), together with the *Apocrypha and the pseudepigrapha, best characterizes other facets of the religion.

The book of Psalms represents a cultic *piety centered on just those aspects that levitical instructions exclude: the *music, dance, poetry, *prayer and praise (the term *psalms*, *šillim*, means "songs of praise") that the temple attracted. They speak more eloquently of the emotional affect of and popular participation in sacrificial worship than does any other document in the Bible. Proverbs also represents a nonpriestly, nonprophetic focus of piety in restored Israel, defined by prudential wisdom. Job and Ecclesiastes are other examples within the canon.

Initially wisdom is understood to be an aspect of God, which by knowing one can become familiar with God. "Wisdom" in Hebrew is a feminine noun and came to be personified as a woman; by the time of Ecclesiasticus (or Ben

Sira, from the early second century B.C.; see Sirach) and the *Wisdom of Solomon (from the late first century B.C. or somewhat later), she is considered a fundamental means of access to God. The Wisdom of Solomon was composed in Greek, but the focus upon Wisdom is by no means unique to what is commonly called *Hellenistic Judaism. Contacts with Egyptian and Babylonian inquiries into divine wisdom do probably date from the time of the Israelite and Judean kings, as part of their characteristic syncretism. But unlike idolatry and polygyny, Wisdom survived and prospered as a suitable and fertile means of communion with God after the notion of the unique covenant with Israel had triumphed.

In the case of *Philo of Alexandria, whose lifetime straddled the end of the last era and the beginning of our own, the pursuit of wisdom became a philosophical articulation of Judaism; he contributed an awareness of how Judaism and Hellenistic culture (see Hellenistic Judaism)—whose contact is already obvious in the Apocrypha and pseudepigrapha—might be related. Philo is unusually learned in his representation of a basic development of the Judaism of his period. His simultaneously Greco-Roman and Judaic notion of the logos is a case in point (see Philo *Op. Mund.*).

3.4. Threats to Cultic Purity and Priestly Unity.

The question of the priesthood in the restored temple, meanwhile, became increasingly fraught. The Persian regime gave way to *Alexander the Great. Among the dynasties of the generals who succeeded him (see Diadochoi), first the Egyptian Ptolemies and then the Syrian Seleucids largely maintained the enlightened settlement of the Persians. The Seleucid monarch Antiochus IV (surnamed Epiphanes) is commonly portrayed as a great exception to the policy, and he did unquestionably occupy Jerusalem and arrange for a foreign cult in the sanctuary in 167 B.C., which included the sacrifice of swine (a Hellenistic delicacy; 1 Macc 1:20-64; Josephus *Ant.* 12.5.4 §§248-56). But Antiochus intervened in the city at first as the protector of a high-priestly family, the Tobiads, who were then in dispute with the Oniad family (Josephus *J.W.* 1.1-2 §§31-35). Dispossessed, the latter group moved to Egypt, where a temple was built at Heliopolis, in a form different from the restored temple in Jerusalem (Josephus *J.W.* 1.1 §33; 7.10.2-3 §§420-32). The cult of Onias appears to

have been of limited influence, but the mere existence in the period of restored Israel of an alternative cult, manned by legitimate pretenders to the high priesthood in Jerusalem, is eloquent testimony of deep divisions within the sacerdotal ranks and within Judaism generally.

4. Radical Pluralization.

Early Judaism may conveniently be dated from 167 B.C., with the entry of Antiochus's officer, named Apollonius (2 Macc 5:24-25), into Jerusalem and his desecration of the temple, but it is evident that the radical pluralization of Judaism prior to Jesus, and of which Jesus was both a symptom and a result, is rooted in the flawed unity of restored Israel during the previous period. But Antiochus's campaign triggered both a fissure of interests and a reconfiguration of those interests in a way that made pluralism the order of the day. The temple of Onias at Heliopolis is only one example, but one that shows that how sacrifice was offered, and by whom, was held by one, familial group to be a better measure of the acceptability of worship than where sacrifice was offered.

4.1. *The Rise of the Hasmoneans and the Response of the Faithful.* In Israel, however, there was another group, defined by a desire to remain loyal to *sacrifice in Jerusalem by an appropriate priesthood and a resistance to the demands of Antiochus, known as "the faithful" (the famous Hasidim). Attempts have been made in the history of scholarship to identify the Hasidim with a particular sect of Judaism during the period of the Second Temple, such as the *Essenes or the *Pharisees, but the adjective *faithful* cannot usefully or legitimately be limited to any one specific group. In the context of reaction to Antiochus, however, the sense of the term clearly related to one's adherence to covenantal norms of sacrifice, as part of a vehement resistance.

Among the resisters was Mattathias, a country priest from Modin, whose son, Judas Maccabeus ("the hammer") introduced the most powerful priestly rule Judaism has ever known, which was known under the name of Hasmoneus, Mattathias's ancestor (1 Macc 2:1-9:18; Josephus *Ant.* 12.6.1 §265; 16.7.1 §187; 20.8.11 §190; 20.10.1 §§238, 247). Judas, as is well known, turned piety into disciplined revolt, including an alliance with Rome (1 Macc 8) and a willingness to break the *sabbath for military

reasons (1 Macc 2:41), which saw the restoration of worship within the covenant in the temple in 164 B.C. (1 Macc 4:36-61). After his death, his brother Jonathan was named high priest (1 Macc 10:20-21), and from that time until the period of Roman rule (see Jewish History: Roman Period), the high priesthood was a *Hasmonean prerogative.

Those events were too rapid for some and unacceptable in the view of others. In strictly familial terms, the Hasmoneans could not claim the high priesthood as a right, and therefore competition with other families of priests was a factor. Moreover, the suspension of the sabbath for military purposes (see Josephus *J.W.* 1.7.3 §146) and the arrogation of the high priesthood and the monarchy by the non-Davidic Hasmoneans seemed particularly vicious to many Jews (Josephus *J.W.* 1.3.1 §70). Antiochus had sanctioned apostasy, and the Hasmonean regime appeared to be compounding apostasy both in its initial resistance and its consolidation of power.

4.1.1. Apocalyptic Resistance. The book of Daniel does not express overt opposition to the Hasmoneans, but it does represent the less activist, apocalyptic stance that many pious Jews adopted as an alternative to the nationalistic and militaristic policy of the Hasmoneans. The eschatology of the prophets during the period of restored Israel is here transformed into a scenario of the end time, in which the temple would be restored by miraculous means, with the archangel Michael's triumph capped by the resurrection of the just and the unjust (Dan 12:1-4). Folk Judaism of the period also anticipated providential interventions (see Tobit), but Daniel elevates and specifies that anticipation until it becomes a program of patient attention and fidelity, warranted by both heavenly vision and the sage named Daniel of the Babylonian period (cf. Ezek 14:14).

4.1.2. Essenes. In the case of the Essenes, opposition to the Hasmoneans became overt. They pursued their own system of purity, ethics and initiation, followed their own calendar and withdrew into their own communities, either within cities or in isolated sites such as *Qumran. There they awaited a coming apocalyptic war, when they, as "the sons of light," would triumph over "the sons of darkness": not only the Gentiles but anyone not of their vision (*War Scroll* [1QM]; *Rule of the Community* [1QS]). The culmination of those efforts was to be complete con-

trol of Jerusalem and the temple, where worship would be offered according to their revelation, the correct understanding of the law of Moses (cf. CD 5:17—6:11). Their insistence upon a doctrine of two *messiahs, one of Israel and one of Aaron, would suggest that it was particularly the Hasmoneans' arrogation of priestly and royal powers that alienated the Essenes.

4.1.3. Pharisees. Most of those who resisted the Seleucids or who sympathized with the resistance were neither of priestly families nor of Essene temperament. Nonetheless, the unchecked rule of the Hasmonean priests in the temple was not entirely acceptable to them. For that large group, the pharisaic movement held a great attraction. The Pharisees, in their attempt to influence what the Hasmoneans did rather than to replace them definitively, appear as much more conservative than the Essenes or competing priestly families. Their focus was upon the issue of *purity, as defined principally in their oral tradition and their interpretation of Scripture. Since issues of purity were bound to be complicated in the Hasmonean combination of secular government and sacrificial worship, disputes were inevitable.

*Josephus, for example, reports that the Pharisees made known their displeasure at Alexander Jannaeus by inciting a crowd to pelt him with lemons (at hand for a festal procession) at the time he should have been offering sacrifice (Josephus *Ant.* 13.13.5 §§372-73). Josephus also relates, from a later period, the teaching of the rabbis (probably Pharisees) who were implicated in dismantling the eagle Herod had erected over a gate of the temple (Josephus *J.W.* 1.33.2-4 §§648-55; *Ant.* 17.6.2-4 §§149-67). This gesture was both less subversive of the established authority in the cult than what earlier Pharisees had done and more pointedly a challenge to Herod. Paradoxically, the willingness of the Pharisees to consider the Hasmoneans in their priestly function, in distinction from the Essenes, involved them not only in symbolic disputes but also in vocal and bloody confrontations. Alexander Jannaeus is reported to have executed by crucifixion eight hundred opponents, either Pharisees or those with whom the Pharisees sympathized, and to have slaughtered their families; but his wife came to an accommodation with the Pharisees that guaranteed them considerable influence (Josephus *J.W.* 1.4.6—1.5.3 §§96-114).

It seems clear that within the Hasmonean period, purity was a political issue and to some extent a symbol. The acquiescence of one of the dynasty to any pharisaic stricture implicitly acknowledged that the Hasmonean priesthood was provisional, and the pharisaic movement probably found its original political expression in opposition to that priesthood (Josephus *Ant.* 13.10.5-6 §§288-98). The Pharisees accepted and developed the notion that with the end of the canon, the age of prophecy in the classical sense had ceased (cf. 1 Macc 4:46). For that reason they plausibly saw Ezra as their source and their own interpretative movement as an extension of his program of restoration (cf. *m. 'Abot* 1:1-18; 2 Esdr 14). But in two vital respects, the Pharisees need to be distinguished from the reforms of Ezra. First, they identified themselves with no specific priestly or political figure. Their program was its own guide and was not to be subservient to any particular family or dynasty. Second, pharisaic interpretation was not limited to the Scriptures, nor was its characteristic focus scriptural: the principal point of departure was the recollection of earlier teaching of those called sages.

Ultimately, after the period of the NT, the ideology of the rabbis, as the Pharisees came to be called, had it that Moses conveyed two Torahs on Sinai, one written and one oral. Even before that understanding, however, the sages treated as normative the teachings of their predecessors in chains of tradition. It was not so much that oral tradition was set alongside Scripture as that oral tradition *was* Scripture until the canon itself could no longer be ignored as the functional standard of Judaism (see Hebrew Bible).

4.2. Judaism Under Roman Rule. Factionalism among the Hasmoneans, which resulted in rival claims to the high priesthood between Aristobulus and Hyrcanus, the sons of Alexandra, culminated in an appeal by both sides to *Pompey, who obliged by taking Jerusalem for Rome and entering the sanctuary in 63 B.C. (Josephus *J.W.* 1.7.6 §§152-54).

4.2.1. Opposition and Accommodation. The **Psalms of Solomon* represents a common, pious expression of horror at the events of 63 B.C., which was probably shared by most Pharisees (whether or not the *Psalms* should be taken as specifically pharisaic). From that period and all through the reign of Herod and his relatives, the Pharisees' attitude to the government was

ambivalent. Some appear to have engaged in a principled opposition to Roman rule and its representatives as such. Today that group is known as the Zealots, but the term is a misnomer.

The Zealots were a priestly group of *revolutionaries, not rebellious Pharisees, who were associated with Eleazar, son of Simon, during the revolt of A.D. 66-73 (Josephus *J.W.* 2.20.3 §§564-65; 4.4.1 §§224-25). The rebellious Pharisees are also to be distinguished from the movements of prophetic pretenders who claimed divine inspiration for their efforts to free the land of the Romans (Josephus *J.W.* 2.13.4-6 §§258-65; 7.11.1-2 §§437-46). Other Pharisees normally accommodated to the new regime, but resisted—sometimes violently—Herodian excesses, such as the erection of a golden eagle on a gate of the temple (Josephus *J.W.* 1.33.2-4 §§648-55). Nonetheless, an apparently pharisaic group is called "the Herodians" (Mt 22:16; Mk 3:6; 12:13), which presumably signals its partisanship of the interests of the royal family as a considerable support of their teaching of purity. They may be associated with rabbis who enjoyed the protection of Herod and his house; the authorities referred to in rabbinic literature as the "sons of Bathyra" (cf. *b. B. Mes.* 85a) may have been such a group.

Others still largely cooperated with the Romans and with the priestly administration of the temple, although they might fall out regarding such questions as whether the priestly vestments should be kept under Roman or local control (Josephus *Ant.* 18.4.3 §§90-95; 20.1.1-2 §§6-14) or the price of doves for sacrifice (*m. Ker.* 1:7).

4.2.2. The Fracturing of the Priesthood: Sadducees, High Priests and Priestly Nationalists. The priesthood itself, meanwhile, was fractured further in its response to the fact of Roman governance. Some priests, especially among the privileged families in Jerusalem, were notoriously pro-Roman. The story of sons of the high priest having the surgery called *epispasmus* in order to restore the appearance of a foreskin (for gymnastic purposes) is well known (cf. 1 Macc 1:14-15; Josephus *Ant.* 12.5.1 §§240-41). There is little doubt but that such families, the most prominent of which were the *Sadducees and Boethusians, were not highly regarded by most Jews (*b. Pesah.* 57a). They are typically portrayed in a negative light, as not teaching the resurrection of the dead (Josephus *J.W.* 2.8.14 §165; Mt 22:23; Mk 12:18; Lk 20:27; Acts 23:8), but the issue may have been one of emphasis. The Torah

had stressed that correct worship in the temple would bring with it material prosperity, and the elite priests attempted to realize that promise. Appeal to apocalyptic schemes or revelations would never have been accepted by the Sadducees as equivalent to or comparable with the Torah. Arrangements in the temple gave them such consistent control that they became known as high priests, although there was only one high priest. But Josephus indulges in the plural usage, as well as the Gospels, so that it should not be taken as an inaccuracy: the plural is a cultic mistake but a sociological fact.

Caiaaphas held a historically long tenure as high priest during the period (Josephus *Ant.* 18.2.2 §§35; 18.4.3 §95), and the frequent change of personnel reflects the collective nature of the priestly leadership as well as Roman caution in respect of a post that might at any time have produced a national leader. Herod himself understood the possibilities of the high priesthood in that regard, which is why he had Jonathan and Hyrcanus, potential rivals (albeit relatives by marriage), murdered, and why he married Mariamne (Josephus *J.W.* 1.22.1-5 §§431-37; *Ant.* 20.10.1 §§247-49). His ambition was for a new Hasmonean dynasty, and it appears that only the notorious greed of his sons, combined with his willingness to have them executed, thwarted its realization. As it was, Herod's grandson and namesake, king of Chalcis, did maintain the residual power of selecting the high priest, although as king of Chalcis he had no ordinary authority over Jerusalem (Josephus *Ant.* 20.1.9 §§15-16).

Several priests were also prominent in the revolt against Rome, however, and it should not be thought that such priestly nationalists, among whom were Joseph bar Matthias, better known as Flavius Josephus, emerged only at the end of the sixties (Josephus *J.W.* 2.20.3-4 §§562-68). The precedent of the Hasmoneans was there for any priestly family to see as a possible alternative to Roman rule, direct or indirect. Some priests were not only nationalists but also revolutionaries who joined with the Essenes or with rebellious Pharisees, although any alliance of priests with a prophetic pretender is perhaps not a likely supposition.

4.2.3. *The Growing Influence of the Pharisees.* The Pharisees' mastery of the oral medium made them the most successful—in terms of popularity—of the tendencies within pluralized

Judaism. In the period before written communication was standard among the generality of Jews, the use of memorization and recitation was far more prominent. The Pharisees were in a position to communicate guidance in respect of purity, an emerging understanding of Scripture (in the targumim, whose development they influenced) and their own sense of the authority of the sages, without requiring general literacy. There is no reason to suppose, for example, that rabbis of the first century such as Hillel and Hanina ben Dosa were able to read fluently, although each was a formative member of the pharisaic, and therefore later of the rabbinic, movements. The Pharisees' willingness to live by craft rather than by status (cf. *m. 'Abot* 2:2)—the most prominent example being Hillel's menial labor (*b. Yoma* 35b)—also meant that they could move from town to town, promulgating their views. In some respects, their occasional itineracy was comparable in Israel to that of the Greco-Roman philosophers of the Mediterranean world (*Stoic, Pythagorean and/or *Cynic).

The success of the Pharisees in small towns became all the more pronounced as their power was largely ceded to priestly interests in Jerusalem. Many local scribes, but not all, were likely Pharisees, and the majority would have to account for pharisaic views. Scribes are men who can read and write, a skill that in antiquity represented some social and educational attainment (see *Literacy and Book Culture*). In Israel, given the Roman encouragement of local government, scribes emerged in towns and villages as a focus of judicial and religious power; their role might be characterized as that of a judge or a magistrate. From the time of the writing of the Torah itself, it was accepted that both aspects of God's rule, the legal and the cultic, were articulated by Moses. The ability of the scribes to read and write made them ideal judges, adjuncts to priests, teachers and leaders of worship.

All those functions were probably discharged by an interactive group of scribes, people of priestly lineage and Pharisees and other elders in any given village. It was likely in the same place in a town that cases were settled, purity or impurity declared, lessons given and the Torah recited from the written form and from memory in Aramaic. There, too, disputes would take place among scribes, judges, priests, Pharisees and elders, concerning how the Torah was to be

understood and applied. Later rabbinic literature tends to reduce the disputes of the period to the "houses" of *Hillel and *Shammai, but that is evidently a schematic presentation; because they lacked any central leadership in the period before A.D. 70, Pharisees differed from movement to movement, town to town, rabbi to rabbi, and to some extent even day to day.

4.2.4. *The Sanhedrin.* The structure of a local council also prevailed under Roman rule in Jerusalem, and the Greek term *synedrion* was applied to it and it has become known as the *Sanhedrin, largely as a result of the *Mishnah. Mishnah, a document of the second century, cannot be taken as a sure guide of events and institutions during the first century (see *DJC*, Rabbinic Traditions and Writings §1), but it does seem clear, from the Gospels and Josephus with the Mishnah, that the council in Jerusalem was largely controlled by the high priests. Elders or aristocrats of the city also participated, among whom were Pharisees and some scribes, who may or may not have been priests, elders or Pharisees. Whether there were seventy-one members of the Sanhedrin (as in rabbinic literature) cannot be known with certainty, and the extent of its capital jurisdiction is not known. But the Romans appear to have given the council the authority to order the execution of perpetrators of blatant sacrilege (Josephus *J.W.* 2.12.2 §§228-31; 5.5.2 §194; *Ant.* 15.11.5 §417).

The authority of the council of Jerusalem outside of the city followed the prestige of the city itself and the acknowledged centrality of the temple. But a ruling of the council there was not automatically binding upon those in the countryside and in other major cities; acceptance of a given teaching, precept by precept, was the path of influence. Pharisees also taught in and around the temple, the focus of their discussion of purity, and the Pharisees in Jerusalem were the most prestigious in the movement.

5. Early Judaism and the New Testament.

5.1. *Jesus in the Temple Within the Context of Early Judaism.* Hillel, an older contemporary of Jesus, is reported to have taught that offerings (as in the case of his own *ōlā*, sacrifice by fire) should be brought to the temple, where the owners would lay hands on them and then give them over to priests for slaughter (cf. *t. Hag.* 2:11; *y. Hag.* 2:3; *y. Beša* 2:4; *b. Beša* 20a, b). His perennial and stereotypical disputants, the

school of Shammai, resist, insisting that the animals might be handed over directly. One of the school of Shammai (named Baba ben Buta in the Babylonian Talmud and Tosefta), however, was so struck by the rectitude of Hillel's position that he had three thousand animals (a number specified only in the Jerusalem Talmud) brought to the temple, and he gave them to those who were willing to lay hands on them in advance of sacrifice.

Generally the Haggadah (narrative, or instructional tale) concerning Hillel, Baba ben Buta and the sheep is characteristic of the pharisaic/rabbinic program. Moreover, the broad attestation of the story within the two Talmuds and its appearance in the Tosefta constitute an indication that it may reflect an actual dispute. Finally, although Hillel's disputants are stereotypical, it is striking that in *b. Beša* 20a, Hillel pretends the animal is a female, for a shared sacrifice rather than a sacrifice by fire, in order to get it by the disciples of Shammai. That is, the Babli's version of the story assumes that the followers of Shammai are in better control of what worshipers do in the temple than are followers of Hillel. The Haggadah is a far cry from the sort of tale, also instanced in rabbinic literature, in which Hillel is portrayed as the prototypical patriarchate of rabbinic Judaism.

In one sense, the tradition concerning Hillel envisages a movement opposite from that of Jesus in the temple (Mt 21:12, 13; Mk 11:15-17; Lk 19:45, 46; Jn 2:13-17): animals are introduced, rather than their traders expelled. But the purpose of the action by Hillel's partisan is to enforce a certain understanding of correct worship, and that is also the motivation attributed to Jesus in the Gospels. Hillel's Halakah, in effect, insists upon the participation of the offerer by virtue of his ownership of what is offered, an ownership of which the laying on of hands is a definitive gesture (cf. *b. Pesah* 66b and the abundant anthropological evidence for this sacrificial gesture, some of which is cited in Chilton 1992, 27-42). "The house of Shammai" is portrayed as sanctioning sacrifice without mandating that sort of emphatic participation on the part of the offerer. Although nothing like the violence of Jesus is attributed to Baba ben Buta, he does offer an analogy for a forcible attempt to insist upon correct worship in the temple on the part of a Pharisee.

Mishnah itself reflects a concern to control

commercial arrangements connected with the temple, and such concern is also somewhat analogous to Jesus' action in the exterior court. The following story is told concerning one of the successors of Hillel (*m. Ker.* 1:7):

Once in Jerusalem a pair of doves cost a golden denar. Rabban Simeon ben Gamaliel said: By this Place! I will not rest this night before they cost but a [silver] denar. He went into the court and taught: If a woman suffered five miscarriages that were not in doubt or five issues that were not in doubt, she need bring but one offering, and she may then eat of the sacrifices; and the rest is not required of her. And the same day the price of a pair of doves stood at a quarter denar each.

Although the story requires more effort to understand than does the one concerning Hillel, it rewards the attention required. The assumption of the tale is that a pair of doves might be offered by a woman as both a burnt offering and a sacrifice for sin, in order to be purified after childbirth; the second of the two would be offered normally, while the first, in the case of poverty, might take the place of a yearling lamb (*Lev* 12:6-8). The story also assumes that miscarriages and unusual issues of blood akin to miscarriages should be treated under the category of childbirth, from the point of view of purity. That interest is characteristically pharisaic, as is the question of when the woman might be considered entitled to eat of offerings. The Pharisees defined purity as fitness to take part in sacrifice and in meals that in their teaching were extensions of the holiness of the temple.

Simeon's anger, which causes him to swear by the temple (cf. *Mt* 23:16-22), is therefore motivated to some extent by economic considerations, and his response is, like Jesus', to teach in the court of the temple, to which point such offerings would be brought. But his action there is far less direct than Hillel's or Jesus'. Instead of importing more birds or releasing those bought at an extortionate price, he promulgates a Halakah designed to reduce the trade in doves, no matter what their price.

If a woman may await several (up to five) miscarriages or flows of blood, offer a single pair of doves and be considered pure enough to eat of the animal offering, the potential revenue from sales of doves would obviously decline. In effect Simeon counters inflationary prices with sacrifi-

cial monetarism. The political lesson was quickly appreciated (on the very day, if we believe the story), and prices went lower even than Simeon had intended. Presumably there was no reason for him to continue promulgating his view in the court of the temple, and both he and the traders were content with the settlement.

The dating of the Mishnah, as compared with the Tosefta, the *Yerushalmi* and the *Babli* (the Jerusalem and Babylonian Talmuds respectively) makes its material, when in any way comparable to the Gospels, of immediate interest to the student of Jesus' life and teaching. For all its complexity, the Haggadah in *Keritot* is vital for appreciating the sort of pharisaic intervention in the operation of the temple that was considered possible during the first century according to the testimony of the Mishnah. (Perhaps the story concerning Simeon is more complicated precisely because it is closer to particulars of pharisaic concern than is the Haggadah concerning Hillel and Baba ben Buta, which is available only in later sources.) Hillel, Simeon and Jesus are all portrayed as interested in the animals offered in the temple to the extent that they intervene (or, in the case of Hillel, a surrogate intervenes) in the exterior court in order to influence the ordinary course of worship. To that extent, it may be said that rabbinic traditions and writings provide a context within which it is possible to interpret a well-attested action of Jesus.

5.2. Paul and the Temple Within Early Judaism. When Paul conceives of Jesus' death sacrificially, he does so as a sacrifice for sin (*Rom* 8:3). By the time he came to compose *Romans*, he had been referring to Jesus' death in that way for five years (cf. *Gal* 1:4, written about A.D. 53, following Papyrus 46 and Sinaiticus). Paul uses precisely the phrase used in the *Septuagint to refer to a sacrifice for sin (*peri hamartias*; cf. *Lev* 16:3, 5, 6, 9, 11, 15). Paul cites the Hebrew Scriptures in a paradigmatically Septuagintal version, so that the identity of phrasing might alone be taken to suggest that he presented Jesus' death as a sacrifice for sin. In addition, both *Galatians* and *Romans* conceive of Jesus' death in a manner congruent with the image of a sacrifice for sin. In *Galatians* 1:4, the purpose of his death is redemption from the present evil age, while *Romans* 8:3 contrasts God's sending his Son with the flesh of sacrifice.

But Paul did not conceive of that death as a

replacement of the cult, for the simple reason that Paul believed he had a role to play within the service of the temple. His preaching of the gospel is depicted in Romans 15:16 as a kind of priestly service, in that it is to result in "the offering of the nations, pleasing, sanctified in Holy Spirit." Contextually Paul's characterization of his own ministry as sacrificial is associated with his "serving the saints in Jerusalem" (Rom 15:25), by means of a collection in Macedonia and Asia for the poorer community in return for its spiritual treasure (Rom 15:26, 27). That done, Paul expects to come to Rome "in the fullness of Christ's blessing" and to proceed to Spain (Rom 15:28, 29), there to engage in the same priestly service (cf. Rom 15:19). Paul's program is known conventionally as the collection, after Galatians 2:10; 1 Corinthians 16:1, 2; 2 Corinthians 8, 9; and Romans 15:26, and the assumption has been that the purpose of the program was purely practical: Paul agreed to provide material support in exchange for recognition by Peter, James and John (cf. Gal 2:9) and used priestly language as a rhetorical device.

Paul was unquestionably capable of using cultic language as metaphor. Romans 12:1 provides the example of the addressees being called to present their bodies as "a living sacrifice, holy and acceptable to God." Romans 15:16 itself can only refer to Paul's priestly service metaphorically, as the agency by which the offering of the nations might be completed, since Paul did not claim priestly lineage. But is "the offering of the nations" itself to be taken only as a metaphor? Paul may be capable of priestly service only in the figurative sense that he brings support to the community of Jesus' followers in Jerusalem, who in turn offer sacrifice within the temple. But the fact would remain that the offering of that community was a sacrifice according to the Torah in the direct and usual sense.

The hope of a climactic disclosure of divine power, signaled in the willingness of nations to worship on Mt. Zion, is attested within Judaic sources extant by the first century. Chief among them, from the point of view of its influence upon the NT, is the book of Zechariah. It can be argued that Zechariah provided a point of departure for Jesus' inclusive program of purity and forgiveness as the occasions of the kingdom (see Chilton 1992, 113-36). Jesus is said to have mentioned the prophet by name (cf. Mt 23:34-36; Lk 11:49-51). The book programmatically

concerns the establishment of restored worship in the temple, especially at the feast of Sukkoth (Zech 14:16-19).

"All the nations" are to go up to Jerusalem annually for worship (Zech 14:16), and the transformation of which that worship is part involves the provision of "living waters" from the city (Zech 14:8; cf. Jn 4:10, 14). That image is related to an earlier "fountain opened for the house of David and the inhabitants of Jerusalem in view of sin and uncleanness" (Zech 13:1). Here is the association of forgiveness and purity that is a feature of Jesus' program, as well as the notion of an immediate release, without any mention of sacrifice, from what keeps Israel from God. (There is also an indication of how the issue of Davidic ancestry might have featured in Jesus' ministry, aside from a formally messianic claim.) God himself is held to arrange the purity he requires, so that the sacrifice he desires might take place.

Zechariah features the commissioning of a priest (Zech 3; cf. Mt 16:18, 19), an oracle against swearing (Zech 5:3, 4; cf. Mt 5:33-37), a vision of a king humbly riding an ass (Zech 9:9; cf. Mt 21:1-9; Mk 11:1-10; Lk 19:28-40; Jn 12:12-19), the prophetic receipt of thirty shekels of silver in witness against the owners of sheep (Zech 11:4-17; cf. Mt 26:14-16; 27:3-10; Mk 14:10, 11; Lk 22:3-6). It is obvious that the connections between Jesus' ministry and Zechariah do not amount to a completely common agenda in every detail, and Matthew reflects a tendency to tailor the fit between the two. But the similarities may be suggestive of Jesus' appropriation of Zechariah's prophecy of eschatological purity, as a final, more fundamental connection would indicate. The climactic vision of Zechariah insists that every vessel in Jerusalem will belong to the Lord and become a fit vessel for sacrifice. As part of that insistence, the text asserts that no trader will be allowed in the temple (Zech 14:20, 21). In the light of Zechariah, Jesus' occupation of the temple appears an enactment of prophetic purity in the face of a commercial innovation, a vigorous insistence that God would prepare his own people and vessels for eschatological worship.

Notably, the *Targum of Zechariah* specifically includes reference to God's kingdom at Zechariah 14:9, and that provides another programmatic link with Jesus. It is clear that Jesus understood the essential affect of sacrifice to de-

rive from a purity and a forgiveness that God extended to Israel in anticipation of the climax of worship. In those understandings, Jesus was no doubt unusual in his immediate application of a prophetic program to the temple, but far from unique. His precise demands concerning the provision of animals as offerings, however, show how the issue of purity was for him pragmatic as well as affective. And it was in that pharisaic vein that he confronted the authorities in the temple with the claim that their management was a scandal and that the direct provision of animals by a forgiven, purified Israel was what was required for the experience of holiness and the reality of the covenant to be achieved.

Whether or not Jesus' program was a direct precedent for Paul's, the mere existence of *Zechariah*, which Paul alludes to (cf. Rom 8:36; 1 Cor 2:11; 11:25; 13:5; 14:25), opens the possibility that Paul might have included an offering from the Gentiles in Jerusalem as a part of his program and therefore as part of his meaning in Romans 15:16. The reading of the *Targum of Zechariah* is particularly pertinent at this point, aside from the question of its relationship to Jesus' preaching. This section of the *Targum of Zechariah* is agreed to reflect the earliest development of the targumim, from the first century onward, and this theme is also represented independently of the book of Zechariah, within the book of *Tobit (Tob 13:8-11). It is evident that within *Hellenistic Judaism the consolation of Jerusalem and the sacrificial recognition of God as king by the nations were motifs that could be and were associated. The significance of the prominence of a similar theme in the *Targum of Zechariah* shows that the association was not merely Hellenistic and that it survived through the first century. More generally, *Jubilees* 4:26 establishes that the global range of the sanctuary was an expectation within early Judaism.

Targum Jonathan, together with Tobit and **Jubilees*, establishes clearly that an expectation of global worship in the temple was a feature of early Judaism, so that it is within the range of plausibility that Paul aimed to promote a literal offering of the nations by means of his collection for the needs of the church in Jerusalem. The book of Acts is at pains to exculpate Paul from the charge that he introduced Gentiles into the precincts of the temple (Acts 21:27-30), but precisely that accusation, mounted by Jews

from Asia who were in a position to know what Paul intended (Acts 21:27), is what in Acts produces the attempt to kill Paul and his subsequent (as it turned out, definitive) arrest (Acts 21:31-32). The conflicted picture Acts conveys at this point may be said to be consistent with the finding from Paul's own letters that he intended that Gentiles should be joined within the sacrificial worship of Israel.

Paul's assertion in Romans 3:25, that God appointed Jesus a cultic appeasement through faith in his blood, is therefore not to be understood as positing a formal replacement of the cult by Jesus' death. The standard references to similar usages in *2 Maccabees (2 Macc 3:33) and *4 Maccabees (4 Macc 6:28, 29; 17:20-22) ought long ago to have warned commentators against any reading that involves such notions. Second Maccabees 3:33 speaks of a high priest "making appeasement" by cultic means. Even 4 Maccabees, which is probably too late a composition to be used as representing the milieu that was the matrix of Paul's thought, maintains a distinction between God's pleasure in sacrifice and the means of that sacrifice. In 4 Maccabees 6:28, God is asked to be pleased with his people by Eleazar and on that basis to make his blood their purification and his life their ransom (4 Macc 6:29). Then, in 4 Maccabees 17, it is said of the seven brothers that, in the manner of Eleazar, they purified the homeland in that they became a ransom for the sin of the nation (4 Macc 17:21). The language of purification and ransom is consistently used, in 4 Maccabees 6 and 17, to refer to the deaths of martyrs in cultic and salvific terms. That salvation did not involve the replacement of cultic sacrifice but its reestablishment in the temple.

Jesus for Paul in Romans 3:25 is a *hilastērion* because he provides the occasion on which God may be appeased, an opportunity for the correct offering of sacrifice in Jerusalem. Precisely that rectitude lies behind the emphasis upon God's righteousness. "The righteous" are held within the *Targum of Isaiah* to be the recipients of that joy whose epicenter is the sanctuary (cf. Is 24:16; 5:17; 66:24). More particularly, the establishment of correct worship in the temple is signaled in Daniel 8:14 as involving a divine justification. Danielic usage presents God as both righteous (cf. Dan 9:7, 14, 16) and making righteous (Dan 9:24; cf. 12:3) an unrighteous nation (Dan 9:7, 16, 18).

5.3. Summary. The utility of the documents of early Judaism and rabbinic Judaism in assessing Jesus and Paul is qualified by three critical considerations, each of which has been instanced in the examples developed here. First, the relatively late date of rabbinic literature must be taken into account, although the continuities between rabbinic Judaism and Pharisaism during the first century rule out any global refusal to countenance analogies between the Gospels and rabbinica. Second, a recognition of the social and religious transformations involved in the emergence of rabbinic Judaism must alert the reader to the possibility of anachronistic attributions or to the presentation of early teachers as spokesmen of later theologies. And finally, the initial target of inquiry must be understood to be the recovery not so much of particular events and sayings paralleled in the Gospels but of the milieu of early Judaism, reflected indirectly both in the Gospels and in rabbinica, which was the matrix of the Christian faith.

JUDAS THE GALILEAN. See REVOLUTIONARY MOVEMENTS, JEWISH.

JUDEA

Judea is the Latinized spelling of Judah (Lat *Judaea*, Gk *Ioudaia*, Aramaic *Y'hud*, Heb *Y'hudah*), the Israelite territory that became the seat of the Davidic kingdom, terminated by the Babylonian conquest of 587 B.C. Comprising the regions immediately surrounding the city of *Jerusalem, Judea encompassed the hill country and desert fringe dividing the Shephelah from the Dead Sea. Intermittently, during periods of *Hasmonean, *Herodian and Roman rule, "Judea" could also be used to designate the totality of regions controlled by Jerusalem's monarch or the Roman governor at *Caesarea

Maritima (*see* Roman Administration; Roman Governors of Palestine). At various times, these possessions included Idumea, Samaria, Galilee and portions of the Mediterranean coast and Transjordan.

It is important to keep in mind that this region never ceased to be referred to as Judea under Babylonian rule; nor did it cease to be inhabited by Judeans, in spite of the deportation of its ruling house and a substantial number of hangers-on to Mesopotamia. Nevertheless, the restoration of Jerusalem and its *temple under Persian auspices marks an important break with the intervening years and is the proper starting point for an overview of what is now commonly referred to as the Second Temple period (516 B.C.-A.D. 70).

1. Judea Under Persian Rule
2. Conquests of Alexander the Great
3. Ptolemaic Rule of Judea
4. Judea Under Seleucid Rule
5. The Hasmonean Revolt
6. Conquest by Pompey
7. Herodian Rule
8. Judea Under Roman Rule
9. Jewish Rebellions

1. Judea Under Persian Rule.

Despite the fact that the Persian kings held Judea as part of their vast Near Eastern empire for a full two centuries (539-332 B.C.), no continuous historical narrative of this period has survived. The biblical books of Ezra and Nehemiah remain the primary literary sources, but their depiction of events is episodic, often confusing and almost always rendered according to the ideological or apologetic agendas of their authors. Archaeology is beginning to provide a counterbalance to these limitations, but its application to the Persian period is still in its infancy (*see* Jewish History: Persian Period).

In 539 B.C., Babylon was conquered by King Cyrus of Persia, the founder of the Achaemenid dynasty. Cyrus's decision to restore Jerusalem was part of a wider propaganda campaign to legitimize his seizure of power. By setting himself up as the *patron and protector of various native cults, Cyrus secured the loyalty of his new subjects. In addition to authorizing the rebuilding of Jerusalem's temple, Cyrus permitted deported Judeans in Mesopotamia to resettle their ancestral homeland. The biblical sources place the number of returnees in the neighborhood

of forty-two thousand (Ezra 2:1-67; Neh 7:5-69). Recent demographic analysis based on known site distribution from this period, however, has made it clear that the biblical statistics are greatly exaggerated not only as estimates for the number of the returning exiles but also for the entire population of Judea at any time during the Persian era. C. E. Carter proposes a total population of about eleven thousand under the early Achaemenids and about seventeen thousand during the mid-fifth century.

More important than the absolute size of Judea's population is the question of the proportion of returnees in relation to the Judeans and neighboring northern Israelites who had never been deported, and how the settlement of these groups was distributed. The biblical sources grudgingly concede the existence of the latter, only to derogate them as "people of the land" (Ezra 6:21; Neh 10:28) or even to deny their Israelite identity outright (Ezra 4:1-3; cf. Josephus *Ant.* 10.9.7 §§183-85). The degree to which imperial goals may have played a role in encouraging such an exclusionary policy is an important issue that still requires an adequate exposition.

As the Persian Empire grew, Judea came to occupy a frontier zone between the Achaemenids and the frequently rebellious satrapy of Egypt. The disruptive potential of this frontier came to a head when the Athenian fleet allied itself with an Egyptian revolt in 460 B.C. The Peace of Callias that followed the conflict (449 B.C.) left the Achaemenids eager to prevent this corner of their empire from slipping out of their control again. Archaeological remains attest to an extensive fortification of Judea at this time, and Nehemiah's mission to rebuild the walls of Jerusalem in 445 B.C. is best understood within this larger context.

2. Conquests of Alexander the Great.

Achaemenid rule over Judea came to an abrupt end with the conquests of *Alexander the Great, king of Macedon, who in 332 B.C. triumphantly marched through Syria, besieging and capturing any cities that still held out for Persia. Two years later, Alexander decisively shattered Achaemenid power and assumed the Persian diadem; seven years later (323 B.C.), Alexander died suddenly and without an heir. For a time his generals took up the challenge of holding together the vast world empire they had inherited, but their unity of purpose was ultimately under-

mined and they fell to fighting one another for supremacy or survival. Virtually nothing is known about Judea's involvement in this era of titanic conflicts. *Josephus preserves a tradition about a meeting between Alexander and the Judeans, but most scholars regard the incident as fictitious.

The partition of Alexander's empire among his surviving generals at the battle of Ipsus (301 B.C.) did not end their conflicts, but the division of spoils resulting from it set the stage for Judea's geopolitical role for the remaining two centuries of the Hellenistic age (*see* Diadochi): as an object of repeated contestation between the superpowers of north and south—the *Seleucids of Syria and the *Ptolemies of Egypt. In accordance with the agreement at Ipsus, Seleucus was to enjoy suzerainty over the whole of Syria and the Phoenician coast; but Ptolemy refused to give up southern Syria, which his own forces were then holding. Consequently Judea became part of the Ptolemaic Empire for the next hundred years (*see* Jewish History: Greek Period).

3. Ptolemaic Rule of Judea.

The period of Ptolemaic rule over Judea suffers from gaping silences in the historical record comparable to those framing the Persian era that preceded it. Two windows on this period are the *Zenon papyri (penned in the 250s by an agent of Ptolemy II's financial minister) and a lengthy section in Josephus purporting to document the fortunes of the Tobiads, a wealthy family of Transjordanian tax farmers with ties to both Jerusalem and the Ptolemies (Josephus *Ant.* 12.4.1—4.11 §§157-236). The latter, however, is patently fictional in many respects, and its dubious temporal setting makes it problematic as a source for chronology.

The Ptolemies were interested in Judea for the same reasons as the Achaemenids before them: as a military frontier to be secured and a source of revenue to be controlled. A Ptolemaic garrison is known to have existed in Jerusalem in 200 B.C. (Josephus *Ant.* 12.3.3 §138); whether this had been a permanent feature or was the result of the immediate military conflict in which it is mentioned is not determinable. The Ptolemies exercised economic control by allowing only Ptolemaic *coinage to be recognized in Syria and Phoenicia and sought to maximize their revenues by the institution of a tax-farming system. If Josephus's account is to be believed,

the high *priest in Jerusalem was initially responsible for paying Judea's tribute, a role described as the *prostasia* (Josephus *Ant.* 12.4.1-2 §§158, 161). Subsequently, we are told, this position was taken over by the Tobiad family. If this is true, it illustrates how imperial economic goals could erode prerogatives traditionally held by the high priest and thus enable other sectors of Judean society to achieve prominence in political life.

4. Judea Under Seleucid Rule.

The Ptolemies lost their Near Eastern holdings to the Seleucids in the so-called Fifth Syrian War (202-200 B.C.). The inhabitants of Jerusalem sided with the victors at a crucial moment in that conflict and were amply rewarded by Antiochus III, the Seleucid king, who renewed the Achaemenid precedent of patronizing the temple and its personnel and endorsing local jurisdiction in accordance with Judean ancestral laws (Josephus *Ant.* 12.3.3 §§138-44). Recent excavations suggest that at some point during Antiochus III's reign, the Israelites of *Samaria (Samaritans) built a temple on the summit of Mt. Gerizim in rivalry to Judean pretensions of Jerusalem being the sole authentic shrine for the worship of Yahweh. This development points to an escalation during this period (first intimated by Ezra and Nehemiah) of competing claims to the biblical heritage as a basis for cult and jurisdiction in Palestine.

Continued involvement with the Seleucid court gave new scope for political rivalry in Jerusalem. The most marked indications of this are the successes of Jason (brother of the high priest) and subsequently of Menelaus (brother of a temple officer) in persuading King Antiochus IV through bribery to summarily depose the incumbent high priest and to install them instead. By the same token, this practice served to undermine the high priest's authority in Judean eyes, because possession of the office was seen to be dependent upon the favor of the Seleucid monarch. This was made manifest by Menelaus's complicity with Antiochus's sack of the temple treasury in 169 B.C. and by Jason's attempt to regain his position a year later when he heard a rumor that Antiochus had died.

The civil strife ensuing from Jason's and Menelaus's feud triggered an unprecedented reaction from the Seleucid king. The civil strife was violently repressed and a Syrian garrison was in-

stalled in Jerusalem; Antiochus is said to have issued an edict outlawing the observance of Torah, installing a cult of Zeus Olympias in the Jerusalem temple and compelling the performance of acts designed to violate Judean laws. It is difficult to interpret Antiochus's motivation for enacting this decree. Second Maccabees offers no explanation other than hubris, and the reason alleged by 1 Maccabees 1:41-42—that Antiochus sought to dissolve ethnic differences throughout his realm—is disproved by evidence for the continuity of native cults elsewhere in the Seleucid Empire at this time. The extreme nature of the decree does not appear to follow logically either from the events that immediately preceded it or from prior Seleucid policy. Whatever Antiochus's intent, the implementation of the decree drove a significant number of Judeans to militant rebellion under the leadership of the Hasmonians.

5. The Hasmonian Revolt.

The *Hasmonian revolt, led first by Judas Maccabeus and subsequently by his brothers, was simultaneously a power play by the Hasmonian family to gain control of the high priesthood. Their heroic military victories and pious rededication of the Jerusalem temple gave them a powerful advantage over their rivals in terms of popularity, yet they remained beholden to the Seleucid dynasty for their legitimacy, just as Jason and Menelaus before them. Hasmonian aspirations became patent when Judas continued to organize armed resistance in spite of the fact that Antiochus's decree was eventually rescinded (163 B.C.) and a new high priest, Alcimus, was appointed by Antiochus's successor (162 B.C.). Judas counterbalanced Alcimus's authority by appealing to *Rome for a token alliance that recognized the Hasmonians to be the legitimate representatives of the Judeans—a gesture that had no practical effect but great propaganda value for Judas and his family. His brothers would continue to emulate Judas in this practice even after they had become established as Seleucid vassals.

Following Alcimus's death in 160 B.C., the Hasmonians began to capitalize on repeated dynastic quarrels among the Seleucids, currying the favor of rival contenders in order to bolster their own status and political prestige. This led to their acquisition of the high priesthood, territorial additions and finally ostensible indepen-

dence from the Seleucids in 143/2 B.C. Yet all of these advances were obtained as Seleucid benefactions, and arbitrary retraction of privileges was a frequent occurrence. Even after the Hasmonians appeared to have entrenched their power, other Judeans continued to regard the Seleucids as a viable means of usurping or deposing them. This can be seen in the actions of Ptolemy, who murdered his Hasmonian uncle and then appealed to the Seleucids for support in 135/4 B.C. (1 Macc 16:18), and in 88 B.C., when the Judean populace appealed to the Seleucid monarch to assist them in deposing Alexander Jannaeus (Josephus *J.W.* 1.4.4-5 §§92-95; *Ant.* 13.5—14.1 §§376-78).

Eventually the Hasmonians felt sufficiently secure to assert royal honors and to engage in large-scale expansion of their Judea-centered domain. The impact this expansion had upon Idumea, Samaria, Galilee and parts of Transjordan, and the consequent attitudes of their inhabitants towards Jerusalem, varied. The rival temple on Mt. Gerizim was destroyed by John Hyrcanus in about 111 B.C. (Josephus *Ant.* 13.9.1 §256), though the Samaritans themselves continued to exist as an ethnic group with distinct cultic traditions. Josephus also reports that the Hasmonian conquest of Idumea and later of Iturea was accompanied by a mass compulsory circumcision of the indigenous male populace and the enforcement of Judean laws (Josephus *Ant.* 13.9.1 §257; 13.5.3 §138). It is noteworthy, however, that both of these groups continue to be referred to as Idumeans and Itureans, not as Judeans. Their ostensible incorporation into the Abrahamic covenant did not erase existing ethnic distinctions. No surviving literary source documents the Hasmonian acquisition of Galilee, unless Josephus's passing reference to Judas Aristobulus's Iturean campaign is to be understood as having taken place within Galilee. Both the Maccabean literature and Josephus assume that region to be inhabited, at least in part, by fellow Israelites.

The consolidation of Hasmonian rule in Judea did not go unchallenged, nor was their control of the high priesthood endorsed by all Judeans. In addition to widespread popular opposition under Alexander Jannaeus (103-76 B.C.), this era also saw the emergence of sectarian groups, such as *Pharisees, *Essenes and the *Qumran community. During the reign of Shelamzion Alexandra (76-67 B.C.), it appears

that the Pharisees managed to gain a significant amount of political power (Josephus *J.W.* 1.5.2 §§110-12; *Ant.* 13.15.5 §§401-4; 13.16.2 §§410-11). Yet in spite of the diversity of their relationships with the ruling family, these groups shared some degree of dissatisfaction with Hasmonean management of the Jerusalem temple, which led them to develop alternative strategies for maintaining the cultic purity and social integrity of Israel. Another effect of the resurgence of a native Judean monarchy was the development or amplification in sectarian literature of royal, as distinct from priestly, models of divinely authorized rule. Dissatisfaction with the existing regime gave new relevance to the biblical monarchic heritage as an ideological foil to Hasmonean and later to Herodian rule (e.g., *Pss. Sol.* 17; 4QpGen^a; 4QFlor; 4QpIsa^a; 4QSerek HaMilhamah).

6. Conquest by Pompey.

The political gains of the later Hasmoneans owed much to the power vacuum resulting from the final throes of the Seleucid Empire. This window of opportunity proved to be short-lived, however, and was soon closed by the arrival of Roman military might in the Near East, occasioned by the Third Mithridatic War (74/3-66 B.C.). Having defeated Mithridates of Pontus and Tigranes of Armenia, the Roman general *Pompey advanced southward in 64 B.C. for the purpose of rearranging the political map of Syria in Rome's favor in order to prevent the Parthians, the new rising imperial power of the East, from doing the same.

Pompey found the Hasmonean house divided. Aristobulus II and Hyrcanus II, the sons of Shelamzion Alexandra, were contending against each other for the kingship, and both appealed to Pompey for support. It was Hyrcanus who succeeded in winning Pompey's favor. Aristobulus's refusal to abide by this verdict elicited a strong Roman reaction. With the assistance of Hyrcanus and his Judean supporters, Jerusalem fell quickly to Pompey in 63 B.C., and Aristobulus was sent to Rome in chains. Pompey then confirmed Hyrcanus as high priest but denied him royal honors, assigning to him instead the less elevated title of *ethmarch* ("ruler of the people"). Pompey further reduced the resources of the Hasmonean state by restoring many of its territorial acquisitions to their native Greco-Syrian citizenries and by imposing tribute on

Judea, which was now placed under the supervision of the Roman proconsul in Syria.

Josephus places great weight on Pompey's actions as marking an end to Judean independence (Josephus *Ant.* 14.4.5 §§77-78; 14.16.4 §§490-91; *J.W.* 2.16.4 §§355-57). This construal of events, however, is an exaggeration reflecting Josephus's pro-Hasmonean bias. Rome continued to rely on native rulers for governing Judea and its neighboring regions for more than a century after Pompey's reinstatement of Hyrcanus in 63 B.C. The scope for political involvement of these native regimes under Roman rule was no less genuine in principle than the autonomy exercised by Judean leaders under the Persian or Hellenistic empires. The significant shift in Judean history that Pompey's arrival did inaugurate was the reorientation of Judea's geopolitical importance from a north-south (Seleucid-Ptolemaic) to an east-west (Roman-Parthian) axis and the gradual supplanting of Hasmonean rule by the Idumean strongman Antipater and his son, Herod the Great (see *Jewish History: Roman Period*).

7. Herodian Rule.

The rise of Antipater and *Herod was made possible by a combination of internal and external circumstances. Tenacious military opposition to Hyrcanus led by surviving members of Aristobulus's family polarized Judean loyalties and left the political climate susceptible to manipulation by the larger Parthian-Roman conflict. More crucial to Herod's success were the protracted civil wars of Rome, in which the resources of Syria and Judea would play no small part.

Antipater's involvement with Hyrcanus began during the initial power struggle with Aristobulus, just prior to Pompey's arrival. Antipater first gained Roman notice by his timely military support for Julius Caesar during the Alexandrian War (48-47 B.C.). In gratitude for this, Caesar conferred substantial vice-regal powers upon Antipater and confirmed Hyrcanus as high priest. Caesar's murder in 44 B.C. left Syria in the hands of the assassins. Antipater bent with the changing political wind and dutifully collected tribute to fund Cassius's imminent war with Octavian and Mark Antony but was himself murdered by a rival potentate in Judea. Herod wasted no time in drawing upon Cassius's support to aid him in avenging his father's death.

Following the battle of Philippi (42 B.C.), Herod was quick to reverse his allegiance yet again in favor of the victorious Antony, winning him over through a combination of bribery and the support of Hyrcanus. Two years later, all of Herod's gains in Judea were undermined by a Parthian invasionary force that agreed to set up Antigonus, the last surviving son of Aristobulus, as king. Hyrcanus was captured and mutilated so that he could no longer serve as high priest, and Herod was compelled to flee to Rome. Eager to counter the Parthians' move, the Roman senate, under advisement from both Antony and Octavian, nominated Herod king of the Judeans (*basileus Ioudaiōn*), promising him military assistance for Antigonus's deposition. So while Antony endeavored to repulse the Parthians in Syria, Herod made war on Antigonus. Three years later (37 B.C.) Jerusalem was taken and Antigonus executed. The Roman political situation had not yet settled, however, and Herod found himself forced once more into a dramatic change of allegiance when Octavian defeated Antony at the battle of Actium in 31 B.C. Octavian (soon to be the emperor Augustus; see Roman Emperors) reconfirmed Herod in his kingship, and Herodian rule over Judea continued unchallenged.

Herod ruled Judea and its satellite territories (increased on three separate occasions by Augustus) for twenty-six years following his reconfirmation. His reign was marked by an extravagant program of building and benefactions throughout the eastern Mediterranean, the greatest work of which was the restoration and expansion of the Jerusalem temple (which was not finished until long after Herod's death). The majority of this activity, however, was concentrated outside of Judea and was calculated to advertise Herod's personal prestige within the Greek world. Another, less glorious side to Herod's reign was his gradual elimination of all surviving Hasmoneans, including Hyrcanus, his own wife Mariamne and his two sons by her. Beginning with the defeat of Antigonus in 37 B.C., Herod introduced a significant innovation to the institution of the high priesthood. Brooking no potential rival to his absolute rule, Herod began appointing and deposing high priests at his discretion, selecting candidates from families who had no political influence in Judea, so that they would be dependent upon him. This practice severely undercut the legitimacy of the

high priesthood in the eyes of many Judeans. How widespread native opposition may have been to Herod during his reign is difficult to determine, but the aftermath of his death in 4 B.C. revealed strongly anti-Herodian sentiments from within both popular and elite sectors of Judean society.

Herod wrote more than one will during his reign, and this fact became a source of contention among his children after his death. Archelaus, the chosen successor in Herod's last will, was challenged by Antipas, named heir in an earlier dispensation. The issue was submitted to the emperor Augustus for judgment, but the situation was complicated by Archelaus's failure to maintain order in Jerusalem just prior to his voyage to Rome, an incident that resulted in a mass slaughter of Judeans and the involvement of Roman troops. Violence escalated in places into open revolt against Herodian rule. Order was restored with the aid of the Syrian governor, who permitted a Judean delegation to be sent to Rome to appeal to the emperor to attach Judea to the province of Syria and allow it to be administered by non-Herodian native governors (*hēgemones*). Augustus opted to retain Archelaus but reduced his territory by dividing it among his siblings, confining Archelaus to Judea, Samaria and Idumea and probationally demoting him to the rank of *ethnarch* until he could prove his worth. Archelaus, however, failed at the test; after a rule of only ten years, Augustus deposed and exiled him in response to complaints of misrule from his subjects. Not sufficiently confident in the abilities of Herod's remaining children, Augustus placed Judea under provincial rule in A.D. 6.

8. Judea Under Roman Rule.

Apart from a brief interval during which Herodian rule was restored, Judea was administered throughout the first century by Roman prefects stationed at Caesarea Maritima who were subordinate to the governor of Syria. In A.D. 66, Jerusalem and much of Palestine rose in armed rebellion against Roman rule (see Revolutionary Movements, Jewish). This revolt culminated in the destruction of Jerusalem and its temple four years later.

A balanced reconstruction of this period is hampered by the skewed perspective placed on it by the Gospels and by the writings of Josephus, all of which (albeit for different reasons)

regard Jerusalem's destruction in A.D. 70 as the inevitable climax to much earlier developments. Josephus in particular retrojects this outcome onto his interpretation of events as far back as the inception of Roman rule in A.D. 6. Consequently Josephus's narrative is selectively biased toward documenting incidents that support a scenario of inexorably escalating tensions within Judean society and between that society and its Roman rulers. In all probability there is much truth to Josephus's picture; however, to adopt his interpretive framework as the sole perspective from which to examine and characterize first-century Judea is to risk oversimplification of a far more complex situation and to ignore or downplay strategies of accommodation to imperial rule that Judeans of this period shared in common with those of previous periods.

A key element of both continuity and discontinuity from A.D. 6 to 66 was the importance of the Judean aristocracy in mediating Roman rule. The Herodians shared in this role throughout the period, though not as directly as Herod the Great had done. The exception to this pattern was Agrippa I, who ruled Judea as its king from A.D. 41 until his death three years later. However, even after Judea's reversion to provincial status, members of the Herodian family (whose realms lay outside Judea's boundaries) were given a degree of control over the Jerusalem temple. Chief among their prerogatives was the power to appoint or depose high priests, just as Herod had done. Yet the impact of this practice was markedly different from its exercise under Herod.

While it is true that such overt control of priestly office, a power also enjoyed by the Roman procurators during the years prior to Agrippa I's reign, advertised the dependency of the candidate upon the one appointing him, the nonmonarchic character of Roman Judea removed the imperative, so clearly manifested in Herod the Great's behavior, of appointing individuals without public influence. On the contrary, the indispensability of the high priest for maintaining public order meant that prospective candidates would be selected only from among the wealthy and the powerful. The result was that the political clout of the high priesthood rose substantially during the first century A.D., and with this development came to prominence a group, hitherto unattested in Judean history,

referred to by Josephus and the NT as the *archiereis* ("the chief/ruling priests").

Also elevated in prestige at this time were ex-high priests, a novel phenomenon whose existence was ironically dependent on the instability of their tenure. The cumulative effect of these developments was the expansion of political involvement by priests in Judean society and the corresponding enhancement of the priesthood as a source of mediation for Rome's administration. The politically important stratum of Judean society, however, was by no means confined to those of priestly descent. Individuals of non-priestly background were just as prominent in the resolution of crises. What is perhaps most striking about the first century is the minimal extent of Roman military-administrative presence in Judea outside of Caesarea and the degree to which Rome relied upon influential priests and laity to maintain the peace.

While it is clear that many native elites benefited politically from the removal of Herodian rule from Judea, it is less easy to ascertain the impact of Roman administration on the Judean populace. Josephus's numerous references to rural brigandage, especially during the post-Agrippa era, suggest increasing economic hardship for the peasantry. The precise causes and dynamics of the situation, however, are not directly accessible and must be reconstructed on the basis of inference and circumstantial evidence. One likely factor contributing to such conditions was the increased importance of wealth in aristocratic competition for Roman or Herodian favor, and the pressure this would have placed on elites to consolidate large, revenue-producing estates. Another factor possibly conducive to worsening conditions may have been the failure of the Roman prefects to respond adequately to economic crises, such as the great famine of the 40s.

Other indications of dissatisfaction with direct Roman rule and its aristocratic Judean collaborators do not point exclusively to material grievances. Ideological factors could be equally relevant, as can be seen in the reaction of certain individuals to the imposition of a Roman census in A.D. 6, who regarded acquiescence to the assessment as being incompatible with the acknowledgment of Yahweh's supremacy (Josephus *J.W.* 2.8.1 §118; cf. *Ant.* 18.1.1 §4). Ironically, the prime exponent of this view, a certain Judas, was not himself affected by the census, as

he did not live in Judea. Josephus seeks to make Judas the wellspring of the revolt of A.D. 66 but provides little evidence of this in his narration of events, suggesting that whatever popular reaction Judas may have inspired in A.D. 6 was ephemeral.

Nevertheless, the ideal of freedom (*eleutheria*) appears to have played a role in other expressions of discontent that the Roman government regarded with greater seriousness. Josephus makes reference to popular prophetic figures who appeared in the Judean desert in the 40s and 50s, apparently reenacting with their followers significant episodes of the biblical past that portended Israel's liberation (Josephus *J.W.* 2.13.4-5 §§259-63; *Ant.* 20.5.1 §§97-98; 20.8.6 §§168-71; *see* Revolutionary Movements). Finally, there was a Jerusalem-based terrorist group popularly known as Sicarii ("dagger-men") who assassinated several notables, including at least one high priest (Josephus *J.W.* 2.13.3 §§254-57) and who later played a role in the revolt of A.D. 66-70. A recurrent element in the activities of these groups (with the exception of Judas, about whom very little is known) is that their anti-Roman stance went hand in hand with opposition, explicit or implicit, to the existing Judean leadership, in particular to the priesthood. This point is crucial to an analysis of the outbreak of the revolt in A.D. 66, because however symptomatic these or other expressions of discontent may have been, the instigation of the revolt came from none of these groups but from the Jerusalem priesthood itself.

9. Jewish Rebellions.

The rebellion of A.D. 66-70, dubbed by Josephus the Judean War against the Romans and by modern scholarship also as the First Revolt or the Great Revolt, took place in several stages. This was in part due to its coincidence with severe political upheaval in Rome, triggered by the emperor Nero's suicide in A.D. 68, which ushered in a succession of short-lived regimes culminating in the seizure of power by Vespasian, the general whom Nero had commissioned to suppress the revolt in Judea. Vespasian's rule initiated a new dynasty of Roman emperors, the Flavians, and for that reason the punishment of Judea became a showpiece for Flavian claims to have reestablished law and order.

Josephus's participation in the rebellion, his capture by the Romans and his subsequent role

as a Flavian protégé have proved as much of a hindrance as a help to modern attempts at understanding the instigation and progress of the revolt from the Judean side. Bent on rehabilitating the image of his people as law-abiding Roman subjects, Josephus frequently took pains to obfuscate the identities and aims of the rebels so as to make them appear unrepresentative of the Judean majority. However, Josephus is unable to conceal the fact that the revolt was begun and led by prominent Jerusalem elites, including most significantly the son of the high priest. Why those who considered as a class stood to benefit most—socially, politically, economically—from the status quo should have ended up at the forefront of a concerted anti-Roman undertaking is perhaps the most puzzling aspect of the revolt.

At the same time, it must be recognized that no single group or individual dominated the scene, and much of the rebel energies were squandered on internecine power struggles. The motivational emphasis of the various groups also appears to have varied. For some leaders, like Menachem, possession of the city of Jerusalem (with possible monarchic aspirations) was the main objective; for others, like the priestly-led Zealots, control of the temple and a probably biblically inspired restructuring of the high-priestly office was paramount. An element of class conflict or at least an appeal to economic grievances may also have been present in the actions of some of the rebel groups, such as the burning of the public debt archives and Herodian residences in Jerusalem by the Sicarii. Yet in spite of their internal divisions, many of the rebel leaders managed to collaborate against the Roman reprisal.

The Jerusalem leaders had a good deal of time to prepare because the Romans would first have to secure the regions surrounding Judea. The initial assault on Jerusalem was led by Cestius Gallus, the governor of Syria, who reached the city late in A.D. 66. He was, however, repulsed by the defenders and forced to withdraw. In the spring of the following year, Nero dispatched Vespasian to handle the situation. The campaign was interrupted by Nero's death and the ensuing political chaos in Rome, which ultimately led Vespasian to entrust the war in Judea to his son Titus. It was not until A.D. 70 that Titus was able to begin the siege of Jerusalem. The temple fell to Titus's troops sometime in August

of that year and was put to the torch. By the end of the following month, the remainder of the city was subdued. Surviving rebels continued to hold out in the fortresses of Herodium, Masada and Machaerus but were eventually crushed.

Although the temple's destruction marked the end of Herodian involvement in Judea and terminated the role of its priesthood, it did not signal the end of Judea itself, nor even of Jerusalem. Judeans continued to inhabit both for more than half a century. A Roman legion now occupied Jerusalem, and some Judean territory was confiscated for Roman usage (Josephus *J.W.* 6.3.5 §216), yet those Judean aristocrats who had surrendered to the Roman forces prior to the conclusion of the war were promised eventual restoration of their property (Josephus *J.W.* 6.2.2 §115). It was not until the reign of the emperor Hadrian, who proposed to transform Jerusalem into a pagan city, that the inhabitants of Judea entered into conflict with Rome once again. No extensive literary source survives for the second revolt (A.D. 132-135), but epigraphic and numismatic testimony from the Judean desert evinces strong continuity with the ideology of the first revolt—the liberation/redemption of Zion—and reveals the name of its leader, Simeon bar Kosibah (known from other contemporary sources as Bar Kokhba; see Simon ben Kosiba). The Roman suppression of the second revolt resulted in the effective end of Judea. Judeans were excluded from inhabiting the territory, which was now renamed Syria Palaestina; Jerusalem became Aelia Capitolina. The center of Judean settlement in southern Syria shifted to Galilee, which would come to foster rabbinic Judaism.

JUDITH

The art of early Jewish storytelling rises to a new level in this literary gem. The tale narrates Judith's single-handed deliverance of the Jewish people from an invasion by the Assyrians. Though ostensibly historical, it is clearly a fictional work. The plot moves rather slowly until Judith makes her appearance, but from that moment on the storyteller spins the tale with escalating suspense, right up to the spine-tingling climax.

Judith is reckoned as deuterocanonical by Roman and Eastern Orthodox Christians but is assigned to the *Apocrypha by Protestants. Though it is extant only in Greek and later versions, it clearly had a Semitic, probably Hebrew, original. N, B and A represent the three best

Greek versions, each of which is slightly different. In the *Septuagint, Judith is placed among the historical books, after Ezra-Nehemiah, in this order: Esther, Judith and *Tobit. In the Vulgate, the order is Ezra-Nehemiah, Tobit, Judith and Esther.

1. Summary of Contents
2. Author, Date and Place
3. Purpose
4. Use of Irony
5. Relevance for the New Testament

1. Summary of Contents.

The book falls into two parts: the first seven chapters narrate the invasion of the Assyrians; chapters 8—16 recount Judith's deliverance. Because the western nations, including Judea, refused assistance in a war against Arphaxad, Nebuchadnezzar (in reality a Neo-Babylonian, not an Assyrian) dispatches his general Holofernes to punish them (Jdt 1—2). The rebels sue for peace and become vassals, except for Judea (Jdt 3).

Left to face retribution alone, the Israelites cry out to God for deliverance and prepare for invasion (Jdt 4). Holofernes consults Achior the Ammonite for an assessment of Israelite strength and resolve. Infuriated by Achior's high regard for and warning about the God of Israel, Holofernes banishes Achior to Bethulia, a Jewish city guarding the pass to the hill country of Judea (Jdt 5—6). Holofernes lays siege to Bethulia, cutting off its water supply. The leaders hearken to the pleas of the people to surrender if rescue does not come within five days (Jdt 7).

At this point the beautiful and pious widow Judith enters the story. One is reminded of 2 Maccabees 5:27 and the *Assumption of Moses* 9:1, in which the introduction of Judas and Taxo, respectively, signals a turning point in the narrative. Hearing of the planned capitulation, she determines to save the city by her own device (Jdt 8). After securing permission from the elders and offering up a *prayer for success, she arrays herself in stunning attire and, with her maidservant and a supply of kosher food, enters Holofernes's camp. Displaying her charms to good effect and under the pretext of having secret information that will prove the undoing of the Israelites, she obtains an audience with Holofernes (Jdt 9—10).

Holofernes, captivated by Judith's beauty, in-

vites her to a banquet and intends to seduce her (Jdt 11—12). Once alone with the general, who falls into a drunken stupor, Judith decapitates him with his own sword. Owing to a cleverly established pattern of ritual observance, she is able to slip out of the camp unchallenged, carrying Holofernes's head in her kosher food bag (Jdt 13). Back in Bethulia, Achior beholds Holofernes's face and becomes a proselyte. The Assyrians, meanwhile, discover the decapitated Holofernes and flee in panic, hotly pursued by the Israelites. Judith is honored by the high *priest and grateful nation (Jdt 14—15). The book concludes with Judith's celebratory song, her dedication of the spoils to the temple and a tribute to her fame and *piety (Jdt 16).

2. Author, Date and Place.

Judith is an anonymous work. Internal evidence suggests that the author was a Palestinian Jew. Though some scholars have placed Judith in the Persian period (*see* Jewish History: Persian Period), the conversion of Achior suggests a date well after the time of Ezra, when conversion of Ammonites to *Judaism was unthinkable (cf. Ezra 9—10 with Deut 23:3). Furthermore, the concerns and atmosphere of the book seem to reflect the trauma of the Maccabean revolt. A widely accepted date is about 150 B.C. The fact, however, that the story is placed in Samaria, with no indication of sectarian strife within Judaism, may point to the reign of John Hyrcanus (135–104 B.C.; *see* Hasmoneans). Hyrcanus captured Shechem, sometimes identified with the otherwise unknown city of Bethulia, and destroyed the Samaritan temple on Mt. Gerizim in 128 B.C. Later he conquered and incorporated Samaria into his kingdom (109 B.C.; cf. Josephus *Ant.* 13.8.4—9.1 §§249–58). This would account for Jews living in a city lying within the former province of Samaria. Achior's conversion may also be a reflex of the forced conversion of the Idumeans living in southern Judea in about 128 B.C. (*see* 4 below).

3. Purpose.

This rousing story combines a clarion call for militant defense of political and religious freedom with a scrupulous observance of Torah. A tale of impending annihilation thinly veils a real-time danger for observant Jews. Through the lens of Nebuchadnezzar, we glimpse the menacing figure of Antiochus IV Epiphanes.

Holofernes conjures up reminiscences of Nicanor, Antiochus's general, whom Judas beheaded (cf. 2 Macc 15:30-35). The narrative breathes the atmosphere of the stirring deeds of the Maccabean brothers. Standing in a line of ancient worthies like Deborah, Jael and Esther, Judith confronts the dark forces of *Hellenistic imperialism. The keynote of Judith is the conviction that God will intervene and defend his people if they but faithfully observe his law. This divine intervention, however, includes militant activism on the part of individuals.

4. Use of Irony.

That the army of Nebuchadnezzar, which had reduced powerful kingdoms to rubble, could be routed by a small Jewish town in Samaria leads off a series of ironies. The supreme irony lies in the thematic verse: "But the Lord Almighty has foiled them by the hand of a woman" (Jdt 16:5 NRSV). This woman, a pious widow of whom no one spoke any ill (Jdt 8:8), lived a celibate life until the day she died (at 105). And yet she possessed such seductive charm that every male who laid eyes upon her was smitten.

The story is framed by the figure of Achior, an Ammonite, who, remarkably, testifies to the power of Israel's God and their invincibility when they obey him (Jdt 5:5-21). The haughty Holofernes expels him to Bethulia with this death sentence: "you shall not see my face again from this day until I take revenge on this race that came out of Egypt. Then at my return the sword of my army and the spear of my servants shall pierce your sides, and you shall fall among their wounded" (Jdt 6:5b-6 NRSV). The next time Achior does see Holofernes's face, Holofernes is bodiless—Achior falls on his face and promptly converts to Judaism (Jdt 14:10). This ironic touch may reflect the conquest of Medaba, near the ancestral home of the Ammonites, and the forced conversion of the Idumeans living in the southern regions of Judea.

Several lines in the story are good examples of double entendre (Jdt 11:6, 16, 19; 12:4, 14, 18). These become apparent after the tale is fully told and add a humorous touch to an otherwise grim plot. Jewish readers would certainly relish the irony of Judith escaping the Assyrian camp with Holofernes's head in her kosher food bag (Jdt 13:10). Perhaps the most delightful irony in Judith surfaces in the realization that Holofernes "lost his head" before he lost his head (Jdt 12:16).

5. Relevance for the New Testament.

Judith is not a historical figure but rather a personification (her name means "Jewess"). As such, she embodies the ideals of a religious community. We are overhearing the concerns and theology of a group similar to the *Pharisees. One of the difficult issues in historical research of early Judaism and Christianity has been an accurate reconstruction of Second Temple Pharisaism. Judith is valuable in this connection because it seems to portray an earlier phase of Pharisaism than that depicted in the NT and in later *rabbinic sources.

For example, Judith's practice of rigorous fasting (Jdt 8:6) exceeds that enjoined in the OT and conforms to the injunctions of the Pharisees as portrayed in the NT (cf. Mk 2:18 par. Mt 9:14-17; Lk 5:33-39; and see Mt 6:16-18). In this regard, Jesus' relaxation of fasting requirements for his disciples was highly controversial (cf. Mk 2:19-20). Judith's fidelity to the ritual purity laws is especially noteworthy. Besides adherence to food laws (Jdt 12:2-4), we read of ritual bathing in running water before *prayer (Jdt 12:6-9), as required by Pharisaic halakah. The NT refers to rules governing table fellowship and ritual purity in Jewish society (cf. Gal 2:11-14; Mk 7:1-5; Lk 11:38; Jn 2:6). These rules generally conform to the Pharisaic position, which, as *Josephus informs us, was acknowledged by the majority of Jews as "the most accurate" (Josephus *Ant.* 13.10.5 §288).

Judith also observed special times of prayer, coinciding with the burning of incense at the *Jerusalem temple (Jdt 9:1), a practice continued by the earliest Jerusalem church (Acts 3:1). Judith's revelation to Holofernes, that the elders of Bethulia were about to commit a grave sin by eating food tithed to God, refers to the Pharisaic practice of meticulously tithing all produce grown in the Holy Land (cf. Mt 23:23; Lk 11:42). We should also mention that Achior's conversion assumes a Judaism that is open to proselytizing—a stance reflected in NT literature (cf. Mt 23:15; Acts 2:10; 6:5; 13:43).

Although no NT document compares with Judith in terms of genre, two writings share a similar intensity and urgency: Hebrews and the Apocalypse. In both, feminine figures and imagery play a role in the rhetorical strategy of exhorting the faithful (cf. Heb 11; Rev 19-21).

The main question that Judith raises is ethical: Are Judith's actions compatible with NT eth-

ical teaching? The general tenor of NT paraenesis with respect to Christian involvement in violence and the role of Christian *women in Greco-Roman society might suggest pacifism (cf. Mt 5:38-48 par. Lk 6:29-30; Mt 26:52; Rom 12:17-21; 1 Pet 2:13-25; 3:1-6, 9; Heb 11:35; 1 Tim 2:9-15; Rev 13:10). However, Christian insistence that the state has the right to punish evildoers has some relevant implications for our question (Rom 13:1-5; 1 Pet 2:13-17). Christian ethicists must search for underlying theological principles in the teachings of Jesus and the apostles and employ philosophical argumentation in working out a response to this difficult issue. What is clear is that in Second Temple Judaism a significant number of Jews viewed Judith's actions as embodying the noblest form of piety. In this they have been joined by some prominent figures in Christian church history (cf. *1 Clem.* 55.3-5).

KINSHIP. See FAMILY AND HOUSEHOLD.

KISSING

Although readers of the NT will be familiar with the practice of the "holy kiss" (Rom 16:16; 1 Cor 16:20; 2 Cor 13:12; 1 Thess 5:26) or "kiss of love" (1 Pet 5:14) and many will recognize it as a cultural practice, fewer readers understand the cultural framework in which such a custom made sense.

In a somewhat later period, the "kiss of peace" assumed a liturgical function in church services (Justin Martyr *Apol. I.* 65). Because the practice in its earliest form was probably not restricted to one's own gender (Tertullian *Ad Ux.* 2.4), it was sometimes abused, drawing condemnations of those who kissed a second time (Athenagoras *Suppl.* 32); eventually it was restricted to members of one's own gender (*Apost. Const.* 2.7.57). Such restrictions were important especially given false accusations the church combated, such as incest (Athenagoras *Suppl.* 3; Theophilus of Antioch *Autol.* 3.4; Minucius Felix *Oct.* 31.1; Tertullian *Apol.* 2.5, 20). But before Paul's instructions ever were adapted for liturgical use, they reflected a broader cultural use in greetings for family and friends.

1. Family and Friends
2. A Respectful Greeting
3. The Nature of Kissing

1. Family and Friends.

Kissing was normally intended to express love; the term *phileō* can mean either "kiss" or "love" and occasionally appears as a play on words that means both (Diodorus Siculus *Bib. Hist.* 9.37.1). Kissing was a standard familial greeting (Longus *Daphn. Chl.* 4.22-23); thus, for example, Roman women kissed kinsmen (Plutarch *Quaest. Rom.* 6,

Mor. 265B). A child was expected to kiss his mother (Ovid *Met.* 10.525) and father (Euripides *Androm.* 416). Likewise, fathers kissed their children (Virgil *Geor.* 2.523). One might rise and kiss a cousin who had greeted him (Achilles Tatius *Leuc.* 1.7.3).

Jewish people also counted it natural for a father to kiss and embrace a son he loved (*Jub.* 31:21; *Song Rab.* 5:16 §9) or for a son to kiss his father (Gen 27:26-27; *Jub.* 22:10-11; 26:21). Such kissing provided a natural greeting for close relatives such as children (*T. Sim.* 1:2), between sisters (*Num. Rab.* 9.9) or between sister and brother (*Song* 8:1; *Jas. and As.* 8:4/3). One expected such displays of affection all the more in dramatic circumstances. One might kiss a relative who had just arrived from a distant land, weeping for joy (Gen 33:4; Tob 7:6-7) or any other relative one had not seen for a long time (Ex 4:27; 18:7). Likewise one might kiss a child (Gen 31:28, 55; Tob 10:13) or other relative (Ruth 1:9, 14; 1 Kings 19:20) who was about to depart. A sister might embrace a brother whom she learned was safe, falling on his neck and kissing him (*Song Rab.* 8:1 §1).

That the father kisses his son in Luke 15:20 is therefore hardly surprising, except for the exceptional circumstances this kiss implies, including the father's forgiveness of the son's radically antisocial behavior. A kiss might also function as an affirmation (e.g., 1 Sam 10:1) or welcoming back into fellowship (2 Sam 14:33), as when John kisses the repentant Callimachus in *Acts of John* 78.

Kissing and embracing friends in greeting was also natural; hence pagans thought it signified a good omen in a dream (Artemidorus *Oneir.* 2.2). Kissing thus functioned as an intimate greeting for someone with whom one was close (Homer *Odys.* 21.224-27); Jewish friends also kissed at separation (1 Sam 20:4; Acts 20:37)

and in greeting (2 Sam 15:5; 19:39; 20:9).

2. A Respectful Greeting.

Kisses further served as respectful greetings to one of higher status (Arrian *Alex.* 4.11.3; cf. Lk 7:38, 45); congratulatory kisses might be offered on the neck, hands, eyes or other body parts (mocked in Epictetus *Disc.* 1.19.24). In one Jewish story Abraham, in respectfully kissing Death's hand, died (*T. Abr.* 20, A). One might kiss one who pleased him; thus God is said to have kissed some Israelites who were circumcised (*Ex. Rab.* 19:5). One source similarly reports that Miriam's father kissed her hand when he thought her prophecy fulfilled, though he struck her head when he later wrongly concluded it a false prophecy (*b. Sofu* 13a). A kiss was generally seen as pleasant (Prov 24:26) and hence might function as a suitable reward.

A king might rise to kiss a teacher whose wise discourse had pleased him (1 Esdr 4:47). A rabbi might rise and kiss the head of a student who expounded well; this is reported of Johanan ben Zakkai (*t. Hag.* 2:1; ARN 6 A; ARN 13 §32 B; *b. Hag.* 14b; *y. Hag.* 2:1 §4), R. Gamaliel II (*y. Ros' Haš.* 2:9 §2), R. Simeon ben Yohai (*Pesiq. Rab Kah.* 1:3) and R. Abba bar Kahana (*y. Hor.* 3:5 §3; *Koh. Rab.* 6:2 §1). A student might also kiss a teacher on the head (*Qoh. Rab.* 9:5 §1). Such a practice seems relevant to Judas's betrayal kiss in Matthew 26:48-49 (par. Mk 14:44-45; Lk 22:47-48): that the outward act should have signified friendship, respect or devotion made the treachery all the more heinous (cf. Prov 27:6).

3. The Nature of Kissing.

The nature of kissing may also differ in many cases from modern readers' expectations. It is possible that the first Christian kisses of greeting, like many kisses in biblical tradition, were light kisses on the cheek (see Ellington). But whether in an early period or a later one, it is likely that some kisses, especially in the Roman West, involved more. Roman women kissed kinsmen on the lips (Plutarch *Quaest. Rom.* 6, *Mor.* 265B); mothers kissed daughters on the lips (Ovid *Met.* 2.356-57). Sources tell us the same of

Roman fathers: one might kiss his son on the lips, albeit lightly (Virgil *Aen.* 12.434), or his daughter on the lips in pure innocence (Ovid *Met.* 10.362). A mourning Greek sister might wish to kiss her dead brother on the mouth (Euripides *Phoen.* 1671); children might do the same with a deceased mother (Euripides *Alc.* 403-4) or father (cf. facial kissing in Gen 50:1). Despite the common use of lips, the kiss of a sister (Ovid *Met.* 4.334) or mother (Ovid *Met.* 4.222) is naturally said to be less passionate than that of a lover. Maidens kiss one another on the lips, but only modestly; thus a lustful deity in disguise might give himself away (Ovid *Met.* 2.430-31). A *Hellenistic Jewish document can thus take for granted that one would kiss relatives on the lips (*Jos. and As.* 8:6).

Conversely, an aged priestess might kiss a departing hero merely on the hand (Apollonius of Rhodes *Arg.* 1.313). Some Jewish teachers seem uncomfortable with some forms of kissing; R. Akiba reportedly respected the Medes because they kissed only on the hand (*b. Ber.* 8b). Kisses of greeting could become the occasion for lustful abuses (Chariton *Chaer.* 2.7.7; cf. *Jos. and As.* 8:3-7).

Romans generally considered sexual kissing (also practiced in traditional Jewish culture; cf. Prov 7:13; Song 1:2) to be a private matter. Traditionalists opined that a man should not kiss his wife in public, though Cato's expulsion from the senate of a man for kissing his own wife in front of their daughter was generally deemed excessive (Plutarch *Bride* 13, *Mor.* 139E). Some erotic kissing did occur at *banquets. "The erotic banquet kiss, the *basium*, was completely different from the *osculum*, the innocent kiss that members of the same family would give each other on the mouth." The *basium* "may have been just a slight brushing of the lips," a hint pointing to something more (Dupont, 285).

LANGUAGES. See ARAMAIC LANGUAGE; GRAMMARIANS, HELLENISTIC GREEK; GREEK OF THE NEW TESTAMENT; HEBREW LANGUAGE; LATIN LANGUAGE.

LATIN LANGUAGE

The standard opinion of scholars is that Latin had relatively no influence on the language milieu of first-century Palestine and has little to inform our understanding of the language Jesus used. This position has recently been questioned, and the evidence deserves examination. It is now widely recognized that *Aramaic and *Greek, with some *Hebrew, were the major languages in use in Palestine in the first century. Aramaic was used by many if not most Jews of the time, with many Jews as well as the non-Jewish population using Greek. Hebrew was probably used in various religious contexts, but there is not clear evidence that it was used much more widely than that. The use of Latin remains disputed.

1. Use for Official Purposes

2. Use in Papyri, the Gospels and Other Documents

1. Use for Official Purposes.

The view of J. A. Fitzmyer is usually cited as representative of the position on Latin. He contends that the evidence indicates that Latin was used "mainly by the Romans who occupied the land and for more or less official purposes" (Fitzmyer, 129). The evidence that he cites in support of this contention is the inscriptional material in Latin found on buildings and aqueducts, funerary inscriptions on the tombstones of Roman legionnaires in Palestine, milestones and Roman tiles with the abbreviation of the Tenth Legion. Several inscriptions he cites are

from *Caesarea Maritima, one of them noting that Pilate had erected a building in honor of Tiberius. This is in keeping with *Josephus's noting that the inscription forbidding non-Jews to enter the *Jerusalem *temple was written in Greek and in Latin characters (Josephus *J.W.* 5.5.2 §§193-94). It also, according to Fitzmyer, makes sense of Pilate's writing the title on Jesus' cross in Latin (Jn 19:20). Fitzmyer thus concludes that this evidence, which he claims is not abundant, says "little about the amount of Latin that might have been spoken in Palestine by the indigenous population, despite the long time since the Roman occupation began in 63 B.C." (Fitzmyer, 133), a situation he attributes to the widespread use of Greek as the *lingua franca* in the Roman East.

2. Use in Papyri, the Gospels and Other Documents.

Recent research has accepted the evidence that Fitzmyer has marshaled but extends it to conclude that not only did the Roman officials use Latin, but that there was some knowledge of Latin among those of the lower social orders as well. In an important and provocative article, A. Millard cites three types of evidence in support of this position: *papyri and *inscriptions pointing to lower societal levels knowing Latin; Latin terms in the Gospels; and Latin in other documents. These three lines of evidence can be summarized briefly.

As evidence that those other than Roman officials knew Latin, Millard cites the jars in the cellar in *Herod's palace at Masada, which were labeled in Latin. It stands to reason, he thinks, that the servants responsible for serving Herod would have needed to know what the labels said in order to carry out their duties properly. Millard also notes that a number of Latin fragments from Masada indicate that others than the offi-

cials read or wrote Latin. Included here is a papyrus fragment of one or two lines of Virgil. In the papyri from the Cave of Letters, dated to the time of the Bar Kokhba revolt (A.D. 132-35; see Jewish Wars with Rome), there are Latinisms noted in the Greek texts, including use of *basilika* (Lat. *basilica*; no. 16 lines 2, 4), *apo aktōn* (Lat. *ablex actis*; no. 12 lines 1, 4), *praesidion* (Lat. *praesidium*; no. 11, lines 6, 19), *tribounalion* (Lat. *tribunal*; no. 14 lines 12-13, 31), as well as Latin terms for money, such as *dēnariōn* (Lat. *denarius*).

Regarding the evidence in the Gospels (see Blass and Debrunner, 4-6; Robertson, 108-11 for a detailed listing), Millard draws attention to several types of evidence. First he notes that the presence of words and terms for money, measure and the military are easily explained but are nevertheless to be noted, since the same penetration is not found in the Hebrew and Aramaic of the *Dead Sea Scrolls or the writings of *Philo and Josephus. Second, Mark's Gospel has ten of the eighteen Latin words to appear in the Gospels. Some scholars have taken this as evidence for Mark's Roman provenance. Millard, however, reexamines the evidence, noting that Matthew has as many Latin words but not all of them in parallel passages to Mark. He contends further that investigation shows that a number of these Latin words appear in Greek texts for the first time in the first century and often first or only in the Gospels (e.g., *kēnsos*/Lat. *census*; *koustōdia*/Lat. *custodia*; *ksestēs*/Lat. *sextarius*; *praitōrion*/Lat. *praetorium*; *soudarion*/Lat. *sudarium*; *spekoulatōr*/Lat. *speculator*; *titlos*/Lat. *tit(u)lus*; *phragellion*/Lat. *flagellium*; *phragelloun*/Lat. *flagellare*). These words are distributed throughout all four Gospels and sometimes occur in places where Synoptic passages have a different word.

Millard also notes several places in the Mishnah and other *rabbinic writings where Latin loanwords are found. Thus he concludes that, unlike the Greek of Egypt, the Greek and local languages of Palestine seem to have been more open to Latinisms and that "the presence of these Latin words in the Gospels reflects the linguistic picture of Palestine in the first century C.E. . . . We may deduce, therefore, that such Latin words as the ones used in the Gospels were current in the Greek spoken in Palestine early in the first century, C.E., even during the lifetime of Jesus of Nazareth" (Millard, 458).

Although even on Millard's accounting one

cannot further argue that Jesus had anything other than a superficial knowledge of Latin or anything other than knowledge of just a few words of Latin, it is plausible to examine again the question of how much Latin was in use in first-century Palestine. Knowledge of Latin may not have been widespread at all societal levels, but there may well have been a greater influence of Latin on other languages of the time than has previously been thought.

LATIN NEW TESTAMENT. See NEW TESTAMENT VERSIONS, ANCIENT.

LAW/NOMOS IN GRECO-ROMAN WORLD

Law in the Greco-Roman world was predominantly the law of *Rome. While Roman law originated as a function of the pontiffs or priests during the period of the kings (753-509 B.C.), it developed into a legal system concerned almost entirely with secular matters. The Roman jurist Gaius (second century A.D.), for instance, rarely refers to religious matters in his *Institutes* and never mentions a god. Religious communities in the Greco-Roman world had their own laws, the Jews being a prime example, but we are not concerned with such manifestations of law (see Torah).

1. The Role of Law

2. Law, Custom and Social Context

3. The Roman Empire and Roman Law
4. Greek Reflection on Law

1. The Role of Law.

Understanding the role that law played in the lives of ancient Mediterranean peoples is vital to an appreciation of several NT writings. The Gospels and Acts refer to various aspects of Roman law when describing Jesus' life and death and the lives of the first Christians. Paul's metaphors for explaining the Christian life often rely on legal terminology, for instance, heredity, guardianship, adoption, and a will. Specific texts such as 1 Corinthians 6:1-8 and 2 Corinthians 13:1 are better appreciated when certain features of Roman law are understood. Particular themes, such as partnership (*koinōnia*), when they are credited with their legal connotations, become even more theologically fertile. Even those terms that we think of in primarily theological categories, such as redemption and judgment, take on richer semantic texture when it is recognized that they originated as legal categories.

The ancients recognized both implicitly and explicitly that social behavior was not regulated by laws alone. In the Greco-Roman world one's *honor was often as valuable as one's life. Consequently concern for staying within social norms, even if they were not legal norms, played a strong regulatory role.

Much of what we know about law in the Greco-Roman world we know because the writings of the law-making and social elite are those that remain. It is difficult to ascertain whether the ordinary *citizen and noncitizen considered the laws to be just or capable of representing their needs and interests. We do know, however, that the distinction between law and justice was one that the *philosophers and jurists understood. Epicurus (341-270 B.C.), for one, understood that law and justice do not coincide. He distinguishes between laws and justice, noting that some laws are too general to apply to individual situations and some too particular (Porphyry *On Abstinence* 1.10ff. The Cynics with their anti-establishment lifestyle thought it just to act outside of the law. *Cicero (106-43 B.C.) recognized that some laws were contrary to natural law (Cicero *De Leg.* 2.5.13-14). Furthermore, the Roman jurists themselves understood that a legal decision could be reached that accorded with legal principle but was not fair.

2. Law, Custom and Social Context.

The Greek word usually rendered "law" by the translators of the NT is *nomos*. This word meant both "law" and "custom" and so could refer to the laws of a society and to that society's habits and customs. Custom was one of the cornerstones of law in the Greco-Roman world: "The commonwealth of Rome is founded firm, On ancient customs and on men of might" (Ennius; quoted in Cicero *De Rep.* 5.1). If custom was not identified with law, it was treated with respect and seen as integral to the rule of law. Gaius's *Institutes* begin this way: "Every people that is governed by statutes and custom observes partly its own peculiar law, and partly common law of all mankind" (*The Institutes of Gaius*, trans. F. de Zulueta [Oxford: Clarendon Press, 1946]). Along with equity, decided cases and legislation Cicero lists custom among the sources of law, that is, the places to which a jurist could go to find out what the law is.

Law always has an organic relationship to its social context. The fact that custom had (and has) such persuasive force in legal matters demonstrates this. One of the features that most separates the Greco-Roman social context from that of the modern Western world was its hierarchical nature. The rule of law did not mean equality for all under the law. Cicero wrote that "equality of legal rights . . . cannot be maintained" since there are "great distinctions among men. . . . For when equal honor is given to the highest and the lowest . . . then this very 'fairness' is most unfair" (Cicero *De Rep.* 1.34.54, LCL, trans. C. W. Keyes). He goes on to advise that every citizen should learn to be content "in his own station" (Cicero *De Rep.* 1.45.69). The Roman legal system has often been characterized as evidencing class jurisprudence. The Romans understood people as essentially unequal—fathers had more status than sons, *patrons than clients, masters than *slaves, men than *women. The development and maintenance of class privilege protected by law is one of the features of the history of Roman law.

Another distinguishing feature of law in the Greco-Roman world is that much of what the modern Western world considers to be public law was private in the ancient Mediterranean world. For example, there were no divorce courts. Neither *marriage nor divorce required public authorization.

3. The Roman Empire and Roman Law.

The Greco-Roman world is the world of the *Roman Empire, a world that began as Rome became dominant through its conquests and acquisitions of territories and as it changed from republic to principate, to governance by oligarchy to governance by emperor (*see* Roman Emperors). Caesar Octavius, who came to be called Augustus, through his remarkable military victories and the changes he brought about in the Roman system of government, marks the beginning of the Greco-Roman world. In 27 B.C. Octavian, ostensibly to restore the republic, gave back the extraordinary powers he had assumed during the civil wars. Effectively, however, this action was the beginning of the empire, for in 23 B.C. he was voted tribunician power for life, and his command was recognized as superior to any other. The age of the Greco-Roman world, in which Rome's authority and influence was felt throughout the known world, began with Augustus. In this age the NT writings were composed.

3.1. Impact of Empire on Roman Law. One of the chief impacts of the spread of Rome's power was the concomitant growth in significance of Roman law. Rome's dominance meant that by and large law in the Greco-Roman world was Roman law. While not all provinces of Rome took on the Roman legal system, Judea being a case in point, all were ultimately under the rule of Rome's law. The *Roman governors of Judea, for instance, had the authority of imperial legates or proconsuls. Furthermore, provincial governors almost invariably had held office in Rome prior to their appointment. A Roman provincial governor might take into account the customs of his province when making legal decisions, but in the end he sought to enforce Roman legal ideas.

Another significant result of the principate was the change in the legal procedure of Roman law, with ultimate power resting in the hands of the emperor. The history of Roman law goes back to the monarchy (753-509 B.C.). The kings produced some legislation, and the pontiffs administered the law, both sacred and secular. After the last king, Tarquin the Proud, was expelled from Rome in 509 B.C. the city was organized as a republic, which it remained until 27 B.C. During this period Rome came into increasing contact with other city-states. Its law broadened to include provisions for relations with

foreigners—the *ius gentium*, the law of all people—a law that acknowledged that some legal principles were valid for all people. At this time the population was divided between the patricians, who knew and administered the law, and the plebians. As a result of conflict between the patricians and the plebians at least some private law was put in writing. This part of the Roman legal tradition was published in the forum in 450 B.C. and came to be called the Twelve Tables.

The effect of this codification was at least twofold: the law was taken out of the hands of the priests, and a need was created for interpretation. The office of praetor arose in order to provide for official legal interpretation. The praetor did not act as a judge but rather oversaw the legal procedure. He was elected by popular vote for one year and upon assuming office published an edict that would remain in force for the tenure of his office. The core of the edict, however, was traditional, and consequently there was relative consistency in the law. In addition to the praetor there developed a body of jurists, wealthy citizens who, without financial rewards, gave legal advice, taught and wrote on the law and assisted in the legal process. The praetor and the jurists built up the Roman civil law.

When the republic was replaced by the principate the law continued to be influenced by the praetor and the jurists, but increasingly the emperor became the source of law. Augustus, for instance, introduced the *ius respondendi*, the right to give legal opinions as emperor. He also gave to several jurists the right to use his authority in their legal dealings. While the senate was given law-making powers in the early empire, many of its actions were dictated by the emperor. Although the emperor was not immediately involved with either legal administration or codification of the law, he was the final court of appeal for those of the senatorial class and for provincial legal matters. Eventually the emperor became the only source of law, as the following ancient adages made plain: "the emperor's will is as good as a statute" and "the emperor is not bound by statutes." Despite the authority of law resting with the emperor the jurists were active during the principate, at least until Diocletian. Their writings are one of the reasons that the period of the principate is called the classical period of Roman law. The most significant work from this period is that of the jurist Gaius, whose

Institutes (c. A.D. 161) came to serve as the model for Justinian's *Digest* (A.D. 533), the chief source of our knowledge of Roman law.

3.2. Impact of Imperial Roman Law on Society. One of the developments in the legal process of the principate was the continuation of what had begun in 149 B.C. with the establishment of standing courts specializing in different types of offenses. Whereas previously the people had been directly involved in deciding legal cases, increasingly legal decision making was in the hands of the privileged, the juries in the standing courts being largely made up of members of the senate and other privileged orders. Furthermore, the principle of inequality became more firmly entrenched, with differentiation in ranks and status making for different juridical privileges.

3.3. Social Significance of Legal Knowledge. In retrospect we recognize that Rome's great legacy is its legal system, preserved for us by Justinian. Rome's legacy rests on its deep and abiding interest in the law. Legal interpretation was one of the few acceptable pastimes for the rich, and excellence in legal knowledge increased one's social stature. As Edward Gibbon put so well in his chapter on Roman law: "arms, eloquence, and the study of civil law, promoted a citizen to the honours of the Roman state" (*Survey of the Roman, or Civil Law; An Extract from Gibbon's History of the Decline and Fall of the Roman Empire* [Littleton, CO: Rothman, 1996] 44).

Moreover, the social significance attached to knowledge of the law rested on the tradition that the original interpreters of the law had been the pontiffs and also on the high cultural value placed on law throughout the ancient Mediterranean world. The Roman playwright Plautus (second century B.C.) writes about how parents ambitious for their children spare no pains or expense in giving "lots of schooling: arts and letters, legal lore to build his brain" (Plautus *Mos-tell.* 125; trans. E. Segal). In another play he speaks of the duty of appearing in court on behalf of another (Plautus *Cas.* 563). By the time of Cicero we have evidence that the study of law is widely regarded as the most important study for the state's leaders.

