The next most severe form of incarceration, military custody (*custodia militaris*), was a development of the imperial period. It could be more or less severe depending upon whether it was within a barracks or camp, in transit to a provincial capital or Rome, in a place of exile or relegation or in one's own home. The rank, experience and number of soldiers assigned to guard a prisoner corresponded with his or her importance or status. Prisoners and guards were frequently manacled together (Josephus *Ant.* 18.6.6-10 §§189-237; Ign. *Rom.* 5.1; Seneca *Ep.* 5.7; Seneca *Tranq.* 10.3). Guards who allowed their prisoners to escape or kill themselves were subject to a graduated penalty system based upon level of culpability (Justinian *Dig.* 48.3.12, 14; Petronius *Sat.* 112).

Less severe yet was entrustment to sureties (*fideiusoribus committenda*), where an accused person of rank was transferred into the custody of a higher-ranking person. The security and

safety of the prisoner were paramount, and the surety had absolute control over the manner of detention and its modalities, which could be comfortable or quite miserable (Dio Cassius *Hist.* 58.3.5-6; Tacitus *Ann.* 6.3.3, 22; Suetonius *Vitellius* 7.2.3; Justinian *Dig.* 1.18.14).

The least severe custodiai option Ulpian mentions is release of an accused on his own recognizances (*etiam sibi*). Where an accused was restricted from appearance in public or travel it showed itself to be a true form of custody.

3. The Privations of Custody and Prisoner Pastimes.

3.1. Privations of Custody. Prisoners suffered various privations in custody. War and civil disturbance, the enforcement of condemnatory edicts and delay in processing cases owing to volume, incompetence or sheer malice could pack prisons far beyond reasonable capacity. Poor ventilation created conditions of dangerously stale air, suffocating heat and dehydration. Prisons were sleepless places. Where pallets were not available one slept on the floor, perhaps using one's outer cloak as a cover against the cold (Josephus *Ant.* 18.6.7 §204; cf. Acts 12:8; 2 Tim 4:13). Chains and stocks (*xyla*) also hindered sleep (Lucian of Samosata *Tox.* 29; Acts 16:24-25).

Most prisons were devoid of much natural light. In their inner cells and underground chambers, light was nonexistent. Small wonder that *tenebrae* ("darkness") can be rendered "dungeon" in some passages (e.g., Cicero *Cat.* 4.10). Nightfall robbed prisoners of natural light, and the requirements of security forbade them artificial light (Tertullian *Ad Mart.* 2; *Mart. Let. Lyons et Vienne* 27-28; *Mart. Perp. et Felic.* 3.5; cf. Acts 16:29).

The chaining of prisoners caused varied consequent sufferings. Iron chafed and corroded the skin over time (Lucan *Civ. W.* 72-73; Seneca *Contr.* 1.6.2; cf. Phil. 1:17). Tightly fixed, chains were a means of torture (*Cod. Theod.* 9.9.1). Prisoners could also be weighed down with such heavy chains as to exhaust or cripple them (*ARS* 8-XII Tables 3.3; Ovid *Con. Liv.* 273-74; Suetonius *Nero* 36.2; Seneca *Contr.* 1.6.2; Philostratus *Vit. Ap.* 7.36).

Without recourse to personal resources or the help of friends on the outside for food or drink (Josephus *Ant.* 18.6.7 §204; *Life* 3 §§13-14; Lucian of Samosata *Peregr.* 12; Tertullian *De Je-*

jun. 12; *b. Mo'ed Qat.* 3:1-2; *b. Mo'ed III: Erub.* 21b; cf. Acts 16:34; 24:23; 27:3), the prisoner's prospects could be grim. The officially provided daily prison ration (*solo fiscalis*) was poor and intended not for health but bare survival. Its denial could be a punishment, a form of torture or even a means of execution (Dio Cassius *Hist.* 58.3.5-6; Tertullian *De Jejuni.* 12; Christian Martyr Literature passim; Heliodorus *Aeth.* 8.6.2; Cyprian *Ep.* 21.2; 33.2; cf. Acts 16:25, 33-34).

Prisons were places of squalor and appalling filth (Cicero *Verr.* 2.5.21; Tertullian *Ad Mart.* 2; Cyprian *Ep.* 47.3). The permissions of a lighter custody might allow for new clothing and visits to the public baths (Josephus *Ant.* 18.6.7 §203; 18.6.10 §228; Tertullian *De Jejuni.* 12; Justinian *Dig.* 48.20.2, 6), but barber's knives were a risk and so haircuts were denied (Martian *Epigr.* 3.74; Josephus *Ant.* 16.11.16 §§387-88; 18.6.10 §237; Lucian of Samosata *Tox.* 30; *m. Mo'ed Qat.* 3:1). Clothing quickly turned to rags in severe custody so prisoners came to look more dead than alive (Lucian of Samosata *Tox.* 30). Even before entering custody, the action of mobs and the normal process of punitive or coercive flogging left clothing and bodies torn (Seneca *Contr.* 9.2.21; Acts 16:22; 21:30-32; 22:24-25).

It is not a surprise that these awful conditions caused such profound distress of body and soul that prisoners, if they did not become sick and die (Seneca *Contr.* 9.1; Plutarch *Vit. Cim.* 4.3; Philostratus *Vit. Ap.* 4.35; 7.26; 8.22; cf. Mt 25:36, 43), wished themselves dead or actively sought suicide (Philostratus *Vit. Ap.* 7.26; Lucian of Samosata *Tox.* 30; Tacitus *Ann.* 6.5.8; Suetonius *Vitellius* 7.2.3; *Tiberius* 61.5; Dio Cassius *Hist.* 58.3.5-6; Justinian *Dig.* 48.3.8; 48.3.14.3-5).

3.2. Prisoner Pastimes. Extended imprisonment created yawning periods of unoccupied time. Prisoners would not have been permitted to pursue a trade and especially not one like tent making, which called for the use of dangerous tools (Acts 18:3; cf. Justinian *Dig.* 2.11.4.1; 4.6.1.1, 10; 22.1.23; 49.14.45.1). Prisoners in antiquity are known to have written petitions for release (PLund. 2:354; PPetr. 3:36a verso; P. Cair. Zen. 2:59275; 3:59482; 4:59492, 59601, 59626; *Sammelb.* 3:6787; PLBat. 20:29; Keenan). It is unlikely that Paul so engaged himself. While other prisoners might prepare their cases in prison (Philostratus *Vit. Ap.* 7; 8.6-7; Achilles Tatius *Leuc.* 7.2.1-4), Jesus had forbidden such activity to Christian prisoners (Lk 21:14-15). It is also a

fact that prisoners occupied their time by playing games (Seneca *Tranq.* 14.6-7; Plutarch *Mor. Sera* 554.D), reading and conversing (Plato *Phaed.* 61.B; Suetonius *Tiberius* 61.4; Arrian *Epict. Diss.* 2.6.27; Lucian of Samosata *Peregr.* 12; cf. 2 Tim 4:13).

Prisoners also engaged in the philosophical and religious disciplines of prayer, song and fasting (Plato *Phaed.* 60.D-E; 61.A-B; 117.B-C; Philostratus *Vit. Ap.* 7.31, 38; Tibullus 2.6.25-26; cf. Christian Martyr Literature passim). The Pauline pattern in prayer and song is evident in both Acts and the captivity epistles. Related to the above were philosophical and religious ministrations to others in writing (Plato *Phaed.* 60.D-E; Cicero *Verr.* 2.5.112; Tacitus *Ann.* 6.39; Philostratus *Vit. Ap.* 4.46; Pol. *Phil.* 13.2; Ign. passim; Christian Martyr Literature passim) and conversation (Plato *Crito; Phaed.*; Philostratus *Vit. Ap.* 7.26-42; *b. Naš.* I: *Yebam.* II:104a, 108b; *m. Git.* 6:7; cf. Christian Martyr Literature passim). The book of Acts and the captivity epistles are particularly rich in their indications that time in custody was not dead time for the apostle.

4. The Shame of Bonds and Christian Responses.

4.1. The Shame of Bonds. Mediterranean culture was significantly driven by *honor and shame concerns, and in such a context the experience of custody and bonds carried devastating dishonor and shame connotations. Prisons and shame are closely identified in the literature (Plutarch *Vit. Sol.* 15.2-3; Pausanias *Test.* 6.13.1; Cicero *Verr.* 2.5.148; Arrian *Epict.* 1.4.23-24; 2.1.35; 2.6.25; Suetonius *Vitellius* 7.17; Seneca *Ep. Lucil.* 85.41). Damaging connotations and insult attached to prisoners irrespective of their deserts because prison was by definition for social deviants (Dio Cassius *Hist.* 58.11.1; Seneca *Contr.* 9.4.20-21; Suetonius *Vitellius* 7.17.1; Philostratus *Vit. Ap.* 7.34). The process of being publicly conducted in chains was intended to degrade prisoners (Dio Cassius *Hist.* 58.11.1.F; Suetonius *Vitellius* 7.17.1; cf. Josephus *J.W.* 2.12.7 §246), and it inspired a general and sometimes lifelong revulsion of the prisoner (Philostratus *Vit. Ap.* 7.34-37; Dio Chrysostom *De Ser.* 1.22 [§14]). Terms for prison and its accoutrements were applied derisively, including "jail guard" (*custos carceris*), "fetter farmer" (*catenarium colonus*), "ex-convict and jail bird" (*ex compedibus atque ergastulo*) and "jail bird" (*desmotes*). Even friends

and close associates experienced great pressure to abandon the prisoner (Seneca *Ep. Lucil.* 9.9; Philostratus *Vit. Ap.* 4.37; Lucian of Samosata *Tox.* 18, 28-29; Antiphon *De Caed. Her.* 18; *Mart. Perp. et Felix.* 5.2). It might be added that the same connotations attended those who had been publicly stripped and flogged (Justinian *Dig.* 48.19.28; 50.2.12).

4.2. Christian Responses. The shame associations from imprisonment and bonds also threatened Christian prisoners in the NT (Acts 16:37; 26:29; 1 Thess 2:2; Phil 1:29-30; Heb 10:33-34; 2 Tim 1:8-12; 2:9). Brothers and sisters were taught that service to the Christian prisoner was service to Christ (Mt 25:31-46). While numbers were celebrated for courageously doing just that (Acts; Phil 1:14; 2:19-30; Col 4:7-15; 2 Tim 2:9; 4:11; Philem 23-24; Heb 10:33-34; 13:3; cf. Rapske 1991), others abandoned their incarcerated fellows (Phil 1:15, 17; 2:21; 2 Tim 4:9-10, 16).

The damage of going into custody, the rigors and restrictions of being in custody and the shame and dishonor of being a prisoner resulted in significant theological reflection, particularly for Luke and Paul. Acts shows that not only is Paul unflinching for the Lord, but also the Lord is decidedly for his imprisoned apostle. Paul is moved to account for his imprisonments and bonds to individuals and to churches, demonstrating that his status, credibility and effectiveness as missionary accommodates to and shows the divine purpose of these trials. This is demonstrable in Paul's terminology of self-designation (Eph 3:1; 4:1; 6:20; Philem 1, 9), his reflections on suffering and mission (Phil 1:12-13, 16, 29; Col 1:24; Philem 13; cf. Eph 4:7-13) and the terminology with which he affirms those who courageously continue to support and help him in his bonds (Col 4:10; Philem 23; cf. Rom 16:7).

PROPHETS AND PROPHECY

Prophecy is the proclamation of divine revelation. At the time of nascent Christianity, it was an established and a ubiquitous phenomenon; in the *Hellenic world, oracular sites had been

operative for centuries and continued to provide guidance to enquirers, while in Rome the Sibylline Oracles had long furnished the senate with direction (see *Mysteries*). Within the milieu of Second Temple Judaism, the writings of *Josephus, *Philo and the *Dead Sea community reveal that prophecy had not died out but continued as a viable, if diverse, phenomenon. This very diversity both in the pagan and Jewish records helps in part to account for the variegated conceptions of prophecy present within the NT.

8. Prophecy in the Writings of Philo
9. Prophecy and the New Testament

1. Terminology.

In the Hellenistic pagan world, prophecy was but one of a large number of divinatory practices (*mantikē*) employed to elicit messages and guidance from the gods. The word *prophecy* (*prophēteia*) is derived from Greek *pro* and *phēmi*, with *pro* signifying "on behalf of" and the root *phēm-* meaning "speak." A prophet is, therefore, "one who speaks on behalf of" someone. It is not until the NT itself that the prophet becomes largely associated with foretelling (Acts 11:27-28; 21:10-12; though cf. Plato *Charm.* 173C). Rather, *prophētēs* ("prophet") signifies a spokesperson or interpreter, and hence the spokesperson of a god. Typically, such a spokesperson was associated with oracular shrines, either as a mouthpiece or a functionary. Somewhat confusingly, in the classical milieu the word *prophet* only occasionally refers to the inspired speaker. The inspired priestess of Apollo at Delphi, the Pythia, for instance, is sometimes designated as a prophet (*prophētis*, Plato *Phaed.* 244A; Euripides *Ion* 42.321), but the term is more frequently used of temple functionaries who may have had little or nothing to do with the Pythia's inspired utterance. Itinerant seers are commonly characterized not as prophets but as *mantikoi*, and oracle mongers as *chrēsmologoi*. The following discussion, therefore, will not restrict itself to the word *prophētēs* and its cognates but will assume a broader purview.

2. The Nature of Pagan Oracles.

2.1. Oracles. An "oracle" can refer either to the shrine where the gods were consulted for advice or prophecy or to the response furnished by a deity. Prophecy at oracular shrines was widespread in the ancient world both temporally and geographically. Oracular sites are attested as early as Homer (c. 750 B.C.; Homer *Il.* 16.233-5; *Odys.* 14.327-28 = 19.296-97) and continued until they were proscribed in the fourth century A.D. While there was a certain falling off in popularity with some of the shrines, especially Delphi about the turn of the common era, due, among other factors, to the increasing influence of astrology (cf. Juvenal *Sat.* 6.553-56), this decline has been unduly emphasized (e.g., by Boring, 50). The second century marked a notable resurgence of interest in the established oracles, particularly in *Asia Minor (Lane Fox, 168-261).

Geographically, oracular sites were widely distributed throughout the Mediterranean world. While oracles to Apollo (Delphi, Claros, Didyma, Corope, Argos) were most common, there were also famous sanctuaries dedicated to Zeus (Dodona, Olympia; and Siwa to Zeus-Ammon) and to heroes such as Amphiaraios and Trophonius. Intriguingly, as Y. Hajjar has demonstrated, oracular sites in Syria and Phoenicia were also abundant, even if our archaeological record is limited.

2.2. Oracular Procedure. The methods of oracular consultation were remarkably varied. At the oracle of Trophonius, for instance, the consultant would himself descend into a chasm to encounter the hero (cf. Pausanias *Descr.* 9.39.4, for a firsthand account). At Boura, by contrast, there was a dice oracle that used knucklebones and an interpretive tablet (Pausanias *Descr.* 7.25.10). While the consultation process at the most famous of ancient oracles, Delphi, is the best known, even its specifics are still far from certain (for reconstructions based on syntheses of the available evidence, see Parke and Wormell).

2.2.1. Oracular Questions. The questions brought to oracles were both public and private in nature. Some oracles, such as Dodona, were largely consulted about private matters, with most of the extant oracular queries formulated in the form of yes-or-no questions: "is it better, and more appropriate to?" Delphi was distinctive because of its large proportion of public en-

quiries about how cities were to cope when confronted with natural catastrophes, divine prodigies or war; and how they were to sanction legislation, found colonies or please the gods. Naturally, Delphi also had its share of private queries typically, according to *Plutarch, whether "one ought to marry, or to start on a voyage, or to make a loan" (Plutarch *Mor.* 408C).

2.2.2. *Oracular Replies.* Heraclitus (frag. 93) claims that at Delphi, Apollo "neither conceals nor reveals, but signifies." His elliptical remark suggests that the oracle straddled the line between clarity and obscurity. While it has been argued (e.g., by Fontenrose, who discounts the historian Herodotus's testimony) that the replies given at Delphi were not ambiguous, it is more likely that some were (Plutarch *Mor.* 406E; 407A-B). The longer replies in particular, delivered in dactylic hexameter, were decidedly cryptic and allusive (cf. Herodotus *Hist.* 1.61), though it must be borne in mind that our evidence is heavily reliant upon literary sources. The shorter replies, perhaps because they were obtained by lot-oracle, tended to be more straightforward.

2.3. *Manic or Mantic?* The nature and character of the Pythia's inspiration continue to be debated. Some scholars still adhere to nineteenth-century conceptions that have the Pythia, rapt in an ecstatic trance, blurt out frenzied and inarticulate utterances, which are then rendered into hexameter verse by attendant prophets. This reconstruction is not without ancient attestation (Lucan *Civ. W.* 5.165-224; Strabo *Geog.* 9.3.5). Plutarch tells us, for instance, that an uneducated girl was chosen to be the Pythia (Plutarch *Mor.* 405C) and alludes to various poets in the vicinity of the oracle who would versify (Plutarch *Mor.* 407B), while *Plato further claims that the Pythia did not know what she was saying (Plato *Phaed.* 244B-C).

All of this could indicate that the Pythia was merely the unwitting mouthpiece for the vatic and unintelligible utterances of Apollo. Such a reconstruction, however, is undeniably problematic. L. Maurizio has rightly argued that not one ancient source describes anyone but the Pythia issuing oracular responses at Delphi. That these responses originated with her is also substantiated by accounts of the Pythia being suborned (Herodotus *Hist.* 6.66, 75), since there would be little point in bribing her if her pronouncements were unintelligible. Whether she would be capable of producing verse in dactylic

hexameter is debated, but is not without precedents (cf. Dodds, 92-93 #70; and Tacitus *Ann.* 2.54 of the "illiterate" priest of Apollo at Claros ignorant of meter), especially given Plutarch's remarks on the poor quality of the verse (Plutarch *Mor.* 396D).

Further, Plato's account of inspiration (Plato *Phaed.* 244; *Tim.* 71-72) has been unduly influential among modern interpreters, but it is idiosyncratic and obviously calculated to promote his own distinction between *philosophers who possess understanding and those who are inspired (poets, prophets) but who do not fully comprehend what they utter. Recent examinations of the phenomenon of inspiration suggest that, Plato apart, poets were regarded as having conscious control over their productions, while at the same time acknowledging their dependence on the divine. The Pythia, then, is best regarded as figuring among their number (cf. Forbes, though his attempt to dissociate prophecy from ecstasy is misguided).

3. False Prophecy in the Greco-Roman World.

While the political motivations and accuracy of the Delphic oracle have sometimes appeared suspect to moderns, in the oracle's heyday these factors appear to have been little questioned. As in the mythological record, Delphi's authority was considered unimpeachable, and much the same could be said for almost all of the ancient oracles. Celsus enthusiastically vouches for them all when he asks, "How many cities have been built by oracles, and have gotten rid of disease and famines, and how many that have neglected or forgotten them have suffered terrible destruction? How many have been sent to form a colony and have prospered by attending to their commands? How many that have been distressed at being childless have come to possess that for which they prayed and escaped the wrath of demons?" (Celsus apud Origen *Cont. Cels.* 8.45, trans. Chadwick).

Despite Celsus's glowing testimonial, false prophets and dubious oracles were widely recognized in the ancient world. *Chrēsmologoi* were thought to add oracles of their own (Herodotus *Hist.* 7.6) or to interpret written oracles in self-serving fashion (Aristophanes *Au.* 959-91; *Pax* 1095; *Eq.* 997-1099). If *Lucian of Samosata is to be believed, there were even bogus oracular sites. His *Alexander* recounts in detail how Alexander of Abonoteichos established his own ora-

cle to the snake(-oil) deity Glykon, the "new Asklepios," and gulled the public with sham oracles. The entire work provides us with an admirable manifesto of sharp practice.

4. Sibylline Prophecy.

In addition to the prophets at oracular shrines, the postclassical period saw the widespread emergence and circulation of written oracles and Sibylline prophecies. "Sibyl" may have originally been a proper name, but by the early fourth century B.C. it had become a generic term for an inspired prophetess. Varro, for instance, is able to list ten sibyls (frag. 56 apud Lactantius *Div. Inst.* 1.6.8-12). If largely mythical, the sibyls were nonetheless extraordinarily influential through the prophetic writings that circulated in their names.

The written oracles of the Cumaean Sibyl became duly famous because of their influence in *Rome. Reputedly sold by the Cumaean Sibyl to Tarquinius Superbus (Pliny *Nat. Hist.* 13.88), they were entrusted to the priestly college of the *Quandecimviri sacris faciundis*. When divine prodigies were brought to the attention of the senate, the college would, on the latter's instruction, consult the Sibylline oracles to establish what the state needed to do. Though the collection perished in 83 B.C., it was reassembled and continued to be consulted until at least A.D. 363 (Amnianus Marcellinus 23.1.7). Augustus's destruction of more than two thousand prophetic books and his editing of the explicitly Sibylline writings in 13 B.C. (Suetonius *Augustus* 31) indicate the pervasiveness of such collections, Sibylline and otherwise, and implicitly their considerable influence. That Tiberius apparently had to embark on a similar proceeding a mere thirty years later (Dio Cassius *Hist.* 57.18.5) is no small indication of their popularity.

Where the Sibylline writings differed from oracular prophecy was in their spontaneous and unsolicited vaticinations. If oracular prophecy was the product of specific queries, the Sibylline and related oracles often independently predicted future natural catastrophes, wars and the rise and fall of kingdoms. Given some of the obvious affinities with traditional Hebrew prophecy and *apocalyptic writings, particularly the prognostic and *eschatological elements, the form was readily appropriated and recast by Jewish authors (c. second century B.C.) and later by Christians.

5. Intertestamental Prophecy.

It is now generally recognized (Sommer's protests notwithstanding) that the so-called cessation of prophecy between the Testaments has been greatly exaggerated. Although *b. Yoma* (9b) states that "after the later prophets, Haggai, Zechariah, and Malachi had died, the Holy Spirit departed from Israel," sources nearer the time of the Second Temple period suggest otherwise (see Holy Spirit). In addition to the examples adduced below, there is evidence in *Josephus for prophetic types of activity among the *Pharisees of Herod's day (Josephus *Ant.* 17.2.4 §43), the Zealots (Josephus *J.W.* 6.5.2 §286) and the Samaritans (Josephus *Ant.* 18.4.1 §§85-87). Prophecy continued, therefore, albeit in a variety of guises. As attempts to categorize the various types of prophet and prophecy have generally proved inadequate (see Webb, 312-16, his own attempt being overly arbitrary), the following examination is drawn from our primary sources for the period: the Dead Sea Scrolls, Josephus and Philo.

6. Prophecy in the Dead Sea Scrolls.

6.1. Charismatic Exegesis. For the Essenes, the Teacher of Righteousness was the inspired interpreter of prophetic secrets. The **Habakkuk Commentary* depicts him as the one to whom "God revealed all the mysteries of his servants the prophets" (1QpHab 7:1-5). He, by means of "charismatic exegesis," was able to make known to later generations what God "would do to the last generation, the congregation of traitors" (CD 1:12-13; see Damascus Document). So even if he is not explicitly styled a prophet, the Teacher's inspired insight into the writings of the OT prophets and into eschatological mysteries show him to be the possessor and expounder of God-given insights.

6.2. False Prophecy. Several fragments of the DSS are cognizant of false prophets. One fragment apparently contains a ceremonial procedure employed to help distinguish between true and false prophets (4Q375). Another fragment (4Q339) lists eight false prophets, including Balaam. The final name on the list is damaged but has plausibly been reconstructed as "John, son of Simon." If so, the reference is likely to John Hyrcanus, who was famed for his prophetic abilities (Josephus *Ant.* 13.10.7 §§299-300; *J.W.* 1.2.8 §§68-69, though ironically Josephus lauds Hyrcanus as a true prophet: "for the Deity was with

him and enabled him to foresee and foretell the future").

6.3. Prognostication. In addition to the evidence provided by the DSS, Josephus maintains that some of the Essenes were gifted with prognostication. He attributes this gift to their "being versed from their early years in holy books, various forms of purification and apothegms of prophets" (Josephus *J.W.* 2.8.12 §159). He specifically cites two individuals, Judas (Josephus *J.W.* 1.3.5 §§78-80; *Ant.* 13.11.2 §§311-13) and Menahem (Josephus *Ant.* 15.10.5 §§373-79), and provides detailed accounts of their predictions.

7. Prophecy in the Writings of Josephus.

Generally speaking, Josephus, mindful of the LXX equation of the Hebrew *nāhī'* ("prophet") with *prophētēs*, confines his use of the latter term to the prophets of the Hebrew Scriptures (though cf. the anomalous *prophētai* at Josephus *J.W.* 6.5.2 §286). In doing so, he appears to accord a special status to the OT prophets and to their writings. This should not, however, be taken to mean that Josephus regards prophecy as having ceased. Rather, in part because he is uncertain about prophetic continuity (Josephus *Ag. Ap.* 1.8 §41), he employs different terms (chiefly *mantis* and cognate forms) to account for the phenomenon. As R. Gray (167) aptly observes, for Josephus "the differences between ancient and modern prophetic figures were differences of degree, not of kind."

7.1. Josephus as Prophet. Remarkably, Josephus claimed to be able to foretell the future himself. Not only does he profess to have predicted the fall of Jotapata after a forty-seven-day siege, but also he alleges that he reneged on a suicide pact because of his conviction that he had been called by God to prophesy to Vespasian. His predictions that the Roman general and his son Titus would both accede to the imperial throne (Josephus *J.W.* 3.8.9 §§399-408) did transpire.

7.2. Sign Prophets. Josephus is our chief source for the so-called Sign Prophets (the designation is coined by Barnett), who were leaders of popular movements in the decades preceding the outbreak of the first revolt against Rome (*see* Revolutionary Movements, Jewish). Two of these figures, Theudas and the Egyptian, are also mentioned in Acts (Acts 5:36; 21:38; cf. Josephus *Ant.* 20.5.1 §§97-99; *J.W.* 2.13.4 §§258-60; *Ant.* 20.8.5 §§169-72). The Sign Prophets include Jonathan, active just after the war (Josephus *J.W.*

7.11.1-2 §§437-50; *Life* 76 §§424-25), as well as a variety of unnamed individuals who came to prominence under the procuratorships of Felix (Josephus *Ant.* 20.8.6 §§167-68; *J.W.* 2.13.4 §§258-60) and Festus (Josephus *Ant.* 20.8.10 §188).

As P. W. Barnett's designation implies, these figures were united both in their claims to be prophets and in their promises of signs or miracles to their followers. Typically they would lead the faithful to a set locale (the Jordan, the Mount of Olives, the wilderness) promising redemption and an imminent divine deliverance. Josephus dismisses them as "deceivers" (*planoi*) or "false prophets" (*pseudoprophētai*), using as his chief *discrimen* the failure of their prophecies to come true. As most of the Sign Prophets were put to death and their followers killed or dispersed, his judgment is hardly unexpected. By contrast, he takes the case of *Jesus ben Ananias more seriously. The latter, dismissed as mad by the procurator Albinus, ceaselessly proclaimed "woe to the city of Jerusalem." He was killed by a Roman missile during the siege of Jerusalem, his last words being "and woe to me also" (Josephus *J.W.* 6.5.3 §309). All of the foregoing indicates, therefore, that for Josephus prognostication is one of the distinguishing hallmarks of prophecy in the Second Temple period. The true prophet is divinely gifted with knowledge of the future.

8. Prophecy in the Writings of Philo.

Like the DSS and Josephus, Philo recognizes the unquestioned prophetic authority of Moses and the prophets. Philo's own approach to prophecy is distinctive in that he presupposes that prophetic experience is mediated through ecstasy and that it is open to every good (*astrias*) man (cf. Philo *Rev. Div. Her.* 259). In the course of the prophet's ecstatic experience, ecstasy, divine possession and madness overshadow him or her, and "the mind is evicted at the arrival of the divine spirit" (Philo *Rev. Div. Her.* 265). Philo's Greek terminology here echoes Plato and testifies to his indebtedness to a Platonic understanding of mantic inspiration. Further passages, however, may indicate that Philo also recognizes instances in which the mind is not entirely eclipsed. In his *Life of Moses* he outlines three different modes in which God communicates with Moses, including questions with oracular responses and the possession of Moses by God, where Moses apparently retains at least some of his faculties (Philo

Vit. Mos. 2.188-90; cf. Winston).

Philo also expatiates on the character of false prophets. Basing his remarks on Deuteronomy 18:1, he remarks that a false prophet appears to "be inspired and possessed by the Holy Spirit" but incites the people to worship false (Greek?) gods (Philo *Spec. Leg.* 1.315). All told, therefore, Philo's prophetic paradigm is an intriguing composite of Greek and Jewish perspectives.

9. Prophecy and the New Testament.

Taken as a whole, the above conceptions of prophecy are remarkably diverse. Even among the Jewish authors, who uniformly acknowledge the authority of the OT prophets, there is little agreement. That they also uniformly express divergent, even contradictory, perspectives on the nature, hallmarks and manifestations of true and false prophecy is revealing and helps to demonstrate something of the fluid conceptions of prophecy characteristic of the late Second Temple period. When the influence of pagan prophecy is further factored into the equation, it becomes evident just how wide-ranging a conceptual framework the NT authors had to draw upon. The diversity of our record, therefore, helps in some measure to account for the variegated conceptions of prophecy present within the NT and within emergent Christianity itself.

PROSELYTISM AND GODFEARERS

"Proselytizing" refers to active attempts on the part of Jews to recruit or evangelize Gentiles as new religious members of *Judaism. Recent discussion of the nature and extent of Jewish proselytizing has focused on whether or not Judaism is a missionary religion and, for historians of the development of the Christian faith, to what degree Christian practice is indebted to Jewish ideology and practice. "Godfearer" describes a Gentile with a certain level of adherence to Judaism, in particular to incomplete commitment to Judaism but with a corresponding commitment to the Jewish community. In effect Godfearers are Gentiles who stand between pagan Gentiles and faithful Jews.

1. History of Scholarship
2. Judaism and the Gentile
3. Judaism and Proselytes
4. Methods of Proselytizing
5. Requirements for Proselytes
6. Levels of Adherence

1. History of Scholarship.

While scholarship has addressed more than the

issue of whether or not Judaism was a missionary religion, the specific points of the discussion (e.g., requirements, numbers of proselytes, the meaning of the Lukan expression *Godfearers*) neatly arrange themselves around this issue.

1.1. The Older Scholarly Consensus. Older scholarship, especially that of Protestant Germany in the nineteenth and early twentieth centuries, univocally affirmed, assumed and sought to explain the rise of Christianity on the basis of the perception that Judaism was a missionary religion. Accompanying the assertion that Judaism evolved into a monotheistic religion with universalistic dimensions was the consistent contention that Judaism and individual Jews actively recruited Gentiles to Judaism. *Diaspora Judaism was given prominence of place in this evolution of Judaism to a universalistic faith that naturally evolved into the Christian mission to the world (see Bertholet; Jeremias; Hahn; Georgi).

While this strand of scholarship affirmed that Judaism was a missionary religion in impulse, it was also argued by some of these scholars that Judaism was inferior to Christianity because it either did not live out its natural impulse to evangelize the world or because, when Christianity emerged as more powerful than Judaism or when *Bar Kokhba's revolt failed, it then abandoned its universalistic impulse to become a nationalistic and introverted religion. Jewish scholars countered this Protestant propaganda by demonstrating both the openness to proselytes in Jewish formative texts, especially the *Talmudim and *Midrashim, as well as the fundamental kindness of individual Jews to Gentiles, both ancient and modern. The most important studies of Jewish scholars are those of B. J. Bamberger, W. G. Braude, J. S. Raisin, J. R. Rosenbloom and L. H. Feldman. A conclusion from a well-known Christian scholar of Judaism, G. F. Moore, perhaps crystallizes this view the best when he says that "the belief in the future universality of the true religion . . . led to efforts to convert the Gentiles to the worship of the one true God and to faith and obedience according to the revelation he had given, and made Judaism the first great missionary religion of the Mediterranean world" (Moore, 1:323-24).

An even more influential articulation of this view was penned by J. Jeremias, whose standing in Christian perceptions of Judaism was without peer for nearly a generation (though that stand-

ing has now been shifted as a result of the work of E. P. Sanders): "Jesus grew up in the midst of a people actively engaged, both by the spoken and written word, in a Gentile mission, whose impelling force was a profound sense of their obligation to glorify their God in the Gentile world." He can also maintain that "Jesus thus came upon the scene in the midst of what was *par excellence* the missionary age of Jewish history" (Jeremias, 17, 11).

Although Feldman's recent study does not make such exaggerated claims, his book establishes the conclusion that Judaism was a missionary religion and was actively involved in proselytizing Gentiles in a manner that helped shape the identity of Judaism (Feldman, 288-341). Feldman's case is based on two major items: demographics and the evidence found in literature. Recognizing the strength of the arguments against the view that Judaism was a missionary religion, Feldman offers a massive concession: "However, although there is, in truth, no single item of conclusive evidence, as we shall see, the cumulative evidence—both demographic and literary—for such activity is considerable" (Feldman, 293).

The literary evidence will be explained in a contrasting manner below, but a word ought to be said here about the demographic evidence. Feldman's argument is simple: since the population statistics of numerical growth cannot be explained on the basis of normal birth and survival patterns, there must have been some other factor that contributed to the blossoming of Jews around the Mediterranean. That other factor, he contends, must have been conversion as the result of Jewish missionary activity. The weaknesses of this argument are that it assumes (1) accurate estimations of Jewish populations from two different periods of history (so a comparison could be made) throughout the Mediterranean basin (all Jews need to be numbered) so that the second larger number would require special explanation; (2) an accurate knowledge of survival rates; and (3) accurate perceptions of immigrations and emigrations, not to mention knowledge of survival after famines, earthquakes, plagues and other disasters. None of these items can be known with the kind of precision needed in order to have sufficient disparity that could be explained by Jewish missionary successes. For example, our knowledge of Jewish population lacks precision at every point; all

that we have is rough estimations that cannot be taken seriously enough for the kind of comparison required (Rosenbloom). Thus an argument for Jewish missionary activity on the basis of demographics lacks credibility (McKnight forthcoming).

1.2. The Recent Scholarly Consensus. Though the assertion that Judaism was a missionary religion has garnered significant support in the last two centuries of scholarship, that conclusion has recently been challenged to such a degree that it may be said to have been overturned and the consensus today is that Judaism was not a missionary religion. Even if some German Protestant scholars polemically contended that Judaism failed to live up to its inherent universalistic impulse, recent studies that contend that Judaism was not a missionary religion argue so on the basis of a variety of ancient evidence and not in order to support an ideology.

One of the earliest voices to be heard in this regard was that of A. T. Kraabel, who after exploring the archaeological data at the site of Sardis, concluded that much of what scholars, particularly Christian, were saying about Jewish missionary activity could not be justified on the basis of evidence, either literary or archaeological (Kraabel 1982, 1983). His insights were then confirmed by three monograph studies of Jewish missionary activity, each of which contended that Judaism was not a missionary religion (McKnight 1991; Goodman; Porton). S. McKnight (1991) offers a comprehensive survey of the evidence that has been used to describe Jewish missionary activity, arranging his separate studies around the following topics: Judaism and the Gentile, Judaism and proselytes, methods, requirements, levels of adherence and the evidence for Jewish missionary activity in the NT. One result of this study is a more careful approach to terms, including "missionary religion" (a self-conscious religion that defines itself in part in terms of missionary practice) and "conversion" (involves cognitive agreement, socialization into a new group and personal-biographical reconstruction). The result of McKnight's study is the contention that Judaism, though it evinced acceptance of Gentiles and proselytes who came to Judaism, (1) was never a missionary religion, (2) occasionally had persons who were involved in what we might call missionary activity and (3) did not set the stage in any substantial manner for early Christian

missionary practice (McKnight 1991).

M. Goodman's study, though it approaches the data from a different angle, comes to the same conclusion: Judaism was not a missionary religion; in addition, he argues that Christianity itself was not always everywhere a missionary religion. The fresh perspective of Goodman is that he approaches the issue from the angle of the ancient Greco-Roman world and seeks to understand not just Jewish practice but also how ancient religious and philosophical groups sought to recruit adherents (if they did). In addition, Goodman introduces nuance into each discussion, especially seeing the historical and social factors at work in Judaism, whether in his approach to the development of missionary work along the lines of Christianity in connection with Nerva or in his insight into the various concerns of missions (information, education, apologetics) or in his conclusion that the imposition of social order should not be confused with religious conversion.

A final study is that of G. Porton, who presents a nuanced socio-rhetorical analysis of the convert within rabbinic texts, a convert whose legal ambiguity prompts the title of his book as *The Stranger Within Your Gates*. Diversity is a leitmotif for Porton. Thus, "indeed, even within each of these documents, various strands of Jewish thought and life, representing disparate locations, periods of time, populations, cultural views, and intellectual environments, have been joined together. . . . Therefore, it is most correct to speak of the rabbinic *views on conversion*" (198). This diversity is enhanced by his contention that Judaism, as a national religion with national and ethnic identity, could not by nature be a missionary religion. Porton's book replaces the older studies of Bamberger, Raisin and Braude because the texts are analyzed with a more critical approach that considers not just ostensive reference but also rhetorical and sociological strategy. These three studies converge in one important way: **Judaism was not a missionary religion.**

2. Judaism and the Gentile.

Before the historian can describe the relationship of Jews to proselytes, the relationship of Jews and Gentiles in general needs to be analyzed. This relationship can be characterized as both an integrating tendency as well as a resisting tendency, and this observation needs to take

into account the important perception that Judaism was diverse (cf. McKnight 1991, 11-29). What for one group was something to be resisted was for another group something to be welcomed; on top of this we need to note that individual groups changed over time so that a constant vacillation characterizes Judaism. Consequently it is historically inaccurate to contend that any one view characterizes Judaism in its relationship to the Gentiles. Instead we are more accurate if we describe Judaism (some would say Judaisms) as a diversity with various approaches to how Jews related to the Gentile world. In light of these observations, these two features of how they related take on special nuance, but in so describing various dimensions of the integrating and resisting tendencies, specific groups are not in view (i.e., *Philo integrates whereas the *Pharisees resist).

2.1. Integrating Tendencies. For nearly two centuries scholars have compared the Hellenistic movement with Jewish culture and religion. Most notable in this regard is the work of M. Hengel, who proved that Judaism, even in Palestine, was heavily influenced by the pervasive influence of *Hellenism. At least six features of this interaction can be observed.

2.1.1. A Growing Universalism. Within Judaism scholars have observed a growing universalism on the part of its various branches. That is, while the *Hebrew Bible has always included the notion that Yahweh is God of the world and that he rules over all the nations (Gen 12:1-3; Is 42: 56), Judaism developed a more precise perception of God and his relation to the world in which not only is God's truth revealed to the nation of *Israel but also that God's truth in all its dimensions was perceived, even if to a lesser degree, by some Gentiles as well. Ben Sira may speak of God's compassion being showered upon everyone (Sir 13:15), but Philo can say that all "created things . . . are brothers, since they have all one Father, the Maker of the universe" (Philo *Decal.* 64; cf. *Spec. Leg.* 1.169; *Praem. Poen.* 9; *Prov.* 2.6); even further: "they can claim to be children of the one common mother of mankind, nature" (Philo *Decal.* 41).

2.1.2. Friendliness. These statements are to be differentiated from friendliness, or even love, being shown to other nations, since in the latter category Israel is sharply distinguished from the nations (e.g., Josephus *Ag. Ap.* 2 §146). Philo reveals the same kind of distinction when he

speaks of general benevolence (Philo *Flacc.* 94; *Virt.* 109-15, 147). From the archaeological evidence discovered at Sardis one can see a similar kind of friendliness, a socioreligious distinction of groups that nonetheless broke down as Jews and Gentiles interacted freely, even to the point of pushing against religious boundaries. At Sardis the Jewish *synagogue was connected to a Gentile *gymnasium, revealing a breathtaking integration of two cultures and a friendly cooperation. The evidence from Sardis also suggests that Jews had the same jobs that Gentiles had and that Jews were members of the city council, holding positions of considerable influence (Kraabel 1983; Trebilco).

2.1.3. Participation. This illustration of integration from the Sardis evidence leads to an observation that Jews regularly permitted Gentiles to participate in the Jewish religion. Even if the balustrade surrounding the inner court of the *temple warned Gentiles not to penetrate any further into the temple, such a prohibition did not prevent Jews from permitting Gentiles, especially the powerful, from offering sacrifices (Josephus *J.W.* 2.17.3 §§412-16; 5.13.6 §563; *Ant.* 13.5.4 §§145-47; 13.5.8 §168; 13.8.2 §242). *Josephus can claim that the Jerusalem temple "flung wide its gates to every foreigner for worship" (Josephus *J.W.* 4.4.4 §275). If the evidence from Sardis suggests an intermingling of Jews with Gentiles in the context of their synagogue, other evidence suggests that Gentiles found famous Jewish religious institutions as something in which they could join (e.g., *sabbath; *CPJ* 3.43-87).

2.1.4. Integration. Integration into foreign culture finds a primary crystallization when Jews became *citizens and found official recognition. If Philo can describe legal protection in *Alexandria as "the sole mooring on which our life was secured" (Philo *Flacc.* 74), Josephus can confirm the same desire for legal protection in the familiar pursuit at the hands of other governments (Josephus *Ant.* 8.2.6-7 §§50-54; 12.4.2-10 §§160-224; 12.10.6 §§414-19). We should probably infer from this desire for citizenship or recognition the need for Jews to find protection, but we would not be far off in also inferring that the Gentile governments at whose hands the Jews wanted protection also benefitted from having Jews as citizens, as opposed to malcontents. The benefits worked both ways.

2.1.5. Education. If our knowledge of Judaism

came exclusively from the rabbinic documents, especially the Mishnah and Tosefta, we might think that Jews abhorred Gentile *education, but the surviving evidence from Philo and Josephus especially reveals that many Jews, particularly those from landed families, were educated in the Greco-Roman manner (Bonner). Thus, in addition to the Torah, Jewish children in Alexandria were educated in the encyclical (Philo *Vit. Mos.* 1.23-24; *Spec. Leg.* 2.228-30; *Leg. All.* 3.244; *Migr. Abr.* 72; *Rer. Div. Her.* 274; *Omn. Prob. Lib.* 143). *Herod, Archelaus and Philip each had a Roman education (Josephus *Ant.* 15.10.5 §§73; *J.W.* 1.31.1 §602). Though this approach is not always approved (Josephus *Ant.* 18.5.4 §141), the foundation is laid here for the kind of education that every aspiring politician would need. Such an education is legitimated by Josephus when he says that Joseph, the patriarch, was given a "liberal education" in Alexandria (Josephus *Ant.* 2.4.1 §39); *Moses received the same (Josephus *Ant.* 2.9.3 §216).

2.1.6. *Intermarriage.* *Marriages took place for different reasons in the ancient world: in addition to marrying for love, one married also for political, religious and social alliances. Thus intermarriage becomes one further illustration of Jewish integration into the Gentile world. Even if the tradition connected to Ezra and Nehemiah shapes one perception of how Jews should relate to the ancient Gentile world, not all followed that path of curbing social contact. Jews regularly and consistently intermarried with women of other nations and religions. Josephus mentions at least the following: Joseph (*Ant.* 2.6.1 §§91-92), Antipater (*J.W.* 1.8.9 §181) and Herod (*Ant.* 17.1.3 §20). Esther's marriage, according to Josephus, however, was not a source for pride (*Ant.* 11.6.2 §§198-204).

Integration, however, can become a problem for Judaism. At times integration slides rather easily into assimilation and adaptation of the Jewish faith in ways unacceptable to many or even outright apostasy. To be sure, this process might be defined differently by various Jewish persons, but lines were nonetheless drawn, even if not by some authorized orthodoxy. Philo finds a "backsliding" (*paranomia*), or apostasy, when some were "spurning their ancestral customs and seeking admission to the rites of a fabulous religion" (Philo *Spec. Leg.* 1.56-57). Antiochus of *Antioch converted to Hellenism, detested Jewish customs and sacrificed in the manner of the

Greeks, according to Josephus (*J.W.* 7.3.3 §§50-53). In times of *persecution, apostasy becomes a socially acute issue, and on at least one occasion the bare decision to eat pork was a surrender of the Jewish nation and faith (Philo *Flacc.* 96).

2.2. *Resisting Tendencies.* Resistance to the various forms of Hellenism no doubt provoked the charge that Jews were misanthropists, but the charges, however observant of special features of Jewish identity, are not founded in fact. Rather, Jewish resistance is not so much a reflection of Jewish attitudes toward Gentiles as it is one of their own identity as the people of God, of their role in the world and of their commitment to the Torah for divine protection (e.g., *Deut.*). At least five features are notable.

2.2.1. *Separation.* For different reasons, usually pertaining to purity, Jews separated themselves from Gentiles in various ways. In fact, the *Epistle of Aristeas* claims that the Torah was given to Israel "that we might not mingle at all with any of the other nations" (139, *APOT*; cf. 151). At times this separation emerges into nationalism (cf. 2 *Bar.* 62:7), which can be seen full force in the documents discovered at *Qumran and its environs (esp. 1QM; cf. also CD 6:14, 15; 7:13; 1QS 1:4; 5:1-2; 1QH 14:21-22; 11QTemple 48:7-13; 60:16-21; see Rule of the Community; Temple Scroll; Thanksgiving Hymns). In the **War Scroll* the Gentiles seem to be assigned by God to his wrath (cf. 1QM 2:7; 4:12; 6:6; 9:9). The list of derogatory comments about other nations is nearly endless in Jewish literature; one example is Philo's attitude toward Egyptians, the people with whom he had to live (Philo *Flacc.* 17, 29, 96; *Spec. Leg.* 162, 166; *Sacr.* 51; *Poster. C.* 96, 113; *Spec. Leg.* 3.110; *Virt.* 131-133).

2.2.2. *Restricted Access to the Temple.* However much the Jews permitted the Gentiles to participate in their religious customs and no matter how much they integrated themselves into the various cultures surrounding them, they remained adamant that Gentiles could not enter into the holiest parts of the *temple. This evinces a clear consciousness of separation and of being the elect of God (cf. Josephus *J.W.* 1.7.6 §152; 1.18.3 §354; *Ant.* 3.15.3 §§318-22). Memorialized on a wall at regular intervals around the holy place, there was a sign in the temple prohibiting Gentile entrance, and "death without appeal" was the consequence for transgression (Bickerman).

2.2.3. *Idolatry.* Especially repudiated among

Jewish authors is the worship of other gods and the practice of other *religions. The polemic against idolatry appears in every dimension of Jewish literature (e.g., *Wis Sol* 14:12-31; *Jos. and As.* 8:5-7) and is surely the most common form of Jewish resistance.

2.2.4. *Prohibitions of Intermarriage.* Because of consistent Jewish integration into the Gentile world and the consequent occurrence of intermarriage, we regularly find warnings and prohibitions of intermarriage; the decision not to marry a Gentile woman was a significant public act on the part of a male Jew. Though not a clear teaching of the Pentateuch (cf. *Ex* 34:11-17; *Deut* 7:3-4; 23:2-9), the absolute prohibition of intermarriage in the reform of Ezra and Nehemiah became a rallying cry for national purity (*Ezra* 9-10). For instance, in **Tobit* we find a consistent prohibition of intermarriage (*Tob* 1:9; 3:10; 4:12; 5:11, 13; 6:12; 7:13). Philo, writing where intermarriage was both practiced as well as a source for constant alarm, legitimates such a prohibition by appealing to its eventual deleterious affect on the sons and daughters (*Philo Spec. Leg.* 3.29).

2.2.5. *Uprisings and Wars.* The bluntest form of resistance is military uprisings and national wars. At no place is this given greater prominence than in the *Maccabean literature and war stories (1-2 *Macc*). The marvelous legend of the Jewish boys who die, one by one, in the presence of their mother for honoring their faith undoubtedly stirred the hearts of many Jews (cf. 4 *Macc* 8:8; 14:11-17:6). And Pilate learned from his own Jewish contemporaries the willingness of Jews to fight if faithfulness to their traditions was under threat (*Josephus J.W.* 2.9.2 §§169-74). Undoubtedly this is how many Jews saw the fight with Rome in A.D. 66-73: Jewish resistance against Roman imposition of order (see *Jewish Wars with Rome*).

In summary, we are on sure ground when we stand on the following convictions: Jews were convinced that they were the people of God; and because they were the people of God they were different from the rest of the world, especially but not only in their religious customs. However, those two convictions did not lead Jews as a rule to cut off all relations to Gentiles, nor did it lead them to hate Gentiles. Rather, though Jews as a rule accepted Gentiles and lived with and dealt with them in business, they knew that deep in their own identity was a con-

viction that God had chosen them as a light among the Gentiles.

3. Judaism and Proselytes.

In a context of integration, yet not without a corresponding resistance, Jews found "proselytes" in their midst (McKnight 1991, 30-48; Feldman, 177-382). Did they favor this development, or did they discourage it?

3.1. *Names of Proselytes.* Names of proselytes appear in nearly every major facet of Jewish evidence (e.g., *Jdt* 14:10, Achior the Ammonite; *Philo Abr.* 251, Hagar; *Josephus Ant.* 20.2.1-5 §§17-53, the royal family of Adiabene; *CJ* 523, Veturia Paula; *b. Git* 56a, Nero). But what can be made of names? Some have argued that the presence of names everywhere reveals consistent missionary activity, but surely this outstrips the evidence. It may be the case that names are given because of their exceptional status. The evidence of names is like the evidence of demographics: too much can be made of too little. A more secure foundation must be found to construct a view that Judaism was a missionary religion or that Jews on the whole were regularly proselytizing their Gentile neighbors.

3.2. *Favorable Attitudes.* Much evidence can be brought to the table on this topic, but a selection will provide the essential contours. *Tobit*, when visiting *Jerusalem, gave his second tithe in money to needy people (*Tob* 1:7), among whom were "proselytes who attached themselves to the sons of Israel" (*Tob* 1:8). And *Tobit* 13:11 reads: "A bright light will shine over all the regions of the earth; many nations will come from far away, from all the ends of the earth, to dwell close to the holy name of the Lord God, with gifts in their hands for the King of heaven." While this surely reveals a positive attitude toward proselytism, it divulges nothing about how people became proselytes and even less about the nature of a Judaism that identified itself as a missionary religion.

In the *Testament of Levi* we find a text that asks what will happen to the world if Jews become pervasively disobedient. The author responds by relating the Jewish mission to the world. *Testament of Levi* 14:4 reads: "For what will all the nations do if you become darkened with impiety? You will bring down a curse on our nation, because you want to destroy the light of the Law which was granted to you for the enlightenment of every man." Here conversion is something

that will take place in the future (as in *T. Jud.* 24:6; 25:5; *T. Dan* 5:11; 6:7; *T. Asher* 7:3; *T. Zeb.* 9:8), but there is no evidence of Jewish missionaries, of Jewish missionary practice and of only one convert (*T. Naph.* 1:10). Rather, what this text expresses is the typical Jewish view that Gentile conversions will take place on the Day of the Lord; when God comes to Zion, Gentiles will swarm to the temple to praise Yahweh and bring gifts to his people.

Philo, who had abundant opportunity to engage in Jewish proselytizing activities, speaks only occasionally of proselytes. He has a fairly relaxed attitude toward Gentile participation in Judaism and sees the Jewish nation as having a purpose of revealing what is good (*Philo Vit. Mos.* 1.149; 2.36). Philo perceives a philosophical-religious element to conversion to Judaism when one becomes enlightened (*Philo Spec. Leg.* 1.51-53; *Praem. Poen.* 61). In particular Philo sees a special revelation to the world in the translation of the Torah from Hebrew to Greek (*Philo Vit. Mos.* 2.44). However, he knows of restrictions even for proselytes: it takes three generations for a convert's family to become fully Jewish (*Philo Vit.* 108), though it is possible that Philo sees this restriction only for Egyptian converts.

With pride Josephus relates that "they [i.e., the Antiochenes] were constantly attracting to their religious ceremonies multitudes of Greeks, and they had in some measure incorporated with themselves" (*Josephus J.W.* 7.3.3 §45). What this text affirms is hard to discern: that Gentiles converted—probably; that Gentiles were attracted to Jewish customs and were not repelled—certainly; but that Judaism was therefore a missionary religion or that Jewish missionaries are at work here—clearly not. The evidence does not permit the latter surmises.

We may take the legendary story about Hillel and Shammai as a reflection of rabbinic attitudes toward proselytism and proselytes (cf. *b. Sabb.* 31a; *'Abot R. Nat.* 24ab, p. 91). A Gentile wants to be taught the whole Torah while he stands on one foot. Shammai repulses him; Hillel expresses the whole law in a negative form of the Golden Rule and accepts him. When another Gentile asks to wear priestly garments Shammai rejects him; Hillel teaches him the law and the heathen converts, learns the special prerogative of *priests and abandons his desire for power. While the texts surely represent the Hillelitic viewpoint, the two positions are com-

mon sense enough for us to say that within Judaism there were those who did not want proselytes and those who did. It is likely that Hillel was more open on this issue.

3.3. Unfavorable Attitudes. While the favorable attitude prevails in Judaism, there is evidence that at times Jews either despised proselytes or disapproved of them. We are justified in our suspicion that more often than not unfavorable attitudes toward proselytes probably are the result of bad experiences with either Gentiles or proselytes in particular. Accordingly, in the diverse setting of ancient Judaism it is nearly unassailable that Jews favored proselytes and only rarely did they disapprove of them. However, acceptance of proselytes does not entail an easy transition or an unthinking incorporation of them into the Jewish community (e.g., Porton).

When Philo discusses the exodus from Egypt he describes the travelers as comprised of a diverse lot, and he looked down on "the children of Egyptian women by Hebrew fathers into whose families they had been adopted" and another group who had converted as a result of miracles from God or his supernatural judgments (*Philo Vit. Mos.* 1.147). This latter observation leads one to think of the much later rabbinical category of "lion proselytes" and reveals a much earlier reflection by Jews on the various motives, some of which are not approved, for conversion. What we find in Philo is not a rejection of proselytes but an unfavorable attitude toward certain motives for conversion.

Historically, the negative evidence found in the rabbis has played a major role in Christian reconstructions of post-Bar Kokhba Judaism with respect to its missionary practices. Thus, Shammai's repulsing of the would-be proselyte (*b. Sabb.* 31a), R. Eliezer b. Hyrcanus's exclusion of Amalekites (*Mek. Amalek*, par. 2, lines 177-86), R. Akiba's rejection of proselytes (*Mek. Shirata*, par. 3, lines 49-63) and R. Helbo's infamous comment that "Proselytes are as hard for Israel as a sore" (*b. Yebam.* 47a; *b. Qidd.* 70b) are used to suggest that the fundamental approach of rabbinic Judaism was unfavorable toward proselytes. It is much more likely, however, that these few statements need to be overwhelmed by the positive attitude found throughout rabbinic literature. That is, these statements are occasional exceptions, probably stemming from negative experiences with proselytes.

Just as the positive attitude toward Gentiles

was tempered by religious and ethical strictures, so also with proselytes: proselytes could come into the fold of Judaism, but certain moral and theological prescriptions were necessary for an acceptable conversion. There is no evidence that Jews repulsed would-be proselytes who wanted to convert for good reasons; those who wanted to convert for marriage, for political advantages or because they were scared of God's power were discouraged by some. But this gives no solid basis for considering Jews unfavorable toward proselytes. There is almost no evidence that Jews actively recruited new members or that they aggressively proselytized Gentiles in order that they might become members of Judaism. Rather, for Judaism conversion was resocialization, and that was nationalization. If Gentiles wanted to join the Jewish nation, to follow its laws, to worship in its temple, to marry its children ethnically and to fight for its causes, then let them in. But it ought to be noted that a leit-motif of proselyte evidence in Judaism is that Gentile conversion is a massive act that will take place on the Day of the Lord rather than an ongoing challenge to the nation (e.g., Tob 13:11; Sir 36:11-17; 4 Ezra 6:26). For the Jews of this time, they were a light among the nations, not a light to the nations.

4. Methods of Proselytizing.

That Judaism was not a missionary religion does not mean that no missionary activity took place. In fact, there are occasional acts of proselytization that not only reveal dimensions of Judaism but also may well have been the stock of information drawn on by early Christian missionaries. A survey of the evidence reveals at least eight methods of converting Gentiles to Judaism and the Jewish nation.

4.1. God's Intervention. Above all, Jews believed that when Gentiles did convert, especially on the Day of the Lord, it would be the result of God's intervention in the world. On the last day, Gentiles will stream to Zion (Tob 13:11; *1 Enoch* 48:4-5; 50:1-5; 62:9-13; 90:30-33; 91:14), even if at times the theme is more triumphalistic than evangelistic (cf. *Jub.* 26:23; 39:4; *T. Sim.* 7:2; *T. Levi* 2:11; 4:3-4; 18:1-9).

4.2. Evangelization. Did Jews evangelize Gentiles? Is there evidence for Jewish missionaries? If we believe the older literature (see 1 above), we would argue that there were missionaries who evangelized Gentiles. But the consensus to-

day is twofold: not only is "evangelism" an anachronistic term for ancient Judaism, but also active proselytization was only a rare exception in Judaism. Though Feldman contends that Judaism was a missionary religion in some sense, he is perplexed by the absence of missionaries: "one of the great puzzles of the proselytizing movement is how to explain the existence of a mass movement [of conversions to Judaism] when we do not know the name of a single Jewish missionary" (see McKnight 1991, 52).

Though some scholars have pointed to a variety of evidence (e.g., Sir 39:4; *Ep. Arist.* 266; *T. Levi* 14:4; *Wis Sol* 18:4; *Sib. Or.* 3:5-10; 1QS 10:17-18; *Philo Spec. Leg.* 1.320-23; *Omn. Prob. Lib.* 74), by far the most probable piece of evidence can be found in Ananias, a Jewish merchant, who won over Izates (Josephus *Ant.* 20.2.3-4 §§35-48). Ananias can profitably be compared with the Christian missionary/apostle Paul, who used his profession as a tentmaker as a platform for evangelism. After winning over some women of the royal court, Ananias also converted King Izates. Later, a certain Eleazar, knowing that Izates had not yet been circumcised, urged the king to convert completely and be circumcised; and he was. In my judgment, Ananias and perhaps Eleazar may be used as evidence for Jewish missionaries, but only in a guarded sense. It is far more likely that they were merchants who used their professions as opportunities to teach others the customs of the Jews than that they were self-defined missionaries. In this sense, they differ from Paul, who was only tangentially a tentmaker.

However, it is perhaps nitpicking to refuse assignment of these two teachers of the Torah to the category of missionary. But we need to observe that these are the only two missionaries that we have a record of, if they were even that. That ordinary Jews occasionally spoke up in defense of their religion, that they occasionally explained their religion and practices to others and that they occasionally wanted Gentiles to convert to their religion and took active steps to convert them seems historically plausible. There is no evidence, however, that Jews enlisted missionaries in the Christian sense of the term.

4.3. Distributing Literature. Distributing literature for the purpose of converting Gentiles has been regularly considered a method of Jewish proselytism. Documents considered to have been written for this purpose include at least the

following: the nonextant Philo, *Apologia hyper Ioudaion*, Josephus, *Contra Apionem*, the **Epistle of Aristean*, and **Sibylline Oracles*, as well as the various texts of *Demetrius, Eupolemus and *Aristobulus. However, the scholarly classification, definition and explanation, not to mention the historical context from which such literature supposedly emerges, have not yet been delineated with sufficient scholarly rigor to be used in a critical reconstruction of Jewish missionary activity. What has taken place is that scholars have assumed that this literature was designed for Jewish apologetics and for Jewish proselytization when that assumption is hardly capable of proof. If a given document defends Judaism against Gentile charges, that alone does not prove that the piece of literature was written to convince Gentiles to convert to Judaism.

There is an insurmountable fact, a phenomenon of the contemporary world, that virtually eliminates such a view from consideration: namely, literature was too expensive to be produced and given to an enemy who may destroy the document (Tcherikover; see *Literacy and Book Culture*). We do not need to argue that Jews did not respond to charges against them, but we do need to exercise caution when considering whether they produced literature to convince the opponents to convert. Simple logic reveals that the bulk of apologetic literature fosters internal legitimation rather than external conversion. From a later Christian world, Tertullian comments on the use of apologetical literature: "to which [literature] no one comes for guidance unless he is already a Christian" (*Tertullian Test.* 1). The same scenario best explains the supposed apologetical literature of Judaism. (On Philo and Josephus, see McKnight 1991, 68-73.)

4.4. Synagogue Influence. Moore once said, "Their [the Jews] religious influence was exerted chiefly through the synagogues, which they set up for themselves, but which were open to all whom curiosity drew to their services" (Moore, 1:324). Nearly a half century later, however, Kraabel argued the opposite: "There is no evidence from the excavations of attempts to recruit gentiles by means of these buildings. In the inscriptions the word 'proselyte' is very rare: it appears in but one per cent of the Jewish inscriptions from Italy, the largest sample available; and it does not occur in the synagogue inscriptions at all" (1982, 458). We need not ask whether Gentiles were converted, led to conver-

sion or catechized after their conversion in the synagogue: if they attended the synagogue those kinds of things happened. What we need to know is whether the synagogue was intentionally a place for proselytization.

Several pieces of evidence have been offered in defense of the synagogue as a place of intentional proselytizing through the exposition of Torah (see Georgi, 83-90): Philo *Spec. Leg.* 2.62-63; Horace *Sat.* 1.4.138-43; Juvenal *Sat.* 14.96-106; Josephus *J.W.* 7.3.3 §45. However, the evidence is not as clear as some would have it: (1) Philo's text says nothing about Gentiles, though it does say much about Jewish intensity; (2) Horace's text does not deal with synagogues or with interpreting the Torah in synagogues; in fact, J. Nolland's recent study suggests that it is concerned with political agitation; (3) Juvenal's comments are also not about synagogues; finally, (4) Josephus's comments may lend credence to synagogue proselytizing, but the text falls short of affirming this as the intention of the activity in the synagogues. It needs to be reiterated that it is probably the case that Gentiles were converted in synagogues, but that the Jews saw their synagogue meetings as designed to reach out to their Gentile community with the hope of conversion goes well beyond the evidence. The synagogue was for Jews; if Gentiles wanted to attend and to behave themselves accordingly so that the service could go on without distraction, they were welcomed; that in so attending some found their interest perked or that some of them converted seems reasonable. But that is a long way from arguing that Jews used the synagogue as a missionary platform (McKnight 1998).

4.5. Education. It cannot be demonstrated with probity that the synagogue was used to proselytize; it remains nonetheless the case that *education was used in proselytizing. If becoming a Jew involved learning the *Torah, comprehending the nature of God's dealing with Israel and appreciating the nature of the temple's sacrificial system, then it is undoubtedly the case that concomitant to becoming a proselyte was being educated in Judaism. The story of Shammai and Hillel illustrates the point adequately: when the would-be proselyte wants to learn Torah or wear priestly vestments, according to Hillel, he needs to be educated—either as to the essence of Torah or to the significance of a specialized priesthood. Philo prides himself on the

educational value of the Torah for humankind: it was translated so "that the greater part, or even the whole, of the human race might be profited and led to a better life" (Philo *Vit. Mos.* 2.36). A distinctive feature of Judaism was the discovering of *asufi* ("foundlings") and educating them into Judaism (Josephus *J.W.* 2.8.2 §120; *m. Qidd.* 4:1-3).

4.6. Good Works. Probably the most effective, even if fundamentally unconscious, method of attracting Gentiles was through the power of good works and a morally attractive life. The author of the *Epistle of Aristean* has expressed this clearly: "My belief is that we must (also) show liberal charity to our opponents so that in this manner we may convert them to what is proper and fitting to them. You must pray God that these things be brought to pass, for he rules the minds of all" (226, *ATP*; but cf. *OTP* for a different rendering; see also *T. Ben.* 5:1-5). Philo, with his unconquerable praise of the Torah's virtues, contends that good behavior led to the translation of the Torah, but "in course of time, the daily, unbroken regularity of practice exercised by those who observed them [the laws] brought them to the knowledge of others, and their fame began to spread on every side" (Philo *Vit. Mos.* 2.27). The son of a Gentile Godfearer described by Juvenal eventually becomes a proselyte as a result of observing the behavior of others (Juvenal *Sat.* 14.96-106).

4.7. Intermarriage. Besides the above-mentioned methods of converting Gentiles, we cannot fail to mention that intermarriage was a common means by which a Gentile chose to convert (*m. Qidd.* 3:5; *b. Yebam.* 92b; *B. Mes.* 16b), and the romantic legend **Joseph and Aseneth*, in which Aseneth converts as a result of her encounter with the wise Joseph, may have legitimated such practice. However, it would be historically unjustified to contend that intermarriage was an intentional method of converting Gentiles.

4.8. Force. At certain periods in history certain Jewish movements, led by charismatic or politically powerful heroes, many conversions took place as the result of force. However triumphalistic the writers' concepts might be, the conversions recorded in Judith (*Jdt* 14:10) and Esther (*Esther* 8:17) resulted from force. Hyrcanus, Aristobulus I and Alexander Jannaeus each forced Gentiles to convert and be circumcised, even if they saw such as part of an *eschatologi-

cal program or political purgation (Josephus *Ant.* 13.9.1 §§257-58; 13.9.3 §§318-19; 13.15.4 §§97; 15.7.9 §§253-54).

In summary, it is likely that the predominant method for conversion in ancient Judaism was God's stupendous acts in history, especially the future Day of the Lord. It is reasonable to infer from this observation that expectation for conversion in the future emerges from the lack of conversions in the present: that is, since Judaism was true, since Yahweh was the one God of the universe and since Gentiles are not now converting to Judaism, they will someday. But there is sufficient evidence of converts, not to mention rules and regulations about them (which imply converts), to contend that some methods were effective in the present. The evidence suggests that the power of good deeds led some Gentiles to inquire about Judaism, and the natural place for their education to occur would be through social discussion or synagogue activities. It is very doubtful, however, that Jews wrote literature for the express purpose of converting Gentiles, and it is even more doubtful that there were Jewish missionaries.

5. Requirements for Proselytes.

Conversion theory requires that most religious conversions be accompanied by demonstration events, symbolic actions that communicate the reality of conversion and a commitment to the new religious group. That is, ritual marks the transition from one social body to another and the resocialization process that is thereby implied. Christian scholars need, however, to beware of the common practice of imputing to Judaism the very ritual that marks the transition into the Christian faith. The evidence from antiquity reveals rather a diverse set of requirements that differ from time and place so that it is no longer accurate to speak of Judaism requiring circumcision, baptism and a sacrifice in the temple (replaced by almsgiving after the temple's destruction). Not only is this evidence sparse; it is also skewed in an androcentric direction since the concerns of *women in conversion are silenced.

5.1. Circumcision. We can be sure that converts were circumcised (*Jdt* 14:10), but the ambiguity of certain authors about the rite reveals that it was not perceived as a necessary requirement by all Jews for all converts (cf. Philo *Som.* 2.25; *Spec. Leg.* 1.304-6; *Quaest. in Ex.* 2.2; but cf.

Migr. Abr. 92; see also Josephus *Ant.* 20.2.3-4 §§35-49). Circumcision as a conversion ritual becomes confused with how Jews perceived the nation: the act and national identity are not easy to separate (Josephus *J.W.* 2.17.10 §454), but when King Izates becomes serious about his commitment to Judaism he undergoes circumcision (Josephus *Ant.* 20.2.3-4 §§35-49). I suspect that Paul's contention that converts to Messiah Jesus did not have to be circumcised would not have been either a startling innovation or unacceptable to all, even if it caused no small disturbance for the Jerusalem converts (*Gal* 5:2, 6, 12; 6:15; *Phil* 3:2; cf. *Acts* 15:1-2). The evidence from the rabbis, though hardly plentiful, suggests that even though there was dispute about how quickly the convert needed to submit to the rite, circumcision was required because it was in Torah (cf. *m. 'Ed.* 5:2; *m. Pesah.* 8:8; *b. Pesah.* 92a; *t. Pesah.* 7:14; *b. Sabb.* 135a; later see *b. Yebam.* 46a; 71a). A safe historical inference is that circumcision was required but there were dissenting voices at different times for special reasons.

5.2. *Baptism.* The evidence for proselyte baptism is even less clear. Water lustrations were clearly a part of Judaism, and ceremonial cleansings were knit deeply into the fabric of Judaism. Therefore a transition rite, such as baptism, seems reasonable, but the evidence is not as clear as this. Baptism is understood in Christianity as a one-time, unrepeatable initiation rite, but the evidence for Judaism practicing baptism in this manner is either unavailable or (which is more likely) nonexistent because it was not a feature of Judaism until after the Bar Kokhba revolt.

It seems possible that *Sibylline Oracles* 4:162-65 refers to a pre-Christian proselyte baptismal rite. It reads: "Ah, wretched mortals, change these things, and do not lead the great God to all sorts of anger, but abandon daggers and groanings, murders and outrages, and *wash your whole bodies in perennial rivers*" (italics added). Not only is the date of this passage unclear (probably around A.D. 80), but also the heavy use of metaphor makes one wonder if a physical act is involved. Apart from this text, the evidence from Philo, Josephus (where Izates is not baptized) and *Joseph and Aseneth* (where Aseneth is not baptized) show a uniform absence of the rite as a conversion act. The rabbinic evidence gains clarity over time: the earliest texts are ambiguous (e.g., *t. Pesah.* 7:13; *m. 'Ed.* 5:2; *m. Pesah.* 8:8;

b. Pesah. 92a), while the latter ones show a rite prescribed for converts (*b. Yebam.* 46a; 71a). It is reasonable then to argue that baptism, as an initiation rite, was a symbolic rite in progress in Judaism when John, probably Jesus and certainly early Christians like Paul began to use the rite as the prevailing entry rite into the newfound movement.

5.3. *Sacrifices.* Judaism was dominated by temple, and that meant *sacrifice; it seems reasonable that Judaism may have required converts to offer a first sacrifice as part of their conversion process. But the evidence is shaky, and the reality of the situation mitigates against sacrifice being a conversion requirement. However important temple was to Judaism, sacrifice was not an integral part of religious life for most Jews, especially those who had no opportunity to visit the temple. Consequently, the voice of Philo may well represent if not a studied view at least a common-sense response: "What is precious in the sight of God is not the number of victims immolated but the true purity of a rational spirit in him who makes the sacrifice" (*Philo Spec. Leg.* 1.277). Thus, "if he is pure of heart and just, this sacrifice stands firm . . . even if no victim at all is brought to the altar" (*Philo Vit. Mos.* 2.107-8). Though Helene of Adiabene offered a sacrifice when she visited Jerusalem there is no evidence that she did so to fulfill some duty (*Josephus Ant.* 20.2.5 §49).

The evidence of the rabbis is explicably silent regarding first-century practice: why prescribe what can't be done when the temple is no longer standing? Thus we are justified to agree with Moore: "The offering of a sacrifice is, thus, not one of the conditions of becoming a proselyte, but only a condition precedent to the exercise of one of the rights which belong to him as a proselyte, namely, the participation in a sacrificial meal" (Moore 1:332). Later rabbis, however, assume the practice and grant a substitute in almsgiving (cf. *m. Ker.* 2:1; *b. Ker.* 8a-9a; *b. Roš Haš.* 31b).

In conclusion, the requirements for proselytes varied from time to time and according to the dominating customs of local culture. It can be said, however, that all Jews would have expected repentance, obedience and social integration into the Jewish community if one wanted to become a proselyte (cf. *Philo Det. Pot. Ins.* 97; *Spec. Leg.* 1.277; *Cher.* 95-96; *Jos. and As.*). It can also be maintained that the absence of

data about requirements perhaps reflects the scarcity of conversions and proselytes.

6. Levels of Adherence.

The rabbis made several distinctions among proselytes, including the following: the true proselyte (*ger sedeq*; see *b. Pesah*, 21b; *b. Git.* 57b), the resident alien (*ger toshab*; see *b. 'Abod. Zar.* 64b; *b. Git.* 57b), the lion/fear proselyte (*ger 'arayot*; see *b. Qidd.* 75ab) and the dream proselyte (*ger halomot*; see *b. Yebam.* 24b; *b. Menah.* 44a). The first is the proselyte who converts for the right reasons and lives righteously according to the Torah; the second is the Gentile who lives appropriately in the land of Israel; the third, stemming from 2 Kings 17:25, converts out of fear or as a result of seeing a miracle, and the conversion is not perceived as complete; the fourth refers to those who convert to their own advantage. While this categorization may prove helpful to later rabbis, there is no evidence that any of these terms were used in the first century. Two kinds of evidence are extant, however, that permit us to see that first-century Jews saw levels of adherence among proselytes and these categories allowed them to define the true Jew more accurately as well as the kinds of conversions that were being made.

6.1. Motives for Conversion. From Philo's exegesis of Exodus 12:38 ("a mixed crowd [*'ereb rab*] also went up with them," *Vit. Mos.* 1.147) we can see that Philo himself saw at least two different motives for conversion (see McKnight 1989). The text reads: "They were accompanied by a promiscuous, nondescript and menial crowd, a bastard host, so to speak, associated with the true-born. These were (1) the children of Egyptian women by Hebrew fathers into whose families they had been adopted, (2) also those who, reverencing the divine favor shown to the people, had come over to them, (3) and such as were converted and brought to a wiser mind by the magnitude and the number of the successive punishments." As a result of an apparent contact with what we now find in the targumic tradition (cf. *Tg. Neof.* on Ex 12:38) Philo has revolutionized a group: from a "mixed crowd" to three separable groups, two of which are kinds of proselytes! Thus we have children educated into Judaism, proselytes who converted as a result of miracles and proselytes who converted after seeing God's punishments. Another distinction, that between the true proselyte and

the resident alien, seems to be made by Philo (*Vit.* 102-8). Thus we can safely conclude that some Jews knew of levels of adherence to Judaism and categorized proselytes accordingly.

6.2. Godfearers. The issue of the meaning of Godfearers has recently been revisited and deserves consideration (Trebilco, 145-66; McKnight 1991, 110-14). A standard perception of the Godfearer is that it is a technical term, describing a Gentile who has only partly committed himself or herself to Judaism, but this definition has been overturned. In general, scholars are convinced that the Jewish communities, especially in the Diaspora (Barclay), attracted in various ways a diversity of Gentiles who may accurately be termed "sympathizers" (Feldman, 842-82). The term *Godfearer* describes either Jews or Gentiles and apparently most of the time on the basis of observable piety (*Jos. and Ant.* 4:7; 28:8-13; 27:1; 28:7; 29:3; Josephus *Ant.* 20.2.4 §41). The question now is what it means when used of a Gentile and whether that term is technical for a specific class of partial converts.

In the Acts of the Apostles the term *Godfearer* is used of Gentiles who honor God in various ways (including almsgiving and synagogue participation) who are distinguished from run-of-the-mill Gentiles, and the term seems to be nearly synonymous with "proselyte" or a category of proselytes; that is, for Luke the Godfearer is a quasi-official sympathizer with Judaism (Acts 10:2, 22; 13:16, 26, 43, 50; 17:4, 17; 18:7).

This quasi-official participation in Judaism has been recently confirmed by the discovery in Aphrodisias of a stele that dates to about A.D. 210 (Reynolds and Tannenbaum). In a list of subscribers to a Jewish institution, perhaps a soup kitchen or a burial society, there are three proselytes (*a.* lines 13, 17, 22) and two "Godfearers" (*theosebēs*, lines 19-20). On face *b.* of the stele there is a list of fifty-four Jews and, after a break, a list of fifty Godfearers whose names are either Greek or Greco-Roman, suggesting a Gentile origin for the group. This text reveals there is a distinction, for this community, between Gentiles and Jews, between Jews and proselytes and between proselytes and Godfearers. We do not have hard data about much else regarding this group, such as the nature and degree of their participation or how they became associated with Judaism, but we do now have independent

data that suggests, with Luke, that the distinction between proselytes and Godfearers was being made.

PSALMS AND HYMNS OF QUMRAN

Among the hundreds of scrolls found in the region of the Dead Sea, dozens contain psalms and hymns. Many of these are the psalms that Jews and Christians would later regard as canonical, but a great many were unknown until the discovery of the scrolls. These various psalms and hymns have implications for our understanding of the Psalter and its recognition as canonical literature, as well as for our understanding of the NT and the world of the early church.

1. The Psalms Scrolls
2. Implications for our Understanding of the Psalter
3. Use and Interpretation of the Psalter at Qumran
4. Relationship to the New Testament
5. "Apocryphal" Psalms
6. Other Hymns and Songs

1. The Psalms Scrolls.

A total of thirty-nine psalm scrolls or manu-

scripts incorporating psalms were found among the Dead Sea Scrolls. Thirty-six were discovered in eight caves at Qumran: three in Cave 1, one each in the minor Caves 2, 3, 5, 6 and 8, twenty-three in Cave 4 and five in Cave 11. Three additional psalms scrolls were discovered further south: two at Masada and one at Nahal Hever. Analysis of these manuscripts reveals interesting features:

1.1. Comparative Datings. At least thirteen psalms manuscripts were copied before the first century B.C. The oldest two are 4QPs^a and 4QPs^w, which date from the second century B.C., while the remaining eleven were copied in first century B.C. (1QPs^a, 4QPs^b, 4QPs^d, 4QPs^f, 4QPs^k, 4QPs^l, 4QPsⁿ, 4QPs^o, 4QPs^u, 4Q522, MasPs^b). Six scrolls are generally classified as Herodian (1QPs^c, 2QPs, 4QPs^h, 4QPs^m, 4QPs^p, 4QPs^r), and four were copied in the first century A.D. (1QPs^l, 3QPs, 5QPs, 8QPs). More specifically, ten scrolls are dated from the early to mid-first century A.D. (4QPs^e, 4QPs^g, 4QPs^j, 4QPs^q, 4QPs^s, 11QPs^a, 11QPs^b, 11QPs^c, 11QPs^d, MasPs^a) and four from the mid-first century A.D. onward (4QPs^c, 4QPs^s, 11QapocPs, 5/6HevPs).

1.2. Original Contents. Some psalms scrolls originally contained only a few compositions or part of a psalter (e.g., 4QPs^g, 4QPs^h, 5QPs probably contained only Ps 119).

1.3. Quantity Preserved. In decreasing order, scrolls with the greatest number of verses preserved (whether wholly or in part) are the *Great Psalms Scroll* from Cave 11 (11QPs^a), followed by 4QPs^a, 5/6HevPs, 4QPs^b, 4QPs^c and 4QPs^e.

1.4. Compositions in these Manuscripts. Of the 150 psalms found in the Masoretic Text (MT-150 Psalter hereafter; i.e., the traditional book of Psalms that appears in modern Bibles), 126 are represented in the thirty-nine psalms scrolls or other relevant manuscripts such as the *Pesharim*. The remaining twenty-four psalms were most likely included, but are now lost due to deterioration and damage: Psalms 3—4, 20—21, 32, 41, 46, 55, 58, 61, 64—65, 70, 72—75, 80, 87, 90, 108?, 110, 111 and 117. At least fifteen "apocryphal" psalms or compositions are also distributed among five manuscripts (11QPs^a, 4QPs^f, 4Q522, 11QPs^b, 11QapocPs). Six of these pieces were previously familiar to scholars: Psalms 151A, 151B, 154, 155, David's Last Words (= 2 Sam 23:1-7) and Sirach 51:19-30. The remaining nine were completely unknown prior to the discovery of the Dead Sea Scrolls: the *Apostrophe to Judah*,

Apostrophe to Zion, *David's Compositions*, *Eschatological Hymn*, *Hymn to the Creator*, *Plea for Deliverance* and *Three Songs Against Demons*. (For more details on these pieces, see section 6 below.)