Furthermore, the patron-client system meant that a patron needed knowledge of the law in order to manage matters regarding his clients. Dionysius of Halicarnassus (born c. 20 B.C.) put it this way: "it was the duty of the patricians to

explain to their clients the laws, of which they were ignorant; . . . doing everything for them that fathers do for their sons with regard both to money and the contracts that related to money; to bring suit on behalf of their clients when they were wronged" (Dionysius of Halicarnassus *Ant. Rom.* 11.10; LCL, trans. E. Carey).

3.4. Cultural Regard for Law. The Romans did not place law in a preeminent position in their society only because of social and practical considerations. They thought of the rule of law as synonymous with a state of harmony. Some, like the poet Ovid (43 B.C.-A.D. 17/18), wrote of a primitive golden age when people obeyed the law naturally: "Golden was that first age which unconstrained, With heart and soul, obedient to no law, Gave honour to good faith and righteousness" (Ovid *Met.* 1.90; trans. A. D. Melville). Others, like the Stoic Seneca (55 B.C.-c. A.D. 37), identified law with reason or nature and wrote that "nature produced us related to one another, since she created us from the same source and to the same end. . . . She established fairness and justice" (Seneca *Ep. Mor.* 95.52). The purpose of human life is to learn and conform to these "laws of life" (Seneca *Ep. Mor.* 57).

4. Greek Reflection on Law.

4.1. The Poets. High regard for law was found not only among the Roman people. The ancient Greek poet Hesiod, in his *Works and Days*, writes: "for this usage [*nomos*] did the son of Cronus grant to people: fishes and land animals and winged birds eat each other because *dikē* [law] is not in them. But to people he gave *dikē*, which is by much the best thing" (276-80; trans. D. W. Tandy and W. C. Neale). Demosthenes (384-322 B.C.) is reputed to have addressed a jury of Athenians with these words:

The whole life of men, Athenians, whether they dwell in a large state or a small one, is governed by nature and by the laws. Of these, nature is something irregular and incalculable, and peculiar to each individual; but the laws are something universal, definite, and the same for all. . . . Laws desire what is just and honourable and salutary; they seek for it, and when they find it, they set it forth as a general commandment, equal and identical for all. . . . Every law is an invention and gift of the gods, a tenet of wise men, a corrective of errors voluntary and involuntary, and a general covenant of the

whole State, in accordance with which all men in that State ought to regulate their lives. (Demosthenes *Arist.* 1.15-16; LCL, trans. J. H. Vince)

The rule of law was often identified with the civilized life. One of the greatest fears of an ancient Greek was of being exiled from his city and its laws, for then one's life was little better than that of an animal. In Euripides' play *Electra* Orestes asks who can be more wretched than a fugitive who cannot call upon his city's laws (lines 294 and 1194).

4.2. *Plato*. Both *Plato and *Aristotle devoted themselves to the study of law and its significance. Neither thought of the philosophical task as including involvement in the details of law, but both considered thinking about law essential to reflecting on the good human life. In the *Crito*, which discusses the question of whether the innocent Socrates should submit to his city's laws and be executed or escape, Plato examines the significance of a city's laws. Socrates expresses the view that since he owes his existence to laws such as those that protect marriage and the procreation of children, and his development to laws that have provided for his *education, he owes the city his obedience to the laws. The laws are not to be disobeyed, even if one believes oneself wrongly accused by them.

In the *Republic* Plato attempts to formulate a definition of justice. Plato understands there to be an inseparable relationship between the state and the individual who is a member of the state. Justice stems from and shapes the individual's soul in relation to how it is embodied and enacted in the community in which the individual lives. And so Plato seeks to determine the best relation between different members or classes in the state so as to find the more harmonious balance.

In the *Laws* Plato applies his idea that a state reflects the composition of its individuals' souls just as its individuals' souls are shaped by the state. He prescribes that laws should include an explanatory preamble explaining the reasons for their enactment (Plato *Leg.* 722D-723B), for since there is an organic relationship between the health of the individual and the health of the state it is equally important that the community member understand and willingly obey the law as it is that the law exist. Plato sought to help individuals be just, that is, to find a way for reason to control the passions so that the common good was the desire of each individual. Related

to this, Plato's goal was to construct a system of law that would be so well suited and effective for its society that eventually the laws themselves would become obsolete. Plato hoped for a time when the laws would have become self-evident to those trained in them (Plato *Leg.* 798A, B).

4.3. *Aristotle*. Aristotle's interest in law extended from the scientific collection and categorizing of different legal constitutions (he is said to have collected 158 different constitutions as preparation for his *Politics*, of which only the Constitution of Athens survives), to philosophical thinking about the nature and function of law. In the *Rhetoric* Aristotle, in distinction from Plato, invests forensic *rhetoric with a certain dignity. Aristotle's *Ethics* are an attempt to understand the way that citizens can be prepared for goodness, through self-understanding, education and the laws. For Aristotle well-devised laws encourage and direct a virtuous and well-ordered life in community. In Aristotle's view ethics and politics are intimately related. His *Politics* is necessarily preceded by his *Ethics* because moral education is essential for the proper working of the state, and laws are a critical factor in training in virtue (Aristotle *Eth. Nic.* 1102a).

4.4. *Stoicism*. *Stoicism, which may have affected Roman law more than any other trend in Greek philosophy, considered that there was a universal law of nature that human reason could appropriate and that formed the basis of all good laws. The Roman *ius gentium* reflected this conception. Chrysippus is said to have written in *De Iure et Lege*, "Law is king of all things human and divine. Law must preside over what is honourable and base . . . and thus be the standard of what is just and unjust" (Chrysippus *Stoicorum Veterum Fragmenta*, 1. Arnim, 9.914). As Cicero, whose work evidences many Stoic leanings, wrote: "True law is right reason in agreement with nature; it is of universal application, unchanging and everlasting" (Cicero *De Rep.* 3.22; LCL, trans. C. W. Keyes).

Greek reflections on law may not have had a direct impact on Roman jurisprudence, but they nourished the high regard for law that was one of the features of the Greco-Roman culture. The writers of the NT were undoubtedly influenced by both the Roman legal system and the Greco-Roman attitude toward law.

LEGAL TEXTS AT QUMRAN

The centrality of Jewish law (termed by the rabbis *halakah*) at *Qumran, among those sectarians usually identified by scholars with the *Essenes, is evident from the legal materials in both major, well-preserved scrolls and in texts which survive in only fragmentary condition. Even the phylacteries and mezuzot and the biblical scrolls reveal much information, mainly on the scribal Halakah of the times.

1. Corpus of Legal Texts
2. Contents of the Legal Texts

1. Corpus of Legal Texts.

A wide variety of legal texts or texts containing Jewish legal rulings are found in the Qumran corpus. Best known are the so-called Serek, or "Rule," scrolls: IQS, IQSa and IQSb. These scrolls more or less systematically provide a constitution whereby the community conducted itself. The *Damascus Document*, the *War Scroll*, the *Halakic Letter* (or 4QMMT), and the *Temple Scroll*

are among the most important documents. However, there are many more.

2. Contents of the Legal Texts.

2.1. Rule of the Community (IQS). Also known as the *Manual of Discipline* or *Serekh ha-Yahad*, the *Rule of the Community was one of the first Qumran scrolls to be discovered and dates from the beginning of the first century B.C. In addition, it exists in fragmentary copies, ten in Cave 4 (4Q255-264) and two in Cave 5 (5Q11), which testify to its centrality to the life of the Qumran sectarians. The text sets out the rules for entry into the community, regulations for sectarian organization and a penal code. The penal code prescribes punishment by a banishment from pure liquid or solid food of the community, tantamount to exclusion from the communal meals, a reduction of the food ration for specified periods and even an expulsion from the sect. The initiation rites of the *Rule of the Community* reveal information on the purity system of the sectarians as well as about their understanding of the theology of Jewish law. The community in the wilderness was devoted to the study and observance of the law as a means of expiation for the land and the attainment of purity and perfection in the pre-messianic age.

2.2. Rule of the Congregation (IQSa or IQ28a). Also known as the *Messianic Rule* or *Serek ha-'Edah*, the *Rule of the Congregation was appended to the *Rule of the Community*. A *messianic document, it sets out a kind of eschatological Halakah describing the ritual purity that must be maintained due to the presence of *angels among the sectarians. At the end of days, the Zadokite priests and their families will gather to read the law at a covenant-renewal ceremony. The text also specifies the ages at which the sectarian attains the right to marry, participate in the military, become an official or leader, and retire. Special roles are assigned to the Levites. The council of the community is appointed to legislate and declare war, but some members of the sect are disqualified from certain duties because they are old, infirm or impure, again emphasizing the strict *purity of the camp. There follows the description of the communal *banquet which, while held in the present, pre-messianic age, is also the enactment of the messianic meal. The priest blesses the bread and wine and receives the first portion, and the

Messiah of Israel takes his portion and distributes the rest among the sectarians according to their rank.

2.3. The War of the Sons of Light Against the Sons of Darkness or War Scroll (IQM). This is one of the longest preserved sectarian scrolls at approximately twenty columns long. In addition to its version in Cave 1, there are also fragments from Cave 4 (4Q491–496) and other related texts describing a final war, such as 4Q285 and 4Q497. However, all of these are certainly different manuscripts copied at different times and slightly different in content; some of them may even be sources of the **War Scroll*. IQM contains an entire version of the Deuteronomic laws of war as understood and adapted by the sectarians. Predicated upon a forty-year battle between the Sons of Light/Israel and the Sons of Darkness/nations of the world, the victory of Israel frees them from the domination of their traditional enemies, Edom, Ammon, Moab, Philistia and the "Kittim," used to refer to Egypt, Syria or Rome. While the battles are more idealistic than realistic, they contain much information about military tactics and weaponry of the era. In addition, the *War Scroll* alludes to sacrificial law and rules of ritual impurity. It shares some of the organizational aspects of the military units and the ages of service for officials and leaders with the *Rule of the Congregation*.

2.4. Damascus Document. Cave 4 at Qumran yielded eight manuscripts of the **Damascus Document* (also known as the *Zadokite Fragments* or CD) which had been found in two partial manuscripts in the Cairo genizah long before the discovery of their counterparts in the caves of Qumran. Cave 5 held one fragmentary text (5Q12), and Cave 6 added five fragments of CD (6Q15). The legal sections of CD describe an entire system of Jewish law, including *priests and their functions such as their diagnosis of skin diseases, laws of the harvest such as gleaning and tithes, impurity of *idolatry and corpses, rules for the proper observance of the *sabbath, oaths and vows, *marriage, judicial procedures, and the purity of the *temple and the temple city. Some of the laws are similar to those of the rabbinic oral law, such as beginning the sabbath some time before sunset, and others disagree with the rabbinic viewpoint such as the statement that the ashes of the red cow cannot be prepared by a minor, a practice which according to tannaitic sources (*m. Parah* 3:2) was customary

in the Second Temple. The laws are mostly stated without scriptural references, and often they are found under rubrics announcing their subject matter, making this one of the first post-biblical Jewish legal codes organized by topic. The communal life described here appears to be of families observing the Torah. This text includes a penal code very similar to that in the *Rule of the Community*.

2.5. Miqsat Ma'asê ha-Torah (4QMMT). Literally rendered "Some Precepts of the Torah," and also known as the *Halakic Letter*, 4QMMT purports to be a letter sent from the leaders of the sectarian community to the leaders of the Jerusalem establishment (*see* Miqsat Ma'asey ha-Torah [4QMMT]). It reports some twenty disputes regarding sacrificial and purification laws in a sectarian context, exhorting the leaders in Jerusalem to follow sectarian law. In a number of significant cases, tannaitic sources allow us to identify the sectarian view with that of the *Sadducees and the view of the opponents of the sect with that of the *Pharisees. Dating from the late *Hasmonean to the early *Herodian period (second half of the first century B.C.), the six manuscripts of this document may represent the foundation document of the Qumran sect or may have been written later to justify the sect's removal from Jerusalem. The arguments presented here show how the sect differed from the Jerusalem establishment so that they refused to participate in the Jerusalem temple. For example, the sect disallowed a priest from officiating in the temple if he had just completed a purification ritual, and the sun had not yet set on his last day of purification. The pharisaic-rabbinic tradition would have allowed a priest still awaiting sunset on his last day of purification to perform the ritual. The Sadducees and those who followed their halakic tradition disagreed. 4QMMT shows the importance of matters of Jewish law as sources of schism within Judaism in Second Temple times.

2.6. Temple Scroll (11Q19–21; 4Q524, 4Q365a). Caves 11 and 4 yielded manuscripts of the *Temple Scroll*. 11Q19 is the longest scroll, running about 26 feet (8 meters). A rewriting of the Torah designed to put forward the author's views on Jewish law, the scroll is written as if it were God's word, changing the third person of the biblical text into the first person. The *Temple Scroll* has four main themes: the construction of the temple, its courtyards, altar, etc.; the cycle of

*festivals; the *purity laws for the temple and the temple city; and a rewriting of the diverse laws contained in Deuteronomy 12–23, emphasizing the law of the king (Deut 17:14–20). Besides the Torah, the author/redactor used several other sources such as a festival calendar including *festivals not mentioned in the Bible (new wheat, wine, oil and the wood offering). Other sources contain laws that were in use in the group to which the author/redactor belonged. The author hoped that the temple would be rebuilt according to his specifications. The interest in *sacrificial law, the architecture of the temple and temple rituals, and the desire to see the monarch subordinated to the priesthood would seem to point to a priestly origin. The text also has a decidedly anti-Hasmonean polemic, a distinct Halakah of its own, and a unique vocabulary, although some of its legal prescriptions agree with Qumran sectarian texts and Sadducean traditions. The best explanation for this phenomenon is to posit that the *Temple Scroll*, like 4QMMT, was compiled by priestly circles early in the history of the Qumran sect, before its removal from Jerusalem.

2.7. *4QMiscellaneous Rules*. The initial editors of 4QMiscellaneous Rules (4Q265, or *Serek-Damascus*) assumed that it was a combination of the *Serek ha-Yahad* (*Rule of the Community*) and *Damascus Document*. While the text might be a composite based on these documents, it might also be an independent redaction made up of the building blocks (*serakim*) of these larger texts. The manuscript is in Late Herodian script and should be dated to the first half of the first century A.D. The text prohibits men below twenty or women of any age from eating of the paschal sacrifice, contrary to the actual practice of Second Temple Judaism but perhaps in accord with the wider Sadducean trend in Halakah (see *Sacrifice and Temple Service*). The text also describes the entry process for joining the sect, parallel to the version in the *Rule of the Community*. Several sabbath prohibitions parallel the sabbath code preserved in both the medieval Cairo genizah version of the *Damascus Document* and the Qumran manuscripts. Appended to this section is a prohibition on eating nonsacral meat in the vicinity of the temple, a regulation also found in the *Temple Scroll*. Like the *Rule of the Community*, 4Q265 requires that there be a learned priest wherever there are ten sectarians and that a minimum of fifteen comprise the council of the

community. The final section is a statement of the laws of the parturient, the woman who has just given birth, following Leviticus 12:1–6 and *Jubilees* 3:9–14.

2.8. *Ordinances* (4Q159, 4Q513, 4Q514). Three manuscripts of *Ordinances* deal with assorted Halakoth. A sample of laws can be assembled from one manuscript: atonement rituals, the produce given to the poor, the donation of the half-shekel upon reaching the majority of twenty years of age, the prohibition of selling Israelite slaves to non-Jews, the court of appeals in capital cases, the prohibition of a man's wearing women's clothes and the case of the husband who claims that his bride was not a virgin. Some of the materials are more biblical in style while others are closer to the formulations common in sectarian texts.

2.9. *4QHalakha A* (4Q251). This text contains many prescriptions which overlap with laws known from the *Damascus Document*, *Miscellaneous Rules*, *Temple Scroll*, 4QMMT and Sadducean-type laws in the sectarian materials. The literary form of this text is close to that of *rewritten Bible, in many ways similar to some portions of the *Temple Scroll*. After some sabbath laws, there is a reference to what seems to be public scriptural reading on the sabbath. Most of the preserved text is a rewriting of various laws in Exodus 21–22. Also discussed here are laws of firstfruits and new grain, following a scheme similar to that in the Festival Calendar of the *Temple Scroll*. Other laws discuss the selling of ancestral lands, the giving of fourth-year produce to priests (as opposed to eating it in Jerusalem as the Pharisees required), a practice also mandated in the *Temple Scroll* and 4QMMT. The text also prohibits eating an animal that did not live for seven days and the slaughter of pregnant animals, prohibitions shared with the *Temple Scroll* and 4QMMT but permitted by pharisaic-rabbinic Halakah. The text also includes a list of forbidden consanguineous marriages similar to that in the *Temple Scroll*. Among the laws here are a prohibition of intermarriage with non-Jews and of a priest giving his daughter in marriage to a nonpriest.

2.10. *Purification Rules* (*Tohorot*) A (4Q274). This is a fragmentary text dealing with the laws of impurity resulting from the skin disease *šāra'at*, usually mistranslated as "leprosy." As in the *Temple Scroll*, this text provides for special places for the quarantine of those with this dis-

ease who must stay away from the pure food. Such people are forbidden to come in contact even with those already impure, as they would still require ritual cleansing from such contact. This indicates that impurity can be contracted in successively stronger layers, so that those with lesser impurity may not come in contact with those with this skin disease. The requirement of separation, even for the impure, indicates a consciousness also of the contagious nature of such diseases. Similarly a woman with a nonmenstrual discharge of blood may not touch a gonorrhoeic or anything which he touched. If she does, she must undergo purification, even if she remains in her own original state of impurity. The text goes into several examples to make this general point. Other issues discussed in this text, also found in the *Temple Scroll*, are the method of purification and the impurity of semen and reptiles.

2.11. Purification Rules. Tohorot B^a (4Q276) and B^b (4Q277) describe the ritual of the red cow as the means of purification from impurity of the dead according to Numbers 19. 4Q276 seems to refer at the beginning to the high priest who ministers at this ritual. The text describes the slaughter of the animal and the sprinkling of its blood, as well as other aspects of the ritual as prescribed in the Torah. 4Q277 mentions the fact that those who perform the ritual of the red cow are rendered impure as a result, a paradox mentioned already in the Bible. Also hinted at here is the requirement, specified also in 4QMMT, that the priest who officiates must be totally pure himself. Further, the text lists a number of ways in which the impurity of the dead can be passed from one person to another.

4Q275 (Tohorot B), as presently preserved, has no specific legal content, but does refer to the inspector (*mehaqger*) and to the cursing of someone, perhaps one who is being expelled from the community. Expulsion as a punishment is mentioned in the *Rule of the Community* and *Damascus Document*. 4QTohorot C (4Q278) is extremely fragmentary and relates to impurity that can be transferred by contact.

2.12. Harvesting, Leqet (4Q284a). This text, although extremely fragmentary, apparently deals with the requirements for gleaning. According to Leviticus 19:9-10 and 23:22, grain left in the field may not be collected after the harvest is completed but must be left for the poor. The Bi-

ble supplies no specific requirements for the gleaners, but this text requires that they be ritually pure. Little more can be derived from this text, but it no doubt included specifics of this requirement and may have included other agricultural laws.

2.13. Rebukes by the Overseer (4Q477). This text clearly stems from the Qumran sectarian community and records actual dockets reflecting sectarian legal proceedings against those who violated the sect's prescriptions. According to sectarian law as detailed in the *Damascus Document*, it was required to perform reproof of those who violated the law, in front of the overseer (*mehaqger*) and in front of witnesses. Only if this procedure had taken place could a sectarian be punished for a later infraction of the same law. This fragmentary text lists by name specific individuals who had been rebuked as well as their transgressions.

The nature of the law in Qumran documents was revealed in greater and greater detail as more and more pieces of the Dead Sea Scrolls puzzle were put into place. These scroll materials all help to clarify legal issues which arise in tannaitic texts and rabbinic Judaism (see Rabbis), such as the historical development of Halakah, the theological underpinnings of the law according to the different religious sects of the time, the later formulation of midrash and Mishnah (see Rabbinic Literature: Midrashim; Rabbinic Literature: Mishnah), the effect of the cataclysm of A.D. 70 on the history of Judaism, and the role of purity in Second Temple Judaism.

LETTERS, GRECO-ROMAN

The popularity of the letter form increased significantly during the *Hellenistic period due to a variety of factors: the increase in scribal learning and influence, the growing availability and relatively inexpensive cost of papyrus as a writing material, the need to monitor accurately expansions in the area of trade and commerce and the desire of political leaders to spread imperial propaganda. The Roman period witnessed an even greater rise in this literary form as the letter increasingly became a common means of communication among people of all stations of life, thereby causing one modern scholar to note that "letter writing was almost a disease" (Brooke, 17). The popularity of the letter form during the Greco-Roman period is also evident in the fact that twenty of the twenty-seven documents found in the NT purport to be letters and two of the remaining documents (Acts, Apocalypse of John) contain letters within them.

1. Epistolary Types
2. Epistolary Conventions
3. Summary

1. Epistolary Types.

The classification of Greco-Roman letters is a difficult matter, since letters can be categorized according to several criteria that often overlap: writing materials (papyri or parchment), character (private, official or public), style of writing (plain, middle or grand), purpose (e.g., commendatory, reproachful, consoling, apologetic) or agreement with one of the three types of *rhetoric (judicial, deliberative or epideictic). The few ancient writers who address this issue of classification fail to provide any real help, as their discussions contain no agreement of categories (see Epistolary Theory). A similar lack of consensus

exists among modern scholars of ancient epistolography. Although no typology is completely free from criticism, it seems best to classify Greco-Roman letters according to three broad categories: private letters, official letters and literary letters.

1.1. Private Letters. Private or documentary letters (i.e., nonliterary writings, or correspondence not intended for publication) constitute the papyrus letters, at least a few thousand in number, that have been preserved in the dry Egyptian climate and that provide the primary source of our knowledge of the common letter tradition in the ancient world. The designation *private* needs to be understood in an extensive fashion so that it includes all correspondence in the personal domain, whether it concerns business or family matters. Private letters are commonly divided into the following subcategories on the basis of subject matter: family letters, letters of petition, letters of introduction and business letters. Since these private or documentary letters are widely recognized as the most important of the three types for a comparative analysis with NT letters, one example of each of the four kinds of private letters is provided below. These letters also illustrate well many of the epistolary conventions discussed in the second half of this article.

1.1.1. Family Letters. Many private letters consist of correspondence between family members, here illustrated by P.Mich 490 (second century A.D.), a letter from a young Greco-Egyptian recruit to his mother:

Apollinarius to his mother, Taeslon, many greetings. Before anything else I wish that you are well, making obeisance on your behalf to all the gods. And when I found someone who was journeying to you from Cyrene, I thought it a necessity to inform you about my welfare; you must inform me at once, in turn, about your safety and that of my brothers. And now I am writing to you from Portus, for I have not yet gone up to Rome and been assigned. When I am assigned and know where I will be, I will tell you immediately; and, for your part, do not hesitate to write about your welfare and that of my brothers. If you do not find someone coming to me, write to Socrates and he will transmit it to me. I greet my brothers much, and Apollinarius and his children, and Kalalas and his children, and all your

friends. Asklepiades greets you. I pray that you are well. I arrived in Portus on Pachon 25.

[2d hand] Know that I have been assigned to Misenus, for I found out later [i.e., after the letter had been written].

1.1.2. Letters of Petition. A second type of private letter that frequently occurs is the letter of petition. In this example from P.enteux 32 (200 B.C.), a woman appeals to the king for justice in a personal matter in which she feels wronged:

To King Ptolemy, greetings from Philista, daughter of Lysis, resident in Trikomia. I am wronged by Petechon. For as I was bathing in the baths of the aforesaid village, on Tybi 7 of the year 1, and had stepped out to soap myself, he, being bathman in the women's rotunda and having brought in the jugs of hot water, emptied one over me and scalded my belly and my left thigh down to the knee, so that my life was in danger. On finding him, I gave him into the custody of Nechthosiris, the chief policeman of the village, in the presence of Simon the epistates. I appeal to you therefore, O king, if it pleases you, as a suppliant who has sought your protection, not to suffer me, who am a working woman, to be treated so lawlessly, but to order Diophanes the strategos to instruct Simon the epistates and Nechthosiris the policeman to bring Petechon before him that Diophanes may inquire into the case, hoping that, having sought your protection, O king, the common benefactor, I may obtain justice. Farewell.

1.1.3. Letters of Introduction. The prevalence of the *patronage system and the reciprocity ethic (favours bestowed incurred obligation) ensured that *commendationes*, or letters of recommendation, played an important role in society, as illustrated here by P.Oxy. 292 (c. A.D. 25):

Theon to the most honored Tyrannos, many greetings. Herakledies, who carries this letter to you, is my brother. Therefore, I appeal to you with all my power to regard him as recommended. I have also asked your brother Hermias through correspondence to talk with you about him. You will grant the greatest favor to me if he receives your attention. Above all I pray that you may have good health and prosperity. Farewell.

1.1.4. Business Letters. Rapid growth in trade and commerce contributed to the popularity of

the business letter, an epistolary type illustrated by P.Oxy. 264 (A.D. 54), which deals with the sale of a loom:

Ammonius, son of Ammonius, to Tryphon, son of Dionysius: Greetings. I agree that I have sold to you the weaver's loom belonging to me, measuring three weavers' cubits less two palms, and containing two rollers and two beams, and I acknowledge the receipt from you through the bank of Sarapion, son of Lochus, near the Serapeum at Oxyrhynchus, of the price of it agreed upon between us, namely, twenty silver drachmae of the Imperial and Ptolemaic coinage; and that I will guarantee to you the sale with every guarantee, under penalty of payment to you of the price which I have received from you increased by half its amount, and of the damages. This note of hand is valid. The fourteenth year of Tiberius Claudius Caesar Augustus Germanicus Imperator, the fifteenth of the month Caesareus.

[2d hand] I, Ammonius, son of Ammonius, have sold the loom, and have received the price of twenty drachmae of silver and will guarantee the sale as aforesaid. I, Heraclides, son of Dionysius, wrote for him as he was illiterate.

1.2. Official Letters. Official letters, the second of the three broad classes of letters, include correspondence written for the conduct of state business and sent between kings, government officials, military officers or ambassadors in the exercise of their duties. The traditional view is that official letters developed out of private letters. There is some evidence, however, in support of the opposite opinion, namely, that official letters were the generating source for the other classes of letters, as diplomatic correspondence was soon adapted to meet personal and other more broadly literary needs.

During the Hellenistic period, official letters were typically written by royal secretaries who not only drafted such letters but also kept copies of all royal correspondence. Although some of these official letters were initiated by the king, more often they were written in response to an oral or a written request from a city or foreign state. The king would prepare a rough draft of his reply, the royal secretaries would put the letter in its finished form, and finally the king would then add the closing farewell wish in his own hand. Many of these official letters were in-

scribed on stone after delivery and placed in prominent places for public viewing. Cities regularly published royal letters in this way, both out of respect for the kings who had written them and to guarantee for themselves whatever privileges such letters contained.

In the later Roman period official letters continued to be used widely. Imperial letters (*epistulae principum*), along with epistolary responses to the queries of officials (*rescripta*), were the primary means by which the emperor conveyed his will and influenced public policy and opinion. Senatorial decrees and other official decisions were typically translated into Greek, a measure taken for no other language group under Roman authority, and published in epistolary form.

1.3. Literary Letters. Literary letters encompass a wide variety of epistolary works that were preserved and transmitted through literary channels. This is a bit of a catch-all category that includes a variety of letters that do not belong to the more clearly defined categories of private and official letters. Yet literary letters share in common with each other their obvious literary character and the intention that such correspondence be copied and distributed to a wider audience. One example of this epistolary type are letter essays, treatises that make use of epistolary conventions, especially in their openings and closings (e.g., writings by Seneca, Dionysius of Halicarnassus, Plutarch). There are also philosophical letters written by moral philosophers who increasingly made use of the letter form as a means for instruction (e.g., Plato, Aristotle, Epicurus). Literary letters also include novelistic letters—fictional, often pseudepigraphical documents cast in an epistolary format that present interesting stories and anecdotes about important historical figures. Some of these novelistic letters were written as part of school exercises in the training of philosophy and rhetoric.

2. Epistolary Conventions.

Despite the diversity of epistolary types, one of the striking features of Greco-Roman letters is how similar and formulaic they are, both in their overall structure (letter opening, letter body, letter closing) and in their constituent epistolary conventions. Many of these stereotyped formulas reappear in either an identical or an adapted form in NT letters.

2.1. Letter Opening. Whereas the letter body contains the specific, situational occasion of the letter (which could be quite diverse), the letter opening, along with the letter closing, is primarily concerned with establishing or enhancing personal contact with the letter recipient (what Koskenniemi called "philophronesis," the expression of friendly relationship). Given this rather uniform purpose of the letter opening, it is not surprising that this section of the letter became stereotyped in nature. Three epistolary conventions found in the letter opening include the prescript, the health wish and sometimes the thanksgiving formula.

2.1.1. Prescript. All letters open with the prescript, which consists of three elements: the sender, the recipient and the salutation. The resulting formula is almost always: "X [nominative] to Y [dative], greetings [*chairein*]." An exception to this pattern is found in letters of petition where, because the document is written to a superior, the name of the recipient is given before that of the sender. All three elements of the prescript are frequently expanded: the sender and recipient through the addition of titles or terms of relationship, endearment and honor; the salutation by adding adverbs emphasizing degree ("warmest greetings") or by combining it with the health wish ("greetings and good health").

2.1.2. Health Wish. The health wish (*formula valetudinis*) expresses concern about the welfare of the letter recipient, with an assurance of the letter writer's own well-being often included as well. Although the health wish exhibits variety, its basic form in the letter opening is "If you are well, it would be good. I too am well."

2.1.3. Thanksgiving Formula. A third epistolary convention sometimes found in the letter opening is the thanksgiving formula. This formula is not nearly as fixed as are the other epistolary conventions found in the letter opening, but it involves some mention of thanksgiving, worship (*proskynēma*) or prayer to the gods, usually for good health or safe travel.

2.2. Letter Body. The letter body deals with the specific historical context and purpose(s) of the letter. Since these settings and purposes can be diverse, the letter body is understandably much less stereotyped than are the opening and closing sections. Nevertheless a number of epistolary formulas can be identified in the body of ancient letters. Space restraints permit the men-

tion of only a few of these body formulas here, with an emphasis on those stereotypical expressions that also appear in NT letters.

2.2.1. Disclosure Formula. The disclosure formula makes use of a verb of knowing and derives its names from the fact that the writer wishes to make known to the recipient some information. Although this formula exhibits some variety, its most common form is: "I want you to know that . . ." This specific form of the disclosure formula frequently introduces the letter body (see Rom 1:13; 2 Cor 1:8; Gal 1:11; Phil 1:12; 1 Thess 2:1).

2.2.2. Appeal Formula. The appeal formula, common in both private and official letters, typically consists of four elements: the verb *parakaleō* ("I appeal") or its synonyms, the person(s) addressed, a prepositional phrase indicating the authority by which the appeal is made (this element is found in official letters only) and the content of the appeal. This formula was used to express a more friendly, less heavy-handed tone than would be conveyed through an explicit command (see Rom 12:1; 15:30; 1 Cor 1:10; 1 Thess 4:1; Philem 9-10).

2.2.3. Confidence Formula. The confidence formula typically consists of four elements: the emphatic use of the first person pronoun ("I"), a verb of confidence ("I am confident"), the reason(s) for the writer's confidence and the course of action that the writer is confident the recipient will take. This formula functions to strengthen the letter's request or admonition by creating a sense of obligation through praise: the recipient feels some indirect pressure to live up to the confidence that the sender has in him or her (see Rom 15:14; Gal 5:10; 2 Thess 3:4; Philem 21).

2.2.4. Peri de Formula. A simple formula frequently used as a topic marker—a shorthand way of introducing the next subject of discussion—is *peri de* ("now about/concerning"), normally pulled to the front of the sentence for emphasis. Although this formula often signals a reply to an issue raised in a preceding letter, it is not restricted to this use (see 1 Cor 7:1, 25; 8:1; 12:1; 16:1, 12; 1 Thess 4:9, 13; 5:1).

2.2.5. Ta de loipa Formula. Another topic-changing formula is *ta de loipa* ("finally/for the rest") and its variations. This concluding transitional formula often introduces the last item or subject matter to be treated in the letter body (see 2 Cor 13:11; Gal 6:17; Phil 4:8; 1

Thess 4:1; 2 Thess 3:1).

2.3. Letter Closing. The letter closing, like the opening section of a letter, is primarily concerned with reestablishing the sender's relationship with the recipient, and this function has similarly resulted in closings that are stereotyped. A number of epistolary conventions belong to the closings of ancient letters: a farewell wish, a health wish, secondary greetings, an autograph and an illiteracy formula. Yet the instances in which all or even most of these occur simultaneously are rare.

2.3.1. Farewell Wish. The farewell wish served to signal the definitive end of a letter, somewhat akin to our modern expressions "sincerely" or "yours truly." This formula occurs in two basic forms, *errāssō* or *eutychei*, which, despite literally meaning "Be strong!" and "Prosper!" can be translated as "farewell" because of their function in bringing a letter to a close. These two basic forms of the farewell wish were often subject to the expansion and elaboration that also takes place in the prescript.

2.3.2. Health Wish. Despite its presence in the letter opening, the health wish is frequently repeated in the letter closing. The basic form of this formula ("Take care of yourself in order that you may be healthy") in the letter closing differs slightly from its use in the letter opening in that it makes no reference to the writer's own health and also exhibits much less variety than does its counterpart in the letter opening.

2.3.3. Secondary Greetings. In addition to the salutation or primary greeting in the letter opening (*chairein*), the letter closing often contains secondary greetings, normally expressed by the *aspazesthai* ("greeting") formula. The sender either greets someone directly (first-person greetings), exhorts the recipient to greet someone else on his or her behalf (second-person greetings) or becomes an agent through whom a third party greets the recipient or even some fourth party (third-person greetings).

2.3.4. Autograph. In letters that were written with the help of a secretary or amanuensis (a widespread practice in that day), it was common for the letter closing to contain an autograph—some final remarks written by the sender in his or her own hand. Since this change of script would have been obvious to the reader of the letter, there was no reason to state explicitly that the author was now writing rather than the secretary. We do not find among the ancient letters,

therefore, an autograph formula or fixed phrase typically given to indicate that the author has begun writing. The extent of an autograph section varies greatly, normally consisting just of the farewell wish but at times including other items such as greetings, a date or postscriptive remarks.

2.3.5. Illiteracy Formula. Many people did not possess the ability to write and so, despite the assistance of a secretary, were unable to close the letter in their own hand. In such situations, a secretary would often include an illiteracy formula—a brief note explaining that a secretary had written the correspondence because of the illiteracy of the person who commissioned the letter (“X wrote for Y because he did not know how to write”). This formula does not occur in family letters but appears to have been a requirement of business and official letters.

3. Summary.

The epistolary handbooks, the rhetorical writings and the educational curriculum reveal a genuine interest in epistolary theory—the ideal characteristics and style of a letter. Nevertheless, the epistolary theorists and rhetoricians did not appear to have much impact on the practice of writing letters and very little about this subject can be learned from the training received in the schools. A more accurate understanding of letter writing, therefore, requires an analysis of the several thousand actual letters from antiquity that have survived.

LITERACY AND BOOK CULTURE

In Greco-Roman antiquity generally literacy was narrowly limited and heavily concentrated in the aristocratic classes. Although the levels and extent of literacy may have varied somewhat with period and region, in no ancient society was there mass literacy. Book culture was similarly limited, being contingent not only on literacy but also on the cost and availability of hand-produced books.

1. Literacy
2. The Uses of Literacy
3. Literacy and Orality
4. Book Culture

1. Literacy.

Literacy in the ancient world is difficult to estimate, owing both to different definitions of literacy and to the incidental nature of available evidence. Literacy can be understood to mean anything from signature literacy (the ability to write one's name), to the capacity to puzzle out a brief and pointed message, to the functional literacy of craftsmen, to the developed skills of reading and comprehending lengthy literary texts. Granting varied types and gradations of literacy, if literacy is understood as the capacity to read with comprehension a text of average complexity, then it seems to have been possessed by relatively few. A further complication in estimating literacy in antiquity is the multilingual character of much of the Mediterranean world, especially in the *Hellenistic and *Roman periods. In many areas several languages were current (in Egypt, for example: Coptic, Greek and Latin), and literacy and its levels varied according to the language in question.

W. V. Harris, using a broad definition of literacy and drawing on evidence partly explicit, partly circumstantial and partly comparative, has concluded that over the whole period of classi-

cal antiquity the extent of literacy rarely exceeded 10 percent of the population. In the special circumstances of a few Hellenistic cities it may have approximated 20 to 30 percent, while in the western provinces of the *Roman Empire it may not have been as high as 5 to 10 percent. Such quantifications are necessarily tentative, but this estimate now commands broad assent. Even if the rate were twice as high, literacy would have characterized only a small minority, and it is beyond dispute that the ancient world knew nothing remotely like mass literacy. Apart from explicit evidence, literacy has historically been a function of social class and of *education, and any appreciable extent of literacy within a society requires institutions and incentives to foster it. These were largely lacking in ancient societies, which made no provisions for general public education and offered no strong or broad-based social and economic stimuli to the acquisition of literacy. Moreover, the means for acquiring literacy and the leisure to exercise it belonged only to some, and texts were not readily available or affordable to all.

Although literacy occurred principally within the aristocratic elite and among males of that class, it was not confined to them. There were literate *women of the aristocracy, but the extent of literacy among women was considerably less than among men at all social levels. Beyond the social elite, literacy must have been fairly common also among members of the retainer class who were in the service of the elite. Among the lower social echelons literacy was rare. Yet some *slaves were literate and often also could write, having been specifically trained for duties requiring those skills. Some technical professions had special uses for literacy: engineers, doctors, surveyors and magicians were frequently literate, as were some well-to-do tradespersons. But there is evidence also that some artisans and craftspersons were literate, and even some farmers possessed low levels of literacy.

2. The Uses of Literacy.

The need of literacy, when it was not routinely gained through the education available to the small upper class, depended on its practical uses. Chief among these was the importance of writing and reading in the operations of government, especially in imperial and provincial administration (*see* Roman Administration). Of-

ficial correspondence, administrative record keeping and the public dissemination of decrees. *laws and regulations were essential tasks. Relatedly, there was apparently an above-average rate of literacy in the Roman army (*see* Roman Military), where it had obvious uses in the communication of orders and in maintaining rosters and records, as well as probably counting in recruitment and promotion. The sheer expanse of the empire placed a premium on writing and reading for long-distance communication, not only in trade but also between family members and friends at far removes (*see* Letters, Greco-Roman).

But locally the general population had little or no need of literacy to negotiate the ordinary business of life. When such skills were required (e.g., in writing contracts or business letters, recording *marriages or *divorces, drawing wills) the assistance of a professional scribe was accessible almost anywhere, and the great number of documentary papyri attest to the regularity of such recourse. In addition, but almost entirely among the elite, literacy was essential to the pursuit of the arts and higher learning. The cultivation and appreciation of history, *poetry, *philosophy, philology and other forms of literature were by definition dependent upon literate skills and also presupposed a leisure that could be devoted to them. Literacy also had a role to play in *religion, though in Greek and Roman religions generally writing played only a small role and literate skills were important principally for priests or hierarchs who had use of calendars, ritual manuals, temple archives or oracular records.

In addition to its diverse pragmatic uses, literacy possessed structural and symbolic values. Because of its restricted accessibility, what was written easily acquired significance in excess of content alone: it had features of the esoteric, of uncommon stability and permanence and of authority. Hence literacy and texts also furnished a medium for the construction, configuration and exercise of power. On one side this can be understood as a power over texts, exercised by controlling access to texts and regulating their use but also by maintaining an exegetical hegemony over their meaning and application. On the other side power was exercised through texts in various ways, for example, through the impressive prominence of monumental inscriptions, the development of intricate bureaucracies and

their records, the emergence of scribal classes, the formation of canons of texts or the creation of vernacular literatures.

3. Literacy and Orality.

The culture of the ancient Mediterranean was a traditionally oral culture into which literacy had made a strong advance, and although literacy was mostly concentrated in the social and political elite, society at large was characterized by a lively synergism of the oral and the written. Modern theoretical models of a fundamental disjunction or opposition between the oral and literate modes (whether social, linguistic, cognitive or hermeneutical) fail to illuminate either their manifest coexistence or their fluid interaction in the Greco-Roman period and offer no adequate account of the ways in which the literate participated in oral culture or the illiterate participated in literate culture. In the ancient world writing and reading were closely related to the spoken word: texts were commonly inscribed from dictation and, once inscribed, were normally read aloud, so that at the level of composition and use the oral and the written were interpenetrating. Similarly, the illiterate and semilliterate found access to the world of literacy not only through public readings of poetry and prose, official inscriptions, public oratory and dramatic performances but also through quotidian familiarity with the documentation entailed by commercial and legal transactions.

Form criticism strongly promoted the idea that early Christianity was a nonliterate folk culture that cultivated oral tradition and had little or no investment in literacy or texts. Without denying the currency of oral tradition, it is increasingly recognized that Christianity, which emerged from a textually oriented *Judaism and whose constituency comprised a rough cross-section of Greco-Roman society, was also early engaged in the use, interpretation and production of texts. Appeals to Jewish Scripture and the exegesis of Jewish texts appear to have been an aspect of Christian activity from the beginning. There was frequent epistolary communication with Christian communities by their founders or overseers and among the far-flung communities spawned by the Christian mission; and various pre-Gospel textual redactions of tradition (small collections of sayings, miracle stories, testimonia) furnished materials later employed in the composition of full-blown Gospels.

In respect of its interest in texts, as well as in other ways, early Christianity more closely resembled a scholastic movement or philosophical school than did other religious groups of the period. Christianity's concern with texts was practical and functional rather than literary in the high sense: texts served the needs of communication, teaching, evangelism, apologetics and worship. Not least in connection with worship a small fund of texts would have been indispensable in virtually every Christian community. Although the vast majority of Christians were, like the larger society, illiterate, through the public reading, interpretation and exposition of texts in worship and catechesis they were strongly exposed to texts and participated in book culture to an unusual degree.

4. Book Culture.

In a context where literacy was restricted and all texts were individually produced by hand, book culture was naturally limited. Beyond literacy, the cost of books and the leisure to use them meant that book culture was mainly confined to the upper classes.

The standard form of the book in antiquity was the roll, a strip of papyrus 8 to 10 inches high and up to about 30 feet long, inscribed on the inside (recto) in tall, narrow columns 2 to 4 inches wide with 25 to 45 lines per column. Near the end of the first century an alternative form, the codex, or leaf book, made an appearance. Constructed by stacking sheets of papyrus, folding them and stitching them along the fold, the codex enabled the leaves to be inscribed on both sides, usually in one broad column to the page, and thus made for a more economical, capacious and convenient book. The codex, which served originally as a notebook, only slowly replaced the roll in general usage but caught on very early in Christian circles. Judging from extant early Christian manuscripts, it appears to have been the preferred and nearly exclusive format for Christian writings.

There was no mass production of books in antiquity. An author who wished to publish a text engaged the services of a professional scribe and furnished the text to be copied. Publication (*ekdosis*) consisted in giving such a copy to a *patron or a friend, who then made it available to be copied at the initiative of other interested parties. In this way copies of the book were multiplied seriatim, one at a time. Once a text

was in circulation and available for copying, anyone who had an interest in and access to it could have a copy made. Thus books were produced and acquired through an informal and unregulated process. Commercial interests played a very small role. Although there were some booksellers, because the market was limited and copying was unregulated they commonly produced books to order rather than stocking large numbers of copies of any work, and throughout the period books were routinely obtained privately, through channels of friendship among persons of literary interests.

The acquisition and use of books depended upon literacy, leisure, financial means and otherwise on need. The educated aristocracy valued and collected belletristic books—of poetry, prose, history, philosophy—for aesthetic and intellectual purposes. Scholars and certain professionals (e.g., physicians, architects, magicians) also required books, including technical manuals. Novelistic literature had a readership, though in a largely illiterate society it hardly qualified as popular in the broad sense. Because literature was a symbol of social status, books were sometimes avidly collected and ostentatiously displayed by the upwardly mobile and *nouveaux riches*. Yet a true book culture flourished only among the literati and among scholars.

Reading in antiquity was customarily done aloud, even if privately. The reason is that texts were written in continuous script (*scriptio continua*), without divisions between words, phrases, clauses or paragraphs, and without punctuation, so that the syllables needed to be sounded and heard in order to be organized into recognizable semantic patterns. Correspondingly, almost all ancient texts were composed in consideration of how they would sound when read aloud. In general it was more common to hear a text read than to read it oneself. There were various occasions of public reading when the illiterate or semiliterate might hear a text and have contact with literary culture.

Books were variously accumulated into libraries, both personal and institutional. Personal libraries of any size were exceptional and rarely exceeded some hundreds of rolls, though a few larger ones are reported. The great institutional libraries of the ancient world not only harbored very large collections of books but also

carefully established texts from the best manuscripts and catalogued their holdings. The renowned *Alexandrian library reputedly held some half a million items, housed a scriptorium and sponsored technical philological scholarship. The rival library at Pergamum was not so large but pursued similar textual, philological and bibliographical work. Roman institutional libraries were smaller and on the whole less notable for technical scholarship. There is no reason to think that ancient institutional libraries were public in the modern sense: their use was limited de facto to a small number of literate and leisured persons, and one of their principal functions was to serve as cultural and political symbols.

LITERATURE. See WRITING AND LITERATURE: GRECO-ROMAN; WRITING AND LITERATURE: JEWISH.

LITURGY: QUMRAN

Liturgy, religious speech which is by its nature fixed rather than spontaneous, is rare in the Hebrew Bible. The rabbis identified only eight instances (*m. Sofa* 7:2) that they accepted as liturgical: the paragraph of the firstfruits (Deut 26:3, 5-10), the rite of *halitzah* (Deut 25:7, 9), the blessings and the cursings (Deut 27:14-26), the priestly blessing (Num 6:24-26), the blessing of the high priest on the Day of Atonement (Lev 16), the paragraph of the king (Deut 17:14-20), the paragraph of the heifer whose neck was to be broken (Deut 21:7-8), and the address of the priest who was anointed for battle when he spoke before the troops (Deut 20:2-7). The determining factor for these passages was the presence (either actual or assumed by argument) of the introductory formula, "they/you/she shall answer and say."

1. Postbiblical Liturgical Ceremonies
2. Development of Institutionalized Prayers
3. Daily and Occasional Prayers

1. Postbiblical Liturgical Ceremonies.

The first concrete evidence for extrabiblical Jewish liturgy is found among the Dead Sea Scrolls. The sectarians evidently noted the same biblical formula later recognized by the rabbis and couched their liturgical compositions in the language of the Bible. In addition to the introductory formula, they also emphasized the antiphonal nature of some liturgy by appending "amen, amen" to the statements (Num 5:22; Neh 8:6). The function of Qumran liturgy can in large part be determined by the distribution and modification of these formulas.

1.1. Initiation Ceremony. The Qumran initiation ceremony incorporated both the plural initial formula, "they shall answer and say," as well as the twofold "amen" closing. 1QS 1:22-3:12 is by and large a confessional prayer developed from the liturgical rites of the Day of Atonement described in Leviticus 16 (see Sacrifice and Temple Service). The blessing texts from Cave 4 (4Q286; 4Q287; 4Q289), which include the same

formulas, may be evidence of an earlier stage in the development of the sectarian initiation. These latter texts are themselves founded on the blessings and the cursings of Deuteronomy 27:14-26. It may be that the fragmentary 4Q275, *Communal Ceremony*, should be included here as well, despite the fact that the bifold "amen" was not preserved among its fragments.

1.2. Thanksgiving Ceremony. Both 4Q502, *Ritual of Marriage*, and 4Q503, *Daily Prayers*, incorporate a plural introduction, "they shall answer and say," with no "amen, amen" response. Some have posed an alternative purpose for the extremely fragmentary 4Q502, suggesting that it is a Golden Age ritual in thanksgiving for longevity (Baumgarten 1983). 4Q503, although entitled *Daily Prayers*, is more accurately a series of community thanksgiving responses for each day of the month, praising God for the sunrise and sunset and plotted according to the changing phases of the moon. In addition to the similar form and corporate setting of these two compositions, the thanksgivings addressed to the "God of Israel" is a common element.

1.3. Purification Ceremony. A singular introductory formula, "he shall answer and say," with no bifold "amen" response defines a group of texts which are all purification liturgies: 4Q284, *Purification Liturgy*; 4Q414, *Ritual Purity A*; and 4Q512, *Ritual Purity B*. These liturgies are for individual use and were recited during ritual bathing. They are also directed to God, incorporating the common phrase, "You are the God of Israel." Numbers 5:2 identified the three areas of ritual uncleanness: leprosy, bodily discharges of any kind, and contact with the dead. The extant purity rituals from Qumran are concerned with these very issues.

2. Development of Institutionalized Prayers.

Although personal prayer is attested on numerous occasions in the Hebrew Bible (e.g., Gen 20:7; 32:11; 1 Sam 1:11; Jer 14:11, etc.), the beginnings of institutionalized prayer have been more difficult to pinpoint. Prayers on special occasions—new moons, sabbaths, assemblies and festivals—are cited (Is 1:13-15), but the fact remains that there are no institutionalized communal prayers in the biblical record and certainly no mention of individual daily prayers until the postexilic period. That there are no prayers or commands to pray as part of the instructions for *sacrifice suggests that the temple

was a place where silence reigned. The theory that institutionalized prayer began in Babylonian exile and was brought about by the destruction of the temple and a need for a substitution for sacrifice has become widely accepted, but, although reasonable, it is without any evidence. However, the later data from the scroll manuscripts do attest to this sort of substitution, but for a different reason than that of forced exile and destruction. The Qumran sectarians had separated themselves from normative Judaism likely due to calendar issues (see *Calendars, Jewish*), a non-Zadokite ruling *priesthood, and a constellation of *legal debates linked to the temple cult (4QMMT). Although a preoccupation with the temple is evident in the community's literature (11QTemple), there would not likely have been any thought of replacing the Jerusalem sanctuary (1 Kings 11:36). Perhaps Proverbs 15:8 (quoted at CD 11:20-21) provided the catalyst for a solution to the lack of temple access:

The sacrifice of the wicked [i.e., normative Judaism] is an abomination to the LORD;

But the prayer of the upright [i.e., the Qumran sect] is his delight.

Although there is some scattered evidence that the priests continued their officiating rôle as prayer began to substitute for sacrifice (1QSa 2:17-21, 1QS 6:2-8; CD 13:2-3; 1QM 10:2, 4Q289 frag. 1 4), generally it would appear that they were not singled out as having special prerogative either in prayer or other liturgical functions. The absence of a presiding priest in the text of virtually every Qumran liturgical composition is certainly noteworthy.

An additional surprise is the lack of any indication that a reading of the law was a part of the liturgy of the public meeting, such as it became in the synagogue service (see Neh 9). Rather than a *bêt henneset*, or synagogue, where the reading of the law was at the center, the scrolls call the place of meeting the *bêt hištah"wiš*, or "house of worship" (CD 11:22, 4Q271 frag. 5 i 15), where prayer was central.

3. Daily and Occasional Prayers.

3.1. Communal Prayers. Liturgy that exhibits an absence of the initial formula ("they answered and said") but with a direct address to the Lord (always *Adonai*) clearly functions as prayer. A set of occasional prayers ending in the bifold "amen" evidences elements that suggest a setting of public worship. 4Q504, *Words of the Heav-*

only Lights, is a collection of daily prayers that incorporates both prayers of confession and celebration. 4Q507-509 are festival prayers; only prayers for the Day of Atonement and Weeks (Pentecost) are explicitly mentioned among the fragments.

3.2 Prayers of the Instructor. The *Songs of the Sage*, 4Q510-511, are prayers specifically composed for the instructor (*maškil*) to intercede for the community to protect it against the power of evil spirits.

3.3 Personal Daily Prayers. Although a manuscript containing personal daily prayers has not been recognized among the Qumran documents, S. Talmon has suggested that 1QS 9:26-10:3 records the six daily occasions for personal prayer. The three daytime prayers are suggested by the biblical text (Dan 5:10; Ps 55:16-17) and also became a part of rabbinic Judaism as attested by the *'Amidah*.

(1) Morning Prayer: when day begins its dominion

(2) Midday Prayer: within the sun's circuit

(3) Evening Prayer: when the sun is regathered into its dwelling place

The Qumran sect also recited prayers during the night hours, dividing it like the day into three watches:

(4) First Night Prayer: when the night watches begin

(5) Second Night Prayer: within its circuit when the stars shine brightest

(6) End of Night Prayer: when the stars are gathered to their dwelling place

LITURGY: RABBINIC

Traditional Jewish liturgy took shape in various stages over a number of centuries. Arguably the most important achievement of rabbinical Judaism was the establishment and institutionalization of the basic liturgical form of communal worship. This process took place after the destruction of the Second Temple in A.D. 70 and involved the formulation of the major liturgical pattern and its moral and spiritual principles.

Prior to 70 a certain order of communal prayer existed. In the Jerusalem temple, sacrifices were accompanied by set prayers and ceremonies administered by temple priests (*m. Tamid* 5:1; *Sir* 50:19; Josephus *Ag. Ap.* 2.24 §196; *Lk* 1:10). Rituals of early synagogues, as well, incorporated diverse forms of communal prayer (*Mt* 6:5; Josephus *Life* 54 §277; *Ag. Ap.* 2.2 §10).

1. Emergence of the Liturgy
2. Form of the Liturgy

1. Emergence of the Liturgy.

The destruction of the Jerusalem temple placed the rabbis in a position of religious leadership. They strove to form a liturgical system that would function without reliance on the temple as a uniting religious focal point and that would still be acceptable to the people as an effective and authentic method of Jewish worship. Supported by the biblical verse "And serve him with all your heart" (*Deut* 10:10), the rabbis redefined the act of prayer as the *avodah*, or "service" of the heart, implying that the act of prayer can function independently of geographical location and can thus substitute for the temple service (*b. Ber.* 32b). With the multiple inspiration of Scripture, forms of individual petitions and prayers, existing patterns of synagogue worship, mystical notions and the ancient temple ceremonies, the rabbis created the basic Jewish liturgical system.

Liturgy and communal worship became central to Jewish religious life. Prayers replaced temple worship, and gradually acquired a fixed and obligatory pattern (*b. Ber.* 21a). Set times for the recital of prayers were defined: twice a day,

at sunrise and sunset, according to one tradition (*m. Ber.* 1:4; cf. 4Q503; Josephus *Ant.* 4.13 §212), and three times a day according to another (*m. Ber.* 4:1; compare 2 *Enoch* 51:4; *Acts* 10:9; *Did.* 8:3). Basic liturgical themes were standardized and the synagogue (lit., "house of meeting") became the major center of communal prayer and worship.

The development of specific prayers in the liturgy was gradual. The liturgy grew in a process of constant additions and rewritings and initially underwent a period of relative fluidity in which various alternative forms of liturgical expression were used interchangeably in Palestine and Babylon. Although it is impossible to trace the roots and authorship of specific prayers, sources such as the early rabbinical literature, Josephus, Philo and the NT all attest to the existence of an established structure of rabbinic public worship and its crystallization in several central prayers. Of these, the following prayers can be considered core elements of the liturgy.

The *Shema*, a prayer so called after its opening words "Hear [*šma*] O Israel, the Lord is our God, the Lord is one" (*Deut* 6:4) had existed before the destruction of the Second Temple but became central in the new liturgy (*m. Meg.* 4:3; Josephus *Ant.* 4.13 §213; *Lk* 10:27). It declares a confession of faith and an ultimate acceptance of God's kingship. The *Shema* consists of three Torah passages, Deuteronomy 6:4-9, Deuteronomy 11:13-21 and Numbers 15:37-41, sections which express the oneness of God, the supreme obligation to serve him, as well as notions of reward, punishment and redemption (*m. Ber.* 2:2; *m. Tamid* 5:1). These biblical passages are framed by various blessings composed by the sages of the rabbinical period. The *Shema* is to be recited twice a day, in the morning and evening time, by every adult male (*m. Ber.* 1:1-4).

The *Shemoneh Esreh*, or Eighteen Benedictions, probably reached its final iteration between A.D. 70 and 100, but it consists of much older traditions. It included originally eighteen separate paragraphs, usually called blessings (*berakhot*; *m. Ber.* 4:3; *m. Ta'an.* 2:2). Toward the end of the first century a nineteenth paragraph was appended—a curse against heretics, or *minim* (*b. Ber.* 28b). As a pivotal prayer of the liturgy, the *Shemoneh Esreh* was known by the rabbis simply as the Prayer or the Amidah (standing) since it is recited while standing. The *Shemoneh Esreh* is divided into three sections: praises, requests and

thanksgiving. It is recited by every member of the congregation three times a day with additional times on the *sabbath and holy days. These times were associated with the original times of the ritual sacrifices of the temple (*b. Ber.* 26b; *t. Ber.* 3:1-2).

2. Form of the Liturgy.

To the *Shema* and the *Shemoneh Esreh*, probably the original components of the public worship in rabbinic times, other liturgical material was added. Public reading of Scripture became part of the service in rabbinic Judaism and was required on the morning of sabbaths, festivals, Mondays, Thursdays, new moons and all special feast and fast days. It consisted of readings from the Torah (*b. Meg.* 29b) and from the Prophets (*m. Meg.* 4:1-5; Lk 4:17; Acts 13:15) as well as public readings of their Aramaic translations (**targum*), since the Hebrew language of the Scripture was no longer familiar to all audiences (*m. Meg.* 4:4, 6, 10). These readings were followed by an exposition on the Scripture, *drashah*, in which the passage was interpreted (*m. Sota* 9:15; Lk 4:20).

The blessing of the priests (Num 6:22-26; *m. Sota* 7:6 = *m. Tamid* 7:2) usually concluded the service. If no priest was present in the congregation, the blessing was replaced by words of benediction recited by the leader of the prayer.

The *Kaddish*, a prayer for the future establishment of God's ultimate kingship on earth, began as a popular prayer recited in the houses of study. It was offered at the conclusion of the daily study of the Torah, fundamentally as an expression of hope for a time when God will be recognized and accepted by all. The *Kaddish* appears in many variations. Its ancient Aramaic verses express clearly the rabbinical concept of sanctifying the name of God (*Kiddush ha-Shem*). This prayer is often associated with the Lord's Prayer formulated by Jesus (Mt 6:9-13 par. Lk 11:2-4).

Between the third and the sixth centuries A.D. poets began to use basic themes of the prayer in poetic patterns known as *piyyutim*. Several of these poetic compositions and others that followed were incorporated later into the formal liturgy.

Early rabbinical Judaism attempted to define the place of liturgy in the framework of its religious philosophy and basic ideology. Rabbinic discussion of liturgy presupposes that God hears all forms of prayers, yet humans are instructed

to submit their prayer according to specific ethical and spiritual standards. Prayers directed to harm others are not permitted, even those that request the fall of one's enemies (*m. 'Abot* 4:19). Prayers that aim to affect that which is determined or has already occurred are regarded as vain (*m. Ber.* 9:3). Prayers for the benefit of others are encouraged (*b. Ber.* 29b-30a). Private personal prayer is acceptable within the framework of the liturgical service, but communal prayers are considered to be of greater significance (*b. Ber.* 6a, 8a; *y. Ber.* 5:1; *Deut. Rab.* 2:12). Prayers that are concerned with the holiness of God can be recited only in the presence of a *minyan*, the minimum quorum of ten adults that, according to the tradition, symbolically represents the whole community.

Prayers must be said with sincerity and offered with proper concentration and intention, *kavana* (*b. Ber.* 31a; *b. 'Eruv.* 65a). A routine and mechanical recitation of the prayers is not acceptable: "He that makes his prayer a fixed task, his prayer is not supplication" (*m. Ber.* 4:4; *m. 'Abot* 2:13). The language of Jewish prayer is Hebrew, but it is permissible to pray in any language (*m. Sota* 7:1; *t. Sota* 7:7; *y. Sota* 21b).

Clear evidence regarding the degree of female participation in liturgical acts does not exist. References to segregation of women are found (Philo *Vit. Cont.* 9 [69]), yet specific acts of prayer are recorded on the part of women in several sources (*t. Ber.* 16b-17a; *t. Sota* 22a). Recent evidence indicates that in the *Diaspora synagogues, women were not segregated and participated in the functional roles of prayer side by side with the men (Brootten).

Normative formulation of the liturgy seems to include elements from early Jewish *mystical traditions associated with the *Hekhalot* and *Merkabah* literature (see *Mysticism*). Ancient mystical traditions, as well as Second Temple period *apocalyptic traditions and texts from *Qumran, present an understanding of prayer as an angelic liturgy in which human beings join the *angels in the celestial act of praising God (see *Heavenly Ascent*). These mystical sources also describe acts of ascending to heaven and beholding the presence of God, accompanied and achieved through the recitation of prayers and blessings. Verses and themes from the *Hekhalot* and *Merkabah* mystical traditions correspond directly to several prayers of rabbinical Judaism. Thus they probably reflect a process in which

mystical and nonmystical traditions influenced one another (Bar-Ilan; Swartz).

Even though a fairly fixed order for prayer was established in rabbinical Judaism, official liturgical texts did not exist. Only in the ninth century, the Geonim created a prayer book known as the *Siddur* (order) and thus canonized the entire system of Jewish liturgy.

LIVES OF THE PROPHETS

Lives of the Prophets, often referred to by its Latin name *Vitae Prophetarum*, is a brief Jewish writing

from the first century A.D. Its intention is indicated by the opening line: "The names of the prophets, and where they are from, and where they died and how, and where they lie" (all quotations of this document are taken from D. R. A. Hare). These biographical "facts" are sometimes supplemented by reports of miracles performed by the prophet or for him, portents associated with him or prophecies he made concerning the end time. Included are all the literary prophets and seven nonliterary prophets (Nathan, Abijah, Joad, Azariah, Elijah, Elisha and Zechariah son of Jehoiada). In some instances the entry is very brief: "Hosea. This man was from Belemoth of the tribe of Issachar, and he was buried in his own district in peace. And he gave a portent, that the Lord would arrive upon the earth if ever the oak which is in Shiloh were divided from itself, and twelve oaks came to be" (*Liv. Proph.* 5:1-2). The longest entries are devoted to Isaiah, Jeremiah, Ezekiel, Daniel, Jonah, Habakkuk, Elijah and Elisha.

The writing has received relatively little attention in the English-speaking world. R. H. Charles did not include it in his *Apocrypha and Pseudepigrapha*. The translation by C. C. Torrey was not easily accessible. Not until 1985 was an English version of the *Lives*, prepared by D. R. A. Hare, readily available in *The Old Testament Pseudepigrapha* (ed. J. H. Charlesworth). More attention has been paid to the document in Europe. Recently a full-length commentary has been undertaken by A. M. Schwemer. The first volume, dealing with the major prophets, appeared in 1995.

This article will present a brief discussion of the original language, earliest sources, probable date, place of origin and the document's significance for students of the NT.

1. Original Language
2. Earliest Sources
3. Probable Date
4. Place of Origin
5. The Document's Significance

1. Original Language.

Although some scholars have argued that *Lives of the Prophets* was written in a Semitic language (Hebrew or Aramaic), this thesis has not stood up under careful examination of the earliest sources, all of which are Greek. The scholarly consensus is that, whether or not the author had access to earlier materials in a Semitic language,

the present work was created in Greek. Early versions of the work are extant in Syriac, Ethiopic, Latin and Armenian, but these are all based on Greek originals.

2. Earliest Sources.

The many Greek manuscripts are sorted into four recensions. Two are associated with Epiphanius of Salamis. The longer of these is best represented by Codex Paris. Gk. 1115 in the Bibliothèque Nationale, Paris. The primary witness of the shorter recension is Codex Coisl. 120, also deposited in the Bibliothèque Nationale. A third recension, attributed to Dorotheus, is found in purest form in Codex Vindob. Theol. Gk. 40, located in Vienna. The fourth is referred to as the anonymous recension, since its witnesses are not associated with the name of a church father. The best example of this recension is Codex Marchalianus, Codex Vaticanus Gk. 2125, in the Vatican library.

Although the text is generally well preserved in these manuscripts, they differ remarkably in the order in which the prophets are treated and regarding which nonliterary prophets are included. The longer Epiphanian recension includes John the Baptist, his father, Zechariah, and Simeon (Lk 2:25). A critical text is available in T. Schermann.

Since all of the surviving witnesses are from Christian scribes (none of the work has been preserved in Jewish sources), it is not surprising that many contain Christian interpolations, some of which are more obvious than others. In the *Life of Jeremiah*, for example, the Dorotheus recension supplements the prophet's prediction of the collapse of Egyptian idolatry with the promise that this will happen "through a savior, a child born of a virgin, in a manger."

3. Probable Date.

It is generally agreed by scholars that this writing can hardly be older than the Maccabean period, nor more recent than A.D. 70, since there is no allusion to the *destruction of Jerusalem that must be taken as prophecy after the fact. Within this period scholars tend to prefer the first half of the first century.

A further narrowing of the range of dates is based on two allusions that can be related to historical data. The *Life of Isaiah* (*Liv. Proph.* 1:1-8) implies that the spring of Siloam is outside the Jerusalem wall. If this reflects the time of writing

rather than simply preserving an uncorrected earlier tradition, a date prior to the new south wall, erected during the rule of Herod Agrippa (A.D. 41-44) is required. The same passage reports that "the nation also buried him [Isaiah] nearby with care and great honor." The wording suggests the erection of a memorial of some kind. A saying of Jesus rebukes his contemporaries for building monuments for prophets whom their ancestors had murdered (Mt 23:29-31; Lk 11:47-48). An associated saying mentions a specific martyr, "Zechariah, who perished between the altar and the sanctuary" (Lk 11:51; cf. Mt 23:35).

J. Jeremias has argued that these sayings refer to the martyrdoms and Jerusalem burials of Isaiah and Zechariah son of Jehoiada (2 Chron 24:20-22); the practice of building memorials to these martyrs was perhaps stimulated by the monuments dedicated to the Maccabean martyrs and by the costly structure built by Herod the Great at the entrance to David's tomb (Josephus *Ant.* 16.7.1 §182; Jeremias, 66, 68). Since the *Life of Zechariah son of Jehoiada* does not mention a monument, Jeremias infers that the *Lives of the Prophets* must have been written earlier, that is, before Jesus' public ministry. If this argument is accepted, the document was probably written in the first quarter of the first century.

4. Place of Origin.

Although the author's scriptural allusions sometimes reflect the Hebrew text, at other points his work clearly relies upon the *Septuagint. This by no means proves that the work originated in the *Diaspora. Palestine was multilingual. The author's familiarity with the geography of Palestine and his detailed knowledge of Jerusalem suggest that despite the fact that Greek was probably his first language, he was resident in Palestine, and probably in Jerusalem. He may, however, have employed sources deriving from the Diaspora. Recently this has been strongly argued by Schwemer (1:165-236) for the Egyptian portions of the *Life of Jeremiah*.

5. The Document's Significance.

The chief value of this writing derives from the glimpses it provides of first-century Jewish popular religion. Although it manifests little interest in theology, it seems to belong in the mainstream of Judaism with respect to its views on God, *angels, *Satan, idolatry, the resurrection

of the dead and judgment. Again, it has little to say about the *Torah, but nothing suggests that the author supported lax observance. His interest lies in the fate of the prophets, not in their scriptural teaching. He is particularly interested in miracles, prodigies, portents and end-time prophecies, and it is proper to assume that he wrote for a public that shared his interests.

Students of the NT will be interested to learn that brief birth narratives are supplied for both Elijah and Elisha. The one concerning Elijah is particularly noteworthy, since it includes a prophecy regarding Elijah's *eschatological role: "When he was to be born, his father Sobacha saw that men of shining white appearance were greeting him and wrapping him in fire, and they gave him flames of fire to eat. And he went and reported (this) in Jerusalem, and the oracle told him, 'Do not be afraid, for his dwelling will be light and his word judgment, and he will judge Israel'" (*Liv. Proph.* 21:2-3; most manuscripts add "with sword and fire"). This passage provides further evidence that first-century Jews did not find reprehensible the idea that God would employ one or more human deputies at the eschatological judgment (cf. Acts 17:31).

Historians of religion are interested in possible pagan antecedents for elements of the stories in Matthew 1-2 and Luke 1-2 concerning Jesus' birth. Some have proposed that the statement in the Life of Jeremiah that the Egyptians "revere a virgin giving birth and, placing an infant in a manger, they worship" (*Liv. Proph.* 2:9) is irrelevant to the question because it is a Christian interpolation. Schwemer argues that this Jewish document was probably referring to a well-known practice of Egyptian religion honoring the "virgin" Isis and her son Horus. Even the reference to a manger need not be secondary, since the myth located the birth of the divine child in the Delta and declared that the baby was born between two animals and was raised by shepherds. Schwemer (1:197-98) proposes that this passage in the *Lives* constitutes the "missing link" between the Egyptian myth and the birth stories in Matthew and Luke. The document's treatment of the prophets as heroes of the faith, whose graves may be profitably visited by pilgrims, suggests a Jewish background for the later Christian practice of the veneration of the saints.

LUCIAN OF SAMOSATA

A prolific satirist of the second century A.D., Lucian's writings are of value to students of the NT for their preservation of numerous insights into religion, philosophy, rhetoric and daily life in the Roman Empire.

1. Life
2. Writings
3. Satire
4. Interpretation
5. Usefulness

1. Life.

Freeborn (c. AD. 120/125-c. 185) in Syria, in a city located on the Euphrates yet touched by Greek culture, Lucian left home and his uncle's workshop to pursue oratory. He may have begun practicing in *Antioch before moving on to Ionia, *Greece, Italy and Gaul, becoming so accomplished that he received Greek citizenship and eliminated his Syrian accent. Perhaps during his tenure in Gaul Lucian attained his greatest wealth and reputation. Though Lucian eventually settled in *Athens, he continued to travel, including a return to Syria and a governmental position in Egypt.

Further comment on Lucian's life flounders on two dangers. First, dating Lucian's works typically depends on a theory of Lucian's development, a dubious enterprise (see Hall). Second, Lucian's literary artifices afford few straightforward autobiographical insights. Even the nature and results of Lucian's alleged conversion to *philosophy around the age of forty are ambiguous.

2. Writings.

A large corpus of Lucian's writings survives.

M. D. Macleod's edition lists eighty-six treatises, of which at least ten are spurious. The genuine writings include *prolatiai* (i.e., prefaces used to introduce longer speeches), *encomia* (i.e., speeches of praise) and defense speeches, which together display brilliantly Lucian's *rhetoric. His enduring reputation, however, rests on his criticism and formal innovations. In diatribes, pamphlets and novels, Lucian unleashes parody and satire to lampoon and censure. Lucian shines brightest, however, in his satiric dialogues, which imaginatively blend Menippean elements with philosophic form to abuse and amuse. Lucian grins as he bites (*Bis Acc.* 33).

3. Satire.

As a satirist, Lucian generally highlights human foibles. He often laughs at human desires for wealth (*Gall.*, *Tim.*, *Cont.*), expressing standard objections such as worry, cares, envy and distrust (*Nav.*). He skewers flatterers (*Tim.*, *Nigr.*; cf. *Par.*, *Pr. Im.*) and charlatans (*Alex.*), mocks pretentiousness (*Ind.*) and attitudes to death (*Dial. Mort.*) and is amused by the convoluted ways of love (*Dial. Meretr.*).

Common fare from the critique of paganism arises in Lucian's handling of religion. He criticizes oracles as ignorant and deceitful, feeding on weakness and credulity. Lucian also enters into the philosophical-religious debate about Fate (*J. Conf.*; *J. Tr.*), as well as the censure of sacrificial and funerary practices (*Sacr.*; *Luct.*). Lucian also disparages Hesiod and viciously maligns the prophet Alexander and the economics of temple practices.

Lucian often scoffs at philosophy. Sometimes he criticizes contradictory cosmologies (*Icar.*), more often contradictory behavior (*Symp.*). In *Vitarum Auctio* he ridicules every philosophical position he knows; *Piscator* and especially *Hermotimus* continue this attack. The latter presses the problem that philosophical schools hold mutually exclusive positions, the analysis and comparison of which are beyond human capability, yet unnecessary because philosophy fails to make people more virtuous anyway.

In the wake of his satires, Lucian has little positive to offer. He does, however, advocate a common-sense view of life: one should accept one's lot in life, shunning the pursuits of wealth, power or speculative philosophy. Pride is evil, dogma foolish, simplicity good. Accordingly, Lucian holds a Delphic anthropology ("Know thy-

self"), an ethic of moderation expressed by the mythical flights of Icarus and Daedalus; moreover, he commends the social criticism of the Platonist Nigrinus and the model life and wisdom of the unaffiliated Socratic Demonax. In short, Lucian grew to regard the life of the common person as best while nevertheless admiring the virtues educated culture inculcated.

4. Interpretation.

Lucian reflects the second sophistic (i.e., the educated culture) of which he was part. Infatuated with ancient Greece (i.e., Atticism), Lucian looked back particularly to Homer, Aristophanes, *Plato, Demosthenes and Menander, drawing as well on Menippus, for both the substance and style of his work, quoting often and imitating habitually (*mimēsis*). Much of the charm of his writings lies in the creative, erudite and witty way he treated old stories, themes and styles. This sophisticated use of tradition characterized his era.

Lucian's obvious participation in Atticizing educated culture (*paideia*) raises the key problem in Lucianic criticism: How real are his observations on life? Did Lucian offer only esoteric comments based on and in dialogue with books, or did he have living targets in view? J. Bompaire's monograph argued that Lucian's dependence on previous literature placed Lucian in conversation with literary culture and left little room for reality in his writings. Recent literature disagrees. B. Baldwin, L. Robert, C. P. Jones and others have documented many comments in Lucian's writings particular to the historical context in which Lucian lived. G. Anderson adds perspective to this debate: on the one hand realists draw their evidence from only a portion of Lucian's writings, while on the other hand nonrealists must concede that engaging the past was the fashion among educated people of Lucian's day and thus a part of Lucian's contemporary reality.

5. Usefulness.

Myriad insights into the background of early Christianity appear in Lucian's writings. For example, he speaks about ancient athletics (*Anach.*), pantomime (*Salt.*), images (*Im.*) and historiography (*Hist. Conscr.*). More obviously, Lucian's writings reveal the social conditions of public speaking (*Ind.*, *Peregr.*, *Scyth.*, *Herod.*, *Sat.*): he records the competitive nature of sophists

and their insults, the possibilities of a peripatetic lifestyle or attachment to great houses, voluntary poverty or potential riches, as well as the popularity and range of audiences. He also demonstrates the attraction of apophthegms (*Demon.*). Lucian's own rhetoric displays a polished Atticism and the ability to make the worse argument the better (e.g., *Phal.*), while his *prolatiai* (e.g., *Zeux.*) and encomia (e.g., *Musc. Enc.*) exemplify the art of embellishment. His invective further trades in standard rhetoric, for example, caricature and charges of inconsistency, murder or sexual malfeasance.

Religious subjects appear throughout Lucian's writings. Greek ideas about the gods and the afterlife fill his works, extending Greek mythology in creative fashion (e.g., *Ver. Hist.*, *Cat.*, *Dial. Deor.*). Lucian's frequent references to gods, oracles, healings, relics, mysteries, rites, sanctuaries and festivals reveal the common features of religion (e.g., *Sat.*, *Alex.*); he also provides narratives that illuminate ancient magic (*Philops.*, *Nec.*). Lucian's observations on how the human and divine realms are bridged contribute to the history-of-religions construction of the divine man (*Alex.*, *Peregr.*, *Philops.*, *Deor. Conc.*; *Demon.* 44, 63, 67; *Nigr.* 3, 38; *Dial. Mort.* 3, 13-16, 28; *Tox.* 3-4; *Herm.* 7).

Specific notice of Christianity (called a *kainē teletē*) appears in *Peregrinus* (11-16) and *Alexander* (25, 38). In typical slander, the latter associates Christians with atheists and Epicureans as scapegoats and the enemies of traditional religion, while the former treatise tells about the time *Peregrinus* spent as a Christian. Lucian

knows about Christian beliefs and practices and evaluates Christians as simpletons (*idiōtai*) and easy prey for a charlatan (*goēs*). These essays earned Lucian the label blasphemer.

M

1 AND 2 MACCABEES

The books of 1 and 2 Maccabees are two of the most important works relating to Jewish history during the Greek period (see Jewish History: Greek Period). Virtually all that we know about *Seleucid rule, the Maccabean revolt and the rise of the *Hasmonean kingdom come from them. Their value is further enhanced in that they seem to have been written relatively soon after the events they purport to describe. As examples of *Jewish literature, they take their place alongside the many other writings of the Second Temple period that did not become a part of the Hebrew canon, though they feature among the deutero-canonical writings in the Roman Catholic and Greek Orthodox canons.

The two books are independent writings but cover a good deal of the same ground. First Maccabees begins with the accession of Antiochus IV (175-164 B.C.), under whose reign great changes rocked the Jewish community in Judah, and ends with the accession of John Hyrcanus (135-104 B.C.) to the high priesthood and leadership of the nation, thus covering almost fifty years. Second Maccabees begins with the reign of Seleucus IV (187-175 B.C.) and ends before the death of Judas Maccabeus in 162 B.C., thus embracing the much shorter period of about a quarter of a century. Apart from the fact that both are fiercely pro-Maccabean and overlapping for one of the most significant periods of the revolt, the aims and content of the two books are quite different in many ways.

1. First Maccabees
2. Second Maccabees

1. First Maccabees.

In the text itself there is no indication of who wrote the book; however, it is evident that the author was a devotee of the Hasmonean dynasty who justifies and extols the exploits of the Mac-

cabean brothers. Since the book ends at the beginning of John Hyrcanus's reign, it is likely to have been completed sometime during that ruler's reign, perhaps about 125 B.C. (some scholars would date it to the beginning of Alexander Jannaeus's reign, or about 100 B.C.). It has been argued that a number of the battle scenes show the knowledge of an eyewitness (Bar-Kochva, 158-62, though this has been disputed by Schwartz, 37 n. 64). However, even if this argument is correct, this may only indicate sources used by the author, not that the author himself had been the witness to the battle.

The style of the Greek text indicates that it was composed originally in Hebrew. No certain portions of that text are extant; the story is referred to in *rabbinic literature, but these allusions do not indicate that the text of the book was known at this time. Some textual difficulties in the Greek have been resolved by attempting to determine the Hebrew text behind the translation. The nature of the narrative indicates that the author used narrative texts of the OT (e.g., Joshua, 1 and 2 Samuel) as a model for his account. Although *piety and theology are not as intrusive in 1 Maccabees as in 2 Maccabees, they are there in a low-key but pervasive manner. God is not referred to directly but as "heaven" (e.g., 1 Macc 3:18; 4:10). Judas and the people pray before battle and even read the law (1 Macc 3:44-54). Heaven gives victory to the righteous even over great odds (1 Macc 3:18-22).

The book contains a summary of the origin and process of the Maccabean struggle, climaxing in the statement of independence in 1 Maccabees 14:27-47 and the affirmation of Maccabean leadership. In 1 Maccabees 1 there is a brief account of the preliminary events, beginning with *Alexander the Great's invasion, but it quickly skips to the time of the wicked Antiochus Epiphanes when Jewish apostates built a *gym-

nasium and followed Greek ways. Then Antiochus attacked Jerusalem, issued a decree imposing the Greek way and set up an "abomination of desolation" in the temple.

In 1 Maccabees 2 the resistance began under Mattathias, but he soon died. First Maccabees 3—4 describe Judas's fight against the Syrian armies in which he finally retakes the temple and reconsecrates it, ending the abomination of desolation. The continuing story of Judas and his fight to prevent the envious Gentiles from wiping out the Jews is related in 1 Maccabees 5—8. Judas's death is recounted in 1 Maccabees 9:1-22, and Jonathan's story is told in 1 Maccabees 13—14, and one might have thought that the book would end here; Josephus's copy may have done just that, for in the *Antiquities* he follows 1 Maccabees closely almost to the end of chapter 13 but then picks up another source for the continuing story of the Hasmoneans. First Maccabees 15—16 form a sort of epilogue about the rest of Simon's reign, describing recognition of the new Jewish state by the Seleucid ruler Antiochus VII Sidetes and by envoys from *Rome. However, Antiochus VII then reneged on his acknowledgment of Jewish independence and was defeated by an army led by John Hyrcanus, Simon's son. The book ends with the death of Simon and the accession of John to the office of high *priest.

The story thus focuses on the Maccabean family, especially the three brothers who each led the people in turn. It is mainly a chronological narrative of events without reflection on what they mean. No clear reason is given for Antiochus's attack on the Jewish religion, and the rightness of the Maccabean actions is taken for granted. The persuasive strength of the book lies in its apparent ingenuousness: it seems straightforward and honest. But this is a part of its *rhetoric of persuasion. A simple narrative also allows the writer's own perspective to prevail without intrusion on the reader's consciousness. The book is very pro-Maccabean, though it does not particularly favor Judas in the way that 2 Maccabees does. Although Judas is given a central position, the phrase "Judas and his brothers" or other phrases in which Judas acts in concert with others occur frequently (1 Macc 3:25, 42; 4:16, 36, 59; 5:16, 25, 28, 63, 65). When those not a part of the Maccabean family attempt to take the lead, disaster invariably befalls

them (1 Macc 5:55-62). Each Maccabean brother is chosen in turn by "the people" (1 Macc 3:2; 9:28-31; 13:1-9; 14:27-47).

Much has been made of the David-and-Goliath-like nature of the conflict and the victories of a small group of Jews against a great empire. This is a part of the myth created by the book. As has been well demonstrated (Bar-Kochva), the victories of Judas were not miraculous but usually fit the normal military criteria for success. In a few cases, defeats have been treated as victories (e.g., 1 Macc 4:28-35 par. 2 Macc 11). The success of the Maccabees was due neither to supernatural intervention nor to superhuman powers on the part of the Jewish fighters. Judas's greatest achievement was in building up and training a regular army skilled in the conventional military techniques of the *Hellenistic period. His brother Jonathan's achievements were in exploiting the divisions in the Seleucid dynasty to his own ends.

The book also makes a close association between ancient Israel and the Jewish nation of the second century. The term *Israel is used frequently as a designation of the Jewish people, especially in a religious or ideological context. The ideological nature of the usage is indicated by the fact that none of the alleged treaties or letters relating to outsiders use anything but "Jews" (e.g., 1 Macc 8:23-32; 10:18-20, 25-45; 11:30-37; 12:6-23; 13:36-40; 14:20-23; 15:2-9, 15-21).

The figure of Antiochus IV looms large in both books, in which his actions are described in satanic terms. First Maccabees presents him as one who is determined to Hellenize his kingdom and replace all local customs with Greek ones (cf. 1 Macc 1:41-42), and many modern scholars have referred to his Hellenizing policy. However, this statement in 1 Maccabees is not supported by other sources. There is no evidence that Antiochus was a particular champion of Hellenization or that he had a policy of suppressing native customs (Bickerman, 30-31). Nor is there any indication that he had a special interest in the Jews; the initial approach to Hellenize Jerusalem came from the Jews themselves (see Hellenistic Judaism). Yet Antiochus did issue a decree forbidding Judaism, at least in Judah itself, and persecuted those who disobeyed. Why he issued this decree is still debated, but it occasioned one of the greatest religious crises for the Jews of antiquity (see Jewish History: Greek Period).

First Maccabees is also an important source for establishing the chronology of Jewish history for the period. It has become widespread in the past fifty years to date the Maccabean revolt to 167-164 B.C. This is a complex calculation, based on the *Seleucid dating used in both books, though we now know that Antiochus died in November-December 164 B.C.. However, it has been recently argued that the correct dating is 168-165 B.C., in line with an earlier generation of scholars (Grabbe 1991).

Of particular interest are a number of documents and letters allegedly quoted in 1 Maccabees 8 and 1 Maccabees 10-15, including a treaty with Rome and *letters between Hasmonean and Seleucid rulers and even with the king of Sparta. Most of the letters have been accepted as genuine, though whether the original wording is preserved is a question since they would have been translated into Hebrew and retranslated into Greek. The two main documents questioned are the supposed treaty with Rome made by Judas (1 Macc 8:28-32) and the letter from the Spartan king (1 Macc 12:20-23). Although a treaty between Rome and the Maccabean state was eventually concluded, the question is whether it was as early as the time of Judas. Many scholars feel it was not until at least the time of Simon. It also seems likely that Jonathan wrote to the king of Sparta, but whether he had a reply and whether this is it are two questions still very much disputed.

One of the most puzzling groups in the book are the *Asidaiot* or Hasidim (1 Macc 2:42; 7:13; 2 Macc 14:6). Hardly has another group about which so little is known been so used in theories and historical reconstructions. Apart from the fact that they were "mighty warriors" (*ischyroi dynamai*), we know hardly anything about them (Davies). The Greek word probably represents Hebrew *hasid*, which can mean "pious." It may be that *Hasidim* was a term not referring to members of a specific narrow sect but a more generic term applied to anyone exhibiting certain characteristics of piety or a particular attitude toward the law. In 2 Maccabees 14:6 the term is applied to Judas Maccabeus, though we cannot be sure that the term is being used in exactly the same way it is in 1 Maccabees. In the end, we must be careful not to build significant theories on a group about which we really know so little.

2. Second Maccabees.

Superficially, 2 Maccabees seems to be a shorter version of 1 Maccabees, since it covers a shorter period of time, yet there are significant differences not only of content but also of outlook and approach. The book is divided into two clear parts: 2 Maccabees 1:1-2:18 is made up of parts of several letters written by the Palestinian community to the Jews in Egypt, calling on them to celebrate the "Feast of Tabernacles in the month of Kislev" (i.e., Hanukkah; see Festivals and Holy Days); 2 Maccabees 3:1-15:39 describes the events of Jewish history, beginning with an episode in the reign of Seleucus IV and ending with Judas Maccabeus's defeat of the Seleucid general Nicanor in the spring of 162 B.C. Second Maccabees 3 is a sort of pre-Maccabean episode that tells how Seleucus IV sent an officer to confiscate the treasury of the Jerusalem temple but was prevented by divine intervention. The rest of the book is on the events leading up to the Maccabean revolt and on the revolt itself. Second Maccabees 4 describes the Hellenistic reform in which Jason took the high priesthood from his brother Onias (III), built a gymnasium and turned Jerusalem into a Greek *polis*. Second Maccabees 5:1-6:11 describes how Jewish worship was suppressed by Antiochus IV. We then come to a description of several martyrdoms in 2 Maccabees 6:12-7:42. Second Maccabees 8-15 is devoted to the exploits of Judas, ending with the great victory over Nicanor.

According to 2:19-31, 2 Maccabees is an epitome or abridged version of a five-volume history of Jason of Cyrene; unfortunately, nothing else is known of this Jason beyond what can be gleaned from 2 Maccabees itself. It is clear, however, that the book was composed originally in Greek and is not a translation like 1 Maccabees. It is debated as to whether the letters that begin the book (2 Macc 1:1-2:18) were a part of Jason's work or were added only to the epitome. Nevertheless, in the present book they form an integral part of the story and message, and they may be a key to its genre.

The exact genre of the book has been debated. It fits the genre of apologetic historiography in many ways, especially in that it defends and exalts a native tradition while using Greek rhetoric to do so (cf. Sterling, 16-19, though he does not explicitly discuss 2 Maccabees in this context; van Henten 1997, 20). It has been ar-

gued that it is "temple propaganda" (Doran), possibly against the temple of Leontopolis in Egypt founded by Onias IV after his father Onias III was murdered (Josephus *Ant.* 12.9.7 §987, though Doran rejects the idea that it is directed against the Leontopolis temple). One of its aims is to commend the celebration of Hanukkah to the Jews of Egypt. This has led to the argument that the book originated as a Jewish parallel to a well-known Hellenistic literary convention, the recommendation to celebrate a *sōtēria* festival ("salvation festival"). The *sōtēria* festival was a local celebration well-known in the Greek world in which the deliverance of a city from grave danger was accomplished by the god(s) and the people, fighting against a foreign power, and was celebrated both by inviting a wide group of neighbors to participate and also by composing a history to chronicle the deliverance (van Henten, 47-50, 248-54, 263-65). If this is correct, 2 Maccabees 1:1—2:18 forms the letter of invitation and 2 Maccabees 3—15 is the document chronicling the event being celebrated.

Since the letter prefacing the book is dated to "year 188 [of the Seleucid era]" or about 125 B.C., the book is no earlier than this time. The book also presupposes Jewish independence, which did not become a reality until the reign of John Hyrcanus (135-104 B.C.). However, the Romans are referred to favorably throughout the book, suggesting it was before they were seen as an enemy, which was the view after the Roman conquest of Jerusalem in 63 B.C. There seems no reason not to assign the date to a time near 125 B.C., that is, the late second century, or approximately the same time as 1 Maccabees.

Several characteristics of 2 Maccabees distinguish it from 1 Maccabees. As already noted, the main focus is on Judas Maccabeus, who is singled out as a great Jewish hero in a way that he is not in 1 Maccabees. Mattathias is ignored, and very little is said about the other brothers. It is Judas who leads the successful restoration of the temple cult and the destruction of the Syrian army. The author has deliberately told the story to end on a high note with his victory over Nicanor, which was not all that long before Judas's death, rather than because he did not know of Judas's death. By the time that 2 Maccabees was written, the story of Judas's death would have been well known, yet it is ignored even though it came not long after the defeat of Nicanor. Another important theme is that of

martyrdom. The last part of 1 Maccabees 6 and especially 1 Maccabees 7 go into painful and even gruesome detail about the deaths of several individuals, especially the mother and her seven sons. This section is extremely important to the book, however, because the deaths of the martyrs are essential for the recovery of Judah. The sins of the Jews have created a breach between them and God, and before future obedience can be given its due the old breach must be repaired. The blood of the martyrs is a vital ingredient for this reconciliation (cf. van Henten, 27).

One section that is widely misunderstood is that of the Hellenistic reform (primarily 1 Macc 4). This episode is often misinterpreted because of the bias of the book itself as well as that of many modern scholars. The initial event was illegal: Jason took the high priesthood from his brother by offering a large sum of money to Antiochus. He also obtained permission to found a gymnasium and turn Jerusalem into a Greek city, or *polis*. Yet from all we can tell, Jason remained firmly committed to the traditional Jewish religion, however much the Greek lifestyle may have been adopted in other respects by some Jews (see Grabbe 1992, 277-81; Grabbe 2000).

The book quotes letters in 1 Maccabees 1:1—2:18, 9 and 11. The first letter (1 Macc 1:1-10a) is probably authentic, but 1 Maccabees 1:10b-2:18 seems to be made of parts of several letters (van Henten, 37). The letters of 1 Maccabees 11 have been widely accepted, but questions remain. Some find a problem with the letter of Antiochus IV (1 Macc 9:19-29), not that he withdrew the decree prohibiting the practice of Judaism but that some aspects of the letter do not fit known Seleucid correspondence. Probably the most questionable is the alleged letter of Antiochus V to Lysias (1 Macc 11:22-26). The dates on the other letters are also a problem, which makes the sequence of letters difficult to sort out; a variety of schemes have been proposed (Grabbe 1992, 262).

3 AND 4 MACCABEES

Third Maccabees and 4 Maccabees are windows into the challenges and concerns of *Diaspora Jews seeking to maintain their identity as God's chosen people. The titles of both are misnomers, as the former deals with Jews under *Ptolemaic rule in Egypt well before the rise of Judas Maccabeus, and the latter celebrates not the military heroes of the Hellenization crisis but rather its steadfast victims. Due to similarities in story and theme, however, these works came to be grouped together with *1 and 2 Maccabees in several *Septuagint codices. Both strongly support strict observance of *Torah and look unfavorably upon compromise of any kind for the sake of the temporary benefits of complete assimilation. Though quite different in content and strategy, both witness to the need of Diaspora Jews to remember who they are and why they must remain separate from the nations around them.

1. Third Maccabees
2. Fourth Maccabees

1. Third Maccabees.

1.1. Synopsis. Third Maccabees opens abruptly with Ptolemy IV Philopator's advance against the forces of Antiochus III at Raphia, near Gaza. After a plot against his life is

thwarted through the timely warning of a lapsed Jew, Ptolemy defeats Antiochus III and goes through the cities in that region to confirm their loyalty to his throne and to encourage them in the aftermath of the war (3 Macc 1:1-8). As was customary for Hellenistic monarchs, he visits sacred sites in order to confer gifts to increase morale. This becomes a problem for the author when Ptolemy enters *Jerusalem and desires to enter the holy place of the *temple there, contrary to local law (Torah). The people flock to the streets in protest and prayer, and Simon, the high *priest, successfully arouses divine intervention. Ptolemy is chastised by invisible forces and, upon recovery, returns to Egypt vowing to inflict vengeance upon the Jewish population there for the repulse he suffered in Jerusalem (3 Macc 1:8-2:24).

Ptolemy's vengeance takes the form of clarifying the civic status of Jews in *Alexandria and the Fayum: those who will assimilate to Hellenistic customs, symbolized by participation in the Dionysus cult, will be enrolled as full citizens; those who do not will be reduced to the status of *slaves, branded as such, and executed if they object. About three hundred Jews accept the benefit of full citizenship at the cost of exclusive commitment to one God; most prefer to suffer loss for their ancestral covenant and even show open contempt for those few who accept the king's offer (3 Macc 2:25-33). This assures Ptolemy of the nation's ill will, so that he now proposes to assemble all the Jews living in his kingdom (save for the apostates) and execute them in the hippodrome (3 Macc 3:1-4:13).

At this point, God's intervention on behalf of his people in Egypt begins. During the registration of the Jews, the king's agents run out of papyrus and pens, allowing some, perhaps, to escape detection (3 Macc 4:14-21). The Jews are herded into the racetrack, and the elephants, which are gathered to trample the Jews to death, are prepared with wine and drugs. In response to prayer, God frustrates Ptolemy's plans first by causing him to sleep through the time appointed for the execution, then by causing the king to forget his plan and become temporarily deranged (3 Macc 5:1-35). On the third day, the king manages to give the order to release the elephants upon the Jews, a sight that fills the victims with a terror portrayed by the author with great pathos (3 Macc 5:36-51). An aged priest named Eleazar silences the screams of the peo-

ple to lead them in *prayer, after which *angels, visible to all but the Jews, frighten the elephants and turn them back on Ptolemy's soldiers (3 Macc 6:1-21). The king repents of his plan, blames his courtiers for leading him into this self-destructive plan and releases the Jews, providing for a seven-day feast for all the Jews and issuing a decree protecting Jewish rights thenceforth (3 Macc 6:22-7:9). The king allows the Jews to execute their co-religionists who had voluntarily apostatized (3 Macc 7:10-16; cf. Deut 13:6-18). Those who were leaving Alexandria celebrated a second seven-day festival as they began their journey (3 Macc 7:17-23).

1.2. Date and Setting. The extreme limits of dating 3 Maccabees are 217 B.C., the battle of Raphia to which the book refers, and A.D. 70, the destruction of the temple, of which the book gives not the slightest hint. Third Maccabees shows striking similarities with 2 Maccabees and the *Letter of *Aristeas*, both frequently associated with Alexandria: it shares vocabulary and phrases found nowhere else in the Septuagint with each of these books, together with common sets of interests (Emmet collects some remarkable data in this regard), and peculiarities of Greek composition (for example, crasis of the definite article). Moreover, it preserves a peculiar epistolary greeting in the king's edicts, which is documented in papyri from 160 to 60 B.C. (Williams). Given these data, a date in the first half of the first century B.C. and a provenance in Alexandria seem most likely. A number of scholars favor a date in the Roman period (Hadas; Tcherikover) mainly on account of the threat of *laographia*, the registration and poll tax that the Romans introduced in 24 B.C. Others, however, point to the regular execution of censuses under the Ptolemies and to the absence of any connection of the *laographia* with taxes in 3 Maccabees (Anderson; Williams). Finally, some scholars have been tempted to link this book with the threat facing Jews under Caligula, but this crisis theory has been ably called into question by H. Anderson and D. S. Williams. Third Maccabees, then, is best read as a work of Egyptian Judaism from the first century B.C. with broader applicability for Jews living in the Diaspora than can be limited to any particular crisis facing the community.

1.3. Genre and Historicity. The genre of 3 Maccabees has been identified as "historical romance" (Hadas): the author was not seeking to

write history but an edifying tale loosely anchored in history. The lack of a single hero or love interest can be ascribed to the author's peculiar moral interests, speaking to the place of the people of *Israel in God's providence and in Diaspora life. While some stress the plausibility of the basic historical outline of the story (e.g., Hadas), others see within the narrative a free expansion of a number of episodes originally unconnected—Ptolemy's victory at Raphia, his census of his kingdom fifteen years later, an isolated episode of persecution under Ptolemy VI Physcon (see Josephus *Ag. Ap.* 2. §§51-55)—now brought together for a specific purpose (Emmet; Williams). Similarities with Esther and 2 Maccabees also suggest conscious literary creativity and patterning rather than historiographical interest.