1.5. Major Disagreements with the Masoretic Psalter. In comparison with the MT-150 Psalter, twelve scrolls contain major disagreements. Variations in *content* (the inclusion of compositions not found in the MT) occur in two scrolls from Cave 4 and another from Cave 11 (4QPs^f, 4Q522, 11QapocPs), for example, the *Apostrophe to Judah* in 4QPs^f. Differences in the *order* of psalms appear in seven scrolls from Cave 4 (4QPs^a, 4QPs^b, 4QPs^d, 4QPs^e, 4QPs^k, 4QPsⁿ, 4QPs^u), for instance, Psalm 31 followed directly by Psalm 33 in 4QPs^a and 4QPs^u. Differences in both *order* and *content* are present in two manuscripts from Cave 11 (11QPs^a and 11QPs^b).

1.6. Variant Readings. The psalms scrolls preserve hundreds of variant readings (not counting orthography) that often involve single words but sometimes extend to entire verses. Many are relatively minor, but several are significant for our understanding of the text of the Psalter: for example, the missing *nun*-verse of the acrostic Psalm 145:13 is preserved in 17:2-3 of 11QPs^a.

2. Implications for Our Understanding of the Psalter.

The publication of 11QPs^a in 1965 by J. A. Sanders (see bibliography) showed how this manuscript greatly diverges from the Masoretic Psalter in both the ordering of contents and the presence of additional compositions. In a series of articles commencing in 1966, Sanders developed a hypothesis that challenged traditional views of the text and canonization of the book of Psalms. According to this hypothesis, the Qumran Psalter was regarded by those who used it as "canonical" (since it incorporated Psalms 1—89, which had been finalized), yet also as "open" (able to admit additional contents or arrangements, since Psalms 90 and following were still fluid). Furthermore, the gathering of Psalms 90 and beyond developed independently in two directions, resulting in two collections or editions that had Psalms 1—89 in common but differed from Psalm 90 onward. These two collections are what Sanders termed the "Qumran Psalter," of which almost all the second half is represented by 11QPs^a, and the Psalter found in the Received Text whose second half comprises Psalms 90—150. Subsequent discussion on the

psalms scrolls has been centered on four main areas:

2.1. Gradual Stabilization. According to Sanders, 11QPs^a and certain other scrolls witness to a Psalter that was being gradually stabilized, from beginning to end. Agreements between the Masoretic Text and the psalms scrolls may be regarded as indicative of stability (e.g., Ps 5 followed by Ps 6 in 4QPs^a), while disagreements in order or content provide evidence of fluidity (e.g., Ps 147 followed by 104 in 4QPs^d and Ps 150 followed by the *Hymn to the Creator* in 11QPs^a). With respect to arrangement, the small number of disagreements with the MT-150 Psalter for Books I-III contrasts markedly with the high incidence of variation for Books IV-V: thirty-six consecutive psalms are in the same arrangement as in the Masoretic Text as opposed to only three in a conflicting order. For Books IV-V, however, only thirty-one consecutive psalms support the Masoretic arrangement, while forty-nine are in a conflicting order. This fluidity following Book III of the Psalter is underscored by the presence of compositions not found in the Masoretic Psalter in eleven consecutive arrangements with compositions (e.g., the *Apostrophe to Zion*) that appear in Psalms 90-150 of the Masoretic Text, but never with any of Psalms 1-89. The psalms scrolls thus show that the order and content of Psalms 1-89 vary little from that of the MT-150 Psalter, but for Psalm 90 and beyond many divergences are evident. This evidence indicates that during the Qumran period Books I-III were stabilized, but Books IV-V remained fluid, although the precise cutoff point is not certain. Comparison of the older and later psalms scrolls shows that this stabilization did not take place gradually but in two distinct stages: Psalms 1-89 (or so) prior to the first century B.C., and Psalm 90 onward toward the end of the first century A.D.

2.2. Two or More Editions of the Psalter. The psalms scrolls attest not to a single, finalized Psalter, but to more than one literary edition of the book of Psalms: the "11QPs^a Psalter," the "MT-150 collection" and possibly others besides. With a literary edition defined as an intentional reworking of an older form of a book according to a specific editorial agenda or for specific purposes, the identification of different literary editions depends mainly upon an assessment of individual variant readings. In the psalms scrolls and the Masoretic Psalter, two types of variation

are prominent: differences in the order of adjoining psalms, and the presence or absence of entire compositions. A comparative analysis suggests the existence of three major collections:

(a) An early Psalter comprising Psalms 1 to 89 (or thereabouts) that was stabilized well before the second century B.C.

(b) The MT-150 Psalter. Note that none of the psalms scrolls *unambiguously* confirms the longer order of the received Masoretic Text (Psalms 1-150) against 11QPs^a; such evidence is only found at Masada, where MasPs^b represents a Psalter ending with Psalm 150.

(c) The 11QPs^a-Psalter. Containing both Psalms 1-89 and the arrangement found in 11QPs^a, this Psalter is found in at least three manuscripts: 11QPs^a, 11QPs^b (includes the *Catena*, *Plea for Deliverance*, the *Apostrophe to Zion*, and the sequence of Psalms 141-133-144), and 4QPs^c (note the sequence of Psalms 118-104-[147]-105-146). Both the MT-150 Psalter and the 11QPs^a Psalter seem to have been completed prior to the Qumran period; it seems impossible to decide which was earlier.

2.3. Provenance of the 11QPs^a-Psalter. There is no clear evidence that 11QPs^a was actually compiled at Qumran and thus may be termed the "Qumran Psalter." The possibility that the 11QPs^a-Psalter was assembled by the Qumran covenanters is allowed by its occurrence in at least three manuscripts (4QPs^c, 11QPs^a, and 11QPs^b), and the 364-day solar *calendar evident in *David's Compositions* (col. 27); however, neither of these is a necessary indicator of Qumran provenance. Other factors make it more likely that the collection was compiled and used by wider Jewish circles—including those at Qumran—who advocated the solar calendar; for example, the individual compositions in 11QPs^a all predate the Qumran period, the absence of "sectually explicit" references (e.g., to the Teacher of Righteousness) suggests that none of the pieces was actually composed there, and the 364-day solar calendar is also attested in other Jewish writings that arose before the founding of the community (*1 *Enoch*, **Jubilees*, the **Temple Scroll*). The notion of a 11QPs^a-Psalter that was used not only at Qumran, but also among other Jewish circles advocating the solar calendar, attests to a widespread type of Judaism which possibly included the *Sadducees. This is in marked contrast to the *Pharisees and *rabbis with their 354-day lunar calendar and

cannot be viewed as sectarian (cf. Flint 1997, 198-201). However, as regards the production of individual scrolls, it is very possible that 11QPs^a and the other two representatives of the 11QPs^a-Psalter (4QPs^c, 11QPs^b) were copied at Qumran in view of the popularity of the 11QPs^a-Psalter among the covenanters and because scrolls were produced at the site.

2.4. 11QPs^a as Part of a Scriptural Psalter.

11QPs^a contains the latter part of a true scriptural Psalter, and it is not a secondary collection dependent upon Psalms 1-150 as found in the Received Text. This proposal has produced numerous challengers, including S. Talmon (1966), M. H. Goshen-Gottstein (1966), P. Skehan (several articles, see bibliography) and B. Z. Wacholder (1988). For example, Talmon proposed that 11QPs^a contains material that is supplementary to Scripture, while Skehan sought to demonstrate that the MT-150 Psalter is chronologically prior to 11QPs^a, which he classified as a "library edition," an "instruction book" containing the supposed works of David or "an instruction book for budding Levite choristers" at the temple in about 200 B.C. In contrast, G. H. Wilson (1985), taking into account 11QPs^{a-d} and most of the Cave 4 scrolls, concluded that the psalms scrolls attest to overall stability for Psalms 1-89 and to general fluidity for Psalm 90 onward, and that 11QPs^a was organized in accordance with principles similar to those in Books IV and V in the MT-150 Psalter.

The analysis of P. Flint (1997) affirms Sanders's view that 11QPs^a represents a scriptural Psalter and that the 11QPs^a-Psalter is an edition of the book of Psalms on three main grounds: the attribution to David, structural principles and usage (i.e., quotations and allusions). For example, *David's Compositions* implies that all the pieces in 11QPs^a originated with David by asserting that 4,050 pieces—which surely included those in 11QPs^a—were spoken by David "through prophecy" (27:11). He finds the attempts by earlier scholars to show that 11QPs^a is not a true scriptural Psalter but a secondary liturgical compilation to be ultimately unconvincing because all presume that the arrangement of the MT-150 Psalter, or even its textual form, had been finalized and was accepted by virtually all Jews as the "book of Psalms" well before the second century B.C., which is simply not the case.

3. Use and Interpretation of the Psalter at Qumran.

There are several indications that the book of Psalms was widely used and most influential within the Qumran community. First, there are more manuscripts of the Psalms among the Dead Sea Scrolls (thirty-six from Qumran, plus three more from other sites) than of any other book, which is a sure indication of the popularity of the Psalter. Second, the Psalter was the model for other books composed at Qumran, the prime example being the *Hodayot*. Third, the Qumran caves yielded three *pesharim, or commentaries, written on the Psalms: 1QpPs, 4QpPs^a and 4QpPs^b. This may emphasize the prophetic nature of the Psalter among the Qumran community, since all the other pesharim were written on prophetic books, and we are told in *David's Compositions* that he spoke the compositions in 11QPs^a—and many others besides—"through prophecy" (27:11).

The largest fragments of 4QpPs^a preserve a running commentary on Psalm 37, which encourages the righteous to keep faith in God despite the apparent prosperity of the wicked. The peshet associates "wickedness" and "the wicked" with the Man of the Lie (frags. 1-10 i 26 and iv 14), the ruthless ones of the covenant (frags. 1-10 ii 14 and iii 12) and the ruthless ones of the Gentiles (frags. 1-10 ii 20). In contrast, "the righteous" are associated with the Teacher of Righteousness (frags. 1-10 iii [15], [19]), the Interpreter of Knowledge (frags. 1-10 i 27), the congregation of the elect (frags. 1-10 ii 5 and iii 5), the congregation of the poor ones (frags. 1-10 ii 10 and iii 10) and the Priest and his partisans (frags. 1-10 ii 19). God will ensure that the wicked will receive punishment, and the righteous will receive their inheritance (frags. 1-10 iii 1, 10). The peshet thus interprets a psalm of instruction and personal tribulation in an eschatological manner.

4. Relationship to the New Testament.

There are similarities between the book of Psalms at Qumran and in the NT with respect to textual forms and interpretation. Although no Greek Psalms are preserved in the scrolls, some features in the Hebrew correspond with the *Septuagint Psalter that was used and quoted by the NT writers. Most prominent is Psalm 151, which ends both the Septuagint Psalter and the 11QPs^a-Psalter (but for the Qumran scroll in the

form of two psalms: 151A and 151B). Another example is Psalm 145:13, where the required *nun* verse in this acrostic psalm, which is missing from the Masoretic Text, is found in 11QPs^a ("God is faithful in his words, and gracious in all his deeds") and in the Septuagint ("The LORD is faithful in all his words, and gracious in all his deeds") that was used by the NT writers.

Like the Psalms *peshtarim* (e.g. 4QpPs^a), the NT writers tend to interpret the Psalms eschatologically; however, whereas 4QpPs^a relates Psalm 37 to the Teacher of Righteousness, the NT writers often connect passages from the Psalms as pointing to Jesus the Messiah. This is especially evident with respect to Psalm 22, which is alluded to by Jesus or the Evangelists in relation to the crucifixion (see Mk 15:24 [Ps 22:18], 29 [Ps 22:7], 34 [Ps 22:1] and parallels).

5. "Apocryphal" Psalms.

11QPs^a includes six pieces that were previously familiar to scholars, all of which are grouped with psalms now found in the MT-150 Psalter:

Psalms 151A and 151B (known from the Greek, Syriac and Latin). Accepted as canonical by the Orthodox churches, this is the final composition in the Septuagint Psalter and the 11QPs^a-Psalter (col. 28).

Psalms 154 and 155 (previously known from the Syriac). Psalm 154 is a wisdom composition that calls the faithful to glorify God by gathering to proclaim his greatness (vv. 1-3) and to instruct the ignorant (vv. 4-8). It goes on to describe the nature and characteristics of wisdom (vv. 12-15) and to affirm God's protection over the godly, humble and pure (vv. 16-20). Psalm 155 is a psalm of thanksgiving that incorporates a plea for deliverance and is reminiscent of Psalms 22 and 51.

David's Last Words (= 2 Sam 23:1-7). Together with *David's Compositions* that follows it (see 6 below), this piece serves to affirm the Davidic authority and authorship of the 11QPs^a-Psalter. Like those of patriarchs such as Jacob, David's final words carried special authority.

Sirach 51:13-30 (previously known from the Greek, Syriac and Latin). This is the second canticle of the Wisdom of Ben Sira (also known as Ecclesiasticus or *Sirach), part of the OT in Roman Catholic and Orthodox Bibles and one of the Apocrypha for Protestants. This text describes how a celibate young man is able, through discipline, to devote his bodily passions

and appetites to the pursuit of wisdom instead of sexual pleasure (a theme found earlier in Genesis, Proverbs and the Song of Songs). The description in 11QPs^a is more erotic than the other versions, which suggests that provocative portions of the original Hebrew version were modified by a later editor. It appears that this piece was originally an independent poem that was both incorporated into the 11QPs^a-Psalter and appended to Ben Sira.

6. Other Hymns and Songs.

The Dead Sea Scrolls also include many hymns or songs that are not grouped with psalms now found in the canonical book of Psalms. Several of these are grouped with psalms now found in the MT-150 Psalter.

The Apostrophe to Judah. Preserved only in 4QPs^f, the *Apostrophe* calls on all creation and on Judah to give praise at the coming destruction of Belial and evildoers, and affirms the eternal nature of Yahweh and his glory.

The Apostrophe to Zion. The *Apostrophe* appears in one scroll from Cave 4 (4QPs^f) and one from Cave 11 (11QPs^a). It is a love poem addressed to Zion in a style reminiscent of the three apostrophes to Zion found in Isaiah (Is 54:1-8; 60:1-22; 62:1-8).

David's Compositions. This piece functions as a prose epilogue to 11QPs^a, although it appears in the second to last inscribed column (27) of the manuscript. The epilogue affirms the Davidic authority and authorship of the 11QPs^a-Psalter and states that he composed a total of 4,050 compositions in accordance with the 364-day solar calendar.

The Eschatological Hymn. Found only in 4QPs^f, this hymn apparently belongs to the category of *hallel* or *halleluyah* psalms, but has marked eschatological features.

The Hymn to the Creator. Preserved in 11QPs^a, this hymn is a Jewish sapiential poem that has many affinities with the *Thanksgiving Hymns* (1QH and 4QH).

The Plea for Deliverance. Found in 11QPs^a and 11QPs^b, the *Plea* is a prayer for deliverance from Satan and sin, and includes praise and thanksgiving for experiences of salvation in the past.

Three Songs Against Demons. These three pieces are grouped together with Psalm 91 in 11QapocPs, with the function of exorcism. They are in all probability the four songs "for making music over the stricken" that are referred to in

David's Compositions (11QPs^a, 27:9-10).

Two more important manuscripts are 4Q380 and 4Q381, which are probably from different parts of a single collection, although two different collections cannot be ruled out. Seven fragments of 4Q380 remain, containing portions of at least three distinct psalms, while the approximately 100 fragments of 4Q381 preserve parts of at least twelve psalms. The original collection or collections were certainly larger. The psalms in these two scrolls are very similar to biblical psalms in vocabulary, style, theme and content. One such theme is Zion, as in 4Q380 fragment 1: "[For the name of Yahweh is invoked upon it (= Zion), [and his glory] is seen upon Jerusalem" (lines 5-6). Penitential psalms or lamentations are also evident, as in 381 fragments 33+35: "For (my) transgressions are too many for me, and [...]. But you, my God, will send your spir[it] and [you will give your compassions] ⁵to the son of your handmaiden, and your mercies to the servant near to you" (lines 4-5. See also frags. 15, 24, 31, 45).

Precisely when the psalms of 4Q380 and 4Q381, all written in Hebrew, were composed is difficult to determine, since they contain virtually no historical references or special themes (4Q380 and 4Q381 were both copied in mid- to late-Hasmonean times, c. 100-30 B.C.). Like several biblical psalms, the general linguistic features are characteristic of Late Biblical and Qumranic Hebrew (see Hebrew Language), suggesting a date in the Persian or early Hellenistic periods. The complete absence of references to the afterlife suggests a relatively early date of composition.

PSALMS OF SOLOMON

Composed in Hebrew in the first century B.C., these Jewish poems have been assembled into a collection of eighteen so-called psalms. Today they are available only in Greek and Syriac translations. If *1 Baruch* 5:5-8 is dependent on *Psalms of Solomon* 11:2-5 the Greek version must have existed before the end of the first century A.D. Otherwise the earliest evidence, often overlooked, is given with the Coptic-Gnostic *Pistis Sophia*, which originated in Greek in the third century A.D. As a Jewish but not necessarily *Pharisaic source the *Psalms of Solomon* are of greatest importance, both by similarity and contrast, for NT christology, theology and anthropology.

1. Evidence of the Text
2. *Psalms of Solomon* as Poetry
3. Hebrew Forms and Jewish Content
4. Historical Allusions and Dating
5. Impact on the New Testament

1. Evidence of the Text.

Although easily accessible in volume 2 of A. Rahlfs's *Septuaginta* (2:471-89) and in part 4, fascicle 6 of *The Old Testament in Syriac* (Baars, 26 pp., between Apocryphal Psalms and *Tobit), the small collection of eighteen pseudo-Solomonic poems has never been part of any *Septuagint version or *Syriac translation of the Bible (Peshitta, etc.). Before the *editio princeps* in 1626 by the Spanish Jesuit J. L. de la Cerda (on the basis of only one Vienna MS) these so-called psalms were lost without any textual trace. There was, however, some evidence of their existence.

1.1. Canon Lists. The table of contents of the Greek Bible Codex A (Alexandrinus, fifth century A.D.; not Vaticanus [Schürer, 196]) mentions at the end—after twenty-nine NT writings, including *1 Clement* and *2 Clement*—as a kind of appendix *Psalmoi Solomōntos iē* ("Eighteen Psalms of Solomon") that must have been regarded as texts very close to the NT.

In the so-called Synopsis of Pseudo-Athanasius (sixth-seventh century A.D.) "Psalms and Odes of Solomon" appear between 1-4 Maccabees and Susanna, among the *antilegomena* ("disputed writings") of the OT.

The appendix to the Greek list of sixty canonical books (seventh century A.D.) contains *Psalmoi Solomōntos* ("Psalms of Solomon") as one of twenty-five *apokrypha* ("apocryphal writings"). This group of twenty-five NT and OT *apocrypha and pseudepigrapha is separated from nine books "outside the sixty," namely, *Wisdom of Solomon, *Sirach, 1-4 *Maccabees, Esther, *Judith and *Tobit. There might be some significance in the number of sixty ("sixty books" as a name of the Bible) even with regard to the early collections of eighteen psalms and forty-two odes (or, forty-two odes and eighteen psalms) of Solomon.

In the *Stichometria* of Patriarch Nicephorus (ninth century A.D.) "Psalms and Odes of Solomon" are again listed as one group of eight OT writings, *hosai antilegorontai kai ouk ekklesiastizontai* ("which are disputed and not canonized"), in this case preceded by 1-3 Maccabees, Wisdom of

Solomon and Wisdom of Jesus Sirach and followed by Esther, Judith, Susanna and Tobit.

1.2. Pistis Sophia. However, since 1909, the year which saw the *editio princeps* of the Syriac *Odes and Psalms of Solomon*, another witness to the existence of the eighteen poems can be identified that is considerably earlier than Codex A. In the Coptic-Gnostic *Pistis Sophia*, which came gradually to light in the nineteenth century, there is a short quotation from the "Nineteenth Ode of Solomon," which is, however, not identical with any text of Ode 19. The only possible conclusion from this erroneous citation is that a collection of Greek psalms and odes of Solomon must have existed as early as the third century A.D. And it is far from certain whether this collection distinguished between *psalmoi* ("psalms") and *ōdai* ("odes"). That is, it is unknown at which time the specific title *Psalms* was given to the eighteen poems ascribed to the poet-king Solomon (cf. 1 Kings 5:12) and originally composed in Hebrew in the first century B.C., probably by several Jewish authors from Palestine or even Jerusalem.

1.3. Manuscripts. If the Hebrew original carried already a general heading given to it by a Jewish collector or redactor, the title might have contained the plural of *mizmōr* ("psalm"; cf. the Syriac title *mazmōrē*, "Psalms," in two of three fragments [Baars, v-vi]). It has to be noted, however, that the only two Syriac manuscripts containing larger parts of the *Psalms of Solomon* as a continuation of the *Odes of Solomon* subsume both the forty-two odes and the eighteen psalms under the title *z'mirtā* ("ode"; plural *z'mirtāā*, "odes"). The question of whether the Syriac version is "primarily" based on a Hebrew text (so again, after Kuhn; Trafton 1985, 207; 1986, 234) or is a translation of a Greek version (cf. Begrich 1989; Holm-Nielsen, 55, "more probable") must be regarded as an open problem.

A Greek translation also produced by Jews was probably "available by the mid first century A.D." (Wright, 640). In its general title the LXX term *psalmoi* ("psalms") would have been used, although in three of the eleven Greek manuscripts known today the superscription is *sophia Solomōntos* ("Wisdom of Solomon"; cf. Trafton 1985, 6-9; Hann 1982, 3-6). Part of this confusion goes back to the secondary titles of *Psalms of Solomon* 2-18 (a title of 1 is not preserved). Only 2, 3, 5, 13, 15, 17 and 18 show *psalmos* ("psalm") in their respective superscriptions, whereas all ex-

tant single titles contain the name of Solomon. In the headings of 15 and 17 an additional *meta ōdēs* ("with song") is found, and *hymnos* ("hymn") serves as superscription of 10, 14 and 16 (cf. Latke 1991, 116). All these musicological or hymnological terms are as insignificant as the rhetorical term *dialogē* ("conversation") appearing in the title of 4 (one MS reads the traditional *psalmos*, "psalm"). It is difficult to explain why neither of them has been used for 6-9 and 11-13.

2. Psalms of Solomon as Poetry.

With the exception of 5, 10 and 14, there is some further indication of the contents in the psalms' headings. However, these key words are more or less arbitrary and have apparently been taken from the total of some six hundred lines, most of which are without any meter. The only poetical device clearly recognizable in all eighteen poems of different length (and without strophical subdivisions) is *parallelismus membrorum* in various forms, namely, antithetical, synonymous and synthetical parallelism (cf. Eissfeldt, 57). As to future research, a "comprehensive critical edition of the *Pss. Sol.*, using both the Greek and the Syriac, is clearly needed," and a "sensitive reading of the *Pss. Sol.* as poetry, rather than history or theology, would be in order" (Trafton 1994, 12-13). With R. B. Wright's new edition of the Greek text still awaiting publication, the following outline of historical and theological issues is still dependent on O. von Gebhardt's textual-critical edition of 1895 (from then only eight MSS) forming also the basis of Rahlfs's text.

3. Hebrew Forms and Jewish Content.

In all of their redaction-critical stages (Schüpphaus, 138-53; Trafton 1994, 6) these poems are dependent on well-established Hebrew forms such as "lament," "praise" and "thanksgiving" (Trafton 1994, 5-6) and to an even larger extent on the contents of earlier Jewish texts, including wisdom literature (cf. index of OT passages and extracanonical writings in Holm-Nielsen, 110-12; Jansen, 9-55). Bearing this in mind one has to be very cautious in drawing conclusions with regard to historical and geographical details. Apart from the name of the holy city Jerusalem (*Pss. Sol.* 2:3, 11, 13, 19, 22; 8:4, 15, 17-22; 9:1 [v.l.]; 11:1-2, 7-8; 17:14, 22, 30) and "the mountains of Egypt" (*Pss. Sol.* 2:26) there is hardly

anything of a concrete and direct nature in the so-called psalms that deals mainly with God's righteousness, justice and help and the contrast between the *dikaios* ("righteous") and the *hamartōlos* ("sinner") (*Pss. Sol.* 2:34 and passim, also in different terms, cf. Trafton *ABD*, 116). Biblical names such as Abraham (*Pss. Sol.* 9:9; 18:3), Jacob (*Pss. Sol.* 7:10; 15:1) and David (*Pss. Sol.* 17:4, 6, 21) appear along with *Israel (*Pss. Sol.* 7:8; 8:26, 28, 34; 9:1-2, 8, 11; 10:5-8; 11:1, 6-9; 12:6; 14:5; 16:3; 17:4, 21, 42, 44-45; 18:1, 3, 5), demonstrating nothing else than the self-understanding of Jews over against the *ethnē* ("Gentiles," *Pss. Sol.* 1:8; 2:2, 6, 19; 7:3, 6; 8:23, 30; 9:2, 9; 17:14-15, 22, 29).

4. Historical Allusions and Dating.

4.1. Pompey. However, there are a few passages within the monotonous flow of lamenting ethics, thanksgiving hope and praising although "unstable theodicy" (Wright, 643) that can be interpreted as encoded allusions to certain historical circumstances, events and sufferings, thus allowing a more specific dating of at least some parts of the whole collection whose first piece seems to be incomplete (Holm-Nielsen, 62). The violent *hamartōlos* ("sinner") of *Psalms of Solomon* 2:1 is probably the Roman conqueror *Pompey (cf. *Pss. Sol.* 2:24), who invaded Jerusalem in 63 B.C. and was killed in Egypt in 48 B.C. Therefore it is also highly probable that *Psalms of Solomon* 2:25-29 is an allusion to the shameful death of Pompey, who wanted to "be Lord of land and sea" (*Pss. Sol.* 2:29), not understanding that *theos* ("God") is *basileus ep̄i tōn ouranōn*, "king over the heavens" (*Pss. Sol.* 2:29-30; cf. Latke, 85-86; addition in the Syriac translation: "and over the earth"). References to "the sound of war" (see also *Pss. Sol.* 1:2), the "one who attacks in strength" and the murderous defilement of Jerusalem in *Psalms of Solomon* 8:1-22 (esp. 1, 15, 22) also remind the reader of "the capture of Jerusalem and the Temple by Pompey" (Wright 658).

4.2. Herodian Era. More difficult and controversial is the case of *Psalms of Solomon* 17, "commonly considered to describe (1) the succession of the sinful *Hasmoneans, (2) their punishment by the hand of Pompey, who was himself a sinner, and (3) from vs. 21 onward, the (future) Davidic Messiah, who will remove Pompey and restore Israel to its glorious state" (Tromp, 346). This view has recently

been challenged by J. Tromp and K. Atkinson, who date this most important messianological/christological psalm to the early Herodian era (37-4 B.C.). While the former thinks of "the Parthians" who "invaded Palestine in 40 B.C.E." (Tromp, 360-61), the latter argues "that *Pss. Sol.* 17 actually describes the siege of Jerusalem by Herod the Great and the Roman general Sosius in 37 B.C.E., and Herod's subsequent extermination of the remaining Hasmonian descendants" (Atkinson 1996, 314). This alternative hypothesis "places the writing of *Pss. Sol.* 17 within the narrow confines between 37-30 B.C.E." (Atkinson 1996, 322; but cf. already Begrich 1931, 90; Braun 1961, 1342; Eissfeldt, 612).

4.3. *Psalms of the Pharisees?* It has often been assumed "that the *Pss. Sol.* are the classical source of Pharisaism" (Trafton 1994, 7; cf. Ryle and James; Kittel, 128; Beer, 236; Gray, 630; esp. Schüpphaus, 127-37; see *Pharisees*). However, "voices have been raised in protest against interpreting all the poems as Pharisaic attacks on the Sadducees," and more than once warnings have been issued against too great a confidence in tracing them to Pharisaic circles, "the more so since the *Psalms of Solomon* show many points of contact with the Qumran texts" (Eissfeldt, 613; cf. Begrich 1931, 91; Braun 1961, 1343; O'Dell; Wright, 641-42, 648-49). In the 1980s a new debate flared up about the community and the *Sitz im Leben* of the Jewish poems (cf. Trafton 1994, 7-8). According to R. R. Hann (1988), the movement that composed them might have had its deepest roots in "a second-century proto-Essene protest of disenfranchised priests against the Hasmonian high priesthood" (Trafton 1994, 7; see *Essenes*). The other extreme to the drawing of sharp trajectories is a position that goes beyond the "conventional Pharisee—Sadducee—Essene categorization" and ascribes the composition to a Jewish "school" of "otherwise 'unknown' groups" (Brock, 651).

5. Impact on the New Testament.

5.1. *The Messiah of Psalms 17 and 18.* As indicated above, psalm 17 (with one hundred lines, the longest one) is "an especially important witness to pre-Christian Jewish messianism" (Trafton *ABD*, 116; see also Trafton 1994, 8-10; see *Messianism*). It must be seen together with 18:1-9, which is followed by the traditional musical and cultic term *diapsalma* ("pause," as after *Pss. Sol.* 17:29; cf. Eissfeldt, 611) and a short

hymnological appendix (*Pss. Sol.* 18:10-12; cf. Wright, 641).

Although the poem emphasizes by *inclusio* that the Lord (God) himself is *basileus hēmōn* ("our king") for ever and ever (*Pss. Sol.* 17:1, 46; cf. 17:3, 34), it also speaks about David's kingship over Israel (*Pss. Sol.* 17:4) and prays for a new *basileus* ("king") as a son of David, *basileusai* ("to rule") over Israel (*Pss. Sol.* 17:21) and *katharisai* ("to purge") Jerusalem from Gentiles (*Pss. Sol.* 17:22; cf. 17:30; 18:5). This king will gather *laon hagion* ("a holy people") and judge *phylas* ("the tribes") of his own sanctified *laos* ("people," 17:26). Like a new Joshua (Holm-Nielsen, 103) he will distribute the tribes of Israel upon the land purged of foreigners (*Pss. Sol.* 17:28). This contradicts the vision that *ethnē* ("nations") will come from the ends of the earth to see his *doxa* ("glory," *Pss. Sol.* 17:31). The appointed king will be *dikaios* ("righteous, just") and *didaktos hypo theou* ("taught by God"). Then all will be *hagioi* ("holy," cf. 1 Pet 2:9), and *basileus autōn* ("their king") will be *christos kyrios* ("Messiah, Lord," *Pss. Sol.* 17:32; cf. relevant NT passages in Fitzmyer, 330).

There is no need to regard the apocalyptic title "Lord Messiah" (Wright, 667, 669; Prigent, 989 ["le Messie Seigneur"]; cf. Lk 2:11) as a Christian emendation and to change it against the evidence of the Syriac and nine Greek manuscripts to *christos kyriou* ("Messiah of the Lord," Rahlf's, 488; Holm-Nielsen, 104). Although the expected Messiah shall be *christos kyriou* ("Messiah of the Lord [God = Yahweh]," *Pss. Sol.* 18:7; cf. 18:5-6, 8, and secondary superscription of 18), he himself can be called *kyrios* ("Lord" = *'ādōn* in Heb, *mārjā* in Aramaic/Syriac; cf. Fitzmyer, 330; Hann 1985, 623, 625). The ambivalence is similar to the use of the title *basileus* ("king") for both God (Yahweh) and his appointed-anointed one.

5.2. Righteousness and Mercy. Apart from the complex issue of eschatological messianism (cf. Braun 1950-51, 42-50 = 1967, 56-64) and a few passages that might have influenced NT authors and redactors, the most important NT background problem is a fair understanding and interpretation of "righteousness" (cf. Trafton 1994, 10-12), which is partly dependent on the question of authorship. The frequent noun *dikaiosynē* ("righteousness," cf. *Pss. Sol.* 1:2-3; 2:15; 4:24; 5:17; 8:6, 24-26; 9:2, 5; 17:19, 26, 40; 18:7-8), the equally frequent adjective *dikaios*

("righteous," cf. *Pss. Sol.* 2:18, 32, 35; 3:3-7; 4:8; 5:1; 8:9; 9:2; 10:3, 5; 13:7-11; 14:9; 15:6-7; 16:15), as well as the much less frequent verb *dikaiōō* ("to justify," cf., with direct object in brackets, *Pss. Sol.* 2:15 [God]; 3:5 [Lord]; 4:8 [God's judgment]; 8:7 [God in his judgments]; 8:26 [God's name]; cf. also the passive, with God as subject, in *Pss. Sol.* 8:23 and 9:2), are primarily forensic terms and must be seen in context with other synonyms and the concept of God's mercy (cf. Braun 1950-51 = 1967, *passim*).

5.3. Further Impact. In addition to NT parallels listed elsewhere (cf. Braun 1950-51, 54 = 1967, 69; Holm-Nielsen, 112; Wright, 651-70), attention may be drawn to two passages that might also have some bearing on NT texts. The statement of *Psalms of Solomon* 15:7 that *limos kai rhomphaia kai thanatos apo dikaiōn makran* ("famine and sword and death shall be far from the righteous") may have influenced Paul's wording of Romans 8:35-39. And the incestuous phenomenon of *Psalms of Solomon* 8:9 that *hyios meta mētros kai patēr meta thygatrois synephyronto* ("son with mother and father with daughter mingled sexually") may in part explain the harsh and far-reaching reaction of Paul in 1 Corinthians 5:1-5 (cf. also Lane, *passim*, on Paul).

PSEUDONYMITY AND PSEUDEPIGRAPHY

Pseudonymity and pseudepigraphy denote the practice of ascribing written works to someone other than the author—that is, the works in question are falsely (*pseud-*) named (*onoma*, "name") or attributed (*epigraphos*, "superscription"). This must not be confused with anonymity, in which no formal claim is made (e.g., Matthew, John and Hebrews are all formally anonymous). Similarly one must distinguish between pseudepigraphical and *apocryphal works. The word *apocrypha* is tied rather more to notions of canon than to notions of authenticity. The matter of false attribution played little or no

part in the identification of the fourteen or fifteen books or parts of books that constitute the Apocrypha, most of which Roman Catholics view as deuterocanonical. A book is either canonical or apocryphal (or, for Roman Catholics, deuterocanonical), regardless of whether or not it is pseudepigraphical.

Although pseudonymity and pseudepigraphy are today used almost synonymously, only the latter term has been traced back to antiquity (as early as an inscription from the second century B.C., found at Priene). Apart from the intrinsic interest of the subject—by what criteria do scholars decide that a document makes false claims regarding its authorship?—its bearing on NT interpretation arises from the fact that a majority of contemporary scholars hold that some of the NT books are pseudonymous. The list of books varies considerably, but a broad consensus would label Ephesians and the Pastoral Epistles (attributed to Paul) pseudepigraphical, as well as 2 Peter (attributed to Peter). Some would add other books: Colossians, 2 Thessalonians, 1 Peter.

1. Extrabiblical Evidence
2. The Stance of the Church Fathers
3. Evidence Internal to the New Testament Documents
4. Some Contemporary Theories

1. Extrabiblical Evidence.

1.1. Preliminary Observations. Given the broadest definition, pseudonymity is a more extensive phenomenon than some have thought. It embraces every false claim of authorship, whether for good motive or ill, and whether advanced by the real author or by some later historical accident. It includes every instance of an author adopting, for whatever reason, a nom de plum—Mary Ann Evans writing under the name of George Eliot or the three Brontë sisters (Charlotte, Emily and Anne) publishing their poems under the title *Poems by Currier, Ellis and Acton Bell*, or the English scholar Gervase Fen writing detective fiction under the name of Edmund Crispin. According to Galen, a learned physician from the second century A.D., literary forgeries first circulated in large numbers when *Alexandria and Pergamum began a race to outdo each other by increasing the number of volumes in their respective libraries (see Alexandrian Library): the *Ptolemies of Egypt and King Eumenes of Pergamum offered large sums to ac-

quire copies of the works of ancient authors. Among other things, Galen feels outraged and betrayed by the interpolations and corruptions introduced into the medical works he and Hippocrates had written (in Hippocrates *Nat. Hom.* 1.42).

At this juncture it is vital to distinguish between pseudepigraphical works and literary forgeries (Metzger, 4). A literary forgery is a work written or modified with the intent to deceive. All literary forgeries are pseudepigraphical, but not all pseudepigrapha are literary forgeries. There is a substantial class of pseudepigraphical writings that, in the course of their transmission, somehow became associated with some figure or other. These connections between a text and an ancient figure, however fallacious, were judgments made with the best will in the world. We do not know how the commentaries of Pelagius on Paul came to be associated with the name of Jerome (who violently opposed Pelagius), but that is what happened. Most hold that Lobon of Argos wrote the *Hymn to Poseidon* in the third century B.C., even though the hymn is widely attributed to Arion; but it is doubtful that Lobon himself had anything to do with the attribution. The reason this distinction is important is that debates over the authenticity of NT books are tied up with the motives of actual authors, since the texts are so early and so stable that the putative author's name is there from the beginning. For the purposes of this article, then, it will be well to focus only on cases where demonstrable intent is involved and thus to exclude all pseudepigrapha that have become such owing to nothing more than the irretrievable accidents of history.

The motives of pseudepigraphers, ancient and modern, have been highly diverse and include the following. (1) Sometimes literary forgeries have been crafted out of pure malice. According to Pausanias (*Descr.* 6.18.2-6) and Josephus (*Ag. Ap.* 1.24 §221), in the fourth century B.C. Anaximenes of Lampsacus destroyed the reputation of a contemporary historian, Theopompus of Chios, by writing, under the name of his rival, horrible invectives against three Greek cities (Athens, Sparta and Thebes) and circulating them. Eusebius (*Hist. Eccl.* 9.5.1) reports that in the fourth century the *Acts of Pilate* began to circulate (possibly written by the apostate Theotecnus), full of bitter slanders against the moral character of Jesus. In modern times, czarist Rus-

sia produced the "Protocols of the Learned Elders of Zion."

(2) More commonly, as we have already seen, literary forgeries were prompted by promise of financial payment.

(3) Sometimes the pseudepigrapher used an ancient name to gain credence for his writing in order to support a position he knew to be false. According to Strabo (*Geog.* 9.1.10), in the sixth century B.C. either Solon or Pisistratus inserted a verse in Homer's *Iliad* (book B, line 258) in order to support the Athenian claim to the island of Salamis. Herodotus (*Hist.* 7.6) says that Onomacritus was banished from Athens when it was shown he had interpolated a passage into the Oracles of Musaeus predicting that the islands off Lemnos would sink into the sea. This third motive has some overtones of the first.

(4) Similarly the pseudepigrapher sometimes used an ancient name to gain credence for his writing in order to support a position he judged to be true. This was especially the case in ancient schools in which the founder was highly venerated. Very few of the *Neo-Pythagoreans published their works under their own names. They attributed them to Pythagorus himself, even though he had been dead for centuries (so Iamblichus, c. A.D. 250-325: *De Vita Pythagorica* 198, following Deubner's edition). In the sixth century A.D. several works appeared claiming to be written by Dionysius the Areopagite (cf. Acts 17:34), though drawing on much later Neo-Platonic argumentation.

(5) A more idiosyncratic case of the same thing has occasionally occurred when an individual has ostensibly hidden his or her own name out of modesty, using the name of another. Perhaps the most famous instance is that of an encyclical that began to circulate about A.D. 440, ostensibly written by someone who identified himself as "Timothy, least of the servants of God." Bishop Saloniuss guessed the author was Salvian, a priest in Marseilles. Without admitting anything, Salvian responded to the bishop's sharp queries by saying that he thought authors, out of humility and modesty, might be justified in using the name of another, so as not to seek glory for themselves (cf. Haefner). One may perhaps be excused for thinking this is a trifle disingenuous. It is a strange modesty that thinks one's own writings are so good that they could and should be attributed to an ancient biblical hero.

One easily imagines that this motive runs into another: (6) A deep desire to get published and be widely read, for both personal and ideological reasons, doubtless characterizes more authors than the Brontë sisters and may be the motive behind the motive of Salvian.

(7) More difficult to assign are the substantial numbers of pseudepigraphical writings that belong to specific genres. Doubtless more than one of the preceding motives were involved. But it is difficult to overlook what might almost be called a genre incentive. In the post-Aristotle period, the rise of the great Attic orators generated high interest in *rhetoric and oratory. Students were taught to compose speeches based on models left by the ancient orators. The most skillful of these were doubtless difficult to distinguish from the originals. This drifted over into the reconstruction, by historians, of speeches that their subjects probably would have made (in the view of the historians). Some historians, of course, were more reflective about such practices than others (cf. Thucydides *Hist.* 1.22). L. Alexander has shown that from Isocrates on, one can distinguish between a more scientific historiography and a looser, more creative form—and Luke, at least (she insists), fits into the former category.

Further, if complex motives were involved in the creation of pseudonymous speeches, the same can be said of *letters. At least in the classical period, great leaders and thinkers were credited with important and voluminous correspondence. One hundred forty-eight letters are attributed to the sixth-century B.C. tyrant Phalaris of Acragas (= Agrigentum), portraying him as a gentle and kind man and as a patron of the arts—though since the end of the seventeenth century scholars have known that these letters were almost certainly composed in the second century A.D., probably by a Sophist (see the work of Bentley). The phenomenon is less common in *Hellenistic times, but see below.

(8) Finally, several bodies of writings are ascribed to some philosophical-religious-mythical figure, especially Orpheus, the Sibyl and Hermes Trismegistus (see esp. Sint, Speyer and some essays in Brox).

1.2. Jewish Examples. Jewish literature evinces a fairly high occurrence of pseudepigraphical literature from about the middle of the third century B.C. to the third century A.D., much of it belonging to the genre of *apocalyptic (broadly

defined). One thinks of the **Psalms of Solomon*, *1 Enoch*, *2 Enoch*, *3 Enoch* (see Enoch, Books of), the works of the Ezra cycle (e.g., *4 Ezra*; see Esdras, Books of), the **Treatise of Shem*, the **Apocalypse of Zephaniah*, the **Apocalypse of Abraham*, the *Apocalypse of Adam* (see Adam and Eve, Literature Concerning) and many more. We may include here the various testaments, most of which have apocalyptic sections (e.g., **Testaments of the Twelve Patriarchs*, **Testament of Job*, **Testament of Moses*, *Testament of Solomon*). Yet other genres are not unrepresented (e.g., **Wisdom of Solomon*). Some works are of such mixed genre they are variously classified. The **Sibylline Oracles*, for example, appears to be made up of a strange mix of pagan oracles from various countries, Jewish writings from a wide spread of dates and Christian moralizing interpolations—yet all the while the document maintains the claim that this conglomeration is the utterance of the Sibyl, an ancient prophetess, sometimes represented as the daughter-in-law of Noah. This arrangement is transparently designed to gain credence for the oracles as genuine **prophecies*.

The wide variety of expansions of OT narratives are not normally pseudepigraphical, but some of the expansions that are also **prayers* must be placed in that category: **Prayer of Manasseh*, *Prayer of Joseph*, *Odes of Solomon* (see Psalms of Solomon). Occasionally a later, non-biblical, literary figure finds his name forged: today's scholars read not only **Philo* but **Pseudo-Philo* (first century A.D., like the real Philo).

Examples of pseudepigraphical letters from this milieu are harder to come by. The two cited by everyone are *Epistle of *Aristeas* and *Epistle of Jeremy*, neither of which is really a letter.

1.3. Early Christian Examples. About the middle of the second century A.D., pseudonymous Christian works began to multiply, often associated with a great Christian leader. We are not here concerned with works that purport to tell us about esteemed Christian figures without making claims as to authorship but only with those that are clearly pseudepigraphical. Some of these are apocalypses (e.g., the *Apocalypse of Peter*, the *Apocalypse of Paul*); some are gospels (e.g., *Gospel of Peter*; *Gospel of Thomas*, which is really no gospel but mostly a collection of sayings attributed to Jesus; see Apocryphal Gospels). Several are letters claiming to be written by Paul: *3 Corinthians*, *Epistle to the Alexandrians*, *Epistle to the Laodiceans* (see Apocryphal Acts and Epistles).

The latter was almost certainly written to provide the document mentioned in Colossians 4:16. It is a brief and rough compilation of Pauline phrases and passages, primarily from Philippians. The largest collection of pseudonymous epistles from the early period of the church's history is the set of fourteen letters of correspondence between the apostle Paul and **Seneca*. They are referred to by both Jerome (*Vir.* 12) and Augustine (*Ep.* 153). The *Muratorian Canon* (c. A.D. 170-200) refers to the *Epistle to the Alexandrians* and the *Epistle to the Laodiceans* as "both forged in Paul's name" (*Mur. Can.* 64-65), and so the **canon* will not allow them to be included. This last observation leads to the next heading.

2. The Stance of the Church Fathers.

All sides agree that pseudepigraphy was common in the ancient world. Nevertheless, in Jewish and Christian circles it was *not* so common in epistles—and it is in the epistolary genre where the subject impinges on the NT documents. But does pseudonymity occur in the NT?

From a mere listing of pseudepigraphical sources, one might unwittingly infer that no one cared. But that is not the case. "Both Greeks and Romans show great concern to maintain the authenticity of their collections of writings from the past, but the sheer number of the pseudepigrapha made the task difficult" (Donelson, 11). Similarly J. Duff: "It simply cannot be maintained that in the pagan culture surrounding the early Christians there was no sense of literary propriety, or no concern over authenticity" (Duff, 278). Referring both to Christian and non-Christian sources, L. R. Donelson goes so far as to say, "No one ever seems to have accepted a document as religiously and philosophically prescriptive which was known to be forged. I do not know a single example" (Donelson, 11).

This is virulently the case in early Christian circles. We have already observed the stance of the *Muratorian Canon* and of Bishop Salomon. When Asian elders examined the author of an *Acts of Paul*, which included the pseudonymous *3 Corinthians*, they condemned him for presuming to write in Paul's name. When about A.D. 200 Serapion, bishop of Antioch, first read *Gospel of Peter*, he thought it might be genuine. When further investigation led him to conclude it was not, he rejected it and provided a rationale for the

church of Rhossus in Cilicia: "For we, brothers, receive both Peter and the other apostles as Christ. But pseudepigrapha in their name we reject, as men of experience, knowing that we did not receive such [from the tradition]" (Eusebius *Hist. Eccl.* 6.12.3; cf. 2.25.4-7—widely cited in the literature). Tertullian is blistering against the Asian elder who confesses that he wrote *Acts of Paul and Thecla*. All the elder's protestations that he had done so out of great love for the apostle did not prevent him from being deposed from the ministry (Tertullian *De Bapt.* 17). Similarly, when Cyril of Jerusalem provides a list of canonical books, he allows only four Gospels, for the rest are "falsely written and hurtful" (*pseudepigraphu kai blabera*; Cyril of Jerusalem *Cat.* 4.36).

I know of no exception to the evidence, which is far more extensive than this brief summary suggests. Ostensible exceptions turn out, under close inspection, to be unconvincing. For instance, M. Kiley (17-18) rightly observes that the *Muratorian Canon* attaches to its list of NT books the Wisdom of Solomon, observing that it was written by the "friends of Solomon in his honor"—which surely, he suggests, demonstrates that "at least portions of the early church were able to detect the pseudepigraphical process." But where it is clear that a "pseudepigraphical process" is observed by the fathers, the fathers universally condemn it. In this case, as Kiley himself observes in an extended footnote, the reference in the *Muratorian Canon* may not be to our Wisdom of Solomon but to the book of Proverbs, which was at that time sometimes referred to as the Wisdom of Solomon. But in that case pseudonymity is not an issue, since the book itself frankly distinguishes various collections of proverbs by different authors.

Similarly, some have argued that Tertullian's words admit the legitimacy of at least some kinds of pseudonymity: "It is allowable that that which pupils publish should be regarded as their master's work" (Tertullian *Marc.* 4.5). But D. Guthrie has rightly shown that this is to misunderstand Tertullian. Tertullian is discussing how Peter stands behind Mark's Gospel and how Paul informs Luke's writing. He does not suggest that the church received the second Gospel as if it had been written by Peter when in fact it was written by Mark.

The view that the NT includes some pseudepigrapha was not mooted until two centuries ago (by Evanson in 1792) and became popular with

the work of F. C. Baur. But so far as the evidence of the fathers goes, when they explicitly evaluated a work for its authenticity, canonicity and pseudonymity proved mutually exclusive.

3. Evidence Internal to the New Testament Documents.

All sides acknowledge that, however they are taken, the extrabiblical examples of pseudonymity cannot establish the ostensible pseudonymity of any NT document. Such material provides no more than a social world of plausibility (or implausibility!) for the acceptance of pseudepigrapha into the NT. The pseudepigraphical character of any particular document is established on other grounds: anachronisms; a high percentage of words or phrases not found in the known writings of the author; a high number of words and phrases found in the ostensible author's agreed writings but used in quite different ways; forms of thought and emphasis that seem at odds with the dominant strains of the agreed writings; and more of the same.

Although some scholars view such evidence as having no more weight than that which affects the balance of probabilities, many judge it to be so strong that there is no doubt in their minds that some NT books are pseudepigraphical (e.g. Charlesworth, Donelson, Meade, Metzger, Speyer). In some cases, those who disagree with them are dismissed as beyond the pale, unworthy and perhaps incompetent opponents. But the issues are complex and interlocking. One might usefully gain insight into the nature of the debate at its best by reading the respective commentaries on Ephesians by A. T. Lincoln and P. T. O'Brien—not only their introductions, but their exegeses wherever understanding of the text is affected by, or affects, the questions of authorship; or by reading the exchange between S. E. Porter and R. W. Wall; or standard introductions, such as those by W. G. Kümmel and Guthrie (esp. the latter's appendix C: "Epistolary Pseudepigraphy," 1011-28).

The entire complex apparatus of technical scholarship and historical criticism, not to say theology and worldview, impinge on a complex string of judgments that bear on the question of whether or not there are pseudepigrapha among the NT documents. Scholars who answer yes are inclined to argue that, say, Ephesians has far too much realized eschatology for it to be Pauline; scholars who answer no highlight all

the passages that retain futurist eschatology and argue that whatever differences that remain are nothing more than different locations on the Pauline spectrum, variously applied by the apostle himself in different ways to meet certain pastoral needs. Scholars who answer yes carefully list all the *hapax legomena* in Ephesians; scholars who answer no point out that Ephesians has no more *hapax legomena* than do some undisputed Pauline letters. Such matters cannot be addressed here, yet it is important to see that they impinge on our topic and that the evidence is spun by scholars in different ways and given very different weight.

Two other bits of internal evidence bear on the discussion. (1) The author of 2 Thessalonians is aware of forgeries made in his own name. He therefore warns his readers "not to become easily unsettled or alarmed by some prophecy, report or letter supposed to have come from us" (2 Thess 2:1-2) and provides them with some signature or token to enable them to distinguish which letters purporting to come from him were authentic and which were not (2 Tim 3:17). If the author was not Paul, as many scholars think, then our pseudonymous author is in the odd position of condemning pseudonymous authors; a literary forgery damns literary forgeries. If the author was Paul, then the apostle himself makes it clear that he is aware of pseudonymity and condemns the practice, at least when people are using his name. (2) It is clear that Paul and perhaps other NT writers used amanuenses (e.g., Rom 16:22). There is a long and complex literature about how much freedom amanuenses enjoyed in the ancient world—much as I might give my secretary detailed dictation or simply ask her to write a letter along such and such a line, which becomes mine once I have read it and signed it. These questions have a bearing on many critical debates and cannot be overlooked in discussion of, say, the authenticity of the Pastorals.

4. Some Contemporary Theories.

Some scholars are convinced that the NT contains many examples of literary forgeries and are unembarrassed by this conclusion. On this view, the pseudonymous author of 2 Peter, for instance, was trying to deceive his readers into thinking that the apostle wrote the missive (so Charlesworth): he was a hypocrite. Similarly Donelson on the Pastorals: the pseudonymous

author, in "the interest of deception . . . fabricated all the personal notes, all the fine moments of deep piety, and all the careless but effective commonplaces in the letter. . . [He] is quite self-consciously employing pseudonymity in order to deceive" (24). W. A. Meeks on Colossians is similar.

On the other side are those who similarly point out how often deception plays a role in pseudepigraphy but recall how the church universally rejected any hint of such deception (e.g., Ellis). This is not to deny the complexity of motives that stand behind the various forms of pseudepigraphy lightly sketched above. It is to say that the letters of the NT, where pseudonymity is alleged to have taken place, are not educational exercises designed to ape the rhetorical styles of Attic orators. Nor are they writings that belong to a certain school of thought with a great but deceased head (whether Paul or Peter): the NT documents make concrete claims that the apostle is the author. Rather, the nature of the ostensibly pseudonymous claim is such that we must conclude that if the documents are pseudonymous, the writers intended to deceive in a way that is morally reprehensible—and given the nature of the documents, this is not credible. Thus in Ephesians, the author refers to his earlier ministry, written and oral (Eph 3:3-4), his chains, his arrangement of the ministry of other of Paul's men (e.g., Tychicus, Eph 6:21-22). He exhorts his readers to pray for his (Paul's!) needs (Eph 6:19-20), when, on the assumptions of pseudonymity, the apostle was already dead. Yet he also exhorts his readers to put off falsehood and to speak truthfully (Eph 4:25; cf. also 4:15, 24; 5:9; 6:14). Similar things can be said about all the ostensibly pseudepigraphical works in the NT. It seems better to take the documents at face value, respect the opinion and care of the church fathers in this regard and read the historical-critical evidence for pseudonymity with historical-critical discernment.

In recent years several mediating positions have been advanced. K. Aland and others have argued that the Holy Spirit breached the gap from ostensible author to real author. Provided the Spirit inspired the text, what difference does it make who the human author was? But this solution is awkward. It ignores the widespread recognition within earliest Christianity that there was such a thing as false prophecy. Worse, it overlooks that these "inspired" prophets were

making historical claims that were either true or not true.

D. G. Meade argues that the most believable background to NT pseudepigraphy is neither the body of Greco-Roman parallels nor the corpus of Second Temple Jewish pseudepigraphy but the process within Jewish writing whereby an original deposit (oral or written) has been enlarged upon, with all the later material being attributed to the earliest author. This pattern, he argues, began within the OT itself: Isaiah, the Solomonic corpus, Daniel. But in every case the ostensible parallels break down. On Meade's assumptions, the prophecy of Isaiah of Jerusalem was enlarged by contributions made more than a century later by others who followed in his train. But Ephesians or 2 Thessalonians or the Pastorals are not additions to a book, additions that seek to make contemporary the prophetic word of someone long dead. They are independent documents, written, even under Meade's assumptions, within a decade or so of the apostle's death. Nor is there anything like the personal claims and historical reminiscences of Ephesians or the Pastorals in Isaiah 40 and following chapters. Meade's theory sounds like an attempt to make the results work out after one has already bought into the dominant historical-critical assumptions.

The mediating position that is perhaps most widely followed today is some form of school theory (e.g. Dunn, Farmer, Bauckham; see *DLNTD*, Pauline Legacy and School; 2 Peter). Those who espouse it concur with the majority opinion that certain NT documents are pseudonymous, but they argue that no deception was involved because within the school of those churches or writers everyone who needed to know understood that the writing was not really from the ostensible author. There was a kind of living tradition that allowed for its expansion in this way, and its adherents understood the process.

If this position were genuinely sustainable, it would have its attractions. In reality it presents more problems than it resolves. The school terminology suitable to the Neo-Pythagoreans does not transfer very well to the church: the former constituted a closed, disciplined society. Moreover, even if the Neo-Pythagoreans understood that some new publication was not penned by Pythagoras, doubtless some outsiders were duped. If the school mode of transmission was

so ubiquitous and easily understood, why did none of the church fathers who addressed questions of authenticity view it as an appropriate model for their grasp of the NT documents? Moreover, the new treatises published by the Neo-Pythagoreans did not attempt the personal claims and allusions happily thrown in by the NT writers. Their new truths were tied up with new insights into numbers, not comments on Pythagoras's prison conditions or solicitations that the readers pray for him. One must not fly in the face of the evidence. J. D. G. Dunn (see *DLNTD*, Pseudepigraphy, 978), for instance, writes, "It is hard to believe that such a convention was not recognized, at least by most thoughtful readers, in the case of the Enoch corpus, the *Testaments of the Twelve Patriarchs* or the *Apocalypse of Adam*, all written probably between second century B.C. and second century A.D." But the fact is that when "the most thoughtful readers" discuss the authenticity of various documents, where they become convinced that a document is pseudonymous it is invariably judged ineligible for inclusion in the canon.

In short, the search for parallels to justify the view that the intended readers of some NT documents would have understood them to be pseudonymous, so that no deception took place, has proved a failure. The hard evidence demands that we conclude either that some NT documents are pseudonymous and that the real authors intended to deceive their readers, or that the real authors intended to speak the truth and that pseudonymity is not attested in the NT.

PSEUDO-ORPHEUS. See JEWISH LITERATURE: HISTORIANS AND POETS

PSEUDO-PHILO

Pseudo-Philo is the name given the unknown author of *Biblical Antiquities* (also known as *Liber Antiquitatum Biblicarum*), a selective narrative of Israel's history from Adam to David, composed in Hebrew around A.D. 70 in Palestine. Attempts at connecting the work with a specific Jewish group (*Essenes, *Pharisees, *Samaritans) have not been successful. Rather it is best seen as a reflection of how Palestinian Jews in the first century A.D. interpreted the Jewish Scriptures, as a source for the popular biblical theology of the period and as a repository for motifs and legends that are paralleled or even unique in ancient Jewish literature. For NT study it is important chiefly for its birth narratives; treatment of the Abraham-Isaac episode in Genesis 22; attitude toward *women, *angelology and *eschatology, as well as for its verbal, literary and theological affinities with

Luke-Acts and other NT texts.

1. *Biblical Antiquities*
2. Pseudo-Philo and the New Testament

1. *Biblical Antiquities*.

1.1. Title. Neither the ascription to *Philo nor the Latin title *Liber Antiquitatum Biblicarum* (*LAB*) appears to be original (Jacobson, 257-73). At no place does the author identify himself as Philo of *Alexandria, and the approach to the biblical text and the theology are different from those of Philo (Cohn, 277-332). Rather, both the ascription and the title probably rest only on a very general analogy perceived between this work and Josephus's *Jewish Antiquities* at a time when among Christians Philo and *Josephus were the best-known Jewish authors from NT times. In the Latin manuscript tradition the work circulated along with Philo's genuine writings.

1.2. Text. *Biblical Antiquities* exists in eighteen complete and three fragmentary Latin manuscripts (Harrington and Cazeaux). All date from the eleventh to the fifteenth centuries, and all are of German or Austrian origin. The Latin manuscripts fall into two major groups, and good readings can be found on both sides of the stemma. There is substantial evidence that the Latin version was translated from Greek and that the Greek version was based on a Hebrew original (Harrington 1970, 503-14). The Hebrew excerpts contained in the *Chronicles of Jerhameel* (Harrington 1974) are more likely retroversions from the Latin translation than remnants of the Hebrew original. The complete manuscripts all break off in an abrupt manner at *Biblical Antiquities* 65:5, just before Saul's death, leaving in doubt whether the original ending has been lost.

1.3. Content. *Biblical Antiquities* is a selective retelling of the biblical story from Genesis through 1 Samuel (Murphy; Reinmuth). It covers the narratives from *Adam to Joseph (*Bib. Ant.* 1-8), through *Moses (*Bib. Ant.* 9-19), Joshua (*Bib. Ant.* 20-24), Kenaz (*Bib. Ant.* 25-29) and Deborah (*Bib. Ant.* 30-33), and then from Aod to the ascension of Phinehas (*Bib. Ant.* 34-48) and from Samuel to David (*Bib. Ant.* 49-65). Rather than telling the whole biblical story, the author chooses certain episodes and expands some greatly while summarizing others quite concisely.

1.4. Genre. As a rewriting of the biblical narrative from Adam to David, *Biblical Antiquities* is

closest in literary form to Josephus's *Jewish Antiquities*, the *Qumran **Genesis Apocryphon* and **Jubilees*. These works are often described as examples of the "rewritten Bible" (Murphy; see *Rewritten Bible*). They are sometimes also called *"midrash" (Bauckham, 33-76) or **targum*, with both terms used loosely. Whether any or all of these three terms define a literary genre and whether *Biblical Antiquities* fits into it are matters of dispute. At any rate, Pseudo-Philo uses biblical episodes creatively to illustrate issues that he regarded as especially instructive for his audience.

1.5. Aim. The central theological theme is God's fidelity to the covenant with *Israel. The disasters that befell Israel in its early history from Adam to David were appropriate punishments for its sins, especially idolatry, and so serve to uphold the justice of God. The positive ideal for Israel is absolute faith in God and faithful observance of God's law. And so the author appears especially interested in biblical narratives that deal with sin and punishment on a collective or national level (Jacobson, 241-53). Whether these lessons demand a date after the destruction of the Jerusalem *temple in A.D. 70 or could fit just as well at other times in Israel's history is a matter of debate.

1.6. Date and Place. The Latin version of *Biblical Antiquities* was very likely produced by a Christian translator in the fourth century A.D. (Jacobson, 277-80). The Greek version seems to have been made by a Jew on the basis of the Hebrew original (Jacobson, 215-24). There is general agreement that the work was composed in Palestine in the first or early second century A.D. Favoring a pre-A.D. 70 composition (Perrot and Bogaert, 66-74) are the free attitude toward the biblical text, interest in *sacrifices and other cultic matters and the apparent silence about the events of 70. Favoring a post-70 date (Jacobson, 199-210) are the parallels with *4 Ezra and *2 Baruch (both post-70 works) and what some regard as allusions to the temple's destruction (*Bib. Ant.* 19:7; 26:13).

1.7. Background. The author's primary source and focus of interest was the Hebrew Bible (Jacobson, 224-41). He was thoroughly familiar with the biblical text and with the popular traditions that were attached to it. His language is biblical, and he assumes his audience's familiarity with the Hebrew Bible. For his own literary and theological purposes he rearranges, simpli-

fics and expands various biblical passages. He sometimes refers to events that are past from his narrative perspective (flashbacks), and at other points he looks forward to the future (anticipations). Some nonbiblical elements in the narrative may indicate the author's knowledge of the religious beliefs and practices of the pagan population of Palestine (see *Bib. Ant.* 25–26, 44). And he may also have been familiar with some Greco-Roman mythology and *magical practices (Jacobson, 213–15; see Religion, Greco-Roman).

2. Pseudo-Philo and the New Testament.

2.1. General Relationship. It cannot be established that any NT author used *Biblical Antiquities* as a source or that Pseudo-Philo knew any NT book. Rather, Pseudo-Philo's *Biblical Antiquities* provides parallels to NT writings from roughly the same time (first century A.D.) and from roughly the same milieu, especially for the Jesus traditions in the Gospels and for the early chapters of Acts.

2.2. Birth Narratives.

2.2.1. Moses and Jesus. *Biblical Antiquities* is an important source for expanded versions of biblical narratives about the births of biblical heroes (Perrot, 481–518). In retelling the biblical narrative about Moses' birth (Ex 2:1–10), Pseudo-Philo in 9:9–16 solves some puzzles in the biblical text by supplying the names of Moses' parents (Amram and Jochebed; see Ex 6:20), by explaining why Pharaoh's daughter recognized Moses as one of the Hebrew children (because he was born circumcised; see *Bib. Ant.* 9:13, 15) and by giving Moses the Hebrew name Melchiel (*Bib. Ant.* 9:16). He also adds some motifs to the biblical account of Moses' birth: The Spirit of God initiates the course of events (*Bib. Ant.* 9:10); God communicates to Miriam (*Bib. Ant.* 9:10) and to Pharaoh's daughter (*Bib. Ant.* 9:15) by dreams; a connection is made between Moses' name and his mission (*Bib. Ant.* 19:10); and the slaughter of the Hebrew children is presented not merely as a threat but as an actual event (*Bib. Ant.* 9:15). These features also appear in Matthew's infancy narrative (Mt 1:18, 20 and 2:13, 19; 1:21 and 2:16–18), thus contributing to the Moses-Jesus typology.

2.2.2. Samson and John the Baptist. A Samson-John the Baptist typology is prominent in Luke 1. And again there are illuminating parallels with *Biblical Antiquities* 42 as seen in its rewriting of Judges 13. In the cases of both Samson and

John the Baptist the mother is regarded as sterile (*Bib. Ant.* 42:1; Lk 1:7); the birth announcement is an answer to prayer (*Bib. Ant.* 42:2, 5; Lk 1:10); an angel announces the hero's birth and describes his future mission (*Bib. Ant.* 42:3; Lk 1:13, 15–18); the child will abstain from wine and strong drink (*Bib. Ant.* 42:3; Lk 1:15); and a parent is silenced (*Bib. Ant.* 42:4; Lk 1:20, 22). The genealogies of Jesus in Matthew 1:1–17 and Luke 3:23–38, especially where there are no biblical sources (Mt 1:13–16; Lk 3:23–27), are amply paralleled not only by Samson's genealogy (*Bib. Ant.* 42:1) but also by the many genealogies in the early chapters of the work (*Bib. Ant.* 1–2, 4–5, 8).

2.3. The Sacrifice of Isaac. The story of God's command to Abraham to sacrifice his son Isaac in Genesis 22 has fascinated Jewish and Christian interpreters throughout the centuries (Daly, 45–75). Perhaps under the influence of the Fourth Servant Song (Is 52:13–53:12) or in the light of the Jewish Passover and New Year's festivals, Pseudo-Philo portrayed Isaac as a martyr who willingly offers himself as a sacrifice to God (see *Bib. Ant.* 18:5; 32:3; 40:2). In general, this motif parallels the NT concept of Jesus' death as a voluntary sacrifice. The specific Abraham-Isaac typology, however, is not as prominent in the NT as one might expect, though it may be present in Romans 8:32 ("He who did not spare his own Son but gave him up for us all"; see also Jas 2:21–23; Heb 11:17–20).

2.4. Women. In comparison with the biblical sources, as in the birth stories of Moses and Samson, Pseudo-Philo often expands the roles of *women (Brown). For example, he gives particular attention to Deborah (*Bib. Ant.* 30–33), Jephthah's daughter Seila (*Bib. Ant.* 39–40) and Hannah (*Bib. Ant.* 50). He offers "feminist" versions of biblical clichés to produce such expressions as "woman of God" (*Bib. Ant.* 33:1) and the "bosom of her mothers" (*Bib. Ant.* 40:4). While relatively open to the place of women in Israel's early history, Pseudo-Philo shared the androcentric and patriarchal assumptions of his society, as did most of the NT writers, despite Galatians 3:28. He was adamantly opposed to *marriage with Gentiles. He claims that Tamar had sexual relations with her father-in-law rather than with Gentiles (*Bib. Ant.* 9:5). Balaam plots to have the Midianite women lead Israel astray (*Bib. Ant.* 18:13–14), and the list of evils in *Biblical Antiquities* 44:7 culminates in lust after

foreign wives. The Levite's concubine is said to have been abused because she had intercourse with Amalekites (*Bib. Ant.* 45:3); for other criticisms of sexual relations with Gentiles, see *Biblical Antiquities* 6:11; 27:7, 15; 45:3; and 49:5.

2.5. Angelology. Angels not only figure in the announcements of the births of Moses and Samson (*Bib. Ant.* 9:10; 42:3, 6-7) but also appear in other contexts throughout the work (as in the Gospels and Acts). Angels lament the death of Moses (*Bib. Ant.* 19:16) and are jealous of Abraham (*Bib. Ant.* 32:1-2). They serve as guardians (*Bib. Ant.* 11:12; 59:4) but will not intercede for sinners (*Bib. Ant.* 15:5). Four angels are named: Ingethel and Zeruel (*Bib. Ant.* 27:10), Nathaniel (*Bib. Ant.* 38:3) and Fadahel (*Bib. Ant.* 42:10). Holy spirits assist in the prophecies of Balaam (*Bib. Ant.* 18:3, 11), Kenaz (*Bib. Ant.* 28:6) and Deborah (*Bib. Ant.* 32:14). Evil spirits (*Bib. Ant.* 53:3-4; 60:1) were created on the second day of creation (*Bib. Ant.* 60:3). Condemned angels help humans in their sorcery (*Bib. Ant.* 34:3), and two angels assist the witch of Endor in raising Samuel from the dead (*Bib. Ant.* 64:6). There is little interest in a chief evil angel such as *Satan who exercises leadership over the forces of evil.

2.6. Eschatology. Pseudo-Philo's teachings on the end time are scattered throughout the work; see, for example, the Apocalypse of Noah in *Biblical Antiquities* 3:9-10 and the Testament of Deborah in *Biblical Antiquities* 33:1-6. He shows no obvious interest in an eschatological messiah or in the political implications of eschatology. The framework is set by the two ages: the present and the world to come (*Bib. Ant.* 3:10; 16:3; 19:7, 13; 32:17; 62:9). His special interest is in what happens to the person after death and then during the eschatological visitation. After death the soul is separated from the body, and all are judged according to their deeds (*Bib. Ant.* 44:10). There is no chance to repent after death, and not even Israel's ancestors can mediate on behalf of sinful Israel (*Bib. Ant.* 33:2-5). The souls of the just are at peace until God's visitation, while the wicked undergo punishment for their sins. After the final judgment the just dwell with God (*Bib. Ant.* 19:12-13) and with the ancestors (*Bib. Ant.* 23:13), whereas the wicked are annihilated (*Bib. Ant.* 16:3).

2.7. Luke-Acts. Pseudo-Philo wrote a history of early Israel from Adam to David with reference to major figures—much as Luke did in writing

his two-volume presentation of the Jesus movement and the early church (Perrot and Bogact, 30). Likewise, there are common interests between Pseudo-Philo and Luke not only in the births of biblical heroes but also in the themes such as *prayer, the *Holy Spirit, *prophecy, divine providence, and so forth. E. Reinmuth finds many affinities between these works in their literary patterns, motifs and the use of Scripture as well as close parallels between specific episodes (e.g., the calls of OT figures and the call of Peter in Lk 5:1-11, and various motifs in Stephen's speech in Acts 7). So impressive are these parallels to Reinmuth that he concludes that the roots of Luke-Acts should be sought in early Judaism rather than describing it as the work of a Hellenist or a Gentile Christian.

2.8. Other Parallels. The following list is but a sample of verbal coincidences between Pseudo-Philo and other NT texts (James, I VI-LVIII): "May your blood be upon your own head" (*Bib. Ant.* 6:11; Mt 27:25); "and brought forth a well of water to follow them" (*Bib. Ant.* 10:7/11:5; 1 Cor 10:4); "on the third day" as the equivalent of "after three days" (*Bib. Ant.* 11:2; Mt 27:63 par.); the list of gems (*Bib. Ant.* 26:9-11; Rev 21:19-20); the wife taking the initiative in a divorce proceeding (*Bib. Ant.* 42:1; Mk 10:12); and "he who restrains" (*Bib. Ant.* 51:5; 2 Thess 2:6-7). Most of the examples reflect a common background in the OT and in Judaism rather than representing a direct borrowing or a unique coincidence.

PSEUDO-PHOCYLIDES

The Greek gnomic poet and bard Phocylides lived in Miletus in Ionia in the middle of the sixth century B.C. and was regarded as a great authority concerning ethical matters and correct behavior in daily living (see, e.g., Plato *Rep.* 407a7; and Aristotle *Pol.* 4.11.1295b34). Only a very few lines of his poetry remain extant.

The poem itself, consisting of 290 verses, serves as the principal formation of practical wisdom stemming from the Hellenistic *Diaspora (Collins, 158). The first known quotation of the poem is by Stobaeus (fifth century A.D.). The work contains similarities found in both Greek gnomologies and Jewish wisdom literature and can therefore be regarded as a "typical example of cross-cultural didactic poetry" (van der Horst 1978, 77). Under the assumption that the work was genuinely written by the hand of Phocylides himself, it achieved wide popularity in the later Middle Ages and was commonly used as a schoolbook (van der Horst 1978, 6).

The work's authenticity was first seriously questioned by J. Scaliger, who in 1606 concluded that in light of the poem's biblical undertones (see sections of the Pentateuch such as

Lev 18—20 and the Decalogue) and its dependence upon the *Septuagint, it was a Christian forgery (Scaliger). After waning interest, study of the poem was revived in 1856 by J. Bernays. Although accepting the poem's reliance upon the LXX, the importance of Bernays's work was to challenge the notion of its Christian authorship (Bernays). Although the Jewish authorship of Pseudo-Phocylides was still disputed into the early twentieth century, this view is presently unchallenged and holds universal acceptance (Collins, 158).

A number of examples exist where Jewish writings from the Hellenistic Diaspora are pseudonymously attributed to prestigious pagan figures, including Sibyl, Orpheus and the great tragedians (Collins, 159). In similar fashion, a Jewish wisdom poet has here invoked the name of Phocylides. Although the author makes a skillful and excellent attempt at antiquating the poem by writing in the old Ionic dialect of Phocylides, he occasionally betrays himself and the work's later compilation date by using Hellenistic or early imperial period vocabulary, meter and syntax; and by employing OT, LXX and *Stoic influences (van der Horst 1978, 55-58). In view of these considerations it seems reasonable to suggest a date of compilation falling sometime between 200 B.C. and A.D. 150, and more specifically between 30 B.C. and A.D. 40 (van der Horst 1978, 81-83). Although *Alexandria has been tentatively suggested as the poem's place of origin, this is uncertain.

Perhaps the most problematic issue concerning the poem, and a matter of much debate, is the question of its purpose. P. W. van der Horst poignantly stresses the dilemma when he asks why a Jewish author wrote a summary of the *Torah, mixed with nonbiblical ethical rules, under a heathen pseudonym. A variety of suggestions have been made, including the author wrote primarily for the pleasure of writing; he wrote to reassure his fellow Jews that Greek and Jewish ethics closely corresponded and therefore there was no need to look beyond their own traditions; he wrote to the pagan public in order to explain Judaism's ethical consensus with Greek thought and to encourage sympathy toward the Jewish faith; the author was a God-fearer (see Proselytism and Godfearers) who accepted elements of Judaism but not the full ritual law and desired to win converts to his particular view; consistent with the purpose of gno-

mologies, the author wrote a schoolbook for children; and lastly, the author wrote in order to prevent defection from Judaism toward Hellenistic culture with all its attractions (Collins, 175). Regardless of the poem's actual purpose, it serves as an important source for our understanding of ethics and morality in daily living within the context of Diaspora Judaism and also provides a background for several paraenetic texts found in the NT.

PSEUDO-PROPHETS (4Q385-388, 390-391)

This group of manuscripts was originally identified by John Strugnell as copies of the same composition and given the title *Pseudo-Ezekiel*. Subsequent editing by D. Dimant (Strugnell and Dimant 1988) has shown that the group is actually two distinct literary works, *Pseudo-Ezekiel* and the *Apocryphon of Jeremiah*, with perhaps as many as five manuscripts of the first and six of the second. The oldest manuscripts date to the middle of the first century B.C., while the contents are nearly a century older.

1. *Pseudo-Ezekiel*
2. *Apocryphon of Jeremiah*

1. *Pseudo-Ezekiel*.

Manuscripts 4Q385, 4Q385b, 4Q385c, 4Q386 and 4Q388 echo aspects of Ezekiel 37-38 in the same first-person format as the biblical book. The vision of the dry bones, their resurrection, and the judgment of the nations are all rehearsed. The addition of a *merkabah* (chariot) vi-

sion, which apparently follows these elements, is of special note. It is likely that the return of the glory of the Lord to the eschatological temple foretold at Ezekiel 43:1-5 is expanded to reflect the prophet's two previous *merkabah* visions (Ezek 1 and 10; see *Mysticism*).

1.1. Resurrection of the Dead. The interpretive aspects of the text are of great importance. When (pseudo-) Ezekiel poses the question, "When will [th]ese things come to pass? How shall their faithfulness be rewarded?" (4Q385 frag. 2 3), the ambiguous nature of the biblical dry bones vision of Ezekiel 37:1-14—is the revival figurative only of Israel's national revival or does it exemplify a belief in the resurrection of the dead?—is clarified. The vision was understood by the ancient author to mean that the resurrection was the reward of righteous individuals. This text thus stands with 4Q521 as the only manuscripts from Qumran that speak explicitly of the resurrection. It is of note that neither of these compositions are characterized by sectarian language, suggesting that the doctrine was widely held in the Jewish community rather than by the Qumran community alone.

1.2. Shortening of the End. *Pseudo-Ezekiel* records that God had promised a shortening of the time of the end due to the difficulties associated with the last days (4Q385 frag. 3 2-5). This concept presages the same theme of difficulties (birth pangs) associated with the end of the age and return of Jesus in the Gospel accounts (Mt 24:22, Mk 13:20).

1.3. Son of Belial. In context of the judgment of the nations, 4Q386 frag. 1 ii 3 mentions a "son of Belial" who comes to Israel as an oppressor (see *Belial*, *Beliar*, *Devil*, *Satan*). Normally found in the plural in Qumran literature in reference to recalcitrant Jews, this singular instance might refer to some historical oppressor—perhaps Antiochus IV Epiphanes (175-164 B.C.).

2. *Apocryphon of Jeremiah*.

Manuscripts 4Q385a, 4Q387, 4Q387a, 4Q388a, 4Q389 and 4Q390 have been assessed by D. Dimant as witnesses to the *Apocryphon of Jeremiah*.

2.1. Historical Review. One portion of the work reviews the sinful history of Israel, mentioning such historical figures as Abraham, Isaac, Jacob, Samuel and Solomon. These end with Nebuzaradan, the fall of Jerusalem and the exile to Babylon. Jeremiah's biblical role of

preparing the Jewish deportees for exile in Egypt is expanded to include Babylon in the *Apocryphon of Jeremiah*. This addition to the biblical account is also found in later *apocryphal and pseudepigraphal works such as 2 *Macca-bees, the Epistle of Jeremiah and 2 *Baruch.

2.2. Vaticinium ex Eventu. The second half of the work turns to the future but is in large part *vaticinium ex eventu*. An example of this genre, a two-column section from 4Q387 (frag. 3 ii-iii) preserves a prophecy of the *Gadfan* (Blasphemer) who was to come ten full Jubilees after the destruction of the *temple (587/6 B.C.). Given the forty-nine-year period delimited by the Qumran Jubilee (see Calendars, Jewish), a literal reckoning would suggest a date of 97/6 B.C. and place the fulfillment during the reign of Alexander Janneus (103-76 B.C.). The title *Gadfan* is, however, more appropriate for the Syrian king Antiochus IV Epiphanes who initiated a persecution of the Jews in 168 B.C. (see Jewish History: Greek Period) and portrayed himself as divine (thus a blasphemer). On the other hand, the schematic basis of the prophecy suggests that the character may be intentionally ambiguous, pointing mainly to the hopeless nature of the last days apart from God's intervention. It is of special note that the period of ten Jubilees—490 years—echoes Daniel 9:24. Only the starting point is different: for the *Apocryphon* the *terminus a quo* is the destruction of the temple, for Daniel it is the "decree to rebuild and restore Jerusalem."