1.4. Purposes. D. S. Williams's proposal that 3 Maccabees presents a defense of Diaspora Judaism must, in some form, be accepted. He suggests that this book responds to Palestinian Jewish criticism of Jews in the Diaspora who follow not Torah but an imperfect translation of it (cf. the prologue to Ben Sira; see Sirach) and whose very location in exile bears witness to God's lingering displeasure (cf. 2 Macc 1:1-9). The artificial connection of the three events related above strongly supports this thesis. The author opens the scene in the Jerusalem temple, linking the trials of Jews in Egypt with the holy place; similarly, Ptolemy's vow to destroy the Jerusalem temple after he eradicates Egyptian Jewry further links the destiny of the holy place with Diaspora Jews. Furthermore, the main theme of the author is God's protection of these faithful Diaspora Jews: God is quick to hear and answer their prayers for deliverance, a sure sign of God's acceptance of their performance of Torah and fully restored favor. The fact that 3 Maccabees is parallel at almost every point to 2 Maccabees 3:1-10:9 (cf. Ptolemy's attempt on the temple to Heliodorus's repulse in 2 Macc 3:1-40; the choice of apostasy or punishment for fidelity to Torah; the persecution of faithful Jews; the efficacious prayer of an aged priest named Eleazar; God's victory over the Gentile forces; the establishment of a festival commemorating deliverance) suggests that it was composed as a sort of parallel saga for Egyptian Judaism.

Third Maccabees served a second function, reinforcing boundaries between the Jewish population and their Gentile neighbors. The book

holds out the themes of divine election, especially in the prayers of Simon and Eleazar (3 Macc 2:2-20; 6:2-15), providence, the dangers of apostasy (3 Macc 2:31-33; 7:10-16) and the error of Gentile religious thinking in order to strengthen commitment to Jewish custom and Torah among the readers and to challenge the view that assimilation to Hellenism brought advantage (see Hellenistic Judaism). In light of this, it is almost certain that it was not intended for a Gentile readership, which would only be repulsed by the dim light in which non-Jews are presented throughout the narrative (vs. Anderson).

1.5. Value as Witness to Ethnic Tensions Between Jew and Gentile. While 3 Maccabees appears to have little or no influence on later Jewish or Christian authors, it is a valuable window into the world of Egyptian Judaism and its social tensions, providing essential information on the environment of early Christianity.

Gentiles are "alienated from the truth" concerning the one God and true religion (3 Macc 4:16)—a theme that will appear again in *Wisdom of Solomon and Paul's letter to the Romans (cf. Rom 1:21, 25, 28). Provoking the one God through their neglect of true worship, disregard for Jerusalem and hostility toward God's elect people, the Gentiles are "arrogant" as well (3 Macc 1:25-26; 2:2-9; 5:13; 6:9). This is not merely a character flaw but a base vice. In 3 Maccabees we also are given an astonishingly balanced view from the Gentile side. Because of their dietary regulations and exclusive worship of one God, Jews tended to stand apart from the larger society, neither mingling in everyday intercourse nor appearing at public festivals (3 Macc 3:3-7). This *amixia* was interpreted negatively as misanthropy, as rejection of the virtue of civic unity and even as a sign of potential seditiousness. The larger community felt as though the Jews in their midst were not fellow citizens concerned about the common good of the city or reliable friends.

Ptolemy also stands as a frustrated *benefactor of the Jewish nation, and the transformation of his favor into wrath may reveal another source of tension between Jews and Gentile rulers. Ptolemy approaches the temple as a beneficent *patron: the peculiar customs of the place baffle him, and the refusal of the Jews to allow him access to the holy place strikes him as a singular offense. This incompatibility of norms and

values appears also in the different perspectives on citizenship and the cost of acquiring citizenship (3 Macc 2:27; 3:23). What Ptolemy sees as the benefaction of the "priceless citizenship," the Jewish author regards as "inflicting public disgrace" because it involves joining fully in the civic life of an idolatrous culture. He comes to regard the Jews as ungrateful (3 Macc 3:17-19), which is the cardinal sin in a society where patronage and clientage makes the world go round (see Patronage). They "disdain what is good" in rejecting the benefits of full participation in Greek society and thus show themselves base-minded (3 Macc 3:15-24). These tensions within the narrative world reveal sources of mutual misunderstanding in the real world.

The hostility of faithful Jews toward apostate Jews in 3 Maccabees—to the point of enforcing the injunctions of Deuteronomy 13:6-18 against the lapsed—provides important background for the hostility of both Christian and non-Christian Jews to such phenomena as the Pauline mission, which sought to eliminate boundaries and prejudices that had been in place for centuries. Paul's relaxation of Torah observance for Jews within the church no doubt appeared as another Hellenizing movement, another threat to the integrity of the covenant people of God.

2. Fourth Maccabees.

2.1. Synopsis. Fourth Maccabees is not an attempt at historiography but at philosophical demonstration (4 Macc 1:1, 7-8) of the thesis that "pious reason is sovereign over the *pathē*," a term that includes emotions, desires and physical sensations. The author argues that the reasoning faculty that is trained in the Jewish Torah is able to achieve domination over these passions, enabling the person to live a life full of virtue. He discusses at some length how specific Mosaic laws train the adherent in different virtues and sets forth the examples of Joseph, *Moses and David to demonstrate how the mind subject to Torah can overcome lust, anger and irrational desire (4 Macc 1:13—2:18). The author cites as the examples that best prove his thesis those who were martyred under Antiochus IV during the Hellenization crisis of 175 to 164 B.C. (4 Macc 1:7-12; 5:1—18:5; cf. 2 Macc 6:18—7:42).

After setting the scene by recounting the apostasy of the nation's leadership (4 Macc 3:19—4:26), the author tells of the martyrdoms

of the aged priest Eleazar, the seven brothers and finally the mother of the seven (4 Macc 5:1—6:30; 8:1—12:19; 14:11—17:1). The author expands the narrative by creating lengthy dialogues between Antiochus, the representative of Hellenistic culture and criticism, and the martyrs, who respond courageously and cogently to the king's arguments and choose loyalty to God and Torah in the face of extreme tortures. The author returns to his demonstration after the deaths of Eleazar, the seven and the mother (4 Macc 6:31—7:23; 13:1—14:10; 16:1-4) in order to celebrate the achievements of the reason dedicated to Torah in the face of the storm of passions, emotions and sensations. He concludes with an exhortation to the readers to devote themselves to Torah, so as to achieve fullness of virtue and the honors that attend it (4 Macc 18:1-2).

2.2. Date and Setting. The authorship of 4 Maccabees is unknown: while some early church fathers attribute it to *Josephus, this has been almost universally rejected on account of certain historical inaccuracies, different styles and radically different stances toward accommodation to Gentile culture (Townshend; Anderson). The author was a devout Jew who was skilled in Greek composition and *rhetoric (Klauck) and who was conversant in the "philosophical *koinē*" of his time (Renehan). While some scholars favor a date in the Hadrianic period (Dupont-Sommer; Breitenstein), the strongest evidence for establishing a date has been provided by E. J. Bickerman. He places the work between A.D. 19 and 54 on account of the use of certain terms (*nomikos*, *thrēskeia*) and the joining of Cilicia, Syria and Phoenicia into one administrative unit (4 Macc 4:2; cf. 2 Macc 3:5). Attempts to narrow this further to the reign of Caligula are based on the false premise that it must respond to a period of crisis or persecution (so rightly O'Hagan). The author does not suggest that his hearers become martyrs themselves but rather emulate their devotion to the Torah so as to become similarly impervious to the passions that weaken devotion to virtue in any circumstance. The choice of these primary examples suggests tension, even despair of rapprochement between the races, but does not necessitate a period of violent persecution. Many are tempted to place the work at Alexandria (Townshend) or *Antioch (Dupont-Sommer); the former because of the work's interest in *philosophy, the

latter because the relics of the martyrs were said to be preserved there. But given the flow of popular philosophy through all major cities of the Mediterranean and the presence of Jewish populations in many, we cannot be certain concerning its provenance.

2.3. Genre and Purpose. Fourth Maccabees describes itself using the language of "demonstration" and "praise" (4 Macc 1:1, 2, 10; 3:19; 16:2) and so falls within the category of epideictic *rhetoric. It may best be described as a protreptic discourse, an oration that recommends a certain way of life and seeks to arouse commitment to pursue that way of life. Like *Seneca's *De Constantia Sapientis*, 4 Maccabees sets out to demonstrate a proposition of philosophical ethics, uses examples of adherents to the philosophy to prove the proposition and seeks to convert the addressee to the way of life espoused by those examples. Some have suggested that it was composed as a sermon for a festival commemorating the martyrs (Hadas; Dupont-Sommer); it would also have been appropriate for the celebration of Hanukkah, particularly in the Diaspora and particularly after the Maccabean line fell into disrepute; its message would also have been timely for a festival celebrating the giving of the Torah (like Shavuot or Simchat-hattorah). Ultimately, however, it cannot be bound with certainty to any particular occasion. An oration that emphasized the nobility of Torah and the Jewish philosophy would always have been in season as a support for Jews resisting the pressures of assimilation, seeking to maintain self-respect among Gentiles who frequently found their customs and religion dishonorable and incomprehensible (Klauck; deSilva). The author addresses his work to his fellow Jews (4 Macc 7:19; 18:1-2) in order to encourage them to remain loyal to their particular customs, knowing that it produces in them the virtues admired by the Greek world and leads to benefits far surpassing anything the Gentiles can offer.

2.4. Torah and Greco-Roman Ethical Philosophy. The author's thesis is familiar to Greco-Roman ethics (Renehan; Hadas; Dupont-Sommer; deSilva). Stoics and Peripatetics (disciples of Aristotelian ethics) alike stress the danger that the *pathē* pose to virtue: fear or pain can disable courage and endurance; anger can frustrate prudence; pleasure can subvert temperance. For the person to live a life of virtue, it is necessary for reason to gain the upper hand

and control (*Aristotle, *Plutarch and some *Stoics like Poseidonius) or destroy (*Cicero and other Stoics) the passions. Fourth Maccabees clearly lines up with the former school: since the emotions and inclinations are part of God's design, they are not to be eradicated but controlled (4 Macc 2:21). The author is not merely arguing a Greek thesis, however: he sets out to demonstrate that "pious" reason masters the passions and directs one's steps in virtue (4 Macc 1:1; 6:31; 13:1; 16:1; 18:2). This adjective signals the author's main contribution: it is specifically the mind that has been trained by the Jewish Torah that is able to achieve the anthropological and ethical goal almost universally admired by Greek and Roman ethicists (4 Macc 1:15-17; 2:21-23; 5:22-24; 7:18-19; 9:18).

The very laws that Gentiles ridicule, especially Jewish dietary laws (4 Macc 5:5-13), are shown to equip the mind for victory over the passions and for the exercise of every virtue (4 Macc 1:30b—2:14; 5:22-26). The Torah is shown to be a superior guide to virtue than the Stoic law of nature, whose spokesperson in this story is Antiochus himself (4 Macc 5:8-11). Nature, however, teaches love for siblings and love for offspring (described here in terms very similar to those found in Aristotle's *Nicomachean Ethics* and Plutarch's "On Affection for Offspring" and "On Fraternal Affection"; Klauck; deSilva) and thus can even inhibit the domination of reason over these *pathē* (4 Macc 13:19-27; 14:13—15:10, 23-28). Torah is not merely a local, ethnic law inferior to the law of nature (cf. Dio Chrysostom *Or.* 80.5-6) but a law superior to nature as it comes from the Creator of nature (4 Macc 5:25-26). The devout Jew will thus attain every virtue and become the enfleshment of the Stoic sage, unconquered (4 Macc 11:24-27) and uninjured (4 Macc 9:7-9). Those who despise or abuse these paragons of virtue will be the ones to be ashamed (4 Macc 11:4-6; 12:11-14; cf. Plato *Gorg.* 508c-e; Seneca *Const.* 16.3).

Fourth Maccabees' engagement with philosophy helps Jews reject the Gentile society's lack of regard and hold fast to Judaism as the true means of attaining *honor, based on virtues that even Greeks should recognize. The criticism from without is turned back against the detractors, as Jews are now equipped to see in their religion the fulfillment of the virtues that Greek culture lauds as honorable. They may ask themselves why the Gentiles fail to recognize their

worth, but they will not be as sorely tempted to seek Gentile validation of their worth.

2.5. Fourth Maccabees and Early Christianity. The early church appears to have known and appreciated 4 Maccabees. Paul's opponents in Galatia may have used arguments very similar to those found in 4 Maccabees to persuade the Gentile converts that taking on the yoke of Torah would lead them on to perfection (Gal 3:3) by providing them with what was lacking in Paul's gospel—a reliable means of making progress toward virtue and overcoming the "passions of the flesh" (Gal 5:16-17). Fourth Maccabees 2:4-6 provides an instructive parallel to Romans 7:7-24: one Jewish author claims that the very commandment proves that reason can conquer the passions and attain the virtue for which God calls, the other claims that the same commandment awakes the passions and leads to sin.

The letter to the Hebrews bears some striking similarities to 4 Maccabees, both in certain phrases (cf. Heb 12:2 with 4 Macc 9:9; Heb 3:6, 14 with 4 Macc 17:4; Heb 11:35b with 4 Macc 6:12-23 and 9:16) and in the definition of faith as loyalty to the divine Patron (cf. 4 Macc 16:18-22 with Heb 11:6, 35). Most striking, however, is the use of the language of vicarious atonement for the deaths of the martyrs (4 Macc 6:27-29; 17:21-22), which represents a bridge and an important development between the Servant Song of Isaiah 52:13—53:12 and early Christian reflection on the death of Jesus (e.g., Rom 3:25; Heb 1:3; 9:11-15; 1 Pet 1:19; 1 Jn 1:7). NT reflection on Jesus' death shares with 4 Maccabees an emphasis not on blood itself as atoning but on the blood of a specifically righteous person who remains loyal to God, which moves the Deity to accept and deliver God's people (4 Macc 17:21-22; Heb 10:4-10).

Fourth Maccabees shares with NT authors several important rhetorical features, although here the latter provides evidence for a common cultural milieu rather than any suggestion of dependence. In both, *athletic imagery becomes a useful image for transforming the endurance of pain, opposition and hostility from one's peers and society into a contest for a noble victory (4 Macc 16:20; 17:11-16; cf. Heb 12:1-4; Phil 3:12-14; 1 Cor 9:24-27). Both use military imagery to turn physical defeat into spiritual victory (4 Macc 1:1; 7:4; 9:23-24, 30; 11:24-27; 16:14; 18:4; cf. Rev 5:5-10; 12:10-11; 15:2). Both also ex-

PLICITLY contrast temporal advantage or disadvantage with eternal advantage or disadvantage in order to strengthen commitment to the one God in the face of opposition (4 Macc 13:14-15; 15:2-3, 8, 26-27; cf. 2 Cor 4:7-18; Heb 10:34; 11:16, 25-26, 35).

Unlike 3 Maccabees, 4 Maccabees enjoys great popularity into the Nicene period, being alluded to or echoed in varying degrees in the *Martyrdom of Polycarp*, Origen's *Exhortation to Martyrdom* and Eusebius's *Ecclesiastical History* (5.1.53-55). The book forms the basis for sermons by John Chrysostom and Gregory of Nazianzus (Townshend), and the martyrs themselves continued to be venerated in numerous circles of the church.

MAGICAL PAPYRI

The magical papyri are a collection of documents from Greco-Roman antiquity that have come to be recognized as important witnesses to the common folk beliefs and practices of the NT era. Their contents include incantations, rituals, formulas, spells, hymns and a variety of magical symbols, characters and names. The majority of these texts were written in Greek, but some were composed in Demotic, Coptic and even *Aramaic. Written on paper made from the papyrus reeds grown in the Nile region of Egypt, these texts are part of a broader set of witnesses attesting to magic. In addition to parchment manuscripts and the many literary references to magic, there are numerous curse tablets, amulets and a variety of magical items that provide further perspective on the practice of magic.

1. Description of the Papyri
2. The Date
3. The Nature and Significance of Magic
4. Jewish Influence
5. The Magical Papyri and the New Testament

1. Description of the Papyri.

The discovery of magical texts written on papy-

rus took place simultaneous to the discovery of many other papyrus documents, including NT fragments, in the early 1800s in Egypt. The largest and most significant find occurred in the 1820s in Thebes, where some villagers discovered a large number of papyrus rolls in a tomb. Bought by Giovanni Anastasi, the Anastasi collection was subsequently sold in 1828 to a number of libraries throughout Europe, including the Rijksmuseum in Leiden, the Bibliothèque Nationale in Paris and the British Museum. Since then, many additional discoveries have been made. There are now about 230 extant magical papyri.

The Great Paris Magical Papyrus (*P. Bibl. Nat. Suppl. Gr. 574*; PGM IV) has garnered the most attention. The longest of all the texts yet discovered, PGM IV is a papyrus codex containing 36 leaves written on both sides with a total of 3,274 lines. Each leaf measures roughly 30 x 13 centimeters (11.7 x 5 inches). The book appears to have been a collection of magical incantations and formulas belonging to one magician in ancient Egypt. Dating to the early fourth century A.D., the document contains a wide variety of magical traditions from much earlier sources.

The definitive critical edition of the magical papyri was compiled by K. Preisendanz in two volumes titled *Papyri Graecae Magicae: Die Griechischen Zauberpapyri*, published in 1928 and 1931 and now appearing in a second edition by A. Heinrichs (1973-74). References to the magical papyri are customarily cited by the abbreviation of Preisendanz's work (PGM). A projected third volume with indexes was scheduled to be printed, but the Teubner publishing house in Leipzig was destroyed in an Allied bombing raid in World War II. The few surviving galley proofs were never reset and printed. R. W. Daniel and F. Maltomini have begun a re-edition of some PGM texts under the title *Supplementum Magicum*.

H.-D. Betz of the University of Chicago gathered a team of scholars to translate into English the Preisendanz texts, some Demotic papyri and a few other magical papyri appearing since Preisendanz's edition. *The Greek Magical Papyri in Translation (GMPT)* has become the indispensable source for NT students wanting easy access to the contents of these distinctive texts.

2. The Date.

Some NT scholars dismiss the relevance of the magical papyri for NT interpretation because

the majority of the documents postdate the NT. But this response fails to recognize how crucial these documents are for understanding the worldview of the masses in the Greco-Roman empire. There are a number of good reasons for affirming the importance of these texts for NT interpretation.

First, a number of these documents can be dated to the first century A.D. and before. The earliest papyrus is known as the curse of Artemisia (PGM XI) and should be dated to the late fourth century B.C. (see Brashear 1995, 3413). It was incorrectly labeled as fourth century A.D. in the *GMPT*. A few magical papyri can be dated to the first century B.C. (PGM XX, CXVII and CXXII) and the first century A.D. (PGM XVI and CXI). A comparison of these texts with the others demonstrates a strong affinity of vocabulary, forms and rituals. The only observable difference is that there is a development of *vores magicae* (magical use of vowels) and *characteres* (magical symbols) in the later texts (Brashear 1995, 3414).

Second, unlike *Gnosticism, which did not emerge as a religious system until the second century, magic not only existed but also was widely practiced for centuries leading up to the time of Jesus and the apostles. There are numerous references to magical practices in a variety of literary sources. The existence of magical scrolls in the first century is corroborated in part by *Suetonius, who says that Augustus ordered two thousand magical scrolls to be burned in 13 B.C. (Suetonius *Augustus* 31.1; see Betz 1992, xli). In the mid-first century, *Pliny complained that "the fraudulent art has held sway throughout the world for many ages" (Pliny *Nat. Hist.* 30.1.1). He also speaks of "the greatness of its influence" in his day (Pliny *Nat. Hist.* 30.1.1), noting that "magic rose to such a height that even today it has sway over a great part of mankind" (Pliny *Nat. Hist.* 30.1.2; see also 30.4.13).

Third, many of the magical papyri are recipes for the creation of amulets and lead curse tablets. Archaeologists have unearthed more than fifteen hundred of these curse tablets, many dating as early as the fifth century B.C. Hundreds of amulets have also been discovered. These material witnesses have demonstrated that the kind of magic illustrated in the magical papyri was practiced all over the Mediterranean world throughout the *Hellenistic and Roman periods.

Finally, magicians prided themselves on the

antiquity of the traditions they used. Classicists agree that the collections of traditions found in the scrolls have been handed down for generations. G. Luck concludes, "they reflect much older ideas, and the doctrines and techniques they embody were probably developed in the late Hellenistic period. Many are considered to be copies of copies" (Luck, 16).

3. The Nature and Significance of Magic.

In the Roman era, magic was a set of rituals and practices that enabled people to coerce the gods and spirit powers to accomplish whatever they might ask. Fundamental to magic is an animistic worldview. Spirits are everywhere and involved in everything. Spirit beings are associated with the sun, moon, stars and planets; they populate the underworld; they are involved with animal life, plants and the elements. The magical papyri ostensibly provide the directions for managing the spirit realm as it touches on every facet of daily life.

F. Graf notes that "the practice of magic was omnipresent in classical antiquity" (Graf, 1). The magical papyri are particularly valuable in providing us with a window on popular beliefs and practices in the Greco-Roman period. They are the primary source documents of folk belief in the lives of people living at the time of Jesus and the apostles. A. D. Nock went so far as to emphasize the necessity of using the magical texts to interpret the religion of the common people. He writes, "We may and must make use of magical papyri in our attempt to reconstruct the religious attitude of the mass of mankind in the Roman world" (Nock, 34).

Many of the spells in the papyri prescribe rituals and formulas for protection from curses, malevolent spirits and disembodied souls (*biaiothanatoi*) that could cause harm. Such apotropaic, or protective, spells typically involved the performance of a ritual, the uttering of magical words and names of spirits or deities and often the creation of an amulet to be worn. *PGM IV.1932-54* illustrates some of these elements:

I call upon you, lord Helios, and your holy angels on this day, in this very hour: Preserve me, NN [insert name], for I am *thenor*, and you are holy angels, guardians of the *ardimalecha* and [nine lines of *vores magicae* follow], I beg you, lord Helios, hear me NN and grant me power over the spirit of this man who died a violent death [*biaiothanatos*], from

whose tent I hold [this], so that I may keep him with me, [NN] as helper and avenger for whatever business I crave from him.

Related to these protective charms are spells designed to expel harmful spirits and for obtaining healing from various ailments, especially fevers and headaches. Spirits and sickness were seldom separated in the magical texts. Indeed, the spirits were believed to be behind the afflictions.

There are also numerous love spells of attraction in the magical papyri. In these the suppliant summons infernal powers to compel the person who is the object of desire to submit herself to the conjurer. A variety of other forms of maleficent magic fill the pages of the papyri. These consist primarily of curses against enemies (slanderers, thieves, economic competitors, adversaries at a trial and competitors in the games). A recipe for a lead curse tablet (*PGM XXXVI.231-55*) prescribes a ritual involving bat's blood and the body of a frog. Along with the performance of the ritual, the conjurer is instructed to inscribe this curse on the lead tablet: "Supreme angels, just as this frog drips with blood and dries up, so also will the body of him, NN whom NN bore, because I conjure you, who are in command of fire *mashelli mashello*."

The magical papyri are also filled with recipes for the conjuring of a dream vision and the appearance of a spirit guide (*paredros*). The spirit assistant is said to come and reside with the one who accomplishes the bidding.

4. Jewish Influence.

Many Jews, in Palestine and throughout the Diaspora, participated in the magical arts. W. M. Brashear states that "the repute of Jewish magicians exceeded even that of Egyptian sorcerers" (Brashear 1995, 3426). In his study of Jewish magic, P. S. Alexander notes, "Magic flourished among the Jews despite strong and persistent condemnation by the religious authority" (Alexander, 342).

Two magical papyri written in Aramaic have recently been discovered in Egypt, one at Oxyrhynchus and another of unknown provenance (see Brashear 1995, 3428). It is likely that some of the recipes in the Greek magical papyri may have been created by Jews. Alexander lists more than a dozen texts from the *PGM* that were probably composed by a Jew based on the overwhelmingly Jewish content of the texts (Alexander, 357-59). The most noteworthy example is

PGM IV.3007-86, a charm to be used by someone possessed by demons (see Demonology). The demons are conjured by "the God of the Hebrews," and the text makes allusions to the exodus and other key figures and events in the history of Israel.

Of even greater significance is the pervasive influence of Jewish ideas on magic as it was practiced all over the Mediterranean world and is evidenced in the magical papyri. Egyptian sorcerers had great respect for the names of the supernatural powers in Judaism. References to Iao (for YHWH), Sabaoth, Adonai, *Moses, Solomon, Michael, Gabriel, angels, archangels, cherubim and seraphim abound in the texts.

Jewish magic continued into the following centuries and is evidenced in such documents as *Sefer ha-Razim*, *Harba de Mosheh*, *Testament of Solomon* and the magical texts found in the Cairo Genizah (see Schäfer and Shaked).

5. The Magical Papyri and the New Testament.

The importance of the magical papyri for NT interpretation lies in their ability to illuminate folk belief. Alexander aptly states, "they open up areas of popular religion which are often inadequately represented in the official literary texts, and which are in consequence frequently ignored by historians. As an indicator of the spiritual atmosphere in which large sections of the populace lived—rich and poor, educated and ignorant—their importance can hardly be overestimated" (Alexander, 342).

M. Smith made extensive use of the magical papyri to develop the thesis that Jesus' contemporaries understood him to be a magician. This view has been rightly rejected because it fails to take into account the whole of what Jesus said and did, the essential Jewishness of Jesus' teaching and the many dissimilarities of method and worldview between Jesus and contemporary magicians.

A more productive approach has been to use the magical texts to illuminate passages in the Gospels that speak about demons and exorcism, even if for distinguishing Jesus from contemporary beliefs and practices. The magical texts give us insight into the worldview assumptions of people bringing demon-possessed persons to Jesus and the nature of cursing. The texts also help to explain specific lexical items such as *selēniazomai* (e.g., Mt 4:24; "to be moonstruck," but often understood to be an epileptic seizure).

The moon goddess Selene figures prominently in the magical papyri and was believed to cause people to go mad.

In the book of Acts, the magical papyri illustrate the kind of texts burned by the *Ephesian believers (Acts 19:19). But the texts also illustrate many features of certain narratives explicitly involving exorcism and magic, such as Simon the Magus (Acts 9:9-25), Paul's encounter with Elymas the magician (Acts 13:6-12), the failed exorcism of Sceva and his sons (Acts 19:13-16), Paul's exorcism of the *slave girl with the spirit of divination (Acts 16:16-21), and many other passages. S. R. Garrett in particular has made good use of the magical papyri to illustrate some of these features.

Many aspects of the Pauline epistles (see DPL, Magic) and the rest of the NT (see DLNTD, Magic and Astrology) can be illuminated through the use of the magical papyri.

MANUSCRIPTS, GREEK NEW TESTAMENT

There are approximately fifty-five hundred manuscripts of the Greek NT, depending upon

how they are counted. The number is larger than for any other ancient Greek or Latin author or book. This wealth of material for reconstructing the text of the NT, as well as tracing its development, also presents a number of problems due to the varied nature of these artifacts. Here is offered a discussion of the physical character of the manuscripts, a summary of the means by which these manuscripts are classified and then a list and description of several of the most important manuscripts.

1. The Physical Character and Description of the Manuscripts
2. Manuscript Types
3. List of the Most Important Manuscripts
4. Conclusion

1. The Physical Character and Description of the Manuscripts.

There are two major problems in describing the manuscripts of the NT (see Epp 1997, 64-67). These stem from the material on which they are written and the character of the writing on them. There is also the third problem of how pages of material were assembled.

NT manuscripts are written on three major kinds of materials: papyrus, parchment and paper (see Kenyon 1899 for description and plates; see Metzger 1981; Skeat 1995). Papyrus was a readily available writing material, made from cutting the papyrus plant into strips that were then laid together in two layers running vertically and horizontally, pressed and dried. The side with the strips of papyrus running horizontally (often referred to as the recto) was considered the preferable side for writing as opposed to that with the strips running vertically (verso). Parchment was made from animal skins, which were skinned, treated, dried and prepared for writing. The side without hair was preferred for writing, since even though the hair had been removed, pores and other imperfections disrupted the smooth surface of the hair side. However, history has shown that the ink adhered better to the hair side, so that often reading parchments on the side without hair requires deciphering surfaces where only a trace or shadow of ink is present. Once paper had been invented, it too became a surface on which to write manuscripts.

Several factors complicate this differentiation of materials. The first is that the term *papyrus* or *papyri* has come to be used for any material upon which nonpermanent writing was made.

Thus, for example, even though the series is referred to as the *Oxyrhynchus Papyri* (abbreviated *P. Oxy.*), many of the texts are written on parchment, as well as papyrus. There also was not a clear-cut time when papyrus gave way to the use of parchment and then to paper.⁷ Although papyrus appears to have been the earliest writing surface for NT manuscripts, there was significant overlap between papyrus and parchment, at least from the fourth to the eighth centuries. The same is true, although much later, for parchment and paper.

At the outset NT manuscripts were written in a continuous hand of capital letters, or majuscules (distinctions are sometimes made between capitals and majuscules, and majuscules and uncial, but these will not be discussed here). Occasionally accents or punctuation was indicated on manuscripts, and occasionally there was some word separation and even paragraph separation. Around the sixth century manuscripts began also to be used for liturgical purposes. The result was that further diacritical marks began to be added to the manuscript to indicate intonation patterns, besides the addition of various lectionary markings (the Gospel manuscripts also began to incorporate the Eusebian numbers as well). This liturgical marking was fully developed by the tenth century. From the ninth century, manuscripts also were produced in noncapital or minuscule letters in a connected or cursive fashion. Although the latest in date, the vast majority of NT manuscripts are written in minuscule letters.

In discussing NT manuscripts some confusion occurs regarding materials and handwriting due to the fact that all of the papyri are written in majuscule letters, although they are not categorized with the manuscripts written in majuscule hand on parchment. Similarly, majuscule or minuscule hands may be found on parchment or paper. At first NT manuscripts were probably written on scrolls, although it is disputed whether we have any manuscripts that were actually scrolls. We have some papyri that have writing of the NT text on only one side (see below), but these are thought to be *opisthographs*, that is, manuscripts written on reused papyrus (Aland and Aland, 102). The rise of Christianity as a book religion was probably at least in part responsible for development of the book form, called the *codex* (see Roberts and Skeat; Skeat 1994). Rather than having a set of

horizontally connected sheets of papyrus rolled into a scroll with writing on one side only, the *codex* bound gatherings of pages on the end and allowed for writing on both sides of the sheet (see *Literacy and Book Culture*).

In referring to particular manuscripts of the NT, however, there are also potential difficulties. One first must note that each of the manuscripts is given a form of identification according to the library in which it is held or the collection in which it is published. However, in the nineteenth century, when textual criticism began to develop, scholars who were editing critical texts of the NT realized that they needed more broadly encompassing schemes for classifying manuscripts. Although several different systems have been used, the one begun by the American/German scholar C. R. Gregory at around the turn of the nineteenth and twentieth centuries and continued by K. Aland is the one most widely used today (Aland and Aland, 72-75). Each manuscript is given a Gregory-Aland designation.

Manuscripts are classified in the Gregory-Aland scheme as belonging to one of four categories. The first is the papyri (designated with a P) (on the papyri, see Porter, forthcoming). The majority of papyri came to light as part of the vast discoveries of thousands and thousands of papyri in Egypt during the nineteenth and early twentieth centuries. There are now about 116 Greek NT papyri (although some of these are bilingual with Coptic). The first was published in 1868 by C. Tischendorf (Russian National Library Greek 258A; now known in NT textual criticism as P¹¹) and the latest, to our knowledge, in 2000 by Papatomas (P. Vindob. G 42417).

The majuscules, often referred to as *uncials*, are the next category. These are often associated with the *codex* form, although as noted above, virtually all NT manuscripts were part of *codices*. The majuscules, designated by a letter for the most well known, as well as a number beginning with 0, include the major *codices*, such as *Codex Sinaiticus* (ⲛ 01), discovered by Tischendorf in St. Catharine's monastery in Sinai; *Codex Alexandrinus* (A 02), housed in the British Library; *Codex Vaticanus* (B 03), long held in the Vatican library; and *Codex Bezae* (D 05), a bilingual Greek and Latin manuscript, as well as several hundred more (see below).

The third category is minuscules. This category, designated simply with a number (1, 2, 3,

etc.), comprises a huge number of manuscripts written in a lower case and interconnected (cursive) hand. These manuscripts also are in codex or book form, and some of them are beautifully prepared. Their beauty includes not only their handwriting but also the decorations and illuminations that often are part of the presentation.

The fourth category of manuscripts is lectionaries. Lectionaries, designated with *l*, themselves can be written in majuscule or minuscule hands and are also in codex, or book, form. What distinguishes a lectionary is its division into lections for liturgical use.

Besides the several difficulties already noted in terms of inconsistencies regarding handwriting and materials, a number of other specific difficulties emerge. To qualify as a Greek NT manuscript in the first three categories (papyrus, majuscule and minuscule), the manuscript is to have continuous text of the NT on it. What distinguishes the lectionaries is their lack of continuous NT text; they have lections, that is, selections of text used for liturgical purposes, often indicated with division lines and other types of identification. This kind of distinction is not as simple as it first seems. One difficulty is that a number of the papyri have been categorized under the Gregory-Aland system as Greek NT papyri when there is serious question of whether they should be seen as having continuous text. For example, a number of these papyri are small fragments, making it very difficult to know if they had continuous text, even if there is text on the other side. They may not have had continuous text or may have been one small excerpt.

There have also been various questions raised about a number of the papyri: P², P³ and P⁴⁴ have been suspected as lectionaries; P¹², P¹³, P¹⁸ and P²² are opistographs (P¹² is also thought to be notes); P⁵⁵, P⁵⁹, P⁶⁰, P⁶³, P⁷⁶ and P⁸⁰ have been suspected of being commentaries, especially since a number of these manuscripts of John's Gospel have the word *hermeneia* on them (Metzger 1992, 266, disputes this interpretation); P⁷ has been suspected of being a patristic rendition, P¹⁰ of being a writing exercise, P²⁵ of being from the *Diatessaron*, P⁴² of being a song, P⁴³ and P⁶² of being merely selections and P⁵⁰ and P⁷⁸ of being talismans (see Aland and Aland, 102, 85).

A similar kind of situation applies to some majuscules, where there is commentary with the biblical text, in some cases interspersed and breaking up its continuousness (e.g., K 018; X

088; 075). This means that roughly one-fifth of the designated Greek NT papyri are possibly misclassified, as well as some majuscules. It also means that the categorization system may have been unduly harsh on those labeled lectionaries, possibly because they provided larger sections than mere fragments.

Some other manuscripts have been excluded from classification as NT manuscripts but might have some bearing on the textual question. These include, for example, the apocryphal Gospel manuscripts (see Apocryphal Gospels). Some recent scholars have wanted to elevate the status of some of these manuscripts (e.g., the *Gospel of Thomas* found in Greek fragments P. Oxy. 1, 654, 655; P. Egerton 2; portions of the *Gospel of Peter* P. Cair. 10759) to priority over, if not equality with, the Greek NT manuscripts in terms of being the earliest Christian documents. Their priority is seriously questioned by other scholars, most of them seeing the apocryphal Gospels, even the earliest ones, as probably derived from the canonical Gospels.

Nevertheless, such apocryphal Gospel manuscripts may have a potentially important role to play in NT textual criticism. According to the classification schemes used presently, there is no place for them to fit within such a scheme, but one also runs the risk of losing sight of important papyri if the ones mentioned above are demoted and have their Gregory-Aland number revoked. As a result, it has been suggested that it might be wise to introduce a layered classificatory system, in which those manuscripts that clearly are continuous Greek NT manuscripts are included in one category but that other related manuscripts of importance—such as some of the problematic papyri noted above or the apocryphal Gospels—are classified in a second category, so that their importance is not overlooked (Porter, forthcoming; cf. also the scheme found in van Haelst).

2. Manuscript Types.

There have been a number of systems for classification of NT manuscript types. One of the most enduring has been that connected with the Majority Text. Those who subscribe to the Majority Text essentially believe that the text of the Greek NT should follow that of the majority of the manuscripts. Of the approximately fifty-five hundred extant Greek NT manuscripts, approximately 80 percent (or more) of them have com-

mon features. The *Textus Receptus*, a label given to an edition of Erasmus's Greek NT, follows a limited number of manuscripts that fall within this category of the majority of manuscripts (see Wallace, 297-320, in Ehrman and Holmes).

Most textual critics today do not follow the Majority Text but instead recognize a number of different manuscript types (see Metzger 1992 for a history of discussion). In the eighteenth century J. J. Griesbach was instrumental in formulating principles that led to the development of modern textual criticism. In the course of his investigation of the text and transmission of the Greek NT, he grouped manuscripts into a number of different categories. He at one time thought there were five or six different groups but eventually confined himself to three: the Alexandrian, Western and Byzantine types. Griesbach's work was instrumental in both breaking the hold of the *Textus Receptus* on NT textual criticism (the *Textus Receptus* fit within his Byzantine group, which he believed was a later combination of the Alexandrian and the Western) and led to further differentiations of manuscript types.

These developments included a number of important events. One was the compiling of comprehensive lists of Greek NT manuscripts. The first to do so was J. M. A. Scholz, and this work is continued in the Gregory-Aland system (see above). There was also much attention paid to tracing the origins and lines of developments of the manuscripts. Sometimes these origins were associated with particular people and sometimes with places. For example, the Alexandrian manuscript tradition has been associated with Origen, who was said to have taken manuscripts of this type with him from Alexandria. B. H. Streeter (27-50) went the furthest, perhaps, in terms of locating manuscripts with places, in his developing a theory of local texts. Related to this was also much work, in the spirit of classical textual criticism, given to tracing the genealogical relationships (hence reference to families of manuscripts) that existed among texts, a method that persists in classical textual criticism (West) and was used in an earlier period of NT textual criticism (e.g., Kenyon, Westcott and Hort, among others; see Colwell, 63-84) but is not as widely relied upon today.

The most important and lasting classification scheme is that developed by B. F. Westcott

and F. J. A. Hort in 1881 (see Metzger 1992, 132-35). Westcott and Hort differentiated four textual types: the Neutral, the Alexandrian, the Western and the Syrian. The Syrian, the latest of the four, is a conflation of the other textual types, made to harmonize the textual tradition. The *Textus Receptus* followed this tradition and is found in the Gospel portion of Codex Alexandrinus (A 02). The Western text, dated very early, probably in the second century, was an ancient and widespread textual type. This textual type is best known through the bilingual (Greek and Latin) Codex Bezae (D 05). The Alexandrian text, apparently under the influence of Alexandrian literary scholarship, reveals the greatest philological precision (see Alexandrian Scholarship). The Neutral text is the textual type that, at least ostensibly, has raised the most questions regarding Westcott and Hort's method.

According to Westcott and Hort, the Neutral text came closest to the original manuscripts and hence was the one freest from corruption in transmission. This textual type is represented by Codex Sinaiticus (Σ 01) and Codex Vaticanus (B 03). Hence, in their edition, they usually follow these two manuscripts, except in a few places where they note otherwise. These exceptional places they have labeled "Western noninterpolations," recognizing that the Western text preserves an earlier reading. It is worth noting, however, that although most textual critics reject the notion of the Neutral text, the standard editions used today, the Nestle-Aland and the United Bible Societies' Greek New Testament, show surprisingly few deviances from the Westcott and Hort edition, especially considering the fact that only one of the papyri had been discovered and published before the publication of the Westcott and Hort edition in 1881. Hence these editions retain the Neutral text in fact if not in principle (Epp, 13-14, in Ehrman and Holmes).

Most textual critics today would recognize three, and possibly four, textual types (see Metzger 1992, 213-16; Epp 1989, 97-100). These are the Alexandrian, the Western, the Byzantine and possibly the Caesarean text types. The Alexandrian text type is still considered by most textual critics to be the most reliable. Discovery of several papyri that have been dated to the late second or early third centuries have confirmed the earliness of this manuscript tradition, which is thought to go back to the early second cen-

ture. B. M. Metzger (1992, 216) notes that what is called the proto-Alexandrian form of this text has generally shorter readings and does not have the characteristics of later philological improvement that characterize some later Alexandrian texts. The highly regarded place of the Alexandrian text and the dependence of the standard modern editions of the Greek NT upon it have led some textual critics to the belief that the text currently in use is virtually the same as the original. Many would find this to be an overly optimistic position, however.

The second text type is the Western. The Western text has been the subject of much discussion, especially in terms of its widely divergent text for the book of Acts. The tendency of this text toward longer readings has led to much speculation about its origin. Some have thought that it was the result of deliberate editing of an earlier text. However, most scholars today do not see the necessary cohesiveness in the text to commend such a conclusion and believe that it was the result of growth in the manuscript tradition. The Western text did not fare well in the hands of Westcott and Hort, but many textual critics today would give it much higher recognition as preserving original readings in a number of instances. The text appears to have been known fairly early over a wide area of the Mediterranean world, including the East, from the second century on (especially in the church fathers). Some have even posited that the Western version of Acts is at least as original as the one found in the Alexandrian tradition.

The third text type, the Caesarean, earlier in the twentieth century was considered to be a distinct text type. It was often identified with Origen, who had brought it from Egypt where it originated, to Caesarea and then to Jerusalem. The Caesarean text was recognized as having a mixture of Western and Alexandrian readings. Because of this diverse mixture, the text as a type was seen as the least homogeneous. As a result, recent textual criticism has wanted to distance itself even further from seeing this as a distinctive textual type, although without losing sight of the important readings to be found in manuscripts previously put in this category, and referring to them as pre-Caesarean (see Metzger 1992, 290).

The final text type is the Byzantine. This text, called the Syrian by Westcott and Hort and also referred to as the Koine, encompasses the vast majority of manuscripts, including a number of

majuscules, and most minuscules. As mentioned above, it is thought that more than 80 percent of Greek NT manuscripts are of this type, and it is especially found in late manuscripts. Some textual critics have attempted to revive the fortunes of the Byzantine text through reconsidering the quality of its witness (Sturz) or editing and disseminating the Majority Text according to more refined text-critical principles than have sometimes been used in advocacy of this kind of text (Hodges and Farstad).

It is probably fair to say that most textual critics today would recognize far more interpenetration between these text types than would some earlier textual critics. The tendency is far less to try to categorize these manuscripts according to location or genealogy and much more to have them represent a tradition of transmission, regardless of how that transmission took place. Nevertheless, the Alexandrian text type, especially as it is found in the two major codices, Sinaiticus and Vaticanus, and confirmed by discovery of several major papyri, including P⁶⁶ and P⁷⁵, continues to be relied upon in NT textual criticism.

3. List of the Most Important Manuscripts.

This list cannot discuss all or even a substantial portion of the extant NT Greek manuscripts. However, a number of these manuscripts merit brief mention because of their importance in the history of discussion (see esp. Metzger 1992; Kenyon 1975; Aland and Aland, where much of the following information is found).

3.1. Papyri. The papyri have been widely discussed in NT textual criticism, even if they have not been fully appreciated in the task of establishing the Greek text commonly used (see Epp 1989, 103-6). The following are a number that merit discussion (see Epp, 3-21, in Ehrman and Holmes).

P⁴, P⁶⁴, P⁶⁷. Some but not all papyrologists would put these three separately numbered and separately housed fragments together, and virtually all put P⁶⁴ and P⁶⁷ together (see Comfort, 43-54). P⁴ is housed in the National Library in Paris, P⁶⁴ is housed in Magdalen College in Oxford and P⁶⁷ is in Barcelona. P⁴ contains parts of Luke, and P⁶⁴ and P⁶⁷ consist of parts of Matthew. P⁶⁴ and P⁶⁷ were once used in the ancient world to bind together a manuscript of *Philo. Recently C. P. Thiede has argued that the Magdalen papyrus should be dated possibly to

the mid to late first century (see Thiede, 29-42; cf. Thiede, 55-57). His view has not been followed by most scholars (see Head; Skeat 1997).

P¹¹. This papyrus from the seventh century has parts of I Corinthians. Its significance lies in the fact that it was the first NT Greek papyrus to be published, by Tischendorf in 1868. It is housed in St. Petersburg in the Russian National Library.

P¹⁵. Chester Beatty I consists of parts of thirty leaves of a papyrus codex. The manuscript, apart from one portion of several fragments in the Vienna collection, is housed in Dublin. Metzger (1992, 37) describes it as being of the Caesarean type for Mark and between the Alexandrian and Western for Matthew, Luke and John, whereas Acts is Alexandrian. The manuscript has been dated to the early third century and is one of the largest Gospels papyri extant.

P¹⁶. Chester Beatty II consists of eighty-six leaves of the Pauline letters, beginning at Romans 5 and continuing to I Thessalonians, with Hebrews after Romans and Ephesians before Galatians. This manuscript has been variously dated, but the general scholarly opinion is that it is to be dated to around A.D. 200, with some scholars wanting to date it earlier. The most controversial aspect of this papyrus codex is whether it ever contained the Pastoral Epistles. Many scholars have noted the fact that this codex does not have the Pastoral Epistles and appears never to have done so, since the composition of the codex gives a fairly clear idea of how many pages it originally included. However, J. Duff has argued that there is a chance the manuscript did have space for the Pastoral Epistles, since the scribe's writing gets more compact as the manuscript proceeds. There is also the possibility that extra pages were added, a feature that the codex form allowed for. About two-thirds of the leaves of this papyrus are in Dublin, with the rest in the University of Michigan collection.

P⁵². This papyrus in the John Rylands Library in Manchester is generally thought to be the earliest papyrus fragment of the Greek NT, being dated by most papyrologists to somewhere in the first half of the second century (see on *P⁴*). This is a fragment from John's Gospel, the finding of which has implications for the dating and provenance of that Gospel. It makes it difficult to accept a date much later than the end of the first century, since the Gospel had to be

transmitted from its place of authorship, thought by many scholars to be Ephesus in Asia Minor, to Egypt.

P⁶⁶. This number is given to a number of manuscripts. The largest part is the Bodmer Papyrus II located in Cologny-Geneva, with other portions housed as part of the Chester Beatty collection. In all there are parts of about 150 pages. This is an important manuscript because it contains a large portion of John's Gospel and has been dated to around A.D. 200. One of the noteworthy features of this manuscript is the abundance of correction, apparently by the scribe who wrote it out. This manuscript has a mixture of Alexandrian and Western readings.

P⁷⁵. This papyrus manuscript is also housed in the Bodmer collection in Cologny-Geneva and is known as Bodmer Papyrus XIV, XV. This manuscript has been dated from the late second to the early third centuries, and its 102 pages contain large portions of Luke and John. The dating may make it the earliest manuscript of Luke's Gospel (cf. *P⁴⁵*). This manuscript follows the Alexandrian textual tradition.

There are many other papyri worth mentioning. Already mentioned above are some that have peculiarities that make them questionable for inclusion in this category. There are also new papyri being published, and these deserve attention as well.

3.2. Majuscule Codices. The majuscule codices are impressive documents, many of them having been in the possession of important libraries, nations or even individuals for a number of years—sometimes for so many years that their origins before then are unknown. They were obviously valued both for their intrinsic worth as documents but also often for their beauty (see Parker, 22-42, in Ehrman and Holmes).

Codex Sinaiticus (№ 01). This manuscript is a beautifully written and prepared codex from the fourth century, with a combination of Alexandrian and Western readings. It contains a portion of the OT and all of the NT, plus the *Epistle of Barnabas* and parts of the *Shepherd of Hermas*. Much could be said about Codex Sinaiticus, since its history has been filled with intrigue and adventure. It was discovered in the mid-nineteenth century by Tischendorf at St. Catharine's Monastery on Mt. Sinai. His story was that he saved it from being burned by the monks for heating. When he had a chance to examine the manuscript, he realized its significance. The

manuscript apparently at one time included the complete Bible in Greek, but some of the pages are now missing (according to Tischendorf's story, the monks told him they had already burned some pages—pages from the first half of the OT are the ones that are most noticeably missing). Nevertheless, the manuscript still preserves a complete Greek NT, the only complete majuscule NT.

It took Tischendorf several trips back to the monastery and enlisting the patronage of the czar of Russia before he was able to locate the entire manuscript. According to Tischendorf, he was able to persuade the monks to make a gift of the manuscript to the czar, who then paid for it to be published and rewarded the monks. Others contend, however, that Tischendorf in some way tricked the monks into handing over the manuscript, possibly with the promise of returning it. The reception of the payment by the monastery, a supposed receipt from Tischendorf only appearing in 1964, and the general behavior and character of Tischendorf make it difficult to accept the revisionist view of what transpired. In any event, the Soviet Union sold the manuscript to the British Museum in 1933 for one hundred thousand pounds (see Tischendorf; Bell). The entire manuscript of 199 leaves, apart from 43 leaves that Tischendorf had secured on his first visit and that are in the Leipzig University library and 3 leaves still in Leningrad, is now on display in the British Museum. It has been thought by some that Sinaiticus was one of the fifty copies of the Bible commissioned by Constantine for Eusebius to produce in Caesarea.

Codex Alexandrinus (A 02). This beautiful manuscript from the fifth century has been in British possession since the seventeenth century and the reign of King Charles I. Its history before that time is unknown. The manuscript contains most of the OT and much of the NT. In the NT, the manuscript in the Gospels follows the Byzantine text but for Acts, the Pauline letters, and the rest of the NT it follows the Alexandrian text.

Codex Vaticanus (B 03). This fourth-century manuscript is an important Alexandrian text, although its beauty as a majuscule codex was ruined when a later scribe retraced all the letters. It also lacks any of the ornamentation that is often found on codex manuscripts. This has led some to suspect that this manuscript was also

one of the fifty commissioned by Constantine, but that it was rejected. In any event, this manuscript has been in the possession of the Vatican Library since at least the fifteenth century. The manuscript contained the entire Bible at one time but now is missing some of Genesis, the Psalms and several books in the NT (some of Hebrews, the Pastoral Epistles, Philemon and Revelation).

Codex Ephraemi (C 04). This fifth-century manuscript has an interesting history that makes it important to note. In the twelfth century this manuscript was erased, and some of Ephraem's (Ephraem the Syrian) sermons were copied onto it, therefore making it a palimpsest. A number of scholars tried to decipher the writing underneath, but it was not until Tischendorf attempted the task that reasonable success was attained (see Tischendorf). Since that time, further work has been done on deciphering the text and correcting Tischendorf's work.

Codex Bezae, or Cantabrigiensis (D 05). This fifth- or sixth-century manuscript contains most of the four Gospels and Acts and a small fragment of 3 John, with the Gospels in the order Matthew, John, Luke and Mark. It is a bilingual manuscript, written in both Greek and Latin (Greek text on the verso), with the writing in cola, or sense units, rather than continuous uninterrupted lettering. This manuscript was given to the library of the University of Cambridge in 1581 by Theodore Beza, Calvin's successor in Geneva. It is interesting to note that although Beza possessed this text, he does not appear to have used it in his own text-critical work. The text of this manuscript is the best representative of the Western tradition (see above).

Purple Codex (N 022). This sixth-century manuscript, called *Purpureus Petropolitanus*, has silver lettering on purple parchment, with gold ink used for the *nomina sacra* (or sacred names, reduced forms of special words used by scribes in copying manuscripts). The result is a striking and beautiful manuscript. Portions of it are now located in a number of different libraries, including the Russian National Library in St. Petersburg, Patmos, the Vatican Library, the British Museum, the Austrian National Library and individual sheets in a number of other places. Roughly half of the original leaves are now extant, of what was a codex with the four Gospels. The text type is Byzantine.

Many other majuscule codices of importance

could be noted here. Most standard textual-criticism volumes have a description of most of these, including Metzger (1992), Kenyon (1975) and Aland and Aland.

3.3. Minuscules. As noted above, there are many minuscule manuscripts. There is differing opinion among textual critics on their value for textual criticism of the Greek NT. One factor seems to be clear: regardless of how much value one places on them for NT textual criticism, as a whole they have been neglected as manuscripts in their own right (see Aland and Wachtel, 43-60, in Ehrman and Holmes). For the purposes of NT textual criticism, some scholars have noticed that a number of minuscules have a close relationship and so they have put them together into families.

Family 1. This family consists of four minuscules from the twelfth to the fourteenth centuries. They seem to reflect a common text that some have thought could go back to Caesarea in the third and fourth centuries.

Family 13. Originally Family 13 consisted of four medieval minuscule manuscripts, but since then this group, known as the Ferrar group after its first identifier, has been expanded to about a dozen minuscules, copied between the eleventh and fifteenth centuries.

3.4. Lectionaries. Many lectionaries could be discussed. Apart from the early lectionaries, dated to the fourth to sixth centuries (11604, 11403, 11276, 11347, 11354), most of them are thought to be significantly later, around the eighth to eleventh centuries, and hence not as valuable in the text-critical endeavor (see Osburn, 61-74, in Ehrman and Holmes). One lectionary (11403), dated to the fifth century, is the second oldest. Now housed in the Austrian National Library, it consists of excerpts from the four Gospels. It is a bilingual lectionary, with Greek lections followed by Coptic lections.

4. Conclusion.

NT textual criticism is fortunate to have an abundance of materials. The abundance of materials also raises a number of questions regarding the data and handling of them. There is not only the difficulty caused by the sheer abundance of evidence, but also a variety of classificatory and methodological problems must be confronted. One of these is the tendency to rely upon the standard critical editions in circulation today, without realizing the manuscript tradi-

tions that go into their makeup. As noted above, the two major codices, Sinaiticus and Vaticanus, are the basis of these modern editions. Even though more than one hundred papyri have been published since Westcott and Hort first published their edition of the Greek NT, these papyri have not apparently influenced the modern textual tradition as much as some scholars may have thought they should. A second area is to be aware of the peculiarities of a given manuscript, rather than simply classifying it according to its type as designated above. There is a tendency in textual criticism to put into fixed categories the various manuscripts and then to use these categorizations in a determinative way for making text-critical judgments. As a result, the peculiarities of the given manuscript can be overlooked.

MANUSCRIPTS, GREEK OLD TESTAMENT

Manuscripts for establishing the text of the Greek OT (Septuagint) continue to increase in number, especially due to papyrological finds in Egypt and in the Judean Desert. The major categories of Greek manuscripts for the Greek OT include papyri (whether actually written on pa-

pyrus or leather, etc.), majuscule codices and minuscules (see Jellicoe, 175-242; Tov 1992, 137-39; Kenyon, 13-53, for the following information). There are also a limited number of manuscripts that contain later versions of the Greek OT.

Discoveries and publication of papyri from Egypt and more recently from the Judean Desert have increased the number of Greek manuscripts to be used in establishing the text of the Greek OT. For years the earliest manuscript was considered P. Rylands Greek 458, a fragment of Deuteronomy dated to the second century B.C., followed by P. Fouad 266, possibly also a second-century B.C. fragment of Deuteronomy. With the publication of several fragments of the Greek OT from the Judean Desert, there are a number of other early fragments to consider, some of which are possibly to be dated to the second century B.C., the latest date being the first century A.D. These include 4QLXXI^{ev}^a, 4QLXXI^{ev}^b, 4QLXXNum, 4QLXXDeut, 7QLXXExod, 7Q-LXXE^pJer, and possibly others of the Greek fragments found in Cave 7, as well as pap4Q-parExod, a Greek paraphrase of Exodus (Fitzmyer). These manuscripts are important for textual criticism because some seem to attest various versions of the Greek Bible, and they are also significant for establishing the history and development of the text of the Greek OT, including the use of the Greek OT at *Qumran. A very important manuscript for textual criticism is 8HevXIIgr, the so-called Minor Prophets Scroll found in Nahal Hever (Tov 1990), dated to around the turn of the era, and probably associated with the later Bar Kokhba revolt (A.D. 132-135) and having significance regarding the multilingual context of the first and second centuries A.D. (Porter; Pearson). This document, which has fragments of Jonah, Micah, Nahum, Habakkuk, Zephaniah and Zechariah, seems to attest to a proto-Masoretic form of the Minor Prophets in use at this time, often called the *haige*-Theodotion recension. Papyrus manuscripts of the Greek OT continue to be published, and many of these are of importance, although some are of later date. Important among these are: P. Oxy. 3522, a second-century fragment of Job; Berlin Staatsbibliothek Gr. fol. 66 I, II, with fragments of Genesis from the third century; the Freer Greek MS V, with the Minor Prophets, also from the third century; and the Chester Beatty Papyri IV, V, VI, VII, VIII, IX, X, XI, with portions of Genesis, Numbers, Deuter-

onomy, Isaiah, Jeremiah, Daniel, Esther and Ecclesiasticus, and dating to the second to fourth centuries.

Before the discovery and publication of the papyri noted above, textual criticism of the Greek OT was dependent for the most part on the major majuscule codex manuscripts. The most important of these is Codex Vaticanus (fourth century A.D.), which is nearly complete for the Septuagint (it lacks much of Genesis and some of Psalms), and seems to reflect a fairly early Alexandrian text type, although it has some intrusions reflective of Origen's *Hexapla*. Also of importance for its text type is Codex Sinaiticus (fourth century A.D.), although this manuscript now only contains about one-third of the OT and is thought to reflect some later textual developments. There is controversy over the origins and relations of these manuscripts, both in terms of where they were written (Alexandria or Caesarea as two of the fifty manuscripts produced by Eusebius for Constantine) and why Vaticanus is in the condition it is (perhaps unfinished, and written over by a later scribe; see Skeat). Next in importance is Codex Alexandrinus (fifth century A.D.), a nearly complete manuscript (it only lacks about ten leaves), but one that is thought to reflect later translational influences, such as from the *Hexapla*. There are a number of other majuscule codices that also are important for textual criticism, but they are later than these, and hence of relatively less importance. These three major codices, especially Codex Vaticanus, are the ones that have formed the basis for the major critical editions of the Greek OT, such as those of Swete, Rahlfs and Brooke-McLean Thackeray.

The number of minuscule manuscripts (or portions) of the Greek OT is large, perhaps totaling 2,000. However, although there may be occasional important readings found in these minuscules, for the most part they are of tertiary importance in textual criticism, due to their late date and the high proportion that reflect later versions, such as the Hexaplaric and Lucianic. The Alexandrian minuscules are relatively few.

The textual evidence for later versions of the Greek OT is relatively sparse. For example, Aquila's version must be reconstructed from marginalia in a few tenth-century Hexaplaric manuscripts and from citations in the church fathers. Theodotion's version is found complete in a tenth-century Vatican minuscule, partially

in a third-century manuscript (Chester Beatty IX, X), as well as in Syriac translation and some readings in other manuscripts. Symmachus's translation is the least well attested, being found only in fragmentary form in the church fathers.

MARIA THE JEWISH ALCHEMIST

This long-neglected author is important in more than one respect. First, Maria is the first nonfictional alchemist of the Western world; and second, she is the first Jewish woman in history we know to have written and published under her own name. Although her works are lost, extensive quotations and excerpts from them have been preserved in the works of later Greco-Roman alchemists, most notably Zosimus of Panopolis (Egypt, c. A.D. 300), who held her in the highest esteem. It is impossible to say exactly when and where she lived, but Egypt and the period from the first century B.C. until the second century A.D. are reasonable guesses.

We know of the existence of other Jewish alchemists in Greco-Roman Egypt, but only Maria rose to great fame among alchemists of late antiquity and the Middle Ages, which is primarily

due to her invention of several types of ovens and boiling and distilling devices made of metal, clay and glass, and to her extraordinary skill. Her most famous invention (or at least description) is that of the *balneum Mariae*, a water bath consisting of a double vessel, of which the outer one is filled with water while the inner vessel contains the substance that must be heated to a moderate degree (the French expression *au bain Marie* derives from it).

Zosimus usually refers to her as Maria but sometimes as Maria Hebraia or even the divine Maria (others call her the Hebrew prophetess). Her Jewishness is also apparent from the fact that she says that the Jews are the chosen people and that only they, not the Gentiles, should know the deepest alchemical secrets. She is reported to have told others not to touch the philosophers' stone with their hands, "since you are not of our race, you are not of the race of Abraham." Maria claims that alchemical procedures were revealed directly to her by God, thus laying the foundation for a long tradition of alchemical esotericism in which Jews played such a significant role. From the quotations by later authors Maria appears as an erudite person, well versed in the traditions and lore of her science (she is the first to mention hydrochloric acid), for whom alchemy was more than an attempt at transmuting base metals into gold. It was a comprehensive religious worldview that assumed an essential unity underlying all of nature and in which the God of Israel acted as guarantor of this unity. In subsequent centuries, Maria became identified with Miriam (= Maria), the sister of Moses.

MARRIAGE

Although ancient Mediterranean marriages and gender roles were quite different from those in modern Western nations, they also varied

among themselves. This article examines ancient Mediterranean views concerning marriage, childbearing, singleness, celibacy and monogamy; the beginning of marriage; and gender roles in marriages.

1. Marriage, Childbearing and Celibacy
2. Beginning Marriage
3. Gender Roles in Marriage
4. Summary

1. Marriage, Childbearing and Celibacy.

1.1. Marriage as a Norm in Greek and Roman Sources. Most people in the ancient Mediterranean world felt that marriage was the norm. Early *Rome required Romans to marry and rear their children (Dionysius of Halicarnassus 9.22.2); the later republic continued to advocate marriage (Aulus Gellius *Noct. Att.* 1.6). In the early empire (see Roman Empire; Roman Emperors), propagandists for the policies of the Roman state advocated marriage, as did Augustus's laws, at least for the aristocracy (e.g., Dixon, 22, 24, 71-103). Most young women reportedly longed for marriage (Apuleius *Met.* 4.32), and tomb *inscriptions underline the tragedy of dying unmarried (e.g., Lefkowitz and Fant, 11). It was also tragic for young men to die unmarried (Pseudo-Demosthenes *Against Leochares* 18).

1.2. Preference for Celibacy or Singleness in Greek and Roman Sources. Marriage remained the norm, but some people did refuse to marry because they feared broken trust (Plutarch *Dinner of Seven Wise Men* 21, *Mor.* 164B); others preferred exclusively homosexual practices (e.g., Clinias in Achilles Tatius *Leuc.* 1.8.1-2). Celibacy for religious reasons was considered praiseworthy, as evidenced specifically by Rome's vestal virgins (e.g., Livy *Hist.* 4.44.11-12; Appian *Rom. Hist.* 1.1.2; *Civ. W.* 1.6.54); the divine displeasure incurred by their voluntary defilement could be propitiated only by death (Dionysius of Halicarnassus 2.67; 9.40.3-4; Livy *Hist.* 8.15.7-8; 14; Plutarch *Quaest. Rom.* 83, 96, *Mor.* 284A-C, 286EF; Dio Cassius *Hist.* 67.3.3-4; Herodian *Hist.* 4.6.4). Some other cult priestesses were also virgins, whether until puberty (Pausanias *Descr.* 2.33.2) or until death (Pausanias *Descr.* 9.27.6). Normally a man could not embrace a sacred figure executing her duties (Euripides *Iph. Taur.* 798-99), and worshippers of many deities had to abstain from sex during the rites (Propertius *Elegies* 2.33.1-6; Ovid *Met.* 10.431-35). The priests of Cybele, the Galli, were pledged to celibacy: their initiation

rite included their castration (e.g., Lucian *Syrian Goddess* 51; Lucretius *Nat.* 2.614-15); but in contrast to the vestal virgins, the Galli usually elicited merely crude satire (e.g., Horace *Sat.* 1.2.120-21; Martial *Epigr.* 1.35.15; 3.24.13). -

Some classical Greek *philosophers had reservations about marriage (Diogenes Laertius *Vit.* 4.48; 6.1.3; 10.119; Aulus Gellius *Noc. Att.* 5.11.2); this was especially true of the Cynics, who complained that it involved distraction (Diogenes Laertius *Vit.* 6.2.54; Epictetus *Disc.* 3.22.69-76; Diogenes *Ep.* 47). Cynics had other ways of relieving their sexual appetites, sometimes even publicly, so their singleness does not represent a pledge to celibacy (Diogenes Laertius *Vit.* 6.2.46, 69). But it does indicate that not everyone shared the prevailing Greco-Roman emphasis on marriage. Even Cynics made at least one exception: despite the skepticism of her male colleagues, the woman Hipparchia proved able to embrace the Cynic lifestyle, and the head of the Cynic school married her (Diogenes Laertius *Vit.* 6.7.96-97). Some philosophers also discouraged intercourse, at least during much of the year (Diogenes Laertius *Vit.* 8.1.9). Others, especially *Stoics, sometimes defend marriage or intercourse (Epictetus *Disc.* 3.7.19; Diogenes Laertius *Vit.* 7.1.121); like Paul, they felt that marriage was better for some, celibacy for others (1 Cor 7:7; see Balch 1983; on celibacy and marriage in antiquity, see Keener 1991, 68-78).

1.3. Marriage and Procreation in Mediterranean Antiquity. Although few people viewed marriage as purely for procreation, procreation provided one vital incentive for pursuing it. Hesiod had warned that avoiding marriage left one childless (Hesiod *Theog.* 602-6), although having a wife and children had its own disadvantages (Hesiod *Theog.* 607-12). Many philosophers, among them the Pythagoreans, emphasized the importance of begetting children to propagate society (*Pythagorean Sentences* 29; Thom, 109). Some of more conservative moral bent did limit the purpose of intercourse to procreation (Lucan *Civ. W.* 2.387-88). In the period of the early empire, Augustus enacted laws to encourage the aristocracy to marry and produce children (e.g., Dio Cassius *Hist.* 54.16.1, 7; Gaius *Inst.* 2.286a; Rawson, 9). Some scholars attribute the low birth rate in Rome in this period to the regular practice of hot baths, which can reportedly reduce male fertility (see Devine).

Not everyone wanted more children; some

resisted the new emphasis on childbearing (see Dixon, 22-23). Some resorted to magical contraceptives (PGM LXIII.24-28) or other contraceptive means they thought were medically sounder (e.g., *b. Nid.* 45a; contraception and abortion were not as widespread as some have argued [see Frier]). Child abandonment was frequent (e.g., Quintilian *Inst. Orat.* 8.1.14; Juvenal *Sat.* 6.602-9). Nevertheless, the debate over such practices appears to have been heated. Stoics (Malherbe, 99), Egyptians (Diodorus Siculus *Bib. Hist.* 1.80.3) and Jews (e.g., *Sib. Or.* 3.765-66) condemned child abandonment; *Judaism also condemned abortions (e.g., Josephus *Ag. Ap.* 2.25 §202; *Pseud.-Phoc.* 184-85; in early Christianity, see Lindemann). Many philosophers (e.g., Heraclitus *Ep.* 7; Den Boer, 272), physicians (see Gorman 19-32), and others (e.g., Chariton *Chaer.* 2.8.6-9.11) disliked abortion; ancients debated whether the embryo was a person and therefore whether or not abortion should be legal (Theon *Progymn.* 2.96-99).

1.4. Marriage and Childbearing as a Norm in Early Judaism. Early Judaism emphasized childbearing even more than imperial propaganda did (see Ilan, 105-7). *Josephus claimed that biblical law allowed intercourse only for procreation (Josephus *Ag. Ap.* 2.25 §199). *Philo claims that a man who knowingly marries a woman who cannot bear children is an enemy of God and nature and acts like an impassioned animal (Philo *Spec. Leg.* 3.6 §36).

The later *rabbis also remained emphatic about the importance of procreation. Rabbis attributed the necessity of procreation to God's command to be fruitful and multiply, because humans are made in God's image (e.g., *m. Yebam.* 6:6; *Pesiq. Rab Kah.* 22:2; cf. *m. Git* 4:5); reportedly as early as the late first century, it was taught that one who refrained from seeking children was "as though he had diminished the image of God" (*Gen. Rab.* 34:14). Thus starting with Adam, begetting children was a divinely ordained duty (*Gen. Rab.* 23:4), and neglecting to beget children came to be viewed as nearly equivalent to killing them (*Ex. Rab.* 1:13; cf. Josephus *Ant.* 4.8.40 §290; *Abot R. Nat.* 31A). One late rabbi said that God nearly let Hezekiah die young to punish him for not trying to have children sooner (*b. Ber.* 10a). Others claimed that one should remarry and continue siring children in old age (*b. Yebam.* 62b, possibly tannaitic tradition). P. E. Harrell cites one Jewish source

as saying that procreation was more meritorious than building the *temple had been (Harrell, 62). One should not marry on holy days when one could not procreate (*y. Git.* 4:5 §2).

Whereas Roman *law permitted but did not require *divorce for childlessness (Rawson, 92; Gardner, 81; Appian *Civ. W.* 2.14.99; Aulus Gellius *Nox. Att.* 4.3.2), rabbis required husbands to divorce their wives who proved unable to bear children, although they were to allow a trial period of ten years (*m. Yebam.* 6:6). Such divorce was sometimes viewed as a tragic necessity (*Pe-siq. Rab Kah.* 22:2), but any form of wasting semen was a terrible sin (*b. Nid.* 13a; some argue that the practice was probably less stringent than this—Baskin). The basic custom of divorce for childlessness undoubtedly predates the rabbis: Pseudo-Philo claims that a wife in Judges 13:2 who could bear no children was on the verge of being divorced (Pseudo-Philo *Bib. Ant.* 42:1). Likewise, the only specific offense Josephus mentions when he notes that he divorced his wife for her behavior is that two of the three children she had borne him had died (Josephus *Life* 76 §426).

1.5. Celibacy in Early Judaism. Marriage was the norm for most Judean and Galilean Jews in the Roman period (see Jewish History: Roman Period), but exceptions existed. Under particular circumstances, even some rabbis sometimes allowed prolonged abstinence (cf. Ostmeyer, though they normally recommended divorce if the husband withheld intercourse more than two weeks—*m. Ketub.* 5:6). If they had the permission of their wives, married men sometimes left home to study with a rabbi (e.g., stories about second-century rabbis in ARV 6A; *Gen. Rab.* 95 MSV), as did Jesus' disciples in the first century (Mk 1:18-20; 10:28-29). One early second-century teacher reportedly agreed with the *rabbinic consensus that procreation was a sacred duty yet personally abstained to allow himself more time to study Torah, much to his colleagues' disdain (*t. Yebam.* 8:7).

Rabbis also sometimes permitted temporary celibacy under extreme circumstances. Because women were often considered unreliable, one second-century rabbi hiding from the Romans allegedly kept his whereabouts a secret from his wife (*b. Sabb.* 33b); while in the ark, Noah had to abstain from intercourse (*y. Ta'an.* 1:6 §8; cf. *Num. Rab.* 14:12). Although they did not approve of the practice in their own time, some

rabbis apparently thought biblical prophets might temporarily abstain to secure divine revelation (Vermes, 100-1; ARV 2A; 2 §10B).

Some first-century, prerabbinic traditions seem more open to celibacy than the rabbis were (McArthur). Some scholars have argued that circles as diverse as those represented in *I Enoch* and Philo promoted temporary abstinence to secure revelations (Marx), yet this was hardly widespread. Others find in Philo an apparent sexual asceticism, modeled especially by the Therapeutae and dependent on a spiritual marriage with Wisdom (R. A. Horsley). Some other Jewish traditions refer specifically to emergencies: because Pharaoh was killing their sons, the Israelites in Egypt began abstaining (Pseudo-Philo *Bib. Ant.* 9:2, but cf. 9:5). In one pre-Christian source, Jacob abstained from marriage until he was more than sixty years old so as to avoid marrying a Canaanite (*Jub.* 25:4; cf. *T. Iss.* 2:1-2). Probably mirroring some Greek conceptions, *2 Baruch* misinterprets Genesis so that parental passion and conceiving children resulted from the fall (*2 Bar.* 56:6), but the writer nowhere advocates celibacy.

Many of these exceptions are temporary and emergency concessions, and none of them seems to have been widespread or well-known. More well-known, though still exceptional, would have been the undoubted celibacy of wilderness prophets like Banus (Josephus *Life* 2 §11) and John the Baptist (Mk 1:4-6). In antiquity, however, the most widely cited example of Jewish celibacy was the *Essenes (Josephus *Ant.* 18.1.5 §21; Philo *Hypoth.* 11.14-18; Pliny *Nat. Hist.* 5.15.73). Some scholars dispute whether the Essenes were celibate or at least were celibate in all periods (Marx; Hübner), yet various ancient sources converge to indicate that some Essenes were celibate. The evidence suggests both celibate and married Essenes, as Josephus also indicates (Josephus *J. W.* 2.8.2 §§120-21, 13); it is possible that many Essenes who lived in the cities were married (in the **Damascus Document* and **Temple Scroll*), whereas most of those in the wilderness were celibate (the **Rule of the Community*). Even at *Qumran in the wilderness, some women's skeletons indicate that in some period of the community's history, a few women lived there (perhaps a third of the tombs—Elder); some of the texts appear to agree (Baumgarten). But the skeletal evidence also suggests that women were the minority and probably excep-

tional (perhaps in one period some already married men were permitted to bring their wives). Some Greek thought may have influenced the ideal of celibacy among Qumran's Essenes, but elements of the Israelite prophetic tradition (Thiering) are also possible antecedents.

Mirroring the rise of sexual asceticism in some circles in late antiquity, some early Christians regarded abstention from intercourse as pious (1 Cor 7:5-6; *Acts Jn.* 68; *Acts of Paul* 3.5-8, 12), although others clearly indicated that Christians could marry and bear children (1 Cor 7:27-28; 1 Tim 5:14; *Diogn.* 5), as well as be celibate (Mt 19:10-12; 1 Cor 7:25-40).

1.6. Monogamy. Some peoples on the periphery of the empire reportedly practiced polygamy, including Thracians, Numidians and Moors (Sallust *Iug.* 80.6; Sextus Empiricus *Pyr.* 3.213; cf. Diodorus Siculus *Bib. Hist.* 1.80.3 on Egypt); writers also alleged that some distant peoples merely held children in common (Diodorus Siculus *Bib. Hist.* 2.58.1). Although a few Greek philosophers supported group marriage (Diogenes Laertius *Vit.* 6.272; 7.1.131; 8.1.33), Greek culture as a whole forbade it (e.g., Euripides *Androm.* 465-93, 909). Likewise, Roman law prohibited polygamy, which bore as its minimum penalty *infamia* (Gardner, 92-93; Gaius *Inst.* 1.63; Dionysius of Halicarnassus 11.28.4); Roman wives found the notion of polygamy abhorrent (Aulus Gellius *Noc. Att.* 1.23.8).

Although the practice was not common, early Palestinian Judaism allowed polygamy (*m. Sanh.* 2:4), and it was practiced at least by some wealthy kings (Josephus *J.W.* 1.28.4 §562). The early sage Hillel reportedly complained against polygamy, but mainly because he felt wives could be dangerous, especially in large numbers (*m. 'Abot* 2:7). Nevertheless, the vast majority of Jewish men and all Jewish women were monogamous, and some conservative sectarians forbade polygamy, including for rulers (CD 4:20-5:2; 11QTemple 56:18-19). More significantly, Jewish people outside Palestine followed the regular Greek practice of avoiding polygamous unions (cf. Frey, cxii).

Other kinds of multiple sexual arrangements were more common than polygamy, although they were not always legal. Greeks did not always approve of holding concubines, but they recognized the practice among other peoples (Athenaeus *Deipn.* 13.556b-57c). Roman law also forbade holding a concubine in addition to a

wife (Gardner, 56-57), and early Romans regarded concubines as infamous (Aulus Gellius *Noc. Att.* 4.3.3). Jewish legal experts refer to concubinage in biblical times, but in their literature treat as a contemporary parallel only intercourse with female *slaves, which they condemn (Safrai, 748-49).

Nevertheless, many men in this period, especially those of lower social status, acquired concubines (Gardner, 57-58). Their unions lacked legal standing, but custom elevated them above merely temporary affairs (O'Rourke, 182). Concubinage was especially common in the military (see, e.g., *OGIS* 674; Lewis, 141), since soldiers could not legally marry until they had completed their term of military service, a period that lasted more than twenty years. Two decades was a long time to wait, and romances were consequently more readily forgiven (Fabius Maximus 4, in Plutarch *Sayings of Romans, Mor.* 195E-F), though it was better to avoid them (cf. Scipio the Elder 2, in Plutarch *Sayings of Romans, Mor.* 196B). In some military discharge documents from the first century Roman officials grant soldiers the legalization of their prior unions as marriages, adding the stipulation that they have only one woman each (Sherk, 99-100, 154; Gaius *Inst.* 1.57). Similarly, *Pseudo-Phocylides* 181 warns against having intercourse with one's father's concubines (plural).

2. Beginning Marriage.

2.1. Age at Marriage. Greeks and Romans were familiar with other cultures that married women around age fifteen (*Ninus Romance frag.* A.3) and reportedly much earlier (Arrian *Ind.* 9.1). In classical Greek culture, Athenian girls usually married younger than did Spartan girls, often before fifteen (Den Boer, 39, 269); the average age, however, was probably late teens (Hesiod *Op.* 698). In the Roman period, a high percentage of Roman girls were married in or by their late teens (Shaw); thus, for example, Quintilian mourns that his wife died after bearing him two sons and before the age of nineteen (pref. 4). Augustus's laws permitted girls to be betrothed as young as the age of ten and married as young as twelve (Gardner, 38; Rawson, 21), and many girls were married by the age of fifteen (Pomèroy 1975, 14; cf. Ovid *Met.* 9.714). In samples with the higher figures (not all run this high), nearly 40 percent of women were married before age fifteen and nearly 75 percent before

age nineteen; in one sample 8 percent were married in some sense before age twelve (Gardner, 39). Seventeen or eighteen was a common age of marriage for most upper-class women, though Augustus's legislation did not penalize them for singleness until the age of twenty (Rawson, 22).

Roman boys could not legally marry before fourteen or physical signs of puberty (Gardner, 38), but Roman males were usually older, often twenty-five or older (Saller). Although Greek men could marry by eighteen (*Mantitheus Against Boeotus* 2.12 in Demosthenes, LCL 4:488-89), thirty seems to have been most common (Hesiod *Op.* 695-97). Some scholars have proposed that Greek men tended to be at least a decade older than women because of a shortage of women due to the more frequent abandonment of female infants (see Lewis, 54-55).

Jewish writers and teachers advocated marrying early, partly to propagate one's family name (e.g., *Pseud.-Phoc.* 175-76; *b. Pesah.* 113b) and partly to protect young men from sexual passion (Sir 7:23; *b. Qidd.* 29b; *b. Yebam.* 63ab). Eighteen to twenty was considered an appropriate age for a man's marriage (*m. 'Abot* 5:21; cf. IQSa 1:10; see Rule of the Congregation). Though men sometimes married later than twenty (e.g., *Clf* 1:409 §553), many later rabbis complained that men who were twenty or older and still not married were sinning against God (*b. Qidd.* 29b-30a, from the second-century school of Rabbi Ishmael). Women usually married in their teens, such as at thirteen or sixteen, but some were older than twenty (Ilan, 67-69).

2.2. Potential Marriage Partners. Many ancient male writers expressed a preference for virgins (Hesiod *Op.* 699). Jewish men usually seem to have preferred virgins (Josephus *Ant.* 4.8.23 §244); *priests could marry only virgins or the widows of priests, and the high priest could marry only a virgin (Josephus *Ant.* 3.14.2 §277).

Contrary to what one might expect, not all men preferred marrying a wealthy woman. That Plutarch warns against wives relying on their dowry, or wealth brought into the marriage, suggests that some must have done so (*Bride* 22, *Mor.* 141AB). Josephus claims that the law forbids marrying a wife on account of money (Josephus *Ag. Ap.* 2.25 §200), though one wonders the degree to which he followed this advice (Josephus *Life* 76 §427). Some men considered a wealthy wife to be worse; if the marriage did not

turn out well, her dowry could become a deterrent from being able to divorce her (*Pseud.-Phoc.* 199-200).

Greeks and Romans recognized some days as more auspicious for marriage than others (Apuleius *Met.* 2.12; cf. Plutarch *Quaest. Rom.* 86, *Mor.* 284F), and Roman widows married on a different day of the week than did virgins (Plutarch *Quaest. Rom.* 105, *Mor.* 289A). If later rabbinic passages may reflect more widespread Palestinian Jewish customs in the first century A.D. in this case, Palestinian Jewish virgins were married on the fourth day and widows on the fifth (*m. Ketub.* 1:1; *b. Ketub.* 2a; *y. Ketub.* 1:1 §1; *Pesiq. Rab Kah.* 26:2).

The ancient Mediterranean world knew nothing of the modern prejudice against interracial marriage, which presupposes a concept of race equally foreign to them (see Snowden, 94-97). But ancients often contemplated the complications of marriage across class lines. Thus a maxim warned against marrying a wife of higher status than oneself (Plutarch *Lib. Educ.* 19, *Mor.* 13F-14A). Likewise, legislators regularly addressed the status of the children of socially mixed marriages. In earlier days, patricians and plebeians could not intermarry (Dionysius of Halicarnassus 11.28.4), though this prohibition was no longer in effect. When both parents were Romans, the child adopted the father's legal status; when neither was Roman, the child adopted the mother's status (Ulpian *Rules* 5.8-9 in Laskowitz and Fant, 192). Only Roman citizens normally contracted official Roman marriages, but Romans sometimes granted such marriages to Latins and foreigners marrying Romans, out of concern for the status of the children (Gardner, 32). Marriages between free Romans and slaves who had not yet been freed were not legal (Weaver, 149-51).

Jewish legal experts also discussed the suitability of intermarriage among classes, especially among lay Israelites, Levites and priests (*t. Sanh.* 4:7); a few questioned whether children of earlier competing *Pharisaic schools should have intermarried (*y. Qidd.* 1:1 §8). Rabbis warned against marrying a daughter of an *am ha'aretz* (one who ignored the rabbinic understanding of the law) lest one die and one's children be reared badly (*b. Pesah.* 49a, *Bar.*)

But the issue for Jewish interpreters became most serious when it involved intermarriage between Jews and Gentiles. For some teachers, the

offspring of pagans would neither live nor be judged in the world to come (*t. Sanh.* 13:2), but marriage between Jews and Gentiles complicated the question. Some rabbis claimed that a child that an Israelite woman bore to a Gentile or a slave was illegitimate (*y. Git.* 1:4 §2). A child conceived in the womb of a proselyte was himself a full Israelite, but if his mother converted between his conception and his birth or if his father fulfilled only part of the conversion ritual, his Jewish status was incomplete (*b. Sanh.* 58a; *y. Qidd.* 3:12 §8); the son of Esther and Ahasuerus was thus only half pure (*Esther Rab.* 8:3). This is probably what Paul means in 1 Corinthians 7:14, where he probably implies that children with one believing parent remain within the sphere of the gospel's influence.

That some of the Corinthian Christians may have wished to divorce on the grounds of spiritual incompatibility (1 Cor 7:12-14) may reflect a tradition of Jewish interpretation: one text claims that it is God's will for Israelite men to divorce pagan wives they wrongly married (1 Esdr 9:9); a husband might also divorce his wife for behavior that he regarded as ungodly (*Sir* 26:1-3; *t. Dem.* 3:9). Under Roman law, children normally went to the father in the case of divorce (Pomeroy 1975, 158, 169).

2.3. Betrothals, Dowries and Other Arrangements. Tannaitic interpreters, probably reflecting broader social custom on family matters, recognized women as persons but in legal matters disposed of their sexuality as chattel (see Wegner, 40-70), as required by traditional Middle Eastern and Greco-Roman customs regarding bride price and dowry.

From the time of Augustus, who desired to replenish especially the aristocracy, Roman law required marriage within two years after betrothal (Dio Cassius *Hist.* 54.16.7). Jewish couples probably normally married a year after their betrothal (*m. Ketub.* 5:2; *m. Ned.* 10:5; Safrai, 757).

Greek custom required a family provide a daughter with a dowry at marriage (Diodorus Siculus *Bib. Hist.* 32.10.2); affluent families often showered her with wealth, but some poor families abandoned infant daughters on trash heaps because they would not be able to provide a dowry (Lewis, 55). The girl's dowry usually corresponded to the degree to which she was considered attractive (Pseudo-Demosthenes *Or.* 59, *Against Neaera* 113). Because of potential conflicts of interest, Roman spouses could not re-

ceive gifts from one another or from most in-laws (Plutarch *Quaest. Rom.* 7-8, *Mor.* 265E-266A).

Husbands controlled all the property (Plutarch *Bride* 20, *Mor.* 140-41), and a dowry was a gift from the in-laws—socially expected but not legally required—to help the new husband cover the expenses he was incurring by getting a wife (Gardner, 97). But if a husband divorced his wife, he would have to release her, paying her back her dowry (e.g., *CPJ* 1.236-38 §128), and some contracts required him to add half to it if he had mistreated her in violation of the contract (Lewis, 55). Because the dowry was usually spent by this point, it provided a monetary deterrent against frivolous divorce. Rabbinic law on dowries to a great extent reflects the larger Mediterranean and Middle Eastern legal milieu of which it was a part (Cohen, 348-76; Geller). By preparing to divorce Mary privately rather than taking her before judges, Joseph may have forfeited his legal right to impound an allegedly unfaithful fiancée's dowry (rabbis said she could lose it for as little as speaking with another man [*m. Ketub.* 7:6]) in order to avoid her humiliation (*Mt* 1:19).

In Hellenistic Egypt, men and women often contracted the marriage directly with each other (Verner, 36-37). Parents usually arranged Palestinian Jewish marriages through intermediaries (agents; *t. Yebam.* 4:4). Both Roman and Jewish law recognized the use of agents, or intermediary marriage brokers, in betrothals (Cohen, 295-96). Betrothal was legally binding and left the survivor of the man's death a widow (*m. Ketub.* 1:2; *m. Yebam.* 4:10; 6:4). Although a betrothed couple like Joseph and Mary did not live together or have intercourse, their union was as binding as marriage and could thus be dissolved only through death or divorce (*m. Git.* 6:2; *Ketub.* 1:2; *Yebam.* 2:6).

2.4. Weddings. Jewish weddings normally lasted seven days (cf. *Tob* 11:19; *Jos. and As.* 21:8 in *OTP*, 21:6 in Greek text; *Sipra Behuq.* *pq.* 5.266.1.7); the fourteen days of *Tobit* 8:19-20 was apparently exceptional, a celebration due to Sara's deliverance. Many of the closest associates of the bride and groom remained the full seven days (*t. Ber.* 2:10), but extant tradition suggests that blessings would be repeated for those who arrived later in the feast (Safrai, 760). The first night was presumably the most essential, however; if traditional Middle Eastern weddings provide a clue, feasting during the wedding

night itself may have been the most important (Eickelman, 174; cf. Mt 25:10-12). Palestinian Jewish wedding parties included the *shoshbin*, apparently an esteemed friend (*m. Sanh.* 3:5; cf. Jn 3:29), though all one's friends would join in the joy of the wedding (1 Macc 9:39). A *shoshbin* of higher status than the groom seems to have been preferred (*b. Yebam.* 63a).

Well-to-do fathers and *patrons were known to invite large numbers of people, sometimes whole villages, to celebrations, including a child's wedding (Chariton *Chaer.* 3.2.10; Diodorus Siculus *Bib. Hist.* 16.91.4; 16.92.1; Pliny *Ep.* 10.116); refusal to come, especially after responding positively to an invitation (cf. Mt 22:2-7), constituted an insult. If others thought as highly of the sages' profession as the sages themselves did, their writings testify that some considered it meritorious to show hospitality to sages and their disciples (*Sipre Deut.* 1.10.1); hence it would prove natural to invite a scholar to a wedding (*b. Ketub.* 17b; *Koh. Rab.* 1:3 §1; Jn 2:2). The rabbis assumed the importance of wine for festal celebrations, including in the blessing for *sabbath meals (*t. Ber.* 3:8) and at weddings (Safrai, 747). It was customary to have food left over at weddings (*t. Sabb.* 17:4), and one who urged a neighbor to attend his wedding without showing proper *hospitality is listed among thieves (*t. B. Qam.* 7:8); running out of wine at a wedding was thus a serious problem (Jn 2:3).

The rites of passage that inaugurated most Roman marriages were often less formal than we would expect (O'Rourke, 181). By contrast, Jewish people emphasized joyous celebration at wedding feasts; texts often use weddings to symbolize the greatest joy, in contrast to the epitome of sorrow, grief at a funeral (1 Macc 9:39-41; Josephus *J.W.* 6.5.3 §901). As one must mourn with the bereaved, one was also obligated to celebrate with the couple at a wedding (*y. Ketub.* 1:1 §6). Like funeral processions, bridal processions were so important that later rabbis even interrupted their schools on this account (*ARN* 4 A; 8 §22 B); God's patronage of Adam and Eve's wedding showed the importance of weddings (*ARN* 8 §23 B; *b. B. Bat.* 75a). Rabbis even exempted the wedding party from *festal obligations (*b. Sukk.* 25b; *p. Sukk.* 2:5 §1) and many ritual obligations, though only the groom was exempt from the Shema (*m. Ber.* 2:5; *t. Ber.* 2:10).

2.5. *Intercourse and Passion.* It was customary

to consummate one's marriage quickly. As in later Middle Eastern practice (Eickelman, 174), blood on the sheet probably proved the validity of the consummation (Deut 22:15; cf. *y. Ketub.* 1:1 §§7-8), though later rabbis always ruled in favor of women when they claimed exceptional reasons for a hymen not bleeding on the first night (Ilan, 98-99). Mary and Joseph chose to forgo this evidence for the honor of God's Messiah (Mt 1:25).

Musonius Rufus thought that sexual desire was inappropriate in marriage except for purposes of procreation (Ward, 284); some Jewish writers (*Pseud.-Phoc.* 193-94) and second-century Christians echoed the attitude (*Sentius Sextus* 231). Such views were not, however, the prevailing ones in the early empire. Love charms were widespread (Theocritus *The Spell*), especially in the *magical papyri (*PGM* XIII.304; XXXVI.69-133, 187-210, 295-311). Such magical love spells were used to secure the attention of persons single (e.g., *PGM* XXXVI.69-160, 187-210, 295-311) or sometimes married (*PDM* LXI.197-216 = *PGM* LXI.39-71; Euripides *Hipp.* 513-16).

Still, even nonphilosophers recognized that the passion of love drowned reason (Publius Syrus *Publii* 15, 22, 131, 314). Although many people based their desire for marriage on beauty (Babrius *Fables* 32.5-6; Judg 14:3), moralists warned that attraction on merely physical grounds was bound to fade after the beginning of a marriage (Plutarch *Bride* 4, *Mor.* 198F). Women could be said to rule or enslave men through men's passion for them (1 Esdr 4:14-33; Josephus *Ant.* 4.6.7 §133; Sir 47:19; Sophocles *Ant.* 756; cf. Sophocles *Trach.* 488-89; Appian *Civ. W.* 5.1.8-9), though many philosophers warned against such behavior (1 Cor 6:12; Diodorus Siculus *Bib. Hist.* 10.9.4; Philo *Op. Mund.* 59-60 §§165-67). Even a married man who failed to deny his wife anything was but a "slave" (insultingly, in Cicero *Parad.* 36; Diodorus Siculus *Bib. Hist.* 32.10.9; Philo *Hypoth.* 11.16-17).

Ancient literature regularly described the passion of love as burning (Apollonius of Rhodes *Arg.* 3.774; Virgil *Aen.* 4.2, 23, 54, 66, 68; *Ecl.* 8.83; Lucan *Civ. W.* 10.71; Plutarch *Dialogue on Love* 16, *Mor.* 759B), including in romance novels (Longus *Daphn. Chl.* 2.7; 3.10; Achilles Tatius *Leuc.* 1.5.5-6; 1.11.3; Chariton *Chaer.* 1.1.8; 2.3.8; Apuleius *Met.* 2.5, 7; 5.23; *Alexandrian Erotic Fragment* col. 1) and Jewish texts (Sir 9:8; *T. Jas.* 2:2); Paul adopts the same image for passion

(1 Cor 7:9). Such texts sometimes describe romantic passion as wounds (Chariton *Chaer.* 1.1.7) or sickness (Longus *Daphn. Chl.* 1.32; Propertius *Eleg.* 2.1.57-58; Song 2:5; *b. Sanh.* 75a; *y. 'Abod. Zar.* 2:2 §3), sometimes from the arrows, often flaming arrows, of Cupid or Eros (Apollonius of Rhodes *Arg.* 3.287; Virgil *Aen.* 4.69; Ovid *Met.* 1.453-65; Propertius *Eleg.* 2.12.9; 2.13.1-2; Longus *Daphn. Chl.* 1.7; 2.6; Achilles Tatius *Leuc.* 1.17.1; 4.6.1). But such descriptions frequently apply to unmarried passions; some texts also apply them to homoerotic desire (Sextus Empiricus *Hyr.* 3.199). Some Gentiles also excused their passion as uncontrollable (e.g., Sophocles *Trach.* 441-48; Herodian *Hist.* 5.6.2) and believed people could die if their passions remained unfulfilled (Parthenius *L.R.* 16.1; 17.2; see other details in Keener 1999, 186-87, on Mt 5:28).

Greek legend claimed that the seer Teiresias had been both male and female and that he testified that women enjoy intercourse ten times as much as men do (e.g., Hesiod *The Melampodia* 3). Nevertheless, one might recognize that a virgin might not find intercourse pleasurable at first, until she continued the practice with her husband for some time (Apuleius *Met.* 5.4); also, a wife should not make advances to her husband (Plutarch *Bride* 18, *Mor.* 140CD). Greek men preferred for their wives to submit to intercourse without signs of reluctance (Artemidorus *Oneir.* 1.78); arguments were known to occur in the bedchamber, though Plutarch advises both husbands and wives against this (Plutarch *Bride* 39, *Mor.* 143E).

Among the husband's duties demanded by Jewish legal scholars, the husband must provide his wife with intercourse (*Sipre Deut.* 231.2.1-2). Classical Athenian law urged husbands to provide intercourse with their wives three times a month, for procreation (Pomeroy 1975, 87). Jewish scholars were more emphatic, however: if a husband abstained from intercourse with his wife for more than one or two weeks, the Pharisees felt that he was obligated to grant her a divorce (*m. Ketub.* 5:6). Many believed that women were more susceptible to passion than were men (Euripides *Androm.* 218-21).

Ancient Mediterranean writers celebrated married love (Dixon, 2-3; Rawson, 26). Wives should love their husbands (e.g., *IG* 14 cited in G. H. R. Horsley 4:35 §10; Dio Chrysostom frag. in LCL, 5:348-49); in the late republic and early empire willingness to die with one's husband

grew as an ideal (Dixon, 3; Petronius *Sat.* 111). Husbands should also love their wives (Homer *Il.* 9.341-42; Cato collection of distichs 20; *Pseud.-Phoc.* 195; *Grk. Anth.* 7.340), which involves more than merely sexual union (as in Athenaeus *Deipn.* 13.557E); the first and most critical family union is between husband and wife (Cicero *De Offic.* 1.17.54). Jewish epitaphs also emphasize married love (Frey, cxvi; *Cif* 1:118 §166; 1:197 §195). One Diaspora Jewish source attributes domestic disturbances to demonic instigation (*T. Sol.* 18:15).

3. Gender Roles in Marriage.

3.1. Greco-Roman Household Codes. *Aristotle established household codes to advise aristocratic men how to rule their wives, children and slaves (see Balch 1981, 1988). Although there were differences (e.g., Aristotle *Pol.* 1.1.2, 1252a), these codes concerning household management could be linked with the broader category of advice on city management, as in the context in Aristotle (*Aristotle Pol.* 1.2.1, 1253b) and some other works (Lührmann; Lycurgus 21 in Plutarch *Sayings of Spartans, Mor.* 228CD). Aristotle and others thought that order in the household would produce order in society.

Household codes probably also affected the formulation of some official laws in terms of relationships among children, wives and slaves (Gaius *Inst.* 1.48-51, 108-19). Josephus's apologetic included an emphasis on biblical law's great virtues (Josephus *Ag. Ap.* 2.291-96), and it is not surprising that Jewish writers with Greek or Hellenized audiences stressed such codes as a way of identifying Judaism with the prevailing values of the dominant culture (see Balch 1988, 28-31). Paul adapts the content of the codes but retains their structure (Eph 5:21-6:9; Col 3:18-4:1), possibly to help Christians witness within their culture (1 Cor 9:19-23; Tit 2:5, 8).

Even outside the context of such household codes, it was understood that wives should subject themselves to their husbands and husbands should tenderly rule their wives the way the soul rules the body (Plutarch *Bride* 39, *Mor.* 142E).

3.2. Relative Rank of Gentile Husbands and Wives. In classical *Athens (Verner, 30-33) and traditional Roman families (Verner, 33-34), the husband had authority over the household. Under the traditional Roman *manus* marriage, marriage freed a bride from her father's authority (*patria potestas*) to bring her under her hus-

band's authority (Verner, 33). One's dependents thus included both those "in marital submission" (*in manu*) and servants (*in mancipio*, Gaius *Inst.* 1.49). But by the period of the early empire most marriages abandoned this arrangement, officially leaving the bride under her father's household. Because she was living with her husband rather than her father, this arrangement increased the wife's freedom in practice; aristocratic wives could accumulate wealth and establish some independence from their husbands (Verner, 39). Some ideals, however, endured over time.

Many ancient writers attributed women's appropriate inferiority of rank in marriage and society to an inferiority inherent in nature (e.g., Aristotle *Eth. Nic.* 8.12.7, 1162a; *Pol.* 1.2.12, 1254b; Aelian *De Nat. Anim.* 11.26). Many viewed women as weaker emotionally (Euripides *Med.* 928; Virgil *Aen.* 4.569-70) or as unfit for battle (Virgil *Aen.* 9.617; 11.734; Livy *Hist.* 25.36.9; Aulus Gellius *Noc. Att.* 17.21.33; Phaedrus *Fables* 4.17.6) or the law court (*P. Oxy.* 261). Writers did report the exploits of women, but generally as unusual. A few men viewed women as a curse to men (Hesiod *Theog.* 570-612; Euripides *Or.* 605-6); a woman might count her own life less valuable than those of male warriors (Euripides *Iph. Aul.* 1393-94). Women's moral weaknesses were also proverbial (e.g., *Sir.* 42:12-14; Hesiod *Theog.* 601-2; *Op.* 375; Publilius Syrus *Publii* 20, 365, 376; Juvenal *Sat.* 6.242-43; Babrius *Fables* 22.13-15; Avianus *Fables* 15-16; in contemporary Middle Eastern culture, Delaney, 41; Eickelman, 205-6, 243), and one woman's behavior could be held to reflect badly on her gender (Homer *Odys.* 11.432-34). Thus Plutarch, a more progressive voice by the standards of his male aristocratic contemporaries, urges a young husband to attend to his bride's learning (*Bride* 48, *Mor.* 145C), for if left to themselves without a husband's input, women produce only base passions and folly (*Bride* 48, *Mor.* 145D-E).

The classical Greek ideal was that women should be shy and retiring, easily injured by hearing foul language (Demosthenes *Meid.* 79) or being insulted (*hubridzōn*, Demosthenes *Aristoc.* 141). In common classical Athenian opinion, a woman's virtue includes being an obedient and dutiful housewife (Meno in Plato *Meno* 71). Well-to-do men slept with high-class prostitutes for pleasure, concubines for bodily health and wives to bear children and rule do-

mestic matters (Pseudo-Demosthenes *Orat.* 59, *Neaer.* 122). A virtuous wife sought to perform whatever her husband wished (Pseudo-Melissa, *Letter to Kleareta* in Malherbe, 83). Traditional Roman ideals also presented women as being submissive and subservient (Hallett, 241-42). Wives should obey their husbands (e.g., Marcus Aurelius *Med.* 1.17.7; Artemidorus *Oneir.* 1.24; Apuleius *Met.* 5.5), including submission in all social and religious matters (Plutarch *Bride* 19, *Mor.* 140D). Good wives prefer such submission to the freedom created by widowhood (Livy *Hist.* 34.7.12).

Thus when women acted boldly, they could be said to be acting like men (Apuleius *Met.* 5.22); some male writers condemned this behavior as a lack of modesty (e.g., Homer *Odys.* 19.91; Valerius Maximus *Fact. ac Dict.* 8.3; Aulus Gellius *Noc. Att.* 10.6). Various first-century writers satirized women who exercised too much power, especially over their husbands (Petronius *Sat.* 37; frag. 6; Juvenal *Sat.* 4.30-37; 6.219-24, 246-305, 474-85). Such writers, committed to the traditional task of preserving the social order (in earlier times, e.g., Isocrates *Ad Nic.* 55, *Or.* 3.38) and perhaps their own role in it, were resisting changes taking place in women's roles in their society (see Reekmans). In so doing, they apparently perpetuated earlier complaints that Roman women were not submissive enough (Cato the Elder 3 in Plutarch *Sayings of Romans*, *Mor.* 198D). Socialization undoubtedly reaffirmed such gender roles even as it does in the same region today, rewarding quiet and submissive behavior on the part of women (Giovannini, 67).

Daily practice was never quite what the ideals may have prescribed. Thus the emperor Augustus, promoting traditional Roman values, told men to command their wives as they wished, especially with regard to modest dress and behavior. But it was widely known that Augustus did not admonish the empress Livia in this manner (Dio Cassius *Hist.* 54.16.4-5). Livia was an exception in some respects; after Augustus's death she shared with the new emperor Tiberius in honoring her deceased husband as if she shared in power (*autarchousa*, Dio Cassius *Hist.* 56.47.1); she also controlled a massive estate (Treggiari). Even Philo exempted Livia from his usual standards for gender, albeit by noting that she had become virtually masculine in her wisdom (Philo *Leg. Gai.* 320). Yet there were limits to her power; even Livia's intercession did not always

persuade Augustus to act against tradition (Sherk, 7). Augustus used Livia for propaganda while maintaining a conservative social policy (Flory).

Britons might have women authority figures like Boudicca (Tacitus *Ann.* 14.31-37); pre-Roman *Alexandria hosted *Macedonian women authority figures of the *Ptolemaic dynasty, including the most famous Cleopatra. To a lesser extent, Roman women also held higher positions than did classical Greek women (e.g., Lefkowitz and Fant, 244-47), and the Roman aristocracy produced powerful women like Livia, Messalina and both first-century Agrippinas (Balsdon). But the degree to which the authority of such public figures affected average marriages remains unclear.

Nevertheless, other indications further render doubtful the assumption that classical ideals always represented social reality. Even the Homeric portrait of Penelope's relationship with Odysseus suggests some degree of mutual respect (Arthur, 15); likewise, some suggest that men in classical Athens felt less secure in their dominance than some texts would suggest (Gould, 52-57). In the first-century Roman world, women had advanced considerably both economically and socially, although a conservative backlash apparently reversed this in early second century A.D. (see Boatwright). The old *manus* marriage largely faded from use, and husbands' authority over their wives was roughly the same as their authority over male children; further, not all husbands would have abused their authority in the ways the laws could have permitted (Gardner, 5). In the period of the early empire some writers also introduced ideals of greater feminine freedom (Hallett, 244); some writers, such as Pliny, proved more favorable toward women than did others (Dobson).

Nevertheless, funerary *inscriptions of the imperial period largely commemorate women in their roles as wives, mothers and daughters, the primary roles through which the predominantly male elite of society related to them (Kleiner; cf., e.g., *CIL* 6.10290). Even when Plutarch, a relatively progressive writer, advocated harmonious consent and mutual agreement in marriage, he expected the husband to lead (Plutarch *Bride* 11, *Mor.* 189CD); even writers like Plutarch and Roman *Stoics who advocated theoretical equality of the sexes usually encouraged wifely subordination in practice (Balch 1981, 143-49). Women

were not always dramatically subordinate; this does not, however, imply that Greco-Roman antiquity shared modern Western egalitarian ideals.

Ancient writers were also aware of geographical variations in marital gender roles. Women exercised more freedom in the western than the eastern Mediterranean (see, e.g., Salles), and Greeks recognized that historically Roman women were more influential than were Greek women (Appian *Rom. Hist.* 9.11.1). Even in Sparta women ran the city while the men were away, much to Aristotle's disdain (Aristotle *Pol.* 2.6.7, 1269b; though cf. Gorgo 5 and anonymous 22 in Plutarch *Sayings of Spartan Women*, *Mor.* 240E, 242B). Sparta's long-term cultural influence was limited; the Greek cultural ideals most recited in the Hellenistic eastern Mediterranean stemmed especially from Athens. Yet Greeks were aware of other customs elsewhere; some they considered savagely repressive toward women, such as bride burning in India (Diodorus Siculus *Bib. Hist.* 17.91.3). But other cases struck the Greeks as odd or inappropriate because they permitted wives undue freedom.

In contrast to the Greeks, Ligurian women worked the fields alongside their husbands because their soil was poor (Diodorus Siculus *Bib. Hist.* 4.20). Making a living at distaff and loom was difficult (Terence *And.* 73-74), but women often worked in rural areas (Longus *Daphn. Chl.* 3.25; *P. Fay.* 91; Scheidel). A writer could criticize the king of old Persia for ruling all his subjects except the one he ought to have ruled most of all, his wife (Plutarch *Uneducated Ruler* 2, *Mor.* 780C). Greeks were so amazed by the greater relative freedom among Egyptian women that they portrayed Egyptian women as ruling (*kyrieuein*) their husbands and Egyptian marriage contracts as stipulating that men obey their wives in all things (*peitharchēsein . . . hapanta*, Diodorus Siculus *Bib. Hist.* 1.27.2). This was an exaggeration but underlines the greater freedom of Egyptian women in contrast to that of Greek women.

But long before the Roman period, Greek culture had pervaded the eastern Mediterranean, including urban Egypt (i.e., Alexandria and the Hellenistic elite in Egypt's nomes). Thus although women in general in Roman Egypt wielded considerably greater economic power than they did in classical Athens (Pomeroy 1981), first- and second-century B.C. marriage contracts from Egypt list among requirements for wives submission to their husbands, not leav-

ing the home without their permission, and so forth (Verner, 38, 64-65; Lewis, 55). Although more such documents were preserved in Egypt, however, the wives' promise to obey their husbands was hardly limited to Egypt.

3.3. Gender Roles in Palestinian and Geographically Related Jewish Traditions. Views on gender roles varied significantly in early Jewish sources (see van der Horst 1993). Philo and Josephus provide examples of Jewish people writing for Hellenistic-Roman or Hellenized audiences. Philo believes that Moses' law enjoins wives to serve and obey their husbands (Philo *Hypoth.* 7.3); child rearing necessarily also subordinates wives to their husbands (Philo *Op. Mund.* 167). That such subservience would, he believed, be good for women undoubtedly stems from his conviction that women are less rational than men (Philo *Omn. Prob. Lib.* 18 §117); his use of feminine imagery connotes women's inferiority by nature (see most extensively Baer), which reflects a broader pattern of Greco-Roman thought. The difficulties of bearing and rearing children also necessarily subject the wife in obedience to her husband (Philo *Op. Mund.* 60 §167). Essenes do not marry, he noted, because women are selfish and devote all their energy to leading their husbands into error (Philo *Hypoth.* 11.14-17).

Josephus also views women as inferior in moral character to men (Josephus *Ant.* 4.8.15 §219). Because women are inferior in all things, the law prescribes the husband's authority and wife's submission for the wife's own good (Josephus *Ag. Ap.* 2.25 §§200-201); thus Josephus believed that God punished both Adam and Herod Antipas for being so weak as to have heeded their wives (Josephus *Ant.* 1.1.4 §49; 18.7.2 §255; cf. *Adam and Eve* 26:2). Josephus may have felt personal existential reasons for his opinions; although he later found a wealthy Jewish woman he believed to be of nobler character than most other women (Josephus *Life* 76 §427), he divorced another wife, displeased with her behavior (Josephus *Life* 76 §426). Yet he was hardly alone in his opinions; negative views of women predominate in Sirach (e.g., Sir 42:13) and probably the *Testament of Job* (Garrett; but cf. van der Horst 1986), though positive pictures appear in Tobit (Sara; Edna; Anna) and Pseudo-Philo (van der Horst 1989). Samaritan marriage contracts require full obedience from the wife (Bowman, 311).

The rabbis also assume that husbands rule their wives (*Sipra Qed.* par. 1.195.2.2; cf. Graetz; 4Q416 frag. 2 iv 2) and complain that a man ruled by his wife has no life (*b. Beza* 32b, *Bar.*) But these sources easily appear more nuanced than Josephus or Philo. The husband had to respect his wife (Safrai, 763-64, citing *b. Yebam.* 62b, *Bar.*; cf. Montefiore and Loewe, 507-15). Second-century rabbis were concerned for women's legal, especially property, rights (see Langer). Likewise, nonliterary evidence suggests the participation of Diaspora Jewish women in community life (Kracmer).

Some sources may reflect broader ancient Mediterranean mistrust of women's moral character. A rash or impudent (*thrasus*) woman shamed her father and husband and invited their loathing (Sir 22:5), and various sources warn about the talkative wife (*Syr. Men. Sent.* 118-21; *Gen. Rab.* 45:5; 80:5). Such women will falsely accuse their husbands (*Sent. Syr. Men.* 336-39). But a husband should appreciate a good wife (Sir 7:19; 26:1-4).

3.4. Respective Duties of Husband and Wife. Classical Athenian culture idealized women's seclusion to the domestic sphere, though it was never fully realized in practice; probably partly to retain the wife's exclusive allegiance to her husband, much of the Greek-speaking eastern Mediterranean of the early empire, however, was less restrictive (Keener 1992, 22-24). Nevertheless, most married women outside the urban elite covered their heads to prevent the lust of males other than their husbands (Keener 1992, 28-30).

The Stoic Hierocles also expects the husband to rule external affairs while the matron rules domestic affairs, but in contrast to many others, he refuses to observe this distinction rigidly (Hierocles *On Duties Household Management*, in Malherbe, 97-98).

Early Palestinian Judaism did not restrict women's movement the way classical Greek culture did (see *m. Ketub.* 1:10; 9:4); it also provided women some rights not common in broader Mediterranean culture (see Verner, 45). Nevertheless, the wife's standard duties are largely domestic: grinding wheat, cooking, washing, nursing and sewing (*m. Ketub.* 5:5; late first-century adaptations of these duties suggest that the original list was accepted among first-century Pharisees).

But Jewish law also required husbands to

provide their wives with expected comforts (Goodman, 36; cf. *Adam and Eve* 2:1). This custom contrasts starkly with Roman law, which provided the wife no claim to maintenance (Gardner, 68). Some divisions of labor may also have been less strict in Galilean village life, especially around harvest time. In southern Lebanon, even today peasant men and women often share interchangeable roles (see Eickelman, 194).

4. Summary.

Betrothal and marriage were commercial and legal as well as romantic matters. Some Gentiles advocated singleness, and a few advocated celibacy; some Jews also advocated celibate singleness. But the Roman world emphasized marriage and the bearing of children, and many Jewish teachers took this emphasis further. Roman laws expected sensitivity to class and citizenship issues in marriage. Greeks, Romans and the vast majority of Jews were officially monogamous. Husbands were expected to rule their homes, though wives could exercise considerable control over domestic matters. Although Palestinian Jewish customs differed in many respects from those of Greece and Rome, they also share much in common with their broader Mediterranean milieu, and Diaspora Jewish customs reflected that milieu even more closely.

MELCHIZEDEK, TRADITIONS OF

The figure of Melchizedek was king and priest of God Most High in the city of Salem. He appears briefly in the OT, and his story was then elaborated upon by early Jewish *apocalyptic literature. He became particularly pivotal in the development of early Christian *messianism and the formulation of christology.

1. Old Testament Traditions
2. *Second Enoch*
3. Melchizedek in Qumran Literature
4. Other Jewish Literature
5. Melchizedek in the New Testament

1. Old Testament Traditions.

The Melchizedek traditions begin with the enigmatic appearance of Melchizedek in Genesis 14:18-20. After Abraham's conquest of the five kings (Gen 14:1-17), Abraham gives Melchizedek a tithe of the booty. The name *Melchizedek*, which means "king of righteousness," may be understood as either a personal name or a title; it is intended to underscore the symbolic or perhaps allegorical nature of the figure. The city of

Salem is understood by all later Jewish tradition to have been *Jerusalem. Consequently some commentators understand the Melchizedek tradition in Genesis 14:18-20 as justifying a high priesthood in Jerusalem predating the Solomonic temple and even Abraham; however, it is difficult to understand why the Zadokite priests would have promulgated tradition that ultimately undermined their own authority.

In Psalm 110, God apparently designates a Davidic ruler—although this is not explicit—"you are a priest forever in the order of Melchizedek." Some commentators would like to see Psalm 110 as a *Hasmonean composition that justifies the secular and priestly leadership of Simon Maccabeus (c. 142-134 B.C.) because Psalm 110:1-4 can be read as an acrostic, *šm 'n* ("Simcon"); however, such a late date has not been widely accepted. Still, it is possible that the peculiar versification that gives rise to the possible acrostic identification with Simeon was Hasmonean. The Melchizedek tradition was a natural mine to excavate in the attempt to legitimate the Hasmonean pedigree. Indeed, the mystery surrounding Melchizedek in both Genesis 14 and Psalm 110 left ample interpretative room for divergent early Jewish communities to fill out his pedigree.

2. *Second Enoch*.

The earliest and most extensive extrabiblical tradition about Melchizedek is found in *2 Enoch* 71-72 (A and J manuscripts; see *Enoch, Books of*). Melchizedek is described as born "fully developed" as a three-year old. He has the mark of the high priesthood on him from birth and must be hidden lest the wicked kill him. God, through the agency of an archangel, hides the child Melchizedek in the garden of Eden for seven years. This child is finally placed at the head of the high priests of the future in the "center of the earth where Adam was created" (*2 Enoch* 71:35 [J]). In these texts Melchizedek is a title. There are multiple Melchizedeks "according to the order of Melchizedek," though the greatest of these is the aforementioned.

3. Melchizedek in Qumran Literature.

Although fragments of *Enoch* dating to the early third century B.C. are found among the *Dead Sea Scrolls, *2 Enoch* is not found and is usually considered a later composition (c. A.D. 100-200). Still, it seems likely that the traditions in *2 Enoch*

have their origins in the Second Temple period, given other evidence for highly developed Melchizedek traditions in *Qumran literature.

The most prominent development of the Melchizedek traditions in Qumran literature are found in a thematic *midrash (*pesher*) known as 11QMelchizedek (11Q13; van der Woude 1965). The midrash is quite fragmentary, with only one column of text well represented. It was apparently organized around Isaiah 61, which is cited repeatedly (see lines 4, 9, 14, 19-20). The passage from Isaiah raises the issue of the release (citing Lev 25:13; Deut 15:2), which points to the ten Jubilee periods that will end in "the day of the vengeance of 'lōhēnū." Although the plain sense would suggest that 'lōhēnū means "our God," the Qumran interpreter takes it as a reference to Melchizedek (note lines 24-25), citing passages where he understands 'lōhīm to refer to the holy *angels who will judge the fallen angels (Pss 82:1; 7:8-9; 82:2; Is 52:7). Melchizedek is presented as the judge of both the saints of God and the fallen angels. The faithful of God will be included in Melchizedek's lot, while the fallen angels are part of the lot of *Belial. There is a similarity between the roles of Melchizedek and the archangel Michael in the *War Scroll (1QM 9:14-16), though the two are never explicitly equated in Qumranic literature. F. García Martínez has suggested that Melchizedek may be identified with the "Son of God" in another Qumran composition, the *Aramaic Apocalypse* (4Q "Son of God" [4Q246]).

An underlying dualism in the Melchizedek traditions is evident by the appearance of the anti-figure Melchiresha' ("king of wickedness") in 4QAmram (4Q543-548) and 4QBenedictions' (4Q280). 4QAmram is quite fragmentary, yet a few observations can be recovered. In 4QAmram, the father of *Moses, Amram, describes his vision of the Watchers, including the chief Angel of Darkness. One of the three names of this angel is Melchiresha' (the other two names are lost). Melchiresha' addresses the leader of the army of light, who also has three names. One of the names of Melchiresha's counterpart, the leader of the army of light, was probably Melchizedek (and also perhaps Michael), but his three names are also lost. 4QBenedictions is also fragmentary, but it suggests that Melchiresha' is set apart "from the sons of light for evil because he turned away from following God." In other words, it suggests

that the Qumran sectarians read the Melchizedek traditions as part of the myth of the fallen angels (see Gen 6:1-4).

4. Other Jewish Literature.

The Palestinian Jew turned historian, Flavius *Josephus, took a purely human interpretation of Melchizedek. He writes that Abraham "was received by the king of Solyma, Melchizedek, whose name means righteous king, and such he was by common consent, inasmuch as for this reason he was moreover made priest of God; Solyma was in fact the place afterward called Hierosolyma [that is, Jerusalem]" (Josephus *Ant.* 1.10.2 §180).

*Philo Judaeus lived in *Alexandria and was roughly a contemporary with Jesus as well as the later stages of the Qumran community. He also took a strictly this-worldly view of Melchizedek: "God has also made Melchizedek both king of peace, for that is the meaning of Salem, and his own priest. . . . For he is named 'the righteous king' [= Melchizedek], and a king is one who is opposed to the tyrant; the one is the author of laws, the other of lawlessness" (Philo *Leg. All.* 3.25-26 §§79-82).

Both the second-century Aramaic *Targum Neofiti* and the *Fragment Targum* identify Melchizedek with Noah's son Shem in its translation of Genesis 14:18: "The king of Righteousness (Melka-sedek), the king of Jerusalem—he is Shem, the great one—brought out bread and wine, for he was the priest who served in the High Priesthood before the Most High God" (also the later *Targum Pseudo-Jonathan*).

Later *rabbinic traditions understand the high priesthood to have first been given to Shem-Melchizedek (Gen 14:18-20) but then transferred to Aaron through Abraham. Psalm 110:4 was read, "You [Abraham] are a priest forever" (see *b. Zebah.* 62a). From manuscripts of *b. Sukkah* 52b, we learn that Melchizedek is a righteous priest who was apparently translated into heaven and who would reappear in the messianic age. But he is a purely human figure. The connection of the Melchizedek tradition with the traditions about the fallen angels was thus marginalized by rabbinic *Judaism, perhaps even in response to the prominence they were given in early Christianity.

5. Melchizedek in the New Testament.

The importance of the Melchizedek traditions

in early Christianity begins already in the Gospels, when Jesus baffles the *Pharisees with his question from Psalm 110: "What do you think of the Messiah? Whose son is he?" The Pharisees responded, "The son of David." He said to them, "How is it then that David by the Spirit calls him Lord, saying, 'The Lord said to my Lord, "Sit at my right hand, until I put your enemies under your feet"?' If David thus calls him Lord, how can he be his son?" (Mt 22:41-45). Jesus uses the enigmatic and debated interpretation of the Melchizedek traditions in early Judaism in order to raise questions about the character of the expected Davidic Messiah.

The figure of Melchizedek becomes central in the book of Hebrews' development of christology (esp. Heb 5, 7). The ambiguity in the OT traditions about Melchizedek, as well as the debate among early Jewish interpreters, left an ideal opening for the author of Hebrews to chart a new way. Melchizedek provides a way for combining the royal and priestly offices ostensibly held by separate individuals. To be sure, the Hasmonean priest-kings had already combined these offices, though they were opposed in part for that reason. The fact that Melchizedek appears suddenly in Genesis 14 gave rise to his identification with an angel in early Jewish apocalyptic literature; for the author of Hebrews, however, it points to Jesus' timelessness; that is, Melchizedek is "without father, without mother, without genealogy, having neither beginning of days nor end of life, but resembling the Son of God, he remains a priest forever" (Heb 7:3).

Hence Hebrews argues that there are two changes in priesthood, one from Melchizedek to Abraham, as in Jewish tradition, but a further transference to Jesus. Since Jesus is the one and only eternal high priest there need be no further transference of the priesthood (Heb 7:12). The emphasis on Jesus as priest in Hebrews undoubtedly responds to the weakness in his messianic claims; that is, by genealogy he was a Davidic messiah, but what about the Messiah of Aaron? Melchizedek provides the way through (see Yadin; Delcor; Gieschen).

MESSIANIC APOCALYPSE (4Q521)

The so-called *Messianic Apocalypse* (4Q521) has generated interest among NT interpreters because of its reference to a messiah to whom "heaven and earth will listen." The text is sometimes referred to as the *Works of the Messiah* or *On Resurrection*. The text, which dates to 75 to 50 B.C. and may have been produced at *Qumran, was published in 1992 and is frequently discussed in connection to Jesus' reply to the imprisoned John the Baptist.

1. Contents of the *Messianic Apocalypse* (4Q521)
2. Interpretations of the *Messianic Apocalypse*
3. The *Messianic Apocalypse* and the New Testament

1. Contents of the *Messianic Apocalypse* (4Q521). The *Messianic Apocalypse* (4Q521) consists of seventeen or eighteen fragments. Of these fragments the best known is fragment 2, which contains the greater part of fourteen lines that make up column 2 (with a few words and letters in column 1 and seven partially preserved lines in column 3; see PAM 41.676 and 43.604). This column, alluding to Psalm 146:6-8, speaks of "his [probably God's] Messiah," to whom "heaven and earth will listen, [and all that is in them will not turn away from the commandment of the holy ones]" (lines 1-2). The text goes on to speak of an era of blessing and restoration, a time when God "will glorify the pious on the throne of an eternal kingdom, releasing captives, giving sight to the blind and raising up those who are bowed down]" (lines 7-8). The "Lord will do as he said, for he will heal the wounded, give life to the dead, and preach good news to the poor" (lines 11-12). Lines 7-8 and 11-12 allude to several passages from Isaiah, such as Isaiah 35:5-6 ("the eyes of the blind shall be opened"), Isaiah 61:1 ("anointed . . . to preach good news to the poor"), Isaiah 26:19 ("your dead shall live, their bodies shall rise") and possibly Isaiah 53:5 ("he was wounded . . . and with his stripes we are healed").

Fragment 2 column 3 alludes to Malachi 4:5-6, with the promise that "the fathers will return to the sons" (line 2). The day of judgment appears to be in view in fragments 7 + 5, which speak of "those who do the good before the Lord" (line 4), those who are "the accursed" and have been set aside "for death" (line 5) and the Lord "who gives life to the dead of his people" (line 6). We probably have contact here with Daniel 12:2, which promises resurrection and "everlasting life" for some and "everlasting contempt" for others. Lines 1-3 ("the earth and all that is in it, the seals and all they contain") parallel the opening lines of fragment 2. Fragment 8 refers to "all his anointed ones" (line 9), which is probably a reference to the prophets (see line 10, which says they "will speak the word of the Lord"), though the reference to "holy vessels" in the previous line may suggest that the "anointed ones" are priests (so Puech, 1992, 509).

2. Interpretations of the *Messianic Apocalypse*.

E. Puech (1992, 497) and others have understood the Messiah of 4Q521 2 ii as the traditional, royal figure ("Messiah-king") whom the awaited Elijah-like prophet will announce. In his most recent discussion, Puech (2000, 543) thinks "his (or its) messiah" (*m'sihō*) may be plural ("its messiahs," *m'sihaw*), in which case reference is to the two anointed figures, the king and the priest (as in 1 QS 9:11: "until the coming of the prophet and the anointed ones of Aaron and of Israel"). If the word is read as a singular, then it is probably to be read in reference to the "priest-prophet of messianic times." The latter option is close to what J. J. Collins (1995a, 117-22; 1998, 112-16) has contended. He thinks the "anointed" figure of this scroll is himself an anointed prophet, probably on the model of the eschatological Elijah, through whom God will heal and raise the dead.

Collins observes that the principal task of this anointed figure is to "preach good news to the poor" (line 12), which alludes to Isaiah 61:1, a text understood to be referring to the eschatological prophet. In the Aramaic paraphrase, this passage is understood explicitly as referring to the prophet: "*The prophet said, 'A spirit of prophecy before the Lord God is upon me, because the Lord has exalted me to announce good news to the poor . . .'*" (*Tg. Isa. 61:1*, with italics denoting departures from the Hebrew). Not only are the words "the prophet" and "a spirit of prophecy" added to the text, but also "anointed" has been replaced with "exalted," perhaps to avoid confusing the eschatological prophet with the Messiah. In any case it is clear that the task outlined in Isaiah 61:1 is understood to be the duty of the eschatological prophet, not that of the awaited royal Messiah.

Collins's interpretation gains further support from the allusion to Malachi in 4Q521 2 iii 2: "it is su[re]: The fathers will return to the sons." According to Malachi 4:5-6 (Heb 3:23-24), when Elijah comes, "he will turn the hearts of fathers to their children and the hearts of children to their fathers." This feature of Elijah's eschatological ministry is mentioned in Sirach 48:10, "you are ready at the appointed time . . . to turn the heart of the father to the son and to restore the tribes of Jacob" and is echoed in Luke 1:16-17, in reference to the promised birth of John the Baptist: "And he will turn many of the sons of Israel to the Lord their God, and he will go

before him in the spirit and power of Elijah, to turn the hearts of the fathers to the children . . . to make ready for the Lord a people prepared."

Collins (1995a, 118-19) suspects that the author of 4Q521 understands lines 11-12 ("the Lord will do as he [said], for he will heal the wounded, give life to the dead, and preach good news to the poor") as God acting through his agent the anointed prophet. This understanding is consistent with Jewish messianism seen in other texts, such as in *y. Ketubbot* 12:3, which says "the dead will come to life in the time of the Messiah," in *m. Sofa* 9:15, which says "the resurrection of the dead comes through Elijah," and in 1QS 9:11, which speaks of the coming of "the Prophet and the anointed ones of Aaron and of Israel" (see Rule of the Community). A prophet is expected to come in the power of Elijah, through whom Israel's healing and restoration will take place, and the Messiah is to come, who will rule Israel faithfully.

3. The Messianic Apocalypse and the New Testament.

Jesus' reply to the imprisoned John the Baptist contains three Isaianic phrases also found in 4Q521: the blind receiving sight, the raising of the dead and the preaching of good news to the poor. The Matthean Evangelist explains that John queried Jesus because he had heard of the "deeds of the Messiah." Reference to the Messiah (or anointed) gives us yet a fourth parallel. From these parallels many interpreters have concluded that Jesus and the author of 4Q521 share a similar eschatological and messianic expectation. The story is found in the Synoptic double tradition: John "sent word by his disciples and said to him, 'Are you he who is to come, or shall we look for another?' And Jesus answered them, 'Go and tell John what you hear and see: the blind receive their sight and the lame walk, lepers are cleansed and the deaf hear, and the dead are raised up, and the poor have good news preached to them. And blessed is he who takes no offense at me'" (Mt 11:2-6; cf. Lk 7:19-23).

The authenticity of the double tradition is assured by the improbability that the early church would create tradition in which such a significant figure as John the Baptist, Jesus' mentor and (in more theological terms) "forerunner," would express doubt in Jesus. Moreover, one would expect to find a more direct and en-

hanced testimony to Jesus in a piece of fictional and confessional material.

Because 4Q521 introduces the blessings of the eschatological period as the time when "heaven and earth will listen to his Messiah" and because these blessings match closely those mentioned by Jesus, scholars now conclude that Jesus' reply to the Baptist was indeed messianic in nature. Thus 4Q521 makes a significant contribution to research into Jesus' self-understanding. This new evidence suggests that Jesus did understand himself in messianic terms. However, the precise nature of this messianism remains unclear. It is probable that it is a prophetic messianism, perhaps even modeled after Malachi's promise of the return of Elijah. In the NT Gospels John denies that he is Elijah (Jn 1:21) and speaks of the coming of one "mightier" than himself (Mk 1:7; Mt 3:11-12; Lk 3:16-17). Moreover, Jesus refers to himself as a prophet (Mk 6:4) and was even regarded by some as Elijah or some other prophet (Mk 6:15; 8:28). Although it is possible that at a later stage in his ministry Jesus began to view John as Elijah (Mk 9:11-13) and himself in more exalted, even royal terms (cf. Mk 11:1-10, where Jesus enters "Jerusalem on an ass, in fulfillment of Zech 9:9), at the outset of his ministry in which he proclaims the kingdom he may have seen himself as the eschatological Elijah.

MESSIANIC RULE. See RULE OF THE CONGREGATION/MESSIANIC RULE (1QS_a).

MESSIANISM

Messianism is the expectation of a coming anointed person or persons who will redeem Israel and/or the church. The appearance of this anointed figure is usually understood to be part of a larger eschatological drama whereby human activity on earth is appreciably altered. At that time God's will on earth will be more tangibly and perhaps permanently experienced, often under the rubric "kingdom of God." It is usually believed that this anointed figure is part of the climax of human history and will not be succeeded by other anointed figures.

1. Derivation of the Term *Messiah*
2. Origins of Messianism
3. Anachronisms in Jewish and Christian Interpretation
4. Varieties of Messianism
5. Messianism and New Testament Christology

1. Derivation of the Term *Messiah*.

The word "messiah" comes from the Greek *messias* (cf. Jn 1:41; 4:25), which is itself a transliteration

of the Hebrew *māšiah* (2 Sam 22:51; 23:1), meaning one who is "smeared" or "anointed" (with oil). *Māšiah* occurs some 38 times in the OT. The Greek equivalent is *christos* (cf. LXX 2 Sam 22:51; 23:1), which occurs some 529 times in the NT (about half in Paul; more than half, if one includes the Pastorals). The nominal form is derived from the verbs *māšah* (Hebrew) and *chrizin* (Greek), which mean "to anoint" or "to smear (with oil)." When the nominal form is definite (Heb. *hammāšiah*; Aram. *m^ašihā*'), it is usually translated "the Messiah." The Greek definite form, *ho christos*, is usually translated "the Christ."

Israel's tradition of anointing the *priest is ancient (cf. Ex 28:41; 30:30; 40:13-15; Lev 16:32; Num 3:3). Of special interest is the anointing of the high priest (Ex 40:13; Lev 7:35), who in Numbers 35:25 is said to be "anointed with holy oil." Yeshua ben Sira eulogizes Aaron, stating that "Moses ordained him, and anointed him with holy oil" (Sir 45:15). Early rabbinic literature is keenly interested in the "anointed (high) priest" (cf. *m. Hor.* 2:1, 2, 3, 6, 7; 3:1, 2, 4, 6; *m. Zebah.* 4:3; *m. Menah.* 5:3, 5; 6:2, 4; *m. Me'il.* 2:9) much more than it is in the royal Messiah (cf. *m. Sota* 9:15; on this point, see Neusner 1984).

The kings of Judah and Israel were "anointed," usually by prophets, as well as by priests. Especially important is Samuel's anointing of Saul (1 Sam 9:9, 16; 10:1; 15:1, 17) and David (1 Sam 16:1-3, 12-13; 2 Sam 12:7; cf. Sir 46:13). Nathan the prophet and Zadok the priest anointed Solomon (1 Kings 1:34; cf. 1:39, 45). Elijah was commanded to anoint Hazael to be king over Syria and Jehu to be king over Israel (1 Kings 19:15-16), though it would be Elisha who carried out the task (2 Kings 9:1-3, 6, 12; cf. Sir 48:8). Even in the period of the judges we find tradition of someone being anointed king (Judg 9:8, 15). Frequently the anointed king is called "the Lord's anointed" (1 Sam 16:6; 24:6, 10; 26:9, 11, 16, 23; 2 Sam 1:14, 16; 19:21; cf. Ps 2:2; 18:50; 20:6; 28:8). The psalmist, on behalf of the "anointed," sometimes appeals to God for help (Ps 84:9; 89:38, 51; 132:10, 17).

Elijah was told to anoint Elisha, his prophetic successor, though the deed itself is not actually narrated (1 Kings 19:15-16; cf. 2 Kings 9:1-3, 6, 12). The anointing of Elisha is the only instance of an anointed prophet. However, one should recall that the prophetic speaker in Isaiah 61 claims to have the Spirit of the Lord and to have

been "anointed" to preach (cf. *Tg. Isa.* 61:1: "The prophet said: 'A spirit of prophecy before the Lord God is upon me'"). The association in a sermon, which is attributed to Jesus (Luke 4:18-27), of this passage from Isaiah with the ministries of Elijah and Elisha is probably not accidental but reflects the tradition of the anointed prophet.

2. Origins of Messianism.

Messianism originates in the OT, which speaks of anointed priests, kings and prophets. But none of these anointed persons are to be understood as eschatological figures of deliverance. Sometime in the third or second century B.C. "messiah" takes on this eschatological nuance (though hopes for a new Davidic king, expressed in some of the prophets, made important contributions to the messianism that would eventually emerge). In reaction to the oppression of Greek and Roman rule, and in response to what was perceived as usurpation of the high priesthood on the part of the Hasmoneans and their successors, hopes for the appearance of a righteous king and/or priest began to be expressed. The later usurpation of Israel's throne by Herod and his successors only fueled these hopes. The literature of this time speaks of the appearance of worthy anointed persons through whom the restoration of Israel might take place. These hopes and predictions drew upon passages of Scripture that spoke of anointed persons and upon passages that spoke in more indirect ways of individuals or symbols that lent themselves to eschatological or salvific interpretations.

Three passages in particular played an important, generative role in the rise of messianism: Genesis 49:10; Numbers 24:17 and Isaiah 11:1-6. All of these passages are interpreted in a messianic sense in the Dead Sea Scrolls and other early Jewish and Christian writings.

2.1. Genesis 49:10. In 4Q252 5:1-7, Gen 49:10-11 is cited and is understood to refer to the "Branch of David." The passage may also be alluded to in 4QpIsa^a (4Q161) frags. 7-10 iii 25, again in a messianic sense. The messianic potential appears to have been enhanced in the LXX. All four targums to the Pentateuch render the passage in an explicitly messianic sense ("king messiah" is mentioned in Gen 49:10, 11, and 12). Jacob's blessing (Gen 49:8-12) is referred to in *Testament of Judah* 1:6 ("my father de-

clared to me, 'You shall be king'") and in *Testament of Judah* 22:9 seems to be understood in a messianic sense. The description of the warrior Messiah in Revelation 19:11-16 may have this passage, as well as Isaiah 11, in mind (compare Rev 19:13 with Gen 49:11); and it may be alluded to in Hebrews 7:14. Christian messianic interpretation of the passage becomes commonplace in the second century (cf. Justin Martyr *Apol.* 132, 54; *Dial. Tryph.* 52, 120; Clement of Alexandria *Paed.* 1.5, 6; Irenaeus *Haer.* 4.10.2).

2.2. Numbers 24:17. The interpretation of Numbers 24:17 is similar to that of Genesis 49:10. All four Pentateuch targums paraphrase the passage in explicitly messianic terms. The Hebrew text's "a star shall come forth out of Jacob, and a scepter shall rise out of Israel" becomes in the Aramaic "a king shall arise out of Jacob and be anointed the Messiah out of Israel" (*Tg. Onq.*; cf. *Tgs. Neof., Ps. J., Frg.*). Messianic interpretation of Numbers 24:17 is widely attested in traditions dating to the first century and earlier (*T. Jud.* 24:1-6; CD 7:20; IQSb 5:27-28; 1QM 11:4-9; 4Q175 1:9-13; possibly Philo *Vit. Mos.* 1.52 §290; *Pruem. Poen.* 16 §95; *Orphica* 91 = Aristobulus frag. 4:5). It is probably to this passage that Josephus refers when he says that his countrymen were misled by an "ambiguous oracle," which promised that "one from their country would become ruler of the world" (Josephus *J.W.* 6.5.4 §§312-13; cf. 9.8.9 §§400-402). The "star" that "stood over the city" of Jerusalem would have only fueled such speculation (Josephus *J.W.* 6.5.3 §289). At issue was not the messianic orientation of the oracle; rather, the question was to whom the oracle applied. Of course, Josephus here is being disingenuous. It is very probable that he too understood the passage in the way his contemporaries did (at least at the beginning of the Jewish War). Instead, Josephus deliberately distanced himself from popular Jewish interpretation and applied the oracle to General Vespasian, his patron, "who was proclaimed emperor on Jewish soil." Early Christians were also aware of the passage's messianic potential, as seen in the "star" of Matthew 2:2 and the magis' assumption that it pointed to the birthplace of the "king of the Jews." *Simon ben Kosiba's nickname *bar kokhba* ("son of the star") apparently was inspired by this passage. According to rabbinic tradition, this man claimed to be the Messiah, or at least was proclaimed as such by some of his following (cf. y.

Ta'an. 4:5 §8; *b. Sanh.* 93b; Justin Martyr *Apol.* 1 81; *Dial. Tryph.* 106; Irenaeus *Haer.* 3.9.2), though in the wake of his defeat his sobriquet was changed to *bar kozibah* ("son of the lie").

2.3. *Isaiah 11:1-6*. In the Hebrew text, the oracle of Isaiah 11 anticipates the coming forth of "a shoot from the stump of Jesse, even a branch (that) shall grow out of his roots" (*Isa.* 11:1). The Isaiah targum renders the verse, "And a king shall come forth from the sons of Jesse, and the Messiah shall be exalted from the sons of his sons" (cf. *Tg. Is* 11:6: "In the days of the Messiah of Israel"). Much earlier the LXX had enhanced the messianic potential of Isaiah 11:10: "And there shall be in that day the root of Jesse, even he who arises to rule over nations"). Paul quotes this passage and applies it to "Christ" (*Rom* 15:12; cf. *Rev* 5:5; 22:16; Clement of Alexandria *Strom.* 5.6). Isaiah 11 is taken in a messianic sense in 4QpIsa^a frags. 7-10 iii 22-29 and is echoed in 1QSb 5:21-26, a passage which describes the blessing that is to be pronounced upon the Prince of the congregation. In 4 Ezra 13:2-10, Isaiah 11:4 is alluded to and applied to the man who "flew with the clouds of heaven" (cf. *Dan* 7:13). Messianic interpretation of Isaiah 11 probably underlies 4Q285 5:1-6 and *Testament of Levi* 18:7 as well. Early Christian writers were especially fond of Isaiah 11 (for *Is* 11:1, cf. *Mt* 2:23; *Acts* 13:23; *Heb* 7:14; *Rev* 5:5; 22:16; Justin Martyr *Apol.* 1 92; *Dial. Tryph.* 87; Clement of Alexandria *Paed.* 1.7; Irenaeus *Haer.* 3.9.3; *Sib. Or.* 6:8, 16; 7:38; 8:254; for *Is* 11:2, cf. *Eph* 1:17; 1 *Pet* 4:14; Irenaeus *Haer.* 3.17.1; for *Is* 11:3, cf. *Jn* 7:24; Clement of Alexandria *Paed.* 1.7; for *Is* 11:4, cf. *Jn* 7:24; *Eph* 6:17; 2 *Thess* 2:8; *Rev* 19:11; Clement of Alexandria *Paed.* 1.7; Irenaeus *Haer.* 4.33.1; for *Is* 11:5, cf. *Eph* 6:14).

The data therefore suggest that the messianism attested in early sources, such as the Dead Sea Scrolls, coheres with what can be ascertained from other Jewish sources from this period of time (such as some of the pseudepigrapha and NT writings) and even later (such as the targums and rabbinic literature). The Scrolls contain some distinctive ideas in certain details (such as the nature of the final war at the end of days and the Messiah's role in it, or the Messiah's submission to the priests), but it would appear that in most of the major points, Qumran messianism is not much different from that held by other pious, hopeful Jews (on this point, see Collins 1995b).

3. Anachronisms in Jewish and Christian Interpretation.

Until relatively recent times, Jewish and Christian interpreters often read messianic ideas of later periods back into the first century. Jewish interpreters assumed that the messianism of the rabbinic literature (the diversity of which was itself often unappreciated) was "normative" and reached back to the times of *Shammai and *Hillel, and perhaps back even further. Christian interpreters sometimes assumed that aspects of Chalcedonian christology were operative in the messianism of Jesus' contemporaries.

Many of the beliefs regarding the supernatural identity and/or abilities of the Messiah in both Jewish and Christian traditions do not reflect pre-A.D. 70 ideas. The Messiah was not expected to perform miracles, though miracles might occur when he appeared (as assumed in 4Q521; cf. Jesus' reply to the imprisoned John the Baptist in *Mt* 11:5 par. *Lk* 7:22). Belief that the Messiah is divine is a Christian idea; it is not Jewish, even if in traditions like those of *I Enoch*, the Messiah appears to enjoy a heavenly co-regency. Belief that the Messiah would suffer death in behalf of his people is largely a Christian idea, though the possibilities for such thinking may be traced to Jewish ideas of the suffering and martyrdom of the righteous (as in 2 *Macc* 6-7; 4 *Macc* 5-8). Ideas of the Messiah's existence before his birth, or even before the creation of the world, are post-A.D. 70 and appear in various ways in both Jewish and Christian contexts. For the latter, it becomes an integral part of christology, with its earliest explicit expression found in the Gospel of John (esp. *Jn* 1:1-18) and an even earlier implicit expression found in Paul (*Col* 1:15-17). Even in these instances, however, Christian ideas are rooted in Jewish traditions of the eternal Word or Wisdom of God (cf. *Sir* 24).

The important point is to take into account the diversity of Jewish messianism prior to Christianity and to recognize the development of Christian messianism in the aftermath of Jesus' ministry, death and resurrection. What became christology in the NT writings and in the later creeds must be carefully distinguished from pre-A.D. 70 Jewish messianism.

4. Varieties of Messianism.

Messianism developed in the postexilic period and seems to have taken on fresh vigor and variety in the Greek and Roman periods. The Dead

Sea Scrolls and various "intertestamental" writings, many of which are related in some ways to the Scrolls, offer a variety of messianic expectations.

4.1. Texts That Speak of an "Anointed" Figure.

4.1.1. *Pseudepigrapha*. There are seven early and important texts in the OT pseudepigrapha that speak of the Messiah. The reference in *I Enoch* 48:10 ("For they have denied the Lord of the Spirits and his Messiah") appears to reflect the language of Psalm 2:2: "The kings of the earth set themselves, and the rulers take counsel together, against the LORD and his anointed." The reference in *I Enoch* 52:4 ("All these things you have seen happen by the authority of his Messiah so that he may give orders and be praised upon the earth") may reflect the idea that the "son of man" will receive authority (cf. Dan 7:13-14).

The textually uncertain 4 Ezra 7:28-29 reads: "For my son the Messiah shall be revealed with those who are with him, and those who remain shall rejoice four hundred years. And after these years my son the Messiah shall die, and all who draw human breath." Although it is possible that the epithet "my son the Messiah," instead of something more simple like "my servant," is due to Christian alteration of the text, we may have a genuine Jewish reading, which alludes to Psalm 2:2 ("the Lord and his anointed") and 2:7 ("You are my son, today I have begotten you"). In 4 Ezra 12:32 the "lion" (of the vision in 4 Ezra 11:1—12:3) is identified as "the Messiah whom the Most High has kept until the end of days, who will arise from the posterity of David." Here we probably have an allusion to Isaiah 11:1 ("a shoot from the stump of Jesse") and Genesis 49:9 ("as a lion").

The Messiah of the **Psalms of Solomon* is explicitly Davidic (*Pss. Sol.* 17:4, 21). The awaited Davidic king of Israel "shall be the Lord Messiah" (*Pss. Sol.* 17:32), who will appear in "the appointed day" (*Pss. Sol.* 18:5). He will drive out the wicked (*Pss. Sol.* 17:27), will purge Jerusalem of sinners (*Pss. Sol.* 17:30, 32, 36; 18:5), and will lead Israel (*Pss. Sol.* 17:26), judging the tribes of the people (*Pss. Sol.* 17:26), who will be distributed upon the land according to their tribes (*Pss. Sol.* 17:28). Happy are those who will be born in those days, to live "under the rod of discipline of the Lord Messiah" (*Pss. Sol.* 18:7; cf. 17:42). Some scholars believe it is necessary to emend *Psalms of Solomon* 17:32 and 18:7 to read "the

Lord's Messiah." However, Greek and Syriac MSS uniformly read "the Lord Messiah." "Lord" here should not be understood in the later Christian sense, or in reference to Yahweh. It is rather part of the Messiah's honorific title and may in fact be modeled after 1 Kings 1:31, 37, 43, 47, where we find the address "lord king David."

4.1.2. *Qumran*. Some thirty texts in the Dead Sea Scrolls speak of anointed personages. About half of these are in reference to what is probably the traditional, royal Messiah. Most of the other texts are in reference to the prophets. A few refer to the priest and one is in reference to Moses. The texts that speak of an awaited anointed person, probably the royal Messiah, are as follows:

(1) CD 12:23—13:1: "until the appearance of the anointed of Aaron and of Israel."

(2) CD 14:19 (= 4Q266 frag.18 iii 12): "{until the anointed of Aaron and of Israel appears and expiates their iniquity."

(3) CD 19:10-11: "others will be delivered up to the sword at the coming of the anointed of Aaron and of Israel."

(4) CD 20:1: "the anointed of Aaron and of Israel appears."

(5) 1QS 9:11: "until the coming of the prophet and the anointed ones of Aaron and of Israel."

(6) 1QSa 2:11-12: "when [God] will have be[got]ten the anointed one among them." This text has been vigorously debated, with several emendations proposed for *yôlid* ("begotten"). However, these emendations are hardly necessary, for not only is *yôlid* the most probable original reading, the language of the passage seems to be an unmistakable allusion to Psalm 2:2, 7: "the Lord and his Messiah . . . 'You are my son; today I have begotten you.'"

(7) 1QSa 2:14-15: "afterward the [anoin]ted one of Israel will [enter]; and the chiefs of the cl[ans (or thousands) of Israel] will sit before him."

(8) 1QSa 2:20-21: "afterwar[d] the anointed one of Israel [will str]etch out his hands over the bread."

(9) 4Q252 frag.1 v. 3-4: "until the coming of the anointed one of righteousness, the branch of David."

(10) 4Q381 frag.15 7: "and I your anointed one have gained understanding."

(11) 4Q382 frag.16 2: "[an]ointed one of Isra[c]l."

(12) 4Q458 frag. 2 ii 6: "one anointed with the oil of the kingdom."

(13) 4Q521 frags. 2 + 4 ii 1: "[heaven and earth will obey his anointed one."

(14) 4Q521 frag. 7 3: "you shall fall[?] by the hand of [his anoin]ted."

4.2. Texts That Speak of Messianic Figures Who Are Not Said to Be "Anointed." There are several other texts that speak of the Messiah, but without using the word "anointed." Many of these texts employ the epithet "Prince" (*nāsi*); most of them are found in the Dead Sea Scrolls:

(1) CD 7:19-20 (= 4Q266 frag. 3 iv 9): "'a rod is risen from Israel' [Num 24:17]. The rod is the prince of the whole congregation."

(2) 1QSb 5:20: "for the Instructor to bless the prince of the congregation."

(3) 1QM 3:16: "the name of the prince of the myriad."

(4) 1QM 5:1: "and on the st[af]f of the prince of the whole congregation they shall write [his] name."

(5) 4Q496 frag. 10 3-4 (cf. 1QM 3:11-15): "the [great standard of the prince who heads [. . .] 'People [of God] and the name of Isra]c[el and] Aaro[n] and [the name of] the prince."

(6) 4Q161 frags. 2-6 ii 17: "the 'rod' [is] the prince of the congregation. And afterwards he will dep[ar]t from them."

(7) 4Q285 frag. 4 2: "the [pr]ince of the congregation as far as the [Great] Sea."

(8) 4Q285 frag. 4 6: "then they will bring him before the prince of the [congregation]."

(9) 4Q285 frag. 5 4: "and the prince of the congregation, the Bran[ch of David,] will put him to death."

(10) 4Q285 frag. 6 2: "the [prin]ce of the congregation and all Israel."

(11) 4Q376 frag. 1 iii 1: "and if the prince of the whole congregation is in the camp."

(12) 4Q376 frag. 1 iii 3: "to the prince"

(13) *Jubilees* 31:18: Jacob blesses his Judah and says, "be a prince, you and one of your sons."

(14) *Sibylline Oracles* 3:469: "a holy prince will come to gain sway over the scepters of the earth."

4.3. Texts That Speak of a Branch of David. The "Branch of David" (*semah dāwid*) is another favorite epithet for the expected Messiah:

(1) 4Q161 frags. 7-10 iii 22: "[its interpretation concerns the Branch] of David who will arise at the en[d of days]."

(2) 4Q174 frags. 1-3 i 11: "'I [will be] a father to him and he shall be a son to me' [2 Sam 7:14a]. This is the 'Branch of David' who will arise with the interpreter of the law."

(3) 4Q252 frag. 1 v 3-4: "'until' [Gen 49:10] the coming of the anointed one of righteousness, the Branch of David."

(4) 4Q285 frag. 5 3: "the Branch of David. Then [all forces of Belial] shall be judged."

(5) 4Q285 frag. 5 4: "and the prince of the congregation, the Bran[ch of David,] will put him to death."

4.4. The Scepter. The awaited Messiah is sometimes referred to as the "scepter," *šebet* (cf. CD 7:19-20 = 4Q266 frag. 3 iv 9):

(1) 1QSb 5:27-28: "for God has established you as a scepter over the rulers."

(2) 4Q161 frags. 2-6 ii 17: "[the scepter is] the prince of the congregation."

4.5. Son of God. Much disputed are the "Son" texts in 4Q246, as well as the "firstborn" text in 4Q369. All of them may refer to a messianic figure, and the texts in 4Q246 probably do (see Son of God Text). The "firstborn son" of 4Q369 may refer either to the historical figure David or to Israel.

(1) 4Q246 1:9: "and he shall be called '[son of] the [gr]eat [God].'"

(2) 4Q246 2:1: "he shall be hailed 'the Son of God.'"

(3) 4Q246 2:1: "and they shall call him 'Son of (the) Most High.'"

(4) 4Q369 frag. 1 ii 6: "and you made him a firstbo[rn] son to you."

4.6. Son of Man and Chosen One. Mention must also be made of the one like a "son of man" in Daniel 7:13, who is alluded to in a messianic sense in *1 Enoch* 46-71 (esp. *1 Enoch* 46:1-5; 52:4; 62:1-15; 63:11; 71:17) and in 4 Ezra 13:3 ("I looked, and behold, that man flew with the clouds of heaven") and 4 Ezra 13:6 ("he carved out for himself a great mountain, and flew upon it"), which also alludes to the mountain of Daniel 2, a mountain that smashes the pagan empires. This man who flies to the mountain will slay God's enemies with his mouth (4 Ezra 13:9-11), an allusion this time to Isaiah 11:4. Finally, the "son of man" figure in *1 Enoch* is frequently designated by the sobriquet "Elect One" or "Chosen One" (e.g., *1 Enoch* 48:6; 49:2, 4; 52:6; 53:6; 55:4; 61:8, 10; 62:1; cf. *Apoc. Abr.* 31:1, whose "chosen one" is probably a messianic figure). This sobriquet probably derives from Isaiah 42:1.

4.7. Diarchic Messianism at Qumran. When the Dead Sea Scrolls first came to light, there was much interest in references to two Messiahs, one priestly and the other royal (e.g., IQS 9:11 "until there come the Prophet and the Messiahs of Aaron and Israel"; cf. CD 12:23—13:1; 14:19; 19:10-11; 20:1). This diarchic messianism, however, is not innovative, but was envisioned by the prophets Jeremiah, Zechariah and Haggai. The former anticipates a righteous Branch of David and a faithful priest (Jer 33:15-18). The second speaks of "two olive trees," "two branches" and "two sons of oil" (Zech 4:11-14); and the coming of a man whose name is "Branch," who will build the temple, and a "priest by his throne," between whom there will be understanding (Zech 6:12-13). The reference here is to Zerubbabel, through whom the restoration of the Davidic dynasty was expected, and to Joshua, through whom the restoration of the Zadokite high priesthood was expected. The prophet Haggai reassures Zerubbabel and Joshua that the Lord is with them and his Spirit abides among them (Hag 2:1-7). In all probability, Qumran's messianism reflects the diarchism of these prophets and is thus unexceptional. The probability increases with the discovery of a reference to the "two sons of oil" of Zechariah 4:14 in part of a commentary on Jacob's blessing of Judah (cf. 4Q254 frag. 4). The messianic interpretation of this blessing (Gen 49:8-12) has already been noted.

4.8. A Slain Messiah at Qumran? From A. Dupont-Sommer (1950) to M. O. Wise (1999), comparison between the Teacher of Righteousness and Jesus of Nazareth has been made. That the life and thought of the Teacher of Righteousness, to the extent that these can be established, shed light on the context of Jesus can hardly be disputed. But claims that the Scrolls actually speak elliptically of Jesus and his contemporaries are farfetched and rest on no clear evidence. Moreover, the more recent and sensational claim that 4Q285 speaks of a slain Messiah rests on a misreading of the Hebrew and a failure to appreciate the context of the fragment in question. The text reads, beginning with a quotation from Isaiah:

"A shoot shall come out from the stump of Jesse [and a branch shall grow out of his roots" (Is 11:1). This is the] Branch of David. Then [all forces of Belial] shall be judged, [and the king of the Kittim shall stand for

judgment] and the Prince of the community—the Bra[nch of David]—will have him put to death. [Then all Israel shall come out with timbrels and dancers, and the [high] priest shall order [them to cleanse their bodies from the guilty blood of the c]orpse[s] of the Kittim. (4Q285 frag. 5 2-6)

Far from anticipating the coming of a suffering Messiah, Qumran messianism was traditional in all major respects. A triumphant, conquering Messiah, who of course would submit himself to Qumran's understanding of the renewed covenant, was awaited.

5. Messianism and New Testament Christology.

Most of the components that we have surveyed contribute to early Christian messianism and lay the groundwork upon which later christology will be constructed. The portrait of the militant Messiah, who is expected to vanquish Israel's enemies, especially the hated Romans (as in 4Q285 and Pss. Sol. 17—18), is subordinated to highly symbolic scenarios, such as what we have in the book of Revelation.

5.1. Davidic Descent. The Davidic descent of Jesus is affirmed in the NT and is rooted in the gospel story itself. Blind Bartimaeus hails Jesus as "son of David" (Mk 10:47, 48). The request for healing presupposes Jesus' healing ministry and may play on ideas regarding David's famous son Solomon, whose healing and exorcistic powers had over the course of time taken on epic proportions in Jewish tradition. Jesus enters Jerusalem amidst shouts about the "kingdom of our father David that is coming!" (Mk 11:10). Jesus' questioning of the scribal tendency to refer to the Messiah as "son of David" (Mk 12:35-37) should not be understood as either a rejection of the Davidic descent of the Messiah or Jesus' rejection of Davidic lineage. His point has to do with the adequacy of the epithet itself, for the Messiah is greater than David and not lesser (as, according to the conventions of the time, *son* of David implies).

The Davidic descent of Jesus is so firmly entrenched in the tradition, Paul can refer to it almost in passing (Rom 1:3, in reference to God's "Son, who was descended from David according to the flesh"). Alluding to this very verse, the Pauline school augments the Christian catechism: "Remember Jesus Christ, risen from the dead, descended from David, as preached in my gospel" (2 Tim 2:8). The Matthean and Lukan

Evangelists incorporate Davidic descent in their respective genealogies (esp. Mt 1:1, 20; Lk 1:32, 69; 2:11), with each supplementing the tradition in his own fashion (Mt 15:22; 21:9, 15; Acts 13:34; 15:16). The author of the Apocalypse testifies to Jesus' Davidic descent (Rév 3:7; 5:5). Indeed, the exalted Christ at the conclusion of the vision declares: "I, Jesus . . . am the root and the offspring of David" (Rév 22:16).

5.2. Messiah. The idea that Jesus is "anointed" of God and that therefore he is the Messiah is everywhere attested in the NT, so much so in the epistles, especially the Pauline epistles, that "Christ" becomes a quasi name, not just a title. Notwithstanding some critical opinion, the messianic understanding of Jesus is rooted in the teaching and activity of Jesus himself and not simply in the post-Easter reflection of the early church.

In the Synoptic tradition we have Peter's famous confession: "You are the Messiah" (Mk 8:29). When asked by high priest Caiaphas, "Are you the Messiah, the Son of the Blessed?" Jesus answers "I am" (Mk 14:61-61). Some critics claim that these traditions are post-Easter confessions, but the crucifixion of Jesus as the "king of the Jews" (Mk 15:26) suggests otherwise. The epithet "king of the Jews" played no role in early Christian confession or christology; nor does it reflect Jewish messianism (cf. Mk 15:32). The epithet is Roman, and its appearance in the crucifixion scene is historical, arguing strongly that by the time Jesus had entered Jerusalem his disciples were speaking of him as Israel's Messiah.

Jesus' allusive use of Isaiah 61:1-2 in his reply to the imprisoned John the Baptist (Mt 11:5 = Lk 7:22; cf. Lk 4:18-19) is another compelling indication of messianic self-understanding. Not only does the speaker of Isaiah 61:1 think of himself as anointed ("the spirit of the Lord is upon me, for he has anointed me to preach"), but phrases of this passage appear in 4Q521, a passage that describes what will take place when God's Messiah, whom "heaven and earth will obey," appears.

5.3. Son of Man. Jesus' favorite self-designation was "the Son of Man." Although the epithet lacks the definite article in Daniel 7:13, whence it is derived, it appears consistently with the article in the Gospels. This articularity is not technical, as though "son of man" is a messianic title (though later it becomes that, as attested in the Similitudes of *Enoch*); rather, it is specific. When

Jesus speaks of *the* Son of Man, he refers specifically to the one in the vision of Daniel 7. This explains why Jesus declares that as Son of Man he has "authority on earth" to forgive sins (Mk 2:10) and to make sabbath rulings (Mk 2:27-28). Furthermore, as Son of Man, Jesus has received God's kingdom and authority, permitting him to act on behalf of God's people in the cosmic struggle against Satan's kingdom, as envisioned in Daniel 7 and attested in various sayings in the dominical tradition (e.g., Mk 3:27; Lk 11:20).

5.4. Chosen/Elect One. The NT also speaks of Jesus as God's "elect" or "chosen." Once again, the tradition may derive from Jesus himself, or the experience of his disciples. The most probable context was during or shortly after the baptism, when the heavenly voice said: "You are my beloved Son; with you I am well pleased" (Mk 1:11). These words probably echo Isaiah 42:1: "Behold my servant, whom I uphold, my chosen, in whom my soul delights; I have put my Spirit upon him, he will bring forth justice to the nations." Mark's "my beloved" is the equivalent of Isaiah's "my chosen" (which the Lukan Evangelist makes explicit in his version of the heavenly voice in Lk 9:35: "This is my Son, my Chosen"). Mark's "with you I am well pleased" is the equivalent of Isaiah's "in whom my soul delights." However, the idea that Jesus was God's chosen one was not influential in the development of NT christology. Luke adds the epithet to the priestly taunting of the crucified Jesus: "He saved others; let him save himself, if he is the Christ of God, his Chosen One!" (Lk 23:35). The author of 1 Peter indirectly refers to Jesus as "chosen" in applying to him Isaiah 28:16: "Behold, I am laying in Zion a stone, a cornerstone chosen and precious, and he who believes in him will not be put to shame" (1 Pet 2:6).

5.5. Priestly Messianism. Finally, the christology and apologetics of the book of Hebrews approximates features of Qumran's priestly messianism (see Heb 5:6, 10; 6:20; 7:1-17). One should take note especially of the exaltation of the mysterious figure Melchizedek, who may have a messianic function (see esp. 11QMelch 2:5-9, 13, 25). Note too that in this scroll Melchizedek's appearance is linked to Isaiah 61:1-2.

MILK

The Hebrew Bible described the promised land as a land of milk and honey (twenty times in the OT, e.g., Ex 3:8, 17; 13:5; 33:5; Lev 20:24). This meant that it would be a prosperous land (cf. *Sinuhe* 80-83; Homer *Odys.* 15.403-14; Euripides *Bacch.* 142-45), not requiring irrigation to the same degree as did Egypt or Mesopotamia (Aharoni, 4). Israelites used milk from sheep, cows (Deut 32:14) and probably especially goats (Prov 27:27). Milk was offered for *hospitality (Gen 18:8), and it was more valuable than mere water (Judg 4:19). Drunk fresh but souring quickly in the warm climate, milk was often curdled for cheese (1 Sam 17:18; 2 Sam 17:29; Job 10:10) or for curds (Gen 18:8; Deut 32:14; Job 20:17; Is 7:15, 22), which are similar to yogurt.

1. Ancient Practices
2. Nursing
3. New Testament References

1. Ancient Practices.

The prohibition against boiling a kid in its

mother's milk (Ex 23:19; 34:26; Deut 14:21) may stem from humanitarian considerations (cf. Deut 22:6-7), but as early as Maimonides some commentators have seen in it a warning against a pagan practice. Canaanite evidence previously cited for this practice (*UT* 52:14) was based on a reconstructed and mistranslated text (Gordon, 173; Craigie, 74-76), yet it is possible that a Thracio-Phrygian Dionysiac ceremony involved ritual boiling of milk in the worship of a mother goddess (Guthrie, 209). Boiling milk in general may have been common (*Sinuhe* 25-28).

Extrabiblical sources provide much information on ancient Mediterranean practices. Although some goat's milk would be taken to town (*Priapea* 2.10-11), milk was more easily preserved and used in the countryside, especially in the form of goat's and sheep's milk (Cary and Haerhoff, 93). Cow's milk was known (e.g., *b. Sabb.* 143b) but not usually preferred in the eastern Mediterranean. Greeks consumed most cow's milk raw, preferring goat's and sheep's milk for cheeses; Romans, by contrast, preferred cheeses from cow's milk (Lewis, 131). Most sheep and goat milk was curdled and pressed into cheeses (*Longus Daphn. Chl.* 1.23; *Epictetus Disc.* 1.16.8). Thus Mediterranean cultures generally found unusual the behavior of such peoples as the Scythians, who depended on wild mares' milk (*Strabo Geog.* 7.300-302).

2. Nursing.

Young children, however, normally required fresh, human milk. Nursing was a common practice in Greco-Roman antiquity (Marcus Aurelius *Med.* 5.4; Lefkowitz and Fant, 164-68; Bradley; see Slavery). Though moralists often promoted maternal breastfeeding, most well-to-do homes and many poorer homes preferred nurses (Dixon, 3, 120; Treggiari, 87). Nursing contracts sometimes specified that the woman would nurse the child in her own home for a particular period and prohibited her from becoming pregnant or nursing another child (*CJF* 2:15-19 §146). The most common duration of nursing was about two years (e.g., *Pseudo-Philo Bib. Ant.* 51:1), but contracts ranged from six months to three years (Lewis, 146). Jewish mothers normally nursed their own children (4 Macc 13:20; 4 Ezra 8:10; *T. Benj.* 1:3; *m. Ketub.* 5:5; for nursing in *rabbinic sources, see Ilan, 119-21). Some Jewish teachers disapproved of Jewish women nursing Gentiles, because this would nurture future idol-

aters, but they allowed the reverse practice (*m. 'Abod. Zar.* 2:1); other Jewish traditions suggest a Jewish preference for avoiding idolaters' milk (Josephus *Ant.* 2.9.5 §226).

Only in ancient legends did sources other than human breasts supply milk for human infants. Pagans included stories of animals that provided milk for lost human babies; these included goats (Longus *Daphn. Chl.* 1.2) and sheep (Longus *Daphn. Chl.* 1.5). In such accounts a goat suckled Zeus (Longus *Daphn. Chl.* 1.16); most often recounted, a wolf suckled Romulus and Remus (Livy *Hist.* 1.4.6; Propertius *Elegies* 4.1.55-56). A man without a wife nursed his child with a wild mare's milk, squeezing the udder himself (Virgil *Aen.* 11.570-72). Later Jewish sages occasionally told of men who miraculously breastfed infants when no mothers were available (*b. Sabb.* 53b, *Bar.*; *Gen. Rab.* 30:8), or of Sarah, who miraculously breastfed the whole world and so converted many Gentiles to the worship of the true God (*Gen. Rab.* 53:9; *Pesiq. Rab Kah.* 22:1). Unlimited milk functioned as a figure for prosperity (Job 29:6; Song 5:12; *T. Job* 13) and was part of the Jewish vision of *eschatological abundance (Joel 3:18; *Sib. Or.* 3.749).

3. New Testament References.

Milk is mentioned several times in the NT. In 1 Corinthians 3:2 Paul probably compares himself with a mother or a nurse breastfeeding a baby. Such feminine images for males were not unusual or necessarily demeaning (e.g., Homer *Il.* 8.271-72; *Odys.* 20.14-16; cf. Malherbe on 1 Thess 2:7). The image does, however, call the Corinthian Christians to account: comparing an adult with a baby (e.g., Homer *Il.* 16.7-8) or a child (Aristophanes *Nub.* 821; Epictetus *Disc.* 2.16.39) was generally insulting. Perhaps the Corinthian Christians felt that Paul's meat was little better than his milk, wanting something deeper than his teaching (cf. Hooker), but for Paul no message could prove deeper than the message of the cross (1 Cor 1:17-2:16). The writer of Hebrews similarly notes that his audience remains dependent on milk (Heb 5:12-13) but in his exposition about the heavenly priest like *Melchizedek warns them that he must supply them deeper teachings lest their failure to press deeper result in their destruction (Heb 6:1-12).

Less relevantly, some scholars have related such NT images to pagan religious images (e.g., Reitzenstein 417-18). For example, some an-

cients employed divine lactation as a symbol for intimacy with a deity (Apuleius *Met.* 11.10; see Goodenough, 6:117-22; 8:75-77; Corrington). In what is probably a twist on this image, in some early Christian texts Christ metaphorically offers holy milk from his breasts (*Odes Sol.* 8:14), or the Spirit milked the Father to incarnate Christ in Mary's womb (*Odes Sol.* 19.1-7). J. D. M. Derrett thinks the pagan association of milk with Dionysus restricted the Jewish emphasis on milk and honey in the early Roman period.

What is more likely in view in the NT texts is the ancient use of milk as a metaphor for the elementary studies, appropriate only for novices (Philo *Agric.* 9; *Congr.* 19; *Migr. Abr.* 29; *Quintilian Inst. Orat.* 2.4.5-6). In a more positive vein, as in 1 Peter 2:2, some Jewish teachers compared the *Torah with milk (*Sipre Deut.* 321.8.5). Papyri and inscriptions attest that the adjective applied to milk in 1 Peter 2:2, when used of foodstuffs, refers to their pure and unadulterated character.

MIQSAT MA'ASEY HA-TORAH (4QMMT)

Known commonly by its abbreviation 4QMMT, this work is undoubtedly the most important document to come to light since the "rediscovery" of the Dead Sea Scrolls in 1991.

1. Description of the Manuscript Evidence
2. Genre
3. Contents
4. Conclusions

1. Description of the Manuscript Evidence.

Six copies of the text were discovered in Cave 4 in 1952 (4Q394-399), but it seems that even the official editors were not fully aware of its significance until the mid-1980s. Its circulation began in bootleg copies of a handwritten manuscript (c. 1986) followed by two unauthorized publications (1990, 1991) before the official edition finally appeared in 1994 (Qimron and Strugnell). None of the six manuscripts is complete, but together they preserve perhaps as much as 50 percent of the original. Two of the manuscripts (4Q394-395) have been dated paleographically to the mid-first century B.C. (Qimron and Strugnell). However, many researchers believe that the document dates to the earliest days of the Qumran sect (c. 160 B.C.).

2. Genre.

4QMMT is a letter of exhortation that gives evidence of having been composed by the leadership of the Qumran sect for the purpose of warning the addressee ("you") concerning differences of opinion respecting legal issues that the addressee was violating, having come under the influence of a third party.

3. Contents.

Calendar (A1-21)

- I. Legal Body: Do not mix the holy with the profane. (B1-C4)
(At least twenty-four paragraphs detailing issues of Halakhah)

- II. Warning I: Transgression brings destruction, therefore we have separated. (C5-9)
- III. Exhortation I: Separate yourself. (C10-21a)
- IV. Warning II: The last days are upon us. (C21b-26a)
- V. Exhortation II: Keep away from the counsel of Belial. (C26b-32)

3.1. The Calendar. One of the six manuscripts contains a calendar preceding the opening passages of the letter itself. As the letter does not mention calendrical matters and instead deals with issues related to purity, it remains doubtful whether it is an integral part of 4QMMT. It is of note that the calendar is the 364-day sectarian form (see *Calendars, Jewish*) found in numerous other documents among the Dead Sea Scrolls (see *Dead Sea Scrolls* §1.2.6). This fact alone makes it relatively certain that 4QMMT is a work composed by the Qumran sect.

3.2. The Legal Body. Although the law and various discussions pertaining to it are plentiful in the Dead Sea corpus, only 4QMMT directly challenges the position of another religious group. Because of the potentially defining nature of such a challenge, scholars have hoped to find in 4QMMT a basis for a definitive identification of the group behind the sectarian scrolls.

3.2.1. Sadducean Theory. L. Schiffman has shaken the long-standing "Essene consensus" by suggesting, "The author of the MMT is usually more stringent than the later Rabbis and where we can check is parallel to the Sadducees in his views." The problems posed by this conclusion are significant. The Sadducees known from ancient sources (Josephus, NT) stand opposed to several foundational doctrines of the Qumran sect. Josephus wrote that the Sadducees "say there is no such thing as fate" (Josephus *Ant.* 13.5.9 §173), whereas the Qumran sect gloried in the fact that God ordered all things, "a destiny impossible to change" (1QS 3:15-23, see also CD 2:7-10). Matthew 22:23 makes it clear that the Sadducees did not believe in the resurrection, whereas the Qumran sect hoped in the resurrection of the dead (4Q521 2+4 ii 12) followed by eternal blessings (1QS 4:7-8).

3.2.2. Weak Point of the Sadducean Theory. A possible problem with the Sadducean theory of Qumran origins is that the similarities in doctrine between the Sadducees and the Qumran sectarians may not be significant enough for identification. As an example, 4QMMT (B13-17)

stipulates that the priest who was to prepare the ashes of the red cow must bathe and wait until sunset before setting to the task of burning the cow. *Mishnah Parah* 3:7 discloses that the priest was to burn the cow before the setting of the sun and the completion of his cleansing, simply because the Sadducees waited until after. There is certainly a notable similarity between the Sadducees and the Qumran sectarians. However, Numbers 19:10-11 stipulates that the gathering of the resultant ashes was to be done by someone clean. This cannot be those who prepared ashes, as the text clearly states that this duty has made them unclean and that they must bathe and wait until evening to be clean once again. If the gathering must be done by a clean individual, it would stand to reason that the preparation was to be done by those who were clean as well. Not so, says the *Mishnah*, "because of the Sadducees." It would appear that the rabbis (Pharisees) were the odd party in this scenario and that the Sadducees and Qumran sectarians were true to the spirit of the biblical text. Thus the similarity may not be specific enough for identification.

3.2.3. Essene Theory. The matter is not settled, but the standard Qumran sect = Essene hypothesis still appears to be the best explanation of the data. Accordingly, 4QMMT was written by Essenes opposing the legal teaching of the Pharisees.

3.3. Warning and Exhortation. The clear message of the final portion of the text is that uncleanness and the impending last days have compelled the author and his group to separate from the rest of the people (C7). The author encourages the addressee—whom he says has "insight and knowledge of the law" (C28)—to do likewise, else he would stand in danger of discovering the writer's words to be true in the end of time (C30). The last two lines then propose: "And it will be reckoned to you as righteousness, in that you have done what is right and good before him, to your own benefit and to that of Israel" (C31-32).

3.3.1. Works of the Law. Contextually, "doing what is right and good" refers to the two dozen or more legal discussions in the body of the document. In line C27 these are called "some of the works of the law," the very phrase which gives the composition its name. The similarity of this statement to passages in Paul's letters to the Romans and Galatians must not be overlooked:

"Knowing that a man is not justified by *works of the law*, but rather by faith in Jesus Christ, even we have believed in Jesus Christ, in order that we might be justified by faith in Christ and not by *works of the law*, because by *works of the law* no flesh shall be justified" (Gal 2:16).

There is virtually no doubt that the Hebrew phrase *ma'asey ha-tōrah* ("works of the law") is equivalent to the Greek phrase *erga nomou* (also, "works of the law"). The importance of this fact can hardly be overstated. Prior to the discovery of 4QMMT, the only ancient documents which contained this phrase were Romans and Galatians and subsequent Christian literature. On the basis of this, some have suggested that Paul had built a straw man, or perhaps that he was not well informed concerning Palestinian Judaism.

3.3.2. Reckoned Righteous. In addition to this clear link between the language of Paul and 4QMMT, the significance of the works of the law to the Qumran writer was that the doing of them brought the "reckoning of righteousness" (C31). The echo of this discussion cannot be denied in Galatians 2:16. This statement places the Qumran writer and Paul in a virtual face-off: 4QMMT claims that it is by works of the law that one is reckoned righteous, while Paul counters directly: not works, but faith in Christ. Paul's ancient opponents—or rather their theology—has been found.

3.3.3. Salvation by Works? The next step of investigation into this matter may be the most significant. Given the existence of an ancient Jewish group that was a theological parallel to Paul's "false brethren" (Gal 2:4), what do their own writings claim one gained by keeping the law. Was salvation by works? "Surely a man's way is not his own; neither can any person firm his own step. Surely justification is of God; by his power is the way made perfect. All that shall be, he foreknows, all that is, his plans establish; apart from him is nothing done. As for me, if I stumble, God's lovingkindness forever shall save me. If through sin of the flesh I fall, my justification will be by the righteousness of God which endures for all time" (1QS 11:11-12, see also 1QS 2:25—3:4; 10:20-21; 1QH 12:30-31; CD 2:4-5).

The emphasis on the need for repentance and focus on God's grace in this and other Qumran writings should convince that a knee-jerk reaction which suggests that 4QMMT reflects a "works-earn-righteousness" religion is

hardly justified. Before the publication of 4QMMT, E. P. Sanders challenged this firmly entrenched notion. The place of obedience to the law in Qumran literature—as well as for other expressions of Palestinian Judaism—is always the same: it is the consequence of being in the covenant and the requirement for remaining in the covenant" (Sanders).

The following excerpt from the *Damascus Document* makes it clear that Sanders' assessment of Qumran Judaism is correct: "Such is the fate for all who join the company of the men of holy perfection and then become sick of obeying virtuous rules. This is the type of person who 'melts in the crucible' [Ezek 22:21]. When his actions become evident he shall be sent away from the company as if his lot had never fallen among the disciples of God" (CD 20:1b-4a, see also CD 19:33—20:1a, 4b-10).

Thus "works of the law," according to the only ancient Jewish group of record that used the term, was not the initiator of a relationship with God; it was the requirement of such a relationship. Paul counters the first century A.D. proponents of this position, writing that both the initial step (Gal 3:2) and the continuing relationship (Gal 3:3) were "by faith in Christ Jesus." The keynote to Paul's position is encapsulated in the quote from Habakkuk 3:11, "The righteous shall live [conduct oneself] by faith."

4. Conclusions.

4.1 Pauline Studies. For Pauline studies, 4QMMT is important in that it shows that Luther's reaction to Catholicism which has been traditionally projected onto first century Judaism is not supported by an examination of the only Jewish community of record which used the vocabulary reflected in Paul's discussions of law and righteousness.

4.2 Qumran Studies. Most scroll researchers have concluded that 4QMMT was directed to the Jerusalem establishment and possibly to the office of the high priest himself. Noting, however, that repentance plays no part in the argument of the writer of 4QMMT, the document appears rather to be directed to one who had been influenced by the counsel of a third party and had begun to turn away from the position of the author. Thus the letter is more likely a warning to a fellow covenanter (and the group he represents) who had fallen under the influence of pharisaic thought.

MUSIC

Investigation of the music of the early church has drawn on the efforts of liturgical scholars, musicologists and historians, as well as biblical scholars, in attempting to find out what the music of the earliest Christian church consisted of

and where it came from. There are still many questions to be answered, and perhaps many questions yet to be asked.

The distance of time and culture makes the task of identifying or reconstructing the musical fiber of the early Christian church particularly elusive. While interest in the subject is rising and investigation of it is increasingly sophisticated, essential features of this music still remain largely unknown to us. For instance, what did the music sound like? What melodies did it use? Was the music Jewish? These most basic of questions and others like them form the basis of scholarly discussion about music in the early Christian church, for even elementary characteristics of the music remain somewhat of a mystery. Essays on this topic frequently begin by saying that the early Christian church was a singing church, but what that means is hard to define.

The sources of information on the subject of music in the early Christian church are limited. Some require much lateral thinking in order to interpret the possible relevance they may have for the subject, and this is one area in which comparative musicology has played a role. Musical texts are likely preserved in the Bible and in other related literature, but how they were used is unclear.

Finally, scholarly discussion about the music of the early Christian church inevitably turns to the question of backgrounds and influences; that is, based on the religious and cultural backgrounds against which the early Christian church was set and within which it thrived, determining which of these influenced its music.

1. Voices and Instruments
2. Sources and Traditions
3. Origins and Influences

1. Voices and Instruments.

The most essential element of music—that is, to experience it, either by hearing it or by participating in it—is what we know the least about when it comes to the music of the early Christian church. The kind of singing, the descriptive terms that were used, and the use of musical instruments all merit attention.

1.1. Singing with One Voice. J. Quasten's classic work on the music and worship found in pagan and Christian antiquity devotes some discussion to the kind of singing that was likely in the early Christian church (Quasten, 66-72). He writes,

"the ideal of early Christian singing was unity or monophony" (Quasten, 68), and this thought is based in part on some of the church fathers' use of the term "one voice," which is seen to be an indication of singing in unison. For instance, Clement of Rome (fl. c. A.D. 96) states: "Let us, therefore, gathered together in concord by conscience, cry out earnestly to him as if with one voice, so that we might come to share in his great and glorious promises" (McKinnon 1987, no. 20). Later, Eusebius of Caesarea (c. A.D. 260-c. 340) uses similar language to describe Christian singing (McKinnon 1987, no. 206; see also Quasten for further examples and discussion). E. Werner also writes that "the ideal of the early Church was, according to the Apostolic literature, the *koinōnia* i.e. the congregation singing in unison" (Werner 1947, 431). Even Paul is thought by some to support this view, where he writes, "so that with one heart and mouth you may glorify the God and Father of our Lord Jesus Christ" (Rom 15:5-6).

Most scholars also think that singing was unaccompanied, although the surest evidence for this view comes generally from third- and fourth-century documents, not from the first century. Quasten, for instance, points out that in Revelation 5:8 John speaks of a "new song" and that he "expressly mentions that it is accompanied by the music of the cithara" (Quasten, 72).

1.2. Psalms, Hymns and Spiritual Songs. Perspectives on these three terms, "psalms, hymns and spiritual songs" (Eph 5:19; Col 3:16), ranged widely over the twentieth century. From a musicological perspective, E. Wellesz proposed that the terms were specific in meaning. He defined psalmody as "the cantillation of the Jewish psalms and of the canticles and doxologies modelled on them"; hymns as "songs of praise of a syllabic type, i.e. each syllable is sung to one or two notes of melody"; and spiritual songs as "Alleluias and other chants of a jubilant or ecstatic character, richly ornamented" (Wellesz 1955, 2). It is thought that Wellesz's distinctions are typical of later Christian chant but not necessarily early Christian chant (see J. A. Smith 1994), and it has also been argued linguistically that the three words seem to be synonyms (see Meeks, 144). Wellesz was aware of the view that the three words are synonyms but suggests that "the individuality of psalm, hymn, and spiritual song is obvious to the student of comparative liturgiology" (Wellesz 1961, 33-34). At this point, there-

fore, it remains unknown exactly what musical form may have been meant by any of these three terms, if any, although it is possible that Wellesz's proposal was too easily dismissed.

1.3. Psalmody. P. F. Bradshaw comments that "liturgical and musical historians have tended to assert confidently that psalmody was a standard part of the early *synagogue. . . . There is, however, an almost total lack of documentary evidence for the inclusion of psalms in synagogue worship. . . . While the *Hallel* seems to have been taken over into the domestic Passover meal at an early date, and apparently also into the festal synagogue liturgy, the first mention of the adoption of the daily psalms in the synagogue is not until the eighth century" (1987, 22-23; see also McKinnon 1986; J. A. Smith 1984). Most scholars think that the Jewish psalmody of the synagogue is what the first Christians sang, and as the earliest Christians were Jews, it is reasonable to think that Jewish psalmody was the basis of their music. Evidence of psalmody in the Christian church is cited from writers in the first centuries outside of the Jewish tradition who describe psalmody as an unusual form of music, while writers from within the Jewish tradition find nothing exceptional about it, which suggests that it is familiar to them.

However, if Bradshaw's assessment is correct, it is difficult to know what role psalmody had in early Christian services. Justin Martyr (c. A.D. 100-c. 165), for instance, gives a detailed description of a eucharistic service at Rome but makes no mention of music or psalm singing (*Apol. II* 65-66). His description may not be representative of the first century or of other locations and gatherings. Nonetheless, psalmody seems to have played some role in the early church, for it is mentioned in later writers, Jewish and Christian, although it may not have had a large established role until one or two centuries after Christ. *Philo's detailed description of an evening gathering of the *Therapeutae is often considered an indication of musical practices in religious gatherings of the time of the NT and is thought to shed light on early Christian gatherings (Philo *Vit. Cont.* 10.80-81). J. W. McKinnon suggests that in "Judaism the psalmody that accompanied sacrifice in the late Temple was music in the fullest sense, but the psalms recited in the synagogues, and in the early Christian gatherings as well, were more scripture than song. They were no doubt recited with some sort of

cantillation, but so was all scripture; it would take several centuries in each of the religions before psalmody became music in a self-conscious sense" (McKinnon 1990, 10).

Another area of the church gatherings where music may have been fostered was at the common meals. For instance, the Synoptic accounts of the Last Supper (Mt 26:30 par. Mk 14:26) mention that Jesus and his disciples sang a hymn before they went out, which is thought by many scholars to be an allusion to the psalms of the Jewish *Hallel*. Similarly, several second- and third-century accounts describe psalmody as a part of common Christian meals (McKinnon 1987, 9).

1.4. Musical Instruments. It is commonly thought that musical instruments were banned from the early church on account of their worldly nature. Some scholars believe that instruments were banned throughout the first century; others, that they were banned after the *destruction of the temple as a way of expressing disapproval. Of the Jews, Werner says that "rabbinic sources explain the strict prohibition of any instrumental music in the Synagogue as an expression of mourning for the loss of the Temple and land, but the present writer has been able to show that a certain animosity against all instrumental music existed well before the fall of the Temple. . . . It seems that this enmity towards instrumental music was a defence against the musical and orgiastic mystery cults in which Syrian and Mesopotamian Jews not infrequently participated." Werner adds, "The primitive Christian community held the same view, as we know from apostolic and post-apostolic literature: instrumental music was thought unfit for religious services" (Werner 1966, 315; see also Werner 1947, 468).

However, McKinnon's search of early rabbinical writings and other contemporaneous literature has found no support for the idea that instruments were banned in the synagogue, but also no evidence that musical instruments were ever employed in the ancient synagogue. As a result, he observes that the central element of the service, the simple declamation of Scripture, had no call for the use of instruments in any case (McKinnon 1979-80; 1986). He further clarifies the position of some of the church fathers against musical instruments: "Music historians have tended to assume . . . that ecclesiastical authorities consciously strove to maintain their

music free from incursion of musical instruments. There is little evidence of this in the sources however. What one observes there are two separate phenomena: a consistent condemnation of instruments . . . and an ecclesiastical psalmody obviously free of instrumental involvement . . . The truth remains that the polemic against musical instruments and the vocal performance of early Christian psalmody were—for whatever reasons—unrelated in the minds of the church fathers" (McKinnon 1987, 3).

2. Sources and Traditions.

2.1. Written Sources. Sources that may be relevant to studying music in the early Christian church are spread far and wide. How to determine which are truly relevant and what they can tell us is the difficulty. Ordered somewhat chronologically, some sources that are used are the OT (Sendrey; J. A. Smith 1998); ancient writings and musical artifacts of ancient cultures (e.g., Sachs 1943; Farmer; Galpin); ancient Greek literature on musical subjects or literature that incorporates either written music or texts that are written to be sung (Henderson); the *Apocrypha (intertestamental literature); the NT (W. S. Smith); the *apocryphal NT books; musical fragments from around the time of Christ (e.g., West 1992a.); the *Dead Sea Scrolls (Werner 1957); *letters (van Beeck); later collections of hymns (Wellesz 1961); writings of the church fathers (McKinnon 1965; 1987); written records of later liturgical practices; frescoes and funerary sculptures that depict musical scenes (Quasten); Jewish writings such as the Talmud and Mishnah (Werner 1959, 1984); and later chant books and other liturgical books that preserve the ancient rites of branches of the Christian church (Wellesz 1967).

Each of these sources poses numerous difficulties. One would think that the NT would be the most authoritative source on music in the early Christian church, but where music is referred to at all, there are more questions than certainties as to what is meant. NT passages include the parallel passages mentioned above about Jesus and his disciples having sung a hymn before going to the Mount of Olives (Mt 26:30 par. Mk 14:26); Paul and Silas praying and singing hymns in prison at midnight (Acts 16:25); Paul's discourse on praying and singing both with the spirit and with the mind (1 Cor

14:15); his reference to having a hymn as part of one's contribution to the strengthening of the church (1 Cor 14:26); his reference to psalms, hymns and spiritual songs (Eph 5:19; Col 3:16); a comment in the book of James on the appropriateness of singing songs of praise when one is happy (Jas 5:13); and instances of singing a new song, singing in a loud voice and singing the song of Moses (Rev 5:9, 12; 14:3; 15:3).

Similarly, there are limited references to musical instruments in the NT, but some that are mentioned are the Greek *aulos* (thought by some to be equivalent to the Roman *tibia*, although the modern equivalent is the oboe; see McKinnon 1990, 7; Scott), harp, kithara, lyre, pipe and timbrel (see Sachs 1940; Sadie 1984; Werner, *IDB*, 469-76). These each have a long history preceding the time of the NT and can be found in various forms in ancient cultures (see, e.g., Schlesinger on the Greek *aulos*; and McKinnon and Anderson; Wulstan on the Babylonian harp; and recently West 1994). NT references to playing musical instruments or to the instruments themselves are found in the pericope where Jesus finds *aulos* players in attendance over a dead girl (Mt 9:23-24); parallel Synoptic passages that quote a children's ditty sung in the marketplace that mentions playing the *aulos* (Mt 11:16-17 par. Lk 7:32); music and dancing in the home of the prodigal son (Lk 15:25); the clanging gong and noisy cymbals mentioned in Paul's discourse on love (see Werner 1960, who argues that Paul detested musical instruments); Paul's discussion about using intelligible words, comparing instruments such as the *aulos*, harp and trumpet that require delineation of notes in order to know the melody (*aulos*, harp) or to recognize a call to battle (trumpet; 1 Cor 14:7-9; see also Porter); and a declaration that harpists and musicians, flute players and trumpeters will not be heard again (Rev 18:22).

Other musical references are found in the Apocrypha in such books as *Judith and *Maccabees. The *Apocryphal Acts of John the Evangelist* (first century) mentions the playing of the *aulos* and dancing in relation to hymn singing (Apel, 39). The OT is replete with musical references, as well as several quotations of canticles (J. A. Smith 1998). The book of Psalms in the OT is thought by many to be the musical texts that were used by early Christians (J. A. Smith 1990). Depictions of musical scenes that are thought to take place near to the time of Christ give some

insight into musical practices of the time, sometimes related to certain cult activities and religious rites (Quasten). Musical fragments that show notation of some of the music in the centuries surrounding the time of Christ may contain insights into the kind of music used by early Christians (West 1992a; for some examples of ancient but undated Jewish melodies, see Davison and Apel, 8; for a transcription of the Greek "First Delphic Hymn," c. 138 B.C. and of Mesomedes's "Hymn to the Sun," c. A.D. 130), as well as "Seikilos Song," first century A.D., see Davison and Apel, 9-10).

Although some of these sources are particularly relevant for early Christian music, it is rare that they can provide conclusive evidence on an issue. For example, the fragmentary notated Christian hymn found on the *papyrus at Oxyrhynchus, first published in 1922 (P.Oxy. 1786; Grenfell and Hunt) is still one of the most significant finds pertaining to the music of early Christianity, yet there is no consensus as to what it tells us or whether it is representative of music of the third-century Christian church or earlier. On its discovery and publication it was thought to show close ties with Greek culture and religion, in particular because of its Greek musical notation (see early discussions in Grenfell and Hunt; Abert; Reinach; more recently, Pöhlmann; but see also Werner IDB; Wellesz 1961, 156). It also has been argued that the hymn is a failed attempt to apply Greek notation to a Christian hymn (Holleman 1972). Recent study, however, has again shown aspects of the Greek hypothesis to have merit (West 1992a).

2.2. Oral Tradition. Some scholars think that certain Jewish oral traditions that have been handed down through the centuries may have changed very little. If this is true, it makes it possible that the singing of some isolated Jewish communities may preserve ancient forms of Jewish psalmody (Idelsohn, followed by Werner 1959, 1984) and therefore reflect psalmody of the earliest churches in Christianity. A. Z. Idelsohn's transcriptions and recordings of Jewish music in the first two decades of the twentieth century were based in part on this premise. The real sound of the music of antiquity is hidden in the past, yet hints of it may exist and be reconstructed from formulaic patterns of notes that have been woven into the various oral traditions of the Jews (see Werner 1981). The inherent difficulty in this approach is that historical threads

must be connected over very long periods of time, and move backwards in time, in order to show that melodies and musical patterns of the Jews were taken over by the early Christian church.

Similar connections must be made (e.g., Wellesz 1967) in order to show that the early church's musical roots exist in the traditional music of branches of the Christian church that have retained the most ancient forms of liturgy, such as may be found in Syrian church music (see, e.g., Husmann). In this regard, comparative musicology has attempted to analyze ancient musical traditions that are thought to be preserved in various languages and cultural settings, which include not only Syrian but also Georgian (Jeffery), Armenian (Hannick) and Byzantine (Strunk, 151-64), as well as branches of Judaism (e.g., Werner 1981), to identify common roots and to determine the chronology of their development (see Sendrey; Werner 1959, 1984; Jeffery; for discussion in general on oral tradition, see Treidler). There are many difficulties to be worked out in tracing oral tradition back to its most primitive sources—specifically, the lack of written records—but it is becoming recognized that new approaches must be developed in this regard.

3. Origins and Influences.

This discussion leads directly back to the question that has dominated discussions about music of the early Christian church—the question of origins and influences. Is the music Jewish? Is it Greek? Or is it a combination of these and other influences?

The twentieth century saw a tremendous increase in scholarly writings on Jewish origins of the music of the early Christian church. These include the groundbreaking work in comparative musicology by Idelsohn, which showed links between the music of isolated Jewish communities that are thought to preserve Jewish chant from before the rise of the Christian church (but cf. Hucke's analysis and critique, 438-39). Similarly, the work of Wellesz (1967) and Werner (1959, 1984; plus numerous other publications by both Wellesz and Werner, and others) represents a vast field of study in musical and liturgical origins, particularly Jewish. It is no surprise to find Jewish origins in the musical traditions of the Christian church. As R. T. Beckwith states, "At its origin, Christianity was a Jewish religion."

Jesus Christ was a Jew, and his first followers were Jews" (Beckwith, 39). It is equally unsurprising, however, to find influences of the Greco-Roman multicultural environment within which the Christian church was situated. Some of these are discussed below.

4.1. *The Influence of the Jewish Temple.* The Jewish temple is frequently cited as being highly influential in the music of the early Christian church, but the temple music was formal music, performed by professional musicians. There seems to be little reason to think that this had much influence on the early church, partly because Christianity only began in the early thirties and the temple was destroyed in A.D. 70, and partly because the early church was not a formal or formalized institution. The earliest church consisted of small, informal gatherings, while the temple was a highly regularized formal institution, therefore allowing for little direct influence. Nonetheless, the early church may have incorporated the cantillation of Scripture (e.g., Maxwell, 2; Werner 1966), which is something that would have been learned originally through the formal training and traditions of the temple. Werner writes that both cantillation and psalmody directly influenced the early Christian church: "Not only are these two elements, the core of the ancient musical liturgy, common to both Synagogue and Church, they also are by far the best preserved and most authentic features" (Werner 1947, 438; but cf. McKinnon on cantillation, 1990, 10).

4.2. *The Influence of the Synagogue.* Two common assumptions regarding the continuity of practices in the Jewish synagogue and the early Christian church have come under recent scrutiny. The first is that the liturgy of the Jewish synagogue was carried over directly to the Christian church (e.g., Dugmore; Dix; see *Liturgy: Rabbinic*). R. P. Martin, for instance, writes that "Christianity entered into the inheritance of an already existing pattern of worship, provided by the Temple ritual and synagogue Liturgy" (Martin 1974, 19). The NT makes clear that Jesus frequently attended and taught in the synagogue on the sabbath (Lk 4:15-16), as did Paul (Acts 17:2), so it is reasonable to think that its liturgical practices were carried on in the early church. But there are difficulties with this seemingly straightforward view.

The synagogue in the first century seems to have been known as a place of study, a place of

prayer (but cf. McKinnon 1986) and also as a place where discussions and certain kinds of general business took place. However, current research on the first-century synagogue recognizes several unsolved problems. There is some question as to the exact nature of the synagogue, even as to its formal existence before the destruction of the temple in A.D. 70 (van der Horst; Bradshaw 1992; see the recent review of discussion in McKay), and recent liturgical scholarship has found little evidence of an established synagogue liturgy. Bradshaw questions the confidence Christian liturgical scholars place on the sure foundations of Jewish liturgical research by pointing out that Jewish scholars are not nearly so certain of a single *Urtext* of this liturgy as has been thought (Bradshaw 1987). The idea of a single pattern from which all later liturgical practices and documents evolved has been found to be unlikely; more likely is that there has always been more than one pattern, even from the earliest days.

The outcome of the discussion on the liturgy of the synagogue will have repercussions on the second assumption: that there was a continuing tradition of music from the Jewish synagogue to the early church (Dix; Martin 1974, 45). Here again difficulties have been encountered. There is doubt, for instance, regarding the role that formal psalmody had in the synagogue of the first century, particularly if there was no formal liturgy (J. A. Smith 1984; McKinnon 1986; Bradshaw 1992; some acknowledgment from Martin 1974, 41, who says, "we admit that there is some doubt as to the extent to which the singing of divine praises had developed in the Palestinian synagogues of the first century"; cf. Dix). McKinnon's observation is that there seems to have been no singing in the synagogue.

However, none of this denies the influence of Judaism on the early church but suggests that it may not have occurred in the manner that is commonly thought, for it is not only the formal liturgy and formal psalmody of the synagogue that may have influenced the Christian church. For instance, musical practices such as psalmody were also a part of the family observance of religious life (see *Piety, Jewish*). The most significant Jewish influence may have been through the music that was a part of Christian family meals (e.g., J. A. Smith 1994).