2.3. Sectarian Origins. In concert with much of Qumran literature, it is the view of the writer of the *Apocryphon* that Israel once again fell into sin during the Second Temple period. This state of steady decline led finally to the loss of statehood, the oppression of the *Gadfan* and subjection to the Angels of Mastemot in the second century B.C. (4Q387 frag. 2 iii 4). The reference to a "remnant" that was rescued rather than destroyed in God's wrath during this time is contextually the same as that mentioned at CD 1:4, the Qumran sectarians. Thus *Apocryphon of Jeremiah* is likely a sectarian document.

PTOLEMIES

From the Greek takeover of the Persian Empire in the late fourth century B.C. to the Roman annexation of Egypt in the mid-first century B.C., Egypt was ruled by a succession of kings and queens from a family of outsiders. The dynasty was fathered by Ptolemy, a high-ranking Macedonian general and long-time confidant of *Alexander the Great (see Greece and Macedon). Ptolemaic Egypt endured for three centuries, approximately one-half of the era designated as *Hellenistic Egypt.

1. Accession to Power
2. Land and Administration
3. Special Concerns

1. Accession to Power.

Upon the unexpected death of Alexander in 323 B.C., Ptolemy became embroiled in the struggles for who would succeed the essentially heirless Alexander. Unlike the other would-be successors (see Diadochi), Ptolemy was content to secure control of the region that he foresaw as having the most potential. It was a gamble, but in the end it was a wise and strategic move. Under the Ptolemies, Egypt rivaled the *Seleucids as the dominant kingdom in the Mediterranean world and was the last to succumb to *Rome. Had Octavian not been successful against Antony and Cleopatra, Ptolemaic Egypt may have prevailed in the eastern Mediterranean.

When Ptolemy hijacked Alexander's corpse and began construction of a fitting tomb in *Alexandria for the great king, he was the satrap over Egypt (using the former Persian terminol-

ogy). But he was prepared to defend his position of supreme ruler if necessary—and it became necessary when Perdiccas, one of his former comrades, unsuccessfully attacked in 321 B.C. Ptolemy eventually assumed the title of king in 305 B.C. and subsequently dated events during his reign from that year. Each of the kings in the Ptolemaic dynasty used the name Ptolemy, and seven of the queens used the name Cleopatra. For ease of reference, the Ptolemies have been assigned Roman numerals, such as Ptolemy II and Cleopatra VII. But their own way of distinguishing each other was by epithet. The epithets for the first five Ptolemies were Soter (savior), Philadelphus (sister-loving), Euergetes (benefactor), Philopator (father-loving) and Epiphanes ([god] manifest). Though the adjective *philadelphus* in this context denoted an incestuous relationship, the noun *philadelphia* appears in the NT for Christian love.

2. Land and Administration.

The assumption of authority over Egypt by the Greek and Macedonian rulers was a strange and awkward time. To the Greeks, Egypt was an enigma with its far-reaching floods, towering pyramids, stick-figured hieroglyphs and mummified crocodiles. To the Egyptians, the new conquerors were equally suspect, partly because of differences in culture but more because of their inexperience in administering Egypt. The issue was whether the newly arrived rulers could figure out how to manage this strange but fertile land and whether the two distinct ethnic groups, cultures and languages could become a functioning society to make Egypt prosperous. The somewhat surprising answer was a profound yes, even with the unique requirements for making Egypt productive agriculturally.

As part of the vast desert stretching across North Africa, Egypt would not be inhabited were it not for the great river flowing north through it. Even so, the only hospitable areas of Egypt were near water, including the river—which transformed the strip of land a few miles on either side into valuable ground for agriculture; the delta in Lower Egypt—where the river fans out to provide large areas of arable land; the lake in the depression known as the Fayum, to the southwest of the delta—which gets its water from the Nile; occasional oases in the desert; and the Mediterranean Sea. With so little functional land, it was up to the Ptolemies to manage

what could be farmed to produce as high yields as possible. Success depended on the annual flooding of the Nile and the silt that was deposited. The summer rainy season deep within the African continent would cause the Nile to begin rising in June, with the peak of the flood not arriving until August or September. The river was generally back within its banks by the end of October. As the river receded, canals and dikes were utilized to retain the water for the agricultural work about to begin. In the areas inundated by the flood, the growing season was November through May. With careful management, areas not touched by the flood could be irrigated with canals and lifting devices, in some cases allowing for two and three crops annually.

The Ptolemaic success in developing Egypt into a world power—especially during the reigns of Ptolemies II and III, with dominion over Cyrenaica, Cyprus, most of the Aegean islands, parts of Asia Minor and Palestine—depended to a great extent on the success of managing the internal concerns of the country. One feature of the domestic policy was to leave in place as much of the native control as possible, from temples and priests to officials overseeing agriculture. In one sense the Ptolemies had to be true Greeks and run the country as such, but in another sense they had to take on the bearing of Egyptian pharaohs and maintain as much tradition as possible. Most of the natives remained in their respective occupations and positions, and except for taxes many were affected only indirectly by the presence of the new rulers. Essential to the Ptolemies' management of Egypt was agriculture and the water supply it depended on. To the government's credit, engineers were able to enlarge and improve on the pharaonic irrigation system so that more of Egypt than ever before could be used for agriculture. All arable parcels of land were carefully registered and classed as royal land (often leased to peasants for farming), sacred land (for the use of temples), allotments to soldiers (cleruchs), civil gift-estates (*doreai*) and (the smallest amount of all) private land.

The notion that the Ptolemies succeeded by running a tightly organized, rigidly centralized bureaucracy—as suggested, for example, by the longest surviving papyrus, known as the Revenue Laws—is an exaggeration. One part of the economy that the Ptolemies attempted to monopolize was oil, used especially in lamps—primarily cas-

tor oil, sesame oil and olive oil. The papyri permit detailed analysis of oil crops and oil production for some areas and time periods. Whereas the Revenue Laws was an attempt to micromanage everything about oils—specifying amounts of seed to be planted, fixing prices of seed and oil, regulating oil factories—the evidence in other papyri suggests that this was an unrealized ideal. For example, some sources of oil prescribed in the Revenue Laws (gourd seed oil and linseed oil) are unattested elsewhere in the papyri. Nevertheless, the Ptolemies were able to impose controls on many aspects of the economy, such as banking and imports and exports.

3. Special Concerns.

Taxes on everything possible were a burden on the populace but a source of significant wealth for the government. The system of tax collection instituted by the Ptolemies was adopted from the Greek homeland. On a yearly basis the government auctioned off to the highest bidders various areas of the country and the right to the taxes from those areas. The entrepreneur who purchased the contract for the taxes (referred to as a tax farmer) thereby guaranteed to the government the amount of the bid, to be paid in installments or in one lump sum. Throughout the year local officials and special agents collected taxes, depositing them in a local bank. If all went well, the purchaser of the contract recouped his outlay plus enough for a healthy profit. If it was a bad year, the entrepreneur had to bear the brunt of the shortfall. The result was that the government's tax revenue did not fluctuate with the variation in Nile flooding and in the harvests.

As a member of the Macedonian aristocracy, Ptolemy I received the best education the Greek world could offer. But that kind of education was lacking in Egypt. So on behalf of their heirs and their Greek and Macedonian subjects, the Ptolemies offered royal patronage to the intelligentsia of the Greek world in order to entice them to move to Alexandria. The Ptolemies wanted to make Alexandria a showcase to the world of learning and culture, and they were successful. The library with its unrivaled collection of scrolls and the museum with unrivaled advancements in learning were a significant achievement (see Alexandrian Library; Alexandrian Scholarship). Demetrius of Phalerum is one example of many who relocated to Alexandria. He was a prominent philosopher and

statesman in Athens, but at the urging of Ptolemy he moved to Alexandria and was instrumental in shaping the developing scholarship (see Scholarship, Greek and Roman).

Regarding religion, the Ptolemies encouraged traditional Egyptian cults to continue without change. The creation of their own patron deity, the cult of Sarapis, showed the intentional syncretism of Egyptian and Greek religion. Similar to the cult of the deified Alexander, the Ptolemies were gradually recognized as descendants of gods. It was a cult with religious and political overtones, part of the strategy to maintain control over both Greek and Egyptian subjects. The Ptolemies' use of epithets like "savior" and "god manifest" supported this cult of living rulers (see Ruler Cult).

Of the fifteen Ptolemies and seven Cleopatras, Ptolemy II Philadelphus is the best documented, partly due to the Zenon papyri. Zenon was the top administrator of the affairs of Apollonius, who as minister of finance was one of the highest government officials. Apollonius had extensive business interests in Palestine and the Fayum, and the Zenon archive documents much of the details of managing those interests. During the reign of Ptolemy V Epiphanes—crowned king at the age of five—serious internal and external problems took their toll on the fading glory of Egypt. In Upper Egypt a revolt lasted for several years, and Egypt's possessions in the Aegean, Asia Minor and Palestine were lost. Even more telling, Rome was easing its way into Ptolemaic politics. It was a trend that would continue with each of the successive Ptolemies, with Egypt in essence becoming a client state of Rome. The most promising ruler of the end of the Ptolemaic dynasty was Cleopatra VII. The Egyptian economy was once again surging, and the peasants were suddenly supportive of the queen. But Cleopatra's ambitions were her downfall. Pursuing a dream to be queen of the Roman world, she courted Julius Caesar and then Marc Antony. But when both of them died and when Octavian could not be enticed, she reportedly took her own life. By doing so, she in effect turned Egypt over to the Romans.

PURIFICATION LITURGY (4Q284). See LITURGY: QUMRAN; PURIFICATION TEXTS (4Q274-279, 281-284, 512-514).

PURIFICATION TEXTS (4Q274-279, 281-284, 512-514)

In continuity with Pentateuchal legislation and with later *rabbinic halakah, numerous *Qumran documents from a variety of genres reveal a community for whom obedience to God and recognition of God's holiness and presence entailed maintenance of ritual *purity. Some texts are of a legal genre and articulate specific regulations concerning males rendered impure by bodily emissions (4Q274, 4Q514), menstruating women (4Q274, 4Q278, 4Q284), removal of impurity by water containing ashes of a red heifer (4Q276-277), purification after sexual intercourse (4Q284), corpse uncleanness (4Q284), crop gleaning by those ritually impure (4Q284a), liturgy for purification rituals (4Q512) and purity status of priests' daughters married to foreigners (4Q513).

The Qumran community was well attuned to the religious value of ritual purity in the Torah as well as to the specificity of the ritual code.

The sect noted, for example, that a menstruating woman and a man with a discharge were considered unclean for a set period and so had a ritually defiling effect on what they contacted during that time (Lev 15:2-33). But determining their status vis-à-vis one another during their unclean period and how their status affected their interaction and other daily activities is not spelled out in the Pentateuchal legislation. In response, one ruling (4Q274 frag 1 i 7-9) enjoins avoidance of contact between two ritually unclean persons and prescribes ritual baths and garment washing should such contact occur. In this manner, the Qumran community promulgated laws that clarified and supplemented the Mosaic code, making it practical for their time and circumstances. The dozens of laws in these texts are examples of careful reading of the law of *Moses and demonstrate that their interpretations are organic outgrowths of their authoritative texts (Harrington, 261-62).

For the study of the NT, these laws of ritual purity illustrate at least three important facts of first-century *Judaism that were recognized even before the discovery of the *Dead Sea Scrolls and are now beginning to make their rightful impact on the study of the NT. First, in late Second Temple Judaism "sectarian law was a living, developing phenomenon constantly giving rise to new compilations of lists of laws" (Schiffman, 280-81). The dynamic nature of Jewish law was characteristic not only of the community responsible for the Dead Sea Scrolls but also of their Jewish contemporaries.

Second, concerning ritual purity and other matters of Jewish practice, there was a variety of viewpoints (cf. 4QMMI; see *Miqsat Ma'asey ha-Torah*) and the differences between the Qumran sectarians, *Pharisees, *Sadducees, Jesus of Nazareth and early Jewish Christians should be seen as various degrees on the spectrum of religious observance. On this spectrum, the Qumran purity regulations are comparatively strict (Harrington, 264). Third, the scrolls help to "dispel a common misconception about the Jewish laws of ritual purity and impurity—that they lack ethical and religious dimensions" (Schiffman, 299). Indeed, 4Q512 is a liturgical composition for use in prescribed purification rituals and expressive of inner spiritual *piety.

It is in this context of a constantly developing, expanding and reforming law; of lively debate; and of genuine spiritual interest that one

must read Gospel narratives, the interlocutions of Jesus with his contemporaries and early Christian discussions on such subjects. The immersion of John the baptizer, for example, while focused on ethical repentance (Mk 1:4-5), was like the Qumran washings in that it was a symbolic ritual act and also made use of the familiar forms of ablutions of ritual purity. In the NT one observes the movement away from the ideas of ritual purity toward the characteristically Christian (especially Gentile) emphasis, namely, purity as exclusively a moral category.

PURITY

Purity is best understood as the condition that God demands of his people for contact with him. In the case of *Israel, specific foods, objects and physical characteristics are demanded for any approach of the divine. Even then, *priests mediate in the final acts of *sacrifice, because greater purity is required the closer one comes to God's holiness.

Two sorts of impurity threaten Israel: impurity by contagion and impurity by holiness. Impurity by contagion results from contact with anything that should not exist. A corpse or a monstrous beast, for example, are not a part of the created order intended by God and must not be brought near God. But it is equally dangerous to approach what belongs to God alone: blood, for example, threatens Israel's existence because it is too holy to be eaten, not because it is essentially impure.

Both forms of impurity can be mortal, unless

they are prevented or dealt with once they emerge. Nadab and Abihu offer an unwarranted sacrifice, and they are consumed by fire (Lev 10:1-3). But God also "broke out" against Uzzah, because he had touched the ark in order to steady it during transport (2 Sam 6:6-10). Such stories show that Israel's purity was a balance on a knife's edge. On the one side were the basic impurities whose existence God would not tolerate. On the other side was the holiness that destroyed even what was pure by simple contact. Defining what is pure was held to be Israel's charter of existence. Earlier inhabitants of the land had been expelled because they did not attend to the purity required by God (see Lev 18:24-30). That belief clearly marks the systemic importance of the observation of the clean and the unclean within Israel.

Issues related to the overall definition of purity were prominent within Jesus' discussions and disputes with his contemporaries. His stance in regard to those questions was so coherent as to amount to a program. As the cultural milieu of Jesus' movement changed after the resurrection, the principal circles of the primitive church (represented by Peter, James and Paul) developed distinctive understandings of purity. Tensions among those positions were resolved in the equation of purity with virtue. That resolution is one of the most important theological achievements of the NT.

1. Strategies of Purity Within Early Judaism
2. Jesus' Program of Purity
3. The Conflicting Strategies of Peter, James and Paul
4. The Resolution of Purity and Virtue in Hellenistic Christianity

1. Strategies of Purity Within Early Judaism.

That purity is required of Israel is axiomatic within the *Hebrew Bible, but distinct strategies of defining, achieving and maintaining purity were developed. The best-known and most comprehensive strategy is the priestly scheme represented in the book of Leviticus, and most discussions understandably begin at that point (see *DJG*, Clean and Unclean). But that picture is to be supplemented by the alternative strategies of other circles within Israel. Ezekiel, Leviticus and Deuteronomy provide patterns of understanding that were classic within the understanding of Israel and formative for several groups within *Judaism during

the time the NT emerged.

In Ezekiel 40—48, a vision establishes the purity by which Israel gains access to the holy, the powerful source of its inheritance. Only Zadokite priests are to serve God in his sanctuary (Ezek 44:15-16). Foreigners are to be excluded, as "foreskinned in heart and foreskinned in flesh" (Ezek 44:9). Levites are relegated to an ancillary function, owing to their previous involvement in idolatry (Ezek 44:10-14): service in the funeral cult of dead kings (Ezek 43:6-9). The Zadokite priests in turn are carefully regulated in respect of their clothing (Ezek 44:17-18), coiffeur (Ezek 44:20), temperance (Ezek 44:21) and marriages (Ezek 44:22).

The priests are to leave their clothing in sacred chambers and put on other clothing before they meet the people in the outer court, "lest they make the people holy with their garments" (Ezek 44:19). Purity and sanctity are complementary and yet distinct. What is pure is accessible to the holy and for that very reason must be protected from the holy. The priests are also charged with teaching the people the difference between the holy and the profane and with making known the difference between the defiled and the clean (Ezek 44:23). Both basic impurity and any outbreak of holiness are dangers that must be guarded against.

Priestly concerns with the logic of cleanness are developed further in Leviticus. Certain things, such as blood and the parts of beasts that are to be offered, are unclean because they belong to the divine alone (see, e.g., Lev 7:22-27; 17:10-14). But other things, impure beasts and carcasses, are not fit for consumption, whether human (Israelite) or divine (Lev 7:19-21; 17:15-16). But whether viewed from the perspective of impurity or of holiness, the thread of the argument is the same: the laws of cleanness are Israel's means of maintaining a solidarity of sacrifice with God, apart from which the land may not be retained. Indeed, the claim is here explicitly made that the former inhabitants of the land failed to keep the rules of purity and for that reason were expelled, so that Israel might suffer the same fate (Lev 18:24-30). The land, in Leviticus, is not for Israel; Israel is for the service of God in his land. The conditionality of Israel's presence is cognate with the fierce emphasis on cutting off what is unclean (cf., e.g., Lev 7:19-21, 22-27) and separating from the Gentiles (cf.,

again as mere instances, Lev 18:3; 20:23).

Holiness is a curiously ambivalent force. It is what gives Israel the land but also what destroys anything that is not compatible with it. The priests are to be the instruments of Israel's compatibility with the holy, and for that reason they are both oddly privileged and fiercely punished. They partake of holy sacrifices and are held to a higher order of sanctity than the generality of Israel (Lev 21:6, 8, 14, 15, 22, 23). When Nadab and Abihu, sons of Aaron, offer incense in a foreign manner, they are consumed in fire, and God announces without remorse, "I will be sanctified among those who are near me, and I will be glorified before all the people" (Lev 10:1-3). Death then becomes the sanction for breaking the specific requirements of priesthood (cf. Lev 10:6-11; 16:1-2). God's desire is to consume a part of what is pure, but he will extirpate the impure, and his destruction of what he does not want is more comprehensive than his consumption of what he sets aside for himself. The priests are to keep those laws of purity that they teach, and more, because they are the guardians of Israel's cleanness, the peoples' tenuous compatibility with the holy (Lev 10:10, 11).

The notion that there are three *feasts that all male Israelites are to keep is paradigmatic within the Torah (cf. Ex 23:14-17; Lev 23; Num 28, 29), but Deuteronomy 16 is especially plain in its requirement. In Deuteronomy, the emphasis is not on what is offered to God, as in Leviticus and Numbers, nor on appearing before him, as in Exodus, but on the fact that a pilgrimage is necessary (for further discussion, see Temple). From the perspective of Moses, of course, Jerusalem itself is not at issue, but readers or hearers can only identify that city with the single "place" (*hamāqōm*) where God is to be worshiped (Deut 12:5-14). Because the ambit of activity in Deuteronomy extends far from Jerusalem, the slaughter and consumption of animals outside of Jerusalem, explicitly as nonsacrificial, is permitted, provided the blood is poured out and the beast concerned is not owed as a sacrifice (Deut 12:15-28).

The assumption of Leviticus is quite different; the priestly focus of its scheme imagines all meat being offered in sacrifice prior to consumption (see Lev 17:1-9). Just as Deuteronomy replaces that impracticable requirement with a concept of a secular meal, so it widens the definition of the meat that may be eaten. The ga-

zelle and the hart are specifically authorized for eating in Deuteronomy 12:22, although they are not mentioned in Leviticus 11. Deuteronomy establishes a conception of purity that functions as related but not identical to the category of what may be sacrificed. Ezekiel, Leviticus and Deuteronomy all represent the covenantal regulation of sacrifice and make the *temple in Jerusalem the sole focus of that regulation.

Sacrifice includes certain pragmatics, things offered in the appropriate place by certain people. The pragmatic offering is associated with specific emotions and is justified by articulated ideologies. Ezekiel defines a particular space and its priests by visionary means; the pragmatics of Leviticus are the animals offered by specified procedures; Deuteronomy motivates Israel to join in sacrifice on festive occasions. Ezekiel looks forward to an affect of security, Leviticus to separation from Gentiles, Deuteronomy to the joy of households. What justifies the particular sacrifices of each book? The memory of idolatry in Ezekiel; the recollection of those expelled from the land in Leviticus; the anticipation of prosperity in Deuteronomy.

The Hebrew Bible attests, then, that the single covenant with Israel was consistent with varying emphases and practices within the conception of purity. Variation in that regard was also characteristic of well-known Judaic groups in the first century (see *DJG*, Judaism §4). *Priests, *Essenes and *Pharisees evolved characteristic concerns of purity. The parable of the Good Samaritan presents a priest and Levite avoiding a man left for dead on the side of the road; their fear of contamination from an unclean corpse overcame their compassion (Lk 10:31-32). Similar attitudes may be the source of *Josephus's complaint that the *Saducees generally are boorish and suspicious (see Josephus *J.W.* 2.8.14 §166). Josephus also describes the Essenes' peculiar habits in regard to purity: among other things, he specifies the avoidance of oil, the practice of ablution and changing clothes prior to ritual meals and the treatment of the eating hall "as if it were a holy temple" (Josephus *J.W.* 2.8.3-5 §§123-31). The Pharisees also used changing clothes as a marker of purity: an associate was not to accept the *hospitality of a person of the land and could only receive a person of the land as a guest if a fresh clothing was provided for the guest (see *m. Dem.* 2:3).

2. Jesus' Program of Purity.

Jesus' circle was centered in *Galilee and was characterized by fellowship at meals involving various people with different practices of purity (see Mt 11:18-19 par. Lk 7:33-35). That description applies to the period of Jesus' own activity and also to the period after his death when Peter appears to lead the movement. In either phase, the circle of Jesus needed to cope with the social issue of possible defilement as one member of Israel with one set of practices met another member of Israel with a different set of practices.

One of the best attested of Jesus' sayings is his assertion that defilement is a matter of what comes from within, not from without (Mk 7:14-15). The point of this saying (and those to which it may be compared, Mt 15:10-11; Lk 11:40-41) is that there is a link between integrity and cleanness: that Israelites are properly understood as pure and that what extends from a person, what he or she is and does and has, manifests that purity.

Paul was to write some twenty-five years later and for his own purposes, "Do you not know that your body is a temple of the Holy Spirit within you, which you have from God?" (1 Cor 6:19). Paul may be alluding to a particular saying of Jesus (cf. Jn 2:21) or to what he takes to be a theme of Jesus; in either case he refers his readers to what he assumes to be elementary knowledge of the gospel. That Jesus and especially Paul, who associated himself with the Pharisees (cf. Phil 3:5) speak from such a perspective is not unusual. It is said that Hillel took a similar point of view and expressed it in a more heterodox manner. He defended an Israelite's right to bathe in Roman installations (see Gymnasia and Baths) on the grounds that if Gentiles deem it an honor to wash the idols of their gods, Israelites should similarly deem it an honor (indeed, a duty) to wash their bodies, the image of God (*Lev. Rab.* 34.3 [on Lev 25:25]). In other words, bathing does not make one pure but celebrates the fact of purity; in their different ways, Hillel and Paul demonstrate that representatives of the Pharisaic movement could conceive of purity as a condition that Israelites could be assumed to enjoy and out of which they should act. Fundamentally Jesus' concern appears similarly to have been with cleanness as a matter of production rather than of consumption.

Jesus' interest in the definition of purity is

also evident in the Synoptic story of what is known as Jesus' cleansing of a leper (Mt 8:2-4; Mk 1:40-41; Lk 5:12-14). In the story, a leper approaches Jesus and for no stated reason asserts that Jesus is able to cleanse him. Jesus assents, touching the man and pronouncing him clean, ordering him to show himself to a priest and to offer the sacrifice prescribed by Moses for cleansing. The terms of reference of the actions described are explicitly given with the book of Leviticus (Lev 13, 14).

The assumption of Leviticus 13-14, and therefore of the story in the Synoptics, is that leprosy, which might more literally be rendered "outbreak" (*sāra 'at*) comes and goes and that its presence and absence can be detected. In Leviticus 13, when the issue is "outbreak" in humans as distinct from cloth and houses, it is clear that the great concern and the cause of uncleanness is broken flesh (Lev 13:15). The suspicion of "outbreak" arises when there is a change in the pigmentation of the skin and accompanying hair, but a total change signals a return to cleanness (Lev 13:12-13), since the fundamental concern is broken flesh, to which no human correctly has access. Accordingly, sufferers are banned (Lev 13:45-46).

In the event one is declared clean by a priest, two distinct offerings are enjoined in Leviticus 14. The first is a local sacrifice and may take place wherever there is running water. The priest kills a bird in a earthen vessel over the water and dips a living bird in its blood, having beforehand attached cedar, scarlet and hyssop to it. He then sprinkles the sufferer from "outbreak" with the living bird and releases it (Lev 14:1-8). Purification follows (cf. Lev 14:9), after which the sufferer needs to offer two male lambs, a ewe, cereal and oil; together they constitute a sacrifice for guilt, a sacrifice for sin, a burnt sacrifice and a cereal sacrifice, all with the sufferer particularly in view (Lev 14:10-20). Exceptional provisions are made for instances of poverty (Lev 14:21-32), but the requirement of ownership remains onerous.

Within the setting envisaged in Leviticus, the story concerning Jesus therefore refers to a specific moment. The sufferer from "outbreak" attributes to Jesus the ability to adjudicate the status of his skin, and Jesus accepts the responsibility of telling him he may proceed directly to the sacrificial moment that is to occur after cleanness has been declared. Although Jesus is

not portrayed as taking over any sacrificial function, he is explicitly assigned—within the terms of reference the story itself establishes—the authority to pronounce on matters of purity. Pharisees were similarly involved, as an entire tractate of the Mishnah (*Nega'im*) attests.

Jesus and his circle appear to have been keenly concerned with purity as such, in a manner similar to the Pharisees (although purity was generally a focus of discussion and controversy within early Judaism). Jesus' stance is perhaps more similar to the Pharisees' than to the sectarians' of Qumran, who separated from ordinary worship in the temple, or the priests', who perpetuated that worship, but the formal categorization of Jesus as a Pharisee is not warranted.

The essential assumption in Jesus' cleansing of the man with "outbreak" is that purity is not merely a function of diagnosis by observation. The integrity of the skin proceeds from the integrity that animates the skin. Others concerned with purity might tell priests how to declare on the basis of their observations, advise concerning the removal of suspicious growths or counsel when the priest could best be visited (so the tractate *Nega'im*); Jesus appears in the story to hold that the determinative factor is the man's approach in the expectation of purity and his own agreement to purification by contact with the man. The link between purity and righteousness is implicit within the sacrificial systems of the Hebrew Bible, and Psalms brings to open expression the systemic association of righteousness and purity (cf. Pss 18:21 [v. 20 in English versions]; 24:3-6; 26:4-7; 51:4, 8, 9, 12 [English vv. 2, 6, 7, 10]; 119:9).

Jesus' perspective in regard to purity is reflected within a passage that is also common to the Synoptics but that is particularly articulated in the source of Jesus' teaching commonly called Q. (Q is principally attested in Matthew and Luke, but parts of the source are also reflected in Mark.) In the commission to his twelve followers (and in Luke, seventy followers) to preach and heal, Jesus specifically commands them to remain in whatever house they are received within a given village, until they depart (Mt 10:11-14; Mk 6:10; Lk 9:4; 10:5-7). That commandment by itself is a notable development compared with a Pharisaic construction of purity, because it presupposes that what the disciples eat, within any house that might perceive them, is clean. Jesus' itinerancy and that of his

disciples, treated in much recent literature as if it were an obviously Greco-Roman practice, was a profound statement of the general purity of food in Israel.

The sayings source underscores that statement by having the disciples pronounce their peace upon the house in question (Mt 10:12, 13; Lk 10:5, 6), and Luke's Jesus particularly insists that the disciples should eat what is set before them in whatever town they might enter (Lk 10:7-8; see also *Gos. Thom.* §14). The pronouncement of peace and the injunction not to go from house to house within a given community (cf. Lk 10:7) but to stay put until the visit is over had obvious utility within the missionary concerns of the movement after the resurrection. (The message of the resurrection proved to be more divisive than Jesus' own preaching. The temptation to try to find especially sympathetic households prior to settling into a mission must have been great.) But the particular focus upon purity, all but obscured in Q with missionary directives, appears to have been Jesus'.

A last peculiarity of the commission in Q, which has long seemed incomprehensible, finds its sense under our analysis. Although Mark's Jesus has the disciples without bread, bag, money or a change of clothes, he does permit them a staff and sandals (Mk 6:8-9). In the mishnaic source of Jesus' sayings, however, just those obviously necessary items are singled out for exclusion (cf. Mt 10:9-10; Lk 9:3; 10:4). The traditional attempt to explain differences within the lists as the result of missionary practices within the early church is reasonable superficially, but that attempt only diverts attention from the obvious fact that the commission makes extremely poor sense as a missionary instrument. Why tell people not to take what on any journey they, practically speaking, might need? But if we understand the commission to treat every village they might enter as clean, as purely Israel as the temple itself, the perplexing structure of the commission makes eminent sense. The disciples are to enter villages exactly as pilgrims were to enter the temple within Pharisaic teaching: without the sandals, the staffs, the garments, the bags and the money (cf. *m. Ber.* 9:5; *b. Yebam.* 6b) that would normally accompany a journey. Q makes Jesus' commission into a missionary discourse; within his ministry, it was designed to be an enacted parable of Israel's purity.

Whether in the triply attested material of the

Synoptics (a probable reflection of Petrine tradition) or in the doubly attested mishnaic source known as Q, a circle of concern associated with Jesus is held to see purity as proceeding from Israel. Once one is identified with Israel, it is not that which is without that defiles but those things that come from oneself. Separation from that which is outside one does not therefore assure purity, and non-Jews in the mixed environment of Galilee pose no particular danger to Israel. The circle of Jesus frames its rhetoric for its specific, social circumstance of Israel in the midst of the nations. Defilement here is a matter of failing to recognize the others of Israel, refusing to produce from within and to contact on that basis the pure Israel that those others represent.

3. The Conflicting Strategies of Peter, James and Paul.

Peter shared with Jesus the hope of a climactic disclosure of divine power, signaled in the willingness of nations to worship on Mt. Zion. That hope is attested within sources extant by the first century. Chief among them, from the point of view of its influence upon the NT, is the book of Zechariah.

Zechariah provided the point of departure for Jesus' inclusive program of purity and forgiveness as the occasions of the kingdom. Jesus is said to have mentioned the prophet by name (see Mt 23:34-36; Lk 11:49-51). The book of Zechariah programmatically concerns the establishment of restored worship in the temple, especially at the feast of Sukkoth (Zech 14:16-19). "All the nations" are to go up to Jerusalem annually for worship (Zech 14:16), and the transformation of which that worship is part involves the provision of "living waters" from the city (Zech 14:8; cf. Jn 4:10, 14). That image is related to an earlier "fountain opened for the house of David and the inhabitants of Jerusalem in view of sin and uncleanness" (Zech 13:1). Here we see the association of forgiveness and purity that is a feature of Jesus' program, as well as the notion of an immediate release, without any mention of sacrifice, from what keeps Israel from God. God himself is held to arrange the purity he requires, so that the sacrifice he desires might take place.

Zechariah features the commissioning of a priest (Zech 3; see Mt 16:18-19), an oracle against swearing (Zech 5:3-4; see Mt 5:33-37), a

vision of a king humbly riding an ass (Zech 9:9; see Mt 21:1-9; Mk 11:1-10; Lk 19:28-40; Jn 12:12-19), the prophetic receipt of thirty shekels of silver in witness against the owners of sheep (Zech 11:4-17; see Mt 26:14-16; 27:3-10; cf. Mk 14:10-11; Lk 22:3-6). It is obvious that the connections between Jesus' ministry and Zechariah do not amount to a common agenda, and Matthew clearly reflects a tendency to increase the fit between the two. But the similarities are suggestive of Jesus' appropriation of Zechariah's prophecy of eschatological purity, as a final, more fundamental connection would indicate. The climactic vision of Zechariah insists that every vessel in Jerusalem will belong to the Lord and become a fit vessel for sacrifice. As part of that insistence, the text asserts that no trader will be allowed in the temple (Zech 14:20-21). In the light of Zechariah, Jesus' occupation of the temple appears an enactment of prophetic purity in the face of a commercial innovation, a vigorous insistence that God would prepare his own people and vessels for eschatological worship (see *see DLNTD*, Temple §2).

Peter perpetuated that vision by means of his fidelity both to breaking bread at home with the disciples and in worship within the temple. At the same time, Acts portrays Peter's activity much further afield (*see DLNTD*, Temple §3). The key to connection between Peter's residence in Jerusalem and his activity in Syria and beyond is provided by the vision that he relates as the warrant for his visit to the house of Cornelius, the Roman centurion (Acts 10:1-18). Peter is praying on a rooftop in Joppa around noon. His vision occurs while he is hungry and concerns a linen lowering from heaven, filled with four-footed animals, reptiles and birds. A voice says, "Arise, Peter, slaughter and eat," and he refuses (in words reminiscent of Ezek 4:14). But a voice again says, "What God has cleansed, you will not defile" (see Acts 10:9-16).

Peter defends his baptisms in the house of Cornelius on the basis of his vision in the course of a dispute with those who argued that circumcision was a requirement of adherence to the movement (Acts 11:1-18). He cites his activity among non-Jews at a later point, in the context of what has come to be called the apostolic council (Acts 15:7-11). Throughout, the position of Peter appears to have been consistent: God may make, and has made, eschatological exceptions to the usual practice of purity. Those ex-

ceptions include the acceptance of uncircumcised men in baptism and fellowship with them.

The policy of accepting non-Jews, who were baptized but not circumcised, was perhaps the most important decision that the primitive church made. It is presented as formalized in the book of Acts in a single session (Acts 15:1-35), but the reference to the dispute earlier (in Acts 11:1-3) shows that the policy was framed over a number of years. Moreover, what appears as a single meeting in Acts 15 addresses two distinct issues. The first issue was whether non-Jews might be baptized without being circumcised (see Acts 15:1-12). The second issue was whether such baptized Gentiles could be embraced in a single fellowship with Jews who had been baptized (see Acts 15:13-29).

In his letter to the Galatians, Paul reflects the discussion and dispute over the two issues as a vitally concerned participant (Gal 2:1-10). Paul records the agreement of the "pillars" of the church in Jerusalem that there should be an apostolate to the uncircumcised, represented by Paul, as well as to the circumcised, represented by Peter. Of course, other apostolates—such as James's—also concentrated on the circumcised; Paul's point is that Peter was especially concerned with the circumcised outside of Jerusalem and even beyond territorial Israel. Those pillars include James, Jesus' brother; Peter; and John. Paul goes on to describe the contention that emerged in *Antioch, a dispute that split the church for decades, but the remarkable agreement on a central point should not be overlooked: James, Peter and Paul agreed that there was a place for non-Jews within the movement. Those who disagreed with them, the adherents to the Abrahamic requirement of circumcision (see Gen 17:10-14), were not silenced and maintained their position (see Acts 11:2-3; 15:1; Gal 5:2-12). Ebionite Christianity, however, appears to have been the only wing of the church in the second century in which their stance prevailed (see Irenaeus *Haer.* 1.26.2; *see DLNTD*, Ebionites). However much the position of the circumcisers could claim the warrant of Scripture, the vision of Peter represents the dominant tendency toward an acceptance of non-Jews.

The inevitable question emerged: did the acceptance of non-Jews imply their full fellowship of Jewish believers? In their response to that question, Peter, James and Paul went their separate ways. Paul reports favorably on the practice

in Antioch before emissaries from James came, when meals could be conducted with common fellowship among Jewish and non-Jewish followers of Jesus (see Gal 2:12). According to Paul, the arrival of those emissaries caused Peter to separate from non-Jews, and even Barnabas acceded to the separation (Gal 2:12-13). The tendency of Hellenistic communities of Christians to mix their Jewish and non-Jewish constituencies, and therefore to relax or ignore issues of purity in foods, is here documented by Paul (c. A.D. 53).

When Acts gives an account of the Jacobean policy toward Gentiles, James appears much more sympathetic but nonetheless rigorous. The occasion of his statement of policy is said to be the suggestion that one must be circumcised in order to be saved (Acts 15:1), a suggestion that is associated with a form of Christian Pharisaism (Acts 15:5). Peter is said to side with Paul, with the argument that Gentiles who receive the Holy Spirit should not have the burdens laid on them "which neither our fathers nor we were able to bear" (Acts 15:10, within Acts 15:7-11). Peter sounds remarkably Pauline at this juncture: Paul uses a similar line of argument against Peter in Galatians 2:14-21, and Peter according to Acts 15:11 sums up by averring that both Jews and Gentiles are to be saved "through the grace of the Lord Jesus" (cf. Eph 2:5). Whatever the precise relationship between Acts 15 and Galatians 2, it is apparent that the Lukan portrayal of Peter has been framed in the interests of an accommodation with a Pauline perspective. James in Acts agrees that Gentiles who turn to God are not to be encumbered (Acts 15:19), and yet he insists they be instructed by letter to abstain "from the pollutions of idols, and from fornication, and from what is strangled, and from blood" (Acts 15:20).

The grounds given for the Jacobean policy are that the law of Moses is commonly acknowledged (Acts 15:21); the implication is that to disregard such elemental considerations of purity as James specifies would be to dishonor Moses. Judas Barsabbas and Silas are then dispatched with Paul and Barnabas to deliver the letter in Antioch along with their personal testimony (Acts 15:22-29), and they are said particularly to continue their instruction as prophets (Acts 15:32-33). They refer to the regulations of purity as necessities (Acts 15:28), and no amount of Lukan gloss can conceal that what they insist upon

is a serious reversal of Paul's position (see 1 Cor 8). The dispatch of Judas and Silas implicitly undermines the standing of Paul and Barnabas, and James's policy amounts to a constraint upon the behavior of Gentiles who joined the movement. The constraints are sometimes compared to the so-called Noachic commandments of *b. Sanhedrin* 56a-b, which are held to be binding on non-Jews.

While Paul held that there was a new "Israel of God" (Gal 6:16), defined by having faith in Jesus just as Abraham had faith in God (Gal 3:6-9), Peter conceived of the acceptance of non-Jews in baptism more as a gracious inclusion than the "new creation" of which Paul spoke (Gal 6:15). Once non-Jews had been accepted in baptism, Peter might sometimes have fellowship with them, and sometimes not. As an apostle, such contact might be necessary; as a faithful Jew, it was not natural. Within Paul's perspective, that was hypocrisy; within Peter's perspective, it was a consistent consequence of proceeding by the revelation of whom and what God accepts and when, rather than a predetermined policy. James, while accepting the baptism of non-Jews, nonetheless maintained that a policy of their separation from Jews should be followed, unless they observed enough of the commonly acknowledged rules of purity to honor in practice the status of the Torah as the revelation to Moses, warranted in Scripture.