4.3. *The Influence of the Greco-Roman World.* It has been mentioned above that in the earlier

part of the twentieth century, the discovery of a third-century Greek papyrus with a fragment of a Christian hymn using Greek musical notation (Grenfell and Hunt) contributed to the idea that early Christian music was highly influenced by Greek music. Later, scholars questioned whether the single papyrus fragment represented a tradition or whether it was a single deviation from that tradition (Hollmann 1972). However, recent investigation suggests that a complete move away from the former possibility may have been premature (West 1998).

However, a less compartmentalized view acknowledges that Jewish religion and culture were highly significant components of the early music of Christianity but also recognizes the influence of the surrounding Greco-Roman culture, a confluence of religious and cultural ingredients that may have combined both contemporary and ancient practices. The position that acknowledges a combination of influences has untidy edges and nondiscrete boundaries, but it is the most consistent with the multicultural environment in which Christianity first began, as well as the fact that Christianity had some things in common with Judaism while it held other things directly in conflict with Judaism. This is the direction in studies of early Christian music that may bring us closest to its origins.

MUSONIUS RUFUS

C. Musonius Rufus, a knight of equestrian rank who lived in the first century A.D., for a time in *Rome, and was roughly a contemporary of Paul, zealously embraced *Stoic dogma and avidly pursued Stoic philosophy. Judging by both the number and the quality of the students whom he attracted and tutored—Rubellius Plautus, *Pliny the Younger, Minicius Fundanus, the teacher of Fronto, Athenodotus, Euphrates (an opponent of Appollonius), Timocrates, Artime-dorus (his future son-in-law) and above all *Epictetus—but most of all by the imprint he left on his contemporaries, he was an unusual man. His dialogues have been preserved by his students; he himself wrote nothing. If Stoics would have introduced saints, he would have been one of them. He was co-opted into the Christian church by men like Clement of Alexandria and called a "model of the highest form of life" by Origen; one might expect him to have enjoyed at least as good a reputation in the subsequent history of the church as did *Seneca. But such was not the case.

1. Assessments of Musonius

2. Ethical Teachings

1. Assessments of Musonius.

The reception Musonius has received from modern scholars and even historians who have tried to depict the variegated picture of Stoicism has been, with some exceptions, modest. M. P. Charlesworth, however, in his five character studies from the Roman Empire, selects him as

the philosopher and finds "something noble and attractive in the figure of Musonius, a simplicity and strength of character . . . single-minded throughout . . . living hard and nobly. . . . It was a good life he lived, and he held before his pupils no low or light ideal" (Charlesworth, 60). A major book on Stoicism describes him as "a spirit whom certainly none excelled." M. Pohlenz described him as "a man cast in a unique mold who in the midst of a servile world went his own way . . . and without following any doctrinaire approach . . . actualised stoic philosophy in life. No wonder that he made a powerful impact on his contemporaries" (Pohlenz, 1:308).

More than one author has drawn a parallel between Musonius and Socrates, but apparently R. Hirzel first called him explicitly the "Roman Socrates." This designation has achieved a certain popularity since it was used as a title for the first extensive monograph (Lutz 1947) ever published on him in English.

2. Ethical Teachings.

As a popular teacher of ethics Musonius believed in teaching and living the simple life, keeping clothes, furniture and a dwelling place to the bare necessities so that he had more to give to the poor and the needy. He taught that men and *women were equal, should have equal opportunities in *education and work and, rejecting pederasty, that married love between male and female was the highest form of love humans could attain. For in *marriage not only do two bodies unite but their spirits, minds and wills as well. He rejected the double standard of behavior in sexual matters and argued that if a female slave owner is not allowed to treat her male *slave as sexual property, then neither can the male slave owner do so.

Musonius was a popular ethicist advocating a high folk morality and had little time for the complex ethical debates of the Sophists. Nevertheless the imitation of Socrates was important to him, and he firmly believed that the virtues of God could be emulated. He rejected violence not only in principle but also by intervening bodily in one conflict by interposing himself between two warring armies. He argued that good people must help offenders, for the bad person's sole hope rests in the way the good person treats him or her.

In his sexual ethics Musonius comes closest to Paul, differing only in that Musonius urged

that sexual intercourse be restricted to child-bearing, while Paul urged that it be engaged in whenever either party desired (1 Cor 7:1-5), as long as there was mutual desire and consent. But Musonius has a higher view of the model of partnership in marriage (cf. Genesis), which seems not to have figured very largely in Paul's view. Paul seems to have viewed marriage as an anodyne to sexual drives. Both viewed marriage as an arrangement under divine appointment and therefore a violation of marriage vows was a breach of the divine will leading to human misery. In short, Musonius had a theological bent, which in itself set him apart from both the Stoics (although clearly Epictetus followed his teacher), but also made it easier for later Christians to be attracted to him. His influence is not directly seen in the NT; there is no doubt that the same people may have been attracted to both Musonius and preachers from the early church, like Paul. At the same time Musonius seems to have addressed ethical dilemmas of the wealthy, whereas most of the early Christian ethical directives were formed to meet the needs of simpler and poorer people.

MYSTERIES

The mysteries, or mystery religions, were secretive religions that flourished alongside official, public religions during the Greco-Roman period. The mysteries varied in matters of geographical origin, historical development and theological orientation, and they championed deities from all around the Mediterranean world and the ancient Middle East. Nonetheless, authors ancient and modern have classified and discussed the mysteries together because they represent a particular form of religion. The mysteries advocated salvation for individual followers who chose to seek initiation into the mysteries and thus to draw close to the divine and to each other. Apparently rooted in ancient tribal and fertility rituals, the mysteries celebrated the death and new life that may be experienced not only in nature but also in the world of humankind. On account of their profound experiences within the mysteries, initiates were enjoined to keep the mysteries secret and not to divulge them to the profane. Some interpreters have suggested that Christianity may be considered to be a mystery religion.

1. Descriptions of the Mysteries
2. Greek Mysteries
3. Mysteries of Middle Eastern Origin
4. The Mysteries and Early Christianity

1. Descriptions of the Mysteries.

In contrast to official Greco-Roman religions, in which people expressed public devotion to the deities of the state, the mysteries were in large part private affairs. In the main the mysteries looked inward, within the persons initiated and within the groups of initiates, to find religious fulfillment. The groups within the mysteries frequently were close-knit and egalitarian, and the

members of these groups typically shared in rituals that included public and especially private ceremonies. Ancient sources freely depict parades and processions, with music and dance, and various preliminary rituals of purification and sacrifice. For example, in his *Metamorphoses*, commonly referred to as *The Golden Ass*, Apuleius of Madaura describes a parade in honor of the Egyptian goddess Isis, with a devoted band of singers, instrumentalists and folks in costume, and with parade officials calling for people to make way for the goddess. As described by Apuleius, the procession was a colorful event, and accompanying the goddess were some participants who were dressed to resemble Egyptian deities and others who carried religious symbols and a chest containing the sacred and secret things of the Egyptian goddess.

Ancient sources say comparatively little, however, about the private ceremonies of the mysteries, and the details of these ceremonies remain largely unknown. A few early Christian authors who had once been initiated or who claimed to know the things that went on in the mysteries sometimes divulged what they believed to be ungodly secrets of the mysteries, but even these sources say relatively little. In descriptions of the Eleusinian mysteries it is said in general that among the experiences within the private ceremonies of the mysteries were "things recited," "things shown" and "things performed," and presumably these sorts of things were a part of other mysteries as well.

Occasionally ancient sources give formulas or symbols (*symbola*) that purportedly were spoken during the private ceremonies, but these formulas are difficult to interpret out of context. Often a sacred meal was shared by the followers of the mysteries, and in at least some of the mysteries there were ceremonies in which participants were said to go through death and rebirth. In a literary fragment attributed to *Plutarch, initiation into the mysteries is compared to the experience of death. Plutarch notes the similarity of the Greek verbs "to be initiated" (*teleisthai*) and "to die" (*teleutan*), and he compares the transformations of those who are initiated and those who die:

At first there is wandering, and wearisome roaming, and fearful traveling through darkness with no end to be found. Then, just before the consummation, there is every sort of terror, shuddering and trembling and

sweating and being alarmed. But after this a marvelous light appears, and open places and meadows await, with voices and dances and the solemnities of sacred utterances and holy visions. In that place one walks about at will, now perfect and initiated and free, and wearing a crown, one celebrates religious rituals, and joins with pure and pious people.

*Aristotle confirms that initiation into the mysteries could be a deeply moving emotional experience. In a fragment preserved in Synesius, Aristotle claims that initiates into the mysteries did not really learn anything, but rather they underwent some kind of experience and they were put into a particular state of mind.

The word *mystery* (*mysterion*) derives from the Greek verb *myein*, "to close," and it can be interpreted to refer to the closing of the lips, for secrecy or the closing and subsequent opening of the eyes, for enlightenment. The word *mystery* is also used in the OT, the NT and the *Dead Sea Scrolls (see Brown). In 1 Corinthians 15:51, in his discussion of the resurrection of Christ and Christians, Paul states that the resurrection is a mystery: "Look, I tell you a mystery. We shall not all sleep, but we shall all be changed." Elsewhere in this discussion Paul uses other language that is reminiscent of the ancient mysteries.

2. Greek Mysteries.

Ancient Greek mysteries were celebrated from very early times through Roman antiquity. The most well known of the Greek mysteries are the Eleusinian mysteries, the Andanian mysteries and the mysteries of Dionysus. Also of considerable significance are the mysteries from Samothrace, which featured the Great Gods, the Kabeiroi, or Cabiri. Further, in his satire *Alexander the False Prophet*, *Lucian of Samosata describes mysteries that employed themes that recall the Eleusinian mysteries but that were founded by Alexander of Abonoteichos, in honor of the serpent Glykon, an incarnation of the Greek god of healing, Asclepius.

2.1. Eleusinian Mysteries. The Eleusinian mysteries, the most prominent of the Greek mysteries, were observed at Eleusis, near *Athens. The Eleusinian mysteries incorporated rituals like those of the old agricultural religion of Eleusis, which commemorated the life cycle and the transformation of grain, but the Eleusinian mysteries applied these agricultural interests to the

life cycle and transformation of people. The sacred mythic account (*hieros logos*) used in the Eleusinian mysteries most likely rehearsed the dramatic story of Demeter, the Grain Mother, and her dying and rising daughter Kore, the Maiden. In this story, as told in the *Homeric Hymn to Demeter*, Kore is seized by Hades (or Plouton, the Wealthy One), but the grieving Demeter finds Kore, who eventually is made to spend part of the year with the dead and part of the year with the living. These agricultural themes remained in the Eleusinian mysteries, it would seem, for the Christian author Hippolytus of Rome observes that among the things shown in the mysteries was a single head of grain beheld in silence by the initiates. The emphasis upon life and death also remained, *Cicero observes, when he indicates that from the Eleusinian mysteries people learned the fundamentals of life, and they grasped "the basis not only for living with joy but also for dying with a better hope." In time Athens took control of the Eleusinian mysteries, and later mysteries of Demeter and Kore were celebrated at a site, also named Eleusis, in *Alexandria, Egypt.

2.2. Andanian Mysteries. The author Pausanias and the inscription called the Rule of the Andanian Mysteries depict Greek mysteries celebrated at Andania in the southwestern Peloponnese. The Andanian mysteries were dedicated to Demeter, Hermes, Apollo Karneios, Hagna (Holy One or Pure One) and the Great Gods. The Rule of the Andanian Mysteries is a public documentation of the regulations that governed the mysteries. The rule thus outlines the formal features of the mysteries (oaths, clothing, processions, tents, funds, sacrifices, musicians, the sacred meal, and so on) and the means by which regulations were to be enforced, but no secrets are disclosed in the rule. As a public document, the rule openly discusses only external aspects of the Andanian mysteries, and when it refers to the private ceremonies, it does so with such cryptic expressions as "the things pertaining to the initiation" and "the things pertaining to the sacrifices."

2.3. Mysteries of Dionysus. The mysteries of Dionysus, or Bacchus, must have been remarkably diverse in character. Euripides' *Bacchae* dramatizes aspects of what might be mysteries of Dionysus in which female followers of Dionysus (Bacchae, or maenads, that is, women in an ecstatic state of mind) are portrayed as embodying

the raw power of Dionysus. Livy's *History of Rome* states that the Roman senate adopted a decree, *Senatus Consultum de Bacchanalibus*, because of suspicions regarding sexual irregularities within the mysteries of Dionysus. Conversely, frescoes in the Villa of the Mysteries at Pompeii make use of Dionysian themes to suggest more domesticated mysteries of sexuality, and the Rule of the Iobacchoi presents the regulations of an Athenian Bacchic club that met together to enjoy the Dionysian pleasures of wine, food and drama. The Orphics considered the Dionysian stories of tearing apart flesh and consuming it raw to reflect the original sin committed by the Titans against Dionysus. Hence, an Orphic lamella from Thessaly has a dead person's soul comment on the dual nature of a human being, who consists of earth, or Titanic flesh, and heaven, or Dionysian divinity: "I am a child of earth and of starry heaven, but my race is of heaven." This Orphic view of the dual nature of a human being may be compared with the view of *Plato.

3. Mysteries of Middle Eastern Origin.

Mysteries of Middle Eastern origin were popular during the *Hellenistic and Roman periods as some religious people of the Mediterranean world became increasingly fascinated with foreign and sometimes exotic religious traditions. These mysteries came, directly or indirectly, from such places as Asia Minor, Syria, Egypt and Persia, and the most important of the mysteries of Middle Eastern origin include the mysteries of the Great Mother and Attis, the mysteries of Isis and Osiris and the mysteries of Mithras. In addition, the mysteries of the Syrian goddess and the slain youth Adonis were also important, and they appear to have been similar in some respects to the mysteries of the Great Mother and Attis.

3.1. Mysteries of the Great Mother and Attis. The mysteries of the Great Mother and Attis come from Phrygia in Asia Minor and feature the Great Mother (*Magna Mater*), often named Kybele (Cybele or Kybebe), and her young lover Attis. During Roman times these mysteries spread to various parts of the Roman world, and they became infamous for their unusual festivals and flamboyant followers, or Galli, who imitated the mythological act of Attis by castrating themselves and becoming eunuchs of the Great Mother. The Christian poet Prudentius describes the ritual slaughter of a bull (the *taurobo-*

lium) in which an initiate descended into a pit to be drenched with the blood of the sacrificed bull. An inscription dated to A.D. 376 maintains that a person thus bathed in the bull's blood was "reborn for eternity." The private ceremonies of the mysteries of the Great Mother and Attis are unknown, but Clement of Alexandria cites a formula with tantalizing hints: "I have eaten from the drum (or tambourine), I have drunk from the cymbal, I have carried the sacred dish, I have stolen into the inner chamber" (variant readings of this formula are to be read in Firmicus Maternus).

3.2. Mysteries of Isis and Osiris. The mysteries of Isis and Osiris from the Greco-Roman world built upon the Egyptian worship of these Egyptian deities, but the Greco-Roman mysteries differ from the ancient Egyptian mysteries of succession and mummification in substantial ways. The goddess Isis was revered during Greco-Roman times, and she retained aspects of her Egyptian nature but also assumed characteristics of a Greco-Roman goddess. The god Osiris, brother and lover of Isis and lord of the realm of death, also attracted many followers in the Greco-Roman period, and sometimes he was worshiped as Sarapis or Osiris-Apis (Osiris joined to the Apis bull). Apuleius of Madaura has the initiate Lucius recount, in guarded terms, what happened during the private ceremonies in the mysteries of Isis and Osiris: "I approached the border of death; I stepped across the threshold of Proserpine and, carried through all the elements, I returned. In the middle of the night I saw the sun shining with dazzling light. I approached the gods below and the gods above and, while near them, I worshiped them." This statement, though deliberately obscure, explains initiation as an experience of moving from darkness to light and from death to life. Elsewhere Apuleius states that Lucius is "reborn" or "born again."

3.3. Mysteries of Mithras. The mysteries of Mithras as found in the Roman world are Roman mysteries that recall some features of Persian sources but appear to represent Roman values. Men, especially soldiers, sailors and imperial officers, were attracted to the worship of Mithras, probably because Mithras was a warrior on behalf of light, truth and justice, and these followers of Mithras entered sanctuaries of Mithras (Mithraea) in order to participate in initiatory rituals and other ceremonies. According

to Tertullian, these Mithraic rituals included lustrations, ordeals and tests of courage; Justin Martyr describes a sacred meal in which initiates partake of bread and a cup of water or a cup of water and wine and recite certain formulas.

Initiation into the mysteries of Mithras specified several stages or grades of initiation. Often seven are enumerated: raven, bridegroom (or occult), soldier, lion, Persian, courier of the sun and father. These seven stages or grades may have corresponded to the seven stations that decorate Mithraea at Ostia Antica, the seven gates of heaven and seven planets and metals associated with the soul's ascent in Origen's citation of Celsus, and the seven stages of ascent in the Mithras Liturgy. The Mithraea often were richly decorated, most notably with astronomical and astrological imagery, and the apse of a Mithraeum usually contained a scene of Mithras slaying a bull (Mithras *tauroktonos*). Recent studies of Mithraism (R. Beck; D. Ulansey) propose astronomical and astrological interpretations of the mysteries of Mithras instead of the traditional dualistic, Zoroastrian interpretations (E. Cumont). An inscription from the Mithraeum of Santa Prisca in *Rome may suggest a soteriological interpretation of the slaying of the bull: "and having shed eternal blood, you [Mithras] have saved us." Another fragmentary inscription may understand salvation as rebirth and creation, perhaps through partaking of the sacred meal: "one piously reborn and created by sweet things."

4. The Mysteries and Early Christianity.

Early Christianity developed as a Greco-Roman religion, with Jewish roots, in the same world as the mystery religions, and it shows clear affinities with the mysteries. Like the mysteries, early Christianity developed as a religion of salvation and personal choice. Early Christian initiates participated in ceremonies of purification, fasting and baptism, and some of these ceremonies were private and secretive. Like groups within the mysteries, early Christian communities could also proclaim that they were egalitarian and lived in unity, and Paul preached that in Christ "there is neither Jew nor Greek, there is neither slave nor free person, there is not male and female" (Gal 3:28). For Paul and other early Christians, baptism could be understood as a death experience that anticipated the experience of resurrection and new life. In 1 Corin-

thians 15 Paul interprets this *apocalyptically and terms it a mystery.

Early Christian believers also shared in a sacred meal, the Eucharist, with the elements bread and wine linked to the death of Christ. Thus early Christians could articulate their salvation to be an experience of dying and rising with Christ, so that Paul writes about being "in Christ" and John discusses being "born again" or "born from above" (*gennēthē anōthen*). Paul's discussion of the Christian mystery of dying and rising involves a comparison, calling to mind the Eleusinian mysteries, with the planting and sprouting of seed (1 Cor 15:36-38), and John likewise has Jesus announce, "In truth, in truth I tell you, unless a kernel of wheat falls into the ground and dies, it remains a single seed, but if it dies, it yields much produce" (Jn 12:24). Further, John's portrayal of Jesus performing the sign of changing water into wine (Jn 2:1-11) duplicates accounts of the famous miracle the Greek god Dionysus, and early Christian depictions of the Virgin Mary and young Jesus recall representations of the Egyptian deities Isis and Horus, and Mary, like Isis, could be acclaimed the queen of heaven.

Ancient and modern interpreters sometimes have tried to explain these similarities by proposing theories of dependence. Early Christian authors such as Tertullian and Justin Martyr explained the similarities between early Christianity and Mithraism as being due to demonic imitation of Christianity, and some modern scholars have also proposed that followers of early Christianity and the mysteries may have borrowed from each other. The Christian author Clement of Alexandria affirms that Christianity is a mystery religion with "truly sacred mysteries," but he grants a privileged status to Christianity by asserting that Christianity is the only true mystery, in contrast to the shameless and corrupt Greco-Roman mysteries.

A balanced interpretation of the relationship between the mysteries and early Christianity acknowledges the similarities but avoids simplistic conclusions about dependence. Borrowing of certain religious ideas and practices may well have occurred in the syncretistic world of Greco-Roman antiquity, and it seems clear that from the fourth century on Christianity appropriated a goodly amount from other religions. Yet many of the similarities between the mysteries and early Christianity may be attributed to the fact that

they were equally religions of the Greco-Roman world. As such, the mysteries and early Christianity often faced similar religious and social challenges, proposed similar ways of salvation and transformation and shared points of similarity in their visions of the way to light and life.

MYSTICISM

There are two broad problems in confronting the subject of mysticism as background to the NT. The first concerns the definition of mysticism as such, a notoriously elusive idea but one that in turn defines the materials to be handled. The second concerns the treatment of the historical mysticisms thus defined. The following article will therefore begin with a discussion of definition followed by a treatment of Jewish mysticism, particularly Merkabah mysticism.

On *Hellenistic forms of mysticism, including the *mystery religions, see B. McGinn (23-61). Specifically regarding *Philo's own brand of mysticism, see D. Winston. These latter strands are of greater importance to the study of post-apostolic mystical developments within Christianity, although at a variety of points Philo's writings bear on if they do not reflect some of the same ideas that will be touched on in this article.

1. Definition
2. Merkabah Mysticism
3. Mysticism and the New Testament

1. Definition.

No movement existed anywhere in biblical times under the name of mysticism. The noun *mysticism* (*la mystique*) is of recent derivation (according to McGinn, xvi, 266-67, it dates to early seventeenth-century France), though the qualifier *mystical* was used by Christians from the late second century on. Of greater interest than the history of words, including the Greek and Hebrew words related to the idea of mystery, is the way we choose to define the idea we will call mysticism (for the terms used by the Jewish mystics themselves, see Scholem 1974, 6-7; on terminology, see *DPL*, Mystery; Mysticism; *DLNTD*,

Mystery; a lengthy survey of modern theories of mysticism is given by McGinn under the headings of theological approaches [266-91], philosophical approaches [291-326] and comparative and psychological approaches [326-43]).

Like *Gnosticism and *apocalypticism, their suspected cousin mysticism has not allowed a consensus on definition. In the first of his proposed four volumes on the history of Western Christian mysticism, McGinn offers a working definition: "The mystical element in Christianity is that part of its belief and practices that concerns the preparation for, the consciousness of, and the reaction to what can be described as the immediate or direct presence of God" (xvii). By this definition mysticism does not exist as a distinct religion but is an element that can exist within the various religions.

Significantly, McGinn stops short of including in his definition the idea of union with God, "particularly a union of absorption or identity in which the individual personality is lost." Given the history of what is commonly called by this name, "at the very least, it is necessary to expand the notion of union, recognizing that there are several, perhaps even many, understandings of union with God held by Christians over the centuries" (McGinn, xvi). A constant feature in mystical texts is the claim that the mystic's "mode of access to God is radically different from that found in ordinary consciousness, even from the awareness of God gained through the usual activities of prayer, sacraments, and other rituals. As believers they affirm that God does become present in these activities, but not in any direct or immediate fashion" (McGinn, xix). It deserves notice for the purposes of this article that according to McGinn's reading of the materials, "Christian mysticism in the proper sense was the result of a historical process that was not complete for several centuries," though "from the start Christianity contained a mystical element" or at least was amenable to mystical interpretations (McGinn, 7).

Though other attempts at definition could be noted (see McGinn; Dunn 1998, 394), McGinn's attempt merits special mention as it is based on probably the widest historical survey of Western Christian mysticism yet undertaken. It cannot be assumed that a definition based on a study of Christian mysticism will be a reliable guide to the presence of non-Christian mysticisms during the first century and earlier, but it provides a

place to start, and it is an appropriate starting point so long as we ask our questions from within an overtly Christian frame of reference.

The leading name among scholars of Jewish mysticism, G. Scholem (1897-1982), takes up the question of definition in the first chapter of *Major Trends in Jewish Mysticism* (1954, from which the following summary derives; see also Scholem 1974, which is an expanded reprint of his contributions to the *Encyclopaedia Judaica*; Scholem 1965). In preliminary fashion Scholem rejects as too broad an equation of mysticism with any experiential form of religion that is concerned with humanity's immediate experience of a divine presence, and he rejects as too narrow any definition that is restricted to an ultimate loss of the mystic's individuality through union with God. Moreover, and significantly, there can be no thought of an abstract mystical religion: "there is only the mysticism of a particular religious system, Christian, Islamic, Jewish mysticism and so on" (Scholem 1954, 6). This is not to deny that there are common characteristics among the mysticisms, but it is to deny that there is any such thing as an ideal mysticism of which the various manifestations are imperfect forms.

Scholem's own definition proceeds from the basic conviction that "mysticism is a definite stage in the historical development of religion and makes its appearance under certain well-defined conditions. It is connected with, and inseparable from, a certain stage of the religious consciousness" (Scholem 1954, 7). According to this evolutionary model, the initial, mythical stage of religion posits no abyss between humanity and deity. Humanity and the gods relate directly so that mysticism is excluded.

The second stage, classical religion, involves the creation of the abyss that cannot be bridged. The religious community "becomes aware of a fundamental duality, of a vast gulf which can be crossed by nothing but the *voice*" of God in revelation and the voice of humanity in *prayer (Scholem 1954, 7). The creation of this abyss, which is the "supreme function" of religion, is antithetical to mysticism.

It is the third, the romantic epoch, that, recognizing the abyss, "proceeds to a quest for the secret that will close it in, the hidden path that will span it" (Scholem 1954, 8). This is the mystical stage, involving the discovery of new religious impulses that reinterpret the old religious

values of the classical stage and suggest new meanings in line with the directness of mystical experience. "Mystical religion seeks to transform the God whom it encounters in the peculiar religious consciousness of its own social environment from an object of dogmatic knowledge into a novel and living experience and intuition. In addition, it also seeks to interpret this experience in a new way" (Scholem 1954, 10; Gruenwald 1995, 8, comments similarly that "mysticism may be described as a live realization of theological notions or entities").

Thus Jewish mysticism "in its various forms represents an attempt to interpret the religious values of Judaism in terms of mystical values" (Scholem 1954, 10). Concentrating on the idea of God who manifests himself in the acts of creation, revelation and redemption, Jewish mystical meditation ultimately "gives birth to the conception of a sphere, a whole realm of divinity, which underlies the world of our sense-data and which is present and active in all that exists" (Scholem 1954, 10-11; this last comment relates especially to the *Sefirot*, which will be mentioned in 2.1 below). Associated with this enterprise is a distinctive technique that employs unique symbols and rituals and brings about the state of ecstasy necessary for the experience.

This is not the place to explain further or critique this definition of Jewish mysticism, but it will be clear from the foregoing that in Scholem's view Jewish mysticism is a necessary stage in the evolution of the Jewish religion (and religions can pass through this sequence more than once), and that as such it is sui generis. It is enough to have noted the attempts of two outstanding students of the subject and so to have been reminded of the difficulty of defining this area and of the linkage between definition and historical investigation.

2. Merkabah Mysticism.

The history of Jewish mysticism will depend on our definition of mysticism as such, and in Scholem's model the first phase of Jewish mysticism, Merkabah mysticism, runs from the first century B.C. to the tenth century A.D., having its roots in the end of the Second Temple era when the conditions of Scholem's third stage of religion prevailed; he notes "the struggle taking place in this period between different religious forces, and . . . the tendency then current to delve more deeply into original religious specu-

lation" (Scholem 1974, 10); differing definitions will trace Jewish mysticism into the OT period (see 2.2.1 below), and one must also allow for other strands within early *Judaism.

2.1. Synopsis. It will be helpful to provide a synopsis of what we mean by Merkabah mysticism before surveying the evidence adduced for its existence and development. The following summary uses Scholem's seminal characterization as a starting point with certain qualifications added from the more recent models, some of which depart in significant ways from Scholem's work. The main lines of this profile are drawn from the fifth century and later *Hekhalot* texts, which are themselves inharmonious, but at various points there is assumed an essential continuity with earlier apocalyptic and *rabbinic sources.

Merkabah mysticism "is used to refer to an esoteric, visionary-mystical tradition centred upon the vision of God seated on the celestial throne or Merkabah" (Murray-Jones 1992, 2). "Its essence is not absorbed contemplation of God's true nature, but perception of his appearance on the throne, as described by Ezekiel, and cognition of the mysteries of the celestial throne-world. . . . God's pre-existing throne, which embodies and exemplifies all forms of creation, is at once the goal and the theme of his mystical vision" (Scholem 1954, 44). The term *Merkabah* ("throne-chariot") is not used in the text of Ezekiel but is first used in reference to Ezekiel's vision in Sirach 49:8 (cf. 1 Chron 28:18; see Sirach) and also frequently in the scrolls from *Qumran. The term *hammerkabah* is often used in Talmudic literature as a shorthand title for Ezekiel 1.

The expression *Maaseh Merkabah* ("the Account of the Chariot") refers to the esoteric tradition of exegesis of Ezekiel 1 and related texts (esp. Dan 7; Is 6), exegesis that could be related to mystical experiences and practices of *ascent to the throne. The ascent through seven heavens is characteristic of these texts, and correspondingly there is mention of seven Merkabah along with the *Hekhalot* ("chambers," "palaces," "temples") of the Merkabah. The latter idea of the *Hekhalot* is possibly a later development, but it became dominant. Though scholarship has traced these mystical practices or traditions into the first century A.D. and earlier, its classical period ran from the fourth to sixth centuries, and its outstanding documents were edited in the

fifth and sixth centuries. These documents are among the *Hekhalot* tracts (see 2.2.6 below), so named because of the importance of "descriptions of the *hekhaloth*, the heavenly halls or palaces through which the visionary passes and in the seventh and last of which there rises the throne of divine glory" (Scholem 1954, 45).

Recent scholarship has preferred to stress that the *Hekhalot* texts represent just one development of the Merkabah tradition along with the apocalypses and other Jewish, Christian and gnostic texts (Murray-Jones 1992, 2; note for example that the term *Merkabah* features prominently in the relevant Qumran materials), though the relationship of the ideas expressed in these sources and the continuity of the movement are matters of dispute.

A strand of speculation related to *Maaseh Merkabah* and also developing during the first six centuries was *Maaseh Bereshit* ("the Account of Creation"). Focusing chiefly on the Genesis account of creation, this was an esoteric and theoretical approach to the problems of cosmology and cosmogony. Little of this teaching was leaked to outsiders, but an important exception is *Sefer Yetzirah* (The Book of Creation), which has been variously dated from the late second/early third century A.D. (in an earlier form) to the ninth century. The work is thought to have been written by and for educated rabbis as an explanation of the creation story of Genesis and as instruction in creative *magic (on permissible magic, see *b. Sanh.* 67a). "Its chief subject matters are the elements of the world, which are sought in the ten elementary and primordial numbers—*Sefiroth*, as the book calls them—and the 22 letters of the Hebrew alphabet. These together represent the mysterious forces whose convergence has produced the various combinations observable throughout the whole of creation; they are the 'thirty-two secret paths of wisdom,' through which God has created all that exists" (Scholem 1954, 76; see further Blumenthal, 6-46; through comparison with Assyrian materials, Parpola [1993], has traced the roots of the Sefirotic Tree, a symbolic configuration of the Sefirot, into the early thirteenth century B.C.).

This inauguration of the Sefirot terminology is noted by I. Gruenwald (1995, 10) as the turning point in the history of Jewish mysticism, leading to a distinct phase of Jewish mysticism, subsequent to the Merkabah phase, namely,

Kabbalah ("reception," "tradition"; on the need to distinguish these phases see Gruenwald 1995, 10), although it must be noted that the term *Kabbalah* is sometimes used to cover the whole mystical movement of Judaism from Talmudic times to the present.

It is argued that behind the tradition of Merkabah mysticism existed a movement, originating in Palestine and organized into esoteric groups making up a school of mystics who were not prepared to reveal their secret knowledge due to its controversial nature. These mystics came to refer to themselves as *Yorde Merkabah*, "Descenders to the Merkabah," though the choice of the descent motif rather than ascent has resisted explanation (the motif of descent might have originated c. A.D. 500). These groups were organized around a master who initiated his group into the tradition's teachings and also demonstrated in their presence the ascent to the Merkabah. Entrance into these groups was conditioned on certain criteria, especially intellectual conditions and age limits ("life's half-way stage"), as well as moral and physical criteria (the latter including physiognomy and chiromancy).

Those who passed the test were worthy to make the ascent, and the primary interests of the *Hekhalot* texts are their preparation and technique for the ascent, as well as what was perceived on the voyage. Preparation for the ascent involved fasting, eating special foods or bathing. The ascent was then effected by techniques that would seem designed to effect a trance-like state, especially the recitation of hymns, *prayers or magical incantations that featured the rhythmical repetition of words, sounds or ideas, possibly whispered while placing the head between the knees (cf. 1 Kings 18:42; Gilgamesh, in the Epic of Gilgamesh, uses a similar technique for attaining dreams; see Parpola 1993, 192 n. 120). In the resulting state of ecstasy the journey took place.

The *Hekhalot* texts do not give much information about the ascent through the heavens, but they do describe the movement of the soul through the seven concentrically arranged *Hekhalot* (palaces) in the seventh heaven (aside from *3 Enoch* [an apocalypse; see Enoch, Books of] and *Massekhet Hekhalot* [a *midrashic compilation] the instructional *Hekhalot* texts appear to equate the *Hekhalot* with the heavenly levels rather than locating them in the seventh

heaven; cf. Morray-Jones 1993, 179-80). The progress of the soul is blocked by a series of angelic gatekeepers. Success in the journey depends, then, on the knowledge of secret names, magic seals derived from the Merkabah itself that function as passes and put the hostile *angels to flight.

As the journey progresses the struggle increases with the result that longer and more complicated magical formulas are needed in order to break through. Theurgy is prominent throughout this literature (theurgy is a form of magic, roughly described "as the 'science' of coercing the gods, and particularly of bringing about changes in divine realms"; see further Gruenwald 1995, 40-41). The journey is perilous, not only because of the hostile angels but also because the mystic must undergo a fiery transformation that threatens to devour the unworthy (on transformation, see 2.2.2; 2.2.5; 2.2.6; 3 below). The entire experience takes place in an atmosphere of majesty, fear and trembling, with an almost exclusive focus on God's otherness. Even the climax of the ascent involves a seeing and hearing in the presence of the throne with no suggestion of absorption or mystical union. Correspondingly there is in this literature no focus on the presence of God or on love of God but primarily an occupation with God as the holy King.

The purpose of the ascent could vary between the mere desire to view God's glory and join in the heavenly angelic worship, the more practical desire to gain knowledge of benefit to oneself (e.g., knowledge of what was about to happen) and the desire to gain revelatory knowledge of more ultimate consequence. The vision of the celestial realm, the songs of the angels and the structure of the Merkabah were among the subjects of esoteric knowledge, and of equal importance to these was the appearance of God in his aspect of Creator enthroned on the Merkabah. The description of this gigantic human form (cf. Ezek 1:26-28) became the subject of the *Shiur Komah* ("Dimensions of the Body") texts and passages, which drew on the imagery and language of OT passages such as Isaiah 6:1-4; 66:1 and especially Song of Solomon 5 (in this connection, the defense of Song of Solomon's canonicity by Rabbi Akiba [*t. Sanh.* 12:10], one of the early rabbis associated with Merkabah mysticism, is significant; Scholem 1965, 38-40, notes other evidence for

the dating of these traditions as early as the third century A.D.).

In the *Hekhalot* texts a distinction is maintained between God as he is in himself and his visible, corporeal manifestation upon his descent to the seventh heaven so as to be worshiped by his creation. This manifestation of God on the throne was referred to as "the Glory," "the Great Glory" or "the Power" (cf. Ezek 1:28; *T. Levi* 2:4; *1 Enoch* 14:20-21; some associate the Simon of Acts 8:10 with this idea), which in some sources could be identified with the "Name" or "Word/Logos" of God (Morrays-Jones 1992, 2-5).

A variety of other aspects of this speculation are brought forth for comparison with NT texts, but space forbids even a summary of them here. Just one more will be mentioned: the figure of Metatron-Enoch. The etymology and meaning of the name *Metatron* is not yet clear, but there appear to be two main sides to his character (see Morrays-Jones 1992, 7-14). He is the "Angel of the Lord" or "Prince of the Presence," a Name-bearing angel (Ex 23:21) who mediates and to some extent embodies the divine Glory. The Judaism represented by the Babylonian Talmud is suspicious of this figure, associating him in two of its three allusions to him with the heretical notion that another Power existed in heaven equal to God (the so-called Two Powers heresy; the three references are *b. 'Abod. Zar.* 3b; *b. Hag.* 15a [cf. *3 Enoch* 16]; *b. Sanh.* 38b), but this negative attitude is understood to confirm the existence of more positive interest in Metatron by other early strands of Judaism. Presumably the latter would be the esoteric strand of Merkabah mystics who would later give birth to the *Hekhalot* texts.

However, some texts relate how the famous *Enoch was transformed in the course of his ascent into an angelic figure and go on to identify Metatron with the transformed Enoch (e.g., *3 Enoch* 7-15). Once again, it is possible to find indications in earlier rabbinic and apocalyptic traditions that this idea of the transformation of an exceptionally righteous person into an angelic figure, possibly even identified with the enthroned Glory (*ksbôd*), has early roots (see Morrays-Jones 1992, 10-11, where he also draws the parallel with the Jesus traditions in 2 Cor 4:3-6; Col 1:15; 2:9; Jn 17:6-12; Phil 2:9-11; Heb 1:2-4).

It was mentioned that rabbinic texts appear to indicate an unease with aspects of Merkabah

mysticism. It would seem that possible causes of this unease would be the threat of new revelation and the perceived tendency to compromise monotheism. Yet the authors of the *Hekhalot* literature were concerned to stress their continuity with rabbinic Judaism by associating their teachings with names such as Rabbi Akiba, Rabbi Ishmael and Rabbi Johanan ben Zakkai (all late first to early second century A.D.; these connections are attested by *Talmud and *midrash as well), by striving to remain within the bounds of monotheism and by paying due respect to *Torah. It is probable that some within this movement did operate from within orthodox Judaism, and the official tendency seems to have been to control rather than ban these teachings. (On the relationship of Merkabah mysticism and Gnosticism, see Scholem 1965; P. Alexander, 236-38; Gruenwald 1982. On the forces giving shape to Merkabah mysticism, see Alexander, 238-39.)

2.2. Literary Evidence. Since we have no continuous literary evidence of Jewish mysticism from its earliest to its later forms there is great difficulty in speaking of historical continuity and a real question as to how much of the later material can be read back into the first century. An additional complication for the NT scholar stems from the growing tendency to use the NT itself as evidence for the first-century currency of Jewish ideas. The latter tendency is methodologically sound from the standpoint of writing a general history of thought, but it is difficult to avoid allowing this circular argument to become viciously circular. Until further evidence comes to light we are without sufficient external controls on the largely speculative reconstructions surrounding, for example, 2 Corinthians 12. At the same time it should be recalled that the Jewish esoteric traditions that found expression in the rabbinic literature were purposely not written down until well after the first century, and in this article we are dealing with Jewish esoteric traditions. The later date of the *Hekhalot* texts should not be overpressed against the case for the early origins of the ideas expressed therein.

For his part Scholem (1954, 43) speaks of three stages in the development of early Jewish Merkabah mysticism: "the anonymous conventicles of the old apocalypics; the Merkabah speculation of the Mishnaic teachers who are known to us by name; and the Merkabah mysticism of late and post-Talmudic times, as reflected in the

literature which has come down to us." Taken together, the three stages manifest an "essential continuity of thought." D. Halperin, however, argues that there is no evidence within the tannaitic literature itself for the practice of ascent or for its association with *Maaseh Merkabah*. In this period *Maaseh Merkabah* involved simply the public exegesis of Ezekiel 1. This does not mean that Scholem's model is wrong, but it would remove positive evidence for the middle stage. And I. Gruenwald issues the caveat that "literary similarity [between earlier and later texts] may point to historical affiliation, but need not of necessity do so" (1995, 32 n. 55). He adds, "generally speaking, scholarly work has still a long way to go before a clear cut case can be made concerning the evidential historical-continuity between trends spread out over hundreds of years, and more."

When speaking of Merkabah mysticism we might treat the strands of evidence as follows: OT, apocalyptic, Qumran, NT, rabbinic and *Hekhalot* texts.

2.2.1. Old Testament. OT texts that became a focus or springboard for the later mysticism are Ezekiel 1; 3:12-13; 10; Isaiah 6:1-4; Exodus 24:10-11; and Daniel 7:9-14. Others deserving mention are 1 Kings 22 and Job 1. Though some scholars have argued that these and other OT texts evidence the existence of mystical trends in OT times, Scholem himself stated that "it is almost certain that the phenomena which they connected with mysticism . . . belong to other strands in the history of religion" (Scholem 1974, 10). Yet Gruenwald, on the basis of a "relaxed definition" (Gruenwald 1995, 27) of mysticism, argues in favor of the idea "that there are mystical elements in [OT] Scripture itself." Of related interest is the recent work of S. Parpola on Assyrian prophecies, in which he seeks "to correlate the Assyrian data with related phenomena, especially OT prophecy, Gnosticism and Jewish mysticism" (Parpola 1997, XVI; cf. Parpola 1993).

2.2.2. Apocalyptic Literature. The earliest Jewish account of an ascent to heaven and vision of the divine throne outside of the *Hebrew Bible is *1 Enoch* 14:8-25 (*1 Enoch* 71:5-11 is thought to depend on this passage; see also *1 Enoch* 18:8), which draws on Ezekiel 1 and 10, Isaiah 6 and Daniel 7:9-10. Parpola (1993, 196) believes that the secret of the ascent to heaven "was the precious secret that Gilgamesh brought back from

his journey to Utnapishtim." The only other pre-Christian description of an ascent in a Semitic language is Levi's in the Aramaic Levi apocryphon from Qumran (cf. *T. Levi* 2-3). At the least these passages evidence interest in the idea of an ascent to the throne of God, and possibly the currency of the mystical practice.

If we broaden our view to include early but not necessarily pre-Christian apocalyptic passages, a variety of features can be found that parallel the picture derived from the later sources (for the following, see esp. Alexander, 247-49). In *1 Enoch* 61:10-12 (Book of the Similitudes; end of the first century A.D.) we encounter a similar angelology. Likewise the transformation of Enoch in *1 Enoch* 70-71 into the Son of Man can be placed alongside the later mystical idea that "exceptionally worthy human beings or 'men of righteousness' were able to achieve a transformation into the likeness of the divine Glory" (Murray-Jones 1992, 20; on this idea of transformation and apotheosis, see also J. J. Collins; cf. *3 Enoch* 3-15). The Slavonic Apocalypse of Enoch (*2 Enoch*; no consensus on date, but probably stemming back to the late first century A.D. in part) contains a number of similarities to *3 Enoch*, which belongs among the *Hekhalot* texts. Enoch travels through seven heavens—a motif that is fundamental to the later Merkabah texts—to the throne of God, where he is transformed and instructed in matters of nature and creation (*Maaseh Bereshit*).

Likewise the *Testament of Levi* 2:6-5:3 in its portrayal of Levi's ascent to the "throne of glory" and in several details of that narrative runs parallel to the later Merkabah texts. *Ascension of Isaiah* 6-11 (probably a Christian composition dating to the second century), *Apocalypse of Abraham* 15-29 (the basic edition probably stemming back to the late first century A.D.), *Life of Adam and Eve* ([Latin] 25-29, [Greek] 31-40, original composition dated to end of first century A.D.), *3 Baruch* (original Jewish work dated to the first and second centuries A.D.), *Testament of Abraham* 10 (c. A.D. 100), and *Testament of Job* 48-50 (original dating to the first century B.C., but 46-53 may be a Montanist addition) all contain a significant amount of material similar to that in the later texts of Merkabah mysticism. There is enough here to justify the claim that ideas of ascent to heaven involving themes important to the later Merkabah speculation were current already in the late first century A.D.

within apocalypticism.

Some of the general differences between these apocalyptic texts and the later Merkabah speculation in the *Hekhalot* texts are enumerated by Alexander (285). He mentions a different ethos, namely, a concentration on the mysteries of heaven and a description of God's throne in the Merkabah texts contrasted with the *eschatological themes (last judgment, resurrection, messianic kingdom, world to come) that are so important in the earlier apocalyptic texts. The difference is one of emphasis, but the contrast is marked. Likewise cosmology is given more attention in apocalyptic than in classic Merkabah texts. Alexander notes also that the theurgic element with its focus on preparation and techniques for ascent is much more pronounced in the later Merkabah texts, though again it is not missing in apocalyptic. Additionally, "the familiar pattern of ascent through a numbered series of heavens, usually seven, is not attested in Judaism before the Christian era" (J. J. Collins, 46). The tradition of seven heavens itself is basic in the *Hekhalot* texts, but it cannot be confirmed earlier than the first century A.D. (Aune, 279, 317-19; cf. A. Y. Collins).

Notwithstanding such differences, C. R. A. Morray-Jones affirms the essential unity of the apocalyptic traditions and the *Hekhalot* writings. It is merely a matter of one mystical tradition giving rise to two *genres of literature: the apocalypse, which functions as a descriptive narrative, subordinating the description of the heavenly vision to the writer's didactic purpose, and the *Hekhalot* writings, which serve as technical guides for mystics (Morray-Jones 1992, 24; see 2.2.6 below).

2.2.3. *Qumran*. That most of our present book of *1 Enoch* (excluding 37-71, the Similitudes) predated the Qumran settlement and that the sect had an interest in this work in general is evidenced by the Aramaic fragments found at Qumran. Among these are fragments of the ascent passage of *1 Enoch* 14 as well as the allusion to the throne of God in *1 Enoch* 18:8 (Schiffman, 353-54). Likewise, among the Aramaic fragments of the *Testament of Levi* there is preserved at least one text giving an account of Levi's ascent (4Q213 [1Levi^a ar] 1 ii 11-18; cf. A. Y. Collins, 62-66).

An interest in elements that would later feature in the *Hekhalot* texts is more specifically evidenced by several types of texts. The work called

Pseudo-Ezekiel contains a treatment of Ezekiel's vision of the divine throne-chariot (4Q385 4), which is noteworthy as the oldest extant example of exegesis of Ezekiel 1, set apart from *1 Enoch* 14 and similar texts by its explicit and intentional reworking of the biblical text (Dimant and Strugnell). D. Dimant and J. Strugnell observe that there does not appear to be anything sectarian about this text, which permits the supposition that this kind of interest in Ezekiel 1 was not necessarily unique to the Qumran sect. Also sharing an interest in the "chariots of your glory" is 4Q286 (cf. also 4Q287).

Among the *Festival Prayers* fragments is a text that connects the renewal of the covenant with "the vision of your glory," though the meaning and significance of this brief allusion is not clear (4Q509 97-98 i 7-8; cf. Schiffman, 355, for one view, though his translation differs from some others). Additionally, several passages in the scrolls express an important belief that the community experienced communion with the angelic hosts (for this see Dunn 1996, 171-87; Newsom, 1-83, esp. 59-72; cf. esp. 1QSa 2:8-9; 4QFl or 1:2-5; CD 15:15-17; 4QCD^b; 1QM 7:4-6; 1QH 3:21-23; 11:10-13, 25; 1QS 11:7-8; 1QSB 3:25-26; 4:24-26; see Book of Blessings; Damascus Document; Rule of the Congregation; Thanksgiving Hymns). Some of the last mentioned texts look to the last days, and some focus on the experience of the priests in particular, but there is a sense in which the holiness of the entire community, all of which is priestly in an extended sense, is defined by the presence of the angels in the present. "Life in the community becomes in some sense priestly service before God shared with the angels" (Newsom, 63).

None of these strands of evidence gives a clear indication of the practice of mystical ascent by individuals. In contrast, 4Q491 [4QM^a] 11 i 8-24 evidently records the claims of a teacher within the community (probably not the Teacher of Righteousness) to have undergone deification through enthronement in heaven. The text gives no description of heaven or of an ascent, but it might be an adaptation of traditions found in Ezekiel the Tragedian's *Exagoge* 68-89 concerning the enthronement and deification of Moses (on which see J. J. Collins). The latter text is identified by Collins as the only "scene of heavenly enthronement in pre-Christian Judaism that is not, or is not necessarily, eschatological" (50).

The most important group of texts relating to the themes of the Merkabah are the *Songs of the Sabbath Sacrifice (see esp. Newsom). The *Songs of the Sabbath Sacrifice*, also called the *Angelic Liturgy*, is a partial reconstruction of a liturgical text using 4Q400-407, 11Q17 (11QShirShabb) and a fragment of the same work that was found at Masada (Masada Shir-Shabb). The major critical edition and study of this text is by C. A. Newsom, upon whose work (esp. Newsom, 1-83) the following comments are based. The text appears to have been written by and for the Qumran sect as a sequence of thirteen *sabbath day readings, specifically for the first quarter of the year. Of present interest are the numerous parallels between these songs and the later *Hekhalot* texts, not least in the strong reliance on Ezekiel's vision of the Merkabah in Ezekiel 1 and 10, as well as other parts of Ezekiel (esp. Ezek 40-48). Much of the text focuses on descriptions of the angelic praise of God toward the end of fostering a type of "communal mysticism." This is accomplished by means of a lengthy period of "preparation" (songs 1-8, though it must be remembered that the recitation of the respective songs is separated by intervals of a week) followed by what can be called a "temple tour" (Newsom, 19). The description of the Merkabah itself runs in part as follows (the following is taken from the penultimate song):

The cherubim lie prostrate before him, and bless when they rise. The voice of a divine silence is heard, and there is the uproar of excitement when they raise their wings, the voice of a divine silence. They bless the image of the throne-chariot (which is) above the vault of the cherubim, and they sing [the splen]dour of the shining vault (which is) beneath the seat of his glory. And when the *ofanim* move forward, the holy angels go back; they emerge among the glorious wheels with the likeness of fire, the spirits of the holy of holies. Around them, the likeness of a stream of fire like electrum, and a luminous substance with glorious colours, wonderfully intermingled, brightly combined. The spirits of the living gods move constantly with the glory of the wonderful chariots. (4Q405 20-21-22:7-11; García Martínez, 429)

It is intriguing that in this same community apocalyptic works containing accounts of ascents to heaven (e.g., *1 Enoch* 14) are apparently

being read, even if the songs differ from the latter in that the songs function as acts of worship (Newsom, esp. 59, 65). There are interests in these songs that will later be shared by the Merkabah mystics, and with the discovery of a fragment of this collection of texts at Masada we may justifiably imagine that precisely these texts or tendencies fed into the later speculation.

Yet there are distinctive features of the songs that are important to note. While these songs may indicate a kind of mysticism relating to the vision of the divine throne, it is not the individual mysticism characteristic of the *Hekhalot* texts. It is impossible to say what individuals participating in the liturgical readings might have "experienced" as individuals, but the texts appear to be directed toward a communal experience of being in God's presence "with the perpetual host and the [everlasting] spirits . . . and with those who know in a community of jubilation" (1QH 11:13-14; García Martínez, 353). It is questionable whether the idea of ascent is relevant in such a setting, if that word is being used in the sense of the later mystical practices. In addition, it might be of significance that the vision of the chariot-throne does not form the goal of the composition. Rather, the sequence of songs culminates in song 13 with a brief description of the heavenly sacrificial service followed by a lengthy description of the vestments of the high-priestly angels who offer the *sacrifice. There does not appear to be an idea of coparticipation in the heavenly cult itself nor a common recitation of a liturgical formula with the angels. The purpose of these liturgical readings was rather the attempt to mount a "literary or rhetorical argument for the legitimation, idealization, or glorification" of the sect's priesthood, a literary function that is paralleled in *Zechariah* 3, *Jubilees* (esp. *Jub.* 31:13-14; 2:17-19, 21; 6:18; 15:26-27) and the *Apocryphon of Levi*, all of which were known to the Qumran community (Newsom, 67-72).

There are parallels between the *Songs of the Sabbath Sacrifice* and the later Merkabah texts (see Newsom, 237, 314, 329, and elsewhere). But there are also differences, and the extent to which the songs indicate interests (in this particular form) cherished outside of Qumran earlier than A.D. 70 is not yet clear.

2.2.4. New Testament. Several NT texts or ideas are currently being explained with reference to Merkabah mysticism (see 3 below). Two texts,

however, stand out as the only firsthand autobiographical accounts of ascent to heaven in all the earliest Jewish and Christian literature, namely, 2 Corinthians 12:2-4 and Revelation 4. Another might be Akiba's account of his ascent, if the reconstruction of that tradition noted below (see 2.2.5) is correct.

2.2.4.1. 2 Corinthians 12. It is not clear why Paul would bring up "visions and revelations" and discuss the topic as he does unless he felt compelled to do so. The probable occasion for his doing so would be an appeal to such experiences by his opponents (2 Cor 11:5 et passim) as a part of their attempt to authenticate their ministerial claims, although what they claimed to derive from their visions is not evident from 2 Corinthians. Paul had appealed to his vision of Christ as a credential of apostleship (e.g., 1 Cor 9:1), and Luke records a vision in connection with Paul's original Corinthian ministry (Acts 18:9-10).

Paul mentions neither of these in 2 Corinthians 12 but instead cites an experience dating well before his work in Corinth and seemingly takes pains to downplay its significance for the issue of apostolic credentials. Positioned at the climax of his "fool's speech" (2 Cor 11:1-12:13) the whole account of his ascent rapidly bypasses any hint of positive benefit in order to focus on the lesson learned through the "thorn" in his flesh: "My grace is sufficient for you, for my power is made perfect in weakness" (2 Cor 12:9 NIV). On the latter lesson the argument of the epistle (assumed in this article to be unified) pivots, and by that argument the appeal to "visions and revelations" is neutralized. Without denying the reality of such experiences in general or diminishing their God-giveness, Paul rejects any suggestion that they authenticate new covenant ministry.

That being the thrust of Paul's argument in 2 Corinthians 12 it is difficult to accept that he is pointing the attention of the Corinthians to an experience, Merkabah or otherwise, that was foundational and formative for his apostleship (as argued esp. by Morray-Jones 1998, who associates 2 Cor 12 with Acts 22:17-18). Nothing here suggests that as of the writing of 2 Corinthians Paul would routinely pursue or promote such experiences, and much suggests that he would now transfer what was thought to be of value in them to another type of experience: turning to the Spirit (2 Cor 3:7-18).

Not only does he not report anything seen or heard during his journey, but Paul also stresses that nothing reportable resulted. Without denigrating the speech heard in paradise (2 Cor 12:4) he probably means to suggest that the experience was of little or no pastoral benefit (cf. 1 Cor 14:18-19). It has been suggested that the thorn (2 Cor 12:7) may correspond to the perils tradition assigned to Merkabah ascents through the seven (versus Paul's three) heavens and *Hekhalot*, but it is not clear that the thorn resulted from the particular ascent narrated (note the plural used in 2 Cor 12:7: "revelations") or that it was inflicted in the course of any ascent. What we know is that the thorn was associated by Paul with his visions and revelations and it functioned as a watershed in his Christian missiology: the prayers of 2 Corinthians 12:8 and the declarations of 2 Corinthians 12:10 represent the two sides of that watershed. As for the connection with Acts 22:17-18, this depends on treating 2 Corinthians 10-13 as a separate letter dating to just before the Jerusalem council of Acts 15 and a generally negative evaluation of Acts' historical reliability touching the chronology of Paul's ministry.

It is apparent that Paul had had mystical experiences (2 Cor 12:1-10 among them; cf. Acts 9:3-9, 12; 16:9-10; 18:9-10; 22:17-21; 23:11; 26:19; 27:23-24; Gal 1:12; 2:1; as did other Christians, e.g., Ananias [Acts 9:10-16], Peter [Acts 10:9-16] and the Seer of Revelation) and he valued them as "surpassingly great," but of greater benefit to the churches and of greater relevance to the subject of authentic new covenant apostleship was the revelation of the thorn. The attempt to correlate details of Paul's account in 2 Corinthians 12 with the Merkabah traditions are strained but possible. It could be that Paul had earlier practiced a kind of mysticism such as we encounter in these traditions—this might explain the various parallels between his writings in general and the Merkabah texts—but that the experience of the thorn had effected the shift in evaluation that he now encourages the Corinthians to accept.

2.2.4.2. Revelation. According to the analysis of D. E. Aune, most of the book of Revelation consists of a "single extended vision narrative" (Rev 1:9-22:9), within which Revelation 4:1-2a introduces a new phase, "The Disclosure of God's Eschatological Plan" (Rev 4:1-22:9). The heavenly journey of Revelation 4:1-2a serves as

an introduction to both the seal narrative of Revelation 4:2b—6:17 and Revelation 4:2b—22:9. Formally, Revelation 4:1—6:17 is labeled a "literary throne scene, i.e., the primarily literary use of the throne vision is as a vehicle for commenting on earthly events in the narrative" (Aune, 278). The accounts of the divine throne room (Rev 4:1—5:14; 8:2-5; 15:1-8) establish the sovereignty of God over the events unfolding on earth. Within Revelation 4—6 we are given a depiction of the heavenly worship of God (Rev 4:2b-11) and the investiture of the Lamb (Rev 5:1-14).

In Revelation 4:1-2a God opens the door of heaven (cf. *1 Enoch* 14:14b-15, 18-25) and a voice identified as the angelic voice of Revelation 1:10-11 summons the Seer to heaven so that he might be shown "what must happen after these things" (cf. Dan 2:29). Immediately the Seer falls into a "prophetic trance" (Aune, 82-83, 283-84; cf. Rev 1:10; 17:3; 21:10; and also Acts 10:10; 11:5; 22:17), designating an experience that took place "in the spirit" rather than "in the body." Ritual preparations that might have attended this experience go unmentioned, if there were any. The journey itself, which involves one rather than seven heavens, passes undescribed; the Seer is immediately in the throne room. The vision that follows verbally recalls the OT passages of Ezekiel 1; 10; Isaiah 6; Daniel 7 and 1 Kings 22:19 and parallels features found in some of the other literature surveyed in this article (e.g., cf. Rev 4:3b with Ezek 1:27-28 and 4Q405 20-21-22:10-11; on the same verse see *1 Enoch* 71:6-8; *3 Enoch* 33:1—34:2; see further Aune, 279-374). In contrast to Ezekiel this account does not attempt to describe God.

Thus this passage contains both similarities and dissimilarities to the various sources of information about Merkabah mysticism, and it contains unique elements as well (Aune, 278-79). More study is needed before we can say that this account is either borrowing from or contrasting itself with a movement or set of traditions continuous with what we encounter in the later *Hekhalot* texts, nor can we say whether this text records a unique experience within the Christian circles associated with this book. Some scholars deny that this text is the voice of experience; it is rather a literary construct borrowing from a variety of traditions, including the Merkabah traditions.

2.2.5. Rabbinic Literature. A variety of rabbinic texts are brought into consideration by those in-

vestigating the roots of Jewish mysticism (see, e.g., Scholem 1965 and 1974, 373-74, and the articles by Morray-Jones). A significant passage is *b. Hag.* 11b-16a (cf. *y. Hag.* 2; *b. Sabb.* 80b), which supplies a lengthy discussion of the seven heavens (*Maaseh Bereshit*), discusses *Maaseh Merkabah* and passes on stories of famous individuals associated with these teachings. Yet in these and other texts there are hints at the existence of esoteric traditions in the background. Of central interest is a story of four who ascended to paradise in heaven, which the Tosefta and both Talmuds attach to a restriction articulated in the Mishnah at *m. Hag.* 2:1 (for related restrictions, see *b. Sabb.* 80b; *y. Hag.* 77a.46; *b. Hag.* 13a).

M. Hag. 2:1 reads: "They do not expound upon the laws of prohibited relationships [Lev 18] before three persons, the works of creation [Gen 1] before two, or the chariot [Ezek 1] before one, unless he was a sage and understands of his own knowledge. Whoever reflects upon four things would have been better off had he not been born: what is above, what is below, what is before, and what is beyond. And whoever has no concern for the glory of his Maker— would have been better off had he not been born" (Neusner, 330).

It is argued that this Mishnah assumes the currency of *Maaseh Bereshit* (works of creation) and *Maaseh Merkabah* (the chariot), and while it issues stern warnings in connection with the public exposition of these portions of Scripture it includes such exposition within the fold of rabbinic orthodoxy. In the judgment of Morray-Jones the first sentence of the above translation "originally meant that no individual (or ascetic) was competent to expound (that is, teach about, or express an opinion concerning) Ezekiel's vision unless he was a mantic sage [such as Daniel] who could do so on the basis of his own visionary-mystical experience and esoteric knowledge" (Morray-Jones 1993, 188). This part of the paragraph derived from the pre-first century A.D. apocalyptic tradition and was modified when taken up into rabbinism. The last two sentences are additions that represent a later strand of opinion "that was hostile toward the esoteric and mystical traditions, especially as it was developed in circles outside rabbinic control" (Morray-Jones 1993, 190), including Christians and Gnostics.

The Tosefta and both Talmuds attach to *m. Hag.* 2:1 the above-mentioned story of four who went into paradise during life, only one of

whom made the round-trip journey "in peace" (*t. Hag.* 2:1-4; *y. Hag.* 77b; *b. Hag.* 14b-15b). This story is also contained in *Song of Songs Rabbah* (*Cant. Rab.* 1:28 [= 1:4:1]) and in two *Hekhalot* texts (*Hekhalot Zutarti* and *Merkabah Rabbah*). A translation of these texts is supplied by Morray-Jones (1993, 196-98, 210-15). It is possible to interpret this story as originally nonmystical, understanding it, for example, as an allegory of four types of rabbinic scholarship (for some of these alternatives with their principal representatives, see Morray-Jones 1993, 192-98; Halperin's view would fit here). Several scholars, however, take the view that this story is an ancient (early third century A.D. or earlier) witness to the practice of mystical ascents to paradise and that the story's association of this type of practice with Akiba (late first and early second century A.D.) is not unlikely.

The sources mentioned in the preceding paragraph represent different versions of the story, and a reconstruction of an earliest version appears to be less than straightforward. One possibility (argued by Morray-Jones 1993) is that the *Hekhalot* texts, though later, contain an earlier version of the story. This was a first-person account of Akiba's ascent in the face of angelic opposition to the heavenly holy of holies to behold the glory of God on the *Merkabah*. This version left the other three men unnamed and attributed Akiba's success (versus their failure) to the merit of his deeds. This story was later adapted as an illustration of the Mishnah's restriction (*m. Hag.* 2:1), which by that time had come to be interpreted as saying that only an ordained rabbi could become involved in *Maaseh Merkabah*. Therefore the previously unnamed three were assigned identities of famous but unordained teachers. According to Morray-Jones, this tradition, going back to its earliest form, is continuous with apocalyptic and mystical traditions predating the first century (assuming continuity with texts such as *1 Enoch* 14).

Key issues here are the related problems of the interpretation of individual texts and the reconstruction of the history of the hypothetical traditions. The same must be said for the further attempt to trace through the rabbinic literature the experience of transformation into angels that certain practitioners of ascents were said to undergo (see esp. Morray-Jones 1992). The transformation of Enoch has already been noted (*1 Enoch* 70-71), and another early text

important to the case for the pre-Christian origins of the transformation motif is Ezekiel the Tragedian's *Exagoge* (second century B.C.; cf. Segal, 102; J. J. Collins, 50-53). Possibly 4Q491 (4QM^a) 11, noted above, confirms its early origins as well. According to A. Segal, "there is adequate evidence . . . that many Jewish mystics and apocalypticists sensed a relationship between the heavenly figure on the throne and important figures in the life of their community. The roots of this tradition are pre-Christian" (Segal, 107-8, for whom the NT itself evidences the antiquity of this tradition).

Likewise, Morray-Jones (1992, 26) summarizes a review of several relevant texts by noting that the story of Enoch's transformation "may represent the ultimate aspiration of the *Merkabah* mystic." The evidence suggests "that a variety of mythical and historical figures were credited with having achieved such a transformation on what might be called a 'cosmic' scale and with having become veritable incarnations of the Name or Power of God. An analogous, though lesser, transformation was promised to the righteous in the world to come. But it seems that such a transformation was also considered possible, if only temporarily, for exceptionally holy individuals in this life. Such men were gifted with supernatural power and knowledge, and became intercessors between the divine and human worlds, because they had been conformed to the divine Image or *kibōd* and, like the High Priest in the Temple sanctuary, had been vested with the Name of God." Note that the experience of mystical transformation is a foretaste of the final transformation of the righteous and the benefits to the mystic.

Assuming an essential continuity between apocalyptic texts such as *1 Enoch* 14 and the later *Hekhalot* writings, Morray-Jones (1992, 1) argues that the mystical aspirations mentioned "were inherited from apocalyptic circles and enthusiastically developed by some Tannaim, but were opposed by others, mainly because the same traditions were being developed by groups whom they regarded as heretical, including the various forms of Christianity and Gnosticism. The *Hekhalot* writings represent the development of these traditions within rabbinism." Thus the negative tone of certain rabbinic texts with respect to mystical beliefs and practices, some of which are related to the Two-Power heresy (e.g., *b. Sukk.* 45b; *b. Sanh.* 68a; *Ex. Rab.* 49:3; *b. Hag.*

15a; *m. Meg.* 4:10; *b. Hag.* 13a; cf. *3 Enoch* 16) represents only one viewpoint from within rabbinism while those very texts attest the currency of these traditions.

In sum, it is possible to make a case from the rabbinic literature for the existence of mystical-visionary beliefs and practices within first-century Judaism, beliefs that are essentially continuous with those later expressed in the *Hekhalot* texts. Confirmation of this hypothesis would open the way for a fresh reading of several NT texts, as some scholars have already proposed. To return to 2 Corinthians, Paul's description of the process of glorification associated with seeing God in 2 Corinthians 3:7-18 coupled with the evident claim to authority made by his opponents based on their "visions and revelations" (2 Cor 12:1-6)—to mention just two important features—might seem to some to be most at home in this matrix of reconstructed mysticism. The way is then opened to read a number of other details scattered about the NT along the same lines.

2.2.6. The Hekhalot Literature. On the whole, these writings have been described as technical guides or manuals for mystics that give little space to narrative descriptions of ascent or the transformation of the mystic (see 2.2.2 above). The exception to this rule is *3 Enoch*, which is a fairly late product of the same mystical-visionary movement but which is itself an apocalypse.

Viewing the texts of Jewish mysticism collectively (not restricted to the *Hekhalot* texts), one is confronted with "a religious phenomenon that is contained in hundreds of books and in thousands of manuscripts, many of which are still unpublished" (Gruenwald 1995, 6), and fewer of which have been translated (for a list of published texts and translations relating to Merkabah mysticism, see Morray-Jones 1998). Scholem characterizes the *Hekhalot* sources as follows: "All our material is in the form of brief tracts, or scattered fragments of varying lengths from what may have been voluminous works; in addition there is a good deal of almost shapeless literary raw material" (Scholem 1954, 44-45). He enumerates eight of the most important *Hekhalot* texts (Scholem 1965, 5-7), giving special mention to the *Lesser Hekhalot*, the *Greater Hekhalot* and *3 Enoch*. The dating of the material is difficult, but the "outstanding documents of the movement appear to have been edited in the fifth and sixth centuries" (Scholem 1954, 44). The relative

inaccessibility of this literature, the lack of a consensus among specialists regarding the origins and dates of the traditions and literary strata and dispute over whether there is one text behind the various extant manuscripts has hindered work with this material by NT scholars. Further, "as a matter of general rule and practice, mysticism is a highly and densely encoded domain. No justice can be done to it by simply translating mystical texts . . . from one language into another, particularly when those translations are made by people who know more about the language than about the 'inner grammar' that is used in mystical formations" (Gruenwald 1995, 29).

A fuller account of the profile of the mysticism encountered in this literature has already been given. And as has already been stated, the key question for those interested in NT background concerns the measure of continuity one can assume between the mysticism encountered in these *Hekhalot* materials and any mysticism that some scholars detect in the other and largely earlier strands of literature surveyed here. Components of the *Hekhalot* traditions had very early origins, but the question of the continuity of a movement, not unlike questions relating to the history of Gnosticism, has not yet received a firm answer.

3. Mysticism and the New Testament.

Second Corinthians 12 (along with 2 Cor 3:7-18; 4:4-6) and Revelation 4 have already been noted as NT texts that have received attention in connection with Merkabah mysticism. In addition to these a number of other NT texts and ideas have been brought into this discussion in the literature, on which see the works mentioned in the bibliography and standard commentaries. In particular, the exaltation of Jesus in a variety of NT texts is paralleled with the transformation of Enoch and his identification with the divine Glory. In addition to 2 Corinthians 12, Paul's experience on the Damascus road has been viewed in this light, as well as his language of baptismal transformation (e.g., Col 3:9-10; cf. Rom 8:29; 2 Cor 3:18), his descriptions of the body of Christ (e.g., Eph 4:12-13, which is paralleled with the *Shiur Komah* doctrine and related ideas), his christology (e.g., Phil 2:9-11, noting especially the bestowal of the divine name, the tetragrammaton, YHWH) and the implied idea of a celestial family of angels in Ephesians 3:14-15 (cf. *3 Enoch* 12:5; 18:21).

Some scholars have sought to explain the mix-

ture of ideas being confronted in Colossians (esp. Col 2:16-19) against the background of Merkabah mysticism. If connections like these can be established, others will almost certainly follow, for example, the "snatching up" of the saints in 1 Thessalonians 4:17 (cf. the use of the same verb in 2 Cor 12:2 and the idea that mystical ascents were a foretaste of the transformation of the righteous). A recent treatment of Paul's so-called Christ mysticism, by contrast, appears to owe little to the background of Merkabah mysticism (Dunn 1998, 390-412; see *DPL*, Mysticism). The book of Hebrews has been placed in this context, with emphasis on among other things the importance of its interest in angels, the importance of the throne and the allusions to the heavenly curtain, which is also important in the *Hekhalot* texts. Elements of John's Gospel have also been related to Merkabah mysticism, for example, features of John 6 and 14:1 (cf. with the latter 3 *Enoch* 1:1 with its idea of God's heavenly dwellings with their chambers; on the question of John's Gospel, see Kanagaraj). Among other issues in all of this would be the issues of magic and theurgy, which imbued Merka-bah mysticism, within apostolic Christianity.

While considerable work remains to be done in the area of Jewish mysticism as background for the NT, enough has been done to show that it could have been current in the apostolic period in some form and that it holds potential for an improved understanding of some NT texts.

N

NABONIDUS. SEE PRAYER OF NABONIDUS (4Q242) AND PSEUDO-DANIEL (4Q243-245).

NARRATIVE A (4Q458)

4Q458 consists of some seventeen fragments. Only fragments 1 and 2 preserve significant amounts of text, with fragment 2 preserving portions of two columns. The official designation of 4Q458 is "Narrative A." However, R. H. Eisenman and M. O. Wise (46) refer to it as the "Tree of Evil" (from frag. 1, line 9) and classify it not as narrative but as apocalypse. Fragments 1 and 2, which is all that Eisenman and Wise cite and translate, have an *apocalyptic orientation, but the other fragments seem to be part of a narrative, with reference to the patriarchs. It may be that the document originally contained both narrative and apocalyptic elements.

Lines 8 and 9 of fragment 1 do create an apocalyptic impression: "And the fir[st] angel will throw down [or: will send] . . . laid waste, and he will cut down the tree of evil. . . ." Some of the words and phrases in fragment 2, column 1, seem to contribute to this (possibly) apocalyptic scenario: "terrify them" (line 1), "[the moon] and the stars" (line 2) and "the immorality" (line 6). Column 2 of the second fragment seems to envision a final, possibly messianic battle: "and he will destroy him, and his army . . . and it will swallow up all the uncircumcised ones, and it will . . . and they will be justified. And he walked upon the mountains . . . anointed with the oil of the kingdom of the . . ." (lines 3-6). It is difficult to determine the context, even the appropriate tense of the verbs (should they be treated as future or as past?). The person referred to as "anointed with the oil of the kingdom" may be a historical personage, perhaps even David himself. We may have an allusion to Psalm 89:21(ET 89:20): "I have found David my servant, with my holy oil I have anointed him." 11QPs^a 28:11

should also be noted: "he will anoint me with holy oil." Moreover, Psalm 89:28 (ET 89:27) goes on to refer to David as God's "firstborn," an epithet that occurs also in 4Q458 frag. 15. If these fragments have an apocalyptic orientation, then a *messianic figure may be in view.

It is possible that the first two fragments depict a scene related in some way to the garden of Eden, in which Adam and Eve ate from the tree of the knowledge of good and evil and were then driven out by an angel. In the end time this "tree of evil" will be cut down and Israel's enemies overthrown. A review of Israel's history then follows this futuristic scenario. (Because the order of the fragments is uncertain, the sequence may actually be the reverse.)

There is little else that can be gleaned from these fragments. Fragment 15 (line 1) probably reads "my first-born" (cf. 4Q369 frag. 1 ii 6), which could refer either to Israel (as in Ex 4:22; Jer 31:9) or to Israel's Davidic king (as in Ps 89:27). "Prophets" or "prophecy" appears in the next line. "Judah" and "Reuben abhorred[?]" appear in fragment 14, lines 3 and 4, and possibly "Joseph" in line 5. We may have here an allusion to Genesis 49. A few other words scattered among the fragments can be picked out (e.g., "heaven" in frag. 3, line 1; "breathe on them" in frag. 4, line 2; "twelfth day" in frag. 4, line 3; "from the east and from the north" in frag. 9, line 2 [cf. Dan 11:44]; "Israel" in frag. 10, line 2; "from his evil" in frag. 11, line 3; "Meshech[?]" in frag. 17, line 2), but with no sense of context or flow of thought.

NEO-PYTHAGOREANISM

Neo-Pythagoreanism refers to the revival of the philosophy of Pythagoras, which began in the first century B.C. and continued until it merged with Neo-Platonism in the third century A.D. This revival did not, however, constitute an organized movement; the representatives of Neo-Pythagoreanism appear as individuals who show no awareness of one another. Neither was there a systematic or distinctive body of doctrines; Neo-Pythagoreanism derived much from *Platonic and *Stoic thought as well as from Pythagoras.

1. Pythagorean Antecedents
2. Leading Figures and Ideas
3. Comparisons and Contrasts
4. Apollonius of Tyana
5. Literary Analogies

1. Pythagorean Antecedents.

Pythagoras, a devotee of Apollo, founded a religious society in Croton (southern Italy) in the latter half of the sixth century B.C. If he produced any writings, none has survived, but admiring *poets, *philosophers and *historians testify to his belief in metempsychosis, or the transmigration of the soul. He believed the soul to be a fallen divinity imprisoned in the body as a tomb and condemned to a cycle of reincarnation. Only by devotion to Apollo could one hope to escape. A second major emphasis of Pythagoras was the interpretation of the world as a whole through numbers, a mathematicization of reality. This resulted from his discovery of the numerical ratios of the intervals in the musical scale. The society he established practiced a dis-

tinctive ascetic and reflective way of life, but political opposition led to its dissolution in the latter half of the fifth century B.C.

2. Leading Figures and Ideas.

Neo-Pythagoreans were often more concerned with religious rather than philosophical speculation. They glorified Pythagoras as the bringer of a revelation and the founder of their way of life. Several figures have been identified as Neo-Pythagoreans, beginning with Nigidius Figulus in the mid-first century B.C. He seems to be the only significant Neo-Pythagorean to predate the Christian era. He was an abstruse scholar, a *mystic and a dabbler in astrology. His writings in *grammar, theology and natural science survive only in fragments. Nicomachus, an arithmetician of the late first/early second century A.D., wrote several works on the Pythagorean theory of numbers, portions of which have survived. Numenius of Apamea (in Syria) was active in the mid-second century. Significant fragments of his work survive. His treatise *On the Good* is a dialogue on the "First Principle" or "the Good." Numenius taught a doctrine of three gods. In addition to the Supreme God there is a Demiurge who is divided between the second and third divinities, creator and creation respectively. The Supreme God is the Father of the creator god. Numenius viewed matter not as neutral but as a positive evil; the descent of the immaterial soul into a material body was a great misfortune.

3. Comparisons and Contrasts.

Neo-Pythagorean life and thought have some similarities to and important differences from early Christianity. Obviously the close-knit community of followers with common commitments and practices has a parallel in Jesus' disciples and the nascent church. The asceticism of the Pythagoreans calls to mind John the Baptist (Mk 1:6), but the latter did not share the Pythagorean rejection of clothing from animal products. Jesus lived the relatively austere life of an itinerant preacher (Mt 8:18-20) but was by no means an ascetic (Mt 11:18-19). The concepts of metempsychosis and reincarnation are foreign to the NT. Neither does the Pythagorean preoccupation with numbers have a parallel in the NT. A clear instance of Pythagorean influence in this respect is found not in the NT but in *Philo (*Philo Op. Mund.* 99-100).

Neo-Pythagoreanism's negative view of the body may have been an influence on *Gnosticism, which was developing simultaneously. The view of the NT stands in contrast to this (Jn 1:14; 1 Cor 6:12-20; Col 2:9); the body is fallen but not intrinsically evil.

The Neo-Pythagorean triad of divinities, apparently an original contribution of Numenius, catches the eye of the Christian interpreter. This reflects the tendency to posit intermediary daemons between the transcendent, supreme God and the world of human beings. The personification of Wisdom and the Johannine Logos function similarly. But beyond this there is no significant correspondence between Numenius's trinity and the concept emerging in Christian thought. Although Numenius does employ relational language similar to the Father/Son terminology of the NT (forefather, offspring, descendant), other comments show that only the second and third members form a unity. The First God is self-existent, indivisible and uninvolved in creation, which is the work of the second deity. Numenius's trinity is necessitated by his negative view of matter: the First God, being truly "the Good," can have no involvement with an evil material world.

The affinities between Neo-Pythagoreanism and the NT are of interest but hardly remarkable. The primary importance of Neo-Pythagoreanism for the study of the NT pertains to the most famous Neo-Pythagorean figure and to certain literary considerations.

4. Apollonius of Tyana.

Apollonius of Tyana, a wandering sage and wonder worker of the first century A.D., combined Pythagorean ideas with the lifestyle of a charismatic prophet. The chief source of information about Apollonius is the idealized and somewhat legendary biography by Philostratus, the *Life of Apollonius*. Philostratus wrote during the reign of Septimius Severus (A.D. 193-211) at the instigation of the emperor's wife, Julia Domna. He was especially concerned to refute the charge that Apollonius was a practitioner of *magic and instead to attribute his miracles to supernatural power (cf. Mk 3:22). The work is apologetic but also laudatory and didactic.

4.1. Comparisons to Christ. The importance of the figure of Apollonius of Tyana for NT studies is twofold: individual passages that are reminiscent of Gospel stories and the *theios anēr* ("di-

vine man") concept, of which Apollonius is the principal first-century representative.

A number of stories in the *Life of Apollonius* may be paralleled with Gospel accounts. Miraculous portents, including divine apparitions and dreams, surrounded the birth of Apollonius (Philostratus *Vit. Ap.* 1.4-5). Similarities with the birth narratives of Matthew and Luke are apparent (Mt 1:20; 2:13, 19; Lk 1:26-38). A number of miracles and healings are attributed to Apollonius (Philostratus *Vit. Ap.* 3.39). The most detailed and, for our purposes, most significant account is the passage that relates the raising of a dead girl in Rome (Philostratus *Vit. Ap.* 4.45). A girl who had apparently died in the hour of her marriage was being carried away for *burial. Apollonius halted the procession, touched the girl, spoke something over her secretly, then awakened her from her seeming death. A close parallel in the NT is found in Luke 7:11-17. A widow's only son has died; he is being carried forth; a large crowd of mourners accompanies them. Jesus calls for the weeping to cease, touches the bier and addresses the young man out loud. In both cases the resuscitated person immediately speaks and is returned to his or her household.

A significant difference between the two narratives is the view of the narrator toward the narrated event. Luke tells his story with an ingenuousness or naiveté that presumes the miraculous nature of the event. Philostratus, while clearly wanting to relate a spectacular occurrence, deliberately leaves the nature of the event ambiguous. This is achieved in the narration itself and even more so in the concluding reflection that neither he nor those present could determine precisely what had occurred.

Finally, the end of Apollonius's life offers a fascinating parallel to the resurrection of Jesus. At the close of his work, Philostratus reaches a point at which his alleged source, the memoirs of Damis the Assyrian, comes to an end. But since that source related nothing about the death of the sage, Philostratus felt compelled to append some stories about Apollonius's de-nouement that were popular in the author's day. These, he admits, are contradictory; neither the age of Apollonius nor the site of his death is reliably known. After relating competing versions of the philosopher's death or translation, Philostratus concludes with a postmortem appearance story.

After the death of Apollonius, a young man engaged the sage's followers in heated discussions about the immortality of the soul, openly and emphatically rejecting the idea. After one such debate he fell asleep. Some time later he awoke suddenly and with much disorientation and distress claimed to see the departed Apollonius present among them, orating on the immortality of the soul. The others present, though desirous, did not share in the vision. The once-skeptical youth transmits a few lines of the sage's utterance, affirming the immortality of the soul and, in true Pythagorean tradition, describing death as liberation from the body.

This passage bears clear similarities to the NT story of doubting Thomas (Jn 20:24-29): an openly skeptical follower becomes convinced of his teacher's immortality by means of a postmortem revelation. But in certain respects the stories differ. Whereas the young doubter's vision and audition of Apollonius are described as a private experience in which no one else present shares, the appearance of Jesus to Thomas is presumably perceived by others as well. Secondly, the skeptical follower of Apollonius is said to have awakened suddenly from sleep, perspiring and raving. Jesus appears to Thomas when the latter is presumably in a normal, wakeful state. Finally, the appearance to Thomas refers to tactile verification of Jesus' reality (cf. Lk 24:39-43). This starkly somatic conception of resurrection contrasts with the Neo-Pythagorean understanding of the immortal soul enduring a "spell of harsh and painful servitude" in the body (Philostratus *Vit. Ap.* 8.31).

4.2. Divine Men. A second way in which Apollonius of Tyana impinges upon NT study relates to the concept of the *theios anēr*. This title refers to a worker of miracles and/or a person with divine wisdom. It occurs twice with reference to Apollonius. In the *Epistles* of Apollonius (of doubtful authenticity) the sage supposedly writes of himself, "Even the gods have spoken of me as of a divine man, not only on many occasions to private individuals, but also in public" (*Ep.* 48). Similarly, Philostratus speaks of how Apollonius came to be considered "a supernatural and divine being" (Philostratus *Vit. Ap.* 1.20). When followers of Apollonius raise the issue of his divinity, he repudiates the idea (Philostratus *Vit. Ap.* 8.7).

The term "divine man" does not occur in the NT, but some scholars have seen its substance in

Jesus' remarkable spiritual insight and ministry of healing. These scholars hypothesize that in the Hellenistic world the divine man was a widespread and popular concept with a recognizable set of traits such as close affiliation with the divine, ability to work miracles and superior wisdom. Through the impact of Hellenization, Jews, who normally would have regarded the concept as contradictory if not blasphemous, supposedly began to reinterpret their ancient biblical heroes, especially Moses, such that these heroes were presented to non-Jews as divine men.

According to the hypothesis, this change in Jewish thinking enabled Christianity to conceive of Jesus in similar terms. But recent study has called this hypothesis into question on two counts. First, Hellenization among Jews seems to have strengthened, not weakened, the dualism between the divine and the human (Holladay). It would be unlikely that Hellenistic Judaism paved the way for Christianity to appropriate the divine man category and apply it to Jesus. Second, the existence of the divine man model has been questioned (Tiede). Characteristics have sometimes been indiscriminately combined to produce a profile that exists only in the minds of modern scholars. Comparisons between Jesus and other charismatic sages of antiquity will continue to intrigue and illuminate, but the sources of NT christology are probably to be sought elsewhere than in the divine man hypothesis.

5. Literary Analogies.

Neo-Pythagorean writings play a role in discussions about certain NT literary forms. Philostratus's *Life of Apollonius* is sometimes regarded as the closest literary analogue to the NT Gospels. One possible category for both is that of aretalogy, a collection of miracle stories whose function is to praise a performer of miraculous deeds. But the existence of the literary form aretalogy has been questioned (Kee), since the common description has no fully representative example. The three most essential features, a wise teacher who also has the ability to work miracles and who dies a martyr's death, are not found together. Ultimately the Gospels resist easy categorization. The Evangelists used recognizable subforms (chreiai, miracle stories), but their end product lacks clear literary precedents, and it must be remembered that the *Life of Apol-*

lonius postdates the canonical Gospels by approximately a century.

Finally, a recent study (Balch) has shown that the household codes of Neo-Pythagorean moralists have much in common with those of the NT (see Family and Household). Among other things, the subordination of *women to their husbands and the elevation of a woman's inner character over her external adornment are common to both.

NEW JERUSALEM TEXTS

Fragments of one or more works describing an ideal future city, presumably *Jerusalem (the name never appears), have been discovered in Qumran Caves 1, 2, 4, 5 and 11. Written in *Aramaic, the texts provide a verbal blueprint for an enormous temple city, mandating the design of its walls, gates, towers and other structures, in-

cluding the *temple, though almost nothing of that structure's details survive. Some of the fragments describe *priestly ceremonies, ritual actions and Jewish *festivals known from neither the Bible nor any other source.

A total of seven *Qumran manuscripts are subsumed under the rubric "New Jerusalem" (1Q32, 2Q24, 4Q554-555a, 5Q15 and 11Q18). Apart from general archaeological considerations, the only way to date these manuscripts is by paleography, or analysis of the letter forms in the writing. This is an imprecise art, but it suggests that the earliest of the copies date to about 25 B.C. This is the date of the copies; the time of original composition can only be inferred by literary analysis and the observation that the New Jerusalem descriptions evidently served as a source for another *Dead Sea Scroll, the *Temple Scroll. A date in the early to mid-second century B.C. is probable for the original writing(s), though there may have been subsequent redaction. The work possesses none of the diagnostic features of language or ideology that would brand it a sectarian composition such as are the *Rule of the Community and *Damascus Document.

1. Background and Description
2. Significance

1. Background and Description.

"In the twenty-fifth year of our exile," wrote Ezekiel the prophet, "the hand of the Lord was upon me, and he brought me by means of angelic visions to the land of Israel, and set me down upon an exceedingly high mountain" (Ezek 40:1-2). The mountain was Zion, whence Ezekiel looked out upon what none other could see. His visions of a new temple set within a new temple city comprise Ezekiel 40-48. Isaiah, too, looked for a new Jerusalem, encrusted with all manner of precious stone (Is 54:11-12); and the *apocryphal book of *Tobit longed for the day when "Jerusalem and the Temple of God will be rebuilt in splendor, just as the prophets have said" (Tob 14:6-7). In part these ideas were a reaction to the comparatively modest temple the Jews were able to build upon their return from exile in Babylon. It was no match, said contemporaries, for the splendid structure of old, erected by Solomon and destroyed by Nebuchadnezzar. For centuries notions of a future, wondrous temple were nurtured and grew, particularly in *priestly circles. Such circles produced the New Jerusalem work(s).

The largest surviving fragments of the New Jerusalem works derive from Qumran Cave 4. These portions have yet to be published in an *editio princeps*, though preliminary publications are available (Eisenman and Wise; Beyer). Fragments from Cave 11 are also of great significance, but they nowhere overlap those from Cave 4, nor is their own order certain. Recently a reconstruction by M. Chyutin has attempted to fit all surviving fragments into a hypothetical twenty-two-line, twenty-two-column scroll. The suggested reconstruction is very problematic, and his ordering of the fragments, largely based on corresponding points of damage, is at best uncertain; nor does Chyutin convincingly reconstruct the Aramaic morphology and syntax at every juncture. Nevertheless, his work has a certain value and includes some intriguing suggestions for the understanding of the New Jerusalem text as a whole, particularly its temple ceremonies. One way of understanding the setting and contents of the New Jerusalem text is as follows.

An angelic figure guides a visionary—unnamed, but possibly to be understood as Ezekiel—around the city, measuring its structures with a seven-cubit cane and revealing to him the ceremonies conducted within it. According to Chyutin, the earliest surviving fragments describe ceremonies held inside the temple; descriptions of the inner court of the temple and of aspects of the temple itself follow. Columns 9-14 of Chyutin's hypothetical twenty-two-column scroll concern ceremonies held within the innermost of three temple courts; column 15 then provides a snapshot of the other two courts. Columns 15-17 detail the fortification wall that surrounds the entire city, measuring about 19 x 13 miles and pierced by twelve gates named after the sons of Jacob; the next several columns consider the city plan with its residential structures, buildings and gates. After a digression to depict certain structures of the outer enclosure (including its 1,432 towers), the last column contains a scenario for the final battle against Jerusalem, led by the Kittim and including among enemy forces Babylon, Edom, Moab and the sons of Ammon.

In Chyutin's reconstruction the New Jerusalem fragments from Cave 11 constitute the initial columns. Notable among these fragmentarily preserved descriptions are several ceremonies that, unlike any described in the Bible, take

place within the temple itself. They have only priestly onlookers, lay attendance being forbidden. In a series of rituals that celebrate the investiture of a new high priest and perhaps also the consecration of the new temple described by lost portions of the New Jerusalem, the high priest is dressed in his father's holy garments and crowned with seven successive diadems. He then takes his seat upon a high-priestly throne in the outer room of the temple (Aramaic *hēklā*). He may read from a scroll (of the law?) that the New Jerusalem situates in that same outer room. The priests receive gifts, and a ceremonial changing of the priestly courses follows. The New Jerusalem text implies twenty-six priestly courses, as in the **War Scroll*, contrasting with the twenty-four courses of the later biblical sources (Chronicles), the Qumran priestly calendars, or *mishmarot*, and **rabbinic literature*. Chyutin makes the intriguing but questionable suggestion that the high priest ends the ceremony by entering the holy of holies as final confirmation of receiving his office, whereupon all the priests prostrate themselves.

The New Jerusalem text's description of the Passover is notable for its attention to the ceremony of cooking the **sacrifices* (see *Festivals*). The work requires the use of seven glasses, seven cups and seven cisterns, details mentioned in no other Jewish sources. The congregation is pictured eating their portions of the sacrifices within the temple confines, as in the *Temple Scroll* (17:6-9) and **Jubilees* (*Jub.* 49:20), and not throughout the entire city of Jerusalem as rabbinic law permitted. Notable here is the numbering of the congregation as 32,900. This number implies representative, not full lay participation, since the total population of the ideal city according to Chyutin's reconstruction (reasonable at this point) is about six hundred thousand.

The New Jerusalem text's description of the inner court of the temple, as with its architecture more generally, enjoys numerous points of contact with other descriptions of the ideal city, including that of Revelation. The inner court is surrounded by a wall built of white stone and penetrated by twelve gates, compared with the four of the *Temple Scroll*. A roofed and gold-plated stoa connects the gates to each other. One of the gates is called the Sapphire Gate, recalling the sapphire in Tobit's future Jerusalem (Tob 14:17) and the foundations of the walls in

Isaiah (Is 54:11-12) and Revelation (second of the twelve foundations of the wall, Rev 21:19). The dimensions of the white wall are identical to those of the *Temple Scroll's* inner court wall. Located within the inner court are a House of the Laver, where the priests would purify themselves—a structure otherwise mentioned only in the *Temple Scroll*—and a slaughterhouse installation integrating twelve pillars and rings to hold the animals, again paralleling the *Temple Scroll* description.

The fortification wall surrounding the city of the New Jerusalem text is the same height as that of the outer court in the *Temple Scroll*, but twice as wide. The wall is built of amber, sapphire and jacinth and overlaid with gold. The gates are named after the twelve sons of Jacob, with Levi in the place of honor: the central gate on the east side. The precise order of the gates accords with no other biblical or extrabiblical gated structure or listing of the tribes; the *Temple Scroll* with its named gates is closest (one small change).

Broadly conceived, the plan of the New Jerusalem text considers in varying detail three architectural complexes—if Chyutin is correct, moving from the innermost outward (as does the *Temple Scroll*, but the opposite of Ezekiel). The outermost complex is the enclosure wall, forming a rectangle. A relatively small square at the center of this rectangle represents the other two complexes combined. One complex is a residential area of 240 blocks shaped as squares. The other is a substantial temple environs having the temple and its courts at its center. The residential area stands to the north of the temple environs, such that this holy zone comprises roughly the southern third of the city. The temple with its three courts presumably formed a square. Thus the New Jerusalem text is the earliest known example of a square planning tradition for the ideal city that is attested by various Jewish and Jewish Christian sources, including Revelation.

2. Significance.

The New Jerusalem text evidences a strain of apocalyptic thinking in Second Temple Judaism that originated in priestly circles and looked forward to an ultimate restoration of Jerusalem and its temple in ideal form. This hope was a straightforward development from the words of Israel's prophets taken at face value. From this restored Jerusalem the Jews were to rule the sur-

rounding Gentile nations, who in turn would offer their worship and the finest of their goods to the God of Israel. This was a mundane as opposed to ultramundane-utopian or millennial concept. The book of Revelation developed this thinking in new directions but used older imagery, at least some deriving, it seems, from extrabiblical Jewish sources. The New Jerusalem text provides us a glimpse of architectural aspects of that older pool of imagery. The New Jerusalem text's tradition of an *angel guiding and measuring the ideal city, ultimately deriving from Ezekiel, also appears in Revelation.

For an understanding of the Judaism of NT times the New Jerusalem text offers more than meets the eye. For its city plan was intended as an expression of number *mysticism reminiscent of *Pythagorean ideas. If Chyutin is correct, the ideal dimensions of the human body lay behind its design, derived ultimately from a much older Egyptian tradition. The numbers seven and eleven are the most important in this mysticism. Moreover, the relation 11:7, which the New Jerusalem text adopts as the relation between the sides of the residential area, solves one of the two main geometrical problems of the ancient world: how to square a circle. The dimensions of the fortification wall of the New Jerusalem are 7:5, creating an oblong that is initially surprising in a square building tradition. But this oblong is deliberate, for it presents a solution to the second major geometric problem of the ancient world: the relation between the lengths of the diagonal and the side of any given square. The ratio 7:5 was the value accepted by *Plato in his *Republic* (546) and by rabbinic sages in the *Talmud. For the author of the New Jerusalem text, a man was, if not the measure of all things, at least that of the city of God.

NEW TESTAMENT VERSIONS, ANCIENT

There are numerous ancient versions or translations of the NT that were produced in a variety of languages. Some of these are quite early, dating possibly to the second century A.D. As a result many textual critics believe that these versions have a significant role to play in textual criticism of the NT by providing another form of external evidence to complement that provided by the Greek manuscripts.

1. The Use of the Versions
2. The Extant Versions
3. Conclusion

I. The Use of the Versions.

The versions or translations of the Greek NT into other languages offer significant evidence for textual critics. The earliest translations were made by Christian missionaries who prepared these versions to aid them in their attempts to propagate Christianity among those for whom Greek was not a first language. As Metzger notes (1992, 67), the Bible being translated into Syriac, Latin and Coptic from the second century on is very important for tracing the history of interpretation of the Bible. However, it is also important for the textual critic, because many of these

translations were made very early in the development of the textual tradition of Christianity. We can see the importance of these versions when we consider that the earliest complete or nearly complete codices of the Greek NT date to the fourth century A.D., by which time some of the versions were already well established. Thus, access to manuscripts that were sympathetically prepared in order to represent Christianity accurately, and made at such an early date, seem to offer much to the textual critic. Nevertheless, despite these possibilities, the versions tend to have been neglected in most textual criticism, from Westcott and Hort to the present. A survey of the major NT textual critics indicates that right up to the present the versions have often been only haphazardly or incompletely drawn upon in the critical apparatuses of published Greek NT texts (see Birdsall, 118).

The reasons for the apparent neglect of the versions can perhaps be accounted for in light of a number of difficulties connected with these documents. The first concerns the difficulties in translation itself. Although many people, especially in the ancient world, were able to communicate in several languages, this does not necessarily mean that they could prepare accurate and faithful translations. In fact, translation is a far more difficult task than is often realized, and for some versions it is questionable whether those who performed the translation had a grasp of Greek adequate enough to provide a faithful rendering into their receptor language.

The second difficulty relates to the demands of textual criticism. Even if one were confident that the rendering into the receptor language were able to capture the essence of the original text, in order for the versions to be useful for NT textual criticism, they must capture the original text in a fairly literalistic way. However, the lack of iconistic correlation between Greek and a number of the other languages into which it was rendered means that such a literalism is by definition virtually excluded. For example (see Metzger 1992, 67-68; Epp, 67), Greek has an article, but Latin does not. Greek distinguishes the aorist and perfect tense-forms, but Syriac and Latin do not. Greek also has a future form, but Gothic does not. Greek has three grammaticalized voices, including a passive voice, but Coptic does not have the passive voice form and uses a syntactical construction to render this concept. Greek has comparative and superlative forms for

adjectives, but Syriac has neither. Greek is an inflected language, with a full case system, but Syriac and Coptic do not have case endings. Greek has a relatively flexible word order depending on a variety of pragmatic features, but Coptic relies on a strict word order (since it does not have case endings). These kinds of variances between Greek and other languages mean that while it might be evident that a version contains a given pericope, and even a given sentence or phrase, it may not be possible to determine the exact Greek wording behind such a text.