4. The Resolution of Purity and Virtue in Hellenistic Christianity.

The logical extension of Paul's conception was that all things are pure to the pure, precisely the formulation attributed to him in Titus 1:15. But Paul's practice turned out to be otherwise. In 1 Corinthians 8 he departs from the policy of James by accepting that food offered to idols might be eaten on the grounds that idols represent entirely fictional gods (1 Cor 8:4-6). But he also warns against eating such food if some who believe in such gods are confirmed in their idolatry, "and their conscience, being weak, is defiled" (1 Cor 8:7-13, especially v. 7). The defilement here is internal and moral rather than pragmatic, but it is nonetheless dangerous; Paul declares that he would prefer not to eat meat at all rather than cause a brother to sin (1 Cor 8:13; see the restatement of the principle in Rom 14:13-23). By means of his own, characteristic argument, Paul approximates to what the

rabbi would come to teach concerning the danger of idolatrous feasts (see *b. 'Abod. Zar.* 8a, instruction in the name of R. Ishmael).

Paul in this aspect reflects a more general tendency in Hellenistic Christianity. In his letters and in letters attributed to him there is an express connection between named vices, which are cataloged, and "impurity" (Rom 1:24; Gal 5:19; Eph 4:19; 5:3; Col 3:5). Early Christianity saw a shift in the understanding of the medium of impurity: no longer foods but moral intentions conveyed the danger of defilement. And those intentions are as specifically identified in the NT as impure foods are discussed in rabbinic literature, because the danger in both cases was understood to be an impurity that made a real and dangerous separation from God.

The cataloguing of sins, and their classification with impurity, is scarcely a Christian invention (see *Vice and Virtue Lists*). It is represented, for example, in Wisdom 14:22-31. But the genre is mastered to brilliant effect in Romans 1:24-32; Galatians 5:19-21; Ephesians 5:3-5; Colossians 3:5-6, and is taken up in the period after the NT (see *Did.* 5; *Herm. Man.* 8; see *DLNTD*, *Virtues and Vices*). What is striking in each case is not only the equation of impurity and sin but also a clear indication that impurity as such remains a fundamental category: sexual contact, a concern from at least the time of Leviticus 18, survives the declining significance of alimentary purity, even within Paul's thought. There is no question, therefore, of purity being abstracted into the realm of intention. Rather, intentionality of practice, as well as observation of the integrity of one's body, are together held to define an ambit of purity. On such an understanding, one's body was indeed a temple of the Holy Spirit (see 1 Cor 6:18-20; cf 1 Cor 3:16-17), and a rigorous attitude toward marriage is coherent with the emphasis that a new purity is required by God for the inheritance of his kingdom (see Mt 5:27-28, 31-32; 19:3-12; Mk 10:2-12; Lk 16:18; 1 Cor 7:10-16).

The success of the gospel of Jesus within the Hellenistic environment of primitive Christianity was in no small measure a function of its ability to frame a rational, practical but stringent system of purity. The marketplace is declared pure in itself, provided it does not encourage the defilement of idolatry, and the requirements of James are largely forgotten. But moral, and especially sexual, requirements make it clear that

purity has not been abandoned as a regulatory system, despite the efforts of Paul in regard to alimentary purity.

The success of the resolution of virtue and purity within primitive Christianity was sealed by the attribution to Jesus of the identification between the two. The attribution appears in Mark and the Matthean parallel just after Jesus' own teaching about what truly defiles (Mk 7:15). First by means of comment in response to a question (Mk 7:17-19) and then by means of comment and catalog (Mk 7:20-23), the rhetoric attributes the shift in the medium of impurity to Jesus himself. The rhetoric is the product of an interpretative community, a circle sufficiently influential to cast what it had been taught concerning Jesus' principle into the terms of reference of the Hellenistic mission.

The circle is concerned with issues of fellowship at meals but is unwilling to dismiss purity as a divine category, as Pauline rhetoric could do (see Rom 14:14). The circle responsible for Mark 7:20-23 insists upon the danger of impurity but sees the contagion in moral terms. Such an attitude is closer to that of the lists of vices that Paul repeats than it is to the innovative aspects of his argument and rhetoric. The identification of the authority behind the circle is obviously a matter of inference, but—among the possibilities given by Paul in Galatians 2—the most plausible suggestion is that it represents the apostolate of Barnabas. Barnabas is described by Paul as being less engaged with the dispute than either James or Peter but also as having been taken up in their "hypocrisy" (Gal 2:11-13). In effect, once Jesus enters the house in Mark 7:17, a new social setting is addressed, and the point of his teaching, as commented upon and expanded by means of a catalog, is that vices rather than foods are sources of impurity. The categories of the pure and the impure are maintained, but they are worked out on the basis of moral rather than alimentary materials.

The dramatic shift in rhetoric and meaning within the Barnaban circle could not have succeeded by means of the comment (Mk 7:17-19) and the catalog (Mk 7:20-23) alone. After all, they were by way of appendix to the principal matter of the emerging text, which still concerned *qorban* (Mk 7:6-13) and the direction of impurity (Mk 7:14-15). In order to recast the whole of the tradition as an assertion of a new medium of impurity, defined on Jesus' authority,

a rhetorical method needed to be found that would point all of the arguments in the same direction that the latest developments indicated.

The solution was a synthetic device of enormous power: narrative context. The arguments generally, with their varying rhetorics and different topics, are presented in the context of a single dispute. Pharisees and scribes observe that Jesus' disciples do not wash their hands before meals; they object, and Jesus goes on to reply by means of the narrative material (Mk 7:1-2, 5). The new context has nothing precisely to do with the arguments that are then attributed to Jesus. Qorban, the direction of defilement, the comparative danger of foods and vices are all interesting matters, more or less related by a common interest in what true purity is, but none of those arguments answers the Pharisaic/scrival objection to not washing prior to a meal. The narrative context proceeds on the assurance that the readership already understands that all Pharisaic/scrival practices are to be grouped together and accorded the same sort of weight one would attribute to washing one's hands.

The power of the rhetoric is demonstrated by the fact that Jesus never answers the question that is posed to him. The response needs to be filled in by the hearer or reader, who has been catechized to the point that it seems evident that there is a new, inner purity of moral intention that supersedes the practices of Judaism. The Gospels, as well as the more obviously Hellenistic documents of the NT, attest the resolution of virtue and purity that was a vital part of the genius of Christianity.

QUMRAN: PLACE AND HISTORY

Nestled above the northwest shore of the Dead Sea, this archaeological site first attracted attention after the discovery of the *Dead Sea Scrolls in 1947. Since then it has been the object of enormous interest and controversy. Its interest for NT studies lies chiefly in what it permits us to know about the people of the Dead Sea Scrolls who were an integral part of the historical context into which the early Christian movement emerged.

1. Physical Location
2. Relationship to the Caves
3. The Excavation of the Site
4. History of the Site: The Consensus View
5. History of the Site: Alternative Hypotheses
6. Related Site: Ain Feshka

1. Physical Location.

The ruins at Qumran (Khirbet Qumran) are located nearly 90 kilometers east of *Jerusalem. The ruins sit atop the north edge of Wadi Qumran, the drainage for the Plain of Buqei'a. The wadi runs into the Dead Sea several kilometers north of Ain Feshka, a site thought to be related to Khirbet Qumran.

2. Relationship to the Caves.

Of the nearly three hundred caves explored in the surrounding region, eleven have yielded scrolls. Caves 1 and 2 are located about 2 kilometers north of Khirbet Qumran, and Caves 11 and 8 are over 1 kilometer further to the north. Caves 4 and 5 and 7 through 10 are situated in the cliffs that lead down from the site to the bot-

tom of the wadi. Cave 6 is located in an eastward-facing cliff due west of Caves 4 and 5 and 7 through 10. When the location of Cave 1 was first established in early 1949 the connection between it and the Qumran site was at first rejected. But in time more observers considered it likely that there was some connection between the two, and so in 1951 R. de Vaux of the École Biblique in Jerusalem led the first season's excavation. That undertaking established the link between the caves, the site and the *Essenes mentioned in the classical sources (Philo *Omn. Prob. Lib.* 75-91; *Hypoth.* 11.1-18; Josephus *J.W.* 2.8.2-13 §§119-61; *Ant.* 18.1.5 §§18-22; Hippolytus *Haer.* 9.18.2—28.2; Pliny *Nat. Hist.* 5.15.79).

3. The Excavation of the Site.

After the 1951 campaign de Vaux did not return to the site to excavate until the 1953 season. He was forced to devote the 1952 season to Cave 4, thanks to its discovery by the bedouin earlier in the same year. Then beginning in 1953 de Vaux and his team excavated at Khirbet Qumran for four consecutive seasons. The complete results of those efforts were never published in de Vaux's lifetime, although his 1959 Schweich Lectures summarize his findings (de Vaux). Only now are the full excavation reports being published (Humbert and Chambon). In any case, de Vaux's fieldwork laid the foundation for the standard view regarding the history of the site and its relationship to the life of the Essene community at Qumran.

4. History of the Site: The Consensus View.

According to de Vaux there were three periods of habitation at Qumran associated with the people of the scrolls (Periods Ia, Ib and II). In addition there was another period that preceded the first Essene occupation of the site (the Isra-

elite period) and three more that followed their residence between A.D. 69 and 134 (Periods II and III and the second revolt).

4.1. Israelite Period. The details of this period of habitation remain sketchy. That it came to a close at the time of the Babylonian conquest of Judah in 586 B.C. seems assured since de Vaux's excavations turned up scattered pottery fragments datable to the sixth century B.C. in an ash layer indicative of violent destruction. During the Israelite period the site consisted of an enclosure that encompassed at its northwest end a large round cistern, a single large room to the east of the cistern, up to eight smaller enclosed spaces at its eastern end and some additional rooms on its north and south sides. De Vaux also dated a wall running from the southeast corner of the enclosure down to Wadi Qumran to this period.

The remains from this period are associated with one of the cities mentioned in Joshua 15:61-62. The passage mentions six cities located "in the desert," one of which is Ain Gedi, a site further up the Dead Sea from Qumran. Thus it is assumed that the phrase "in the wilderness" situates the cities in the Dead Sea region. Additional evidence supporting this conclusion comes from a survey of other Israelite-period strongholds located on the "Plain of the Buqei'a, on the plateau which dominates Qumran" (de Vaux, 2; Cross and Milik). De Vaux and most others have assumed this site to be the City of Salt mentioned in Joshua 15:62, but whether that is true can hardly be determined with certainty. In any case, the site was occupied in the preexilic period and probably functioned as an outpost like the other sites surveyed by F. M. Cross and J. T. Milik.

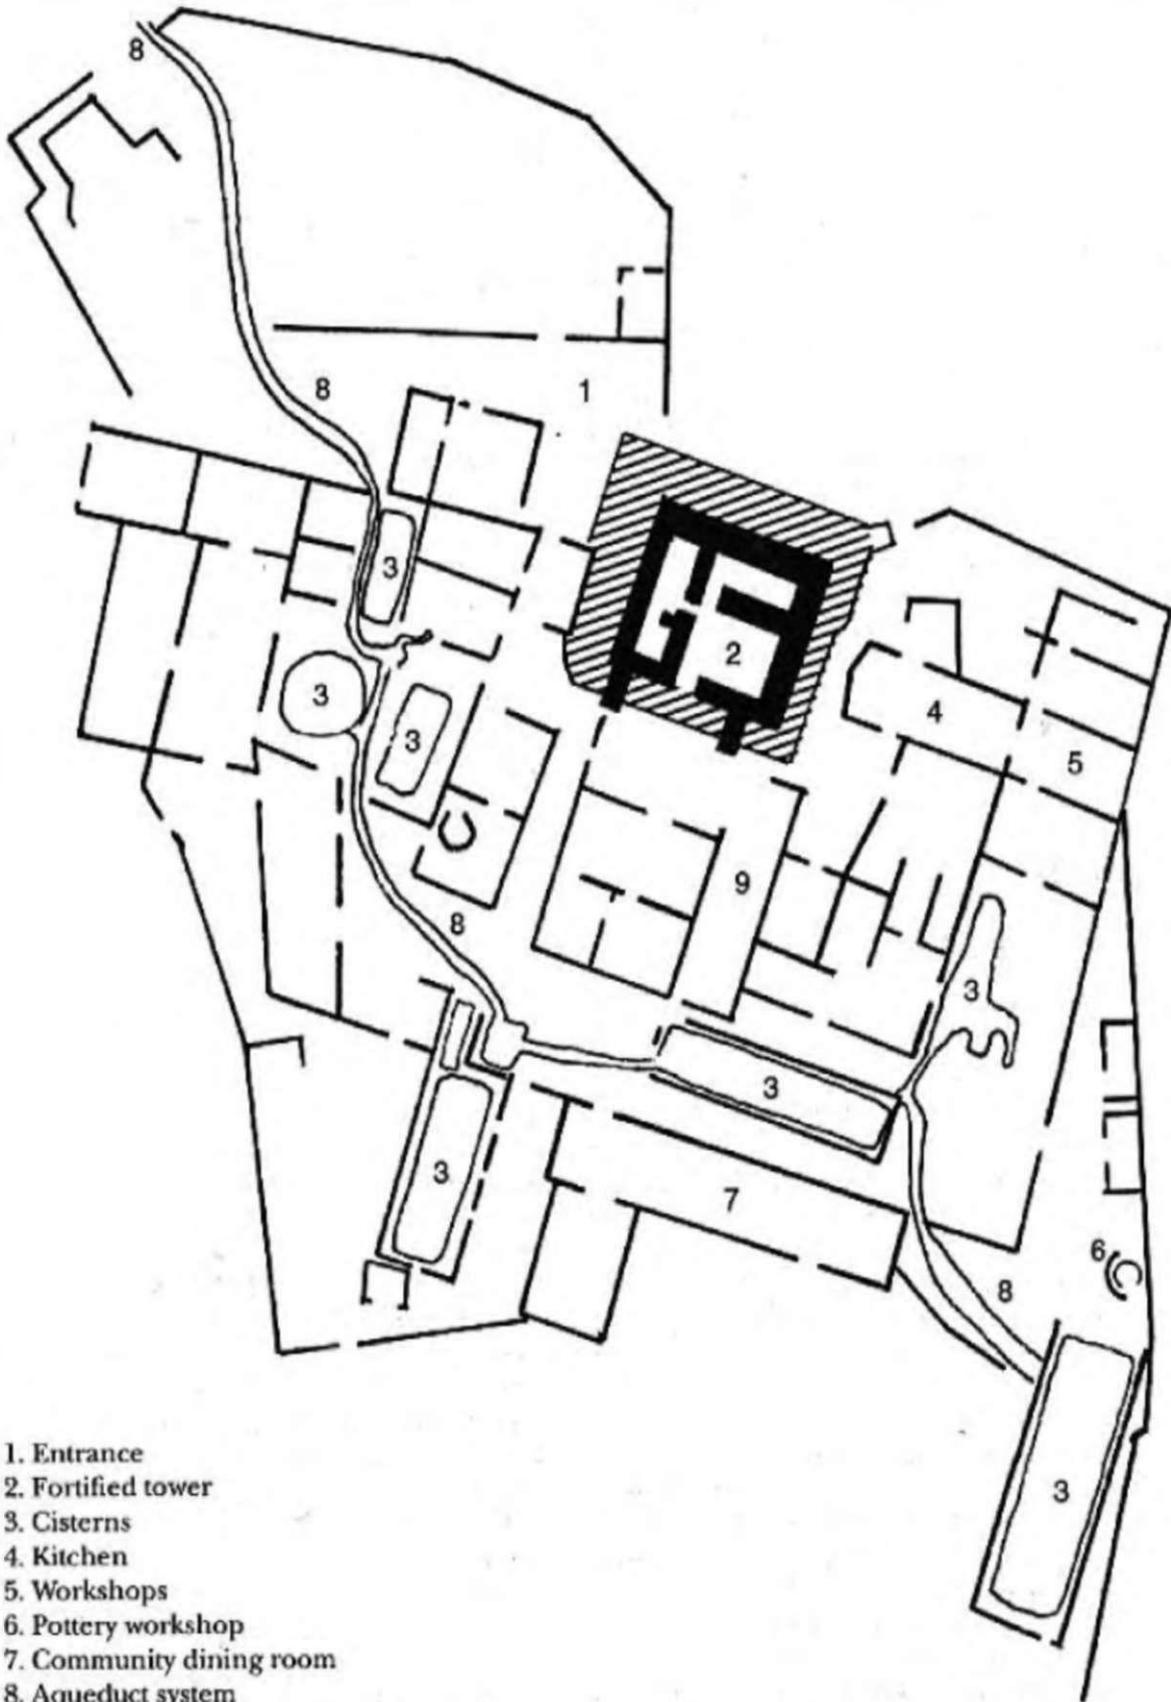

4.2. Period Ia. According to de Vaux the site remained unoccupied for centuries, only to be resettled some time in the second half of the second century B.C. The modest installation during this period was built around the remains of the earlier settlement. North and east of the round cistern two new rectangular water basins were added, and the original round cistern was restored to use. Rudimentary aqueducts were installed to collect the runoff from the plain to the west and to channel the water among the cisterns. A decantation basin to collect the silt from all three cisterns was added. Several small rooms were constructed around the cisterns, and in the southeast corner, in the space formerly occupied by the small rooms at the east end of the Is-

raelite period settlement, two pottery kilns were constructed. De Vaux notes that the few pottery sherds from this period are of the same type as those produced in Period Ib, making it impossible to use them to date the beginning of this era. However, because he dates the beginning of the next phase of occupation to around 100 B.C. and the evidence for this phase is so sparse, he concludes that it cannot have lasted long and that it began no earlier than the middle of the second century B.C.

4.3. Period Ib. De Vaux remarks that it was during this period "when the buildings at Khirbet Qumran acquired what was virtually their definitive form" (5; see fig. Qumran Site, Period Ib). From the evidence of the site it is presumed that an influx of new community members necessitated an expansion of the existing facilities. The new construction developed around the basic structural outlines of Period Ia.

One new feature of this period is the addition of a well-defined entryway to the community site. Just to the east of the existing cistern complex is an entrance from the north. This opens to a corridor that runs between the cistern complex and the now walled-off enclosure of Period Ia. The corridor extends to the southern edge of the Period Ia settlement and continues, after a jog to the east, into Period Ib buildings south of the earlier enclosure.

A second new feature is the considerable expansion and articulation of the large Period Ia enclosure that formed the easternmost part of the settlement. There are several new features within the enclosure. A fortified tower was built in the northwest corner, adjacent to the new entryway. Access to its lower two stories could be had only from within the tower, indicating the structure's defensive purpose. South of the tower several new rooms on two levels were added. Further to the south, but still within the Period Ia enclosure, a new, large cistern was added. Another cistern was installed over the old pottery kiln in the southeast corner of the enclosure. Finally, another complex of rooms was developed in the eastern half of the old enclosure, among which were a kitchen and workshops. Outside of the Period Ia courtyard there were small expansions to the north and east of the tower. To the east of the old enclosure and west of the Period Ia wall that ran to the wadi a pottery workshop was added, and south of that a large cistern was installed. On the south side of the Period Ia en-

- 9. Scriptorium

QUMRAN SITE, PERIOD IB

closure the community dining room was added. Supporting the latter identification was the additional room off the southwest corner of the dining hall that contained hundreds of pieces of crockery. An additional cistern was added to the west of the dining hall and due south of the original cistern complex, and still further to the west was a corral area for livestock.

Additional expansion in this period took place to the west and north of the existing cistern complex. A courtyard was added west of the original circular cistern, and to the west of the courtyard storerooms were constructed. To the north of the cistern complex an enclosed courtyard was added, as were decantation basins and a bath, all of which served to catch the water flowing into the community from the newly constructed aqueduct that brought runoff from the hillside. The increased numbers of site users necessitated construction of the aqueduct, as well as the new cisterns.

De Vaux made a complex argument involving the pottery and coin evidence to date the beginning of this period to the reign of John Hyrcanus (*see* Hasmoneans), although he was inclined by the evidence to go as late as the beginning of the first century B.C. To date the end of Period Ib de Vaux correlates the testimony of *Josephus with signs of an earthquake and a fire at the site. Josephus records that an earthquake struck the region in 31 B.C. (*Ant.* 15.5. §§121-47; *War* 1.19. §§370-80), and there is abundant evidence of a seismic event in the site that was followed almost immediately by a fire. While de Vaux acknowledges that the two events could have been separated by some time, he insists that the simplest explanation of the evidence is that the earthquake caused a devastating fire to break out. This single episode marked the end of the Period Ib.

4.4. Period II. Relying once more on a complicated argument involving the *coins found at the site, de Vaux suggests that the site was reoccupied during the early part of the reign of Archelaus, perhaps around 4 B.C. Roman arrowheads within a layer of ash, coins from the third year of the war between *Rome and the Jews and Josephus's account of Vespasian's military activities in the region (*J.W.* 3.4. §447) convince de Vaux that Period II drew to a violent close in A.D. 68 (*see* Jewish Wars with Rome).

During this period little new was added to the site. The main adjustments seem to have been

aimed at compensating for the losses incurred as a result of the earthquake and fire that ended the previous period of habitation. Rooms that were no longer useful were closed off, and other spaces that had been open were covered over to create new indoor areas. Walls weakened by the earthquake were fortified, especially those around the tower. Decantation basins overrun with silt during the period of abandonment were repaired or replaced. De Vaux also thinks that the room in the central part of the settlement he defined as a scriptorium was constructed in this period. He identified the room as a scriptorium on the basis of several structures that he thought were suitable as writing tables. Further confirmation came in two inkwells unearthed in the rubble of the room (*see* fig. Qumran Site, Period Ib).

4.5. Period III. The presence of coins from *Caesarea and Roman arrowheads above the destruction layer that indicates the end of Period IIIb suggested to de Vaux that the site was remodeled by the Romans as a garrison after their attack on the community in A.D. 68. The latest coin found within the settlement dates to A.D. 72/73, indicating to de Vaux that use of the site ceased not much later, certainly by the end of the war. During this period most of the site was leveled or left to decay, and only the fortified tower and rooms to the south and east of it were refurbished for use by the soldiers stationed there. That the aqueduct was simplified to channel all of the runoff from the hillside into the cistern at the southeastern corner of the site further indicates the more limited use of the site during this period.

4.6. The Second Revolt. Once again a small cache of coins helps prove that the site was inhabited during the period in question. A bowl containing ten coins was found in a ground-floor room in the fortified tower. Among them was one silver denarius of the second revolt, one denarius of Vespasian and three denarii of Trajan. The coins suggest that this was one of the sites that provided refuge for Jews fleeing the Roman legions as they advanced across the land to extirpate the remaining pockets of resistance. A letter from Wadi Murabbat is interpreted to refer to this site when it mentions a "Fortress of the Pious" (Milik 1960, 163-64). Whatever its name at the time, it was only briefly occupied during the revolt, and there is no sign that its inhabitants did anything to ad-

just the structures to their needs.

4.7. The Cemetery. A large cemetery was located by the community just to the east of the settlement. It contains around eleven hundred graves and is generally associated with Periods I and II (Steckoll). The few graves that have been excavated within the cemetery proper all contained male remains that were more or less interred in the same manner. A north-south orientation shaft of 1 to 2 meters was dug into the marl terrace, at the bottom of which was carved out a cavity under the east wall. The body was laid in the cavity, and the cavity was covered over with stone slabs or bricks. The bodies were placed with their heads to the south. (On burial practices at Qumran, see Hachlili.) An extension to the east of this large cemetery contains bodies in much shallower east-west orientation graves. The remains in those graves were of women and children, raising questions regarding the community's admission of nonmale members. However, recently those remains have proven to be no more than two centuries old, and probably those of bedouin who traveled the area in the recent past (Zias). Two additional cemeteries north and south of the settlement hold another forty-five graves altogether.

5. History of the Site: Alternative Hypotheses.

Not everyone has accepted de Vaux's judgments. There are two kinds of alternative hypotheses. Some reject his identification of the site with the Essenes, and one other merely disagrees with his site chronology.

5.1. Alternative Identifications. Several alternative theories have been proposed, but because they all stumble over some of the most obvious aspects of the site, none of them presents real challenges to the Essene hypothesis. P. Donceel-Voûte and J.-B. Humbert interpret the site as a country villa, N. Golb determines it to be a fortress, A. Crown and L. Cansdale speculate that it was a commercial trading post, and E. Cook has suggested that it served as a ritual purification center. The fortified tower and lack of ornamentation speak against the villa hypothesis; the lack of fortification apart from the tower undermines Golb's suggestion; insufficient evidence of trading activity eliminates the Crown and Cansdale theory; and the evidence for wider use of the site than for ritual cleansing casts doubt on Cook's notion.

5.2. Alternative Chronology. A much stiffer

challenge to de Vaux's theory comes from J. Magness, who offers a revised chronology for the site (1998, 57-59). She notes, as have others, that the absence of habitation from 31 B.C. (the earthquake and fire) to 4 B.C. is difficult to explain. Moreover, she notes that the hoard of silver coins found beneath Period II and above Period Ib include Tyrian tetradrachmas dating from 126 B.C. to 9/8 B.C., when Herod's reign ended. De Vaux said that these must have been placed there at the beginning of Period II. Magness makes the observation that hoards are most likely placed in situ during periods of stress and that 9/8 B.C., the end of Herod's reign and the time of the latest coins in the hoard, was just such a passage of time. So she suggests that the earthquake of 31 B.C. did damage the site but that there was no fire at the time and the site was not abandoned then. Rather the repairs de Vaux associates with Period II were made shortly after the seismic event, and it was only in 9/8 B.C. that fire and violence descended upon the site as a result of the disturbances connected with Herod's demise. Thus the site would have been abandoned no more than a few years at most, since we are confident of habitation beginning again in 4 B.C. On the basis of ceramic evidence Magness also rejects de Vaux's Period Ia, suggesting instead that the settlement was first inhabited by the people of the Dead Sea Scrolls in the first half of the first century B.C. (1998, 64-65).

6. Related Site: Ain Feshka.

Down the hill from Qumran and slightly to the south is a related site, Ain Feshka. It was in use during Periods Ib and II of the Qumran site. There is no sign of the fire that de Vaux thinks brought Period Ib to a close. There is, however, evidence of destruction in A.D. 68. Magness suggests that this site was developed only after the earthquake of 31 B.C. (Magness 1997).

The installation is made up of a central building or courtyard with rooms around it. De Vaux found some evidence that the site served as a date-ripening facility. Another building to the north contains a water-control box with waterways and a pool. Just what this part of the installation was used for is not clear, although some speculate that it was a tannery (de Vaux), while another suggests it served as a fish farm (Zeuner). In any case, it seems to have been utilized for some unspecified industrial use supportive to the residents at the Qumran site.

R

RABBINIC LITERATURE: MIDRASHIM

The noun *midrash* derives from the Hebrew root *drs*, which means "to seek" or "to inquire." The root *drs* occurs more than 150 times in the *Hebrew Bible; however, the noun *mdrs* appears only twice (2 Chron 13:22; 24:27). Both passages refer to items "written in the midrash of," but it is impossible for us to know the contents or nature of these two midrashic texts. *Mdrs* appears a few times in the literature from *Qumran, where it denotes the study of *law, judicial investigation or interpretation of Scripture. In Mishnah, *mdrs* refers to an interpretation or explanation. In the earliest midrashic collections—*Mekilta*, *Sipra* and *Sipre*—it denotes interpretation of statutes, *hūqim*, or a collection of these interpretations, and it often carries the same two meanings in the Babylonian Talmud. While *midrash* may mean study or inquiry in general, by the time of the compilation of the Babylonian Talmud it most frequently refers to scriptural interpretation or to collections of such interpretations; that is, it names an intellectual activity, the product of that activity and a collection of those products.

1. Midrash as a Type of Literature
2. Types of Rabbinic Literature
3. Midrash as a Literary and Religious Activity
4. Midrashic Collections

1. Midrash as a Type of Literature.

At present we have only literary examples of midrash and the midrashic processes. As a literary phenomenon, midrash is best defined as "a type of literature, oral or written, that stands in direct relationship to a fixed, canonical text, considered to be the authoritative and revealed word of God by the midrashist and his (or today, her) audience, and in which this canonical text is explicitly cited or clearly alluded to" (Porton 1979,

112). Midrash stands in opposition to those texts of rabbinic Judaism, such as Mishnah and Tosefta, that do not frequently cite biblical texts in support of their rulings or as elements in their pericopes (see Rabbinic Literature: Mishnah and Tosefta). Some passages within large literary collections may be midrashic, while other sections are not.

The midrashic enterprise begins within the Hebrew Bible itself. Deuteronomy reworks passages from Exodus and Numbers, Chronicles retells many of the stories found in the books of Kings, the later prophets often build upon the earlier prophets, and the titles of some of the psalms are commentaries on the psalms' contents. Although the exact relationship between intrabiblical and extrabiblical midrash has not been fully examined, it is likely that the Bible does not comment upon itself in exactly the same manner as do the later texts that view it as a sacred and canonical whole.

The Samaritan Pentateuch, 1 Maccabees 1:56 ("The books of the law which they found they tore to pieces and burned with fire"), the appearance of every biblical book with the exception of Esther at Qumran, the importance of the OT for the nascent Christian communities and the centrality of the Bible for *Philo, *Josephus and rabbinic Judaism testify to the importance of the Hebrew Bible during the *Hellenistic period and in late antiquity. However, this does not justify the claim that the Bible was the charter, constitution or sole source of inspiration and law for the postexilic Jewish communities. The *Apocrypha and Pseudepigrapha, the texts from Qumran, the Christian Bible and the rabbinic collections all include many nonbiblical traditions. Midrash often brings these two sources, biblical and nonbiblical traditions, into juxtaposition.

There are several types of Palestinian Jewish

midrashic activity in the postbiblical period. As Ben Sira's grandson noted (*see* Sirach), all translations involve interpretation, "for things once expressed in Hebrew do not have the same force in them when put into another language." The *Septuagint and the targumin (*see* Rabbinic Literature: Targumim) are examples of this type of midrash. Another class of midrash involves rewriting the biblical narratives (*see* Rewritten Bible). The book of *Jubilees, *Pseudo-Philo's *Liber Antiquitatum Biblicarum* and the *Genesis Apocryphon are perfect illustrations of this type of midrashic activity. Because Josephus's *Antiquities of the Jews* and Philo's *Life of Moses* seem to be directed to non-Jews, they do not fall into our definition of midrash. The pesharim found at Qumran and similar eschatological interpretations of the Hebrew Bible represent another kind of midrashic activity. Finally, rabbinic midrash fits into its own category, and this is the type of midrash we normally think of.

2. Types of Rabbinic Literature.

In general terms there are two major types of rabbinic literature: midrashic and nonmidrashic, frequently referred to as mishnaic. Previous scholars have distinguished between *midrash halakhah*, the legal midrashic collections of *Sipre*, *Sipra* and *Mekilta*, and *midrash aggadah*, nonlegal midrashic collections, such as *Genesis Rabbah*, *Leviticus Rabbah*, the *Pesiqta de Rab Kahana* and the *Pesiqta Rabbati*. However, this distinction is meaningless because the so-called halakic midrashim contain a good deal of nonlegal material and comment upon nonlegal passages in the Bible, and the so-called haggadic midrashim include a fair amount of explicit halakah and even more implicit halakah. Similarly, the label "tannaitic midrashim," which is often used to refer to the halakic midrashim, should be abandoned. The date of the compilation of some of these texts is far from certain. They do contain only interpretations attributed to Tannaim, Palestinian sages of the first two centuries A.D., but the later texts also contain Tannaim along with Amoraim, Babylonian and Palestinian rabbis of the third through the eighth centuries. Some include major sections that cite only tannaitic authorities and may be tannaitic creations.

The most useful distinction among the midrashic collections is between the homiletical and the expository midrashim. An expository

midrash follows the text of a given biblical book. It is a running commentary on the book or a major section of the book. While individual sections may have been created in settings different from their present contexts and may have no real relationship to the comments that surround them, a relationship has been imposed on them by the order of the biblical text. The homiletical midrashim are collections of independent units that do not form a running commentary on the biblical books. Each unit's coherence stems from its relationship to a given topic, theme or holy day. *Sipra*, *Sipre*, *Mekilta*, *Genesis Rabbah* and the midrash on Lamentations are the major expository midrashim. The *Pesiqta de Rab Kahana*, the *Pesiqta Rabbati*, *Leviticus Rabbah* and *Deuteronomy Rabbah* are the best examples of the homiletical midrashim.

3. Midrash as a Literary and Religious Activity.

The homiletic midrashim we have are literary creations; we have no evidence that they were originally oral rabbinic sermons. No rabbinic sources from late antiquity support the contention that the rabbis preached in *synagogues. There are few texts that place rabbis within the context of a synagogue, and none of them describe a rabbi preaching a sermon. More likely the rabbis created midrash for other sages within the context of their schoolhouses. Midrash reflects the rabbis' fascination with the Hebrew Bible as God's revelation. One of the rabbis' tasks was to make the Bible applicable and comprehensible in the age in which they lived. The rabbis also sought to demonstrate their intimate knowledge of the text and their mastery of God's revelation. Their knowledge of the whole of revelation, both the written Torah and the oral Torah, distinguished the rabbis from other Jews, who at most knew only the written Torah. Their knowledge of Torah was the source of the rabbis' authority within the Jewish community, as well as the blueprint for the community they wished to create.

Midrash is a religious activity, and it reflects the rabbis' intimate interaction with the written record of God's revelation. The styles and methods of rabbinic interpretation did not differ greatly from the Greek *rhetoricians' investigations of Homer. The Hebrew exegetical terms are often Hebrew translations of the rhetoricians' technical vocabulary. The major difference between the two enterprises was the rabbis' belief

that the Bible was God's revelation to humanity and that it contained, along with the oral torah, God's plan and expectations for the whole of humankind. The Bible was God's everlasting, perfect truth, and it formed the foundation of the world the rabbis sought to create. Midrash was based on and reinforced these truths. It was a means of bringing the Bible into the rabbis' world in a more direct way than did Mishnah or other nonmidrashic intellectual activities.

Jewish groups in the ancient world distinguished themselves from one another through their readings of the Hebrew Bible and their interpretative schemes. Josephus tells us that a major difference between the *Sadducees and the *Pharisees was the former's rejection of laws "which were not recorded in the Law of Moses." The Mishnah states that those who deny that resurrection is a biblical doctrine will not enter the world to come. A defining difference between Judaism and Christianity was their mutually exclusive interpretations of the Hebrew Bible. The covenanters at Qumran and the Jews in Jerusalem had radically different ideas about the Bible's calendar and its theory of election. Even Philo distinguishes himself from others in *Alexandria based on their methods of biblical exegesis. Interpretation of Scripture was a literary and theological activity of great consequence for Jews in antiquity.

Those who engaged in midrash accepted the divinity of the Torah and the belief that the only way to discover God's plan was through exegeting Scripture. The biblical text had to be examined and reexamined until every nuance had been elucidated and their implications fully spelled out. Those who composed nonmidrashic texts, such as Mishnah, assumed that human rationality and reason could uncover God's will and plan. While the authors of Mishnah drew heavily on Scripture, we could not perceive the topics they chose to elucidate merely by studying the Bible. They moved in directions and on trajectories unlimited by the biblical text and its priorities. Those who created midrash sought to demonstrate that everything they imagined or created was firmly based in and even originated in the biblical text. The human mind could not create the Jewish community or follow God's plan unaided by revelation.

4. Midrashic Collections.

It is impossible for us to review in detail the ma-

ior midrashic collections from the rabbinic period. At this point, we only wish to mention something about the most frequently cited collections for purposes of studying Judaism and its relationship to early Christianity. We must remember, however, that these collections date at the earliest from the third century, so that it is often difficult to know what parts of their content originated earlier. They were all created in Palestine.

Sipra is an early collection of exegetical statements on Leviticus. *Sipra* means "the book," an early designation for the book of Leviticus. The *Sipra* we now have comments on the entire book of Leviticus, verse by verse, often word by word. *Sipra* is either contemporaneous with Mishnah or slightly postdates it.

Mekilta is an exegesis of parts of the book of Exodus, specifically Exodus 12:1—23:19, 31:12-17 and 35:1-3. *Mekilta* is the Aramaic word for "rule" or "norm." In the postrabbinic age, the word carries the meaning of a rule derived from Scripture or of halakic exegesis. Although *mekilta* occurs in the Talmudim, it does not refer to our exegetical collection. The earliest clear reference to our present *Mekilta* comes from the eleventh century. The work is called the *Mekilta of Rabbi Ishmael* because the body of the collection was considered to have begun with the second section, which opens with a reference to Ishmael. *Mekilta* does not cover all of the legal portions of Exodus, especially omitting the building of the tabernacle, and it contains an exegesis of some of the narrative portions of the biblical book, especially the Song of the Sea (Ex 15). The *Mekilta* we have has undergone numerous redactions, beginning in the Amoraic period; therefore, it is difficult to determine the date of its origin as an exegetical collection. However, most would place its origins somewhere in the second to the third centuries.

Sipre means "books," and in the Babylonian Talmud it refers to a commentary on Exodus, Numbers and Deuteronomy. By the Middle Ages, however, the term was limited to commentaries on only the latter two books of the Torah. *Sipre Numbers* begins with Numbers 5:1, the first legal material in the book, and covers Numbers 5—12, 15, 18—19, 25:1-13, 26:52—31:24 and 35:9-34. The consensus of scholarly opinion dates the midrash after the middle of the third century. *Sipre Deuteronomy* is a midrash on Deuteronomy 1:1-30, 3:23-29, 6:4-9, 11:10—26:15

and 31:14—32:34; therefore, it covers both legal and narrative portions of the biblical book. Most scholars believe that the exegetical portions at the beginning and the end of the collection are of a different origin from the midrash's central legal core. The collection is usually dated to the late third century.

Genesis Rabbah is a midrash on the book of Genesis. The meaning of the word *rabbah* in its title is a matter of dispute. Some have argued that this is the "great" midrash on Genesis, while others have suggested that the name comes from Rabbi Oshayah Rabbah, a sage cited early in the collection. The midrash includes everything from close readings of verses, sometimes word by word, to elaborate expositions that have little connection to the text of Genesis. The redactor of this collection seems to have drawn material from a wide range of rabbinic texts. Although direct quotations are difficult to demonstrate, especially given the state of the manuscripts we now have, it seems that those behind *Genesis Rabbah* knew the contents of Mishnah, Tosefta, *Sipra*, *Sifre*, *Mekilla* and the targumim. Because *Genesis Rabbah* does not quote our present version of the Palestinian Talmud but does know the content of even its most recent layers, the two texts were most likely redacted at about the same time, probably in the first half of the fifth century.

Leviticus Rabbah is constructed around themes. It does not necessarily follow the order of the biblical text, and it often deals with only the first few verses of a section of the Bible. *Leviticus Rabbah* consists of thirty-seven homilies. Most scholars agree that *Leviticus Rabbah* was redacted sometime in the fifth century. The *Pesiqta de Rab Kahana* is a homiletical midrash constructed around the biblical readings for the *festivals and the special *sabbaths. In addition to sections for the festivals, there are homilies for the four sabbaths after Hanukkah, the three sabbaths before the ninth of Av, the fast day on which Jews recall the destructions of the first and second temples, the seven sabbaths of comfort after the ninth of Av and the two sabbaths after the New Year. The *Pesiqta* has five chapters in common with *Leviticus Rabbah*. Most contemporary scholars would date the core of the midrash to the fifth century, about the same time as the redaction of *Leviticus Rabbah*.

RABBINIC LITERATURE: MISHNAH AND TOSEFTA

The Mishnah is the principal source of the law of Judaism in ancient times. The Tosefta is a compilation of clarifications of mishnaic law and supplements to them.

1. The Mishnah
2. The Tosefta

1. The Mishnah.

The primary law code of Judaism from its closure in about A.D. 200 to the present, the Mishnah is a collection of sixty-two treatises on norms of action and attitude that all together set

forth a philosophy of hierarchical classification. That philosophy sets forth through inductive analysis a philosophy of monotheism. That religious philosophy shows through practical rules how all things flow upward to one thing or how from one thing all things emanate downward, the result of hierarchical classification. When the framers of the Mishnah take up any topic, they collect the relevant facts and then form these facts into groups through a process of classification by indicative traits, working from the species to the genus. At the next stage, the groups are formed into lists of things in hierarchical order. The whole therefore holds together through syllogistic logic applied to the analysis of the traits of things: applied reason and practical logic.

The Mishnah's laws cover both theoretical matters, bearing no practical consequence at the time of the formation of the code, as well as highly practical topics. Organized by topic, the laws fall into six principal categories: the conduct of the agricultural economy in accord with the commandments of God to "Moses set forth in the Torah of Sinai; the observance of holy time, specifically, the *sabbath and *festivals; the sanctification of *marriage and *family life; the institutions of civil government and the resolution of conflict in a just and righteous society; the sacred offerings of the *temple and maintenance of the building and the cults; and the levitical rules of *purity and uncleanness pertinent both to the temple and sexual life.

1.1. Zeraim: Agriculture. The critical issue in the economic life, which means in farming, is in two parts, revealed in the first division. First, Israel, as tenant on God's Holy Land, maintains that property in the ways God requires, keeping the rules that mark the land and its crops as holy. Next, the hour at which the sanctification of the land comes to form a critical mass, namely, in the ripened crops, is the moment most ponderous with danger and heightened holiness. Israel's will so affects the crops as to mark a part of them as holy, the rest of them as available for common use. The human will is determinative in the process of sanctification.

1.2. Moed: Appointed Times or Holy Seasons. What happens in the land at appointed times marks off spaces of the land as holy in yet another way. The center of the land and the focus of its sanctification is the temple. There the produce of the land is received and given back to

God, the One who created and sanctified the land. At these unusual moments of sanctification, the inhabitants of the land in their social being in villages enter a state of spatial sanctification. That is to say, the village boundaries mark off holy space, within which one must remain during the holy time. This is expressed in two ways. First, the temple itself observes and expresses the special, recurring holy time. Second, the villages of the land are brought into alignment with the temple, forming a complement and completion to the temple's sacred being. The advent of the appointed times precipitates a spatial reordering of the land, so that the boundaries of the sacred are matched and mirrored in village and in temple. At the heightened holiness marked by these moments of appointed times, therefore, the occasion for an affective sanctification is worked out. Like the harvest, the advent of an appointed time such as a pilgrim festival, also a sacred season, is made to express that regular, orderly and predictable sort of sanctification for Israel that the system as a whole seeks.

1.3. Nashim: Women and Neziqin: Damages. These take their place in the structure of the whole by showing the congruence, within the larger framework of regularity and order, of human concerns of family and farm, politics and workaday transactions among ordinary people. For without attending to these matters, the Mishnah's system does not encompass what is meant to comprehend and order. So what is at issue is fully cogent with the rest. In the case of *women, the third division, attention focuses upon the point of disorder marked by the transfer of that disordering anomaly, woman, from the regular status provided by one man to the equally trustworthy status provided by another. That is the point at which the Mishnah's interests are aroused: once more, predictably, the moment of disorder. In the case of damages, the fourth division, there are two important concerns. First, there is the paramount interest in preventing, so far as possible, the disorderly rise of one person and fall of another and in sustaining the status quo of the economy, the house and household, of Israel, the holy society in eternal stasis. Second, there is the necessary concomitant in the provision of a system of political institutions to carry out the laws that preserve the balance and steady state of persons.

The third and fourth divisions, which take up

topics of concrete and material concern, the formation and dissolution of families and the transfer of property in that connection, the transactions, both through torts and through commerce, that lead to exchanges of property and the potential dislocation of the state of families in society, are both locative and utopian. They deal with the concrete locations in which people make their lives, household and street and field, the sexual and commercial exchanges of a given village. But they pertain to the life of all Israel, both in the land and otherwise. These two divisions, together with the household ones of appointed times, constitute the sole opening outward toward the life of utopian Israel, that *Diaspora in the far reaches of the ancient world, in the endless span of time. This community from the Mishnah's perspective is not only in exile but also unaccounted for, outside the system, for the Mishnah declines to recognize and take it into account. Israelites who dwell in the land of (unclean) death instead of in the Holy Land fall outside of the range of (holy) life. *Priests, who must remain cultically clean, may not leave the land, and neither may most of the Mishnah.

1.4. Qodoshim: Holy Things and Tohorot: Purities. These form the counterpart of the divisions of agriculture and appointed times, for they deal with the everyday and the ordinary, as against the special moments of harvest and special time or season. The fifth division is specifically about the temple on ordinary days. The work of the temple, the locus of sanctification, is conducted in a wholly routine and trustworthy, punctilious manner. The one thing that may unsettle matters is the intention and will of the human actor. This is subjected to carefully prescribed limitations and remedies. The division of holy things generates its companion, the sixth division, the one on cultic cleanness, purities. The relationship between the two is like that between agriculture and appointed times, the former locative, the latter utopian, the former dealing with the fields, the latter with the interplay between fields and altar.

Here too, in the sixth division, once we speak of the one place of the temple, we address the cleanness that pertains to every place. A system of cleanness, taking into account what imparts uncleanness and how this is done, what is subject to uncleanness and how that state is overcome, that system is fully expressed in response

to the participation of the human will. Without the wish and act of a human being, the system does not function. It is inert. Sources of uncleanness, which come naturally and not by volition, and modes of purification, which work naturally and not by human intervention, remain inert until human will has imparted susceptibility to uncleanness. The movement from sanctification to uncleanness takes place when human will and work precipitate it.

2. The Tosefta.

Reaching closure some time, perhaps fifty years (hence c. A.D. 250), after the Mishnah, the Tosefta ("supplements") provides a compilation of statements pertinent to rulings of the Mishnah or their problems or their themes. Some of these statements are freestanding, but most of them presuppose counterpart statements in the Mishnah and form commentaries to them. It follows that the Tosefta is a collection of statements on the general problems addressed in the Mishnah, ordered in large topical formations, or tracts, that correspond to those of the Mishnah and treating only the topics addressed in the Mishnah and no others.

The document contains three kinds of materials, in descending order of frequency. The first is citation of a sentence of the Mishnah and a paraphrase and gloss of that sentence, thus, commentary in the simplest form; such writing is incomprehensible on its own but makes good sense in relationship to the Mishnah's sentence, which defines its context and meaning. The second is freestanding sentence(s), which can be understood in their own terms but that, on closer reading, can be fully understood and shown to be coherent only when brought into juxtaposition with a counterpart statement in the Mishnah. The third is autonomous sets of sentences that make full and complete sense standing on their own, with no point of intersection with the Mishnah except in general topic. We do not need to open the Mishnah to understand the statements of such aggregates of cogent sentences, forming entirely coherent paragraphs.

2.1. How the Tosefta Is Organized. The Tosefta holds together in one of two ways. First, sentences cohere not to one another but only to the Mishnah, forming glosses, pure and simple; we know that they cohere only to the Mishnah because if we rearranged the sentences, putting first last and last first, they would make as much

or as little sense as they do now. But, in relationship to the Mishnah, they make perfect sense. Then the Mishnah's order dictates the Tosefta's sentences' sequence. Second, sentences cohere to one another but make sense only when we read the corresponding Mishnah paragraph. The coherence is general, but if we set forth the same sentences in some other order than the one they now have, they would make sense just as well or just as little. So we know that the full sense of a set of sentences emerges only in response to the uncited but omnipresent Mishnah paragraph, because their present order is explained or is best explained when we bring the discrete sentences into relationship to the Mishnah. Then the order, which at first seems random, turns out to be necessary; we can explain that order and show that that, and no other sequence, is necessary.

2.2. The Oral Torah. The laws of the Mishnah and the Tosefta are represented by tractate *'Abot*, the Fathers (c. A.D. 250), as deriving by oral tradition from God through Moses and the prophets and sages. Presented as part of the Mishnah but standing on its own and autonomous of the Mishnah's forms and entire topical program, tractate *'Abot* contains wise sayings attributed to sages in a chain of tradition beginning, "Moses received Torah from Sinai and handed it on to Joshua" and ending with the names of authorities of the first and second centuries. Some of these, in particular Gamaliel and his son Simeon, are known to us as *Pharisees.

While the Mishnah contains laws deriving from a variety of sources, beginning with Scripture itself, and while much of the document is worked out in the names of authorities who flourished in the second century, three areas of the law focus upon topics important to the Pharisees as represented by the Gospels: tithing, cultic cleanness and sabbath observance. These bodies of law are portrayed as subject to dispute between Jesus and the Pharisees, and much that the Mishnah records as normative law intersects in topic, problematic and even proposition with sayings attributed to Jesus. That explains why, once the Gospels indicate points of intersection with the rules of the Mishnah or the Tosefta, we may ask those rules to help us understand that to which the Gospels' stories make reference. The Mishnah's and Tosefta's information may then define the context in which statements in the Gospels take on concrete meaning.

2.3. *The Mishnah and the Gospels: A Case Study.*

Numerous stories and sayings in the Gospels presuppose information that comes to us only in the Mishnah and its supplement. To give a single example, Matthew 23:25-26 has "Woe to you, scribes and Pharisees, hypocrites! For you cleanse the outside of the cup and of the plate but inside they are full of extortion and rapacity . . . first cleanse the inside of the cup and of the plate, that the outside also may be clean."

The saying thus presupposes that Pharisees concern themselves with the cleanness of cups and plates, and since the setting is not cultic (temple cleanness) but quotidian, the premise of the saying directs attention to the application to domestic affairs of levitical rules of cultic cleanness that in Scripture apply only to the temple. The saying further takes for granted Pharisees distinguish between the inside and the outside of a cup or plate; they cleanse first of all the outside. To uncover the relevance of the saying we turn to Mishnah tractate *Kelim* 25:1, which states, "All utensils have outsides and an inside." The matter is further clarified at *m. Kelim* 25:6: "A utensil, the outer parts of which have been made unclean with liquids—the outer parts are unclean. Its inside, its rims, hangers, and handles are clean. [If] its inside is made unclean, the whole is unclean." To this Tosefta *Kelim Baba Batra* 8:12 adds, "Utensils used for Holy Things have no [distinctions among] an outer part or an inner part." A further statement in the same context is assigned to first-century figures: "This testimony did Hezekiah Abi Iqqesh present before Rabban Gamaliel in Yavneh, which he stated in the name of Rabban Gamaliel the Elder, 'Whatever has no inside among clay utensils also has no outer parts [that are subject to becoming unclean. Such a flat clay object is insusceptible entirely]'" (*Sifra* CXIV:1.6). So the premise of the statement attributed to Jesus, that we deal with everyday objects, is reinforced by this explicit statement of the law.

In the present instance, therefore, the notion that we make distinctions among the parts of a utensil is attested to the first century by Matthew, and the details of what it means to make such a distinction are contributed by the later rabbinic law code and its commentary. But a point of conflict emerges. The saying attributed to Jesus takes for granted that Pharisees first or only cleanse the outside of the cup. If it were taken for granted that Pharisees first cleanse the in-

side of the cup before they cleanse the outside or do not cleanse the outside, then the saying makes no sense. If people do clean the inside first, then the saying "first cleanse the inside" bears no weight. But all parties to the discussion of the rabbinic law concur that if the outside is unclean, the inside of the utensil is unaffected. If the inside is unclean, the entire utensil is unclean. Now that conception is precisely the one advocated—metaphorically for the moral condition of humanity—by Jesus. So the actual law taken as normative by the authorities of the Mishnah contradicts the law that the saying attributed to Jesus imputes to the Pharisees.

But there are Pharisees who maintain that the outer part of the utensil may be clean even while the inner part is unclean. These are the disciples of Shammai, the first-century debating partner of Hillel, organized as the house of Shammai, opponents of the house of Hillel. They take the view that even if the inner part of the utensil is unclean, the outer part is clean. That position emerges at Mishnah tractate *Berakot* 8:2. In preparing the meal, the house of Shammai maintains that people are to wash hands and then mix the cup of wine, and the house of Hillel hold that one mixes the cup and afterward washes the hands. The reason of the house of Shammai is given by the Tosefta to the same passage: "So that the liquids that are on the outer side of the cup may not be made unclean by his hands and then go and make the cup unclean." The house of Shammai does not want unclean hands to touch the liquid on the outer part of the cup, which will go and make the cup unclean; so the state of the inner part is not decisive (just the opposite of what Jesus says). The house of Hillel, by contrast, holds that the outer side of the cup is always unclean (so the Tosefta), so all that what matters is the condition of the inside of the cup (exactly what Jesus says in his metaphor).

The saying of Matthew has called our attention to the corresponding passages in the Mishnah and the Tosefta, and these have imparted concreteness to the saying attributed to Jesus and shown the practical foundations for his moral metaphor.

We cannot uncritically cite the Mishnah and the Tosefta for a factual account of the state of the law in the time of Jesus. The Mishnah's attributions cannot be taken at face value, and the sources of the Mishnah's law and the state of its

conception of the law prior to closure remain questions subject to considerable study. No final answers dictate that a given rule tells us about the law in remote antiquity, or in the first century or only in the early third century, when the document reached closure. And the Tosefta is temporally and logically subordinate to the Mishnah. The Gospels stand closer in time to the first century than do the Mishnah and the Tosefta as we now have them. Nor can we automatically deem as a factual account of first-century times a saying attributed to a first-century authority by a third-century compilation. But at numerous specific points exegesis of the Gospels does find valuable information and even sharp perspective in those documents, just as the Gospels richly contribute to the exegesis of the Mishnah.

RABBINIC LITERATURE: TALMUD

The Talmud (lit. "learning," or what is to be "learned," from *lāmad*, "to learn") is a compendium of rabbinic law and lore that combines Mishnah and *gemara* ("completion"), as well as portions of the Tosefta (see Rabbinic Literature: Mishnah and Tosefta). The mishnaic material derives from the tannaitic rabbis and sages (c. 50 B.C. to A.D. 200), while the *gemara* derives mostly from the amoraic rabbis of a later period (c. A.D. 200-500). Included in the *gemara* are tannaitic sayings not included in the Mishnah. These traditions are called *baraitoth* ("external [sayings]"), in that they reach back to the tannaitic period but are *external* to the Mishnah. Although the Talmud postdates the NT by several centuries, it offers potentially useful background material.

1. The Two Talmuds
2. The Relevance of the Talmuds for New Testament Study
3. Jesus' Teaching and Rabbinic Thought
4. Paul and Rabbinic Teaching

5. Historical Relevance of the Talmuds

1. The Two Talmuds.

Although it is conventional to refer to "the Talmud," as though it is a single recension, there are in fact two recensions, one from the land of Israel, called Talmud Yerushalmi, the other from Babylon, called Talmud Babli. Although very similar in format, as seen in how each follows a program of citing a paragraph of Mishnah and then adding several explanatory paragraphs of *gemara*, the two recensions of the Talmud are quite different. These differences are seen in the ground that is covered (i.e., how many and which tractates of the Mishnah are actually treated), how extensive the *gemara* is, the text of the underlying Mishnah, the sages who are cited, the respective lengths (Babli is much longer) and the degree to which the recension has been edited and finalized (Babli is much more edited and polished).

1.1. Talmud Yerushalmi. The oldest recension is the one prepared in the land of Israel. The name "Talmud of the Land of Israel" is actually found on one of the oldest surviving manuscripts. However, this recension has been linked with Jerusalem and so traditionally has been called Yerushalmi. Much of this recension probably dates to A.D. 400, or just a generation or two after the time of the compilation of the Tosefta. The later parts of Yerushalmi probably date closer to A.D. 450. As the name of this recension suggests, most of the cited rabbinic authorities lived in Palestine.

Yerushalmi comments on the first, second, third and fourth divisions of the Mishnah. The compilers and editors of Yerushalmi are interested in the reading of the Mishnah (textual criticism), in the meaning of the Mishnah, in augmenting the Mishnah's arguments with scriptural proof texts and in harmonizing mishnaic traditions.

1.2. Talmud Babli. The Babylonian Talmud was edited sometime after A.D. 500 and up to A.D. 600. As the name suggests, it was produced in Babylon, where a large Jewish population developed in the aftermath of the Babylonian capture of Jerusalem and *destruction of the Jewish temple in 586 B.C. Most of the cited rabbinic authorities were from Babylon, though Palestinian authorities are also cited.

Babli comments and expands upon the second, third, fourth and fifth divisions of the

Mishnah, as well as part of the first division. Babli interprets and embellishes the Mishnah, exegetes Scripture, identifies anonymous authorities and discusses a variety of topics that fall outside the subject of the Mishnah. Whereas there is almost no *messianic tradition in the Mishnah (see the later insertion at *m. Sofa* 9:15), there is comparatively a great deal of messianic lore in Babli.

2. The Relevance of the Talmuds for New Testament Study.

Because of the late date of rabbinic literature, especially the recensions of the Talmud, the question of the relevance of the Talmuds for NT study must be addressed.

2.1. The Problem of Date. The Mishnah was edited and published between A.D. 200 and 220, while other major rabbinic works, including the Tosefta, the halakic midrashim, the two Talmuds, and the homiletic midrashim were composed in the period A.D. 300-1000. These dates of composition might seem to rule out the rabbinic literature as providing background material for the NT, leaving us with only *Apocrypha, *pseudepigrapha, *Dead Sea Scrolls, *Philo and *Josephus as roughly contemporaneous literature. Such a conclusion, however, would be mistaken, because the rabbinic literature consists of compilations of material, much of which stems from or is strongly related to periods far earlier than the date of redaction. Moreover, the *targumim (Aramaic translations of the Bible, some parts of which date from the first century) should be reckoned as part of rabbinic literature, and much evidence can be gleaned from them about early rabbinic and pharisaic attitudes. Problems of dating exist, since even material purporting to be early may be late, but scholarly methods exist to cope with such problems in all ancient texts. Thus, after due allowance has been made for legendary or pseudepigraphic elements, a wealth of material remains in the rabbinic literature throwing light on the background of Jesus' sayings and on the circumstances of his lifetime.

2.2. Pharisees and Rabbis. A related question is, What degree of continuity existed between the Pharisees of Jesus' day, who included such figures as *Hillel, *Shammai and Gamaliel I, and the rabbinic movement of the post-temple period, which included Gamaliel II, Akiba and Meir? Scholarly opinions have varied much.

H. Strack and P. Billerbeck had no doubt that sufficient continuity existed for rabbinic material to throw light on the *Pharisees. Some of their work, it is now recognized, was biased by their desire to find evidence supporting NT criticism of the Pharisees. Later scholars, notably E. P. Sanders (1977), showed that the rabbinic literature does not support such criticism. Some scholars (e.g., Fitzmyer; Neusner) have resorted to a theory of complete discontinuity between Pharisees and *rabbis. This has proved unsustainable (see Vermes; Sanders 1992), and it seems clear that the lack of compatibility between rabbinic literature and the NT Pharisees should be explained in terms of NT bias or selective treatment rather than Jewish discontinuity. Further, many of the features of Jesus' preaching, even when ostensibly anti-Pharisee, can best be understood as arising from a background of pharisaic thought.

3. Jesus' Teaching and Rabbinic Thought.

At many points there is overlap between Jesus' teaching and rabbinic thought. Evidence of overlap may be traced through the two Talmuds to the oldest rabbinic literature.

3.1. The Lord's Prayer. A prominent example of affinity between Jesus and the rabbinic movement is the prayer Jesus composed, known as the Lord's Prayer. Scarcely a single phrase in this prayer does not have its parallel in rabbinic sources (see Petuchowski and Brocke). The Lord's Prayer was composed by Jesus in response to a request from his disciples to provide them with a prayer "as John also taught his disciples" (Lk 11:2-4 AV). Rabbis often composed a prayer for their disciples, not to supersede the regular daily prayers but as an addition to them. Neither John nor Jesus wanted to abolish the regular prayers, consisting mainly of the Shema, which was prized by Jesus (Mt 22:37), and the Amidah, or supplications (see Liturgy: Rabbinic). It was only in the later church that the Lord's Prayer was given liturgical centrality.

Some scholars, noting parallels between rabbinic prayer and the Lord's Prayer, conclude that Jesus had an influence on the rabbis, rather than the reverse (see 3.3 below). This, however, ignores the communal nature of rabbinic thinking, by which patterns of creativity derive from mutual exchange and tradition rather than from an individual. Each rabbi had his own measure of creativity and originality, set within a frame-

work of societal patterning. It is highly unlikely that Jesus invented new patterns that were then adopted by the rabbis; much more likely he exercised his own individuality within existing patterns, just as they did.

3.2. Modes of Expression. If we can find in Jesus' reported utterances strong affinities to rabbinic style, as found in the Talmud and other rabbinic literature, we shall be justified in postulating that Jesus moved in a milieu that was saturated with rabbinic culture.

Examples may be found in Jesus' use of metaphor and hyperbole. When he says that it is easier for a camel to go through the eye of a needle than for a rich man to enter heaven (Mt 19:24), this extravagant turn of phrase is typically rabbinic. Indeed, the parallel rabbinic phrase expressing impossibility is even more extravagant, involving an elephant and a needle (*b. Ber.* 55b; *b. B. Mes.* 38b). In another passage, the animal is a camel, but instead of going through the eye of a needle, it dances in a tiny area (*b. Yebam.* 45a). Exegetes who have tried to reduce the extravagance of Jesus' simile (by saying that the camel means "rope" or that the needle was the name of a gate in Jerusalem) fail to appreciate the authentically exuberant rabbinic idiom of Jesus' saying.

Similarly, Jesus' sayings on hypocrites have a genuinely rabbinic air. He says (Mt 7:4 AV), "Thou hypocrite, first cast the beam out of thine own eye; and then shalt thou see clearly to cast out the mote out of thy brother's eye." The rabbinic parallel runs,

Rabbi Tarfon said, "I wonder if anyone in this generation knows how to accept reproof. If anyone says to him, 'Take the splinter from between your eyes,' he replies, 'Take the beam from between *your* eyes'" (*b. Arak.* 16b).

Here the charge of hypocrisy is made in order to avoid a just reproof. Yet, despite the somewhat broader context, the metaphor for hypocrisy is almost identical.

Similarly, Jesus refers to hypocrites as "whited sepulchres, which indeed appear beautiful outward, but are within full of dead men's bones, and of all uncleanness" (Mt 23:27 AV). The rabbis used very similar imagery, as is shown by the dream of Rabban Gamaliel in which he saw "white pitchers full of ashes." This was in a context where he had issued a proclamation, "No disciple may enter the House of Learning unless his inside is like his

outside" (*b. Ber.* 28a).

3.3. Parables. We do not find parables in the pseudepigrapha or in the Dead Sea Scrolls, but we do find them in profusion in the rabbinic writings, especially the Midrashim (see Rabbinic Parables).

Here again the question of dating has given rise to controversy. Some scholars, notably J. Jeremias, have argued that there is no evidence of the use of parables among the Pharisees of Jesus' day and that the frequent parables of the second-century rabbis show that they were influenced in this aspect by Jesus himself. However, there is evidence that the second-century rabbis were carrying on an established tradition of preaching in their use of parables. Moreover, a rabbinic version of a parable can sometimes throw light on parables that appear in the Gospels in a version modified by the ideological aims of the Gospel redactor. The full range of the parable genre is much better displayed in the rabbinic literature, which contains thousands of examples, than in the NT, which contains only thirty-one.

An example is the following:

Rabban Johanan ben Zakkai said: This may be compared to a king who summoned his servants to a banquet without appointing a time. The wise ones adorned themselves and sat at the door of the palace. Said they, Is anything lacking in a royal palace? The fools went about their work, saying, Can there be a banquet without preparations? Suddenly the king desired [the presence of] his servants: the wise entered adorned, while the fools entered soiled. The king rejoiced at the wise but was angry with the fools. Those who adorned themselves for the banquet, ordered he, let them sit, eat and drink. But those who did not adorn themselves for the banquet, let them stand and watch. (*b. Sabb.* 153a, Soncino translation)

This parable shows affinities to two Gospel parables: that of the virgins (Mt 25:1-12) and that of the wedding (Mt 22:2-14). It is interesting that this Talmudic parable is attributed to Rabban Johanan ben Zakkai, who was a contemporary of Jesus and was well known for his knowledge of parables and fables, though most of them were lost. Certain puzzling or redundant features in the Gospel versions suggest that the simpler Talmudic version is the earliest.

3.4. Halakah. The arguments attributed to

Jesus in the Gospels often have strong affinities to the kind of legal argument associated with the pharisaic and rabbinic Halakah (lit. "way" or "going").

An example is Jesus' argument for healing on the *sabbath, based on the analogy of circumcision. In this saying (Jn 7:22-23) Jesus refers to the ruling that circumcision overrules the sabbath law: that though incisions are usually forbidden on the sabbath, an exception is made when a child's circumcision day (the eighth from birth) coincides with the sabbath. Now this particular ruling, or Halakah, features elsewhere only in the rabbinic literature. Nothing is said in the Hebrew Bible or the intertestamental literature about what to do if the circumcision day coincides with the sabbath. This is thus a typical piece of rabbinic decision making, to which Jesus refers as a matter already known to his hearers.

Even more interesting is that the inference that Jesus then proceeds to make (that healing should be allowed on the sabbath) is also to be found in the rabbinic literature:

Whence do we know that the duty of saving life annuls the sabbath? Rabbi Eleazar ben Azariah answered: If circumcision, which affects only one member of the body annuls the sabbath, how much more so for the rest of the body! Rabbi Simeon ben Menasia says: Behold it is said, "And you shall keep the sabbath for it is holy to you" (Ex 31:14). To you the sabbath is handed over, but you are not handed over to the sabbath. (*Mek. Abbeta* on Ex 31:13)

Though the rabbis quoted here belong to the second century, the arguments they use were part of the rabbinic stock, on which Jesus also was drawing. It is noteworthy that the second argument quoted, that of Rabbi Simeon ben Menasia, is almost identical with another saying of Jesus in the incident of the corn plucking. When Jesus said, "The Sabbath was made for man, not man for the Sabbath" (Mk 2:27 AV), he was quoting from the pharisaic heritage, for a pharisaic purpose, namely, the mitigation of the law of the sabbath in situations dangerous to human life (see Maccoby, 40-42, for a detailed analysis of the corn-plucking incident).

3.5. Theology: Kingdom of God. The rabbinic writings can also throw light on Jesus' religious aims and teaching. When Jesus first came on the public scene, he was proclaiming, "Repent, for

the kingdom of heaven is at hand" (Mt 4:17 AV). The expression "kingdom of heaven" (*malkūt šāmayim*) is found in many places in rabbinic literature, where it means "the rule of God as King." Jesus, like John the Baptist before him (Mt 3:2), was prophesying the messianic era on earth, when the commands of God (i.e., the Torah) would be obeyed, rather than the commands of the Roman emperor (see Roman Emperors). The whole this-worldly, revolutionary emphasis of the expression "kingdom of heaven" is lost in later "spiritualizing" interpretations, but can be recovered through study of the Talmud. The emphasis on repentance in Jesus' preaching is indissolubly tied to his proclamation of the coming rule of God. All Jewish messianic campaigns began with an emphasis on repentance, or "return" (*šûbā*).

3.6. Jesus and Christian Study of the Talmud. On the other hand, the intensive effort of Christian scholars, especially by the Dominicans in the Middle Ages, to find Talmudic support for specifically Christian doctrines was a failure. The chief literary product of this school was the monumental *Pugio Fidei* of R. Martini, and the chief public use of the method for conversionary purposes was the Barcelona Disputation of 1263. An example is the citing of the Talmudic legend (*b. Yoma 89b*) that forty years before the destruction of the temple, certain miracles associated with the service of the temple ceased. The date was equated with that of the death of Jesus and the NT account of the rending of the temple "veil" (Mk 25:38); and Talmudic authority was thus claimed for the supersession of the temple by the salvific death of Jesus. Tendentious though such associations were, they led to an interesting phase of Talmudic study by Christians, foreshadowing the modern scientific interest in the Talmud as background to the NT.

3.7. The Talmud and Re-Judaizing the New Testament. For some scholars the use of Talmudic material tends to throw light on the essential Jewishness of Jesus' teaching and activity but to cast doubt on the historicity of his conflicts with the Pharisees. The question has been raised, however, especially by the school of form criticism, whether the rabbinic aspects of Jesus are authentic or later accretions in the Gospel narratives. It is argued that we have here a phenomenon of re-Judaization, by which the radical aspects of Jesus' thinking have been tempered and reconciled with mainstream Judaism.

Certain early Christian communities, it is argued, did not wish to sever their links with Judaism, and it was for the benefit of such communities that the Jewish Jesus was created. For example, in the corn-plucking incident, Matthew adds to Mark's account by saying that the disciples were hungry, an addition that would bring Jesus' action within the scope of rabbinic laws allowing sabbath breaking in extreme conditions. Yet, it should be observed, Mark's account of the incident is closer in other respects to rabbinic thought than Matthew's, so such argument is not decisive. At any rate, the value of the Talmudic background to NT exegesis is not affected, since even if it were only relevant to re-Judaized material, it would still throw light on important elements in the NT. The form-critical approach, however, while valuable in principle, has been seen recently as biased in its attempts to eliminate the Jewish aspects of Jesus.

4. Paul and Rabbinic Teaching.

While the rabbinic quality of Jesus' teaching has been questioned or, where it is acknowledged as unquestionable, relegated to the re-Judaizing activity of the Gospel writers, Paul's writings have always been a hunting ground for rabbinic allusions, and most NT scholars (both Christian and Jewish) have assumed that Paul was someone whose texture of thought was essentially rabbinic. This is because Paul himself claimed to have had an upbringing as a Pharisee and even to have reached the peak of Pharisee education. According to Acts, he was a pupil of Gamaliel, though Paul himself does not make this claim in his letters, and most scholars have discounted it, especially in view of the problem of why Paul (Saul) was so intolerant to the followers of Jesus when Gamaliel was so tolerant (Acts 5).

A celebrated attempt to establish the rabbinic credentials of Paul is that of W. D. Davies, which concentrates on alleged links between Paul's christology and rabbinic (and prerabbinic) messianism. More recent attempts to substantiate Paul as a Pharisee (e.g., Segal) have acknowledged a conceptual gap between Paul and rabbinism and have thus been led to postulate a prerabbinic Pharisaism, for which the chief evidence is Paul's own writings. This approach, which has been criticized as circular, abandons the rabbinic writings as too late to provide background to Paul's kind of Pharisaism. However, Jesus' own style of preaching

(even if it is re-Judaized by the redactors) testifies to the existence of rabbinism in the first century (see the introductory paragraphs and 3.7 above), so it is hard to see why Paul had a Pharisaism so devoid of rabbinism. Some scholars (e.g., Montefiore, Maccoby) have seen Paul as primarily employing *Hellenistic styles of thought and argument but as occasionally attempting to argue in rabbinic style (e.g., Rom 7:1-6). On this view, Paul's claim to special Pharisee expertise must be regarded as a stance that he thought helpful to his missionary campaigns. The debate on Paul's Pharisaism continues.

5. Historical Relevance of the Talmuds.

The rabbinic writings are not of a historical or biographical nature and thus do not provide the kind of direct historical data relevant to NT studies that we find in *Josephus or even *Philo. Nevertheless, much incidental material found in the rabbinic writings is relevant. An example is the character of Gamaliel, referred to in the NT as a Pharisee "held in high regard by all the people" (Acts 5:34 NEB). Acts describes how Gamaliel intervened to save Peter and his companions from the high priest. Even here one may discern that he was an influential figure, that he was sympathetic to Jesus and other messianic figures aiming at Jewish liberation and that he led the opposition to the high priest. This picture, which is at odds with other NT portrayals of Pharisees, is much enhanced by recourse to the rabbinic writings, in which Gamaliel is a prominent and respected figure: grandson of Hillel, progenitor of Gamaliel II and Judah the Prince, and author of many seminal pronouncements. Among other Talmudic topics useful for NT studies are the conflict between Pharisees and *Sadducees; the *Samaritan issue; the nature of *messianic hopes; the position of the high priest as a temple administrator who carried no religious authority among the Jewish masses (see Sacrifice and Temple Service).

In conclusion, the rabbinic literature, especially the two recensions of the Talmud, is the depository of many centuries of Jewish thought and life. Though late in time of composition and final redaction, it is of great value, if read critically, as evidence of social, religious and political conditions in first-century Palestine. It is therefore an indispensable source for NT research.

RABBINIC LITERATURE: TARGUMIM

The term *targum* simply means "translation" in Aramaic, but the type and purpose of the rendering involved in Judaism was distinctive. The general phenomenon of targum needs to be appreciated, and the specific documents involved (targumim) need to be described before the

question of targumic influence upon Jesus and the Gospels may be taken up.

1. The Purpose of Targumic Production
2. Categories of Targumim
3. Significance of the Targumim
4. The Targumim and Aspects of Judaism
5. The Targumim and Paul

1. The Purpose of Targumic Production.

*Aramaic survived the demise of the Persian Empire as a *lingua franca* in the Near East. It had been embraced enthusiastically by Jews as by other peoples, such as Nabateans and Palmyrenes, and the Aramaic portions of the Hebrew Bible (in Ezra and Daniel) testify to a significant change in the linguistic constitution of *Judaism. Abraham himself had been an Aramean, although the variants of the Aramaic language during its history are stunning. Conceivably, one reason for Jewish enthusiasm in embracing Aramaic was a distant memory of its affiliation with *Hebrew, but it should always be borne in mind that Hebrew is quite a different language. By the time of Jesus, Aramaic appears to have been the common language of *Judea, *Samaria and *Galilee, although distinctive dialects were spoken; Hebrew was understood by an educated and/or perhaps a nationalistic stratum of the population, and some familiarity with Greek was a cultural—especially a commercial and bureaucratic—necessity.

The linguistic situation in Judea and Galilee demanded that translation be effected for the purpose of popular study and worship. Although fragments of Leviticus and Job in Aramaic, which have been discovered at *Qumran, are technically targumim, the fact is that they are unrepresentative of the genre targum in literary terms (see Aramaic Targums: Qumran). They are reasonably literal renderings; that is, there is some attempt at formal correspondence between the Hebrew rendered and the Aramaic that is presented. The targumim that are extant, as documents deliberately guarded within rabbinic Judaism, are of a different character.

In that the aim of targumic production was to give the sense of the Hebrew Scriptures, paraphrase is characteristic of the targumim. Theoretically, a passage of Scripture was to be rendered orally by an interpreter (*meturgeman*) after the reading in Hebrew; the *meturgeman* was not to be confused with the reader, lest the congregation mistake the interpreta-

tion with the original text (cf. *m. Meg.* 4:4-10 and *b. Meg.* 23b-25b). Regulations that specify the number of verses that may be read prior to the delivery of a targum probably date from well after the period of the NT. Although the renderings so delivered were oral in principle, over the course of time traditions in important centers of learning became fixed and coalescence became possible.

Moreover, the emergence of the rabbis as the dominant leaders within Judaism after A.D. 70 provided a centralizing tendency without which literary targumim could never have been produced. The targumim preserved by the rabbis are notoriously difficult to characterize. They are paraphrases, but the theological programs conveyed are not always consistent, even within a given targum. Although the rabbis attempted to control targumic activity, the extant targumim themselves sometimes contradict rabbinic prescriptions. For example, *Mishnah Megilla* 4:9 insists that Leviticus 18:21 ("You must not give of your seed, to deliver it to Moloch") should not be interpreted in respect of sexual intercourse with Gentiles; the *Targum Pseudo-Jonathan*—a late work, produced long after rabbinic authority had been established—takes just that line. The targumim evince such oddities because they are the products of a dialectical interaction between folk practice and rabbinic supervision—sometimes mediated through a love of dramatic and inventive speculation, a dynamic tension that continued over centuries. Each of the extant targumim crystallizes that complex relationship at a given moment.

2. Categories of Targumim.

The targumim may conveniently be divided among those of the Torah (the Pentateuch), those of the Prophets (both Former Prophets, or the so-called historical works, and the Latter Prophets, or the Prophets as commonly designated in English) and those of the Writings (or Hagiographa), following the conventional designations of the Hebrew Bible in Judaism. The fact needs to be stressed at the outset, however, that although the Hebrew Bible is almost entirely rendered by the targumim in aggregate, there was no single moment and no particular movement that produced a comprehensive Bible in Aramaic. The targumim are irreducibly complex in proveniences, purposes and dialects of Aramaic.

Among the targumim to the Pentateuch, *Targum Onqelos* is a suitable point of departure. *Onqelos* appears to correspond best of all the targumim to rabbinic ideals of translation. Although paraphrase is evident, especially in order to describe God and his revelation in suitably reverent terms, the high degree of correspondence with the Hebrew of the Masoretic Text (and, presumably, with the Hebrew text current in antiquity) is striking. The dialect of *Onqelos* is commonly called Middle Aramaic, which would place the targum between the first century B.C. and A.D. 200. A better designation, however, would be Transitional Aramaic (200 B.C.-A.D. 200), embracing the various dialects (*Hasmonean, Nabatean, Palmyrene, Arsacid, *Esseene, as well as targumic) that came to be used during the period, since what followed was a strong regionalization in dialects of Aramaic, which we can logically refer to as Regional Aramaic (A.D. 200-700).

Because it was transitional, various targumim were produced in Transitional Aramaic after its demise as a common language. For that reason, the year 200 is not a firm date, after which a targum in Transitional Aramaic cannot have been composed. *Onqelos* should probably be dated toward the end of the third century, in the wake of similar efforts to produce a literal Greek rendering during the second century, and well after any strict construal of the principle that targumim were to be oral. By contrast with the rabbinic ethos that permitted the creation and preservation of *Onqelos*, one might recall the story of Rabbi Gamaliel, who is said during the first century to have immured a targum of Job in a wall of the temple (*t. Sabb. 115a*).

The *Targum Neofiti I* was discovered in 1949 by A. Díez Macho in the Library of the Neophytes in Rome. The paraphrases of *Neofiti* are substantially different from those of *Onqelos*. Entire paragraphs are added, as when Cain and Abel argue in the field prior to the first case of murder (Gen 4:8); such renderings are substantial additions, and it is impossible to predict when remarkable freedom of this kind is to be indulged. The dialect of *Neofiti* is known as Palestinian Aramaic (and was produced during the period of Regional Aramaic, A.D. 200-700), to distinguish it from the Babylonian Aramaic of *Onqelos*. That distinction between Palestinian and Babylonian manifests the nascent regionalization in the Aramaic language to which we have

referred. But *Neofiti* is produced in a frankly Regional Aramaic, while *Onqelos* appears in a Transitional Aramaic that is on the way to becoming Regional. Yet the chronology of the two targumim is about the same, although *Neofiti* appears somewhat later; the differences between them are a function more of program than dating. The rabbis of Babylonia, who called *Onqelos* "our targum," exerted greater influence there than did their colleagues in the west.

The latest representative of the type of expansive rendering found in *Neofiti* is *Targum Pseudo-Jonathan*. Its reference to the names of Muhammad's wife and daughter in Genesis 21:21 puts its final composition sometime after the seventh century A.D. (This oddly designated targum is so called in that the name *Jonathan* was attributed to it during the Middle Ages, because its name was abbreviated with a *yod*. But the letter probably stood for Jerusalem, although that designation is also not established critically. The title *Pseudo-Jonathan* is therefore an admission of uncertainty.) *Neofiti* and *Pseudo-Jonathan* are together known as Palestinian targumim, to distinguish their dialects and their style of interpretation from those of *Onqelos*. In fact, however, *Pseudo-Jonathan* was produced at the dawn of the period of Academic Aramaic (A.D. 700-1500), during which rabbinic usage continued to develop the language in a literary idiom after it had been supplanted by Arabic as a *lingua franca* in the Near East.