A third mitigating factor for the use of the versions is that some of these translations were probably not made directly from the Greek NT but were derived from another translation. It is possible that the Armenian version is derived from the Syriac version and the Georgian from either Armenian or Syriac or both (Epp, 67). A fourth difficulty is the number of manuscripts available in the versions. The numbers exceed those of the Greek NT itself and present a whole host of text-critical questions to be answered in their own right before they can be used. These include questions of whether later versions were checked against Greek manuscripts, and which ones, and how much contamination occurred between manuscripts of the version concerned. For these reasons, due caution must be exercised when drawing upon the versions in textual criticism of the NT.

2. The Extant Versions.

There are a number of versions of the Greek NT that merit discussion. These will be categorized according to their relative importance. For each of these versions there is a wealth of historical discussion that has preceded our arrival at the *status questionis*. The current state of scholarship, as gleaned from recent research, will be cited below, with sources listed for further consultation.

2.1. Diatessaron. (Metzger 1977, 10-36; Petersen, 77-96 in Ehrman and Holmes; Birdsall, 127-30.) Although no longer extant and reconstructed through secondary witnesses (possibly apart from a Greek fragment found at Dura-Europos in 1933, considered by some as close as one can get to the earliest text), Tatian's *Diatessaron* has been the subject of much continued discussion. The consensus today is that Tatian composed this harmony of the Gospels in Syriac in about A.D. 172. Whereas it was once thought, more by default than anything else, that he had composed it in Rome, there is now reason for

thinking that he composed it in the East or on his way to the East after being expelled from the Roman church. Tatian's *Diatessaron*, according to the reconstructed evidence, has a number of readings that deviate from those in the canonical Gospels, which has prompted speculation on his sources. Some have suspected that he used a noncanonical Gospel, while others think that he may have had a canonical Gospel containing readings that deviated from those found in the major codices. In any event, the *Diatessaron* was highly influential in the East and possibly in the West. In the East it influenced, directly or indirectly, all of the later Syriac texts, as well as the Georgian and Arabic texts, and possibly the Armenian. In the West, the influence of the *Diatessaron* had to compete with other influences, such as Justin's harmony of the Gospels, which may account for Diatessaronic readings found in various traditions, such as the Latin, Middle Dutch, Old French, Old and Middle German, Middle English and Middle Italian.

2.2. Syriac. (Metzger 1977, 36-98; Metzger 1992, 68-71, 269-70; Birdsall, 123-32; Baarda, 97-112 in Ehrman and Holmes.) The Peshitta Syriac (fifth century A.D.) version is still considered the standard version of the Syriac-speaking church, but two earlier manuscripts reveal that there was an earlier Old Syriac text. The first manuscript is the Cureton manuscript of the British Library (Syr^c, fifth century A.D.), published in 1858, and the second is a palimpsest (overwritten) manuscript in St. Catherine's Monastery in Sinai, discovered by Mrs. Agnes Smith Lewis (Syr^a, fourth century) and published in 1910. These both contain portions of the Gospels, but there is nothing else of the Old Syriac for other portions of the NT, except through citations found in church fathers and reconstructions from other versions, such as Armenian.

The Peshitta version dates to about the fifth century and probably was (so Metzger) prepared to replace the divergent Old Syriac version. The Peshitta does not include 2 Peter, 2 and 3 John, Jude and Revelation. The Peshitta exists in more than 350 manuscripts, some dating to the fifth and sixth centuries. According to Metzger, it follows the Byzantine tradition in the Gospels and the Western tradition in Acts. In the sixth and seventh centuries, there were two revisions of the Peshitta made, the Philoxenian version and the Harelean. The relation between these two versions is complex. Some think that the

Philoxenia was prepared for Bishop Philoxenus of Mabbug and then was reissued by Thomas of Harkel, a later bishop of Mabbug, who added marginal notes gained from several Greek manuscripts. However, a competing theory is that Thomas thoroughly revised the earlier version. As Metzger says, the first theory contends that there was one version with variant readings, but the second theory contends that there are two versions. The difficulty is compounded by the fact that the Philoxenian version has very little manuscript evidence, apart from some marginalia in Harclean manuscripts.

Finally, there is the Palestinian Syriac version. This Aramaic version is known from a Gospel lectionary found primarily in three manuscripts from the eleventh and twelfth centuries, although there are also other fragmentary manuscripts of the rest of the NT. Some speculate that this version dates from the fifth century. According to Metzger, it appears to follow the Caesarean text type and is independent of the other Syriac versions.

2.3. Latin. (Metzger 1977, 285-374; Metzger 1992, 72-79, 270-72; Petzer, in Ehrman and Holmes, 113-30; Birdsall, 118-22). With over ten thousand extant manuscripts, the Latin tradition is the best attested of any of the versions. Although there has been some terminological confusion occasioned by the terms used to refer to the Latin versions, the two major distinctions are the Old Latin (OL), with its European and African traditions, and the Vulgate (Vg). There are over fifty manuscripts of the Old Latin version, dating from the fourth to the thirteen centuries (Epp, 68), although there is no extant complete Old Latin Bible. Some parts of the Greek NT appear to have been translated into Latin as early as the late second century, and Tertullian cites the NT in Latin in the third century. However, it is not until the mid-third century that there appears to be an identifiable text of the Latin Bible. The Old Latin tradition is divided into the African and European texts. Although called the African text because of association with Cyprian, who was bishop of Carthage, recent scholarship thinks that the text may have been produced in Italy and probably not Africa. According to Petzer, the African version is distinguished by distinct vocabulary and diction that indicate the age of the version. This African version was subjected to revision, which produced the European version. As with the Af-

rican, the origins of the European Old Latin version are unknown. It evidences great diversity in the tradition, with numerous divergent readings from manuscript to manuscript. This diversity led to other minor revisions of this tradition, often having only local influence. Despite this great diversity in this very widely disseminated tradition, as Petzer notes, it is thought that the Old Latin tradition in all its diversity sprang from a single translation from Greek into Latin. Nevertheless, even Jerome complained to Pope Damasus that there were as many versions as manuscripts, prompting the pope in A.D. 382 to commission Jerome to revise the Latin Bible (Vulgate). Whereas Jerome's Latin OT is a translation from Hebrew, the NT is a revision of the European version. Metzger notes that in his explanation of his principles of revision for the Gospels, Jerome indicates he used a relatively good Latin text, compared it with some Greek manuscripts, and revised in a conservative way, retaining the Latin text except where the meaning was distorted. Many scholars now doubt that Jerome was responsible for the entire NT, with someone else doing the Pauline and other letters. The goal of Jerome's work originally was to bring unity to the diverse textual tradition. This was not accomplished, however. The Old Latin version continued to be used and transmitted, and the Vulgate itself underwent a number of revisions, promoting further textual diversity. One instance noted by Petzer is the apparent use in Peregrinus's Spanish revision of an Old Latin manuscript to revise the Vulgate.

2.4. Coptic. (Metzger 1977, 99-152, with an essay by Plumley, 141-52 on problems in translation of Greek into Coptic; Metzger 1992, 79-81, 272-74; Wisse, 131-41 in Ehrman and Holmes; Birdsall, 132-35.) Coptic, though the latest form of the ancient Egyptian language, adopted the Greek alphabet in the first and second centuries, supplementing it with seven characters from the Demotic script. It was used in Egypt but in a context that had been heavily influenced by Greek language and culture, so that Coptic had many Greek loanwords (estimated at 15 percent of its total vocabulary). One might have thought that, as a result, the Coptic version would be the most unproblematic in terms of tracing its relationship with the Greek NT textual tradition. However, the opposite appears to be the case. Because of the deep penetration of Greek language and culture into Egypt, there were many

native Copts who used Greek instead, with the result that the earliest Coptic manuscripts did not appear until the fourth century. Because of the interpenetration of languages, there is also a difficulty in using the Coptic text to reconstruct the Greek text, because after the Coptic translation was completed, the Greek could continue to be in use, thus possibly distorting the Coptic version. There are also many linguistic differences (noted above, such as Coptic not being a case but a word-order language, etc.) that make iconic translation difficult.

Wisse notes four stages in the development of the Coptic tradition. The first is the pre-classical stage (A.D. 250-350), during which there were several uncoordinated efforts at producing a Coptic version, resulting in odd selections from the NT. Wisse thinks it is not appropriate to speak of a Coptic version at this point. The next stage is the classical Sahidic and Fayumic stage (A.D. 350-450). During this period the Coptic shifted from bilingual to monolingual Coptic members, along with the growth of the monastic movement. Thus, a Coptic translation was needed, and the most widely used dialect, Sahidic, was used. The Sahidic seems to follow the Alexandrian text, but with Western readings in the Gospels and Acts. Of the other versions in Coptic that took place during this period, the Fayumic was the most important, probably for the same reasons as the Sahidic, but for the relatively isolated Fayum area. The third period is the final Sahidic and Fayumic stage (A.D. 450-1000). With the Arab conquest of Egypt in the seventh century, the Coptic language began its decline, with Bohairic becoming the liturgical language of the Coptic church. The fourth period is the Bohairic version (after A.D. 800). The earliest evidence of a true Bohairic version is from the ninth century. Wisse attributes the shift from Greek to Bohairic as the language of the Coptic church as the reason for the origin and spread of the Bohairic version as an ecclesiastical version.

2.5. Other Versions. (Metzger 1977, 153-282, 375-460; Metzger 1992, 81-86, 274-76; Zuurmond, 142-56, Alexanian, 157-72, and Birdsall, 173-87, all in Ehrman and Holmes; Birdsall, 135-37.) Other versions worth noting are the Gothic version, which is well represented by the fifth- or sixth-century Codex Argenteus; the Armenian version, in which there are over 1200 manuscripts, second of the versions only to Latin, possibly dating from the fifth century, though possibly a rendering of the Syriac version;

the Georgian version, of which little is known, with its earliest manuscript from the ninth century; the Ethiopic version, which though it may have been directly translated from Greek relatively early (fourth century?) is only represented in late manuscripts; Church Slavonic, the result of the work of Saints Cyril and Methodius, to whom are accredited the Glagolitic and Cyrillic alphabets, and the translation in the ninth century into Old Bulgarian or Old Slavonic.

3. Conclusion.

There are two major issues one must confront in the study of the versions. First is how and in what ways they are useful for determining the text of the Greek NT and tracing its development. Second is the state of scholarship regarding the individual versions. Some of the versions have been studied more thoroughly than others, some of which have been virtually neglected. The wealth of evidence in Greek manuscripts mitigates the efforts that will or can be spent on some of these other versions as well.

ODES OF SOLOMON

The *Odes of Solomon* (*Odes*) are preserved in four manuscripts: two are in Syriac, but neither preserves the whole collection of *Odes*; one is in Greek, but it preserves only one ode; and one is in Coptic, but it consists of excerpts in the *Pistis Sophia*. There is in addition only one quotation; it is in Latin. Thus, only forty of the original forty-two *Odes* are extant. *Ode* 1 may be preserved in a Coptic citation in the *Pistis Sophia*, but all of *Ode* 2 and the beginning of *Ode* 3 are lost. The collection was perhaps attributed by the author, the Odist, to Solomon. It is characterized by the joy and love experienced at the appearance of the Beloved who is the Messiah (*Ode* 7:1-2). Since the *Odes* were discovered in a Syriac manuscript in 1909, scholars have published widely different assessments of them, ranging from a Jewish composition of the first century A.D. or earlier to a *gnostic text of the third century A.D. Thus, the *Odes* are hailed as a most important hymnbook, but scholars have not been able to decide if they are Jewish, Christian or gnostic. The debate is not easy to follow, since during the twentieth century each of these terms were defined, redefined and sometimes claimed as misleading for documents composed in the first two centuries.

1. Original Language
2. Date
3. Provenance
4. Relation to the Dead Sea Scrolls
5. Jewish, Christian, Gnostic?
6. Importance

1. Original Language.

The original language of the *Odes of Solomon* is perhaps Greek but most likely an early form of Aramaic-Syriac. The extant Greek seems to represent Semitisms that suggest an earlier manu-

script in Syriac or better Aramaic-Syriac; perhaps it was in the original language. The Syriac text abounds in paronomasia, assonance, rhythm and other linguistic features that indicate either the scribe was an unusually gifted translator or was composing these *Odes* in an early form of Aramaic-Syriac (see Aramaic Language).

2. Date.

After some confusion and speculations, those focusing their research on the *Odes* now agree that the collection was completed in the second century and most likely before A.D. 125. The Greek manuscript (Bodmer Papyrus XI), which dates from the third century, was copied from an earlier Greek manuscript that would most likely take us back into the second century A.D. That is evident since the scribe inadvertently omits, and later adds in the margins, a portion of the ode. If the original language is not Greek, then we must allow for some time for the *Odes* to be composed and then later translated into Greek. If the *Odes* antedate A.D. 125, then the question to be researched is the date of the odes in the collection. That is, how early does the collection go into the first century? It is clear that the hymns in a hymnbook were not written when they were collected into a hymnbook.

3. Provenance.

If the *Odes* were composed in Greek, they could have been written virtually anywhere, including Egypt, Syria or Palestine. If they were composed in Aramaic-Syriac, then they may have been composed in Palestine, perhaps in Galilee, or in western Syria. Scholars cannot discover their provenance. As with most works in the OT *pseudepigrapha, scholars find it practically impossible to discern the place in which a work was written. Long before the *Odes* were composed, the first world culture appeared: the Hel-

lenistic world. Commerce and the movement of ideas traveled from Parthia in the East to *Rome in the West. After the end of the first century B.C. piracy on the high seas was abolished and substantial roads still evident connected the East with the West. Hence, it is not clear where a document was composed. The situation applies not only to the documents in the OT pseudepigrapha but also to those in the NT.

4. Relation to the Dead Sea Scrolls.

The abundant links with the *Dead Sea Scrolls, especially those composed at *Qumran—the **Rule of the Community* (1QS) and the *Hodayot*, or **Thanksgiving Hymns* (1QH)—suggest some influence from the Qumranites or, better, *Essenes. The dualism seems to reflect that developed in 1QS 3-4, and the poetry is similar to that found in 1QH. J. Carmignac concluded that the Odist was once a member of the Qumran community. J. H. Charlesworth contends that the Odist may not have been a Qumranite but seems to have been an Essene—that is, he was once a member of the larger Essene community that lived on the fringes of towns or cities (as *Philo and *Josephus reported).

5. Jewish, Christian, Gnostic?

Some scholars claimed that the *Odes* were originally Jewish but later edited by a Christian (esp. Harnack) or Jewish-Christian as now extant. Some specialists were convinced the *Odes* should be declared to be gnostic (Gunkel and Rudolph). Most scholars contend that they are Christian (Charlesworth and Emerton). Strictly speaking, the labels "Jewish," "gnostic" and "Christian" seem to be ill suited to this collection of forty-two odes attributed to Solomon. Some passages are deeply Jewish, others apparently gnostic, and yet others patently influenced by Christian ideas and teachings. Thus the *Odes* seem to have been composed when Judaism, gnostic ideas [not Gnosticism of the second century] and Christian affirmation were mixing easily.

Note how "the Messiah" is mentioned in the *Odes*. The reference to the Messiah seems only symbolically Christian. In *Ode* 9:3 the Odist mentions "the Messiah" for the first time:

The word of the Lord and his desires,
The holy thought which he has thought concerning his Messiah.

The thought is fundamentally Jewish. The mention of "his Messiah"—which appears also in

Ode 41:3-4—is reminiscent of "his Messiah" of the **Psalms of Solomon*, which always subordinates the Messiah to the Lord (cf. *Pss. Sol.* 18:5) Yahweh. Who is "the Lord" in the ode? In antiquity some readers may have taken the noun to refer to Yahweh, others to Jesus. Thus it is not wise to label the Odist as a Christian without discussion and clarification.

In *Ode* 17:17 the noun *Messiah* appears in a doxology:

Glory to you, our Head, O Lord Messiah.
Not only a Jew, expecting the coming of the Messiah, but also a Christian could have recited this doxology. We should remember that the Jew who composed the *Psalms of Solomon* called the Messiah "the Lord Messiah" (*Pss. Sol.* 17:32; 18:7). If the *Odes* are to be labeled Christian, then we need to also stress that the Christianity of the *Odes* is articulated so that a Jew could join in chanting them. In contrast to the apocryphal NT compositions, which are frequently anti-Jewish, the *Odes* are not anti-Christian; they are sometimes anti-Gentile (*Ode* 10:4-6).

In *Ode* 24:1 the Odist mentions how
The dove fluttered over the head of our Lord Messiah,

Because he was her head.

Again, "Lord Messiah" is mentioned, but there is no clear reference to Jesus. This passage, however, is surely a poetic reflection on the baptism of Jesus, highlighted by the descent of the Spirit as a dove, which is described in the Gospels (Mt 3:16; Mk 1:10; Lk 3:22; Jn 1:32). Yet the passage is only obliquely Christian, and there seem to be gnostic overtones in the exegesis of the verse in the following verses. Note especially verses 9-12:

And all of them who were lacking perished,
Because they were not able to express the word so that they might remain.

And the Lord destroyed the thoughts,
Of all those who had not the truth with them.
For they were lacking in wisdom,

They who exalted themselves in their mind.
So they were rejected,

Because the truth was not with them.

We do not know much about the full extent of Christianity at the turn of the first to the second centuries. Some scholars may argue that we should expect a Christian to stress the salvation the Messiah brought to those on earth. Instead, the Odist stresses the punishment the Messiah brings to those who do not have the truth or wisdom. This idea seems strange in

light of the Christian confession that the Messiah brings the truth or is the truth. Thus these verses in *Ode 24* do seem quasi-gnostic or maybe naively gnostic—that is, if the *Ode* seems distant from Christian claims, it is also far from Gnosticism.

In *Ode 39:11-12* we find another allusion, again veiled, to another aspect of the charismatic dimension or pneumatic quality of Jesus' life, according to the Gospels:

On this side and on that the waves were lifted up,

But the footsteps of our Lord Messiah were standing firm.

And they are neither blotted out,

Nor destroyed. (*Ode 39:11-12*)

Obviously, readers who are familiar with the NT will see an allusion to the account of Jesus walking on the water, found in Matthew 14:22-33, Mark 6:45-52 and John 6:16-21 (but not in Luke). Again, the allusion is only oblique and the mention of the Messiah is as "Lord Messiah" (as in the *Pss. Sol.* 17:32; 18:7).

The Odist mentions the Messiah twice in his next to last ode, *Ode 41*:

We live in the Lord by his grace,
And life we receive by his Messiah.
For a great day has shined upon us,
And wonderful is he who has given to us of his glory. (*Ode 41:3-4*)

The Man who humbled himself,
But was raised because of his own righteousness.

The Son of the Most High appeared
In the perfection of his Father.
And light dawned from the Word
That was before time in him.

The Messiah in truth is one.
And he was known before the foundations of the world,

That he might give life to persons forever by the truth of his name. (*Ode 41:12-15*)

As in *Ode 9:3*, so here we hear about "his Messiah" (cf. *Pss. Sol.* 18:5). *Ode 41* is clearly the most Christian interpretation of the Messiah in the *Odes*—note the joyous tone at the appearance of the Messiah, the poetic vision of Jesus' crucifixion, the sonship christology, and the Word christology (similar to the protology of the prologue of the Gospel of John). Yet the name *Jesus* does not appear here or anywhere in the *Odes*. The thin veneer of Christian theology seems deliberate, and this seems so pro-Jewish in light of the

growing hostility to Jews in Matthew and John (that is, Gospels written just before or contemporaneous with the composition of the *Odes*). If one needs a label for the Odist, I would suggest a Jew, perhaps once an Essene, who was ecstatic about the appearance of God's Messiah, whose sacrifice and righteousness brought love and life to all who have knowledge (e.g., *Odes* 8:8-12; 9:7; 11:4; 12:3, etc.) and love the Lord (e.g., *Odes* 3:3-5; 5:1; 6:2; 8:20-22, etc.).

6. Importance.

The importance of the *Odes* seems evident. They mark a fork in the road in the development of Western culture. The Odist seems to stand at a three-way junction: some will proceed ahead to Judaism, others will move on to full-blown Gnosticism, and others will progress to orthodox Christianity. The beauty of the *Odes* seems to lie in their naive, spontaneous and joyous affirmation that the long-awaited Messiah has come to God's people, the Jews:

My joy is the Lord and my course is toward him,

This way of mine is beautiful.

For there is a Helper for me, the Lord.

He has generously shown himself to me in his simplicity,

Because his kindness has diminished his grandeur.

He became like me, that I might receive him.
In form he was considered like me, that I might put him on.

And I trembled not when I saw him.

Because he was gracious to me.

Like my nature he became, that I might understand him.

And like my form, that I might not turn away from him. (*Ode 7:2-6*)

OLD TESTAMENT VERSIONS, ANCIENT

The writers of the NT were convinced that God had revealed himself in earlier Scripture (sacred writing) and that important portions of this Scripture applied directly to themselves and their community. It is not surprising that the NT is filled with references, direct and otherwise, to what today's Christians call the OT and Jews, the *Hebrew Bible. In this article we explore the textual resources for Scripture available to NT writers. By the first century A.D., much if not all of the Hebrew Bible had been translated into Greek and/or Aramaic. The seeds of other foreign-language versions may also have been sown by this time. Additionally, although not technically versions, there were differing Hebrew texts as well. Such diversity, which was exegetical as well as textual, offered a rich array of possibilities for NT authors.

1. Greek Versions
2. Aramaic Versions
3. Syriac Versions
4. Latin Versions
5. Hebrew-Language Versions
6. Transmission of the New Testament

1. Greek Versions.

The earliest translation of the Hebrew Bible, the *Septuagint, dates to the first quarter of the third century B.C., when, in *Alexandria, Egypt, the Torah or Pentateuch was rendered into Greek, primarily, we may suppose, for the benefit of members of that city's large Jewish population who were no longer fluent in the Hebrew language. In subsequent decades the remainder of the Hebrew Bible was translated, although the circumstances and chronology of this process are still obscure. Eventually the term *Septuagint* (relating to the tradition that seventy or seventy-two Jewish elders prepared the Greek version of the Torah) was applied to the Greek translation of the entire OT as well as to materials originally composed in Greek.

The first translators of the Pentateuch adopted a fairly literal approach toward that text, although not without introducing some interpretive elements that would bridge the gap between ancient *Israel and *Hellenistic Egypt. A number of other translators also tended toward the literal representation of their Hebrew *Vorlage*, that is, the Hebrew text that lay before them. Fairly early, however, perhaps before the Hebrew Bible was completely translated for a first time, efforts were made to retranslate it or to revise earlier forms of the Greek version. Such efforts arose from the fact that the Septuagint, or more precisely the Old Greek, did not always conform to the Hebrew text coming into popular use especially in *Jerusalem. This occurred primarily when the Old Greek translators had access to a Hebrew different from the developing standard, later to be called the Masoretic Text, but also as a result of conscious efforts to update or modify the Hebrew for cultural, theological or other ideological reasons. In this way several alternative Greek versions of various OT books came into being.

It is not clear that even a careful ancient reader would have been able, even if he or she had wanted to, to distinguish between original Old Greek and later revisional or translational activity. Almost everything in Greek, so it appears, could be called Septuagint. In some cases, a later text all but replaced an earlier one (as is true for the book of Daniel) or usurped the place originally occupied by the Old Greek (as with Ecclesiastes). It cannot be proven to be so, but it is reasonable to maintain that the Greek text, whatever its precise origins, would be viewed by many

first-century Jews as equal in authority to the Hebrew. Such a view goes back at least as far as the second century B.C. **Epistle of Aristeus*, which describes the reception of the Greek Pentateuch at Alexandria in language unmistakably reminiscent of Moses' giving of the Ten Commandments at Sinai. The first-century A.D. Jewish philosopher *Philo was surely not alone in maintaining that those responsible for the Septuagint were more than mere translators—they had functioned as authentic and true *prophets.

It is not surprising, given this information, to learn that the Septuagint broadly defined is a constant source of OT citations in the NT. It would be natural for those writing in Greek to have recourse to Scripture in that language. A number of caveats or provisos must, however, be kept in mind when dealing with this important issue. (1) Most, if not all, NT authors were familiar with Hebrew. On their own initiative they could have prepared and incorporated Greek translations of Hebrew texts, both those like our standard Masoretic text and those in agreement with the differing *Vortage* of the Greek translators. (2) On occasion, NT authors cited from memory or modified an OT passage to fit into its context (literary, theological, and other) within the NT. (3) To speak of NT usage of the Septuagint can lead to the trap of envisioning the Septuagint as a monolithic composition, an artificial construction we have sought to abolish.

In short, no careful reader can fully comprehend the NT without knowledge and appreciation for the Greek version known as the Septuagint. In a world for which and in which the divinely inspired word conveyed life-defining meaning and instruction, it was frequently the word as conveyed in Greek that formed the essence of the NT and the later versions that derived from it.

2. Aramaic Versions.

Because *Aramaic was the dominant language in the Near East considerably before the advent of the Hellenistic period, it is logical to assume that some sort of translation of the Hebrew Bible into that language took place even earlier than the Septuagint. Nehemiah 8 portrays Ezra as reading from the Book of the Law (a form of our Pentateuch?) in front of Jerusalem's Water Gate, with others providing an explanation of the text for the benefit of the huge crowd gathered on this occasion. Many scholars under-

stand this event, which took place in the mid-fifth century B.C., to refer to the origins of the practice of supplementing with Aramaic translation or interpretation the reading of the Hebrew biblical text. Although Hebrew and Aramaic are closely related Semitic languages (far closer to each other than either is to Indo-European languages like Greek), knowledge of one does not guarantee understanding of the other.

Our textual evidence for Aramaic translations or interpretations of the Hebrew Bible, which are generally called targums (*targumim) from the Aramaic term for "translation," in pre-Christian centuries is scant. Tradition records that the Pentateuch or Torah was the first portion to be rendered in either oral or written form into Aramaic. The process apparently followed by those who produced the Septuagint, as well as the near universal prominence accorded to the Torah in almost all branches of Judaism, gives considerable support to this tradition. Some confirmation is provided by two small fragments of the Dead Sea Scrolls; found in Cave 4, they preserve a targum to the book of Leviticus. But the most extensive remains of early targumic texts, also found at *Qumran, are from the book of Job (*see* Targum of Job). Be that as it may, there are extant several important targumim to the Torah from both Palestine and Babylonia. The Former Prophets (roughly equivalent to the historical books in the Christian tradition) and the Latter Prophets are also well represented, as are the Writings (Ketubim, the third part into which the Hebrew Bible is divided in Jewish tradition).

In their present form all of these texts, to the extent they are datable, stem from periods well after the formation of the NT. But it is demonstrable that several of them contain material that derives from pre-Christian times and that would therefore have been available to writers of the NT. In addition to specific instances in which dependence on an Aramaic source seems likely on the part of such writers, there is the more general observation that Aramaic was bound to exert at least some influence in the world of the NT, where many, perhaps most, people were functionally bilingual or even trilingual, with Aramaic being the common tongue.

It is often asserted that the targumim exhibit a uniformly periphrastic style in rendering the Hebrew. This is not the case. Although it is difficult to go beyond speculation, it seems that

those responsible for the targumim rather carefully represented what appeared in their *Vorlage*, to which they added in widely varying degrees all manner of exegetical and other interpretive material. This accords well with an understanding of targumic origins as complementary to/accompanying the Hebrew text rather than as its replacement. It is also true that many targumim display circumlocutions for references to the divine, presumably reflecting (as do added materials) beliefs and practices contemporary with the targumim's creation or compilation.

3. Syriac Versions.

There is no sure evidence to support the view that other foreign-language versions of the Hebrew Bible were in circulation within the Jewish community during the time when the NT was being composed. Nonetheless, it is possible that some books had already received Jewish renderings from Hebrew to Syriac (Eastern Aramaic) by the end of the first century A.D. The process that produced the Peshitta, as the standard version of the Syriac became known in Eastern churches, was a long and varied one, similar in that respect to what appears to have occurred with the Septuagint (see Syriac Bible). But this takes us beyond the background period of the NT.

4. Latin Versions.

The same holds true for Latin translations, although their genesis seems to have been about a century later, that is, second century A.D., than the early Syriac renderings. Moreover, there are no Latin biblical texts that can be surely connected with Jewish communities. It is not, however, impossible that some Jews in Roman North Africa, where Latin texts first appear among Christians, attempted to produce biblical materials for their non-Semitic speaking/understanding communities.

5. Hebrew-Language Versions.

Writers of the NT had at their disposal not only texts and traditions circulating in Greek and one form or another of Aramaic, but also a number (possibly a considerable number) of texts in Hebrew. Although not technically versions, this material must be taken into account in any evaluation of OT citations or quotations in the NT. Recent discoveries have made it clear that textual diversity characterized the Bible for almost all Jews until the end of the first century A.D.

(with the destruction of the *temple and its leadership), when one textual tradition was selected by leading rabbis for each book or block of material and nearly all others were suppressed.

As Jews, NT writers might well have come into contact, for example, with the expansive Hebrew text of the *Torah that later became identified with the *Samaritans. And there is no reason to believe that the array of textual evidence uncovered at Qumran was restricted to that community and its adherents. Full recognition of this phenomenon makes it increasingly difficult to state unequivocally that a given NT quotation of the OT is Septuagintal, since it is possible that the NT writer had access to the same Hebrew *Vorlage* as the did Old Greek translators.

6. Transmission of the New Testament.

Ancient versions, including the two post-NT ones enumerated, play another role with respect to the NT. As the NT was copied over and over again in its Greek original, to say nothing of its numerous translations, some scribes would feel empowered or impelled to correct OT citations on the basis of the biblical text in circulation within the Christian community contemporary with them. To the extent that this text had been influenced at some point by the Septuagint, the targumim, the Peshitta or the Latin, the ancient versions would continue their influence on the NT far after its composition.

P

PAGAN SOURCES IN THE NEW TESTAMENT

Students of the Bible are understandably inclined, given the Jewish matrix of early Christianity, to read the NT wholly in terms of language and idiom found in the *Hebrew Bible and postbiblical *Judaism. These two domains thus constitute the primary, if not lone, ancient source with which the student is typically familiar. If, however, the NT is framed against the background of pan-Hellenic culture, it is reasonable to assume that its ideas, conventions, metaphors, language, literary genre, style and technique mirror that cultural milieu. An early Christian writer expressed the relationship of Christianity to the surrounding world in the following way: "Christians are distinguished from other men neither by country, nor by language, nor by customs. For nowhere do they inhabit cities of their own, nor do they make use of any exceptional dialect, nor do they practice a conspicuous mode of life" (*Diogn.* 5). The NT can be understood as "a book of peasants, fishermen, artisans, travellers by land and sea, fighters and martyrs, . . . [a book] in cosmopolitan Greek with marks of Semitic origin, . . . [a book] of the Imperial age, written at Antioch, Ephesus, Corinth, Rome" (Deissmann, 392).

Language cannot exist independently of culture; nor can culture exist apart from its expression through language. Appreciating the extent to which the NT mirrors the language and idiom of the Greco-Roman world is the thrust of the examination that follows. Probing this relationship will serve to illuminate the world of the NT and thus confirm the maxim that "five words in an original source are worth a thousand words in a secondary source" (Ferguson, xv). The early Christian community, which emerged and proliferated in Greco-Roman culture, expressed itself in the language

and thought mode of that cultural context.

1. Assessing Convergence Between Pagan and Early Christian Texts
2. Classifying Convergence Between Pagan and Early Christian Texts
3. Examples of Convergence Between Pagan and Early Christian Texts

1. Assessing Convergence Between Pagan and Early Christian Texts.

The inherent value of studying the NT against the background of extrabiblical tradition material is multifaceted. It can elucidate the meaning of concepts, themes, words and literary strategy. In addition it can shed light on the social, political and religious history of late antiquity, thereby aiding the exegetical and hermeneutical task.

Even though the reader is less likely to explore the NT writers' appropriation of pagan sources than their reliance on the OT or Judaistic texts, a word of caution is in order. Whether one is analyzing classical texts that circulated in the Hellenistic world, texts from the Hebrew Bible or *rabbinic parallels that surface in the NT, a common temptation accompanies the examination of ancient sources. Superficial but erroneous parallels that appear to illuminate the NT might be discovered by unconsciously importing contemporary cultural assumptions into the world of antiquity. Texts that are alien to the NT are to be understood in their own terms and not apart from their literary environment. The tendency of the modern reader may be to describe source and derivation "as if implying literary connection flowing in an inevitable or predetermined direction" (Sandmel, 1). The cautionary reminders of D. E. Aune and F. W. Danker need restatement: there exists the perennial danger that those whose primary interest is early Christian literature will "seize only

the more easily portable valuables found in random raids on ancient texts" (Aune 1988, ii); those who have explored the labyrinth of Greco-Roman studies will be familiar with the hazards that await the enthusiastic but unwary seeker (Danker, 7).

While few people have the luxury of being steeped in classical literature, investigating points of contact between Hellenistic and NT writers nevertheless promises rich returns for the study of the NT. Demonstrating the relevance and fruitfulness of comparing NT writings with diverse ancient sources serves as a reminder that all ancient texts, including sacred Scripture, are a reflection of the literary, social, religious and political culture to which they belong. It is this pluriform cultural backdrop that the writers of the NT share with their contemporaries. The greater our capacity to enter the world of the NT equipped with both knowledge and imagination, the more rewarding will be our study and appreciation of the NT as literature.

In seeking to persuade their contemporaries, the NT writers employ not only the language of that era but also the generic forms, stylistic features and literary conventions of their day. Inasmuch as apologetic and evangelistic motives underlay their writings, they adapt, accommodate and modify these tools as part of a literary arsenal in the service of a greater, overriding theological purpose.

Touchpoints between ancient literary genre and that of the NT include story, biography, epistolography, poetry, hymns, *apocalyptic and historiography. Among the literary-rhetorical conventions that are common to both fields are the household code, the diatribe, paraenesis, the chreia, the rhetorical question, the imaginary dialogue, the parable, riddle or proverb, inclusio, the concealment motif and tragedy. On a broader level, the student of the NT encounters an enormously wide range of vocabulary and imagery common to both pagan and early Christian texts. Metaphors of the slave market and institutional *slavery, the wealthy *benefactor, the military, agriculture, the Isthmian games, the *athlete, the *marriage relationship, commerce, circumcision, the *mystery cults, the priesthood, the *ruler cult, medicine and the Asclepius cult are but a few points of literary contact worthy of note.

Similarly, NT writers exploit for their own

purposes the rich semantic fields of words and word pictures—for example, *skandalon* ("scandal"), *logos* ("word," "mind," "reason"), *gnōsis* ("knowledge"), *diathēkē* ("covenant"), *autarkeia* ("self-sufficiency"), *stoicheia* ("elemental substances," "heavenly bodies"), *chorēgos* ("wealthy local benefactor"), *prōtokos* ("firstborn"), *ekklēsia* ("assembly"), *arrabōn* ("deposit," "engagement ring"), *leitourgia* ("public service"), *biastēs* ("violent person") *thriambos* ("military triumph")—that have the effect of translating for the reader the kaleidoscopic implications of the Christian gospel.

2. Classifying Convergence Between Pagan and Early Christian Texts.

Neat and clean distinctions between varieties of literary convergence elude the reader and resist being pressed too far. Such might be illustrated by the distinction between borrowing, adaptation and citation. Any finer distinctions that may be made serve to highlight the redactive interests of the NT writer and the new literary context in which the appropriation is found. General distinctions can be observed and classified according to the following categories, none of which are intended to be all-inclusive or exhaustive.

2.1. Common Idea or Concept. Pagan and NT texts may reflect common themes, concepts or traditions that have divergent theological assumptions. Examples include the broader ancient Near Eastern wisdom tradition (Gospels and James), the idea of dying and rising deities (Gospels and Pauline epistles), the notion of covenant or testament (Gospels, Pauline epistles and Hebrews), Greco-Roman attitudes toward *women (1 Cor 11; 1 Tim 2), and slave-master relationships (Pauline and Pastoral Epistles).

2.2. Common Convention. Elements, customs or conventions from common culture are frequently utilized by the writers of the NT because of their form and function. Among common literary-rhetorical conventions are the household code (Col 3:18–4:1; 1 Pet 2:11–3:12), catalogs of vice and virtue (e.g., Rom 1:29–31; Gal 5:19–21, 22–23; 2 Cor 6:6–8; Phil 4:8; 1 Tim 1:9–10; 4:12; 6:11; 2 Tim 2:22; 3:2–5; 2 Pet 1:5–7), the rhetoric of boasting (2 Cor 10–13), diatribe (e.g., Rom 2:1–16, 17–29; 1 Cor 15:19–33) and imaginary dialogue (e.g., Rom 11:19–21; Tit 1:13–17; Jas 2:1–9, 14–26).

Exemplary cultural customs deriving from

Greco-Roman society that provide the context for particular NT teaching include the eating of meat sold in the marketplace (1 Cor 8:1-13; Acts 15:20, 29) and the veiling of the head (1 Cor 11:2-16). Typically viewed by the modern reader as some form of obscure cultural oddity, the veiling of the head would have been known to Paul from his upbringing in the city of Tarsus, the capital seat of the province of Cilicia. A "university" city, Tarsus was markedly cosmopolitan. Due to its location, the city was a center of trade and commerce and served as a gateway to the East and West. Writing approximately A.D. 110, the *historian Dio Chrysostom, upon visiting the city, makes note of one particular aspect of Tarsian social etiquette. He lavishly praises the conspicuously modest dress of Tarsian women, who are always deeply veiled when they appear in public (Dio Chrysostom *Or.* 7.89). Doubtless this practice would have left a notable impression on Paul when he was confronted with matters of impropriety in the Christian community at Corinth (*see* Head Coverings).

2.3. Expansion. Concepts or terms may take on high visibility or central importance in the NT that possess marginal significance in broader culture. Notable examples are the Christian virtues of *agapē* and *pistis* (e.g., 1 Cor 13; Col 3:19; Eph 5:25), as well as humility and poverty of spirit (cf., e.g., the introductory chapters of *Aristotle's *Eth. Nic.* over against Mt 5:3-10).

2.4. Reminiscence. The reminiscence bears slight resemblance to another tradition, story, concept or occurrence from common culture. In the Lukan account of Paul's work in *Athens, the apostle to the Gentiles is portrayed as adapting himself in a fluid manner to the dialectical habits of Athenian life, where he "disputed . . . in the agora daily with any whom he encountered" (Acts 17:17). It was in the agora, Athens's marketplace, that Socrates argued and carried on discourse. Perhaps Luke (Acts 17:18: "Others said [of Paul], 'He seems to be a preacher of foreign deities'") has in mind the tradition regarding Socrates, recounted by Xenophon: "Socrates does wrongly, for he does not acknowledge the gods which the state acknowledges; rather, he introduces other new-fashioned gods" (Xenophon *Mem.* 1.1.1). Not only Socrates but also Anaxagoras (500-428 B.C.) and Protagoras (480-410 B.C.) were accused in Athens of introducing "foreign gods." A century prior to Paul, *Cicero had criticized the *Stoic philosopher Chrysippus

for embracing "unknown gods" (Cicero *Nat. Deor.* 1.15.39). Luke may well be attempting to present Paul in the great philosophic tradition.

Paul's dialectical habits are displayed in his epistle to the Romans as well. A faint resemblance to *Aristotle's discussion of the unwritten law of nature (Aristotle *Rhet.* 1.15.8) can be detected in Romans 2:12-15. Aristotle writes that "it is part of a better man to make use of and abide by the unwritten rather than the written law."

2.5. Parallel. A parallel shows direct correspondence to certain elements of a tradition, concept, form or function. Representative NT parallels to pagan tradition material include miracles stories (Gospels), walking on water (Gospels; cf. in Hesiod [*Astron.* 4.182] the grandson of Poseidon possessing the power to walk on the waves of the sea) and the Last Supper (Gospels) as contrasted with pagan cultic meals.

In form and function, the household codes of Colossians 3:18-4:1 and 1 Peter 2:11-3:12 mirror discussions on household management that appear in Aristotle (Aristotle *Pol.* 1 1253b 1-14; *Eth. Nic.* V 1134b 9-18; VIII 1160a-1161a), *Seneca (*Ep.* 94.1-3) and other Stoic writers. The NT writers' appropriation of the household management code would appear to have an apologetic function; it serves as part of a response to Greco-Roman critics who may be slandering the Christian community. This response entails attitudes toward authority and how to rightly order social relationships (*see* Family and Household).

2.6. Borrowing. NT writers may borrow a pagan tradition, concept or convention without any clarification or explanation for the reader and without transposing or adapting it to a different literary context. Background knowledge on the part of the audience would appear to be assumed. Numerous examples of borrowing in the NT can be cited. Religious superstition (*deisidaimonia*) is viewed positively in antiquity by some and negatively by others. Writing in the second century B.C., Polybius (*Hist.* 6.56) understands *deisidaimonia* as a contributing factor in the success and cohesion of the, *Roman Empire: "The quality in which the Roman commonwealth is the most distinctly superior is in my opinion the nature of their religious convictions. I believe that it is the very thing which among other peoples is an object of reproach. I mean superstition [*deisidaimonia*], which maintains the cohesion of the Roman state" (LCL).

Cicero observes that Roman citizens "in piety, in devotion to religion, . . . have excelled every race and every nation" (Cicero *De Div.* 9.19 [LCL]). Exploiting this positive sense of *deisidaimonia* in his opening remarks to the Council of the Areopagus, of which Cicero had been a member one hundred years earlier, the apostle Paul commends his audience: "Men of Athens, I perceive that in every respect you are very religious [*deisidaimonesterous*], for as I passed along and observed your objects of devotion" (Acts 17:22b-23a). Properly understood, this reference is a commendation, intended to build a bridge with the audience.

NT themes are dependent on borrowing as well. The message of the NT Apocalypse is framed against the backdrop of the imperial cult, which supplies the principal motif and ancillary imagery that are critical to John's presentation of the Lamb. Asian readers are painfully aware of the all-encompassing nature, majesty and irresistible character of the Roman imperium. In Titus 1:12, meant to illustrate the need for integrity in the life of an elder, the reader encounters a popular byword about Cretans ("Cretans are always liars, evil beasts, lazy gluttons"), attributed to the sixth-century B.C. *poet Epimenides of Crete and borrowed for the sake of comparison. Some NT scholars attribute the proverb to the third-century B.C. poet Callimachus, whose *Hymn to Zeus* contains only the expression "Cretans are always liars."

Perhaps most frequently borrowed by the writers of the NT are sundry images that derive from metropolitan life in the first century. Imagery abounds from Corinthian life as mirrored in Paul's letters to the church in Corinth. Polished bronze mirrors, the theater, the proconsul's judgment seat, agriculture, *architecture and building, the Isthmian Games and local *temples all add color to Pauline correspondence. Given the apostle's emphasis on unity and diversity among different members of Christ's body, it would be natural for him to conceive of unity and diversity in terms of the local Asclepius temple in Corinth. In 1 Corinthians 12:12-31 Paul mentions ears, eyes, hands and more honorable and less honorable parts of the body. It is plausible that he is alluding to the huge number of clay figurines of dismembered body parts scattered throughout the Asclepion that represented afflicted members cured by the deity. In Paul's day, these terra cotta offerings consisted of

heads, hands and feet, arms and legs, breasts and genitals, eyes and ears. Against the background of the Asclepion the Corinthian believers would have been reminded in the most vivid of terms of what they should not be—divided, dead, unconnected members of the body (Murphy-O'Connor, 161-67). The Asclepius cult provides the apostle with forceful imagery to underscore the need for Christian unity.

In his exhortations to the Philippian believers, Paul "forgets what lies behind" and "stretches forward, pressing on for the prize" (Phil 3:13-14). The apostle may well have in mind not the *athletic contests of the Greek games, as many commentators have assumed, rather the chariot racing of either *Rome or the Isthmian Games, which depict a much more perilous sport and supply graphic imagery to the audience in *Philippi, an intensely loyal Roman colony. Standing braced on a small platform over the chariot's wheels and axle, the charioteer bent forward with arms outstretched toward the horses' rumps, reins wrapped tightly—lethally—around the arms. The driver, in accordance with his skills, was fully at the mercy of his charging steeds. Should he fall or be pulled from the chariot, his fate was often an excruciating death. Any ill-timed glance behind at the competition, any distraction by the roaring crowd, could be fatal (cf. the graphic description of the chariot race in Ovid *Met.* 15). One thing and one thing alone remained in the eye of the driver: to reach the end of the race.

Not least, the *letters to the seven churches in the NT Apocalypse are replete with contemporary images meaningful to the audience. The initial letter, addressed to the Ephesian Christians, appropriates the image imprinted on *coins of Ephesus showing a date palm, sacred to Artemis and symbol of her life: "To the one overcoming I will give to eat from the tree of life" (Rev 2:7). Similarly, the concluding letter, addressed to Christians in Laodicea (Rev 3:14-22), borrows multiple images from the city's banking industry (3:17, 18), inadequate water source and hot springs (3:15, 16), garment industry (3:17, 18) and medical school (3:17, 18).

2.7. *Transposition.* Material or traditions might be transplanted by the NT writers into a new literary context with a different thematic emphasis. Examples of transposition abound in Paul's ministry. In his speech before the Areopagus Council (Acts 17:22-31), the apostle borrows

from literary sources meaningful to his audience. His qualification of the divine nature entails a strategy utilizing common ground sustained by partial citations from well-known poets. The statement "In him we live, move and have our being" (Acts 17:28a) expresses the Stoic belief in kinship with God. No pagan philosopher would reject this assertion, since any Stoic worth his salt readily conceded that the divine fills the universe, allowing a union to exist. This saying is generally attributed to the poet Epimenides of Crete (*Clem. Misc.* 1.14.59), with traces of resemblance in Callimachus.

The second literary allusion at the Areopagus, "We are his offspring," stems from the third-century B.C. Stoic philosopher Aratus, who hailed from Paul's native Cilicia. Written in honor of Zeus and titled *Phaenomena*, Aratus's poetry is an interpretation of constellations and weather signs. The poetic verse from which Paul borrows reads "In all things each of us needs Zeus, for we are also his offspring" (Aratus *Phaen.* 5), and it closely resembles the verse of Cleanthes, a contemporary of Aratus, whose *Hymn to Zeus* reads, "Unto you may all flesh speak, for we are your offspring." M. E. Boring and others note the generally widespread use of the works of Aratus in the pedagogy of late antiquity. Transposed by the apostle, the words "his offspring" are sure to resonate with any Stoic present in his audience.

2.8. Adaptation. Material that is adapted mirrors a less direct correspondence than does material that is borrowed. Adapted material is adjusted or modified to the theological and redemptive purposes of the NT writer. Writing the Christians at Colossae, Paul uses the metaphor of a commercial loan to interpret the redemptive work of Christ, wherein the debt that stood against us has been cancelled (Col 2:14); the apostle's wording implies that the *cheirographon*, the bond, has been publicly displayed as cancelled. A second image follows on the heels of the *cheirographon* (Col 2:15): that of the Roman victory procession, in which conquered military leaders and prisoners were paraded through the city behind the chariot of their victor, free for all to behold (see Roman Triumph). Tacitus (*Ann.* 8.36) describes one such triumphal procession occurring during the reign of Claudius, in the year 51, roughly a decade before the epistle to the Colossians is thought to have been penned (see also 2 Cor 2:14-16).

The worthy-hymn of Revelation 5 adapts language and imagery derived from the imperial cult (Aune 1983; Charles 1993). With the scroll of Revelation 5, which has been sealed in accordance with Roman stipulations and represents history from the divine standpoint, the absolute sovereignty of the one sitting on the throne and the Lamb is in focus. The vision of the Lamb mediated by John is heavily imbued with imperial overtones. The Lion-Lamb who is simultaneously savior and conqueror is revealed in terms that are poignantly familiar to a first-century audience. Extolling the Lamb in categories normally reserved for the Caesar—"might," "power," "strength," "glory," "honor," "riches," "wisdom" and "blessing"—John portrays Jesus in a manner that causes even the glories of the imperial throne to pale by contrast.

2.9. Imitation. The category of imitation implies a strong correspondence in literary-linguistic form or structure without any correspondence to substance or content. The dominant genre employed by NT writers, the epistle (twenty-one of twenty-seven NT documents), reflects the widespread use of epistolography in Greco-Roman culture, whether diplomatic letters, petitions, family letters or letters of introduction and recommendation. Epistolary treatises and letter essays are known to have steadily increased in later antiquity. The NT epistle, while comparable to the Greek letter in terms of fixed formal patterns, phraseology and function, tends to be somewhat longer than its pagan counterpart, a phenomenon attributable in large measure to its purpose (i.e., theological instruction).

In addition to imitating generic form, NT writers also employ standard literary-rhetorical conventions such as the rhetorical question, the diatribe or the imaginary dialogic. The latter two features figure prominently in Romans and James, where discussions of God's justice (Rom 2), an individual's justification (Rom 3), the function of the law (Rom 7) and the relationship of faith and works (Jas 2) proceed.

2.10. Allusion or Citation. This category consists of traditional material utilized by the NT writer in which the reference is clearly to a known text or source, verbatim or near-verbatim and the literary context is not significantly altered. The citation by Paul of Menander ("Bad company corrupts good character," 1 Cor 15:33b), who had introduced the New Comedy

in Athens, rings true regardless of culture, era or audience and certainly in Corinth (see *Fragments of Menander* [I.C.L.]). Similarly, 1 Timothy 6:10 is an echo of Bion, the first-century B.C. Greek poet, quoted in Stobaeus (*Anth.* 3.417): "Bion the Sophist said, 'The love of money is the matrix of all evils.'" This timeless maxim holds true cross-culturally, much the same way as that of Menander.

3. Examples of Convergence Between Pagan and Early Christian Texts.

3.1. Gospels. Mt 5:25-26 = Lk 12:57-59 (Synoptic reflections of duties and liability as spelled out by Roman law, on which see Wolff)

Mt 8:18-20 (*chreia*); 8:21-22 (*chreia*)

Mt 13:1-52 = Mk 4:1-34 = Lk 8:1-18 (cf. Hellenistic analogies to Jesus' parables but without the *eschatological element; see Aesop's fables, which remind the hearer of moral choices, the frequent necessity of personal sacrifice and the priority of wisdom in social dealings; see Ernst)

Mt 14:22-33 = Mk 6:45-52 = Jn 6:15-21 (cf. Hesiod *Astron.* 4.182, in which Orion, grandson of Poseidon, has power to walk on the waves of the sea as on dry ground)

Mt 15:19 = Mk 7:21-22 (catalog of vices)

Jn 1:1-4, 14 (cf. Stoic cosmology; Zeno in Diogenes Laertius *Vit.* 7.87; Cicero *De Fin. Bon. et Mal.* 3.6; Epictetus *Diss.* 1.20; Diogenes Laertius *Vit.* 7.88; Eusebius *Praep. Ev.* 15.15—by which the *logos*, Reason and Purpose, were understood to pervade the universe; a seed of this universal principle, *logos spermatikos*, was thought to dwell within humans)

Jn 4:43-44 (*chreia*)

Jn 19:12 (according to Philo *Leg. Gai.* 161, and Josephus *Ant.* 18.3.1-2, 5 §§55-62, 85-89, in A.D. 31 the emperor Tiberius deposed his turncoat, anti-Jewish confidant Sejanus, head of the Praetorian Guard, and ordered provincial *governors to treat the Jews with more respect; the Jews' success in crucifying Jesus required the assistance of Pilate, who, as political realities would have it, was a close confidant of Sejanus; hence the politically loaded reference to "a friend of Caesar")

3.2. Luke-Acts. Lk 3:10-11 (*chreia*)

Lk 9:49-50 (*chreia*)

Acts 14:11-13 (cf. Ovid *Met.* 8.610-700, a late first-century B.C. depiction of a similar appearance of the incognito god, with Jupiter and Mercury corresponding to Zeus and Hermes)

Acts 17:17-18 (cf. Xenophon *Mem.* 1.1.1, and

Cicero *Nat. Deor.* 1.15.39, regarding the charge of preaching "foreign" or "unknown" deities)

Acts 17:22 (cf. Polybius *Hist.* 6.56, and Cicero *De Div.* 9.19, regarding *deisidaimonia*, religious superstition/devotion, conceived as a positive Roman virtue)

Acts 17:28-29 (cf. Aratus *Phaen.* 5; Cleanthes *Hymn to Zeus*; Callimachus *Hymn to Zeus*; and Clement *Misc.* 1.14.59, regarding Paul's appropriation of Stoic philosopher-poets)

Acts 18:2 (cf. Suetonius *Claudius* 25, which reports on the Claudian edict resulting in the expulsion of Jews from Rome arising from disturbances instigated by one "Chrestus" [*impulsore Christo*])

3.3. Pauline Epistles. Rom 1:26-27 (cf. Plato *Leg.* 1.636; 8.841; *Phaed.* 251, on the analogous argument from the animal world and belief that same-sex relationships are contrary to nature)

Rom 1:29-31 (catalog of vices)

Rom 2:1-5, 17-24 (imaginary dialog)

Rom 2:12-15 (cf. Aristotle *Rhet.* 1.15.3-8, on a parallel understanding of the "unwritten law" of nature)

Rom 7:7-25 (imaginary dialog)

Rom 11:19-21 (imaginary dialog)

Rom 13:4 (cf. Tacitus *Hist.* 3.68, regarding the use of the technical term *ius gladii*, the "law of the sword," by which was conveyed magisterial sentence of punishment by death)

1 Cor 1:18—2:16 (discourse against the background of Greek notions of wisdom)

1 Cor 3:5-15 (building and agriculture metaphors)

1 Cor 3:16-17 (the temple metaphor)

1 Cor 4:15 (cf. descriptions of the *paidugōgos*, the guardian, guide or tutor, in Xenophon *Laced.* 3.1: "When a boy ceases to be child, and begins to be a lad, others release him from his moral tutor and his schoolmaster: he is then no longer under a ruler and is allowed to go his own way"; also Plato *Lys.* 208; Diogenes Laertius *Vit.* 3.92; and Philo *Leg. Gai.* 53)

1 Cor 5:10-11 (catalog of vices)

1 Cor 6:9-10 (catalog of vices)

1 Cor 6:19-20 (the temple metaphor)

1 Cor 7:22-23 (the slave metaphor)

1 Cor 8:1-13 (wordplay on *gnōsis*)

1 Cor 9:24-27 (the Isthmian Games metaphor)

1 Cor 11:2-16 (common convention: the veiling of the head)

1 Cor 12:12-27 (the body metaphor most

likely borrowed from the Asclepion)

1 Cor 15:32a (a possible rhetorical metaphor for ideological conflict; cf. Ign. *Rom.* 5.1)

1 Cor 15:32b (possible citation from Plutarch *Mor.* 1098)

1 Cor 15:33 (citation from the New Comedian Menander *Thais* [*Fragments of Menander*, I.C.L.])

1 Cor 15:35 (imaginary dialog)

2 Cor 1:22 (adaptation of the *arrabōn* ["deposit," "down payment," "wedding ring"] metaphor)

2 Cor 2:14-16 (the triumphal procession metaphor; cf. Tacitus *Ann.* 8.36)

2 Cor 6:6-8, 9-10 (catalogs of virtue and vice)

2 Cor 10—13 (the rhetoric of boasting; cf. Cicero *De Inv.* 1.16.22, and the textbook *Ad Herennium* 1.5.8, on specific ways to influence an audience with self-reference and self-praise respectively)

2 Cor 12:20-21 (catalogs of vice)

Gal 3:24 (the *paidagōgos* metaphor; see 1 Cor 4:15)

Gal 5:19-21, 22-23 (catalogs of vice and virtue)

Eph 1:14 (adaptation of the *arrabōn* metaphor; see 2 Cor 1:22)

Eph 2:19-22 (the citizenship and building metaphors)

Eph 4:31 (catalog of vices)

Eph 4:32 (catalog of virtues)

Eph 5:9 (catalog of virtues)

Eph 5:22-33 (the marriage metaphor)

Eph 6:11-17 (the soldier metaphor)

Phil 1:21 (cf. Aeschylus *Prom.* 747, and Sophocles *Antig.* 463-64, in which death is gain because of life filled with suffering)

Phil 2:17 (the libation metaphor; cf. Ign. *Rom.* 2.2, where cultic associations appear to be confirmed)

Phil 3:13-14 (cf. the description in Ovid *Met.* 15, of the driver in a chariot race; see 2.6 above)

Phil 4:8 (catalog of virtues)

Col 2:14 (the bond metaphor; see 2.8 above)

Col 2:15 (the triumph metaphor; see 2.8 above)

Col 3:12 (catalog of virtues)

Col 3:18—4:1 (household code)

1 Thess 2:6-7 (cf. Dio Chrysostom *Or.* 32, on Stoic and Cynic recourse to gentleness over harshness)

1 Thess 5:3 (the words "For when they are saying 'Peace and safety'" may be an allusion to the OT *prophets' denunciation of those who

say "peace when there is no peace" [e.g., Jer 6:14; Ezek 13:10]; however, it may be a reference to the peace and safety, i.e., an absence of war based on **Pax Romana*, popularly associated with Roman imperium)

1 Thess 5:8 (the soldier metaphor; see Eph 6:11-17)

2 Thess 2:5-12 (plausibly an allusion to the restraining influence of Roman imperium, which maintains social order; cf. Rom 13:1-7)

3.4. *Pastoral Epistles.* 1 Tim 6:10 (cf. Bion in Stobaeus *Anth.* 3.417 on *philargyrian*, the love of money as the "matrix of all evils")

1 Tim 6:11 (catalog of virtues)

1 Tim 6:12 (the soldier metaphor)

2 Tim 2:22 (catalog of virtues)

2 Tim 3:10-11 (catalog of virtues)

2 Tim 4:6 (the libation metaphor; see Phil 2:17)

Tit 1:12 (citation of Epimenides of Crete, echoes of which appear also in Callimachus's *Hymn to Zeus*)

Tit 1:13 (imaginary dialog)

Tit 3:3 (catalog of vices)

3.5. *General Epistles.* Jas 1:19-20, 22-25, 26; 3:1-12 (cf. Plutarch *The Education of Children*, which utilizes the "mirror of remembrance" as a teaching device in the context of moral *education, wherein, significantly, control of the tongue and control of one's anger are incorporated)

Jas 2:1-9 (imaginary dialog with rhetorical questions)

Jas 2:14-26 (imaginary dialog with rhetorical questions)

Jas 3:15, 17 (catalogs of vice and virtue)

1 Pet 2:1 (catalog of vices)

1 Pet 2:11—3:12 (household code)

1 Pet 3:8 (catalog of virtues)

1 Pet 4:3, 14 (catalogs of vice)

2 Pet 1:5-7 (catalog of virtues)

2 Pet 2:22 (cf. *Ahiq.* 8.18 [Syr.]; also Horace *Ep.* 1.2.26)

2 Pet 3:3-4 (cf. Diogenes Laertius *Vit.* 10.73 on the Epicurean cosmological argument against divine providence)

2 Pet 3:5-7 (Seneca *Nat. Quaest.* 3.29; Plutarch *Mor.* 1077; and Diogenes Laertius *Vit.* 7.134 on Stoic notions of cosmic conflagration)

Jude 13 (cf. the grotesque account in Hesiod *Theog.* 147-206, of Aphrodite's birth and parallels to Jude's "wild waves of the sea, casting up the foam of their shame")

3.6. *Revelation*. Rev 2:7—3:11 (cf. Ramsay 1904; Blaiklock 1951; and Hemer for background to the abundance of imagery drawn from cosmopolitan life in the cities of *Asia Minor)

Rev 4—5 (the imperial cult motif)

PANTHEON, GREEK AND ROMAN. See POLYTHEISM.

PAPYRI, PALESTINIAN

When one thinks of the papyri documents, one typically thinks of those found in Egypt. Whereas the vast majority of papyrus documents have come from Egypt, there have been a number of significant discoveries in Palestine as well. Their importance for understanding the background to the NT cannot be underestimated.

1. Greek Papyri Found in Palestine
2. Significant Manuscript Archives
3. Conclusion

1. Greek Papyri Found in Palestine.

A survey of the papyrological finds of the Roman Near East (Cotton, Cockle and Millar) shows that more than six hundred documentary texts have been discovered in that area. The documents cover a wide range, from a few letters or a simple list of names to lengthier contracts, and the like. The substances on which these documents are written covers the usual range of ephemeral materials, including papyrus, wood, leather and ostraka. The languages also cover Greek, Latin, Hebrew, a number of Aramaic dialects and a few scraps of others.

What is most significant to note, however, is that *Greek is the dominant language of these papyri. Of the roughly 600 documents, 400 of them are in Greek. Of the roughly 155 documents found in Judea/Syria Palestina from the first to the third centuries A.D., around 54 of these are in Greek. What becomes clear through this evidence is the widespread use of Greek throughout the Roman world of the time, including in the eastern part of the empire (see Roman East), of which Palestine was a part. To be sure, some of these documents were written by non-Jews who came from outside of the area (e.g., DJD 2 [= P.Mur.], no. 114, a document acknowledging a debt written by a Roman soldier), and some are written later than is germane for the period being investigated here.

Nevertheless, a number of others are of more direct relevance. For example, there are letters in Greek that have been found at Masada and are thought mostly to originate with Jews. One document from Masada in Greek may be from as early as A.D. 25-35 (Doc. Masada 740), but the vast majority are from the period of the First Jewish Revolt (A.D. 66-73; see Jewish Wars with

Rome). These include a letter from Judah to Abascantus regarding a delivery of lettuce (Doc. Masada 741), instructions regarding a delivery (Doc. Masada 248; cf. Doc. Masada 249) and several ledgers or lists of names (Doc. Masada 244, 247 [bilingual with Latin], 250, 251, 254), as well as a number of fragmentary texts. What is especially interesting to note is that at least one of these documents is an abecedaria (Doc. Masada 782-83).

There are also a number of legal and other financial texts written in Greek that involve Jews. Some of these are records of accounts and the like (e.g., DJD 2 [= P.Mur.], nos. 89-107, 118-21, 123-25). There is also possibly a school exercise in this group (DJD 2 [= P.Mur.], no. 122). One is a double deed contract dated to A.D. 124 for remarriage (a double deed contract involved the contract being written twice, with one copy sealed as a permanent record and the other exposed for reference) between two Jews, Elaios and Salome, who had been divorced and then reconciled, along with payment of a dowry (DJD 2 [= P.Mur.], no. 115). The original editors note that this rare practice of remarriage (see Marriage) is paralleled by a few other papyri from Egypt (e.g., BGU IV 1101 [13 B.C.]), and seems to reflect typically Greco-Roman practices even by Jews. (The editors refer here to syncretism, but this appears to be an instance of Jews living by the legal conventions of the Greco-Roman world, as might have been expected.) Similar is a fragmentary cancelled marriage double deed contract between two Jews, Aqabas and Selampious (?), dated to A.D. 130 (DJD 27 [= XHcv/Sc Gr.], no. 69, probably from the Nahal Hever Cave of Letters). This text also probably originated near Hebron. Another marriage contract also involves a woman named Salome, here marrying a man named Aurelius (DJD 2 [= P.Mur.], no. 116). The fragmentary text cannot be dated precisely but probably dates to the first half of the second century.

A last example is an example of legal proceedings between two Jewish women, Mariam and Salome, and a Roman soldier (DJD 2 [= P.Mur.], no. 113). The fragmentary nature of the text makes it uncertain regarding the nature of the litigation. Paleographically the text has been dated to the second half of the second century A.D.

2. Significant Manuscript Archives.

Among these significant findings in Palestine of

Greek papyrus letters and documents, there are two particular archives worth noting.

2.1. The Bar Kokhba Letters in Greek. One of the most significant papyrus finds in Palestine has been the *Hebrew, *Aramaic and especially Greek letters from the so-called Cave of Letters in Wadi Habra/Nahal Hever from the Bar Kokhba archive (designated P.Yadin). Among the fifteen letters found in the Bar Kokhba archive, two of the letters are in Greek. Arguably the most interesting of all of these documents is P. Yadin *52 (= 5/6Hev 52 and SB VIII 9843). The second Greek letter is P. Yadin *59 (= 5/6Hev 59 = SB VIII 9844). The first letter is from a certain Soumaios to Jonathe and Masabala. Although this letter has been edited numerous times, there are still difficulties with it. The issues can only be summarized here. One concerns whether the author of the letter, Soumaios, is Simon Ben Kosiba, the leader of the Second Jewish revolt (A.D. 132-35). A second factor is the reconstruction of line 13, which seems to indicate the reason for the letter's having been written in Greek: "I have written the letter in Greek because the [blank] was not found to write in Hebrew." Proposals to fill this gap have included the word *desire* (*horman*); a name, such as Herman (*herman*), although any name of suitable length could do; and the word *opportunity* (*ophormas*). A third and final issue to mention is the use of the opening *chairin* ("greeting") and the closing *errōso* ("farewell"), which are the standard Greek epistolary formulas.

Although the letter remains problematic, several conclusions can be drawn from it. The first is that the letter is clearly written in the form of the standard Hellenistic *letter, with the usual epistolary formulas (including greetings and closing). Second, the letter confirms the multilingual milieu of first- and second-century Palestine. We may still not know the reason the letter was written in Greek, but written in Greek it was. Third, this letter helps to dispute attempts to link language, ethnicity and region in a simplistic or unitary way (see Porter for recent discussion, including an edition and translation of the letter).

2.2. The Babatha Archive. The Babatha archive (see Lewis; Porter), arguably the most important archive for a discussion of this nature, comes from the so-called Cave of Letters in Wadi Habra/Nahal Hever (designated alternatively as P.Yadin or P.Babatha), to which further

similar texts have been added in recent publications (designated P. Se'elim, although they probably also originated in the Cave of Letters; DJD 27). The Babatha archive has texts in Nabatean, Palestinian Aramaic and Greek. A second, somewhat similar archive has recently been identified and published from the Cave of Letters, but it contains only six Greek documents (DJD 27 nos. 60-65, plus one in Aramaic, DJD 27 no. 12). The Babatha archive consists of thirty-six or thirty-seven items, twenty-six of which are Greek documents (nine of these with subscriptions and signatures in Aramaic and/or Nabatean), the rest being in Nabatean and Aramaic.

Babatha was a woman of some financial status, although not from the upper or noble class of Jewish residents of the province of Arabia. She was apparently married twice. Her first husband, Joshua, died, leaving her with an orphaned son placed in the care of guardians. She married a second time, to a man named Judah, who was already married to a woman named Miriam (polygamy was apparently more widespread among Jews during this time than many have recognized). When he died two years later, Babatha became embroiled in a number of legal battles, since her husband's second wife and family failed to provide her with the dowry to which she was legally entitled, including providing an adequate means of support for her son. As a result, she was sued and countersued, through a guardian or lord, as per Roman law.

Babatha's archive spans the years of A.D. 94 to 132, many articles being precisely dated, and some of the documents apparently overlap with the start of the Second Jewish revolt. Her residence was in Arabia, in the village of Maoza on the southeastern side of the Dead Sea. It appears that, when the revolution broke out, she, along with other villagers, may have gone to Engedi, which was a stronghold of the revolutionaries, probably fleeing to the caves when events turned against them. She apparently took her most important legal documents, spanning almost forty years of litigation and establishing her legal claim to a variety of properties, along with a number of valuable artifacts, for a time when she might need them to establish her claims. Whether she died in the Cave of Letters is not known.

Included in the archive are the following Greek documents, many of them double documents: a series of texts regarding her orphaned

son and his guardians (P.Yadin 27-30), including extracts of council minutes on the appointments of the guardians (P.Yadin 12), a petition to the Roman governor regarding the care of the son (P.Yadin 13), a summons of the guardians (P.Yadin 14) and a deposition (P.Yadin 15); several financial documents, including a census report that establishes her wealth (P.Yadin 16); two documents regarding her first husband's daughter (P.Yadin 18, 19), perhaps implying that the daughter was also in the cave; and a series of litigation-related documents concerning Babatha's inheritance when her second husband died (P.Yadin 20-26). A number of fragmentary texts also appear to be financial or administrative documents (P.Yadin 31-35). There was also a marriage contract for Salome Komaise (P.Yadin 37), a woman from the same village (her archive has now been published as well).

This archive indicates that Babatha was fully conversant with and involved in the Roman legal system of the time, even if she herself did not speak or write Greek (this cannot be determined). This social-political system apparently allowed for, or even encouraged, the suitable documents to be recorded, filed and preserved in Greek, no matter what other languages may also have been used. Since Arabia had only been a province since A.D. 106, by the time of direct Roman rule over the area there was already a distinct and clear understanding and use of the Roman legal system. Whereas indigenous Semitic languages continued to be used, these documents illustrate that the language of commerce, trade and governmental administration, including the courts, was Greek.

3. Conclusion.

Most NT interpreters associate Greek documentary papyri with the abundant finds in Egypt from the nineteenth and twentieth centuries. The result of this categorization has led some to think that the Egyptian situation is distinctly different from that of the eastern Mediterranean. The find of significant numbers and types of documentary papyri from the Roman East has confirmed that in many respects the Egyptian papyrological situation can probably stand as representative for the rest of the Mediterranean world of the time. The finds from the Roman East well illustrate that Greco-Roman influence was widespread, and deep in many areas. This factor must be taken into account when studying

and analyzing life in Palestine in the first century.

PATRONAGE

The patron-client relationship is the basic building block of Greco-Roman society. In an economy in which most of the resources are held by a fraction of the population, attaching oneself to a patron would be essential to ensure the well-being of oneself and one's family. In a culture in which prestige and *honor were highly valued, patrons would be willing to exchange material goods or other assistance for the honor, loyalty and service that a client would provide. This form of beneficence, which involved mutual loyalty and personal connection, stood alongside the practice of public *benefaction, in which giving brought recognition but did not involve the formation of patron-client bonds. The social institution of patronage becomes relevant for

reading the NT since, for example, the language of "grace" and "faith" are central terms in both.

1. Patron-Client Scripts
2. Patronage and Salvation in the New Testament
3. Patronage Within the New Community

1. Patron-Client Scripts.

1.1. Patrons, Brokers and Clients. *Seneca speaks of the giving and receiving of benefactions as "the practice that constitutes the chief bond of human society" (*Seneca Ben.* 1.4.2; cf. 5.11.5; 6.41.2). The Greco-Roman world was a patronal society, supported by an infrastructure of networks of favor and loyalty. These relationships were regarded as an essential element of security (*Seneca Ben.* 4.18.1). Such bonds existed between social equals who call each other friends (*see* Friendship) and for whom the dictum "friends possess all things in common" holds true. Partners in such relationships exchanged favors as needed, with neither party being in an inferior, dependent role (Saller).

Such bonds were also forged between social unequals, in which one party was clearly the patron of the other. These relationships might still employ the language of friendship out of sensitivity to the person in the inferior role (e.g., when Pilate is called "Caesar's friend," Jn 19:12). The system did not lend itself to precise evaluations of favors (*Seneca Ben.* 3.9.3), such that mutual commitment tended to be long-term. The point of the institution was not even exchange but ongoing exchange (*Seneca Ben.* 2.18.5). Mutual bonds of favor and the accompanying bonds of indebtedness provided the glue that maintained social cohesion (Saller). In such a society, gratitude becomes an essential virtue, and ingratitude the cardinal social and political sin (*Seneca Ben.* 7.31.1; 4.18.1).

In a world in which wealth and property were concentrated into the hands of a very small percentage of the population, the majority of people often found themselves in need of assistance in one form or another and therefore had to seek the patronage of someone who was better placed in the world than himself or herself. Patrons might be asked to provide money, grain, employment or land; the better connected persons could be sought out as patrons for the opportunities they would give for professional or social advancement (Stambaugh and Balch). One who received such a benefit became a cli-

ent to the patron, accepting the obligation to publicize the favor and his or her gratitude for it, thus contributing to the patron's reputation. The client also accepted the obligation of loyalty to a patron and could be called upon to perform services for the patron, thus contributing to the patron's power. The reception of a gift and the acceptance of the obligation of gratitude are inseparable (cf. *Seneca Ben.* 2.25.3).

A third figure in this network of patronage has been called the "broker" (Boissevain) or mediator. This mediator acts as a patron, but his or her primary gift to the client is access to a more suitable or powerful patron. This second patron will be a friend (in the technical sense) of the broker, a member of the broker's family or the broker's own patron. Brokerage was common and personal in the ancient world. The letters of *Pliny the Younger, *Cicero and Fronto are filled with these authors' attempts to connect a client with one of their friends or patrons (de Ste. Croix). Pliny's letters to Trajan, for example, document Pliny's attempts to gain imperial *beneficia* (benefits) for Pliny's own friends and clients. In *Epistles* 10.4, Pliny asks Trajan to grant a senatorial office to Voconius Romanus. He addresses Trajan clearly as a client addressing his patron and proceeds to ask a favor for Romanus. Pliny offers his own character as a guarantee of his client's character, and Trajan's assessment of the secondhand client is inseparable from his assessment of Pliny—Trajan's "favorable judgment" of Pliny (not Romanus) is the basis for Trajan's granting of this favor.

Such considerations in the patron-client exchange have an obvious corollary in the church's christology and soteriology, wherein God, the Patron, accepts Christ's clients (i.e., the Christians) on the basis of the mediator's merit. Within these webs of patronage, indebtedness remains within each patron-client (or friend-to-friend) relationship. Voconius Romanus will be indebted to Pliny as well as Trajan, and Pliny will be indebted further to Trajan. The broker, or mediator, at the same time incurs a debt and increases his own honor through the indebtedness of his or her client. Brokerage occurs also between friends and associates in private life. A familiar example appears in Paul's letter to Philemon, in which Paul approaches his friend Philemon on behalf of Paul's new client, Onesimus: "if you consider me your partner, welcome him as you would welcome me" (Philem 17).

1.2. Grace and Patronage. A term of central importance for discourse about patronage is *charis*, frequently translated "grace." Classical and Hellenistic Greek authors use this word primarily as an expression of the dynamics within the patron-client or friendship relationship. Within this social context, *charis* has three distinct meanings. First, it is the benefactor's favorable disposition toward the petitioner (Aristotle *Rhet.* 2.7.1-2). Second, the term can be used to refer to the gift or benefit conferred (as frequently in honorary inscriptions; see Danker; *TDNT* 9:375; cf. 2 Cor 8:19). The third meaning is the reciprocal of the first, namely, the response of the client, the necessary and appropriate return for favor shown. In this sense the term is best translated as "gratitude" (Demosthenes *De Cor.* 131; Rom 6:17; 7:25; Heb 12:28).

According to ancient ethicists on giving, patrons were to give without calculation of reward. That is, giving was to be in the interest of the recipient, not motivated by self-interest (Aristotle *Eth. Nic.* 1385a35-1385b3; Seneca *Ben.* 3.15.4). Patrons were, however, cautioned to select their beneficiaries well—people who had a reputation for honoring the giver with gratitude (Isocrates *Dem.* 29). Even Seneca, however, could exhort the patron to consider giving to a proven ingrate, thus imitating the generosity of the gods (Seneca *Ben.* 1.1.9; 4.26.1—4.28.1) and possibly arousing a grateful response with a second gift (Seneca *Ben.* 7.32).

A person who received "grace" (a patron's favor) knew also that "grace" (gratitude) must be returned (Aristotle *Eth. Nic.* 1169b12-15; Cicero *De Offic.* 1.47-48; Seneca *Ben.* 2.25.3). According to Seneca, the three Graces dance with their arms linked in an unbroken circle because a benefit "passing from hand to hand nevertheless returns to the giver; the beauty of the whole is destroyed if the course is anywhere broken" (Seneca *Ben.* 1.3.3-4). Gratitude was a sacred obligation, and the client who failed to show gratitude appropriately was considered base and impious (Dio Chrysostom *Or.* 31.37; Seneca *Ben.* 1.4.4). The greater the benefit bestowed, the greater should be the response of gratitude.

Gratitude in the ancient world involves the demonstration of respect for the benefactor (Aristotle *Eth. Nic.* 1169b1-5; Danker), acting in such a way as to enhance his or her honor and avoiding any course of action that would bring him or her into dishonor. A client who showed

disregard for a patron would exchange favor for wrath (Aristotle *Rhet.* 2.2.8). The client would return this gift of honor not only in his or her own demeanor and actions but also in public testimony to the benefactor (Seneca *Ben.* 2.22.1; 2.24.2). Gratitude also involves intense personal loyalty to the patron, even if that loyalty should lead one to lose one's place in one's homeland, one's physical well-being, one's wealth and one's reputation (Seneca *Ep. Mor.* 81.27; *Ben.* 4.20.2; 4.24.2). This is the level of gratitude and loyalty that the NT authors claim should be given to Jesus and, through him, to God. Finally, making a fair return for a gift meant giving something in exchange, whether another gift, or, as was more usual for clients, some appropriate acts of service (Seneca *Ben.* 2.35.1). "Grace," therefore, has specific meanings for the authors and readers of the NT, who are themselves part of a world in which patronage is a primary social bond.

1.3. Faith and Patronage. While not as dominant as *charis* in discussions of patronage, *pistis* (usually translated as "faith") and its related words also receive specific meanings within the context of the patron-client relationship (Danker). To place *pistis* in a patron is to trust him or her to be able and willing to provide what he or she has promised. It means to entrust one's cause or future to a patron (cf. 4 Macc 8:5-7), to give oneself over into his or her care. *Pistis* also represents the response of loyalty on the part of the client. Having received benefits from a patron, the client must demonstrate *pistis* ("loyalty") toward the patron (Latin *fides*, Seneca *Ben.* 3.14.2; cf. 4 Macc 16:18-22; 7:19; 15:24; 17:2-3). In this context, then, *pistis* speaks to the firmness, reliability and faithfulness of both parties in the patron-client relationship or the relationship of friends.

The opposite of *pistis* is *apistia*. This refers in one sense to "distrust" toward a patron or client. It would entail a negative evaluation of the character and reliability of the other person and could be insulting in the extreme. However, it was also recognized that one had to be prudent concerning the placement of trust (cf. Dio Chrysostom *Or.* 74, "Concerning Distrust"), just as a patron would need to weigh carefully whether or not to accept the responsibility of a client's or a friend's "trust" (Seneca *Ben.* 1.1.2; 4.8.2; Dio Chrysostom *Or.* 73). The term may also refer, in its second sense, to disloyalty or unfaithfulness,

as when clients fail to remain steadfast in their commitment to their patron or prove untrustworthy in their service.

2. Patronage and Salvation in the New Testament.

In order to give expression to supernatural or unseen realities, people in the ancient world used the language of everyday realities. The world beyond was understood by analogy to known quantities in the world at hand. The relationship between human and divine beings, cosmic inferiors and superiors as it were, was expressed in terms of the closest analogy in the world of social interaction, namely, patronage, so that we find talk of "patron deities" by individuals and groups (e.g., associations or cities; Saller). This holds true also for the way NT authors give expression to the relationship between the one God and the people of God. Even its use of *family imagery connects with the image of the patron who brings a host of clients into the household, although now with the special status of daughters and sons.

2.1. God as Patron. The Hebrew Scriptures speak of God as the Patron of *Israel who protects and provides for the people with whom God has formed this special relationship of favor. When Israel does not make the proper response (i.e., by failing to return honor, exclusive loyalty and service in the form of obedience to Torah), God responds by punishing them. What is remarkable is God's loyalty to the relationship: though that relationship is breached on one side, God never abandons the nation despite its ingratitude.

Both the Jewish and Greco-Roman backgrounds lead the early church to view God in a similar fashion. God is the Patron of all, since God has given to all the matchless gift of existence and sustenance (Rev 4:11). God will be the benefactor of all who seek and trust God's favor (Heb 11:6). God is celebrated as the Patron whose favor and benefits are sought in *prayer and whose favorable response to prayer is assured (Lk 1:13, 25, 28, 30; 11:9-13; Heb 4:14-16). The songs in the Lukan infancy narratives (Lk 1:46-55, 68-75) are primarily songs about God's patronage. They represent the response of gratitude to God for God's favor but also describe God as the patron of the weak and the poor, a portrait that ties closely with Luke's overall emphasis on caring for the poor. God is also cele-

brated as the Patron of Israel in both Mary's and Zechariah's songs, for God has brought the help that the people have needed so desperately.

God's favor is astonishing not in that God gives "freely" or "uncoerced": every benefactor, in theory at least, did this. Rather, it is in God's determination to bring benefit to those who have affronted God in the extreme. God goes far beyond the high-water mark of generosity set by Seneca, which was for virtuous people to consider even giving to the ungrateful (if they had resources to spare after benefiting the virtuous). To provide some modest assistance to those who had failed to be grateful in the past would be accounted a proof of great generosity, but God shows the supreme, fullest generosity (giving his most costly gift, the life of his Son) toward those who are not merely ungrateful but who have been actively hostile to God and God's desires. This is an outgrowth of God's determination to be "kind" even "toward the ungrateful [*acharistous*] and the wicked" (Lk 6:35).

A second distinctive aspect of God's favor is God's initiative in effecting reconciliation with those who have affronted God's honor. God does not wait for the offenders to make an overture or to offer some token acknowledging their own disgrace and shame in acting against God in the first place. Rather, God sets aside his anger in setting forth Jesus, providing an opportunity for people to come into favor and escape the consequences of having previously acted as enemies (hence the choice of "deliverance," *sōtēria*, as a dominant image for God's gift).

Not all, however, honor God as the Patron merits (cf. Rom 1:18-25; Rev 9:20-11; 14:9-11); even the special covenant people have brought God's name into dishonor on account of disloyalty and disobedience (Rom 2:17-24). Nevertheless, God remains faithful to those whom he has benefited in the past, continuing to offer favor, even the gift of adoption into God's household, for those who return to God in trust and gratitude. Those who persist in responding ungraciously to the divine Patron, however, will ultimately face wrath.

2.2. Jesus as Mediator. Jesus is presented likewise as a patron of the Christian community. The author of Hebrews, for example, presents Jesus as one who "lays hold of the descendants of Abraham" (Heb 2:16) and comes "to the aid of those who are tempted" (Heb 2:18). He supplies for the Christians what is wanting in their

own resources. Jesus' patronage may be more precisely defined, however, as brokerage. He is the mediator (Heb 8:6; 9:15; 12:24) who secures favor from God on behalf of those who have committed themselves to Jesus as client dependents. As God's Son, who is placed closest to the head of the household, Jesus' successful mediation is assured. Jesus' gift of access to God (Heb 4:14-16; cf. Heb 10:19-22) affords the community access to resources for endurance in faith in the present world so that they may receive the benefactions promised for the future, to be awarded before God's court at the end of the age. The believers may draw near to God and expect to "receive mercy and find favor"—that is, the disposition of God to give assistance—"for timely help" (Heb 4:16). Christians have been brought into God's household (Heb 3:6) through their clientage to the Son and are thus under God's protection and provision (deSilva 1999).

Other NT authors share the conviction that Jesus is the one who mediates the favor of God. One gains access to God only through the Son, and apart from Jesus there is none who can secure for us God's favor (Lk 9:48; 10:22; Jn 13:20; 14:6). Paul, in his formulation of "salvation by grace," uses this background to articulate the gospel. Being "saved by grace" points to God's uncoerced initiative in reaching out to form a people from all nations through God's anointed agent, Jesus. The role of "faith" in this process is Jesus' reliability as broker of God's favor and our trust in and loyalty toward Jesus. Paul reacts so strongly against requiring circumcision and observance of dietary laws for Gentile converts because this "displaces the favor of God" (Gal 2:21), evidenced in the benefaction of the Holy Spirit (Gal 3:1-5), which Jesus has gained for his faithful clients (Gal 2:21; 5:2-4). It casts doubt on Jesus' ability to secure God's favor by his own mediation and thus shows distrust toward Jesus.

2.3. The Obligation of Gratitude. The proper response toward a patron is gratitude: offering honor, loyalty, testimony and service to the patron. Reciprocity is such a part of this relationship that failure to return "grace" ("gratitude") for "grace" ("favor") results in a breach of the patron-client relationship. God's favor seeks a response of faithfulness (*pistis*) and service from God's clients. Paul speaks, for example, of the "obedience of faith" (Rom 1:5; 16:26) as the goal of his mission, calling forth the proper response of those who have benefited from God's gift.

The recipients of God's favor are called to offer up their whole selves to God's service, to do what is righteous in God's sight (Rom 6:1-14; 12:1). This response centers not only on honoring God but also on love, generosity and loyal service toward one's fellow believers (Gal 5:13-14; 6:2; Rom 13:9-10).

The author of Hebrews also calls Christians to remain firm in their trust and loyalty (Heb 10:35-39; 11), to take great care not to dishonor the Giver nor show contempt for the gift won at such cost to the Broker (Heb 10:26-31) through apostasy, to avoid "distrust" (Heb 3:19—4:2) and to "show gratitude" (Heb 12:28) to God by continuing to bear witness to their Benefactor in a hostile world (Heb 13:15) and by assisting one another by love and service, encouraging and supporting one another in the face of an unsupportive society (Heb 6:10; 13:1-3, 16). While God's favor remains free and uncoerced, the first-century hearer knows that to accept a gift meant accepting also the obligation to respond properly.

3. Patronage Within the New Community.

The Christian mission depended on the financial support of its richer converts. Individuals might provide some important service or financial aid for the community and so be remembered honorably (cf. Acts 4:34-36; 1 Cor 16:17-18; Phil 2:29-30; Philem 7). Household members within the movement would host the meetings of the group (Rom 16:23; 1 Cor 16:19; Philem 1) and provide *hospitality for missionaries and teachers (Philem 22; 3 Jn 5-8, 10b). Paul sought to develop relationships of reciprocity between churches, so that beneficence between Christians might span the Mediterranean. The collection of relief funds for the churches in Judea is presented as an act of reciprocity for the spiritual benefits that went out from those Judean churches to the Gentiles (Rom 15:25-29); similarly, Paul assures the Achaian churches that their contributions to other churches will establish ties of reciprocity for the future (2 Cor 8:13-14). Churches are to act as collectives of friends who share all things in common. Paul presents himself frequently as a partner or a friend who brings spiritual benefits and receives material support (Phil 1:5-7; 4:15; Philem 17), but he is also conscious of his role as patron or "father" (1 Cor 4:15) to the converts since he has provided the gift of access to Jesus that has saved

them from God's wrath (Philem 19).

Patronage within the church is not, however, meant to be pursued as a means of advancing one's own honor or power within the group. Acts of love and service toward one's fellow believers was the service enjoined upon the clients by the divine Patron. Giving to fellow believers is presented as a reflection of Christ's own act on our behalf (2 Cor 8:9-14), and Paul presents giving as itself a spiritual gift (Rom 12:8). Patrons within the church are acting as stewards of God's gifts (2 Cor 9:8-10). Christians are also urged to extend their own beneficence to the outside world (1 Thess 5:15; 1 Pet 2:14-16; Rom 13:3-4), not only as a reflection of the generosity of God but also as a sign that Christians, too, were honorable people who contributed to the welfare of all (Winter).

PAX ROMANA

The *Pax Romana* ("Roman peace") is a term used to designate Roman political rule in the Mediterranean world beginning with the reign of Caesar Augustus and lasting for the next two and a half centuries. The term, original to the Romans, reflects both imperial ideal and propaganda toward its own "citizens and its imperial holdings (see Roman Emperors; Roman Empire). "Pax" is also used of a Roman cult that was the religious support for the governing ideal. The pax is most closely associated with Caesar Augustus, and its benefits are enshrined in the traditional sobriquet for the period of Augustus's rule (27 B.C.-A.D. 14), "the Augustan Golden Age."

1. The Ideal of Pax Romana
2. The Pax Cult
3. The Pax Romana and New Testament Writings

1. The Ideal of Pax Romana.

1.1. Pax Romana and the Empire of Augustus.

A standard assessment of the achievements of Augustus is to be found in M. Grant's *History of Rome*. Grant writes that "by his reorganization . . . of the entire machinery of civilian government, he had proved himself one of the most gifted administrators the world has ever seen and the most influential single figure in the entire history of Rome. The gigantic work of reform that he carried out in every branch of Italian and provincial life not only transformed the decaying republic into a new regime with many centuries of existence ahead of it, but also created a durable efficient Roman peace. It was this *Pax Romana* or *Pax Augusta* that insured the survival and eventual transmission of the classical heritage, Greek and Roman alike, and made possible the diffusion of Christianity, of which the founder, Jesus, was born during this reign" (Grant, 256-58).

An appreciation of Augustus's achievement from a Roman perspective is gained by comparing the internal stability of Roman politics in the Augustan Age with the chaotic two decades of civil war and unrest in the years preceding his rule. In those years the Roman world was torn by "disruption and uncertainty, pillage and slaughter, near-anarchy and the ever-present threat of disintegration, years in which the rule of law was set aside and justice was merely the

interest of the stronger" (Stockton, 532). After Augustus's triumph, "the mass of the inhabitants of Italy and the Empire welcomed the peace and stability, material prosperity, and increased administrative efficiency which came with the Principate. . . . It was his achievement that . . . gave to the Roman world a freedom from war and the fear of war unmatched in its duration, and that freedom under the law, one of the ideals of classical Greece and republican Rome, was still an ideal of the Principate" (Stockton, 539).

In the centuries following Augustus, this ideal of imperial peace, best defined as security within the empire, remained intact even as the empire, which already dominated the lands surrounding the Mediterranean, grew. The influential English historian of the late eighteenth century, Edward Gibbon, made the famous and fantastic claim that in the second century A.D. (from Domitian's death in 96 to Commodus's accession in 176), when Rome spread its imperial wings over the largest territory, the world saw its greatest happiness and prosperity (*History of the Decline and Fall of the Roman Empire*, chap. 3).

Most important for understanding how the imperial peace was understood by Augustus are his own words published in the *Res Gestae* ("Works Accomplished"). This composition, written to be read in the senate after his death and intended for display at the entrance to his mausoleum in Rome, now survives in partial inscriptional evidence from the provinces. It testifies to the emperor's desire to be known and remembered as the architect of a government that created and sustained peace.

(paragraph 3) I undertook many wars, civil and foreign, by land and sea, in every part of the world; and as victor I pardoned all citizens who sought mercy. Foreign peoples who could safely be pardoned, I preferred to spare rather than put to the sword.

(paragraph 12) On my return to Rome from Spain and Gaul [19 B.C.] . . . , after the successful conclusion of affairs in those provinces, the Senate in honour of my return decreed that an altar to the Peace of Augustus should be consecrated on the Campus Martius, where it commanded magistrates and priests and the Vestal virgins to perform an annual sacrifice.

(paragraph 13) The temple of Janus Geminus, which our ancestors resolved should be closed whenever peace with victory was secured throughout the empire of the Roman people by land and sea, and which before my birth according to tradition has been closed only twice in all since the founding of Rome, was ordered by the Senate to be closed three times during my Principate.

(paragraph 25) I brought peace to the seas by freeing them from pirates.

(paragraph 26) I pacified the provinces of Gaul and Spain, and likewise Germany. . . . I pacified the Alps from the region next to the Adriatic sea to the Tuscan sea, without waging war unjustly on any people.

(paragraph 32) Numerous other peoples, with whom hitherto there had been no exchange of embassies or friendship with the Roman people, also enjoyed the good faith of the Roman people during my Principate. (translation by A. Lentini from Chisholm and Ferguson, 4-10)

1.2. The Pax Romana and Roman Writers: Ideal and Reality. The theme of peace, so apparent in Augustus's words, became conventional in Roman thought and writings concerning the empire. The popular ideal can be defined as "Rome's mission of peace in the world, with concord, prosperity, and ordered life" and led many Romans to see their empire as the great benefactor of the world (Syme, 2:529). The poet Virgil (70-19 B.C.) immortalized Augustus in his national epic, the *Aeneid*. He lauds Augustus as he who "is destined to bound his domain with the ocean"; in his reign "wars shall cease" (1.280-90) for he "shall rebuild the golden age" (6.793). Virgil calls his fellow Romans to the imperial ideal with these words: "Remember, Romans, your arts shall be: to rule the nations as their masters, to establish the law of peace, to show clemency to the conquered, and to conquer the proud" (6.851-853). Similarly, the patriotic historian Livy (59-17 B.C.) held that the Romans were "children of destiny, lords of creation, fated to prevail over all other peoples," and it was the will of heaven that Rome would be "the capital of the world" (*Livy Hist.* 1.4.1; Hadas, 230). With such a view of Rome's divine des-

tiny, it is perhaps not surprising that Livy could overlook or excuse Roman atrocities abroad (Syme, 2:529). Panegyrics to the Roman state and its rule of peace continue in the next centuries and are perhaps at their most fulsome in the encomium of Publius Aelius Aristides (A.D. 117-181), titled "To Rome."

Other Roman authors were more critical (see Wengst). Tacitus (c. A.D. 56-120), for example, gave Roman injustices no disguise. He is sympathetic with those for whom the Roman peace was experienced as brute force and calls the *Pax Romana* a thing to be feared (Tacitus *Ann.* 12.38) and speaks instead of *vis Romana* ("Roman power," Tacitus *Ann.* 3.60). In his first monograph, Tacitus speaks forthrightly in references to the Roman conquest of Caldonia thus: "the Romans call it empire, it is in fact murder and rapine and profit; they make a desolation and they call it peace" (*Agric.* 30.7; Syme 2:529). So also the *Dissertationes* (3.22.55) of *Epictetus (mid-first to second century) note the incongruities between the Roman ideal and reality.

In the Republican Era, prior to any official state doctrine of pax, the orator and historian Cato (234-149 B.C.) had criticized the oppression of Roman governors sent to rule Rhodes from then republican Rome. A century later, the orator *Cicero (106-43 B.C.) "declares how bitterly and how justly the empire of the Romans is detested in all the lands; the provinces make lamentation, free peoples complain, and kings are indignant" (Cicero *Verr.* 2.3.207, *De Imp. Cn. Pomp.* 65; Syme, 2:527-29). It is clear from events in Judea and from writers such as Tacitus that oppression by governors continued apace after Augustus. Thus, what could be hailed by Romans at home as an empire of strength and peace was characterized otherwise by many of its subjects, experiencing oppression and foreign taxation, both before and after Augustus (Shelton, 286, 241, 249, 287-88).

1.3. Pax Romana in the Provinces. In the provinces of the Roman Empire the *Pax Romana* was not uniformly experienced as tranquility in the best interest of indigenous peoples. In addition to the inevitable difficulties associated with rule by a foreign nation, the Roman system of provincial rule was prone to abuse (see Roman Administration). *Roman governors, usually called proconsuls, were placed over foreign territories, and their freedom to rule was almost unfettered. "Few bounds were set to the free exercise of

their *imperium* ["command"]. Unless the proconsul offended the wealthy magnates of his province, he was unlikely to be called to account at Rome for abuse of power when his proconsulship was over. He was under no compulsion to consult the Senate, which was his nominal director, and still less the *Princeps*. . . . The proconsul had the total power of administration, jurisdiction, defense—in so far as that arose—and the maintenance of public order" (Sherwin-White, 2).

This created a system of governing that was only as good as the character of the governor. During this period, *Judea, which had come under Roman dominion in 63 B.C., when not under Rome's client king (e.g., *Herod, 27-4 B.C.) was governed by a prefect (after Claudius, A.D. 41-54, called procurator). The prefects were of lesser Roman rank than the proconsuls and were commissioned to smaller territories or areas that required special treatment (Sherwin-White, 6). Formally under the emperor, "they had been given powers similar to those of the proconsuls" (Sherwin-White, 7; Josephus *J.W.* 2.8.1 §117; see Roman Governors of Palestine).

Thus in Judea, the experience of the eulogized Roman peace was mediated by the ruling client king or current prefect. *Flavius Josephus (A.D. 37-c. 100), the Jewish historian who wrote his history of the Jewish revolt (A.D. 66-70) under Roman *patronage, while blaming the war on a few Jewish renegades and tyrants (Josephus *J.W.* 1.1.4, 11 §§10-11, 27), does not fail to record the provocations to violence by Roman governors, client kings and even emperors (Josephus *J.W.* 2.3.1 §41; 2.6.2 §§84-92; 2.9.2 §§169-77; 2.10.1 §184; 2.12.7 §§245-46; 2.14.1-2 §§272-77). Of the Roman governors in Judea, E. Schürer writes that the good intentions of emperors (i.e., their ideals of peace and goodwill) "were always foiled by the ineptitude of the governors, and not infrequently also by gross miscarriages of justice on their part. These officials of lower rank were, like all petty rulers, above all conscious of their own arbitrary power, and through their infringements they in the end so aggravated the people that in wild despair they plunged into a war of self-annihilation" (Schürer, 1:356-57; cf. 455). In the next century, in the midst of what Gibbon declared to be the time when the human race was most happy, the second Jewish revolt, provoked by Roman interference in Jewish custom, was put down ruthlessly (A.D. 132-135), and *Jerusalem was

divested of its Jewish inhabitants.

2. The Pax Cult.

Not to be overlooked is the association of the institutions of religion with the imperial pax. *Pax Augusta*, often generalized as *Pax Romana*, was a cult centered around the goddess Pax, the personification of political security and peace. The *Res Gestae* of Augustus (paragraph 13; see 1.1. above) mentions the founding of her temple, the *Ara Pacis Augustae* ("Augustan Peace Altar"), which was voted by the senate in 13 B.C., finished in 9 B.C. and is today beautifully restored. Though Pax was not unknown prior to the principate (note the Greek goddess Eirene, "Peace"), the cult was given solid imperial standing by Augustus. From its name and the situation surrounding its establishment, it is clear that the cult was profoundly political and supportive of the Roman imperial view of its governance at home and abroad. Augustus and his successors for obvious political purposes fostered the worship of divine abstractions with which they associated themselves (Ferguson, 72). As to the monument itself, it is considered "one of the major products of Augustan public art" in Rome, and its reliefs are called the "highest achievement of Roman decorative art that is known to us" (Platner, 32; for a photograph, see Cornell and Matthews, 77).

But the cult, as evidence of its value in Roman culture, was not limited to the Julio-Claudian patronage. Another temple, also in Rome, the *Templum Pacis* ("Peace Temple"), was founded in A.D. 71 by Vespasian, the first of the Flavian emperors, after the battle for Jerusalem at the conclusion of the great revolt of the Jews against Roman rule (A.D. 68-70). Completed in 75, this temple housed a library, antique art and spoils of war brought by Vespasian from Jerusalem. According to *Pliny the Elder (A.D. 23-79) it was one of the most beautiful monuments in Rome (Pliny *Nat. Hist.* 36.102). Josephus, equally impressed with the shrine's magnificence, describes the erection of this temple of Peace (*temnos Eirēnēs*) as following upon the firm "establishment of the Roman empire" after the war with the Jews (Josephus *J.W.* 7.5.7 §158). Such a description is apt from the Roman perspective, for peace meant imperial security.

3. The Pax Romana and New Testament Writings.

The complex realities of the Roman empire—

with ideals of strength, peace, clemency, the freedom of movement, times of prosperity but also repression and both good and bad governors—form the political backdrop of the drama of the NT. The spread of Christianity was served by the security and stability of the empire. Yet NT writers do not discuss the Roman peace, either as a political policy or as a religious cult. Certain texts, however, are given added perspective when they are read against the background of the Roman ideal of peace. For example, those who suffered the brutal enforcement of the pax Romana must have heard with hope the words of Jesus contrasting his peace with that of the current world order: "Peace I impart to you, my peace I give to you; not like the world gives, I give to you" (Jn 14:27).

For those early Christians whose experience with Roman governance was mainly positive, the concept of *Pax Romana* would also have been positive. The apostle Paul was a native of the important city of Tarsus (Acts 21:39; 22:3), capital of the Roman province of Cilicia and a prominent city with a vibrant intellectual life and prosperous position in the empire (cf. Strabo *Geog.* 14.673-74). Furthermore, according to Acts, Paul's status as a citizen of the Roman Empire benefitted him greatly (Acts 22:27-29), and so we are not surprised by his generous opinion of the Roman authorities (cf. Rom 13:1-7, "for the rulers are not a threat to doing good but to doing bad. . . . It [the government] is God's servant for your own good."). In contrast, the author of Revelation is much more critical of the imperial rule (Rev 13).

But it cannot be assumed that Paul would have been always uncritical of Roman authority. Having experienced no small amount of suffering (cf. 2 Cor 11:23-33), Paul saw himself not ultimately as a citizen of Rome but of a different empire not of this world (Gal 4:26; Eph 2:19; Phil 2:20). Finally, Paul's familiar benediction, "The God of peace be with you" (Rom 15:33; 16:20; 1 Cor 14:33; 2 Cor 13:11; Phil 4:9; 1 Thess 5:23; 2 Thess 3:16), while not referring to the Roman goddess Pax, would have registered with those familiar with the Roman cult as a subtle claim that divine peace for the world is not found in the rule or cult of Rome but in the rule of the God proclaimed by Paul.

PERSECUTION

The experience of persecution, suffering for one's religious beliefs or behavior, is widely attested in the pages of the NT. Jews suffered because of their fidelity to their ancestral religion (Heb 11:35-38), Christians were persecuted by Jews (Acts 5:17-42; 6:8-8:1; 17:1-14; 18:12-17; 21:27-36; 2 Cor 11:24; Gal 5:11; 6:12; 1 Thess 2:14-16), and Christians suffered under Roman officials (Heb 10:32-35; 12:3-7; 1 Pet 1:6; 4:12-19; Rev 2:10; 6:9-11; 17:1-6; 20:4). Extrabiblical writings provide important background information about these persecutions.

1. Jewish Experience of Persecution
2. Jewish Persecution of Christians
3. Roman Persecution of Christians
4. Relevance for the Interpretation of the New Testament

1. Jewish Experience of Persecution.

1.1. Under Ptolemaic and Seleucid Rulers. Jewish people suffered persecution for their beliefs

under both *Ptolemaic and *Seleucid rulers in the second century B.C. Ptolemy Philopater, for example, having been prevented from entering the inner sanctuary of the Jerusalem *temple, returned to Egypt and set in motion plans to exterminate Jews in *Alexandria (3 Macc 3:1-4:15). The Seleucid ruler Antiochus IV Epiphanes is remembered as the most infamous persecutor of the Jews. He proscribed Jewish practices (1 Macc 1:44-49; 2 Macc 6:1, 10-11), plundered and desecrated the temple in Jerusalem (1 Macc 1:20-24, 50, 54-55; 2 Macc 6:2-6), banned the possession of the book of the covenant (1 Macc 1:56-57) and demanded that Jewish people offer sacrifice to pagan gods (2 Macc 6:7-8). All these things were enforced on threat of death (1 Macc 1:57, 60-61). His actions precipitated the Maccabean revolt (1 Macc 2:15-28; see *Revolutionary Movements, Jewish*).

Many Jews saw Antiochus as one bent upon destroying their ancestral religion. Antiochus was more concerned, initially at least, about uniting his kingdom with a common culture (1 Macc 1:41-43) and supplementing his finances by plundering the temple treasury (1 Macc 1:20-24). He probably did not understand the long struggle against Hellenization that had been going on among the Jews when he sought to impose Greek practices upon them (Frend). Antiochus shared the Greek view that Jews were by nature the enemies of all nations (3 Macc 7:4) and therefore deserved to be punished.

While some Jews capitulated to the process of Hellenization (1 Macc 2:23; 2 Macc 4:15), pious Jews chose to suffer and die rather than transgress the laws of their ancestors (1 Macc 2:29-38, 49-50; 2 Macc 6:18-31; 7:1-42). They believed that those who suffered would be rewarded in the age to come (2 Macc 7:9, 14, 20-29) and that the blood of their martyrs would become, by divine providence, an expiation for the sins of the nation (4 Macc 6:24-30; 17:17-22; 18:3-4).

1.2. Under the Romans. The Romans allowed the Jewish people a great deal of autonomy in local affairs as long as they did not rebel (Josephus *J. W.* 6.6.2 §§323-50). They supported Jewish rights when threatened by others, as in the case of the dispute between the Greek and Jewish communities in Alexandria in A.D. 113 and 115. On that occasion the emperor Trajan and his local prefect adopted severe attitudes toward the Greeks who initiated the conflict (Ze'ev). The Romans made concessions to accommodate

Jewish beliefs. Nevertheless, many educated Romans despised Jews because of their strange customs, proselytizing and exclusiveness ("haters of the human race") and because they showed no respect to Roman gods (Tacitus *Hist.* 5.8; Quintilian *Inst. Orat.* 3.7.21; Suetonius *Claudius* 25.4; Juvenal *Sat.* 14.96-104). Romans had cause to be wary of the Jews in the light of repeated Jewish attempts to throw off the Roman yoke (as they attempted to do in A.D. 66-73, 115-117 and 132-135).

Jewish attitudes toward the Romans varied considerably. There were those of the ruling elite who cooperated with the Romans and had sacrifices made to Israel's God for the well being of the emperor (Philo *Leg. Gai.* 357). But there were others who were prepared to resist the Romans to the last drop of blood. Jews like these brought about the cessation of the offerings for the emperor in the Jerusalem temple at the outbreak of the Jewish war of A.D. 66 to 73 (Josephus *J.W.* 2.17.2 §§409-410) and made a last stand against the Romans at Masada in A.D. 73, choosing to die rather than call Caesar Lord (Josephus *J.W.* 7.8.6 §§320-336; see Jewish Wars with Rome).

1.3. Jewish Persecution of Fellow Jews. Zealous Jews in the time of Antiochus IV put to death renegade Jews who broke God's laws in obedience to Antiochus's edicts (1 Macc 2:23-26). They believed they were following the godly example of Phinehas (Num 25:1-13). Zeal for the law also led them to forcibly circumcise Jews who had not yet been circumcised to prevent the desecration of the holy land (1 Macc 2:45-46). Zealous Jews, known as *sicari*, were responsible for the murder of other Jews who collaborated with the Romans (Josephus *J.W.* 2.13.3 §§254-57), sometimes after mock trials (Josephus *J.W.* 4.5.4 §§335-44).

2. Jewish Persecution of Christians.

Extrabiblical sources, like parts of the NT (Acts 24:5, 14; 28:22), indicate that in the early years other Jews regarded Jewish Christians as sectarians (*minim*). They continued to do this even after many Christians saw themselves as separate from the Jewish community (Setzer). Toward the end of the first century the Eighteen Benedictions used in synagogue prayers were reworded to include a curse upon Nazarenes and heretics.

In the early years of the Christian church, Jewish Christians saw themselves as part of Ju-

daism (Acts 2:46—3:1; 20:16; 21:17-26), though the relationship between Christians and Jews became increasingly tense as time went on. Christian attitudes toward the temple probably prevented them opposing Caligula's attempt to desecrate the temple in A.D. 39/40 and contributed to the ultimate separation of Judaism and Christianity (N. H. Taylor). If Eusebius's tradition concerning the flight of Jewish Christians from Jerusalem to Pella at the outbreak of the Jewish war of A.D. 66 to 73 (*Hist. Eccl.* 3.5.3) is true, this incident would have further contributed to the separation (see *DLNTD*, Pella, Flight to). The writings of the apostolic fathers contain polemic passages directed against Jews (*Diogn.* 3.1-5; 4.1-6; *Ign. Magn.* 8.1; 10.2-3; *Ign. Phil.* 6.1-2), but these may not accurately reflect living Judaism of the time but rather a symbolic Judaism constructed by the fathers to make points for their Christian readers (M. S. Taylor). The Jews are portrayed as partly responsible for the martyrdom of Polycarp (*Mart. Pol.* 12.2; 13.1).

3. Roman Persecution of Christians.

The Romans had a stronger dislike for Christians than they did for Jews. They regarded the Jews as an ancient people who had remained faithful to their ancestral traditions. The Christians by contrast had abandoned their ancestral religions to become followers of the Crucified. Christians refused to worship Roman gods, representing them as either nonexistent or demonic, and would not even acknowledge that others ought to do so (de Ste. Croix). To the Romans this was atheism (*Mart. Pol.* 3.2; Justin *Martyr Apol.* 16; *Apol.* II 3). It alienated the gods upon whom the well-being of the empire depended. However, Roman hostility was not a reaction to Christians' atheism only, but to a mélange of other Christian characteristics that also affronted them: their aggressive proselytizing, antipagan polemics and the disruption their beliefs produced in families (Walsh). Nevertheless, it was rarely Roman policy to seek out Christians for punishment. The process depended on accusations from the populace, not official inquisitions. No action was taken against Christians unless formal denunciations were made by people who were not only prepared to inform but also to conduct the prosecution and to risk the charge of malicious prosecution if their cases failed (de Ste. Croix). It is a sad fact that sometimes Jews were more zealous than

Roman officials in seeing Christians put to death (*Mart. Pol.* 13.2).

The correspondence between *Pliny (proconsul of Bithynia and Pöntus, A.D. 111-112) and Trajan (emperor, A.D. 98-117) reflects a policy of not seeking out Christians for punishment (*Pliny Ep.* 10.97.2). If Christians, once accused, refused to recant by offering sacrifices to Roman gods and the statue of the emperor, they were to be punished. Pliny's practice, endorsed by Trajan, was to execute those who refused to recant or, if they were Roman *citizens, to send them to *Rome for trial. This Pliny did, not because of the beliefs or practices of the Christians but because of their obstinate refusal to make offerings of wine and incense to Roman gods (*Pliny Ep.* 10.96.3-4).

The major sources outside the NT for information concerning Christian attitudes toward persecution by the Romans are Ignatius's *Letter to the Romans*, Polycarp's *Letter to the Philippians* and the *Martyrdom of Polycarp*. Ignatius speaks of his desire for martyrdom (*Ign. Rom.* 8.1) and urges his readers not to intervene to prevent it because he wants to become a "true disciple of Christ" (*Ign. Rom.* 4:1-3) and "attain to Jesus Christ" (*Ign. Rom.* 5.3; see *DLNTD*, Ignatius of Antioch). Polycarp wrote to the Philippians shortly after Ignatius's death. He speaks of suffering persecution as an imitation of the endurance of Christ (*Pol. Phil.* 8.2) and urges his readers to obey "the word of righteousness" by following the example of the martyrs (*Pol. Phil.* 9:1). The *Martyrdom of Polycarp* speaks of the blessedness and noble example of the martyrs (*Mart. Pol.* 2.1-2) and the privilege of being numbered among them (*Mart. Pol.* 14.1-2). By a single hour of worldly tortures they purchase everlasting life (*Mart. Pol.* 2.3). By their endurance they "overcome" unrighteous rulers, gain immortality and glorify God (*Mart. Pol.* 19.2). Christians choose martyrdom rather than deny their Lord (*Mart. Pol.* 9.3; see *DLNTD*, Polycarp of Smyrna). It is a choice between the Lord and Caesar. Martyrdom was a special gift from God (Osiek), but this did not mean that Christians should court martyrdom by voluntarily "giving themselves up," a practice that Marcus Aurelius (emperor, A.D. 161-180) later described as "stage heroics" (*Med.* 11.3). This practice was not commanded in the gospel (*Mart. Pol.* 14.1-2). While martyrdom in the first centuries was probably something that most Christians heard about, it

was something that most never witnessed (Osiek).

4. Relevance for the Interpretation of the New Testament.

Hebrews draws upon the example of the faithful Jews of the Maccabean period (Heb 11:35-38) to encourage Christians to stand firm in face of persecution (Heb 10:32-35). They must be prepared to give their lives (Heb 12:4) rather than deny their faith in Christ. The Maccabean belief that those who suffered because of their faithfulness to God would be rewarded in the age to come has counterparts in the NT (Mt 5:10-12; Mk 10:30; Acts 14:22; Rom 8:17b; 2 Thess 1:5; 2 Tim 3:12), as does the view that there is an absolute choice to be made between faithfulness to the Lord and compromise with idolatry (1 Cor 6:9; 2 Cor 6:16). This belief carries over into the postapostolic period, when Christians had to choose between the demands of Caesar and allegiance to Christ (*Mart. Pol.* 9.3).

Jewish persecution of Jesus (Jn 5:16), Stephen (Acts 6:13-14), Paul (Gal 5:11; 2 Cor 11:24, 26) and other Jewish Christians (Gal 6:12) because they were thought to speak against or neglect the law may be understood against the background of Jewish zeal for the law. Paul's failure to preach circumcision (Gal 5:11) made him the object of verbal attack by Jewish Christians, who themselves wanted to avoid persecution by unbelieving Jews (Gal 6:12). Jesus' and Paul's criticisms of some of their Jewish kinspeople (Mt 15:12-14; 23:1-36; Gal 4:22-26; 2 Thess 2:14-16), as well as Paul's negative comments about the value of Jewish pedigree and piety (Phil 3:2-11), probably provided some impetus for anti-Jewish writings by Gentile Christians in the postapostolic period (*Diogn.* 3.1-5; 4.1-6; *Ign. Magn.* 8.1; 10.2-3; *Ign. Phld.* 6.1-2).

The term "the word of righteousness" found in Hebrews 5:13 is best understood in the light of Polycarp's exhortation to obey "the word of righteousness" by following the example of the martyrs' endurance (*Pol. Phil.* 9.1). If this is the case, the readers of Hebrews were described as "unskilled in the word of righteousness" because they had forgotten how to endure persecution for the sake of Christ.

The persecutions reflected in 1 Peter are best understood to have been initiated by people who, for various reasons, had grudges against Christians and brought accusations against them to Roman governors, who then acted as

Pliny did. The nature of the persecutions reflected in Revelation might best be understood in the same way, as supporting evidence for the tradition that Domitian actively persecuted Christians is rather scant (Bruce).

PESHARIM

The term *peshar* (pl. *pesharim*) is a noun from the root *pšr*, a root that is attested in several Semitic languages and has the basic meaning of "loosen." The extended meaning of "interpret, interpretation" is found in Akkadian of the mid-second millennium B.C. The term only occurs in biblical Hebrew as a noun (Eccles 8:1; cf. Sir 38:14) but in biblical Aramaic both as a noun

(e.g., Dan 4:3; 5:15, 26) and as a verb (Dan 5:12, 16). In the book of Daniel it is consistently used of the "interpretation" of dreams, a contextual meaning that has also been clearly recognized in Akkadian texts more than a thousand years earlier. The term is also used of dream interpretation in 4QEnGiants^b frags. 7-8 ii 14, 23 and iii 10. In the Bible the Hebrew cognate root *pšr* occurs only in relation to the "interpretation" of dreams in Genesis 40-41. Peshar is "interpretation," and more specifically "dream interpretation." In the sectarian compositions from *Qumran the term *peshar* is used almost exclusively in technical formulas that introduce the interpretation of biblical texts; the exception is 4Q180 frag. 1 1, 7 where the term introduces whole units of summarized interpretation. By extension the term has come to be used in modern scholarship of a literary genre of biblical commentary and the exegetical techniques used in it. The closer definition and significance of such a genre is the subject of the rest of this article.

1. Definition of the Genre
2. Kinds of Peshar
3. The New Testament

1. Definition of the Genre.

Among the first seven scrolls to come to light from Cave 1 in 1947, one was found to contain a commentary on the first two chapters of the prophet Habakkuk (1QpHab; see Habakkuk Commentary). The commentary had a distinctive form: each small section (lemma) of text was followed by a few sentences of commentary introduced formulaically, in each case by a phrase including the word *peshar*. The significant occurrence of the term used in a technical way gave its name to this type of commentary. Other examples were found, also using similar formulas. As scholars sought to define this new genre more closely, several different facets of this kind of commentary were described. The discussion about *pšr* has been controlled by observations made about 1QpHab, but as M. P. Horgan neatly points out (part 2) the diversity and range of all the evidence needs to be carefully described and assessed.

Several factors contribute to the definition of the genre.

1.1. Form and Structure. The most obvious feature of 1QpHab is its structural form (see Brooke 1979-81). The manuscript of 1QpHab is

comparatively well preserved, so it is easy to see that the whole of Habakkuk 1—2 is broken into small units and presented in its biblical sequence with each unit of prophetic text interleaved with interpretation. After the explicit quotation of the prophetic text each segment of interpretation is introduced by a formula such as "its interpretation concerns" (*pšrw 'l*) or "the interpretation of the word is" (*pšr hdb*). In some sections of interpretation part of the scriptural quotation is repeated and then precise interpretation given, again usually introduced by a formula that includes the word *pšer*, such as "its interpretation is that" (*pšrw 'šr*). Though this formal arrangement seems strict, there are many minor variations, even in 1QpHab, which appears to be one of the most consistently structured of the pesharim. For example, sometimes a pronoun rather than a *pšer* formula will introduce a subsection of interpretation.

The variations to this formal arrangement are most obvious in compositions, such as 4Q174 and 11QMelchizedek (see Florilegium; Melchizedek, Traditions of), where the biblical quotations are selected thematically and the *pšer* formulae are used more intermittently.

1.2. Content. Apart from form, content has been the most widely discussed criterion for defining *pšer*. Such discussions have considered both the biblical text being interpreted and the content of the interpretations themselves. Working with 1QpHab and some fragmentary pesharim from Cave 1 (1QpMic, 1QpZeph, 1QpPs) as well as the more extensive range of examples found in Cave 4 (4QpIsa^{a-c}, 4QpHos^{a-b}, 4QpNah, 4QpZeph and 4QpPs^{a-d}), it has often been noted that all the biblical texts that receive interpretation in the form of *pšer* are from the prophets (including the Psalms considered as prophecy; cf. 11QPs^a 27:11; Acts 2:30). Furthermore, in the pesharim these prophetic texts are treated as being fully understood only by the Qumran commentator. As with those who dream (Finkel), so the prophets are portrayed as not knowing the significance of the *mysteries that they spoke or saw; only the Qumran interpreter can make this known.

More closely defined, it is possible to see that *pšer* is usually given only to what were considered to be partially or completely unfulfilled prophecies, blessings and curses; an oft-cited exception is 4Q159 frag. 5 1, which seems to offer an interpretation of Leviticus 16:1, but the con-

text is not large enough for detailed comment. Part of the exhortation in the so-called halakic letter (4QMMT; see *Miqṣat Ma'asey haTorah*) is significant in this overall respect: "And we recognize that some of the blessings and curses which are written in the book of Moses have been fulfilled" (4Q398 frags. 11-13 3-4). The sectarian authors of this letter claim that they can discern between those items that have already been fulfilled and those that are yet to happen.

As for the interpretation itself, this is uniformly concerned with the circumstances of the interpreter's present or immediate future, both of which are conceived as belonging to the *eschatological age. Thus the prophets, including *Moses, and the psalmists are understood as predictively uttering mysteries concerning the end times, rather than as speaking to the Israelites of their own generations.

1.3. Character. Other interpreters (Betz) have stressed the distinctive way in which interpretation in the form of *pšer* assumes a particular view of revelation. Not only is the original prophecy inspired by God, but also the interpretation could be considered to be equally inspired. Such an understanding was encouraged by taking at face value the claims made by the author of the *Habakkuk Commentary* on behalf of the Teacher of Righteousness. He is the one "to whom God made known all the mysteries of the words of his servants the prophets" (1QpHab 7:4-5). This aspect of defining the genre minimizes the role of the careful exegete and emphasizes the experiential side of the interpretative process. Like those who originally received the oracles or visions, the sectarian interpreter is given the interpretation directly by God. In this way the interpretation can claim to have as great an authority as the text that is interpreted. This fact may lie behind the use of small sections of *pšer*-like interpretation in some of the other sectarian compositions. Most notably in the *Damascus Document various exegetical units, such as the so-called Amos—Numbers *midrash (CD 7:14—8:3), are woven into the composition's comments on the movement's history, its particular interpretations of the law and its eschatological hopes.

1.4. Interpreter. Through noting that the interpretation might be as inspired as the prophetic text, attention in defining the genre of *pšer* has sometimes been given to the identification of the interpreter. Some scholars have

supposed that all the pesharim were authored by the Teacher of Righteousness, since the *Habakkuk Commentary* (1QpHab 7:3-5) claims that it was to him, albeit in the third person, that God made known all the mysteries of his servants the prophets. Since it was sometimes wrongly believed that only one copy of any of the pesharim has survived, this view was often accompanied by the explicit assumption that the manuscripts of the pesharim are all autographs, as if dictated by the Teacher. This is highly unlikely. Not only are there several different copies of pesharim for Isaiah, but also manuscripts such as 1QpHab preserve marginal markings that seem to reflect some aspect of the copying process. Nevertheless, the place of the interpreter should not be underestimated as a significant part of the definition of the genre. Only a group of teachers learned in the Scriptures and in the techniques of how their secrets could be unlocked could have produced such intricate interpretations.

1.5. Interpretative Techniques. Those who do not want to identify the pesharim too closely with just one inspired interpreter often tend to stress the exegetical techniques that are apparent in many places in these works (Brownlee). Thus rather than thinking that an inspired teacher discloses meaning after flashes of divine insight, the sectarian commentator may be more appropriately described as an expert in unlocking ancient texts by applying appropriate methods. Several of these methods anticipate those found in the later *rabbinic midrashim and strongly suggest that the increasing acceptance in rabbinic circles of various hermeneutical methods was the result of the rabbis recognizing what many Jews were already practicing, rather than being their own innovations (Brooke 1985, 8-17).

A few examples of these exegetical techniques can be cited. In 4Q174, where the Psalms receive interpretation introduced by a pesher formula, the interpretation contains the subsidiary quotation of other scriptural passages such as Isaiah 8:11 and Ezekiel 37:23. These quotations are not cited arbitrarily but on the basis of key catchwords or phrases that can be directly compared with the Psalms text that is being interpreted; this is akin to the rabbinic technique of *gēzēra* = *sāwa* = (analogy). The use of a quotation of Zechariah in the commentary on Isaiah 14:26-27 in 4QpIsa^c frags. 8-10 lines 4-9 is another example of the same phenomenon. In 1QpHab there are several examples of parono-

masia, playing on the polyvalence of some Hebrew roots: for example, the Hebrew *msl* of Habakkuk 2:6, where it means "proverb," is taken in the commentary to mean "rule" (1QpHab 8:9), which the same three letters can signify. Or there seem to be instances of the rearrangement of the letters of a word (anagram): so, for example, the consonants *hykl* ("temple," Hab 2:20) are rearranged in the interpretation as *yklh* ("he will destroy," 1QpHab 13:4), suggesting that when God is rightly acknowledged as present in the *temple, then idolaters are put to destruction. This method is akin to the later rabbinic technique of *hilluf*. The rabbinic approach of '*al tiqrē*' (don't read this, but read that) is anticipated in the pesharim. For example, in 1QpHab 4:9 the commentator reads *wyšm*, "he will make waste," instead of *w'šm*, "and guilt," of Habakkuk 1:11, but in the interpretation both words are understood, as there is description of the "house of guilt" (*'šm*) and "laying waste" (*lšhyt*).

The widespread use of such exegetical techniques, together with the formal similarities between Qumran pesher and rabbinic descriptions of dream interpretation (Finkel), has caused several scholars to highlight the similarities between the Qumran compositions and later rabbinic texts. The nontechnical use of the label *midrash* in 4Q174 frags. 1-3 i 14 has also encouraged the view that pesher should be viewed as an early part of a trajectory of Jewish biblical interpretation that runs through to the medieval period and beyond. Caution should be exercised, however, before anachronistic terminology is used to describe this distinctive Qumran phenomenon.

2. Kinds of Pesher.

Having considered these various grounds for appreciating pesher as a literary genre, many scholars have agreed with J. Carmignac (Dimant) that the phenomenon at Qumran is visible in two kinds. The first is the continuous interpretation of a single prophetic text. Here the influence of 1QpHab is obvious: it is a continuous interpretation of the whole of Habakkuk 1-2. Other more fragmentary manuscripts probably fall straightforwardly into this category, such as 4QpIsa^a (on Is 10:20-11:5), 4QpHos^a (on Hos 2:7-14), and 4QpNah (on Nah 1:3-3:14). The second kind of pesher commentary Carmignac designated as thematic. Sev-

eral compositions could be grouped in this category. Among those most often referred to as thematic pesharim is 4QFlorilegium (4Q174, sometimes known as 4QEschatological Midrash), of which the principal fragment contains some quotations from and interpretation of parts of 2 Samuel 7 and some pesher commentary on the Psalms, which are cited by their opening verses. Another composition that is commonly described as a thematic pesher is 11QMelchizedek (see Melchizedek, Traditions of). The principal extant fragment of 11QMelchizedek contains an elaborate interpretation of Leviticus 25; parts of the interpretation contain the quotation of secondary biblical passages that are then themselves interpreted. In two cases (Ps 82:2 in 11QMelch 2:11-12; Is 52:7 in 11QMelch 2:15-17) the interpretations of these secondary quotations are introduced by a technical formula using the term *peshet*.

Although the two categories of continuous and thematic peshet are convenient, a better appreciation of the character of peshet is obtained by considering it formally as a kind of interpretation of a wide variety of kinds (Bernstein). There is no such thing as peshet in a narrowly defined sense against which all forms of commentary can be assessed. It is true that some compositions are readily recognized as peshet, others less obviously so, but it is important to recognize the diversity of the phenomenon. At one end of the range are the most obviously continuous and formulaically regular kinds of commentary such as 1QpHab. However, even in 1QpHab it is clear that the commentary is often heavily reliant on allusions to other parts of Scripture: for example, in 1QpHab 6:10-12 the interpretation of Habakkuk 1:17 is in large part an implicit quotation of Isaiah 13:18. Several commentaries at Qumran follow the form and structure of 1QpHab, but it should be noted, for example, that although 4QpIsa^b 1 ii seems to be a continuous commentary, it only covers excerpts from Isaiah 5, not the complete text. Perhaps it should be classified as more thematic than continuous. Rather than a strict classification into two kinds, scholars should reckon that the term *peshet* covers a spectrum of prophetic commentaries or sections of commentaries in which at one end there is something easily defined formally (1QpHab) and at the other the form is much more varied (4Q174 frags. 1-3 i 14—ii 5) with only excerpts of the base text be-

ing given exegesis and that exegesis commonly using subsidiary scriptural quotations.

Discussion of peshet should include the wider character of compositions such as the *Damascus Document* and the *Commentary on Genesis A*. In the *Damascus Document* there are frequent uses of sections of biblical interpretation, including one, the quotation and interpretation of Isaiah 24:17 (CD 4:14-19), in which there is technical use of the term *peshet*. In the *Commentary on Genesis A* the formal section of peshet interpretation, which is an exegesis of the unfulfilled blessings of Jacob from Genesis 49, is combined with other kinds of interpretation that have other purposes: there is a rewritten version of the flood narrative that fits all the events of the flood into a 364-day year, there are chronistic reworkings of some sections from the Abram narratives, there is a poetic adaptation of the curse of Canaan that magisterially combines Genesis 9:24-25, 9:1, 9:27 and 2 Chronicles 20:7, and there is a legal adaptation of the story of the destruction of Sodom and Gomorrah through the use of relevant phrasology from Deuteronomy 13:16-17 and 20:11-14 (Brooke 1994). It is clear that neither the *Damascus Document* nor the *Commentary on Genesis A* can be simply labeled as peshet. Rather both compositions show the wide variety of forms of biblical interpretation to be found in the sectarian scrolls, of which peshet forms a part, and a very distinctive part at that, concerned with the interpretation of partially or completely unfulfilled blessings, curses and prophecies of all kinds.

On the basis of this variety it is important that modern commentators do not use the term *peshet* loosely, as if it could ever cover all that there is to understand and catalog in Qumran biblical interpretation. Peshet describes one distinctive kind of interpretation among others (Gabrion; Fishbane). Commonly, studies have focused almost exclusively on peshet as Qumran exegesis and thereby missed the wealth of ways in which Scripture is used in the sectarian and nonsectarian scrolls found in the Qumran library. The interpretation of legal texts, the reuse of biblical poetic images in new hymns and psalms, the homiletic use of scriptural examples and the retelling of biblical stories with a certain amount of embellishment, all these are among the variety of scriptural interpretation in the Qumran literary corpus. None of them is peshet.

3. The New Testament.

The warning about the careful use of the term *pesher* applies especially in relation to the various kinds of biblical interpretation found in the NT (sound usage is adopted by Fitzmyer; Lim). The argument of this article implies that the term can be applied only in cases where the NT author engages in the interpretation of unfulfilled or partially fulfilled blessings, curses and other prophecies. Perhaps it is important to note that most of the scriptural interpretation in the NT that is usually associated with the Qumran *pesherim* depicts the Scriptures as having been fulfilled. It is no surprise, therefore, that the order of presentation in Matthew's infancy narrative, for example, is not a quotation of Scripture and then its interpretation as in the *pesherim*. It is rather a description of an event that has already taken place for which a prophetic text is provided as a proof-text. Scripture is not searched for information about what will happen but plundered to explain what has already taken place. In many ways what is found in NT passages such as Matthew's infancy narrative is more akin to the use of scriptural material in parts of compositions like the *Damascus Document*, where at least some of the experiences described are in the past, than it is close to the more explicitly continuous *pesherim* like 1QpHab, in which the scriptural text acts as much more of a control over the whole content of the commentary.

Furthermore, some modern NT commentators suggest that the existence of certain exegetical techniques in some passages of the NT, such as the use of catchwords in the catena in Romans 3:10-18, aligns such passages with the *pesherim*. But it has been noted above that the use of such techniques is not a sufficient criterion for defining a piece of exegesis as *pesher*.

PESHITTA. See NEW TESTAMENT VERSIONS, ANCIENT.

PHARISEES

Although the name of the Pharisees and the main sources about them have been known for about two thousand years, scholars are only now beginning to reconstruct the group's aims and history. From the rise of critical scholarship on this matter in the nineteenth century until the 1960s, there was a growing consensus on some issues and growing disagreement on others. It was broadly agreed, for example, that the Pharisees formed the core of the rabbinic movement, so that first-century Pharisaic perspectives could be read out of *rabbinic literature—even

though that was admittedly published only in the third to sixth centuries and later. Most scholars also held that the Pharisees dominated Jewish society, having supplanted the *priests, who had long since ceased to be effective leaders. The Pharisee-sages were the authorized teachers of Jesus' time, exercising their influence through the *Sanhedrin, the *synagogues (held to be Pharisaic institutions, over against the *temple) and the schools.

1. Origins and Sources
2. Josephus
3. New Testament Evidence
4. Rabbinic Literature
5. Conclusion

1. Origins and Sources.

If these points were agreed upon, disagreement proliferated on most other matters. The origin of the Pharisees was variously traced to conflicts between high priests in Solomon's time (1000 B.C.), to the early postexilic period (500 B.C.) or to the *Hasmonean era (c. 150 B.C.). Even though the majority of scholars preferred the last option, they disagreed widely about the circumstances of and reasons for the Pharisees' emergence and about the group's relation to the Asideans described in 1 and 2 Maccabees (1 Macc 2:42; 7:19; 2 Macc 14:6). The name of the Pharisees similarly was much debated: even though most critics (not all) traced it to the Hebrew *ḥrūšīm* of the rabbinic literature, they did not agree about the meaning of this word's root ("separation," "consecration," "secession," "interpretation," "specification"); perhaps it means something else altogether: Persian! Even more vigorous debates occurred over the questions: whether the Pharisees had an interest in *apocalypticism and wrote such literature; how much they were involved in the political life of the nation or endorsed a political program (pacifism? militancy?); their connection with the rebels; and above all, whether they were a progressive reforming movement or a virtual establishment trying to protect its narrow, legalistic traditions.

An important change occurred in scholarship on the Pharisees in the 1970s, with the work of J. Neusner and E. Rivkin. In various articles and books, both critics made the observation that any sound historical results would need to proceed from a prior, disciplined analysis of the best sources. The only sources that name the Pharisees and have some claim to independent

knowledge of the group are the works of the first-century priest Flavius *Josephus; the NT texts, especially the Gospels; and the early rabbinic literature. One needs to understand each source collection's portrait of the Pharisees in context before proceeding to historical reconstruction. Much of the debate of the preceding decades stemmed from seemingly arbitrary choices of sources: many scholars assumed that certain apocalyptic texts were Pharisaic, whereas others thought them anti-Pharisaic; some used the *Dead Sea Scrolls, on certain assumptions about those texts' authors and opponents, whereas others did not. And even among those who used Josephus, the NT and the rabbinic literature, some arbitrarily gave more weight to one of these than to the others.

Neusner and Rivkin were both experts in rabbinic literature, but they also undertook to analyze the Pharisees in other sources in order to be true to their avowed methods. Even though they came to radically opposite conclusions, they sealed the methodological agenda for coming decades. Neusner in particular showed that even what had been agreed upon by previous scholarship, the easy Pharisee/rabbi tandem, could not be sustained. He and his students, among others, have now undermined the old consensus with the following arguments: that synagogues before A.D. 70, of which not many have been found, were not Pharisaic institutions; that the rabbinic movement was a coalition of groups, not the Pharisees alone, between 70 and 200; that rabbinic literature reflected the particular concerns of its authors in particular social circumstances; and that many other Jews did not recognize the earlier rabbis without further ado—they took different views. The degree of the Pharisees' influence in pre-70 society remains a matter of debate, but the general trend today is to minimize that influence over against the old consensus.

Because we have no surviving text written by a committed Pharisee and no archaeological finds that mention Pharisees, the reconstruction of their aims and views must depend on the writings of the third parties mentioned. Because none of these outsiders was primarily interested in explaining who the Pharisees were, we must be careful to interpret their evidence against their motives and larger contexts.

2. Josephus.

Josephus, a representative of the priestly aristoc-

racy, wrote the *Jewish War* in the late A.D. 70s to persuade Greek readers that the recent Jewish loss to Rome (A.D. 66-74) was not a defeat of the Jewish God and that most Jews had no desire to revolt (see *Jewish Wars with Rome*). In recounting earlier history as evidence of the Jews' good citizenship, Josephus mentions the Pharisees incidentally as a destructive force, because of the inordinate power they wielded under the Hasmonean queen Alexandra (Josephus *J.W.* 1.5.2 §§110-14) and later under *Herod (Josephus *J.W.* 1.29.2 §571). When the revolt against *Rome finally broke out, however, the most eminent Pharisees joined with the temple authorities in trying to dissuade the revolutionaries, but they were all equally unsuccessful (Josephus *J.W.* 2.17.3 §411).

Describing the Jews' philosophical traditions in this same work, Josephus devotes the greatest attention to the *Pythagorean-like *Essenes but includes brief mention of the Pharisees. He says that they, in contrast to the *Sadducees, believe in life after death, judgment and fate or providence (Josephus *J.W.* 2.8.14 §§162-66).

In the *Antiquities of the Jews/Life*, completed fifteen to twenty years after the *War*, Josephus offers a primer in Judean history and culture, with an appendix portraying his own life and character. He describes the Judean constitution as priestly and aristocratic: the proper form of government is through the priestly senate; monarchy is to be avoided, and democracy is ill advised (apparently) in view of Josephus's general disdain for the fickleness of the masses.

Antiquities expands *War's* narrative for the period from the Hasmoneans to the revolt by six times (Josephus *Ant.* 13-20; *Life*), so it includes a good deal more information than did *War* about the Pharisees. In both the narrative accounts and Josephus's editorial comments, the Pharisees appear as the most influential of the Jewish parties, even though they do not officially control the organs of power, which are centered in the temple. Every time Josephus mentions the Pharisees' activities, under the Hasmonean prince John Hyrcanus, Queen Alexandra, Herod the Great or himself as commander of Galilean forces in the revolt, he caustically repudiates them: they allegedly use their vast popular support to cause problems for the proper leaders—that is, for Josephus and other aristocrats (Josephus *Ant.* 13.10.5, 15.5-16.6 §§288, 400-432; 17.2.2 §§41-45; *Life* 38-39 §§189-98).

In his descriptions of the Pharisees' views, Josephus continues to mention their doctrine of the afterlife, which he claims endears them to the masses, and he also introduces their special extrabiblical tradition "from the fathers" (Josephus *Ant.* 13.10.6 §§297-98; 18.1.3-4 §§12-17). Throughout his works, Josephus repeats that the Pharisees have the reputation for being the most precise of the schools in their interpretation of the laws (Josephus *J.W.* 1.5.2 §110; 2.8.14 §162; *Ant.* 17.2.4 §41; *Life* 38 §191), though this priest-expert is not willing to concede that they are legitimate teachers of the constitution.

Scholars who wish to challenge the old consensus view of the Pharisees' virtual hegemony in Judean society with the argument that they actually had little influence before A.D. 70 must explain Josephus's portrayal in some way. The most common solution is to propose that Josephus exaggerated their power in his *Antiquities* (completed in A.D. 93) because he was trying then to throw in his lot with the new rabbinic movement at Yavneh in Judea, which was allegedly grounded in the surviving Pharisees. Thus Josephus drew attention to the Pharisees' power in order to alert the Romans to the importance of this group, to make a bid for Roman support of them as the new power brokers in postwar Judea.

The problems with this theory are legion, however. As we have seen, Josephus does not speak positively of the Pharisees' power but complains about it from his aristocratic perspective. It is far from clear why Roman authorities (which ones?) should have persevered through the long biblical paraphrase (Josephus *Ant.* 1-11) to reach the sections concerning Pharisees at the time of the Hasmoneans and Herods, understood these sections as praise or understood that these Pharisees were to be identified with the rabbinic movement in Judea. And we have seen that scholarship on early rabbinism has denied that it was exclusively Pharisaic. It is not so easy to dismiss Josephus's complaints about the Pharisees' great influence with the people. And the Gospels, from quite different perspectives, tend to agree about that influence.

3. New Testament Evidence.

The NT authors use the Pharisees mainly as a negative foil for Jesus, but there are considerable differences among them. Paul is the only writer known to us who lived as a Pharisee (Phil

3:5), so we might hope to find traces of his Pharisaic past in what he writes as a Christian—for example, in his apocalyptic orientation toward the imminent end of this evil age. But because his writings are conditioned by his encounter with the risen Christ and he dismisses his Pharisaic past as “dung” (Phil 3:8), it is hazardous to make inferences about Pharisaism from them. Paul’s expert biblical knowledge doubtless comes from his former life as a Pharisee; he cites allegiance to the Pharisees as if it were a token of superior legal training (Phil 3:5). Since other sources include belief in resurrection or some sort of afterlife and spiritual powers among Pharisaic beliefs, these features of Paul’s worldview probably also continue from his past as a Pharisee.

Of the Gospels, Mark and John portray the Pharisees as key elements of the cosmic battle between Jesus and the evil spirits. Lumped together in a scarcely differentiated Jewish leadership, they are presented as hostile to Jesus from the outset and in league with the devil (Mk 3:6, 19-30; Jn 8:13, 22, 44). For historical purposes it is noteworthy that the Pharisees appear in both texts as the most prominent Jewish group in Jesus’ environment. And Mark, among the minor distinctions that it retains, shows them as preoccupied with issues of purity, tithing and legal interpretation (Mk 2:1-3:6). This Gospel also attributes to them a special extrabiblical tradition that Jesus denounces as a merely human accretion to the divine law (Mk 7:5-8).

Matthew often couples the Pharisees with the Sadducees, even with the chief priests, to portray them all as the leadership of old *Israel (Mt 3:7; 16:1, 6), the ones from whom the kingdom will be taken away (Mt 8:12; 21:43-45). His linking of the Pharisees and Sadducees as partners is historically problematic in view of what other sources say about the typical hostility and class differences between these two groups (Josephus *Ant.* 13.10.6 §298; Acts 23:7-9). Within Matthew’s portrayal tensions remain, however, perhaps partly as a result of Matthew’s conflicting sources. The Pharisees are both “blind guides” whose teachings are harmful (Mt 15:14; 16:11-12) and those who “sit on Moses’ seat,” whose teachings should be observed even while their practices are eschewed (Mt 23:2-3). Matthew introduces specific remarks about the Pharisees’ wearing of phylacteries (small boxes containing Scripture portions, ancient examples of which

have been found) and fringes (corner tassels on men’s shirts), and also about their concern for tithing (Mt 23:5, 23). Like Mark and John, this Gospel assumes their prominence in Galilean-Judean life.

So does Luke-Acts. Luke’s portrayal of the Pharisees recalls portraits of the Sophists in Hellenistic texts. They are the respected teachers of the common people who come out to scrutinize Jesus’ activities (Lk 5:17). Though sometimes critical of him, they nevertheless address him respectfully as a fellow teacher, regularly invite him to dinner and even try to help him when he is in trouble (Lk 7:36; 11:37; 13:31; 14:1; 19:39). Jesus is much more strident in his critique of them for typical sophists’ faults—allegedly for being money-hungry, complacent and ineffective in bringing about real change (Lk 11:39-44; 12:1; 16:14-15; 18:9-14). The Pharisees of Luke remain outside Jerusalem and so are sharply distinguished from the Sadducee-related temple authorities, who immediately plan to kill Jesus upon his arrival (Lk 20:47).

In Acts this openness continues at first, especially in the person of Gamaliel, an influential member of the Sanhedrin (Acts 5:33-39). But with the execution of Stephen, Acts presents a galvanizing Jewish opposition to the Christian “Path” (Acts 8:1-3). Some Pharisees convert, and they remain zealous for the precise observance of Torah (Acts 15:5). Acts claims that the Pharisees are the most scrupulously precise of the schools (Acts 22:3; 26:5). When he is brought before the Sanhedrin, Acts’ Paul is able to make clever use of the Pharisees’ famous opposition to the Sadducees on the issue of resurrection (and angels, the author notes) to deflect the charges against him.

4. Rabbinic Literature.

Rabbinic literature is complex and multilayered. It was written in *Hebrew and *Aramaic from the third to the sixth centuries A.D., in Galilee and Babylonia. Because this literature mentions among its founding figures some men who are elsewhere connected with the Pharisees, especially Hillel and Shammai, as well as the family of Gamaliel, scholars have traditionally more or less identified the Pharisees with the rabbis. Those who liked what they found in rabbinic literature saw the Pharisees as a progressive party committed to making the Torah practicable for everyone. Those who were baffled and alien-

ated by rabbinic style found support for their view of the Pharisees as petty legalists. Curiously, when these texts refer to a group called the *ḥ'rušim* (Heb), more often than not the tone is unfavorable (e.g., *m. Sota* 3:4); the rabbis do not call their own forebears *ḥ'rušim*. Scholars disagree, also for linguistic reasons, on the extent to which these *ḥ'rušim* should even be identified with the Pharisees (Gk *Pharisaioi*) of Josephus and the NT.

Neusner's work on the various rabbinic compositions pointed out that because each of these rabbinic texts had its particular historical context and reasons for being written and because it used highly stylized presentations of rabbinic opinion to support these aims, one could only distill information about the Pharisees before A.D. 70 by applying thoroughgoing suspicion and rigorous logic. In a monumental study, he distinguished layers of oral tradition going back to the first consolidation of a rabbinic group at Yavneh (Jamnia) after the Judean revolt. He argued that the few surviving traditions about likely Pharisees before A.D. 70 portray them as a small association concerned with applying priestly codes of purity to their own table fellowship. Neusner's more recent work on rabbinic literature has made it even more difficult to abstract reliable information about the first-century Pharisees from rabbinic literature; he focuses increasingly on the ways in which the aims of the final authors have decisively shaped those texts.

The general trend today is to see early rabbinic literature as the product of a small elite that gradually came to exert influence over larger circles of Jews toward the end of the second century A.D. That elite claimed notable Pharisees among its founders, but it also took over the role of temple-related teaching. It probably originated not simply among the Pharisees but in a coalition of priests, scribes, Pharisees, Sadducees, and others who survived the destruction of the temple. Rabbinic literature should no longer be used, therefore, as transparent evidence for the Pharisees.

5. Conclusion.

Reconstruction of the historical Pharisees turns mainly on the use of these three bodies of literature. The most vigorously contested issue concerns the degree and manner of the Pharisees' influence over the Judean-Galilean populace in

the time of Jesus and Paul. But all three source collections, although they understand the Pharisees differently, support the conclusions that: they were a lay, not priestly, association who were thought to be expert in the laws; they were in a sociological sense brokers of power between the aristocracy and the masses; they promoted their special living tradition in addition to the biblical laws; they were interested in issues of ritual purity and tithing; and they believed in afterlife, judgment and a densely populated, organized spirit world.

Few critics today, however, would make the confident statements that characterized scholarship of a generation ago concerning the meaning of the Pharisees' name (separatists, the consecrated, Persians, specifiers), the date and circumstances of their origin (in Ezra's time, after the Maccabean revolt, from the Hasidim), the degree of their involvement with apocalypticism and their political platform. It is plausible that the Pharisees emerged from the turmoil following the Maccabean revolt, but no more can be said at this point.

PHILIP THE TETRARCH. See HERODIAN DYNASTY.

PHILIPPI

Philippi is situated in eastern Macedonia on the Via Egnatia that overlooks an inland plain to the east of Mt. Pangaeus/Pangaion. It was founded by immigrants from Thrace and known for its rich gold mines as well as for its many springs of water that rise in its hills (Strabo *Geog.* 7.34). This ancient community was surrounded by mountains on three sides and an open plain to the west.

1. Macedonian Influence
2. Roman Influence
3. The Church in Philippi
4. Archaeological Features

I. Macedonian Influence.

The current site was settled about 360 B.C., when residents from Thasos annexed the territory and called it Crenides because of its springs (Gk *krenai*). It was also known for a brief period as Datum or Daton (Strabo *Geog.* 7.34). Later, when its citizens called upon Philip II of Macedon, the father of *Alexander the Great, for help against the Thracians, he came to their aid but also enlarged their city and renamed it after himself. He built a wall around the city, some of which still remains, though it was later reinforced by the Romans. Except for the wealth derived from the gold mines, Philippi was relatively unimportant until the Roman conquest of the region in 168-167 B.C. According to Diodorus Siculus (*Bib. Hist.* 16.3.7, 8.6), Philip II received one thousand talents a year from the rich mines in the vicinity and treated Philippi as a free city within his kingdom. The wealth received here enabled him to enlarge his army and unify his kingdom. Pausanias, who traveled *Greece during the reign of Hadrian (A.D. 117-138), called the city the "youngest city in Macedonia." The city is mentioned in a number of ancient authors (Dio

Cassius *Hist.* 47.35-49; Appian *Civ. W.* 4.102-138; Plutarch *Brutus* 38-53).

2. Roman Influence.

When work was completed on the famous Via Egnatia (begun c. 145 B.C. and completed c. 130), which connected Byzantium (later Constantinople) with the Adriatic ports that led to Italy and became *Rome's primary route to the east, Philippi became a major stopping place on the way. Besides making it possible to move troops more rapidly throughout the empire, this route was the one Paul traveled on his missionary journey from Neapolis to Philippi, Amphipolis, Apollonia and Thessalonica (Acts 16:12; 17:1) but abandoned when he departed for Berea (Acts 17:10).

With the emergence of the second triumvirate made up of Octavian (later Augustus; see Roman Emperors), Marc Antony (Marcus Antonius) and Marcus Aemilius Lepidus in 43 B.C., and following their proscriptions that led to the executions of three hundred senators and two thousand knights in Rome, they had secured their control of Rome. The only remaining threat to their control was the republican army led by Cassius Longinus and Iunius Brutus, the murderers of Julius Caesar. Leaving Lepidus to guard Rome, Octavian and Antony engaged the republican forces just west of Philippi in two battles. After their defeat, both Cassius and Brutus committed suicide (Horace *Odes* 2.7.9-12).

Following the battles, Antony settled many veterans from his army in Philippi and enlarged and fortified the city, made it a Roman colony that included Neapolis, Oisyme and Apollonia, and offered land to many of the triumviral soldiers from Rome who had earlier lost their land in Italy (Strabo *Geog.* 7.41; Pliny *Nat. Hist.* 4.42; Diodorus Siculus *Bib. Hist.* 51.4.6). Following his victory over Antony at Actium in 31 B.C., Octavian moved more settlers from Italy to Philippi. Its colonial status brought with it the significant benefit of equal status with the Italian communities and freedom of its citizens and lands from direct taxation. This was known as the *ius italicum*, which conferred the same rights as those granted to Italian cities (Acts 16:12)—the highest privilege possible for a Roman province. The new settlers, along with the previous residents, constituted the newly reformed colony that became known as *Colonia Augusta Julia Philippensis*. It was common in those days for the Romans

to build or reconstitute communities as Roman colonies and then offer property to veteran soldiers and other *citizens of Rome.

The official language of Philippi in the first century was Latin, the language of more than half of the inscriptions found there, but the marketplace language and that of the surrounding community continued to be Greek. The city was serviced both by the nearby port of Neapolis, modern Kavalla (Acts 16:11), some 10 miles southeast of the city and by the Via Egnatia. Remains from the Macedonian, Roman and Byzantine periods, including remains of a sanctuary of the Egyptian gods Serapis and Isis, have been found on the acropolis at Philippi.

3. The Church in Philippi.

Following his vision at Troas (Acts 16:8-10), the apostle Paul started the first church in ancient Greece at Philippi (c. A.D. 49-50, Acts 16:11-40). Although he was shamefully treated at Philippi (1 Thess 2:2; cf. Acts 16:19-24), he nevertheless had a significant ministry in the city. His best known converts at Philippi included Lydia, in whose house he began the church; the jailer and his family (Acts 16:14-15, 27-34); Epaphroditus (Phil 2:25-30); Euodia and Syntyche, who were at odds with one another after Paul's departure; Clement; and others who served with Paul and Silas at Philippi (Phil 4:2-3). The Philippian church contributed substantially to Paul's subsequent missionary activity (Phil 4:15-18) and became very dear to him. He visited here at least one more time (1 Cor 16:5-6; 2 Cor 2:13; 7:5; Acts 20:1-6) and, on the same trip, may have gone west to Illyricum (Rom 15:19). He may have written his letter(s) to the leaders of the church at Philippi (c. 54-55) from Ephesus or later while he was at Rome (c. 60). The letter itself originally may have been two or more separate letters that were brought together into one document after the death of Paul (see *DPL*, Philippians, Letter to the).

In the second century, Ignatius, bishop of *Antioch of Syria, passed through Philippi on his way to Rome to face martyrdom. The Philippian church later sent a letter to Polycarp, bishop of Smyrna, requesting his assistance in collecting Ignatius's letters. Polycarp responded favorably to their request in his only letter that has survived (see *Pol. Phil.* 19.2), though Irenaeus claims that he wrote several others (Irenaeus *Huer.* 5.33.4). Polycarp's letter (c. the

mid-second century A.D.) is helpful in understanding the continuing witness of the church in Philippi in the second century, its concern for those in prison because of their faith and its *hospitality. Like Paul, Polycarp also addressed the presbyters (bishops) and deacons (*Pol. Phil.* 5.2-3; 6.1; cf. Paul's Phil 1:1; see *DLNTD*, Polycarp of Smyrna). In the post-Nicene era, the city became an important Christian center and had a metropolitan bishop.

4. Archaeological Features.

In the reigns of Trajan (A.D. 97-117) and Hadrian (A.D. 117-138) extensive repairs to the Via Egnatia in the vicinity of Philippi were made, and later Marcus Aurelius made many building additions and improvements at Philippi. Several of the remains at Philippi date from the second century, but most come from the fourth to the sixth centuries. These remains include a large forum (230 x 485 feet) and a rostrum for public speaking, with other buildings that can be dated to the time of Marcus Aurelius (A.D. 161-180). Philippi also has a large theater that dates from the time of Philip II (382-336 B.C.). It later was enlarged by the Romans in the second century. The location where Paul and Silas were imprisoned may possibly be identified with a Roman crypt found just west of Basilica A on the north side of the forum. Portions of the Neapolis gate, through which they entered the city from the east, have also been discovered. Philippi also has four large basilicas and a section of the ancient Via Egnatia, but nothing that remains at the ancient site sheds light on the church's organization, life, worship and ministries in the first century.

Among the most significant discoveries at this site are seven churches dating from the fourth to the sixth centuries, the most prominent of which are commonly identified as Basilicas A and B. A number of other buildings were found, as well as tombs of both Christians and pagans dating from the fifth and sixth centuries. In the fourth century, the city was an important economic and cultural center and was praised for the purity of Greek spoken there. The fate of Philippi after the seventh century is obscure, though the Slavs settled in much of the area in the seventh century, and the Bulgarian invasions of 812 forced the residents to flee the city and its fortress. The city was finally captured by the Ottomans in 1387.

PHILO

Philo (c. 20 B.C.-c. A.D. 50) is an important witness of Greek-speaking Judaism in the Second Temple period. The expansiveness of his corpus and its preservation by Christians make it a significant source both for the world of early Christianity and for determining the extent to which Christianity developed from Greek-speaking Judaism.

1. The Life of Philo
2. The Philonic Corpus
3. Philo and Early Christianity

1. The Life of Philo.

There is no ancient *bios* of Philo. We can reconstruct a sketch of his life from occasional autobiographical asides, ancient *testimonia* and the indirect evidence provided by our knowledge of his family.

1.1. Philo's Family. Philo was a member of the most prominent family of the Jewish community of *Alexandria. Eusebius accurately says that he "was inferior to none of the illustrious people in office in Alexandria" (Eusebius *Hist. Eccl.* 2.4.2). His brother, Julius Gaius Alexander, held a responsible governmental position in Alexandria (Josephus *Ant.* 20.5.2 §100; *CPJ* 420). His name suggests that Julius Gaius Caesar bestowed citizenship on the family, possibly on Alexander's and Philo's grandfather for assistance during

the Alexandrian war (48-47 B.C.). Since the family could not have received Roman *citizenship without first holding Alexandrian citizenship (Pliny *Ep.* 10.5-7, 10), members of the family must have held triple citizenships in the Jewish community of Alexandria, the Greek city of Alexandria and *Rome. The privileged position of the family is confirmed by the careers of Alexander's sons: Tiberius Julius Alexander worked his way up the *cursus honorum* through governorships of Judea, Syria and Egypt, until he became Titus's chief of staff during the first Jewish revolt (A.D. 66-70; see Jewish Wars with Rome; Roman Administration) and the prefect of the praetorian guard in Rome; Marcus Julius Alexander died at an early age but not before he married Berenice, the daughter of *Herod Agrippa I. It was undoubtedly the social standing of the family that led the Jewish community to select Philo, Alexander and the young Tiberius Julius Alexander as members of the embassy to Gaius in A.D. 39-41 (Philo *Leg. Gai.* 182, 370; *Anim.* 54).

1.2. Philo's Life. As a member of this family, Philo received both a Greek (Philo *Congr.* 74-76; *Spec. Leg.* 2.229-30) and a Jewish *education. His Greek education would have taken place in three stages: training in a *gymnasium, a one-year *ephebeia* that in Alexandria normally occurred when a boy was thirteen or fourteen and advanced training in *rhetoric and *philosophy. The latter was particularly important for Philo, who embraced the basic positions of Middle Platonism (c. 80 B.C.-A.D. 220), which became a vibrant intellectual force in Alexandria with Eudorus (fl. c. 25 B.C.). He also received training in his ancestral traditions, although not in Aramaic or Hebrew. His thorough knowledge of the *Septuagint (LXX) suggests that he learned it from the cradle. Philo did not believe that Platonism and Judaism were antagonistic systems; rather, he held that *Moses and *Plato understood the same realities. This does not mean that they stood on equal footing—Philo was first and foremost a Jew—but that Philo's commitment to Moses was not to a Hebraic Moses but to a Platonic Moses. Ancient authors recognized this in the famous aphorism, "Either Plato philonizes or Philo platonizes" (e.g., Jerome *Vtr.* 11.7).

Philo's Greek education and social position invited him to embrace many aspects of Greek culture. He mentions his participation in banquets (e.g., Philo *Leg. All.* 3.156; *Fug.* 31-32), theater productions (e.g., Philo *Ebr.* 177; *Omn. Prob.*

Lib. 141), and athletic contests (e.g., Philo *Omn. Prob. Lib.* 26; *Prov.* 2.58). Like most Jews in this period, he did not believe such activities constituted a threat to his Jewish identity. The latter remained secure through observance of Jewish practices (e.g., Philo *Vit. Mos.* 1.31) including a pilgrimage to the *temple in *Jerusalem (Philo *Prov.* 2.64).

While Philo served the Jewish community in the famous embassy and possibly in other civic positions, his heart lay in the contemplative life (Philo *Spec. Leg.* 3.1-6). We know that there was a tradition of Jewish works in Alexandria that extended from the third century B.C., when the translation of the LXX began, to the dismantling of the Alexandrian Jewish community in A.D. 115 to 117. Although Philo does not mention his predecessors by name, his works betray knowledge of several, including *Aristobulus, Pseudo-Aristeas and Ezekiel the Tragedian (see *Jewish Literature: Historians and Poets*). Even more important are the anonymous exegetes to whom he alludes and whose exegetical traditions he incorporates (e.g., Philo *Op. Mund.* 26 for literalists; *Migr. Abr.* 89-93 for radical allegorizers). We should therefore not view his work as an isolated effort but as the apex of a long and rich tradition. The specific social locale for Philo's study and writing is debated. While the meagerness of the evidence permits only speculation, the best suggestion is that he operated an advanced school of exegesis in his home or in a privately owned building as philosophers and physicians often did (e.g., the *Epicurean Philodemus, the *Stoic *Epictetus, the Neo-Platonist Plotinus or the physician Galen). His students were probably potential leaders of the Jewish community.

2. The Philonic Corpus.

Some such setting must be posited given the extensive nature of Philo's corpus. We know that he wrote more than seventy treatises: thirty-seven of these survive in Greek manuscripts and twelve in a rather literal sixth-century Armenian translation. We have excerpts of another work in Greek and fragments of two more in Armenian. The remainder are known only from references in either the extant treatises or *testimonia*. It is likely that lacunae in the commentary series point to others about which we have no evidence. The corpus can be subdivided into five major groups: three commentary series, philo-

sophical works and apologetic treatises. The three commentary series are Philo's own literary designs; the philosophical and apologetic groupings are modern constructs used to group treatises that are conceptually similar but literarily independent. The interrelationship among these groups, especially the commentary series, is complex. We should probably think of them as independent projects that were written simultaneously throughout his career rather than single projects that were completed before he moved on to the next series.

The bulk of the treatises belong to the commentary series. Philo provided a general introduction to all three sets in his two-volume *Life of Moses (De Vita Mosis)*. The biography provided an orientation to the works of Moses in much the same way that Porphyry's *Life of Plotinus* prepares the reader for the *Enneads*. The implied audience of this *biography is large and probably included members of the wider Jewish community and possibly interested non-Jews.

2.1. The Questions and Answers on Genesis and Exodus. The simplest of the commentary series is the twelve-book *The Questions and Answers on Genesis and Exodus (Questiones et Solutiones in Exodum, Quaestiones et Solutiones in Genesis)*, a running commentary on Genesis 2:4-28:9 and Exodus 6:2-30:10. Ten of the twelve books are extant in the Armenian translation and in some Greek fragments. The commentary uses the question-and-answer format in the literary tradition that began with Aristotle's *Homeric Problems* and is best represented in Plutarch's zetematic works. Jewish predecessors such as Demetrius (frags. 2 and 5) and Aristobulus (frag. 2) had used the question-and-answer format within a larger work, but Philo's commentary is the first known zetematic work in Judaism. The questions take two forms: a citation of the biblical text prefaced with an interrogative or a fully formed question that includes the rationale for the query. The answers are relatively brief and frequently contain both literal and allegorical interpretations. The work was probably intended as a beginning commentary for students in Philo's school or for members of the larger Jewish community.

2.2. The Allegorical Commentary. The most famous commentary series is the *Allegorical Commentary*, a running commentary on Genesis 2:1-41:24. Of the thirty-one books whose titles have come down to us, twenty are preserved in

Greek and a fragment of another in Armenian. Like the *Questions and Answers*, the *Allegorical Commentary* uses the question-and-answer device; however, it does so differently. The questions are now subsumed in the exegesis. The answers are greatly expanded through the incorporation of observations on secondary biblical texts (*lemmata*) in which allegorical readings dominate the exposition. While earlier Jews such as Aristobulus and Pseudo-Aristeas used allegorical interpretation, the particular form of Philo's commentary is closest to that of commentaries in the philosophical tradition (e.g., the Platonic *Anonymous Theaetetus Commentary*, Plutarch's *On the Generation of the Soul in the Timaeus* and Porphyry's *On the Cave of Nymphs*). However, the similarities are not complete; for example, Philo attempted to connect his exegetical treatments into an unbroken chain. The series was probably intended for advanced students of Philo's school or for other Jewish exegetes.

2.3. The Exposition of the Law. The third commentary series is the *Exposition of the Law*. We have twelve of the fifteen books preserved in Greek. This series is significantly different from the other two: it is systematic in its organization and literal in its interpretation. Philo divides the series into three parts (*Praem.* 1–3). The first is an account of creation since the cosmos is in harmony with the law (*Creation/De Opificio Mundi*). The second is historical or biographical: the patriarchs (Abraham, Isaac and Jacob) are embodiments of the unwritten law (*Abraham/De Abrahamo*), and Joseph is a politician (*Joseph/De Iosepho*). The third is legislative. It opens with *On the Decalogue (De Decalogo)*. Each of the Ten Commandments subsequently serves as a heading for other laws in the four-volume *On the Special Laws (De Specialibus Legibus)*. The remaining legal material appears in several appendices under the headings of various virtues (*Virtues/De Virtutibus*). *On Rewards and Punishments (De Praemiis et Poenis)* functions as the finale in imitation of Deuteronomy. It is possible that these works were written for a wider Jewish audience.

2.4. Philosophical Works. The fourth group comprises Philo's philosophical works. Of the eight books we know that he wrote we have two in Greek, two in Armenian and an Armenian fragment of another. These have several features that set them apart from the commentary series: the subject matter consists of philosophical themes, the sources are primarily Greek, and

the literary forms are those of the philosophical tradition (e.g., arithmology, *Numbers/De Arithmis*; dialogue, *Providence/De Providentia* and *Animals/De Animalibus*; thesis, a work which sets out a thesis along with the arguments pro and con, *Eternity/De Aeternitate Mundi*; and a discourse, *That Every Good Person Is Free/Quod Omnis Probus Liber Sit*). They were probably intended for students in Philo's school.

2.5. Apologetic Works. The final category consists of works that are explicitly apologetic. We have three of the eight books extant in Greek (*On the Contemplative Life/De Vita Contemplativa*, *Flaccus/In Flaccum* and *Embassy/Legatio ad Gaium*) and excerpts from a fourth (*Hypothetica*). The majority of these were probably written in connection with the pogrom at Alexandria and the subsequent embassy in A.D. 38–41.

3. Philo and Early Christianity.

At an early date, probably prior to the destruction of the Alexandrian Jewish community in 115 to 117, Philo's works passed into Christian hands. A legend soon developed that he was a Christian (e.g., Eusebius *Hist. Eccl.* 2.16.2–17.2). In a number of Byzantine catenae he is called Philo the bishop. His works directly influenced a number of significant early Christian thinkers, including Clement of Alexandria, Origen, Eusebius, Didymus, Gregory of Nyssa and Ambrose. Indirectly they influenced far more. While the legend of Philo Christianus is an anachronistic effort to christen a remarkable Jew, it points out the importance that Philo had for early Christians. What about his relationship to the NT authors and communities?

3.1. The Debate. Scholars have long recognized the relevance of Philo's treatises for the interpretation of the NT. One of the most important initial works was C. E. Loesnerus, *Observationes ad Novum Testamentum e Philone Alexandrino* (1777). The place of Philo in NT studies reached a zenith in the first half of the twentieth century in the works of C. Spicq on Hebrews, C. H. Dodd on John and E. R. Goodenough on the history of religions. The discovery of the *Dead Sea Scrolls and the archaeological discoveries of the century have challenged earlier assessments. The scrolls provided a different set of texts against which the NT could be read. In particular scholars pointed out that the *apocalyptic eschatology of the scrolls was much closer to the perspective of NT authors than was the Platonic

ontology of Philo. Further, the scrolls and archaeological discoveries established the diversity of Judaism. When M. Hengel erased the distinction between Hellenistic and Palestinian Judaism (see Hellenistic Judaism), Philo's place in Judaism became problematic.

The issue is not whether Philo's works are important for understanding the world of early Christians; they constitute a mine of information on interpretative traditions, Jewish ethics and *Hellenistic moral philosophy, and historical matters. The issue is whether Philo attests a form of *Judaism that directly influenced the development of Christianity. Philonic specialists have argued that Philo's works are representative in a number of areas (Borgen, Sterling). While he is not socially representative of the larger Jewish world, he incorporated perspectives that were widely held.

3.2. The History of Religions. The following examples suggest some of the perspectives that were common to Philo, Greek-speaking Judaism and early Christians.

3.2.1. The Corinthians. The earliest example is the anthropology of the Corinthian community (Pearson; Horsley; Sellin; Sterling). The clearest example is in 1 Corinthians 15:44-49, where Paul's eschatological orientation led him to argue against the Corinthians' understanding of Genesis 1:26-27 and Genesis 2:7. The latter became the focal point of a controversy between the apostle and the community. Paul quoted the text but reversed clauses c and b (1 Cor 15:45). He explained, "The spiritual is not first, but the natural." For Paul the natural is Adam and the spiritual is Christ. The apostle's polemic on order suggests that the Corinthians had a different order. They identified the spiritual with the human of Genesis 1:26-27 and the natural with the human of Genesis 2:7. The closest analogy to their view is Philo, who distinguished between the intelligible human of Genesis 1:26-27 and the sense-perceptible human of Genesis 2:7 (e.g., Philo *Op. Mund.* 134-35). It was probably this type of Platonizing exegesis that led the Corinthians to devalue the corruptible body and deny the resurrection.

3.2.2. Hebrews. The major issue comes into sharp relief in Hebrews: Does this early homily use an apocalyptic eschatology (Hurst) or a Platonizing ontology (Thompson)? It may not be a case of either-or but of both-and. Two texts use the famous Platonic metaphor of "shadow"

(Plato *Rep.* 7.515a-b) but in different ways. The first occurs in the discussion of the tabernacle, when the author refers to the priests on earth "who serve in a shadowy copy of the heavenly (tabernacle)" (Heb 8:5). It is difficult to miss the Platonism of this statement: it uses a Platonic image ("shadow") and an earthly/heavenly contrast and cites Exodus 25:40 as a textual basis for the distinction. Philo made the same Platonic distinction from the same text (Plato *Leg.* 3.102-3; Philo *Quaest. in Ex.* 2.82). It may have been a well-known interpretation in some circles. The second text uses identical imagery but juxtaposes it with an eschatological perspective that operates temporally: "For the law was a shadow of the good things to come, not the very image of the things" (Heb 10:1). The imagery of the contrast is again Platonic: "shadow" (Plato *Rep.* 7.515a-b) versus "image" (Plato *Crat.* 439a), but the application is eschatological: the Mosaic cult and law are a shadowy reflection of a future reality ("image"). The relationship between the ontological distinction of Hebrews 8:5 and the eschatological distinction of Hebrews 10:1 is problematic. It may be that both the audience and author accepted the Platonic distinction but that the author added an eschatological twist in keeping with a christological understanding of history.

3.2.3. Luke-Acts. H. Conzelmann pointed out the importance of repentance (*metanoēō*, *metanoia*) for Luke-Acts. The third Evangelist used the word group to denote a turning to God involving a moral transformation (e.g., Acts 26:20). While some philosophers used the language to describe moral improvement (e.g., Pseudo-Cebes *Tabula* 10.4-11.1-2; Plutarch *Mor.* 26d, 27a, 204a, 551d, 712c), the closest parallels are Second Temple Jewish authors who found this to be a natural way to speak of conversion from paganism to Judaism (*Jas. and As.* 9:2; 15:6-8; 16:7; Pr Man; Philo *Virt.* 175-86). The most striking parallels are in Philo. Luke-Acts appears to reflect a view common in Greek-speaking Judaism.

3.2.4. John. A final example occurs in the *hymnic prologue of John. There are three significant parallels to Philo. First, the use of Logos for the intermediary between God and the cosmos and humanity is striking. It is not only the common term but the similar functions of the Logos that make the parallel powerful (Tobin). Second, the prologue distinguishes between the

eternal Logos and the temporal creation through a Platonic distinction between "was" (*ēn*) in verses 1-2 and "became" (*egeneto*) in verse 3. The shift in tenses is not accidental: it is maintained throughout the prologue (the Logos *was* [Jn 1:1, 2, 3, 9, 10, 15, 18] versus the world *became* [Jn 1:3, 6, 10, 14, 17]) and possibly in the main text (Jn 8:24, 28, 58; 13:19). This shift is reminiscent of Plato's famous question "whether the cosmos always was [*ēn*], having no beginning, or became [*egenon*], having begun from a certain beginning" (Plato *Tim.* 28b). Philo of Alexandria used the same word play to make the distinction between the two worlds (Philo *Op. Mund.* 12; *Poster. C.* 30; *Gig.* 42). Third, the prologue uses prepositional metaphysics (the use of different prepositions to denote different metaphysical causes) to present the Logos as the agent of creation (Jn 1:3, 10). Philo uses the same prepositional phrase to denote the agency of the Logos in creation (Philo *Sacr.* 8; *Spec. Leg.* 1.81).

Examples such as these suggest that our changed understanding of Judaism should redirect but not eliminate the use that we make of Philo's works in reconstructing Christian origins.

PHILOSOPHY

The subject matter of philosophy, as it emerges in *Greece from the beginning of the sixth century, with Thales of Miletus (fl. c. 585 B.C.), is grouped around three basic questions: What is there?—that is to say, what is the world made of, what is its origin and what is its end, if any? What ought we to do?—that is, what are the bases, natural or conventional, of personal and social morality? How can we know?—that is, what is the criterion of knowledge, as opposed to opinion, and what are the laws of reasoning and of proof? From these basic philosophical questions arise in this historical order the topics respectively of physics, including metaphysics,

ethics and logic. The earliest philosophizing was really physics in this broad sense, and much of what constitutes pre-Socratic philosophy has more to do with the origins of science than with philosophy in the sense relevant to this article.

1. The Pre-Socratic Period
2. Plato and Aristotle
3. Hellenistic Philosophy: Stoics and Epicureans
4. The Philosophies of the Roman Empire

1. The Pre-Socratic Period.

The term *philosophia*, or "love of wisdom," as well as much of the substance behind that term is an invention not of the earliest recorded philosophers, the Milesian school of Thales and his successors, but rather of Pythagoras (fl. c. 520) and his followers in southern Italy, around the end of the sixth century B.C. The significance of this neologism, in Pythagoras's mind, was that he felt, in contrast to the early physicists and other contemporary experts (who would have called themselves *sophoi*) that wisdom (*sophia*) properly belonged to God alone, and that humans could only aspire to being seekers after wisdom (*philosophos*).

For Pythagoras and the tradition stemming from him, including that of *Plato, this search for wisdom involved not only the postulation of certain principles but also the adoption of a distinct moral code, or way of life (*bios*). In the case of the original Pythagoreans this *bios* meant a strictly regulated communal life, anticipating in many ways that of later Christian monastic communities; abstention from animal food because of a belief in reincarnation and the kinship of all souls, human and animal; and a series of taboos, such as that against the eating of beans, probably devised by Pythagoras to give his followers a sense of distinctness.

Such a degree of discipline, however, remained peculiar to the Pythagoreans. Their philosophical doctrines became widely influential through commending themselves to Plato. Pythagoras's chief philosophical insight was that the world was held together and given coherence by the operation of harmony and proportion, which could be expressed in terms of mathematical ratios. The dominant creative principle was One, or unity (the Monad), which acted on an archetypal, formless substratum, symbolized by the number Two (the Dyad). The union of these two generated primarily the

whole system of numbers and secondarily the world of physical objects, which, for the early Pythagoreans, were to be regarded as numbers.

Pythagoras was also the first to give philosophical underpinning to the originally shamanistic notion of the soul as something separable from the body, which is not just an insubstantial shade but the true repository of the personality. For him, and for Plato after him, immortality for the soul was inextricably involved with reincarnation, into both human and (in the case of unsatisfactory humans) animal bodies. The problems about personal identity that this involves do not seem to have bothered ancient thinkers.

2. Plato and Aristotle.

Plato (427-347 B.C.) is the spiritual heir to Pythagoras, but in constructing his philosophy he was also much influenced by the intellectual challenges laid down by Parmenides of Elea (c. 515-445 B.C.) and Heraclitus of Ephesus (fl. c. 500 B.C.). Heraclitus seems to have been the first to view the world (*kosmos*) as a system: in constant flux but held together in a tension of opposites, by a force that he termed *logos* ("ratio," "reason," "word"). Parmenides focused on the problem of being, what must be the characteristics of what is, and declared that it must be one, eternal, uniform and motionless, and that only what is can be known: there can be no knowledge of what is not. The true subject of these mysterious pronouncements remained a puzzle for subsequent thinkers, but they make best sense if they are taken to concern the totality of what is. To confuse matters, Parmenides also composed an account of the physical world, which for him was a realm of illusion, and Plato took up the challenge thus posed by postulating first an intelligible realm of true Being, which fulfilled Parmenides' prescription, and served as home of the Forms, ideal archetypes of all physical reality, and then a sense-perceptible realm of Becoming, in which we dwell, which is in constant (Heraclitean) flux but held together nonetheless by the system of Forms, which project themselves upon a material substratum in the form of geometrical structures (the basic triangles and their combinations described in his dialogue *Timaeus*).

However, Pythagoras is the dominant influence on Plato and his immediate successors, Speusippus and Xenocrates, under whom Pla-

tonism becomes properly a system. All their works have perished, but we can see from the titles that are preserved their formalizing tendency, of Xenocrates in particular, and that propensity for reinterpreting Pythagoras to accord with their doctrines that is the origin of *Neo-Pythagoreanism. Speusippus advanced a doctrine of the first principle, that it is a unity beyond being, which finds no support in main-line Platonism before Plotinus but which seems to have found echoes in less orthodox Neo-Pythagorean and platonizing gnostic circles. Xenocrates, perhaps influenced to some extent by *Aristotle, postulated as a first principle a monad that is also an intellect and whose contents were probably, though not certainly, envisaged as being the Forms (this is the case in the Platonism of such figures as Antiochus and Eudorus in the first century B.C.).

Plato's most distinguished successor, however, was his most dissident one, *Aristotle (384-322 B.C.). Aristotle, son of a distinguished doctor from Stagira in the north of Greece, had joined Plato's Academy in 367 B.C., at the age of seventeen, and remained with him until his death, though showing an increasing tendency to argue with him on basic issues. After a period abroad, Aristotle set up his own rival school across town, the Lyceum or Peripatos, in 335 B.C. Aristotle greatly advanced all departments of philosophy, metaphysics, physics, ethics and logic, but, despite his polemical stance toward Plato, his disagreements with him chiefly concern the theory of Forms, the general tendency to mathematicize the universe (evident particularly in Plato's other successors) and the doctrine of the separable nature of the soul. Later Platonists managed to appropriate most of Aristotelian philosophy into a common Academic synthesis, even contriving to downplay his objections to the Forms and his denial of the separate existence of the soul. In the former case, he was held to be referring to the immanent form (*eidōs*), a projection into matter of the transcendent form (*idea*); in the latter, likewise, his analysis (in the *De Anima*) is thought to concern only the soul in its embodied mode—a triumphant exercise of the late antique philosophical conviction that great minds must at all costs think alike, as well as being entirely consistent with themselves!

Aristotle's doctrine of the supreme principle, or God, as a mind thinking itself becomes stan-

dard Platonic doctrine up to the time of Plotinus, when a doctrine stemming from Speusippus is reasserted, of a unitary first principle, above being and intellection, the self-thinking mind being relegated to second place in the universe. Such doctrines as those of the four causes, of matter, of potentiality and actuality, and the whole of Aristotelian logic, are also taken on board. In the sphere of ethics, the doctrines advanced in the *Nicomachean Ethics*, such as those of virtue as a mean, the moderation of the passions and contemplation (*theoria*) as the supreme purpose of human life, are accepted likewise. It was felt by later Platonists that in all these areas Aristotle was formalizing the common doctrine of the Academy.

3. Hellenistic Philosophy: Stoics and Epicureans.

During the *Hellenistic era, dating broadly from the death of *Alexander the Great in 323 B.C. to the defeat of Antony and Cleopatra by Augustus in 31 B.C., the cutting edge of philosophy was represented not by either the Academy (which after Polemon deviated into skepticism) or by the Lyceum (which after Aristotle's successor, Theophrastus, declined into antiquarianism and triviality) but rather by the rival schools of *Stoics and *Epicureans, the one founded by Zeno of Kiton, in Cyprus (395-263 B.C.), a creative admirer of the Cynic movement, the other by the Athenian Epicurus (341-270 B.C.), a dissident follower of the Atomists, but both based in Athens.

Of these, the Epicureans have little to offer from the perspective of Christianity—being materialists, constructive atheists (Epicurus held that the gods existed but were not concerned with humans) and devotees of pleasure as the highest aim of human life—except for their advancement of certain arguments that they developed against the existence of the traditional Greek gods, which are borrowed gratefully by the church fathers. The Stoics, by contrast, despite their materialism, are of great importance. In metaphysics, their conception of the Logos, or creative reason-principle of God, which is borrowed back by later Platonists as a demythologized version of the Demiurge of Plato's *Timaeus*, becomes crucial for the development of christological doctrine from the Fourth Gospel on and causes difficulties later about the relation of the Son to the Father.

In epistemology, the Stoics' most important contribution was to postulate the concept of the "cognitive impression" (*katalēptikē phantasia*), the essential feature of which was that it could not have come from anything other than that of which it did in fact come. On this basis they were able to construct a system involving propositions of which one could be certain, such as "gods exist" and "they exercise providential care over the world"—this in the face of the pervasive skepticism being advanced by the Platonic Academy of the time.

In ethics, too, the Stoics set up an ideal of the extirpation of the passions (*apatheia*), as against the less extreme Aristotelian ideal of their moderation (*metriopatheia*), which proved attractive both to many Platonists and to many of the church fathers. The Stoics propounded an ideal of the Sage as self-sufficient and impervious to the blows of fortune, an ideal that was in one way attractive to Christian ascetics but in another way antithetical to the Christian ideal of brotherly love and concern for one's fellow humans.

5. The Philosophies of the Roman Empire.

In the first century B.C., various important developments took place. The Platonist Antiochus of Ascalon (c. 130-69 B.C.), much influenced by Stoic thought, turned Platonism back to dogmatism in a way that was to prove fruitful for later ages, though a transcendental element derived from Neo-Pythagoreanism, which reestablished a supreme deity as immaterial and external to the physical world, needed to be added before the synthetic philosophical system known as Middle Platonism could emerge in the first centuries A.D. and exercise a significant influence on emergent Christianity. At the same time, a revitalized Stoicism, the most notable representatives of which were the Roman nobleman *Seneca (c. 4 B.C.-A.D. 65), the freed slave *Epictetus (mid-first to mid-second century A.D.), and the emperor Marcus Aurelius Antoninus (A.D. 121-180), popularized and developed the basic principles of Stoic ethics in such a way as to influence both Platonism and Christianity.

In many ways, the new synthesis developed by the third-century Platonist Plotinus (A.D. 204-269), taking in many concepts from both Aristotelianism and Stoicism but adding also a strongly transcendentalist element derived from the Neo-Pythagoreanism of Numenius (fl. c. A.D. 150) provided a stimulus for later Christian

thinkers such as the Cappadocian fathers. In Plotinus we find for the first time, in a coherent form, the concept of a first principle superior to intellect, the One, adumbrated by Plato's successor Speusippus but overlaid then by the Aristotelian concept of God as a self-thinking intellect. This development, however, which becomes a distinguishing mark of later Platonism, was one that Christian thinkers were disinclined to follow, as it conflicted with the concept of a personal God. Only in the writings of the mysterious sixth-century Christian Platonist going under the name of Dionysius the Areopagite is this concept taken on board, with fantastic results.

For Plotinus, as for most other philosophers of the period, philosophy is a matter of seeking the best way of purifying the soul from the influences of the body and the external world and leading it back to its source in the intelligible world. Both his ethical theory and his epistemology are directed to that end. He expends much effort in trying to bring us to a realization of our true nature, being that of a strictly impassive soul immured in a body animated by a sort of emanation from this soul, which is the seat of "vulgar" consciousness, involving passions and sense perceptions but which does not properly constitute the core of our being. Such a scenario, while considerably more austere than the normal Christian view, presents a challenge that a number of the more Platonically minded fathers, such as the Cappadocians, found stimulating.

PHYLACTERIES/TEPILLIN, QUMRAN. *See* DEAD SEA SCROLLS: GENERAL INTRODUCTION.

PIETY, JEWISH

For ancient *Judaism piety, or devotion to God, was understood to embrace every aspect of life:

"Piety governs all our actions and occupations and speech; none of these things did our law-giver leave unexamined or indeterminate" (Josephus *Ag. Ap.* 2.16 §171). In a more narrow sense, piety (*eusebeia*; cf. "holiness," *hosiotēs*) could refer to duty to God, although true piety was inseparable from its corollary, duty to fellow human beings ("justice," *dikaiosynē*, and "love of humanity," *philanthrōpia*; *Ep. Arist.* 131; cf. 24, 215; Josephus *Ant.* 18.5.2 §117; Philo *Spec. Leg.* 2.15 §63; Mk 12:28-34 par.). Although our focus will be on piety more narrowly conceived, a full picture of ancient Judaism must also include its strong emphasis on love of neighbor (Lev 19:18) and stranger (Lev 19:34) as essential to the right worship of God (*m. 'Abot* 1:2). The following discussion is divided among the three major spheres of life in which piety was practiced: temple, synagogue and daily life.

1. The Context of Piety
2. The Practice of Piety in the Temple
3. The Practice of Piety in the Synagogue
4. The Practice of Piety in Daily Life
5. Jewish Piety After A.D. 70

1. The Context of Piety.

1.1. Diversity and Unity. Critical use of our major sources—Jewish writings of the Second Temple period (*Josephus, *Philo, the *Apocrypha and Pseudepigrapha, *Dead Sea Scrolls), the NT, *rabbinic literature and pagan writers who discuss Jews and Judaism—reveals vibrant, developing and often diverse practices and beliefs, such that broad generalizations about Judaism are difficult and potentially misleading. Interpretations of the Torah varied, and surviving documents reveal often vigorous debates concerning correct practices (**Miqsat Ma'asey ha-Torah* [4QMMT]; Mk 7:1-23 par.; Mt 23; cf. the debates between the school of Hillel and the school of Shammai in rabbinic literature [see Neusner 1971]). Furthermore, the vast majority of Jews who lived in this period left no written records; the extent to which their various understandings of piety are reflected in our sources is a matter for conjecture.

In highlighting the diversity within Judaism, it must be emphasized that important core beliefs (particularly monotheism and election) and practices (e.g., circumcision, dietary observances, *sabbath) clearly set the Jewish people as a whole apart from surrounding cultures. Below we will focus on the core of generally shared

practices; more information on diversity of practice within Second Temple Judaism can be found herein under articles treating various groups and sects and in the works cited in the bibliography.

1.2. Obedience as a Response to Grace. The overarching context for Jewish piety was the belief that the one true God had graciously chosen *Israel to be his people. Monotheism—exclusive devotion to Yahweh—resulted in a strong abhorrence of Gentile idolatry, although the degree of participation in surrounding cultures varied widely (see Barclay; Kashner). *Rome generally exempted Jews from direct participation in the emperor cult (see Ruler Cult). The attempt of Gaius Caligula to install his statue in the Jerusalem *temple (c. A.D. 41) nearly touched off a worldwide uprising of Jews (Philo *Leg. Gai.* 31 §§213-17; cf. Mt 24:15 par.). After Gaius's death brought this crisis to an end, the right of the Jews to worship Yahweh alone was reaffirmed (Josephus *Ant.* 19.5.2 §§284-85).

Along with belief in Yahweh as the one true God came the conviction that this God had chosen Israel out of all the nations of the world and made a covenant with them. This conviction is crucial for a correct understanding of the place of the law in early Judaism (see Torah). Jewish piety has often been unfairly characterized as legalism—the attempt to acquire merit before God through the performance of various rituals and practices. This reconstruction of Judaism is founded primarily on a particular reading of polemical passages in the Gospels and in Paul's writings. When all of our available sources are considered, however, a much different picture results. In a series of major studies investigating a wide range of Jewish texts from approximately 200 B.C. to A.D. 200, E. P. Sanders has persuasively argued that obedience to the law was widely understood in Second Temple Judaism not as a way to earn God's favor but rather as a response to God's prior election of Israel (Sanders 1977, 1990, 1992; cf. Moore; see DPL, Law).

Obedience to the commandments was viewed as a sign of membership in God's covenant, but the covenant itself had its origin in God's grace, not in Israel's worthiness: "Thou hast shown us mercy, for we had no meritorious deeds to show. . . . For the whole world is Thine, and yet Thou hast no other people than Israel, as it is said, 'The people which I formed for Myself' (Is 43:21)" (*Mekilta Shirata* 9 [Lauterbach

2:69]). Likewise, while human obedience was a necessary response to God, the maintenance of the covenant ultimately depended on God's mercy and faithfulness: "As for me, if I stumble, the mercies of God shall be my eternal salvation. If I stagger because of the sin of flesh, my justification shall be by the righteousness of God which endures forever. . . . He will draw me near by His grace, and by His mercy will He bring my justification. He will judge me in the righteousness of His truth and in the greatness of His goodness He will pardon all my sins" (1QS 11:11-14, Vermes). Similar views are expressed in a multitude of texts, many of which are cited and discussed in detail by Sanders. That individual Jews, much like the adherents of any other faith, did not always live up to the ideals expressed in their theology is not to be doubted. However, criticisms of Jewish practices and beliefs, whether found in the NT or in other early Jewish literature, must be interpreted in light of the widespread and foundational Jewish conviction that obedience to the commandments was above all a response of love and devotion to the God who out of his abundant mercy and grace had chosen Israel to be his covenant people.

2. The Practice of Piety in the Temple.

2.1. One God, One Temple. The Second Temple was built after the exile on the site of Solomon's temple (516 B.C.; Ezra 6:14-18). *Herod began a massive expansion of the temple complex (20/19 B.C.; Josephus *Ant.* 15.11.1-7 §§380-425) that was not completed until about A.D. 64 (Josephus *Ant.* 20.9.7 §219; cf. Jn 2:20). What was most notable about the Jerusalem temple, however, was not its size and magnificence but the fact that it stood as the sole official temple of Yahweh, in stark contrast to the multitude of temples and shrines to other gods found throughout the Greco-Roman world (Acts 17:16, 22-23). "Since God is one, there should likewise be only one temple," remarks Philo (*Spec. Leg.* 1.12 §67; cf. Josephus *Ag. Ap.* 2.23 §193). Even groups who bitterly opposed the current temple leadership did not normally establish alternate temples, although the hope for a new or renewed temple was a common *eschatological expectation (Job 13:16-18; *1 Enoch* 90:28-29; *Jub.* 1:17, 29; 11QTemple 29:7-10; *Sib. Or.* 5:420-33; contrast Rev 21:22). Other Jewish temples, such as those at Araq el-Emir (second century B.C.) and Leontopolis (c. 160 B.C.-A.D. 73), never seri-

ously rivaled the Jerusalem temple. Diaspora Jews looked to Jerusalem and its temple as the spiritual center of Judaism (Philo *Spec. Leg.* 1.12 §§68-70).

2.2. Sacrifice, Prayer and Festivals. Temple activities centered around *sacrifice. The daily sacrifice of two male yearling lambs along with offerings of flour, oil and wine (one lamb in the morning and one in the late afternoon) was accompanied by *prayers and by the recitation of the *Shema*' and the Ten Commandments (Ex 29:38-46; Num 28:1-8; Josephus *Ant.* 14.4.3 §65; *Ag. Ap.* 2.23 §§196-97; *m. Tamid* 4:1-5:1). In connection with these daily sacrifices, the *priests burned incense before the Most Holy Place inside the temple (Ex 30:7-8; Jdt 9:1; Lk 1:8-11). Special sacrifices were offered on the sabbath, at the new moon, at the New Year, on the Day of Atonement and during the three major pilgrimage *festivals (Lev 23; Num 28:9-29:40; Josephus *Ant.* 3.10.1-7 §§237-57). Individual worshipers brought various offerings for purification (Mk 1:44; Lk 2:22-24; Acts 21:23-26), for transgressions or for thanksgiving (Lev 1-7; Josephus *Ant.* 3.9.1-4 §§224-36). Proper sacrifice was understood to require the right intentions, such as repentance for sin and reconciliation with others, on the part of the worshiper (Philo *Spec. Leg.* 1.53 §§290-95; Mt 5:23-24).

Laypeople came to pray in the temple precincts at the times of the daily sacrifices (Sir 50:5-21; Lk 1:10; Acts 3:1; cf. Acts 2:42) and throughout the day (Lk 2:37). Psalms continued to be sung in the temple as well (Sir 50:18). The temple courts and porticoes served as a location for Jesus' teaching (Mk 11:27; 14:49; Jn 10:23), for the apostles' preaching (Acts 5:42) and for gatherings of the Jerusalem church (Acts 2:46).

The three great pilgrimage feasts (Passover/Unleavened Bread, Weeks or Pentecost and Tabernacles), which recalled the exodus, wilderness journeys and the gift of the land (Ex 12:1-13:10; Num 28:16-31; 29:12-38; Deut 16:1-17), brought great crowds to Jerusalem. The increased numbers and heightened sense of national identity made these festivals prime occasions for protest and even revolt (Josephus *Ant.* 13.13.5 §§372-73; 17.9.3 §§213-18; 17.10.2 §§254-64; 20.5.3 §§105-12; cf. Mk 14:1-2 par.). As a result, the Roman governor (*see* Roman Governors of Palestine), who normally resided in *Caesarea Maritima, brought extra troops to Jerusalem for the feasts.

Although the Torah requires attendance at all three major festivals, those who lived far from Jerusalem probably found it difficult to come to more than one festival per year, while most "Diaspora Jews might have made the pilgrimage only once, if at all. The pilgrimage was both a worshipful and a festive experience. Families would spend their "second tithe" money in Jerusalem (Deut 14:22-26; *Jub.* 32:10-14; *Josephus Ant.* 4.8.8 §205) and also use the visit to bring their sacrifices, which in the case of shared sacrifices and the Passover sacrifice resulted in a relatively rare opportunity to enjoy red meat. The difficulty involved in bringing sacrificial animals long distances created a demand for suitable animals that could be bought in Jerusalem (Mk 11:15 par.; see Festivals).

Gentiles could and did bring gifts and sacrifices to the temple (*Josephus Ag. Ap.* 2.5 §48; *J.W.* 2.17.3 §§412-14; 5.13.6 §§562-63; cf. Is 56:7; Mk 11:17 par.), though they were prevented from moving beyond the outer court by a barrier carrying a strict warning that to proceed further would result in a death sentence (*Josephus Ant.* 15.11.5 §417; *Philo Leg. Gai.* 31 §212; cf. Acts 21:27-29; Eph 2:14). Rome subsidized a daily sacrifice at the temple for the emperor and the Roman people (*Philo Leg. Gai.* 23 §157; 40 §317; cf. 32 §232; 36 §291; 45 §§356-57; *Josephus Ag. Ap.* 2.6 §77; *J.W.* 2.10.4 §197); the priests' decision in A.D. 66 to cease this sacrifice signaled their fixed intent to go to war with Rome (*Josephus J.W.* 2.17.2-3 §§408-16; see Jewish History: Roman Period; Jewish Wars with Rome).

2.3. Financial Support of the Temple. The Torah, as interpreted in the Second Temple period, stipulated that a tenth of each nonsabbatical year's produce be given for the support of the Levites, who in turn tithed to the priests (Num 18:21-32; Neh 10:37-39; *Josephus Ant.* 4.4.4 §69). The priests also received the firstfruits of produce (Num 18:13), the firstborn of clean animals (unclean animals and firstborn children were redeemed with money, Ex 13:11-16; Num 18:15-18), heave offering (Num 18:11-12; Neh 10:37; *m. Ter.*) and portions of many of the sacrifices and offerings brought to the temple (*Josephus Ant.* 4.4.4 §§69-75). People could also dedicate property to the temple (Mk 7:11 par.).

A yearly temple tax of a half shekel (2 denarii), required of every male Israelite over twenty, directly supported the temple operations (Ex 30:11-16; Neh 10:32). This tax appears to

have been paid faithfully, even by Diaspora Jews, and it served as a marker of Jewish identity. Rome helped to ensure the Jews' right to send money to Jerusalem despite the local tensions caused by this large outflow of cash (*Philo Spec. Leg.* 1.14 §§76-78; *Leg. Gai.* 23 §§156-57; 31 §216; 36 §291; 40 §§311-16; *Josephus Ant.* 14.10.8 §§213-16; 16.6.2-3 §§163, 166; *Cicero Flac.* 28; on payment of the tax by Babylonian Jews, see *Josephus Ant.* 18.9.1 §§312-13; *Philo Leg. Gai.* 31 §216). The rich temple treasury found itself the object of plunder by foreigners more than once (1 Macc 1:20-24; *Josephus J.W.* 2.9.4 §175; 2.14.6 §293; *Ant.* 17.10.2 §264). After the destruction of the temple, the Romans collected an equivalent tax on all Jews to be paid to the temple of Jupiter Capitolinus (*Josephus J.W.* 7.6.6 §218; *Dio Cassius Hist.* 66.7.2). Jesus' payment of the temple tax is the subject of a curious exchange in Matthew 17:24-27 (see Taxation, Jewish; see also Sanders 1992. For attitudes toward the temple, see Temple, Jewish).

3. The Practice of Piety in the Synagogue.

While its origins remain obscure, the synagogue was an established, if continually developing, institution by the Second Temple period in both the Diaspora and Palestine. The functions associated with the synagogue varied from place to place and from time to time, with the synagogue's importance to the Jewish community likely increasing the greater the distance from Jerusalem. The right of Jews to assemble was protected by Roman law, even in Rome itself, where other religious societies were forbidden to meet (*Josephus Ant.* 14.10.8 §§213-16; *Philo Leg. Gai.* 40 §§311-16). Sabbath assembly was regarded by some as a Mosaic decree (*Bib. Ant.* 11:8; *Philo Hypoth.* 7.12-13; *Op. Mund.* 43 §128; *Josephus Ag. Ap.* 2.17 §175).

Remains of synagogues from the first century A.D. have been discovered, but in many cases Jews may have met on the sabbath in private homes or in buildings used on other days for different purposes (see Synagogues; see also Fine; Levine 1987 and 1999; Urman and Fleisher). In the Diaspora, synagogues were often located by water, perhaps for purification rituals (*Josephus Ant.* 14.10.23 §258; *Ep. Arist.* 305-6; Acts 16:13). Leadership may have been primarily by laypeople, although the Theodotus inscription from Jerusalem (in Greek, usually dated first century A.D.) indicates several genera-

tions of priestly leadership at that particular synagogue (cf. Philo *Hypoth.* 7.12-13; see Inscriptions and Papyri: Jewish). Leadership of synagogues by *Pharisees is suggested by some passages in the Gospels (Mt 23:2, 6), but not all (Mk 5:21-24, 35-43 par.; Lk 13:14). *Women appear to have participated in leadership roles in the synagogue to varying degrees (cf. Acts 16:13-14; 17:4, 12; 18:26; see Brooten; Kraemer; Feldman 1996, 56-58).

3.1. Study of Torah. During the pre-70 period, the reading and exposition of *Torah was the primary sabbath activity of the synagogue (Philo *Op. Mund.* 43 §128; *Spec. Leg.* 2.15 §§61-64; Josephus *Ag. Ap.* 2.17 §175; Acts 15:21). Portions of the Torah and Prophets were read, although there was not yet a standard lectionary. The origin of the *Septuagint and of the *targumim is probably to be traced back to the necessity of providing translations of Scriptures in the vernacular (*m. Meg.* 4:4; see Septuagint/Greek Old Testament; Aramaic Language). Exposition and exhortation would follow, perhaps with several people speaking in turn. The NT provides important early evidence for the structure of a synagogue service (Lk 4:16-27; Acts 13:14-43; cf. 1 Cor 14:26-33a). The Dead Sea sect was notable for its devotion to the study of Torah, legislating continual study and exposition by some members of the group (1QS 6:6-8; 8:12-16).

3.2. Prayer. The most common Greek term for what we know as a synagogue is *proseuchē*, "[place of] prayer" (see Acts 16:13, 16), yet the role of communal prayer in the synagogue service of the pre-70 period is unclear. The Dead Sea sect appears to have had a fixed liturgy for corporate prayer, but similar evidence for other groups is lacking before A.D. 70 (see Liturgy: Qumran). Even if they did not attain a fixed form this early, however, the main themes of later rabbinic prayers such as the Eighteen Benedictions—creation, revelation, election, redemption—were likely widespread. These later prayers share common features with the Lord's Prayer as well as with prayers known from the Dead Sea Scrolls (see Prayer; Liturgy: Rabbinic).

3.3. Other Communal Activities. Particularly in the Diaspora, the synagogue functioned as a center for community life in a manner similar to that of Greco-Roman associations, providing a site for communal meals and for the celebration of holy days (Josephus *Ant.* 14.10.8 §§213-16; cf. Mt 23:6; 1 Cor 11:17-34; see Associations) and serv-

ing as a collection point for alms (Mt 6:2) and for the temple tax (Philo *Leg. Gai.* 23 §156; Josephus *Ant.* 14.10.8 §215; 16.6.2 §§163-64). The synagogue also served as a law court for community matters, with authority to mete out punishments such as the thirty-nine lashes suffered repeatedly by Paul (2 Cor 11:24; cf. Mt 10:17; Acts 22:19; *m. Mak.* 3:10-11). The Theodotus inscription indicates that the synagogue provided accommodations for visitors to Jerusalem, most likely from the Greek-speaking Diaspora.

3.4. Gentiles and the Synagogue. Jewish piety evoked both scorn and admiration from Gentiles (see Feldman 1993; Whittaker). Instances of violence against Jews and their synagogues are known from this period (e.g., in *Alexandria, A.D. 38, Philo *Leg. Gai.* §§132-39; *Flacc.* §§41-53; Caesarea, A.D. 66, Josephus *J.W.* 2.14.4-5 §§284-92), yet a sizable number of Gentiles appear to have attended synagogues and to have observed some Jewish practices (Josephus *Ag. Ap.* 2.39 §282; *J.W.* 7.3.3 §45; see Proselytism and Godfearers; see also Feldman 1993).

4. The Practice of Piety in Daily Life.

4.1. Circumcision. Though it was practiced by other peoples in the ancient world (e.g., by Arabs and by Egyptian priests, Josephus *Ant.* 1.12.2 §214; *Ag. Ap.* 2.13 §141), circumcision was particularly associated with the Jews. According to Genesis 17:9-14, circumcision on the eighth day was given to Abraham by God as a sign of the covenant. Thus, to forego circumcision would be to renounce the covenant (Gen 17:14; cf. Acts 21:20-24; *m. Ker.* 1:1). That it served as a clear marker of Jewish identity can be seen in Antiochus IV Epiphanes' prohibition of the practice (1 Macc 1:48) and in the attempt of some Hellenizing Jews surgically to remove the evidence of circumcision (1 Macc 1:15). Circumcision was the mark that distinguished Gentile proselytes from sympathizers (Josephus *Ant.* 20.2.4 §§38-48; 20.7.1 §139; see Nolland).

4.2. Dietary Observances. Another distinguishing mark of Jewish identity was observance of biblical restrictions on allowable foods (Lev 11:1-47; Deut 14:3-21; see *DJC*, Clean and Unclean). Particularly notable in the ancient world (and often the subject of mockery—cf. Philo *Leg. Gai.* 45 §§361-62) was Jewish avoidance of pork. During the *Hasmonean revolt, pious Jews chose death rather than violate this stricture (2 Macc 7; 4 Macc 5:1-6:30).

While observance of dietary laws was fairly uncomplicated in Palestine, Diaspora Jews had more difficulty obtaining acceptable food, as is evidenced by a number of decrees designed to ensure that Jews had access to their ancestral food (Josephus *Ant.* 14.10.12, 21, 24 §§226, 245, 261). Eating with Gentiles would have been acceptable as long as Jewish food was available (Jdt 10:5; 12:2, 9, 19; *Ep. Arist.* 180-81), although in practice the food laws probably limited social interaction between Jews and Gentiles (3 Macc 3:3-7). Eating Gentile meat would have posed difficulties both because most of the meat in the Greco-Roman world had been sacrificed in connection with a religious ceremony (1 Cor 8, 10) and because Jews suspected Gentile slaughtering methods of leaving blood in the meat (Lev 7:26-27; 17:10-14; Acts 15:20). The common practice of offering a libation to the gods would have made Gentile wine objectionable as well. Gentile oil was also avoided by many Jews, perhaps for purity reasons (Josephus *Life* 13 §74; *J.W.* 2.21.2 §591; *Ant.* 12.3.1 §120). Where proper food was unavailable, pious Jews probably ate vegetables and drank water (Josephus *Life* 3 §14; cf. Dan 1:8-16; Rom 14:2). Josephus mentions observance of at least some of the Jewish dietary laws by Gentile sympathizers as a fairly common phenomenon (Josephus *Ag. Ap.* 2.39 §282).

4.3. Purity. Biblical purity laws also continued to be observed in our period (e.g., Lev 11-15; Num 19; see *DJG*, Clean and Unclean; see also Sanders 1992). Purity primarily had to do with one's ability to participate in the temple cult, since no impure Israelite could enter the temple precincts (Lev 15:31; *m. Parah* 11:4). Because impurity was contracted in the course of everyday activities, however, most people were impure most of the time. It is crucial to realize that to be in a state of impurity was not sinful in and of itself. Many activities that in themselves were pious and good (e.g., caring for the dead; sexual intercourse; childbirth) resulted in impurity. Depending on the type of impurity, purification could require some or all of the following: immersion, washing clothes, the passage of set time periods, inspection by a priest and sacrifice (cf. Mk 1:44). Corpse impurity required a seven-day purification period and sprinkling with a special mixture of water and the ashes of the red heifer sacrifice (Num 19). Only the high priest was prohibited from contracting corpse impurity altogether (Lev 21:10-12), but priests were ex-

pected to avoid it except in the case of a close relative's death (Lev 21:1-4). This stricture may help to explain the behavior of the priest and Levite in Jesus' parable of the Good Samaritan (Lk 10:25-37).

Although impurity was in many cases unavoidable and not in itself sinful, purity was generally seen as a desirable state, and many people may have immersed regularly (Jdt 12:7-9). Archaeological investigation has turned up numerous immersion pools both in Jerusalem and in areas of Palestine far from the temple. Groups such as the Pharisees and the Dead Sea sectarians elaborated purity laws to a greater extent than most Jews observed (see Pharisees; Essenes). The Pharisees as well as other groups of pious Jews (Is 66:20; Jdt 11:13; *m. Parah* 11:4-5; CD 11:18-21) tried to handle the priests' food in a state of ritual purity, though to what extent they attempted to eat their own food in purity is debated (see Neusner 1973; Sanders 1990). Nothing suggests that the Pharisees forced everyone to follow their purity rules or considered those who did not to be "sinners" (*m. Parah* 11:5); even the schools of Hillel and Shammai disagreed on correct practices, yet they continued to associate and intermarry with each other (*m. Yebam.* 1:4). Jesus debated with Pharisees over issues involving purity (see *DJG*, Clean and Unclean; see also Sanders 1990; Fredriksen).

In the Diaspora, Jews developed extrabiblical purifications such as handwashing and sprinkling (*Ep. Arist.* 305-6; *Sib. Or.* 3.591-93; Philo *Spec. Leg.* 3.10 §63; 36 §§205-6; cf. Mk 7:1-4), evincing a desire for purity even apart from direct participation in the temple cult. Writers such as Philo emphasized that outward purity is valueless without purity of one's heart (Philo *Spec. Leg.* 1.49 §§262-66; *Quaest. in Ex.* 1.2; cf. IQS 2:25-3:12; Ps 24:4; Jas 4:8). Gentiles were apparently not thought to be subject to purity laws. The major Jewish concern in social relationships with Gentile neighbors would have been to avoid idolatry and impure food (see Sanders 1992, 72-76).

4.4. Prayer. In addition to spontaneous, private prayer, the practice of fixed times of prayer was widespread by this period. Prayers were joined with recitation of the *Shema* (Deut 6:4-9), a passage that affirms the core beliefs of monotheism and election. Saying the *Shema* in the morning and evening follows from a literal interpretation of Deuteronomy 6:7b-9, as does the

wearing of *tefillin* (phylacteries) on arm and forehead and the use of *mezuzot* on doorposts, both of which contained portions of Scripture (*m. Ber.* 1:1-4; 1QS 9:26-10:3; 4Q128-155; *Ep. Arist.* 158-60; Josephus *Ant.* 4.8.13 §§212-13; Mt 23:5). Some evidence connects regular times of prayer with the daily sacrifices in the morning and late afternoon (*Jdt* 9:1; *t. Ber.* 3:1; cf. *m. Ber.* 4:1). Other sources suggest that three times of prayer were observed (*m. Ber.* 4:1; cf. Dan 6:10, 13; Ps 55:17; Acts 10:9). Mealtimes provided yet another opportunity for prayer and thanksgiving (1QS 6:4-6; Josephus *J.W.* 2.8.5 §131; Mk 6:41 par.; Mk 8:6-7 par.; Mk 14:22-23 par.; Rom 14:6). The proliferation of hymns and prayers in Second Temple period texts attests the vibrancy of prayer and praise in this era (cf. 1QH; Lk 1:46-55, 67-79; 2:28-32; see Prayer).

4.5. Sabbath. The Torah establishes observance of a day of rest as a mark of the covenant, linking it both with creation (Ex 20:8-11) and with the redemption of Israel at the exodus (Deut 5:12-15). The prohibition of work on the sabbath, elaborated in later periods (*Jer* 17:19-27; *Neh* 10:31; 13:15-22), continued to be further specified in the Second Temple period, though not everyone observed the same restrictions. For example, the practice of the Essenes was notable for its strictness (Josephus *J.W.* 2.8.9 §147; cf. CD 10:14-11:18). Rabbinic evidence indicates that certain religious duties and any actions necessary to protect life, even when the danger to life was doubtful, took precedence over sabbath observance (*m. Yoma* 8:6; *m. Sabb.* 18:3-19:5; *m. Pesah.* 5-6).

Observance of the sabbath was a conspicuous marker of Jewish identity. During the Hasmoncan revolt, some pious Jews refused even to defend themselves on the sabbath and were slaughtered (*1 Macc* 2:29-38). The subsequent decision to allow self-defense (*1 Macc* 2:39-41) covered only direct assault; thus, in 63 B.C., Pompey's army was able to capture the temple by building siege works on the sabbath, when they were unhindered by the Jews' missiles (Josephus *J.W.* 1.7.3 §§145-47; Dio Cassius *Hist.* 37.16.1-4). The Romans exempted Jews from military service because of their refusal to carry arms or march on the sabbath (Josephus *Ant.* 14.10.12 §226; see Roman Military), and Josephus mentions decrees allowing Jews to assemble on the sabbath (Josephus *Ant.* 14.10.23-24 §§258, 261) and exempting them from being called into

court on the sabbath (Josephus *Ant.* 16.6.2 §163). In addition to the weekly sabbath, every seventh year the land was to have a rest from cultivation (Ex 23:10-11; Lev 25:1-7). That this was generally observed is suggested by Caesar's remission of taxes on Herod's domain in the seventh year (Josephus *Ant.* 14.10.6 §202).

Although some pagans mistook the sabbath for a fast day, in reality it was a day for rest and festive dining with family and friends (cf. Lk 14:1; *Jdt* 8:6). *'Erubin*, a Pharisaic device allowing houses with a common courtyard to be considered as one dwelling (thus permitting the carrying of vessels between the houses), facilitated communal dining, even though it relaxed the sabbath restriction that prohibited carrying vessels out of a house (*Jer* 17:22; *m. 'Erub.*). Other groups, such as the *Sadducees, who did not recognize this custom (cf. *m. 'Erub.* 6:1-2), probably considered the Pharisees to be breaking one of the commandments regulating the sabbath. Yet this, like most minor differences of practice, appears to have been met with toleration. Sabbath observance was one of the practices often adopted by Gentile sympathizers (Josephus *Ag. Ap.* 2.39 §282; Philo *Vit. Mos.* 2.4 §§20-22; cf. Rom 14:5-6; Gal 4:10; Col 2:16).

5. Jewish Piety After A.D. 70.

The sacrificial cult ceased with the destruction of the temple in 70, yet hopes for the imminent rebuilding of the temple and the renewal of *sacrifice persisted at least until after the Bar Kokhba revolt. A saying attributed to Rabbi Johanan ben Zakkai indicates one way in which Jewish piety came to terms with the loss of temple and sacrifice: "We have another atonement in place of [the temple cult]. . . . 'For I desire lovingkindness and not sacrifice (Hos 6:6)'" (*'Abot R. Nat.* A, 4 [B, 8]; cf. *Pr Azar* 15-18; *Sir* 35:1-5; *Tob* 4:11). In Justin's *Dialogue with Trypho* (c. 160), Trypho notes that even without the temple the Jews continue to observe practices such as circumcision, sabbath, new moon festivals and some purificatory washings (Justin Martyr *Dial. Tryph.* 46.2); in addition, continued observance of dietary laws is presupposed by rabbinic literature. As synagogue worship gradually became more central to Jewish piety, its liturgy was expanded and standardized to a greater degree than in the pre-70 period. In the decades following the first war with Rome, rabbinic Judaism increasingly became the dominant, though not

the exclusive form of Judaism; even so, the debates preserved in the Mishnah and related literature show that rabbinic Judaism continued to be characterized to a significant degree by diversity of practice.

PILATE INSCRIPTION

Pontius Pilate, governor of Judea, notorious for his role in condemning Jesus to the cross (Mt 27:1-2, 11-26 par. Mk 15:1-15; Lk 23:1-7, 13-25; Jn 18:28-19:16; cf. Acts 3:13; 4:27; 13:28; 1 Tim 6:13), succeeded Valerius Gratus in A.D. 26 (see Roman Governors of Palestine). Pilate was dismissed by Vitellius, legate of Syria, in late A.D. 36 or early 37. The immediate cause for Pilate's removal was his violent action taken against the *Samaritans who had gathered at the foot of Mt. Gerizim in hopes of finding the lost vessels of the Samaritan temple, which had been destroyed by the *Hasmoneans some 150 years earlier. Pilate was involved in at least two serious encounters with the Jewish people (Josephus *J.W.* 2.9.2-3 §§171-74; *Ant.* 18.3.1-2 §§55-62; *Philo Leg. Gai.* 38 §§299-305; Lk 13:1).

In the Gospels, Pilate is called a *hēgemōn* (cf. Mt 27:2; Lk 3:1), a general term that means "leader" or "governor" and can serve as the

Greek equivalent for either prefect or procurator. *Josephus calls Gratus, Pilate's predecessor, an *eparchos* (Josephus *Ant.* 18.2.2 §33) but elsewhere refers to Pilate as an *epitropos* (Josephus *J.W.* 2.9.2 §169), the word *Philo uses (*Leg. Gai.* 38 §299). The Roman historian Cornelius *Tacitus (c. 56-c. 118) states that "Christus . . . had suffered the death penalty during the reign of Tiberius, by sentence of the procurator Pontius Pilate" (*per procuratorem Pontium Pilatum*, *Ann.* 15.44). Some scholars suspected that Tacitus was in error and that Pilate was a governor of the rank of prefect, not procurator.

An inscription found at *Caesarea Maritima in 1961 confirmed this suspicion. Inscribed on a partially effaced stone that had been used as a step in the theater are the following words:

STIBERIÉVM
TIVSPILATVS
ECTVSIVDA[EA]E
É

A. Frova has restored most of the text accordingly:

[Caesarien]STIBERIÉVM
[PON]TIVSPILATVS
[PRAEF]ECTVSIVDA[EA]E
[D]É[DIT]

This restoration reads:

[Caesarean]s' Tiberieum
[Pon]tius Pilate,
[Pref]ect of Juda[ea]
[d]e[dicates]

Several other restorations of the first word have been proposed. S. Bartina: [opu]s Tiberieum—"The Tiberieum building"; A. Degrassi, [Dis Augusti]s Tiberieum—"The Tiberieum of the Divine Augusti" (i.e., Caesar Augustus and Livia his wife, the mother of Tiberius); E. Weber, [Kal(endis) Iulii]s Tiberieum—"The Tiberieum of July First"; V. Burr, [nemu]s Tiberieum—"The Tiberieum of the (sacred) grove"; C. Gatti, [Iudaei]s Tiberieum—"The Tiberieum of the Jews"; G. Labbé, [munu]s Tiberieum—"The Tiberieum (erected for the people)"; G. Alföldy, [nauti]s Tiberieum—"The seamen's Tiberieum." The last proposed reconstruction has much to commend it. Alföldy believes that the Seamen's Tiberieum in all probability was the lighthouse that guided ships into the harbor at Caesarea Maritima. Alföldy restores the word in the last line *refecit* ("restores"), concluding that the restoration of the lighthouse was only part of a major renovation

of the harbor, over which Pilate gave oversight.

The Pilate inscription thus confirms the governor's rank as prefect, and it may also provide an important indication of what major projects occupied the attention of the governor of Judea.

PLATO, PLATONISM

The system of philosophy founded by Plato is perhaps the greatest philosophical edifice ever erected in the Western intellectual tradition. Its influence even on thinkers who rejected its principles, beginning with Aristotle, has been pro-

found. Contemporary Platonism helped to shape Christian theology in the first centuries A.D. and heavily influenced European thought thereafter, down to Descartes, Kant and Hegel.

1. Plato
2. Platonism

1. Plato.

Plato (427-347 B.C.), an Athenian philosopher, was of aristocratic and antidemocratic background. In his youth he fell under the spell of *Socrates, and this led him first to abandon literature and then, after Socrates' death in 399 B.C., to give up any thought of political activity. From Socrates he learned to subordinate the concerns of the body to those of the soul, as the true seat of the personality, and to seek for truth through the formulation of definitions of key concepts, such as justice, courage and beauty, through the practice of dialectic, or the radical questioning of uncritically held assumptions by means of dialogue, which was Socrates' own method of philosophizing. After Socrates' execution, Plato left *Athens for some years and traveled widely, chiefly to southern Italy and Sicily, where he came into contact with Pythagorean philosophers, such as Archytas of Tarentum, who gave a new direction to his thought.

Socrates had not much concerned himself with the ontological status of the definitions that he was seeking. Now Plato was stimulated to postulate that they must relate to real objects in an intelligible world (Forms or Ideas) and that this was the level of reality at which the soul is truly itself. He was also attracted by the Pythagorean mathematization of the universe, whereby things were in some sense numbers, or mathematical formulas, and all was held together by a cosmic harmony. While he considerably refined these Pythagorean concepts, they remain basic for his later thought.

On returning to Athens in 387 B.C., Plato established a philosophical school, the Academy, and gathered around him a distinguished group of pupils, including his immediate successors Speusippus and Xenocrates, the distinguished mathematician Eudoxus, and *Aristotle, who, though Plato's pupil for twenty years, was later to set up a rival school. Plato presided over this establishment for forty years, with only two interruptions, so far as we know, in the form of two further visits to Sicily, in 367 and 361, in a futile attempt to convert the tyrant of Syracuse, Diony-

sius II, into an ideal ruler.

Plato produced a steady stream of works—not straightforward treatises, however, but dialogues, in which his own views are generally not unequivocally presented. This device enables him to honor Socrates' aversion to writing and the memory of Socrates himself, while still preserving for posterity something of his philosophical positions. This problematic body of work seems to be preserved in full and amounts to fully twenty-seven works, of varying length and importance. Their dates of composition are unknown, but they are conventionally divided into three broad groups, early, middle and late. The most important works for later Greek philosophy, and for early Christianity, are in the latter two groups: *Phaedo*, *Symposium*, *Republic*, *Phaedrus*, *Parmenides*, *Theaetetus* (middle); and *Sophist*, *Statesman*, *Timaeus*, *Philebus*, *Laws* (late). Of special interest also is the seventh in a collection of Plato's letters, which contains some autobiographical material and a statement of his philosophical position.

The most important aspects of his philosophy from the point of view of Christianity are his emphasis on the immortality of the soul and the paramount importance of "tending" it by the practice of virtue (see esp. *Phaedo*, *Republic*); the existence of an intelligible realm, in which are situated the Forms, paramount among which is the Form of the Good; and that this material world is a realm of flux and imperfection about which nothing certain can be known—knowledge is of perfect and permanent objects of knowledge, namely, the Forms. His political philosophy—his advocacy of rational absolutism—is also of some importance as a basis for theories of absolute monarchy.

2. Platonism.

As a coherent and structured philosophical system, Platonism should be regarded as beginning not with Plato himself but rather among his immediate successors in the Academy, in particular with its third head, Xenocrates, who presided over the Academy from 339 to 314 B.C. We may divide Platonism in the ancient world, up to about A.D. 250, into three main periods—a fourth, Neo-Platonism (c. A.D. 250-600), falls outside the scope of the present survey.

2.1. The Old Academy (347-267 B.C.). Plato's followers continued to develop his ideas freely after his death. After the formal secession of Ar-

istotle in 335 B.C. to found his own school, however, a process of codification of doctrine seems to have begun under Xenocrates, who was probably responsible for the definitive edition of Plato's works and who published many works himself (all now lost) that sound like dogmatic treatises on various basic issues. The other heads of the Old Academy were Speusippus, who led from 347 to 339 B.C., and Polemon, who presided longest, from 314 to 267 B.C.

The complex of doctrines that emerges is as follows:

1. In metaphysics, a first principle is termed a Monad or One, but it is also a self-thinking intellect like Aristotle's god, the contents of whose mind are probably the Platonic Forms, and from whose interaction with a secondary principle (an indefinite Dyad), the whole cosmos, at its various levels, is derived. We also find the doctrine of soul as a self-motive number—a formulation probably intended to bring together the definitions of soul in Plato's *Phaedrus* and *Timaeus*.

2. In ethics we find a recognition of "the primary natural instincts" as a basis for conduct, in a way that seems to anticipate the *Stoics, though without involving the rejection of physical or external goods. In fact, Old Academic ethics remained closer to Aristotelian principles, and this continued to be the case in later times.

3. In logic, the Old Academicians remained faithful to the Platonic processes of collection and division. The Aristotelian system of categories and the syllogism do not seem to have been adopted until the Middle Platonic period.

2.2. *The New Academy (267-80 B.C.)*. With Polemon's successor Arcesilaus (scholarch 267-241 B.C.), the Platonist tradition takes a remarkable turn, though one that could and did reasonably appeal for authority to the Socratic, aporetic aspect of Plato's teaching. What precisely set this off is not clear, but it is probably a reaction to the dogmatic tendencies of contemporary Stoicism. The main thrust of Arcesilaus's philosophical activity was polemical, his chief targets being the Stoic theory of knowledge, specifically the doctrines of *enargeia* ("certainty") and *synkatathesis* ("assent to impressions"). He asserted that the sort of certainty claimed by the Stoics was not attainable and that the only rational attitude to physical phenomena was to withhold assent (*epochē*). Like Socrates, he published nothing but was enormously influential nonetheless. Of his followers, only Carneades (schol-

arch c. 160-129 B.C.) made any original contribution. He seems to have devised a system of three levels of "probability" (*pithanotes*), by observance of which one would be enabled to make practical decisions without assenting to the perspicuity of impressions.

2.3. *Middle Platonism (c. 80 B.C.-A.D. 250)*. The New Academy's position was effectively undermined by its last scholarch, Philo of Larissa, who went so far as to deny that Platonists claimed that things were nonapprehensible but only that the Stoic criterion of certainty was unworkable. His precise position is not easy to recover, but it left the way open for his dissident successor, Antiochus of Ascalon (c. 130-69 B.C.), to reassert the dogmatic tradition of Platonism, augmented by Stoic influences, thus inaugurating the amalgam known as Middle Platonism. This is the period of Platonism most influential on the earliest generations of Christian thinkers. Antiochus claimed to be returning the Academy to its Platonic roots, but in reality he was much influenced by Stoicism, to the extent that it is not clear that he believed in immaterial reality. Certainly he accepted a Stoic-style system of an active and passive principle within the universe, taking the creator-god of Plato's *Timaeus* as representing the Stoic *Logos*, a concept influential in Christianity from St. John onwards. He also adopted the Stoic formulation of the purpose of human life as "living in accordance with nature."

However, over the next generation or so, beginning with such a figure as Eudorus of Alexandria (fl. c. 25 B.C.), a much more transcendental tendency manifests itself, which leads also to a revival of respect for Pythagoras within Platonism. This comes to a head in the second century A.D. In metaphysics, the view of God is as a self-thinking intellect on the Aristotelian model, whose thoughts are the Platonic Forms, this divine intellect being also a perfect unity (the Pythagorean Monad), for which a source was found in the Good of Plato's *Republic*. A secondary divinity, either a demiurgic figure derived from the *Timaeus* or a version of the Stoic *Logos* (which had some influence on the role of Christ in the thinking of the church fathers) and a World-Soul, is also derived from the *Timaeus* but owes something as well to the Pythagorean Indefinite Dyad.

In ethics, we find Aristotelian doctrine widely accepted as Platonism, notably by such a figure as *Plutarch, though others, such as the second-

century Atticus, championed the Stoic ideals of impassivity and the self-sufficiency of virtue. In logic, Aristotelian syllogistic, as amplified by Theophrastus, reigns supreme, though there is some tendency also to adopt the basic argument-forms of Stoic logic.

Within the Middle Platonic spectrum, a special place must be accorded to the *Neo-Pythagorean tradition, the most notable representative of which is Numenius of Apamea (fl. c. A.D. 150), and which, while accepting the broad lines of Platonic doctrine, advocated a much more ascetic and structured lifestyle, modeled on the old Pythagorean communities of south Italy. Numenius was a major influence on the founder of Neo-Platonism, Plotinus.

A series of Christian thinkers in the first two and a half centuries A.D., from Justin and Tatian to Clement and Origen, were influenced to varying degrees by contemporary Platonism and are often themselves valuable witnesses to developments in Platonic doctrine.

PLINY THE ELDER

Gaius Plinius Secundus (A.D. 23/24-79) was born in Nouum Comum in Cisalpine Gaul. Of equestrian rank, he followed a public career in the army, law, provincial administration and the navy. His literary works included a history of the

Roman wars against the Germans in twenty books and a general history in thirty-one books, beginning perhaps with the 30s. But his only surviving work is an encyclopedia of practical knowledge, the *Natural History* (*Naturalis Historia*) in thirty-seven books, dedicated to the future emperor Titus in 77 (pref. 1-3) but published posthumously according to a manuscript note to book 34. Book 1 is a table of contents for the remaining thirty-six books. For each book there is a list of topics followed more briefly by a list of authors consulted as sources. The procedure shows that in general the writing is a compendium rather than the result of independent research, despite Pliny's occasional claims to originality (e.g., *Nat. Hist.* 2.71). The contents are the universe as a whole (book 2); the geography of the earth (books 3-6); humankind (book 7); other animals (books 8-11); botany in general (books 12-19); drugs obtained from plants (books 20-27); drugs obtained from animals (books 28-32); metals, stones and their uses (books 33-37).

Pliny makes no mention of Christians in his surviving work. However, there are references relevant to the Jewish and Judean background of Christianity. There are primarily geographical references to the external boundaries of Judea (*Nat. Hist.* 5.66-70; 6.13; 12.100), to towns and toparchies (*Nat. Hist.* 5.68-70; 6.13; 9.11; 12.64) and to physical features (*Nat. Hist.* 5.71-72; 31.24), especially the Dead Sea (*Nat. Hist.* 2.226; 5.72). Major natural products receive particular attention, apparently because of their economic significance: bitumen from the Dead Sea (*Nat. Hist.* 2.226; 5.72; 7.65; 28.80; 35.178), the balsam shrub (*Nat. Hist.* 12.111-24) and palm trees (*Nat. Hist.* 13.26-49). The information reflects sources of different periods and is not always accurate (for details see Stern, chap. 78).

The most notable passage concerns the *Essenes (*Nat. Hist.* 5.73). This occurs within the geographical section of the work. Pliny follows the course of the River Jordan from north to south to its termination in the Dead Sea (*Nat. Hist.* 5.71-73). On the west side of the sea, away from the shore, is the "isolated group" (*gens sola*) of the Essenes. Pliny is the only extant pagan writer who independently connects the Essenes with the Dead Sea. According to Synesius *Life of Iho*, Dio Chrysostom praised the Essenes, "a polis situated by the Dead Sea" (Stern, 1:589). However, it is not clear that this alleged account was

independent of Pliny: *polis* may mean "community" rather than a city and may correspond to Pliny's *gens*. Nor is it clear that Pliny regarded the Essenes as a separate nation, since *gens* may also mean a type or class of people. And, if *sola* meant "unique" here, it would be redundant with the coordinate phrase, "and remarkable in all the world beyond others"; it therefore more probably means "isolated."

In describing the Essenes as "without any woman" (*sine ulla femina*) and "having rejected all sexual love" (*omni uenere abdicata*), Pliny's account corresponds to *Philo in Eusebius (*Praep. Ev.* 8.11.4) and to *Josephus (*J.W.* 2.8.2 §120). Pliny's description of the Essenes as being "without money" (*sine pecunia*) is usually understood as a reference not to poverty but to communal sharing of resources. This corresponds to Philo *That Every Good Man Is Free* 76-77; Philo in Eusebius (*Praep. Ev.* 8.11.4-5); Josephus (*J.W.* 2.8.3 §122). Pliny is struck by the paradox that the membership of the community remains stable, even though no one is born into it. Daily recruitment compensates for any deaths. But Pliny exaggerates when he says that this has been going on "for thousands of generations/ages/centuries" (*per saeculorum milia*). As he acknowledges, this is "unbelievable to say" (*incredibile dictu*). In conclusion, repeating the point, "others' weariness of life is fruitful for them." The phrase "weariness of life" (*uitae paenitentia*) corresponds to the preceding phrase "weary of life" (*uita fessos*); it can hardly mean "repentance . . . for their past lives" (contrary to Vermes and Goodman, 33).

Pliny rounds off his treatment of Judea by mentioning the town of Engedi and the fortress of Masada; "and that is as far as Judea goes." The location of Engedi "below" (*infra*) the Essenes has caused debate. But Pliny's discussion has been proceeding southward, and that is a standard application of the term *infra*.

Pliny's account thus gives a single location for the Essenes, which corresponds to the site of *Qumran: on the west of the Dead Sea, away from the shore, and north of Engedi and in turn Masada. The isolated nature of the community described by Pliny also fits in with the site of Qumran. The portrayal of the Essenes as male celibates who shared their property corresponds to Philo's description and to one of the two subgroups described by Josephus (*J.W.* 2.8.2-4 §§120-127; 2.8.13 §§160-61). In the light of the

*Dead Sea Scrolls and of the archaeology of Qumran, it is likely that there was a stricter group of Essenes at Qumran from an early date and a more open order of marrying Essenes with private property living in towns (see Schürer, 2:577-79; Vermes, 45). Pliny's description suits only the stricter group at a single site. But if Qumran was devastated by the Romans in the summer of A.D. 68, then Pliny's account, though accurate, was out of date by the time it was published in or after 79.

Apart from the preface to *Natural History*, the most useful ancient information about Pliny the Elder comes from two letters of *Pliny the Younger. *Epistles* 3.5 lists Pliny the Elder's writings in chronological sequence and describes his method of study. *Epistles* 6.16 is written in reply to a request by *Tacitus for information about the death of Pliny the Elder at the time of the eruption of Mt. Vesuvius in A.D. 79.

PLINY THE YOUNGER

Pliny the Younger was a Roman administrator of the early second century A.D. His published letters convey the ethos of the man and his times.

An exchange of correspondence with the emperor Trajan is of particular interest for the social setting of early Christianity in an eastern Roman province.

1. Life
2. Writings
3. Pliny on Christians

1. Life.

Pliny the Younger lived from A.D. 61/62 to about A.D. 113. His father, Lucius Caecilius, died during Pliny's boyhood. An official guardian, Verginius Rufus, was appointed for Pliny by his father's will (*Ep.* 2.1.8). Although the guardian lived until A.D. 97, Pliny and his mother were living with the mother's brother, *Pliny the Elder, at the time of the latter's death in A.D. 79. And it is assumed that the uncle had some responsibility for his nephew's education. Pliny the Younger was in his eighteenth year when his uncle died (*Ep.* 6.20.5). His career in law, in public administration and even in the army was especially concerned with financial issues. He was the first of his family to attain senatorial rank, which he achieved as a result of his quaestorship (probably A.D. 90). He was one of several supplementary consuls (*consul suffectus*) in A.D. 100. But he held no provincial governorship until about ten years later. He presumably died in office no later than A.D. 113. Pliny mentions only once the fact of his adoption by his uncle (*Ep.* 5.8.5). This may have occurred in accordance with the uncle's will. Hence Pliny the Younger is both a Plinius (by adoption) and a Caecilius (by birth). But he continues to refer to Pliny the Elder as uncle.

Bithynia and Pontus on the southern rim of the Black Sea had formed a single Roman province since A.D. 63. The culture remained Greek and barbarian. Individual cities were prosperous but competitive. Roman governors had been appointed by the senate. However, in the early empire, procurators (independent of the governor) played a large role in the management of the emperor's properties in the province (see Roman Administration; Roman Emperors). With the appointment of Pliny by the emperor Trajan the status of the province in effect changed from senatorial to imperial. It was Pliny's financial and administrative skills rather than his limited military experience that justified the appointment. His brief was to improve the organization and efficiency of the province. His period of of-

fice fell within three calendar years, most probably A.D. 109 to 111, but conceivably A.D. 110 to 112 or 111 to 113.

2. Writings.

Pliny mentions having written a Greek tragedy at the age of fourteen (*Ep.* 7.4.2). He also wrote light verse and two short biographies besides revising some of his speeches for publication (references in Sherwin-White, 51). The only surviving speech is the *Panegyricus*. This is an expanded form of the speech given in the Roman senate in gratitude for Pliny's appointment as consul in A.D. 100, but it largely consists of praise of Trajan, especially by contrast with the former emperor Domitian (A.D. 81-96). However, Pliny is best known for his *letters published in ten books. Books 1-9 appeared spasmodically between A.D. 104/5 and Pliny's departure for Bithynia. All the letters in books 1-9 are written by Pliny himself to a variety of addressees. There is a wide range of topics (for a classification see Sherwin-White, 43-45). While books 1-9 are chronological, the letters within each book are arranged to achieve an aesthetic balance. Book 10 is different. It is probably a complete set of correspondence between Pliny and the emperor Trajan. *Epistles* 10.1-14 comprise eleven letters from Pliny to Trajan and three of Trajan's replies between A.D. 98 (Trajan's accession) and the beginning of Pliny's governorship. The remaining 109 letters of book 10 (including 17B and 86B) all belong to the period of the governorship and include 61 from Pliny to Trajan and 48 replies. The letters of book 10 have perhaps not been revised and were probably published posthumously.

3. Pliny on Christians.

*Judaism is not a topic of Pliny's correspondence. But an exchange of letters at *Epistles* 10.96-97 is directly concerned with Christianity. Indeed, it is noticeable that Christianity is not considered in relation to Judaism but as a voluntary association of the same social status as a fire brigade (*Ep.* 10.96.7; cf. 10.34). The term *Christian* occurs for the first time in extant Latin literature at *Epistles* 10.96.1, 2, 3, 5, 6; also 10.97.1, 2. On the assumption that the letters in book 10 are arranged chronologically and that Pliny is proceeding on an administrative circuit, *Epistles* 10.96 will have been written between September 18 of the second calendar year of Pliny's office

and the following January 3, and either from Amisus (*Ep.* 10.92) or from Amastris (*Ep.* 10.98). Both places are Greek towns of the former kingdom of Pontus in the eastern part of the province (*see* Asia Minor).

Pliny begins by noting that it is his regular practice to refer all doubtful matters to the emperor. This is not a sign of incompetence on Pliny's part but is in keeping with the current imperial policy of centralized administration. Pliny then states that he has never participated in trials concerning Christians. The type of trial indicated (*cognitio*) involved the emperor or his deputy sitting in council (*consilium*), hearing charges and making a decision. Pliny had served on the emperor's council for such trials at Vienne in Gaul (*Ep.* 4.22), at *Rome (*Ep.* 6.22, presumably) and at Centum Cellae in Etruria (*Ep.* 6.31); and in his own jurisdiction as prefect of Saturn (*Ep.* 1.10.10). A moderate interpretation of Pliny's statement would be that he had participated in trials of the *cognitio* type, but never concerning Christians. More extreme views have been taken. "This implies that Pliny knew that such trials had taken place within the period of his public career, and hence at Rome" (Sherwin-White, 694). W. Williams (139) follows this view. But according to K. Wellesley (489) the "exact contrary could be implied with equal logic."

Pliny therefore does not know the usual nature and extent of investigation and punishment of Christians. He is unsure whether quite young persons should be treated in the same way as the more mature. This implies that persons within such an age range, perhaps families, have been brought to the attention of Pliny. He also expresses uncertainty whether allowance (or pardon, *venia*) should be made for those who have withdrawn from their commitment to Christianity. This indicates that both present and former Christians have been reported to him. Finally, Pliny wants to know whether the mere status (*nomen*, lit. "name") of being a Christian without any shameful actions (*flagitia*; the term does not mean "crimes" as such) requires punishment or whether only *flagitia* connected with the *nomen* should be punished. Confusion is already evident in Pliny's opening four questions. "Punishment" is mentioned in the first and fourth. In the first, Pliny assumes that punishment is appropriate. In the fourth, he allows that Christianity may exist without any shameful

action. On the other hand, he thinks that there are shameful actions "connected with" (*cohaerentia*) Christianity. And he still seeks advice on whether punishment is appropriate either for the alleged shameful actions or even for being a Christian without any such actions (*Ep.* 10.96.1-2).

Pliny next outlines the procedure that he has been following so far (*Ep.* 10.96.2-4). When any persons are accused before him as being Christians, he asks them whether they are so; if they admit it, he threatens punishment and repeats the question twice more. If they persist, he orders them to be led (away for punishment?). His rationale is that whatever they confess to, they ought at any rate to be punished for their "persistence and unbending stubbornness." Many modern scholars see Pliny's action as a normal exercise of *coercitio*, summary punishment for refusal to obey a lawful command. But Pliny has not issued any command; he has merely asked the accused whether they are Christians. His rationale seems unjustified. Williams (140-41) regards this as "a retrospective account of his attitude, written . . . after he had become convinced of the desirability of making Christians apostatise rather than confess." All this applies to Christians who were not Roman *citizens. But "there were others of similar madness, whom, since they were Roman citizens, I designated to be referred to the city" (of Rome) (*Ep.* 10.96.4). This is a case of referral by the governor, not appeal to the emperor by the accused, for which, in general, evidence is limited.

However, once Pliny began to deal with the matter, allegations increased. First, an anonymous notice containing many names was posted (*Ep.* 10.96.5). Pliny does not comment on any persistent Christians from this group. But he dismissed those who denied that they were or had been Christians, after they had called on the gods, made offerings of incense and wine to Trajan's statue and insulted Christ; for real Christians could not be compelled to do any of these things. These tests are applied only to those who deny that they are Christians. If all or some of this group were really not Christians, it remains a question who falsely accused them and why. And the implication stands, that Christianity was socially unacceptable.

A second group of alleged Christians was reported to Pliny by an informer (*Ep.* 10.96.6). These all admitted to being Christians but sub-

sequently denied. The denial is essentially a clarification: they had been Christians but ceased to be so three or more or even twenty years earlier. The maximum period shows that people in this region not only had been converted to Christianity in the later first century but had already begun dropping out by about A.D. 90. No reason is given for their falling away. Members of this group seem not to have been reluctant to admit that they had been Christians. And the following description of their former activity seems harmless from a Roman point of view. However, they all demonstrated their lapsed status by venerating the statues of the emperor and the gods and by insulting Christ. "Moreover, they asserted that this had been the extent of their fault or error" (*Ep.* 10.96.7). Pliny's phrasing suggests that he did not regard their Christian activity as a very serious matter. They reported regular meetings before dawn; the singing of a *hymn to Christ as to a god; and an oath concerning theft, adultery, breach of trust and refusal to repay a deposit. There was a separate meeting later in the day to take food, which was "nevertheless ordinary and harmless." They had abandoned even this practice after Pliny's decree (*edictum*) in accordance with Trajan's instructions (*mandata*) forbidding voluntary associations (*hetaeriae*) (*Ep.* 10.96.7).

Such an edict could only have been issued within the preceding year or so (cf. *Ep.* 10.33-34; 10.92-93) and thus would affect only those who were still practicing Christians at that period. Three aspects of the practice of these lapsed Christians (no adultery, no strange food and perhaps veneration of Christ as a god) anticipate the allegations that will soon be defended in the apologists (sexual immorality, cannibalism and atheism).

Because of the apparently harmless nature of Christianity, Pliny pressed his inquiry by the normal method of interrogating slaves under torture: "servants [*ancillae*] who were called assistants [*ministrae*]" (*Ep.* 10.96.8). Both terms are feminine. Pliny may be translating Greek terms into Latin. The phrasing suggests that he first uses a general term, then a synonymous but technical term denoting deaconesses. Pliny does not specify whether these women belonged to the lapsed group. His conclusion was that the Christians constituted "nothing other than a misguided and extreme cult" (*nihil aliud . . . quam superstitionem pravam et immodicam*, *Ep.* 10.96.8).

In his concluding paragraph Pliny states that he has postponed the trial pending consultation with the emperor. But he also gives a further indication of the extent of the spread of Christianity, its effect on pagan religion and the prospects for reform (*Ep.* 10.96.8-10). There is a large number of persons "on trial" (*periclitantium*): "many of every age, every rank, both sexes are still being summoned and will be summoned to trial [*periculum*]." "And the infection of that cult has spread not only through the cities but also through the villages and the countryside." Thus Pliny is confident that further denunciations will be made as he continues his administrative circuit. But he believes that the tide is turning: abandoned temples are becoming crowded, sacred rites are being performed again and the "flesh" (*carnem*, an editorial insertion) of victims is on sale everywhere. Although the language of this description is inflated, that seems to be due to Pliny rather than to his informants (against Williams, 143). Pliny is supporting his view that "if there were opportunity for a change of attitude, . . . a crowd of people could be reformed."

In his brief reply, Trajan gives general approval to the procedure that Pliny has followed; no fixed rule of universal application is possible (*Ep.* 10.97.1). He does not answer Pliny's question concerning differentiation according to age. More precisely, Christians are not to be hunted out (*conquirendi*) but are to be punished if they are reported and convicted (*Ep.* 10.97.2). So government officials are not to take the initiative in prosecuting Christians. Moreover, anyone who denies that he or she is a Christian and demonstrates this by making offerings to the gods is to be pardoned. Trajan's brevity becomes confusing here, since non-Christians should not need pardon along with lapsed Christians. Finally, anonymous notices are not a valid form of accusation.

These letters of Pliny and Trajan give a picture of Christianity in an eastern province of the Roman Empire in the early second century. There is evidence of liturgical and ethical practice. Christianity is not portrayed as a crime. Nor is any evidence presented for crimes connected with the movement. Although modern scholars often assume that Pliny has already executed some Christians at the time of writing, the term "to be led" (*duci*, *Ep.* 10.96.3) does not necessarily imply punishment (it may allude to detention); Pliny does not specify any particular form

of punishment for Christians; and Roman citizens are to be sent to Rome (*Ep.* 10.96.4). Christianity in the province is simultaneously flourishing and declining: some have lapsed as long as twenty years previously, but accusations are continuing to be made; the large number of Christians is distributed through city and country, but pagan worship is beginning to recover. The main basis for proceeding against Christians is an ill-defined social unacceptability and their stubborn refusal to recant. A governor may punish them by virtue of the imperial authority vested in him, despite the lack of any crime on the part of the Christians. However, Pliny would welcome recantations as the easiest way of dealing with the problem. Apart from confessed Christians, others have been falsely accused. This reflects the litigious character of the province of Bithynia Pontus (Johnson).

D. W. Palmer

PLUTARCH

Plutarch of Chaironeia, famous essayist, biographer and philosopher, was born about A.D. 45. Much of his life, especially the later years until his death (ca. 120), were spent in this town of central *Greece where his well-to-do family had long resided. He studied at *Athens with the *Platonist Ammonius and taught at Rome. Through the consular L. Mestrius Florus, one of

his influential friends, Plutarch acquired Roman *citizenship and the name Mestrius.

Plutarch advocated partnership between Greece and Rome, and his two patriotisms are reflected in his *Lives* or biographies, most of which belong to a series of parallels of Greek and Roman heroes and statesmen, often with comparisons (*synkrisis*). Plutarch viewed history as a kind of mirror and tried to fashion his own life in conformity with the virtues depicted in his *Lives* (see *Aem.* 1-2).

For about the last thirty years of his life, Plutarch was a priest at Delphi and helped to revive this shrine of Apollo in Trajanic times. His special interest in religious and theological matters is found, for example, in the Pythian dialogues (e.g., *E Delph.*, which together with works of quite varied content, form the so-called *Moralia* (*Ethica* in Greek).

Although Christianity began its expansion shortly before Plutarch's lifetime, he never mentions it in his extant writings, and like many of his contemporaries, he probably took little or no notice of it. Yet scholars of Christianity have often been struck by similarities between it and Plutarch's thought and have sought for parallels between his writings and early Christian literature focusing on forms of composition, language and style, and topics such as ethics and theology.

Plutarch was a Platonist who despite opposing *Aristotelianism and *Stoicism was indirectly indebted to them. Among the main themes of Plutarch's thought is that the purpose or goal of life (*telos*) is "likeness to God." For Plutarch, God was the One (or monadic intellect) and the Good, opposed by an evil principle, the Indefinite Dyad representing disorder and multiplicity, similar to but not simply Matter. Intermediate between God and mortals are good and evil *daemons* (guardian spirits) involved in human affairs so that God remains serene and untroubled. On divine providence, fate and free will, Plutarch's beliefs cannot be fully determined, but his ethical teaching is clear: "likeness to God" is the goal of human existence, and in order to attain this state of well-being, external and bodily goods as well as virtues that involve moderation of the passions are in some measure required.

In sum, Plutarch's works are important for understanding some *philosophical and religious beliefs of the Greco-Roman world, in which the NT and other early Christian litera-

ture took their origin. Moreover, Plutarch has always had a strong appeal to Christian thinkers such as Clement of Alexandria and other Greek church fathers and Byzantine and Renaissance scholars such as Michael Planudes and Erasmus.

POETRY, HELLENISTIC

*Plato's attack on poets as technicians who offered no real knowledge to their readers reflected the Hellenistic age's forsaking of poetry for the more disciplined studies of science and philosophy. Poets of the Hellenistic age were not only greeted with skepticism but also were faced with the daunting certainty of having their work compared unfavorably with the great epic, lyrical and dramatic works of the classical age. No longer was the poet a reputable source of insight, wisdom or moral authority, and no longer was poetry intimately connected with Greek *religion. Hence Hellenistic poetry is marked by a preoccu-

pation with style and technical virtuosity and a discarding of traditional religion and mythology.

Despite the poet's diminished cultural role, the Hellenistic period produced works of daring innovation and technical brilliance. The most celebrated source was the school of poetry centered in the new city of *Alexandria, where the foundation of the library offered the age's best poets a professional security impossible elsewhere (see Alexandrian Library). But while Alexandria as an intellectual center offered poets a secure office to practice their art, it also comprised their entire audience. These poets wrote for a scholarly elite, and their works reflect the erudition of their audience. Unlike their classic predecessors, the Hellenistic poets' work was doomed to be time-bound. To modern tastes, the poetry of this era can seem sterile and irrelevant. Among the Alexandrian scholar-poets were the three greatest of the age: Callimachus, Apollonius and Theocritus.

1. Callimachus
2. Apollonius
3. Theocritus
4. Paul and the Poets

1. Callimachus.

Callimachus (third century B.C.) was born in Cyrene and educated in *Athens. Although he is reputed to have written more than 800 books of prose, including his 120-volume catalog of the library at Alexandria, only portions of his poetry continue to exist. Callimachus composed in several genres of poetry but is best known for his epigrams, which have come to be recognized as the characteristic Hellenistic form. Sensing, perhaps, that no new works could compete with the epic poetry of the past, Callimachus championed the value of brevity in poetry. "A great book," he insisted, "is a great evil." In one of his epigrams he points out that the waters of the great Assyrian river are muddied but that a trickling stream is pure and undefiled. For Callimachus, if poetry was to remain relevant in this new age, it would be through technical perfection, rigorous scholarship and distilled meaning, none of which he found in the epics of his contemporaries.

Of Callimachus's poetic works, six hymns and nearly sixty epigrams remain extant. Based on the elegiac couplet, Callimachus's epigrams gained renown for their striking wit and terse-

ness. Forgoing the mythological and heroic, these epigrams celebrated the lives and concerns of ordinary people. Of his six existing hymns, which have no true religious content but are rather political poems addressed to specific gods, five are composed of hexameters and one of elegiac couplets. Also extant are several sections of *Actia*, a collection of legends in elegiac verse, and his brief epic, *Hecale*. Judging by the frequency with which Callimachus's poetry is quoted by later scholars and the large number of papyri that bear recognizable fragments of his work, Callimachus's reputation likely eclipsed that of any other Hellenistic poet. Callimachus's epigrams greatly influenced many Roman poets, most notably Catullus (c. 84-c. 54 B.C.), Ovid (43 B.C.-A.D. 17) and Propertius (c. 50-c. 15 B.C.).

2. Apollonius.

Apollonius of Rhodes (?295-215 B.C.) likely began his career as a student of Callimachus but soon became his teacher's superior when he was appointed director of the library around 260 B.C. A violent quarrel ensued between the two poets, culminating in Callimachus's accusations of plagiarism. Callimachus seems to have gained the upper hand early in the quarrel, and Apollonius retired to Rhodes.

While Callimachus championed short poems, Apollonius, in what seems clearly an act of rebellion against his teacher, imitated the epic poetry of Homer, the length of which enabled him to revel in the Hellenistic tendency toward erudition. In his only extant work, *Argonautica*, Apollonius retells the myth of Jason, leader of the Argonauts, who, with the assistance of the princess Medea, obtains the golden fleece. Unlike the traditional treatments of the myth, however, Apollonius's version is distinctly Hellenistic in tone. While previous treatments focused on war and heroism, Apollonius's version is psychological and romantic in nature, focusing on the love story between Jason and Medea. Apollonius exerted a great influence on the Roman poet Virgil (70-19 B.C.).

3. Theocritus.

Theocritus (c. 310-c. 250 B.C.) is generally recognized today as the finest of the Alexandrian poets and is noted for his elegance and grace. While Callimachus likely enjoyed a greater reputation in his day, Theocritus answers best to

modern tastes, due largely to his avoidance of the Hellenistic tendency toward the esoteric and scholarly. Of his work, two dozen epigrams and thirty idyllic poems remain extant.

Theocritus is credited with the invention of the pastoral poem, which celebrates rural life and focuses on the loves of shepherds and shepherdesses, although precursors of the genre can be found in earlier works attributed to the Sicilian poets Epitharmus and Sophron. Theocritus's pastoral *Idylls* are most likely drawn from his memories of childhood in Sicily. Penned for the city dweller nostalgic for the rustic, the *Idylls* are not entirely escapist but rather find a balance between idealized and realistic pictures of rural life. The shepherds in the *Idylls* express themselves as shepherds; their speech is full of village proverbs and superstition, and so the *Idylls* manage to avoid the scholarly tone that marks most poetry of the age. Love and nature are the focus of these poems, and so they strike the modern reader as more relevant. Theocritus's pastoral poetry influenced subsequent Greek pastoral poets, including Moschus of Syracuse (c. 150 B.C.) and Bion of Phlossa (c. ?100 B.C.). He also exerted a great influence on Latin poetry, most notably in the pastoral works of Virgil. *Idyll* 1 especially has demonstrated remarkable influence even on English poetry, being the model for Milton's *Lycidas* and Shelley's *Adonais*.

4. Paul and the Poets.

Paul makes four references to Greek poets in the NT. While preaching to the Athenians (Acts 17:28), Paul quotes Aratus (c. 315-c. 240 B.C.), an Athenian whose *Phaenomena* describes the major constellations in Greek astronomy. Paul's use of the plural ("poets") is thought to indicate an acquaintance with the work of Cleanthes (c. 331-c. 232 B.C.), the founder of *Stoicism, who is best known for a surviving fragment of a hymn to Zeus that advocates a disinterested, stoic outlook in a world governed by a sovereign god. Menander (342-c. 292 B.C.), alluded to in 1 Corinthians 15:33, is a comic playwright who composed in iambic verse, and Paul's quote "Cretans are always liars" (Tit 1:12) is thought to refer to the work of Epimenides (fifth century B.C.), the legendary Cretan mystic poet and wonder worker.

POLYTHEISM, GRECO-ROMAN

Greco-Roman polytheism was a complex interplay of not only the pantheons of Greece and Rome, but also the many foreign gods and goddesses of other cultures, such as Egypt, Israel and the many indigenous groups of Asia Minor.

1. The Greek Pantheon
2. The Roman Pantheon
3. Greco-Roman Polytheism and the New Testament

1. The Greek Pantheon.

In the earliest phases of extant Greek literature, there are clear traces of connections with cult and religious belief from a much earlier phase of development. In recent years, since the decipherment of Mycenaean Linear B, there has been a growing awareness that the Greeks of the archaic period (up to the sixth century B.C.) had inherited something of the religion of the Mycenaean/Minoan period. Although impossible to uncover fully, the *Iliad* and the *Odyssey* contain much that reflects the religion of this now lost civilization. However, Hesiod, another writer almost contemporary with Homer, wrote what are probably the earliest records of Greek polytheistic belief.

Hesiod's *Theogony* is especially valuable for understanding the generation of the gods, their various groupings, and their relationships with one another. Hesiod records the following as the "family tree" of the gods: In the beginning was Chaos, and from Chaos came Earth (Gaia) and Heaven (Uranos). The mating of these two primordial figures produced, in turn, the twelve

Titans: Oceanus and Tethys, Hyperion and Thia, Crios and Eurybia (or Mnemosyne), Cocos and Phoebe, Iapetos and Themis, and Cronos and Rhea. Uranos, unhappy with the potential for competition from his offspring, imprisons each of his children in Tartarus, the underworld. Gaia, understandably unhappy with Uranos's imprisonment of her children, convinced Cronos to castrate Uranos, in an effort to take revenge on him for his shameful treatment of his children. This he does, and, according to Hesiod, when the severed testicles of Uranos land on the ocean, Aphrodite is "born" from them (though other versions of Aphrodite's genesis suggest that she is the daughter of Zeus and Dione). There are, in Hesiod, also two other orders of "earth-born" (i.e., born of Gaia): the Cyclopes (one-eyed) and the Hecatonchires (hundred-handed). These were also imprisoned by Uranos, but were not released by Cronos when he attained mastery over his father.

In time, all of the Titans mate with each other, and from the union of Cronos and Rhea descend the twelve gods who will eventually be known as "Olympian": Zeus, Poseidon, Hera, Hephaestus, Ares, Apollo, Aphrodite, Demeter, Hermes, Hestia, Artemis, Pallas Athena, and some lists also include Hades as an Olympian. Cronos, like his father Uranos before him, was afraid of the possibility of being usurped from his kingly position by his children and so swallowed each of them as they were born. Rhea, no more happy with this than was Gaia with Uranos, consults with her parents on an appropriate way to stop Cronos. The plan which is hatched and carried through is as follows: instead of her last child to be born, Cronos will be handed a stone, wrapped in swaddling clothes, to swallow, while the child is whisked away to Crete to be raised. This child, of course, is Zeus, and upon reaching maturity he came back and caused his father to vomit up all of his siblings, as well as the rock that Cronos had thought was Zeus (this rock, known as the Omphalos, was thought to be the very same stone which, in the NT period, was still in the temple of Apollo at Delphi [Plutarch *E Delph.*]).

Zeus and his siblings, supported by the Cyclopes and the Hecatonchires whom he freed from prison, made war on the Titans in a battle known as the Titanomachy or the Gigantomachy. At the end of this battle, the Titans were reimprisoned in Tartarus, and Zeus and

his siblings reign from this point onwards on Mount Olympus. It is these Olympian gods that are active in the Homeric literature and who form the basis of most popular conceptions of Greek polytheism from the archaic period right into NT times. However, this was not the only way in which Greeks formulated their theogonies. There were several different theogonies that played different roles for different groups.

One of the most well-known alternatives is the Rhapsodic Theogony of the Orphic cult. The Rhapsodic Theogony seems to have existed as early as the first century B.C., and though it bears some relationship to more "conventional" theogonies like that recorded in Hesiod, it is far more complex. In this version, the world was made by the Manifest (Phanes), or the Firstborn (Protogonos), who was swallowed by Zeus, who went on to create the world in which humans live. This form of theogony had special currency with Neo-Platonic philosophy, which saw in this a reflection of the Platonic doctrine of ideals (i.e., the world of Phanes corresponds to this world, while the world that Zeus created is the world in which we live). These stories of genesis have an obvious correlation to the biblical stories of creation and primordial times, and this sort of connection was an important feature of much Jewish literature of the Second Temple period (cf. Pearson 1999).

In Greek literature, there is a plethora of divine beings. Not only the twelve Titans and the Olympian gods are considered deities. For instance, Hesiod has long lists of the gods and goddesses sprung from various unions among the Titans and the Olympian gods, but these, such as Night, Dawn, the Nymphs, etc., are not on the same level as the Olympian gods. As a result, we read in Homer of the "goddess" Calypso, who is clearly not an Olympian (Homer *Odys.* 5), and Odysseus proclaims his devotion to the Nymphs. These are the "goddesses" who are believed to be resident in the sacred cave on Ithaca, next to which he is put ashore by the Phaeacian sailors on his return to Ithaca, despite the fact that he is, at that time, in the company of Athena, one of the second-generation Olympian goddesses.

Homeric religion is somewhat of a mystery in many aspects, even if Homer devotes great detail to describing things like libations and sacrifices and makes it fairly clear what the family relationships are among the Olympian gods.

Zeus, clearly king of the gods, is closely related to Poseidon, and acts at times in collusion with him, and at times keeps clear of Poseidon's wishes. Athena, clearly a friend of the Achaeans (Greeks), and in particular of Odysseus, is afraid to act against her uncle, and she only truly reveals herself to Odysseus when Poseidon's vengeance is apparently assuaged, after he has turned the Phaeacian ship to stone, and (apparently) ringed Phaeacia itself with impenetrable mountains. There is a clear tension in Homer over the way in which humans devote themselves to the gods and the way in which the gods act toward humans.

The developments of Greek polytheism during the Hellenistic period are simply too complex to address here. As with so many things, the way the Greeks sublimated everything into their own cultural framework—the *interpretatio graeca*—led to widespread identifications between Greek gods and those of their subjects and neighbors. Perhaps the most famous of these, however, is the relationship between the Greek and Roman pantheons.

2. The Roman Pantheon.

Because of this, Roman religion is often misunderstood as a rough cognate of Greek religion, but with Latin names. The assimilation of Roman gods to their Greek counterparts—e.g., Zeus = Jupiter, Hera = Minerva, Ares = Mars—has been so deeply ingrained in modern Western culture that a recovery of the *Roman* pantheon becomes not only an exercise in the history of ancient religions, but a countercultural move as well. This assimilation can be found as early as the work of the poet Ennius (239-169 B.C.), but became characteristic of the Hellenistic period and the later Augustan age. Nevertheless, this recovery is possible and instructive for those interested in the world that gave birth to the NT and eventually elevated its religion to primacy.

Kerényi's comments (219-20) outline one of the clichés of comparison between Greek and Roman religion: "With the Greeks it is their poetry which provides a basis for characterizing the form of the relation between god and man. . . . In the acts of the Greek cult . . . primordial things are always to some extent still present. . . . The cult was still essentially representation, but it was always mythology. . . . In the Roman cult the picture is quite different. Here mythology

and art seem to be lacking." This lack of extant mythology has led, in many cases, to uncertainty about the roles of and relations between the Roman gods and goddesses. This has led many to consider Roman religion to be without mythology, and even, by nature, confused and uncertain when it came to understanding its own gods. Nevertheless, as the great scholar of Roman religion G. Dumézil (48) characterizes it, "our uncertainty is the result of a weakening, an aging produced by the forgetting of definitions and functions which had earlier been clear, complex, and harmonious."

The earliest structure of archaic Roman religion is the triad of Jupiter, Mars and Quirinus, but this structure is, by the NT period, no longer much in evidence. The chief gods of the Romans in the NT period are known as the Capitoline Triad, which is made up of Jupiter, Juno and Minerva. Juno played the role of queen of the gods, and would, under later Greek influence, play conjugal mate to Jupiter (as Hera did to Zeus), while Minerva was a goddess of the arts and trades and of their practitioners. Minerva was identified with Pallas Athena of the Greek pantheon.

The origins of the Capitoline Triad are obscure. Dumézil's detailed discussion (Dumézil, 306-10) of all archaic aspects of Roman religion only surely connects this with the Etruscans, but can establish little else that is firm. Although it is clear that three was a sacred number to both the early Etruscans and their Roman successors, beyond this "We can only imagine" the original significance of the triad (Dumézil, 309). Regardless, it is clear that the temple of Jupiter Optimus Maximus on the Capitol hill of Rome was the chief temple of the triad and formed the political and religious center of Roman cult. Each of the three gods had a section (or *cella*) of the temple dedicated to themselves.

Jupiter was the sky-father king god, whose epithets included various features of the heavens: *Tonans* ("Thunderer"), *Fulgur* ("Lightning"), *Feretrius* ("Striker"?) (cf. Ferguson 33). Jupiter, whatever his precise origins and archaic function in the original triad with Mars and Quirinus, is nevertheless the chief national divinity of Rome. Yet, as Dumézil states (1:198): "Even before he took two goddesses as his associates on the Capitol, Jupiter was not alone in his majestic sovereignty. Surrounding him on his own level, and forming theological struc-

tures with him, were several Entities, autonomous divinities more or less absorbed by him, or aspects more or less detached from him." Still, despite Dumézil's use of Roman theology to try and reconstruct this original structure, the lack of extant ancient mythology makes this a difficult task. Dumézil himself recognizes this, and his conception of the state-of-play in the NT period is central (Dumézil, 1:48, cf. 1:197): "In the era when it was fixed in literature, a great part of the Roman pantheon was on its way to dissolution. The Greek flood had submerged everything and had destroyed the taste for and awareness of traditional explanations. The most original forms, those which had not been able to receive an *interpretatio graeca*, were destined to disappear or to survive only in rites which became less and less intelligible."

3. Greco-Roman Polytheism and the New Testament.

This "Greek flood," or, as Momigliano put it, "alien wisdom," is in the NT period really the more important movement to understand, for it was in the widely accessible and appropriated medium of Greek or Graecized culture that the theologies of the first century were being argued and established. "Greco-Roman," while not an ancient term, nevertheless describes well the complex interplay between especially these two cultures, but also the many cultures of the eastern Mediterranean. In this kind of setting, many more pantheons play a role than merely the Greek or Roman—the Egyptian gods and goddesses, the Jewish God, the new God of the Christians, various mother-goddesses, ruler and emperor worship, etc., all play a role in the intricate dance of deities competing for adherents, status and recognition.

It would be impossible here to outline this drama in any detail, but two contrasting examples from the writings of Paul are illustrative of the role that interaction with these various factors plays in the writings of the apostle to the Gentiles. Both of these represent interpretive positions unusual in contemporary NT scholarship, which only underlines the complexity of this aspect of the ancient world and the degree to which facility with ancient religious culture may ultimately be one of the most important aspects of the work of any NT scholar.

The first of these is found in Romans 1:23, in Paul's apparently summative condemnation of

idolatry: "Claiming to be wise, they became fools, and exchanged the glory of the immortal God for images resembling mortal man or birds or animals or reptiles" (RSV). There are two usual approaches to contextualizing Paul's meaning here, but these two are really only alternative versions of the same solution: Paul is reflecting traditional Jewish invective against pagan idolatry. It is typically suggested either that the argumentative framework here is simply anti-pagan (see *Idolatry*) or that the condemnation of Israel is in view. These approaches have masked the true identity of Paul's dialogue with the Roman church and ignored vital evidence for the reconstruction of the religious milieu in which the earliest church existed. Anyone versed in the cultic imagery of the Roman world will note that the idolatrous images listed in this passage exist together *only* in one group of cults in the Roman world: those originating in Egypt, and typically centered around the worship of the chief god and goddess, Sarapis and Isis (see Witt, 255). Nevertheless, this is not a typical position in the scholarship of this passage. As Pearson shows (forthcoming, ch. 6), there is much potential fruit in understanding this contextualization, both for the interpretation of Romans and for our understanding of the character of Paul's religious milieu.

Likewise, the second chapter of Philippians, with its famous christological hymn (or so-called hymn), is another example where Paul's interaction with Romans on a religious level is directly predicated upon polemic against Roman religious practice. Paul's characterization of Christ's humility and humiliation in this passage—whatever the interest that this has had for modern theologians—was originally written to members of a church in a Roman *colonia*, whose understanding of and devotion to the emperor cult (see *Ruler Cult*) must have played a dramatic role in their lives both prior to and, to a different degree, after their conversion to Christianity. Paul is also writing this letter at a time when, of course, he is in prison, likely in Rome, having appealed to the emperor Nero. Nero's well-known self-aggrandizement and desired divination (cf. Suetonius *Nero*) did not sit well with his subjects. Long before his suicide/assassination in A.D. 68, there were stirrings of discontent. In this setting, Paul characterizes Christ as once a god, but taking the form of a human, even a slave; emptying himself, not counting equality

with God something to be grasped at (*harpagmos*); humbling himself to death, even death on a cross (on the social status of crucifixion, see Hengel, 62). In direct and polemical contrast to the attitudes of Nero, whose ideas about himself could be easily construed as the contradiction of this characterization of Christ, Paul asserts that this *via negativa* is the reason that God has "highly exalted him and bestowed on him the name which is above every name, that at the name of Jesus every knee should bow, in heaven and on earth and under the earth, and every tongue confess that Jesus Christ is Lord, to the glory of God the Father" (Phil 2:9-11 RSV).

Paul is not only aware of Greco-Roman religious sensibilities, he is able in at least two circumstances to manipulate and polemicize against one aspect of Greco-Roman religion for the purpose of speaking to another group. The investigation of other NT writings that engage in similar polemics with Greco-Roman polytheism is a burgeoning area for research.

POMPEY

In the history of the Jews, Pompey is most significant as the Roman general who brought to an end the waning power of the *Hasmonean dynasty and the first Gentile to penetrate into the

holy of holies of the Jewish *temple since its purification after the Maccabean revolt.

1. Career
2. Interaction with the Jews

1. Career.

Born in 106 B.C., Gnaeus Pompeius was the son of the Roman general Strabo. He appears to have been a gifted youth and obtained much early distinction in a variety of military exploits. The 80s were a period of unrest in the *Roman Empire, with one tyrant after another seizing power. During this period, at the age of twenty-three, Pompey attached himself to one of these figures, the tyrant Sulla. He did so only after winning a victory in Sulla's interest as a self-appointed general against Sulla's enemy, Carbo, and further defeating an offensive force led by three generals (Plutarch *Pomp.* 6.3—7.3). His career after this risky but well-calculated beginning continued with striking success as a general in Sulla's service (83—79 B.C., during which he was given the cognomen "the Great," in obvious suggestion of his similarity with *Alexander the Great).

Against precedent, as he held only knightly, equestrian rank (see Roman Social Classes), and only those of consular or praetorian rank were allowed to triumph, he was allowed to triumph in Rome after successful campaigning in northern Africa, while still in his mid-twenties (see Roman Triumph).

After the death of Sulla in 78 B.C., Pompey was appointed by the senate to campaign against a pretender to Sulla's former power, Lepidus (whom Pompey had earlier backed, against Sulla's wishes, in a consular election). Later (76 B.C.) he was enlisted again to face the rebellious general Sertorius, who, in the power vacuum after the passing of Sulla, was threatening Rome from Spain. This campaign dragged on for several years until 71 B.C., when Sertorius was killed by intimates, who then tried to continue in his place. Pompey dealt with the ring-leader, Perpenna, in a single battle. Returning from Spain, he became involved in the mop-up operations against the Spartican revolt.

His reception in Rome was a wary one, as the possibility of Pompey claiming the power of Sulla was a very real one now that he had dealt with Sertorius. In response Pompey promised to disband his army if he was granted a consulship and a second triumph, to which the senate agreed. In the process, the statesman Crassus,

formerly above Pompey in both rank and personal pride, was forced to turn to Pompey to gain support in his bid to become a consul.

After the cessation of this office, Pompey's hitherto unchecked success began to flag—it seems his role as a peacetime statesman was ill-fitted to his soldierly temperament, and he withdrew from an active political life. However, in 67 B.C. he was called upon again to deal with the extensive piratical activity in the Mediterranean centered in Cilicia, which was flourishing as a result of extended Roman inattention in the wake of the Mithridatic wars (88—85, 83—81, 74 B.C.; Plutarch *Pomp.* 24). Pompey was given virtual hegemony over the Mediterranean and its coastal areas, as well as a large fleet and fighting force. He effected the destruction of the pirate fleets, showing forbearance and humanness in dealing with the different groups of pirates and the towns that had lent them support, even resettling many of them in areas depopulated as a result of various conflicts (Plutarch *Pomp.* 27.4—28.4).

Upon these successes, Pompey was given the command of the forces aligned against Mithridates and Tigranes, together with all of the territories of *Asia Minor, while still retaining the command of his naval forces. Over the next four years, he defeated not only the territory of Mithridates and Tigranes but, in pursuit of the fleeing Mithridates, took Syria and Judea as well. Upon Mithridates' suicide in 62 B.C., Pompey returned to Rome, where he celebrated his third triumph in 61 B.C. These victories of Pompey's, in which he subdued fourteen nations, brought back twenty thousand talents to Rome and almost doubled its annual income.

In Rome, however, he faced opposition on account of senatorial disapproval of some of his actions while in command of the eastern portion of the empire. In response, the First Triumvirate, consisting of Pompey, Crassus and Julius Caesar, came into being. This uneasy alliance allowed each of these powerful figures the support he needed to circumvent the senate and was active until the death of Crassus in 58 B.C. During the intervening years, while Caesar had been campaigning against the Gauls and the Germans, Pompey had steadily been losing political ground in Rome. Ever the soldier, his political acumen seems again to have lacked the force necessary to survive the senatorial infighting, as well as the increasing popularity of Cae-

sar. After the death of Crassus, the senate aligned itself behind Pompey as sole consul in 52 B.C. Caesar invaded three years later, and Pompey withdrew to *Greece, where the final battle of the civil war was concluded in 48 B.C. Pompey fled with his wife and a few loyal retainers, only to die as the result of treachery in Egypt later that year.

2. Interaction with the Jews.

During his pursuit of Mithridates in 64/63 B.C., Pompey became involved in the struggles between the Hasmoneans Aristobulus and Hyrcanus. Josephus (*J.W.* 1.6.3—7.7 §§128-58; *Ant.* 15.2.3—4.4 §§29-76), Plutarch (*Pomp.* 30.2), Strabo (*Geog.* 16.763), and Dio Cassius (*Epit.* 37.15.2—19.3), with varying degrees of concern and detail, all record his subjugation of *Judea, with the result that it was placed under the governorship of the governor of Syria and made to pay tribute to Rome, although it was allowed to exist with some independence as a temple state under Hyrcanus's leadership.

Although all of the available historical sources (save Plutarch, who merely states that Judea was subjugated) record that the defenders of the temple were captured as a result of their unwillingness on the *sabbath to prevent the Romans from building up earthworks, some have thought that Dio Cassius disagrees with Josephus and Strabo in suggesting that Pompey plundered the temple. However, the language of Dio Cassius does not necessitate such an interpretation—he makes no explicit reference to Pompey's tour of the holy of holies with all of its treasures, nor does he contradict other sources that suggest that he left these treasures intact.

Pompey took Aristobulus as a captive and displayed him, along with other notable captives, in his third triumph (Plutarch *Pomp.* 65.4). In addition, he reorganized many of the territories that had been captured by the Hasmoneans, including the coastal towns of Gaza, Joppa, Dora and Suato's Tower (later *Caesarea Philippi); rebuilt Gadara in response to a request from a favorite freedman, Demetrius, who was a native of that city; and restored many of the cities to their former inhabitants of what was later known as the *Decapolis, as well as other non-Jewish cities.

The *Psalms of Solomon were probably written just after Pompey's Palestinian conquests, and Pompey himself is probably the "foreign" conqueror mentioned in them (see esp. *Ps. Sol.* 2).

In addition, it is probable that the peshet on Habakkuk from *Qumran (1QpHab; see Habakkuk Commentary) dates from the period immediately following the taking of Jerusalem by Pompey (see esp. 1QpHab 9:2-7).

PRAYER OF ENOSH (4Q369 + 4Q458)

Prayer of Enosh (4Q369 + 4Q458) consists of ten leather fragments. Fragment I is the largest and contains portions of two columns. In the second column there is reference to a "firstborn son." H. Attridge and J. Strugnell (353) have named the document the *Prayer of Enosh*. According to *Jubilees* 4:12, Enosh was the "first to call upon the name of the Lord" (see *Jubilees*). This tradition, which represents an elaboration on Genesis 5, is probably what underlies 4Q369. It is probable that this document represents what is imagined to have been uttered by Enosh when he called upon the name of the Lord. However, the contents of column ii may in fact be a prayer uttered by Enoch.

What is disputed in this book is its perspective. Does Enosh foresee the historical Israel, or does he foresee the Davidic Messiah (see Messianism)? Attridge, Strugnell and C. A. Evans opt for the latter alternative; J. L. Kugel opts for the former. Kugel believes that the "firstborn son" of fragment I ii 6 refers to Israel (perhaps alluding to Ex 4:22), not to David or to a Davidic Messiah, and that the whole of column ii concerns the history of Israel

as a nation. The reference to "goodly statutes" and "righteous laws" in fragment 1 ii 5 and 10 is to the Sinai covenant, not to some special preparation of the Messiah. God has taught his people his laws (cf. Deut 8:5). Kugel further notes that the perspective of 4Q369 is similar to 4Q504 (the *Words of the Luminaries*), which also speaks of Israel as God's "firstborn son" among the nations. Kugel also cites Sirach 17:17-18, which in some manuscripts speaks of Israel as God's "firstborn," brought up with discipline. Thus it may be argued that Israel is firstborn "by dint of discipline" in the Torah (Kugel, 129-30). 4Q369's "eternal light" may be in reference to the guiding light of Torah, as in Proverbs 6:23 and later interpretive traditions, such as in Wisdom 18:4, *Testament of Levi* 14:4 or *Pseudo-Philo's *Biblical Antiquities* 11:11 (see Sirach; Wisdom of Solomon; Testaments of the Twelve Patriarchs).

Although Kugel's interpretation may be correct, some factors support the eschatological interpretation. The words "until the decreed time of judgment" in fragment 1 i 6 and the appearance of Enoch, of the seventh generation, at the conclusion of the genealogy in fragment 1 i 10 suggest an eschatological orientation, which in turn supports a messianic understanding of the "firstborn son" in column ii. References to the land of Israel do not compete with this interpretation. The exact words, "in/with eternal light," appear in IQM 17:6 and IQS 4:8, again in eschatological contexts (see War Scroll; Rule of the Community). In the Hebrew Bible David is called God's "firstborn," as in Psalm 89:21, 27-28 (Eng. vv. 20, 26-27): "I have found David, my servant; with holy oil I have anointed him . . . he shall cry to me, 'You are my Father . . . ' and I will make him the firstborn, the highest of the kings of the earth." Psalm 89 offers three important parallels with 4Q369 frag. 1 ii 6-10: David calls God his father, which parallels line 10, "as a father to his son"; the psalmist says that God "will make him the firstborn," which parallels line 6, "You made him a firstborn son to you"; and the psalmist says that God's firstborn will be "the highest of the kings of the earth," which finds a partial parallel in line 7, "a prince and ruler in all your earthly land." Finally, the words in fragment 3, line 3, "from your hand is all the dominion," may hint at eschatological deliverance.

PRAYER OF MANASSEH

The Prayer of Manasseh is an individual penitential prayer ascribed to Manasseh, king of Judah (687-642 B.C.). According to 2 Chronicles, Manasseh, a king notorious for his sin and idolatry (2 Kings 21), was taken prisoner to Babylon, where he repented and prayed for forgiveness (2 Chron 33:11-13). The account also refers to two annals that contain "his prayer to God" (2 Chron 33:18-19). Though the Prayer of Manasseh purports to be this prayer uttered by the king in prison, there is little doubt that it is a pseudonymous work composed many centuries later.

1. Structure of the Prayer
2. Composition of the Prayer

1. Structure of the Prayer.

The structure of the prayer is similar to what we find in other postexilic and early Jewish prayers (cf. Dan 9:4-19; Neh 9:6-37; Tob 3:2-6; Pr Azar):

1. Invocation (v. 1)
2. Ascription of praise, mentioning God's work in creation, his wrath and his mercy (vv. 2-7)
3. Confession of sin (vv. 8-10)
4. Petition for forgiveness (v. 11-15a)
5. Doxology (v. 15b)

While most other penitential prayers contain a collective confession of sin, the Prayer of Manasseh is strictly individual. Manasseh stresses his own sinfulness in opposition to the righteous patriarchs (Pr Man 8; cf. Lk 5:32; 15:7). And while he paints himself as the worst of sinners, "unworthy" of God's grace (Pr Man 9, 14; cf. *Jos. and As.* 12:5; Lk 15:19), he knows that God is "compassionate, long-suffering, and very merciful" (Pr Man 7; cf. Ex 34:6), the "God of those who repent" (Pr Man 13). The intention of the prayer is apparently to proclaim God's willingness to forgive repenting sinners.

2. Composition of the Prayer.

There is no consensus with regard to original language; it may be Hebrew, but most likely the

prayer was composed in Greek. This is supported by the author's apparent acquaintance with the *Septuagint (cf. Pr Man 7 and Joel 2:13/Jon 4:2; Pr Man 10, 11, 14 and Ps 50 (51):1, 5, 6) and by the occurrence of Greek words that are unusual in translation from the Hebrew.

Though the prayer is not found in any Jewish writings, it was probably composed by a Jew. This is indicated by the lack of any specific Christian elements, the parallels in Jewish prayers, for example, *Joseph and Aseneth* 12, the *Hellenistic *synagogal prayers (preserved in the *Apos. Con.* 7.33-38; cf. 7.33.2; 35.1), the *Shemoneh Esreh* (sixth benediction) and the existence of a similar, fragmentary Prayer of Manasseh in *Qumran (4Q381 33:8-11). It should also be noted that the most peculiar statement found in the prayer—the sinlessness of the patriarchs (Pr Man 8)—has its closest parallels in other early Jewish texts (cf. *T. Abr.* 10:13; *T. Iss.* 7:1; *T. Zeb.* 1:4; cf. also *Jub.* 23:10; 35:12). All these parallels point to a date of composition sometime between 200 B.C. and A.D. 100.

The earliest attestation of the prayer is in the Syriac *Didascalia Apostolorum* (early third century A.D.; originally written in Greek) and later incorporated in the *Apostolic Constitutions* (c. 350-380). There the prayer is found as part of the story of Manasseh, retold on the basis of 2 Kings and 2 Chronicles, though it is supplemented by other material that has some parallels in *rabbinic works (e.g., *Tg. Chron.* 33; *b. Sanh.* 103a). In all probability the prayer was originally composed and transmitted in such a context and not as a separate prayer later ascribed to Manasseh. This is supported by the links between the prayer and the story in 2 Chronicles (cf. Pr Man 1, 10, and 2 Chron 33:6, 11, 12; 35:19c LXX).

Despite the links to the story of Manasseh, the influence from other texts in the LXX (esp. the Psalms) has given the prayer a rather general tone. Consequently it could easily be used as a general penitential prayer. A Christian liturgical use is attested by its place among the Odes added to the Psalms in some manuscripts of the LXX (e.g., Codex Alexandrinum and Codex Turicensis) and in many separate editions of these Odes or Canticles in various languages (see Mearns). According to John of Damascus (*Sacra Parallela*; PG 95.1436.35), already Julius Africanus (c. A.D. 160-240) knew the prayer as an "ode."

In the Eastern Orthodox churches the Prayer

of Manasseh is regarded as canonical, and in many Protestant Bibles (e.g. the Bible of Luther, KJV, RSV) it is part of the OT *Apocrypha. In the early printed editions of the Vulgate it is found at the end of 2 Chronicles; after the Council of Trent, which did not list it as canonical, it is placed as an appendix following the NT in the Vulgate.

PRAYER OF NABONIDUS (4Q242) AND PSEUDO-DANIEL (4Q243-245)

As many as nine Dead Sea Scrolls, all written in Aramaic, are associated with the book of Daniel or with traditions about Daniel. The first four of these manuscripts, comprising three distinct works, are the focus of this article (see table).

1. 4Q242 (4QPrNab ar, "The Prayer of Nabonidus")
2. The Pseudo-Daniel Scrolls

Deut 27:18; 28:29; Is 59:10; Zeph 1:17; Lam 4:14) and occurs elsewhere in the scrolls (CD 1:10-11: "And they were like the blind and like those who grope their way," referring to the remnant of Israel).

Two groups ("these . . . [th]ese") seem to be contrasted in lines 3-4. *These* must either be understood in the context of final judgment or may reflect the parting of the ways when an elect group arises in the end time. Line 4 preserves the words "[th]ese then will arise," which some commentators see as an allusion to Daniel 12 and the resurrection of the dead. However, Daniel 12:2 uses a different verb ("they will awake"); furthermore, in Daniel the other group will awake "to shame and everlasting contempt," while in 4Q245 (line 3) they are in blindness and have gone astray. It seems here that contrast is not between two groups who are resurrected, but between some who persist in error and others who rise and walk in the way of truth (cf. CD 1:11-15). Although lines 5-6 are fragmentary, the references to the "holy kingdom" and a return have strong eschatological connotations. "Iniquity" may well be the last word in the manuscript, which suggests that the composition ended with the extermination of wickedness (cf. line 2).

The lists in fragment 1 must be understood in light of the eschatological conclusion in fragment 2. The return of one group at the end suggests a reversal of the course of history, as in apocalyptic and pseudo-prophetic texts (e.g., the Apocalypse of Weeks in *1 Enoch* and Daniel 10-12). The list of legitimate priests in 4Q245 must have ended with Simon, suggesting that subsequent priests were unacceptable since the boundary between priesthood and kingship had been transgressed. Thus fragment 2 anticipates the eschatological restoration in accordance with the divine order, which would include a priesthood that was legitimate in the eyes of God.

PRIESTS AND PRIESTHOOD, JEWISH

This entry deals with the traditional view of the priesthood as it emerges from ancient biblical commentaries and age-old tradition. These sources illuminate our understanding of the NT.

1. Descent and Duties of the Priests
2. The High Priest
3. New Testament and Talmudic References to Priests

1. Descent and Duties of the Priests.

The priesthood is a male, hereditary clique,

each member descended from *Moses' brother Aaron and his male children, themselves descendants of Levi the son of Jacob the patriarch (that is, they belong to the tribe of Levites). Their major duty, in times when *sacrifices were offered, was to attend to the sacrificial rites in whatever places were designated as public sanctuaries (Deut 10:8). They did not officiate at high places of private individuals where altars were constructed. They came to participate according to a rotation on weeks or courses set up for the various families. The families were named after the progenitor of the course. Priests sprinkled blood of purification on the ark covers, altars, ark of the covenant, and on those with designated plagues. They prepared and burned incense on the inner altar, lit the candelabra and offered advice on religious matters. They performed the elaborate rituals of sacrifice, instructed the people, judged certain cases—particularly cases involving *temple matters—blessed the nation, examined and purified lepers and helped the high priest in teaching the oracles of the Lord that were entrusted to him.

In later times, priests were not the only ones to instruct and judge the people, even matters involving just priests. The class of scribes eventually assumed authority for this and even supervised the priests in the temple at certain times. The priests received priestly gifts of food from produce and animals that people ate, as well as a portion in certain sacrifices. Some had special duties during wars. They set out and consumed shewbread on the temple table and were given parts of certain sacrifices to eat. Priests also administered the rites of the suspected adulteress who wanted to clear herself of suspicion (Num 5:11). When they received firstfruits they were to listen to a specific liturgy detailing the heroic exploits of God in saving his people and bringing them to the land. They were the administrators of the Lord's manor, watching to see that everyone understood their security depended on the Lord. Nevertheless, they were not to own property themselves but to tend the vineyard of the Lord. Yet they were given dwelling places, and Joshua 21 mentions thirteen towns. An elevated priest, specifically anointed for the purpose, addressed the people at the beginnings of wars.

Priests were anointed with the sprinkling of oil on their vestments, but the high priest was anointed with oil also being poured on his head (Ex 29:29). According to tradition this pouring

ritual ceased during the reign of King Josiah during biblical times. Many priests were entrusted with looking after ritual items and overseeing certain duties of other priests. There was an assistant high priest as well who had very few cultic duties but many administrative ones. In essence the priest's job was to effect atonement for sins, private and public, and to maintain the institution of covenant. In this regard they joined with kings and prophets in early biblical periods of the first temple. Their job was to ensure the sanctity of the temple and the obedience of the people so that God would dwell among the nation.

Priests had designated duties in the temple and rotated their presence according to a well worked out scheme. They were not to enter the sanctuary except for the purposes of fulfilling their duties, nor were they to leave until their ministrations were completed. Priests were enjoined from strong drink, from growing long hair, from wearing ragged clothing and from having contact with most corpses. Priests with certain physical defects were not permitted to offer sacrifices.

Today, long after the destruction of the temple, descendants of priestly families themselves holding the status of priest with potential to serve in a rebuilt temple hold special privileges in the *synagogue, where their hereditary honor is respected and acknowledged. The integrity of the priestly line and their family traditions have been bolstered by modern genetic studies that have shown that the male group has a marked tendency to have a chromosome marker statistically unique to Jews claiming priestly descent.

2. The High Priest.

The high priest was the foremost priest and had special rites on the Day of Atonement. The high priest wore specific garments for certain ministrations; ordinary priests wore a different arrangement of clothes. Every day he offered a cake offering of flour and oil both in the morning and in the evening. While both ordinary priests and high priests were not to marry divorcees, loose women or the daughters of priests who broke these marriage rules, high priests were not supposed to marry widows although ordinary priests might. The high priesthood, during the time of Solomon's temple, was the right of the family of Zadok (2 Sam 15:24).

During the period of the restoration, when

Palestine was ruled by monarchs of Persian and then Hellenist cultures, the high priest served as head of state, incorporating the duties of king and prophet since his office was the only remaining office of first temple times (see Jewish History: Greek Period; Jewish History: Persian Period). He enjoyed unprecedented power, and now families vied over the office and problems developed. As the high priesthood developed into a highly political office serving the needs of the ruling Syrians, strife and war broke out.

Eventually the *Hasmonean family established themselves officially as high priests and kings of Israel, although they were entitled to do so neither by the rules or long-established practice. They were neither of the high-priestly clan of Zadok nor of the kingly tribe of Judah. The last of the Hasmoncans was deposed by *Herod, who made himself king and appointed high priests. High priests were no longer groomed for the position nor sanctioned by official judicial powers, and the office lent itself to corruption, although not all appointed high priests were corrupt. An early Talmudic source (*t. Menah.* 13:21) mentions the oppression of the people by some *Sadducean high priests. Since high priests came and went year by year after Herod, the families of the once high priests, including these priests themselves, formed an aristocracy of chief priests. Eventually the Sanhedrin, the official *Pharisaic judicial power, gained control over the appointments long after Herod's death, but with the destruction of the temple this privilege came to an abrupt end.

3. New Testament and Talmudic References to Priests.

The NT refers to priests within many contexts, but the while Gospels do not refer to the sense of a minister of the Christian sacraments, Paul does regard himself as carrying out a priestly role (Rom 15:16). The development of the priesthood in Catholicism, East and West, requires special treatment beyond the focus of this article. The modern-day Catholic priesthood is heir to a Christian institution whose roots are based on a kind of imitation of the Jewish priesthood, including the papal office as a kind of high priesthood.

The Talmud mentions not only priestly courses but also the method of drawing lots for the various services in the temple. References to these institutions are noted in Luke 1. The Tal-

ud also mentions the institution of lay prayer at the time of various offerings, and this also is noted in Luke 1. Indeed, the Talmud noted that a priest who got to offer incense was deemed very fortunate, as that honor would surely bring him miraculous joy, so that once a priest had received that honor he was not to participate in that lottery again until every other priest had at least had a turn. In the Gospel trial scenes mention is made of chief priests, elders, scribes and the high priest. We must assume that the trial envisioned here is one in which the high priest convened his own council and not the official Pharisaic court or *Sanhedrin mentioned in the Talmud to have existed in the latter days of the Second Temple.

In the Synoptic Gospels, Jesus does not assume priestly roles. For instance, Matthew 8:4 (Mk 1:44; Lk 5:14) and Luke 17:14 tell that Jesus sent lepers to the priest for examination to be declared pure. He did not declare them such himself. However in 1 Peter 2:5-9 Christians are seen as a priesthood with Jesus as the chief priest by which sacrifices might be offered. The passage makes it clear that a spiritual, nonphysical sacrificial rite is at the core here, and so it is in Revelation 1:6.

The book of Hebrews (Heb 5, 7) is unique in that it claims Jesus has superseded the levitical priesthood of the Jewish temple and the universal, Gentile priesthood of *Melchizedek. The previous orders of serving God, whether by Jew or Gentile, was said to be encompassed in the priestly figure of Jesus Christ. There were many traditions concerning Genesis 14:18-19. According to some *Melchizedek, king of Salem, was none other than Shem the son of Noah. He was fluent in all the laws of the priesthood and acted as one. The rabbis interpreted Psalm 110:4 to mean that he eventually handed the authority of the eternal priesthood to Abraham. One senses here an attempt to defuse the personage of Melchizedek from the Christian model. The author of Hebrews used Psalm 110 to claim that Melchizedek prefigured Jesus as the eternal and universal high priest.

PRISON, PRISONER

Jesus prophesied that his disciples would experience imprisonment (Lk 21:12). This prophecy was recurrently fulfilled in the experience of the Twelve (Acts 4:3; 5:18-25; 12:1-19; cf. Rev 1:9-10), Paul and his associates (Acts 16:16-40; 20:23; 21:11-13; 21:27-28:31; 2 Cor 6:5; 11:23; cf. Col 4:10; Philem 23) and many other believers (Acts 8:3; 9:2, 14; 22:4-5; 26:10; Heb 10:34). Moreover, of the thirteen letters attributed to Paul in the NT, five are written in the context of custody. Historical knowledge of the nature and variety of imprisonment practices in antiquity is critical to an understanding of the life impact and theological significance of the earliest Christian experiences.

1. The Process of Going to Prison
2. The Purposes and Places of Imprisonment
3. The Privations of Custody and Prisoner Pastimes
4. The Shame of Bonds and Christian Responses

1. The Process of Going to Prison.

As with the administration of justice (e.g., Pliny *Ep.* 9.5; 10.96), custodial arrangements in the Greco-Roman world were made based on legal and social factors. The Roman jurist Ulpian writes that the proconsul normally determined the custody of accused persons "by reference to the nature of the charge brought, the honorable status, or the great wealth, or the harmlessness, or the rank of the accused" (Justinian *Dig.* 48.9.1).

1.1. Charges. Serious crimes usually merited heavier custody and less serious crimes lighter custody. A charge could be deemed "serious" in itself (e.g., murder) or in virtue of the one against whom it had been committed (e.g., striking a senator). Some crimes were eminently worthy of imprisonment: war, rebellion and civil disturbance; treason (*maiestas minuta*), which diminished or endangered the dignity, grandeur or power of *Rome and/or the *emperor; con-juring harm to the emperor through *philosophy or occult practices; murder and poisoning;

theft, brigandage, piracy and sacrilege; fiscal offenses and debt; and sundry other charges, including Christianity (Rapske 1994, 41-46).

1.2. Identity. An individual's identity was determined not only by the civil law (whether one was free or *slave, *citizen or alien) but also by background and status, as noted by Ulpian. Where "upper-class" (*honestiores*) and "lower-class" (*humiliores*) distinctions using Ulpian's measures cut across the divide between citizens and aliens, conflicts inevitably arose (Garnsey). For example, citizens had trusted in legal provisions that protected them from bonds, scourging and summary execution (Livy *Hist.* 10.9.3-5; Cicero *Verr.* 2.5.170; Justinian *Dig.* 48.6.7-8; Paulus *Sent.* 5.26.1-2). However, a citizenship unadorned by upper-class attachments might make it difficult to come to one's rights. The more extensive grant of Roman citizenship over time (Tacitus *Ann.* 3.40.2) also tended to erode its currency in litigation and custodial assignments.

The class indicators noted by Ulpian may be defined thus: "Honorable status" (*honor*) related to offices held and the public esteem they commanded. "Great wealth" (*amplissimae facultates*) reflected material superabundance. "Harmlessness" (*innocentia*) probably denoted what a magistrate might positively presume of an individual. "Rank" (*dignitas*) indicated one's place relative to others in Roman society. All of these were in various ways inheritable.

Citizens generally fared better than noncitizens and the wealthy better than the poor in the setting of custodial arrangements. It must also be kept in mind that magistrates were interested in the relative status of both accused and accuser.

1.3. Negative Influences. Custodial determinations might be corrupted by the sinister forces of influence (*potentia*), favoritism (*gratia*) and bribery (*pecunia*). Despite laws against it (e.g., Justinian *Dig.* 48.11.7 *prol.*), judicial corruption was rife (Josephus *Ant.* 20.21.5 §215; *J.W.* 2.14.1 §273; 2.14.4-9 §§284-308; Pliny *Ep.* 2.11). Additionally, for magistrates who possessed capital jurisdiction and immunity from prosecution during office and who governed at a distance from Rome, there was great temptation to wrongdoing.

2. The Purposes and Places of Imprisonment.

2.1. Purposes. In antiquity custody had several purposes: protection against threat from others or oneself; remand against the risk of

flight; the place to await ratification or execution of sentence; the place of execution; and an instrument of extrajudicial coercion (*coercitio*). While Roman criminal law did not formally recognize imprisonment as a punishment for free persons, delays in trial, sentence and execution effectively turned imprisonment into a punishment (Rapske 1994, 10-20).

2.2. Places. Ulpian indicates a range of options in setting custody, "whether someone is to be lodged in prison, handed over to the military, entrusted to sureties, or even on his own recognizances" (Justinian *Dig.* 48.3.1). Ulpian's sequence runs from most to least severe.

Prison (*carcer*) was the most severe form of custody. Rome's oldest state prison (the *Carcer*), consisting of an upper structure and a subterranean death cell (the *Tullianum*), had the worst appointments and housed the worst criminals. Rome's quarry prison (*lautumia*) and prison of the Hundred (*carcer centumviralis*), the ancient prison on the site of the Theater of Marcellus, and the prison cells of the regional fire stations were less severe. Like Rome, other cities, towns and municipalities had their prisons. The wearing of chains (*vincula, catenae*; Gk *desma/oi, halyseis*) seems more consistently to have been associated with confinement in the *Carcer* rather than in the prisons of lighter custody (*libera custodia*), but this is far from invariable. Generally, however, imprisonment without chains was a concession to high status.