Neofiti and *Pseudo-Jonathan* are to be associated with two other targumim, or to be more precise, groups of targumim. The first group, in chronological order, consists of the fragments of the Cairo Genizah. They were originally part of more complete works, dating between the seventh and the eleventh centuries, that were deposited in the Genizah of the Old Synagogue in Cairo. In the type and substance of its interpretation, these fragments are comparable to the other targumim of the Palestinian type. The same may be said of the *Fragmentary Targum*, which was collected as a miscellany of targumic readings during the Middle Ages. An interesting feature of the targumim of the Palestinian type is that their relationship might be described as a synoptic one, in some ways comparable to the relationship among the Gospels. All four of the Palestinian targumim, for example, convey a debate between Cain and Abel, and they do so with those variations of order and wording that are

well known to students of the Synoptic Gospels.

Both the Former and the Latter Prophets are extant in Aramaic in a single collection, although the date and character of each targum within the collection needs to be studied individually. The entire corpus, however, is ascribed by rabbinic tradition (*b. Meg.* 3a) to Jonathan ben Uzziel, a disciple of Hillel, the famous contemporary of Jesus. There are passages of the *Targum of the Prophets* that accord precisely with renderings given in the name of Joseph bar Hiyya, a rabbi of the fourth century (cf. *Tg. Isa.* 5:17b and *b. Pesah.* 68a).

As it happens, *Targum Isaiah*, which has been subjected to more study than any of the Prophets' targumim, shows signs of a nationalistic *eschatology that was current just after the destruction of the temple in A.D. 70 and of the more settled perspective of the rabbis in Babylon some three hundred years later. It appears that *Targum Jonathan* as a whole is the result of two major periods of collecting and editing interpretations by the rabbis, the first period being tannaitic, and the second amoraic.

After *Targum Jonathan* was composed, probably around the same time the *Fragmentary Targum* (to the Pentateuch) was assembled, targumic addenda were appended in certain of its manuscripts; they are represented in the Codex Reuchlinianus and in a manuscript in the Bibliothèque Nationale (mis)labeled *Hébreu 75*.

Of the three categories of targumim, that of the Writings is without question the most diverse. Although the targum to Psalms is formally a translation, substantially it is better described as a midrash, while the targum to Proverbs appears to be a fairly straightforward rendition of the Peshitta (see Syriac Bible), and the targum(im) to Esther seems designed for use within a celebration of the liturgy of Purim. The targumim to the Writings are the most problematic within modern study, but they are also of the least interest of the three general categories of targumim from the point of view of understanding the NT, in view of their late (in most cases, medieval) date.

3. Significance of the Targumim.

The significance of the targumim for appreciating Jesus and the Gospels follows naturally from assessing their purpose and provenience. Fundamentally, the targumim constitute evidence of the first importance for the way in which the

Hebrew Scriptures were understood, not simply among rabbis but more commonly by the congregations for whom the targumim were intended. Insofar as what is reflected in a targum is representative of the reception of Scripture in the first century, that targumic material is of crucial importance for any student of the NT. But care must also be taken, lest the perspective of later materials be accepted uncritically as representative of an earlier period; that would result in anachronistic exegeses. There are clearly readings in the targumim that presuppose events long after the death of Jesus. One example of such a reading is *Targum Isaiah* 53:4, 5, 10-11a, which clearly anticipates that the reader takes the destruction of the temple as given.

A particular problem is posed for modern study by the persistent notion that there is somewhere extant today a Palestinian targum that substantially represents the understanding of the Hebrew Bible in the time of Jesus. There was a time when that was a comprehensible position, because it was taken that Palestinian Aramaic was more ancient than Babylonian Aramaic. Today, however, the discoveries at Qumran have cast a new light on *Onqelos* and *Jonathan*, which makes them appear more ancient than was supposed some sixty years ago and more similar to Aramaic as spoken in Palestine. *Onqelos* and *Jonathan*, insofar as they represent Transitional Aramaic, convey an earlier form of the language than what we find in the Cairo Genizah, *Pseudo-Jonathan* and the *Fragmentary Targum*. To the same extent that the last three targumim are Palestinian, they also represent the later, Regional dialect of Aramaic. Moreover, the present understanding of early Judaism is that it was too variegated to allow the formation of a single, authoritative tradition of rendering, such as the designation "Palestinian Targum" would suggest. *Pseudo-Jonathan* appears to represent a more recent tendency, not only in language but also in its historical allusions and its form.

The difficulty of assessing the precise form of targumic tradition(s) within the first century should also make us wary of any claim that we know the precise dialect(s) of Aramaic current in that period. The literary remains of the language are sporadic, dialectical variation was great, and there sometimes appears to have been a significant difference between the language as spoken and the language as written.

For all those reasons, attempts to retranslate the Greek Gospels into Jesus' own language are extremely speculative; when the targumim are appealed to by way of antecedent, speculation is piled upon speculation. In purely linguistic terms, it is evident that the Aramaic of Qumran, rather than that of any of the targumim, offers a useful guide in the exercise of retroversion.

The composite nature of the targumim is nonetheless such that upon occasion one may discern in them the survival of materials that did circulate in the time of Jesus and therefore influenced his teaching and/or the memory of that teaching among those disciples who were familiar with such traditions. Whatever Qumran may tell us of the language of Jesus, his thought and its environment are often better represented by the targumim. An example of such a survival might be Leviticus 22:28 in *Pseudo-Jonathan*, "My people, children of Israel, since our father is merciful in heaven, so should you be merciful upon the earth." The expansion in the targum is unquestionably innovative, as compared with what may be read in the Masoretic Text, so that the possible echo in Luke 6:36, within the address known conventionally as the Sermon on the Plain, is with the targum or with nothing at all. It is theoretically possible that the saying originated with Jesus and was then anonymously taken up within the targum.

Without doubt, the statement is rhetorically more at home within Luke than in *Pseudo-Jonathan*, where it appears unmotivated. But it seems inherently unlikely that *Pseudo-Jonathan*, which of all the Pentateuchal targumim is perhaps the most influenced by a concern to guard and articulate Judaic integrity, would inadvertently convey a saying of Jesus. More probably, both *Pseudo-Jonathan* and Luke's Jesus are here independently passing on the wisdom of a proverbial statement. The targumic echo is therefore not the source of Jesus' statement, but it may help us to describe the nature of Jesus' statement.

Examples such as Leviticus 22:28 demonstrate that the targumim might have a heuristic value in illustrating the sort of Judaism that Jesus and his followers took for granted. Recent study has greatly increased the catalog of such instances. But there are also cases in which Jesus appears to have cited a form of the book of Isaiah that is closer to the targum than to any other extant source; in such cases, an awareness

of the fact helps us better to understand his preaching. *Targum Isaiah* 6:9, 10 is an especially famous example, and it helps to explain Mark 4:11, 12. The statement in Mark could be taken to mean that Jesus told parables with the purpose that (*hina*) people might see and not perceive, hear and not understand, lest they turn and be forgiven:

And he was saying to them, "To you the mystery has been given of the kingdom of God, but to those outside, everything comes in parables, so that (*hina*) while seeing they see and not perceive, and while hearing they hear and do not understand, lest they repent and it be forgiven them."

The targum also, unlike the Masoretic Text and the *Septuagint, refers to people not being "forgiven" (rather than not being "healed"), and that suggests that the targum may give the key to the meaning supposed in Mark. The relevant clause in the targum refers to people who behave in such a way "so that" (*d* in Aramaic) they see and do not perceive, hear and do not understand, lest they repent and they be forgiven. It appears that Jesus was characterizing people in the targumic manner, as he characterizes his own fate similarly in Mark with a clause employing *hina* (cf. Mk 9:12), not acting in order to be misunderstood.

In this famous case from Mark, then, the underlying Aramaism of using the clause with *d* caused the saying of Jesus to use the term *hina* in Greek, which may mean "in order that" or "so that." If the former meaning obtains, Mark's Jesus speaks so as not to be understood and deliberately to preclude the forgiveness of those who do not understand. If the latter meaning obtains, then Jesus uses the reference from Isaiah in its targumic form in order to characterize the kind of people who do not respond to his message and what happens to them. The fact of the similarity in word with the targum shows us that the second meaning is preferable, as does the fact that Jesus elsewhere in Mark refers to his own followers as being hard-hearted, with unseeing eyes and unseeing ears (Mk 8:17-18). His point in alluding once again to Isaiah 6 is given at the end of the rebuke, "Do you not yet understand?" (Mk 8:21). Jesus' citation of Isaiah 6 in its targumic form was intended to rouse hearers to understanding, not to make their misunderstanding into his own program.

Another example of overlap with the teach-

ing of Jesus is provided by the final verse of the book of Isaiah targum, which clearly identifies who will suffer where at the end of time, when it says "the wicked shall be judged in Gehenna until the righteous will say concerning them, 'We have seen enough'" (*Tg. Isa.* 66:24). "Gehenna" is just what Jesus associates with the phrase "their worm will not die, and their fire will not be quenched" (Mk 9:48, and see vv. 44, 46 in many manuscripts), which is taken from the same verse of Isaiah. The term *Gehenna* refers in a literal sense to the Valley of Hinnom in the Kidron Valley, just across from the temple in Jerusalem. But because that had been a place where idolatrous human sacrifice by fire had taken place (see 2 Kings 16:3; 21:6), the site was deliberately destroyed and desecrated by King Josiah as part of his cultic reform during the seventh century B.C. (see 2 Kings 23:10). As a result, Gehenna came to be known as the place of the definitive punishment of the wicked.

Apart from James 3:6, the term appears only in sayings of Jesus in the NT; otherwise, only the *Pseudepigrapha and rabbinic literature (especially the book of *1 Enoch) provide us with examples of the usage from the same period or near the same period that enable us to see what the usage means. Gehenna is the place of fiery torment for the wicked. But it is not known as such in the Septuagint, *Josephus or even *Philo; evidently the usage is at home in an Aramaic environment. Rabbi Aqiba also is said to have associated Gehenna with the end of the book of Isaiah (in the Mishnah, see *Ed.* 2:10). Aqiba, however, refers to punishment in Gehenna having a limit, of twelve months; for Jesus, as in *Targum Isaiah*, part of the threat of Gehenna was that its limit could not be determined in advance.

Time and again the targumim present a synoptic relationship among their materials, be it in the instance of the dispute between Cain and Abel (as already mentioned), the Aqedah (Gen 22 in the Palestinian targumim and Isaiah 33:7 in the margin of Reuchlinianus) or the Poem of the Four Nights (Ex 12:32 in the Palestinian targumim). In that the synopticity of the targumim is evinced among four documents, not three (as in the case of the relationship among the Gospels), it is even more complicated to trace a purely documentary, rigidly literary relationship among the texts. The study of the synoptic aspect of the targumim remains in its infancy, but

it appears possible that, once it is better understood, we will find that we also conceive of the literary relationship among the Gospels in a different way.

4. The Targumim and Aspects of Judaism.

The targumim are a rich source of that form of early Judaism and rabbinic Judaism where the folk and the expert aspects of the religion met. For that reason, serious students of the NT might well read them as helping them to comprehend the context within which Jesus taught and his movement first developed, before the transition to a Hellenistic compass and to the Greek language. In particular cases, the targumim uniquely present material that helps to illuminate Jesus' teaching. (In other instances, they may support what we know from other sources.) It might be that a targum happens to preserve proverbial material that Jesus cites or alludes to (see Rabbinic Proverbs). But there are also cases in which Jesus seems to have been influenced by a specifically targumic understanding of the Bible. Finally, apart from what they may tell us of particular passages in the Gospels, the targumim give us an example of how composite documents evolved within Judaism, and to that extent they may provide an analogy for understanding the Gospels themselves.

5. The Targumim and Paul.

Paul also is sometimes better understood in the light of the targumim than he can be otherwise. In his letter to the Galatians, Paul uses the phrase "hanging upon a tree" in order to describe Jesus' execution. The wording itself comes from Deuteronomy 21:23, and Paul applies it to argue that, in being crucified, Jesus was subject to the curse of "everyone who hangs upon a tree" (Gal 3:13, which follows the LXX in its wording). The argument assumes that crucifixion carries with it some sanction of Judaic law, and that is just what we find in the Ruth targum, when Naomi says, "We have four kinds of death for the guilty, stoning with stones, burning with fire, execution by the sword and hanging upon a tree." In his commentary, D. R. G. Beattie observes the contradiction of the Mishnah (*Sanh.* 7:1) in equating crucifixion with the punishment envisaged in Deuteronomy. That is a principal support of his suggestion of "an ancient origin, at least for that part of the Targum."

The argument is vitiated by the severe criti-

cism that has recently been leveled at any form of the assertion that a statement that appears to be antimishnaic in content must be premishnaic in origin. The logic of midrash may explore almost any logical and historical possibility, precisely because it is not identified with halakic authority. And the Ruth targum is late, midrashic in nature; it represents the later interpretative tendency in Academic Aramaic, probably during the eighth century, of incorporating selected midrashic passages within a rendering that was generally more restrained.

But Beattie's basic insight can be supported by reference to what Paul himself says. Here is an indisputably first-century usage in which the midrashic connection between crucifixion and Deuteronomy 21:23 is explicitly made. Taken together, Galatians and the Ruth targum show us that this connection is as ancient as Beattie suggests and that Paul was making an argument that was within the idiom of midrashic possibility.

But perhaps the most evocative overlap between Paul and the targumim corresponds to the equally telling comparison between Jesus and the targumim: reference to the kingdom of God. The phrase conveys the central category of Jesus' theology and also appears in the form "kingdom of the Lord" in the targumim (see *Tg. Onq.*, Ex 15:18; *Tg. Ps.-J.*, Is 24:23; 31:4; 40:9; 52:7; Ezek 7:7; Obad 21; Zech 14:9). The first usage in *Targum Isaiah* (*Tg. Isa.* 24:23) associates the theologoumenon of the kingdom of God with God's self-revelation on Mt. Zion, where his appearing is to occasion a feast for all nations (see Is 25:6-8). The association of the kingdom with a festal image is comparable to Jesus' promise in Matthew 8:11 and Luke 13:28-29 that many will come from the ends of the earth to feast with Abraham, Isaac and Jacob in the kingdom of God.

The Masoretic Text develops a picture of the Lord descending upon Mt. Zion as a lion that is not afraid of the shepherds who attempt to protect the prey. That arresting image is referred explicitly to the kingdom in *Targum Isaiah* (*Tg. Isa.* 31:4):

As a lion, a young lion roars over its prey, and, when a band of shepherds are appointed against it, it is not broken up at their shouting or checked at their tumult, so the kingdom of the Lord of hosts will be revealed to settle upon the Mount of Zion and upon its hill.

This passage refutes the outworn generalization that the kingdom within Judaic usage was static in nature and that the dynamic aspect was Jesus' innovation. The kingdom's dynamism was not original with Jesus; his particular contribution was in his portrayal of how the kingdom comes.

The dynamic nature of the kingdom in the targumim explicitly involves eschatological judgment. In the case of Paul, the emphasis falls more unequivocally on the aspect of judgment involved in the kingdom than it does in the case of Jesus (see Gal 5:21; 1 Cor 6:9-11; 15:24, 50). At the same time, Paul understands that the kingdom is also active as a force in the present, involving both divine power (see 1 Cor 4:20) and human response to that power through the Holy Spirit (Rom 14:17). In their mutual reference to the kingdom of God as the dynamic strength of God's rule, Jesus and Paul show themselves to have inherited and evolved the idiom of the targumim.

RABBINIC PARABLES

Parables are "short fictitious stories that illustrate a moral attitude or religious principle" (*Webster's Third New International Dictionary*). Normally they have two levels of meaning, popularly the "earthly story" and the "heavenly meaning."

1. Frequency
2. Variety
3. Parables as Analogies
4. Parables as Mini-Dramas
5. Caricature
6. Stock Metaphors
7. Function and Audience
8. Comparison with Jesus' Parables

1. Frequency.

In the ancient Greco-Roman world parables occur frequently in the teaching of Jesus and the rabbinic literature but only rarely elsewhere. More than 1,500 rabbinic parables survive, though only 324 of these date before A.D. 200. These earlier parables are given in R. M. Johnston (1977). Only three date before the time of Jesus, from R. Hillel in the generation immediately preceding. Thus the 60 parables of Jesus in the Synoptic Gospels are among the earliest known. Yet Jesus' audience realized he was speaking in parables (Mt 13:10), so the form was apparently well known at that time. Perhaps parables were common in the *synagogue sermons of Jesus' day, as they were later. We have too little information from this early period to be sure.

2. Variety.

In Jewish usage, the Greek word *parabolē*, like its Hebrew counterpart *māsāl*, is broader in meaning than the English word *parable*. Both also include proverb and paradox, and *māsāl* can mean byword or prophetic poem as well. Here we confine ourselves to parables in the narrower sense, illustrative stories ranging in length from a sentence or two (a similitude) to a short story of a few hundred words (story parable). These may make a single point or several; they may be rather allegorical or not. To conserve space here, the parables quoted are the shorter ones.

3. Parables as Analogies.

Most parables have two levels of meaning. As J. W. Sider notes, parables typically make their points by means of analogy or proportion, using some situation in everyday life to picture something in the moral or spiritual realm. "R. Jacob said: 'This world is like a lobby before the world to come. Prepare yourself in the lobby that you may enter the banquet hall'" (J116 [indicates the number of the parable cataloged in Johnston's work]; *m. 'Abot* 4:16) Here the analogy is:

this world: the world to come = lobby: banquet hall.

The left side of the equation is the reality part (tenor, *nimšal*); the right side is the picture part (vehicle, *māsāl*). The speaker is making one or more points of comparison through this proportion. His main point here is (1) we need to get ready in the first before we enter the second. Some other points are probably implied: (2) we have to pass out of the first to get into the second; (3) the second is far more important than the first, or even the (3a) second is what the first is all about.

4. Parables as Mini-Dramas.

B. H. Young notes that many parables have a structure like that of a miniature drama. They often begin with an introductory formula, followed by the presentation of the main characters and setting. A crisis is developed and then resolved. Finally, the parable is applied.

Judah ha-Nasi said: "Unto what is the matter like? It is like a king who was judging his son, and the accuser was standing and indicting him. When the tutor of the prince saw that his pupil was being condemned, he thrust the accuser outside the court and put himself in

his place in order to plead on his behalf. Even so, when Israel made the Golden Calf, Satan stood before God accusing him, while Moses remained without. What then did Moses do? He arose and thrust Satan away and put himself in his place." (J267; *Ex. Rab.* 43:1)

5. Caricature.

Parables are typically stories drawn from everyday life, but often they have some unusual character or exaggerated action designed to draw attention to a particular point. The best ones are short and memorable creations of experienced storytellers.

It is said, "Will you be angry with the entire assembly when only one man sins?" (Num 16:22). R. Simeon b. Yohai taught: "A parable. It is like men sitting in a ship. One took a drill and began boring beneath his seat. His fellow-travelers said, 'What are you doing?' He responded, 'What does it matter to you? It's my seat I'm boring under!' They said, 'The water will come in and drown us all!'" (J271; *Lev. Rab.* 4:6)

6. Stock Metaphors.

Parable stories often have characters and actions that are based on common metaphors. Many of these are drawn from the OT, and they help the listener understand what the point is. Among Johnston's 324 early rabbinic parables, by far the commonest metaphor is that of a king (161 times), nearly always standing for God. Other common pictures for God are husband and father. For Israel, the stock metaphors are son, wife, daughter and servant. *Moses is often pictured as a friend, steward or tutor. A banquet is used with some variety, but a common meaning is the age to come. Inheritance sometimes pictures the promised land, sometimes Israelites and once the future reward. The skillful parable maker would often weave together a consistent set of these motifs into a story to teach a lesson.

A philosopher asked R. Gamaliel, "Why is your God jealous of idol-worshippers rather than of the idol itself?" He answered, "I will tell you a parable. To what is the matter like? It is like a king who had a son, and his son raised a dog whom he named for his father. Whenever the son took an oath, he said, 'By the life of this dog, my father!' When the king heard of it, with whom was he angry, his son or the dog? Surely his son!" (J174; *Mek. Bahodesh* 6:113ff.).

7. Function and Audience.

Among the rabbis, parables are commonly used in two ways—as illustrations and as arguments. The rabbi's audience might be his disciples in a teaching situation, a congregation listening to a synagogue sermon or some outsider in an encounter or debate. We see the last of these in the parable cited in §6 above. The teaching situation is probably the occasion for §§4-5, which are explaining Scripture passages, and the setting of §3 is likely to have been sermonic (see *Homily, Ancient*).

8. Comparison with Jesus' Parables.

The sorts of parables used by the rabbis are often similar to those used by Jesus, and each can cast some light on the interpretation of the other. In fact, most of what has been said above applies to the parables of Jesus.

8.1. Fables. One type of rabbinic parable not found in the Gospels is the fable, a story featuring animals or plants acting in human ways. When one rabbi warned R. Akiba for violating the Roman decree against studying the Torah, the latter responded,

Unto what is the matter like? It is like a fox who was walking alongside a river, and he saw fish going in swarms from one place to another [fleeing the fishermen]. He said to them, "Would you like to come on to the dry land . . . ?" They said to him, ". . . If we are afraid in the element in which we live, how much more in the element in which we would die!" So it is with us. . . . If we go and neglect the Torah [which is our life], how much worse off we shall be. (J148; *b. Ber.* 61b)

This type of parable is occasionally found in the OT (e.g., Judg 9:8-15), but is best known in the collection ascribed to Aesop (sixth century B.C.).

8.2. Sample Parables. A type of parable used by Jesus but not apparently by the rabbis is the sample, or paratigm, parable. In these, the story operates only on a single level, being already a moral or religious story without the use of analogy. Instead, a sample of the sort of behavior to be approved or condemned is given (e.g., the parables of the Good Samaritan, Lk 10:30-36, and the Rich Fool, Lk 12:16-21), and the recipient is expected to generalize the lesson from this concrete example. These have a background in the case law of the OT and in the sample stories of Proverbs (e.g., Prov 7:6-23).

8.3. Similar Parables. Stock metaphors (§6

above) are used by Jesus as well as the rabbis, and in a few cases, a similar cluster of such metaphors results in a very similar parable. Compare R. Tarfon's saying, "The day is short, the task is great, the laborers are idle, the wage is abundant, and the master of the house is urgent" (*m. 'Abot* 2:15) with Jesus' "The harvest is plentiful, but the workers are few. Ask the Lord of the harvest, therefore, to send out workers into his harvest field" (Lk 10:2). Or consider the following parable:

A king had a vineyard for which he engaged many laborers, one of whom was especially apt and skillful. What did the king do? He took this laborer from his work and walked through the vineyard with him. When the laborers came for their hire in the evening, the skillful laborer also appeared among them and received a full day's wages from the king. The other laborers were angry at this and said, "We have toiled the whole day, while this man has worked but two hours; why does the king give him the full hire, even as to us?" The king said to them, "Why are you angry? Through his skill he has done more in two hours than you have all day." (*y. Ber.* 2:5)

The story is very similar to that of Jesus in Matthew 20:1-16, but the lesson is very different.

RABBINIC PROVERBS

The word *proverb* suggests a gem of popular wisdom, a short, pithy statement that encapsulates a keen observation about nature and/or human nature, and is memorable and often repeated.

Rabbinic proverbs are part of a long tradition linking Jewish wisdom teaching with Torah. The biblical proverbs are paradigmatic as exhortations to correct moral choices; this emphasis continues from the Old Testament period into the first centuries A.D. As they appear in selected texts from late antiquity, rabbinic proverbs illustrate the richness of practical instruction and illuminate our study of Jesus as the consummate teacher of wisdom.

1. Definition
2. A Literary/Historical Survey
3. Characteristics of Rabbinic Proverbs
4. Selected Parallels: Rabbinic Proverbs and the Teaching of Jesus

1. Definition.

The Hebrew word translated "proverb" is *māsāl*, a term that covers a wide spectrum of literary products. While the fundamental meaning of this word implies "likeness" (Johnson, 162-63), the various means of articulating that likeness are manifold. *Māsāl* frequently indicates a *parable, a literary form that significantly develops the comparison. This study of rabbinic proverbs, however, will focus on decidedly brief but pungent and memorable statements, only some of which are labeled *m'šālīm*. Certain of these are introduced in the rabbinic collections by (*hayyenu*) *de'amre 'inše*, "according to the popular saying," indicating they were often repeated.

2. A Literary/Historical Survey.

The same features that characterize biblical proverbs are reflected in their rabbinic counterparts.

2.1. Attributed Collections. A majority of biblical proverbs are found in collections and are attributed to named individuals whose reputation for wisdom gives credence to the statements. Portions of the book of Proverbs are attributed to Solomon (Prov 10:1; 25:1) and to "the wise" (Prov 22:17). Likewise, the wisdom sayings collected in *Pirque 'Abot* (*Sayings of the Fathers*) are attributed to significant sages of the first centuries B.C. and A.D.

2.2. Isolated Statements. At the same time, the biblical text contains singular instances of popular sayings. One example is Ezekiel 18:2b: "the fathers eat sour grapes, and the teeth of the children are set on edge." So also, popular sayings appear individually in the rabbinic literature, often introduced by (*hayyenu*) *de'amre 'inše*.

2.3. Topics. Biblical wisdom texts deal with

knowledge and wisdom, righteousness, truth, justice and humility; the rabbinic collections of proverbs address the same profound concerns, starting with the necessity of knowing and practicing Torah. Many of the biblical and rabbinic proverbs are founded upon observations about the natural world. Often the proverbs focus on the implicit order and predictable character of that world and then note the reversals introduced by humanity.

2.4. Extrabiblical Sources. The long tradition of Jewish texts that contain proverbs includes *Sirach (Ben Sirā) and the *Wisdom of Solomon from the intertestamental period. Indicative of the perceived importance of these pursuits, Sirach 39:1-3 describes the sage who devoted himself to the study of the law of the Most High: "He seeks out the wisdom of all the ancients . . . he seeks out the hidden meanings of proverbs [*apocrypha paroimion*] and is at home with the obscurities of parables" (NRSV).

The rabbinic texts cited below include the Mishnah, compiled about A.D. 220; *Mekilta de Rabbi Ishmael*, an exegetical commentary on the book of Exodus that most likely dates to the second half of the third century; and the Babylonian Talmud, compiled around A.D. 500. While the names of the sages suggest that some of these traditions may be representative of the first century, they have undergone centuries of oral development.

3. Characteristics of Rabbinic Proverbs.

3.1. Collections with a Biblical Foundation.

3.1.1. 'Abot. The best known collection of rabbinic proverbs is 'Abot, a tractate in the Mishnah, one purpose of which seems to have been to establish the authority of oral tradition by linking it with written Torah (Lerner, 278). The named individuals whose wise sayings are cited span the period from Ezra to the production of the Mishnah by Rabbi Judah the Prince, thus demonstrating this continuity. The major subjects addressed have to do with the study and practice of Torah, the importance of a teacher, care with words, choosing to do good, wisdom and the fear of heaven, honoring other people, justice and humility. Chapter 5 presents these gems of wisdom in numbered lists, a pattern found in Proverbs and an aid to memory.

Hillel's words are prominent in the early chapters: "A name made great is a name destroyed, and he that increases not decreases,

and he that learns not is worthy of death, and he that makes worldly use of the crown shall perish" (*m. 'Abot* 1:13) and "do not judge your fellow until you have come into his place" (*m. 'Abot* 2:5b). Further expositions of 'Abot's wisdom sayings appear in *'Abot de Rabbi Nathan*, one of the minor tractates of the Babylonian Talmud.

3.1.2. The Babylonian Talmud. Later collections of rabbinic proverbs appear in *Derek Eres Rabba* and *Baba Qamma* 92a-b, tractates of the Babylonian Talmud. Chapter 2 of *Derek Eres Rabba* is a series of character descriptions, each of which is grounded in a biblical text. These are similar to traits described in Proverbs, and parts of the chapter also resonate with Jesus' Sermon on the Mount. "Concerning them who are merciful, who feed the hungry, give drink to the thirsty, clothe the naked and distribute alms Scripture declares, *Say of the righteous, that it shall be well with him*" [Is 3:10] (*b. Der. Er. Rab.* 2:21).

In the *Baba Qamma* collection, several features are significant. First, some of them are cited as popular sayings, while others are attributed to the sages. Second, in both cases there is an intentional effort to link them with biblical texts as their bases. Note the following examples:

Raba said to Rabbah bar Mari: "Whence can be derived the popular saying that together with the thorn the cabbage is smitten?" He replied: "As it is written, *Why will you strive with Me? You all have transgressed against Me, says the Lord*" [Jer 2:29]. (*b. B. Qam.* 92a)

This proof-text and those that follow in the ensuing discussion draw on a plural pronoun in the biblical text to conclude that all are worthy of punishment.

Raba said to Rabbah bar Mari: "Whence can be derived the saying of the rabbis: 'If your fellow calls you an ass, put a saddle on your back?'"

The response quotes Genesis 16:8-9, in which Hagar, addressed by the angel as the handmaid of Sarai, calls Sarai her mistress, accepting the role (*b. B. Qam.* 92b).

3.2. Isolated Statements. Apart from the collections of proverbs, we occasionally find single maxims that are cited in the context of biblical text analyses. For example, as the sages discussed the name Di-Zahab (Deut 1:1),

the school of Yannai said: "Moses said before The Holy One Blessed Be He: 'Master of the Universe, it was because of the silver and

gold that you poured out on Israel until they said: Enough! that they were led to make a god of gold." A *mashal*: The lion does not tear and roar out of a basket of straw, but out of a basket of meat. (*b. Sanh.* 102a)

The Hebrew word for "enough" is related to *Di Zahab* is "gold." The moral is that they were overwhelmed by the abundant presence of that which tempted them to sin. The proverb drawn from the natural world graphically illustrates the point.

3.3. Incongruities and Paradoxes. Folk proverbs often point out incongruities and paradoxes. "Though the wine belongs to the master, the thanks are given to the butler" (*b. B. Qam.* 92b). Hillel's words in *m. 'Abot* 1:13 (cited above) are illustrative of a recognizable set of paradoxes.

3.4. Hebrew and Aramaic. Although the Mishnah is an essentially Hebrew text, some of the maxims quoted by Hillel in *'Abot* are in Aramaic. In other words, those sayings that were reflective of the earlier discussions in academic circles were preserved in Hebrew, while the popular culture and language only occasionally emerged in the text. In the Babylonian Talmud, compiled later and in a different geographical context, both the proverbs and the sages' discussion are primarily in Aramaic.

4. Selected Parallels: Rabbinic Proverbs and the Teaching of Jesus.

4.1. Paradoxes. Some of Jesus' proverbs highlighted the reversals of life in the kingdom of God: "The first shall be last, and the last first" (Mt 19:30; 20:16); and "whoever wants to save his life will lose it, but whoever loses his life for me will find it" (Mt 16:25).

4.2. Measure for Measure. A maxim that appears with great frequency in the rabbinic texts is the assurance that "according to the measure that a person has used, so it will be measured to him." This is followed by citations of multiple biblical examples to demonstrate that God's justice is balanced and the measures of punishment and reward fit the human activity (*m. Sofa* 1:7-9; *Mek. Beṣallah* 1; *Mek. Sirta* 2). Overall, there is a qualitative balance in all of God's dispensations of justice. In those contexts, however, the rabbis also emphasized that the measure of reward for good was always greater than the measure of punishment for a crime. This was in keeping with Exodus 20:5-6.

When Jesus used this expression in Matthew 7:1-2, simple balanced justice is evident. "Do not judge, so that you may not be judged. For with the judgment you make you will be judged, and the measure you give will be the measure you get" (NRSV). In Mark 4, Jesus' reference to measure for measure engaged both the aspects of balance and greater measure. Following his disclosure of the meaning of the parable of the sower, Jesus says: "For there is nothing hidden, except to be disclosed; nor is anything secret, except to come to light. . . . the measure you give will be the measure you get. For to those who have, more will be given; and from those who have nothing, even what they have will be taken away" (Mk 4:22-25 NRSV).

4.3. The Sabbath. Jesus' use of proverbs was occasionally prompted by disputes. One example was the ongoing sabbath controversy. After the "Pharisees challenged the actions of his disciples on the sabbath, Jesus responded with several biblical examples and then made a summary statement in Mark 2:27 (NRSV): "The sabbath was made for humankind, and not humankind for the sabbath." This is echoed in *Mekilta* in conjunction with its commentary on Exodus 31:13. The question for the sages was what activities ought to supersede the sabbath and why. Following that discussion, R. Shimon ben Menasiah said: "The verse says: *Keep the Sabbath because it is holy for you.* The Sabbath has been given for you; you haven't been given for the Sabbath" (*Mek. Sabta* 1).

RABBIS

The term "rabbi" has ignited controversy in the study of the NT. Although it appears frequently within the Gospels in reference to Jesus, some scholars deny that earliest Christianity can be described in rabbinic terms at all. Others have been prepared to assume, as part of the background of the NT, the existence of rabbinic institutions that only developed after the destruction of the temple in A.D. 70. Considering the history of the term's actual usage during this period enables us to negotiate this impasse.

1. The Pharisees Within Early Judaism
2. The Transition to Rabbinic Judaism

1. The Pharisees Within Early Judaism.

The rabbinic movement in its earliest phase is to be identified with Pharisaism. The *Pharisees are portrayed by *Josephus as being critical of the *Hasmonean *priesthood. Their expression was at first political (Josephus *Ant.* 13.10.5-6 §§288-98) and could extend to violent action, as in the demand that the counselors who advised Alexander Janneus to kill some of their sympathizers should themselves be executed (Josephus *J.W.* 1.5.2-3 §§110-14). At base, however, the orientation of the Pharisees was toward the achievement and maintenance of *purity.

The purity they strived for had fundamentally to do with making offerings, people and priests fit for the cult of *sacrifice in the *temple. For that reason, the issues of the personnel of the priesthood, the sorts of animals and goods that might be brought and their permitted proximity to all sources of uncleanness were vitally important.

By the dawn of the present era, the Pharisees found a distinguished teacher in *Jerusalem in the person of Hillel. Hillel is justly famous for the dictum, uttered some twenty years before Jesus, "That which you hate, do not do to your fellow; that is the whole Torah, while all the rest is commentary thereon" (*b. Sabb.* 31a). The story is striking, but it can also be misleading. First, Hillel in the tale is talking to an impatient proselyte who wished to learn the Torah while he stands on one foot; his impatience has just won him a cuff with a measuring rod from Shammai, the rabbi with whom Hillel is programmatically

contrasted in Mishnah. Obviously Hillel has no overt desire to reduce the Torah on the grounds of principle, and he tells the proselyte, "Go and learn it." In other words, the Gentile is told that the revelation to *Moses is the expression of the best ethics, and for that reason the whole should be mastered.

In any case, Hillel was understood among the Pharisees as having come to prominence for adjudicating a distinct issue: whether the Passover (see Festivals and Holy Days: Jewish) could be offered on the *sabbath. Hillel first offers a scriptural argument for accepting the practice: since other forms of priestly service are permitted, so is the slaying of the lamb. His hearers are unimpressed, until he states that he learned the position in Babylon, from Shemaiah and Abtalion, distinguished predecessors in the movement. Their authority is sufficient to displace the current leaders of Pharisaic opinion, the sons of Bathyra (cf. *t. Pesah.* 4:13, 14; *y. Pesah.* 6:1; *y. Sabb.* 19:1; *b. Pesah.* 66a, b).

The latter story may appear the more arcane to most readers, but it is also more redolent of Pharisaic culture. Hillel consistently involved himself in cultic questions and disputes in Jerusalem. His position also is said to have convinced another teacher, Baba ben Buta, to provide cultically correct beasts in great numbers for slaughter, with the stipulation (against the school of Shammai) that the offerer lay hands on the victim immediately prior to the killing (cf. *t. Hag.* 2:11; *y. Hag.* 2:3; *y. Beša* 2:4; *b. Beša* 20a, b). Moreover, the basis of Hillel's authority was not so much any scriptural expertise as his mastery of what he had been taught by previous masters. Hillel embodies the Pharisaic principle that the "chains" of their tradition were normative for purity. Such chains were understood to have been developed from Moses to Ezra, after that by "the men of the great congregation" and then by teachers who were generally invoked as "pairs" (*m. 'Abot* 1:1-18). The last pair was Hillel and Shammai, from which point the Pharisees acknowledged that division increased in Israel (*b. Sotā* 47b; *b. Sanh.* 88b; *t. Sotā* 14:9; *t. Hag.* 2:9; *t. Sanh.* 7:1; *y. Hag.* 2:2; *y. Sanh.* 1:4). The notion of primeval unity disturbed by recent faction is probably mythical, but it is plain that the Pharisees developed their oral tradition by means of a structured understanding of the past, as well as by mnemonic techniques.

The term *Pharisee* is probably an outsiders'

name for the movement and may mean "separatist" or "purist"; participants in the movement appear to have referred to their ancient predecessors (after Ezra) as "the sages" or "the wise" and to their more recent predecessors and contemporaries as "teachers" (cf. *rab* in *m. 'Abot* 1:6, 16; *sophistēs* in Josephus). The normal, respectful address of a teacher was "my great one," or "my master," *rabbi*. Jesus is so addressed in the Gospels more than by any other designation; moreover, he had a characteristic interest in purity, and a dispute concerning appropriate sacrifice in the temple cost him his life.

That Jesus' followers called him *rabbi* (Mt 26:25, 49; Mk 9:5; 10:51; 11:21; 14:45; Jn 1:38, 49; 3:2; 4:31; 6:25; 9:2; 11:8) is a straightforward deduction from the Gospels as they stand; that he is most naturally to be associated with the Pharisees of his period is an equally straightforward inference. When, during the course of the twentieth century, scholars have expressed reservations in respect of that finding, they have had in mind the danger of identifying Jesus with the rabbinic movement after A.D. 70, which was more systematized than before that time and which amounted to the established power within Judaism. Unfortunately, anxiety in respect of that anachronism can result in the far greater error of bracketing Jesus within "sectarian" Judaism (as if "orthodoxy" existed in early, pluralized Judaism) or—worse still—of placing him within no Judaism at all (see *Theologies and Sects, Jewish*).

2. The Transition to Rabbinic Judaism.

During the time of Hillel and Shammai and until A.D. 70, Pharisaic teaching was targeted at the conduct of the cult in the temple, but its influence was limited. Nonetheless, Pharisees appeared to have succeeded reasonably well in towns and villages, even in Galilee, where they urged local populations to maintain the sort of purity that would permit them to participate rightly in the cult. Josephus's fellow in the armed resistance against Rome and archrival, John of Gischala, may well have been representing Pharisaic interests when he arranged for Jews in Syria to purchase oil exclusively from Galilean sources (Josephus *J.W.* 2.21.2 §§591-94). In any case, it does appear plain that some Pharisees supported the revolt of A.D. 66-70, while others did not (see *Jewish Wars with Rome*). But while many priests and *Essenes perished in the internecine strife of the revolt and in the war

with the Romans, and while the aristocracy of scribes and elders in Jerusalem was discredited and decimated, the Pharisees survived the war better than did any other single group. They were well accepted locally, had long ago accommodated to some marginality and survived with their personnel and their traditions comparatively intact.

Rabbinic literature itself personifies the survival of the movement in a story concerning Rabbi Yohanan ben Zakkai. According to the story, Yohanan had himself borne out of Jerusalem on the pretense he was dead, only to hail Vespasian as king; on his ascent to power, Vespasian granted Yohanan his wish of settlement in the town of Yavneh. In that Josephus claims similarly to have flattered Vespasian (Josephus *J.W.* 3.8.9 §§399-408) and to have seen in his coming the fulfillment of messianic prophecy (Josephus *J.W.* 6.5.4 §§10-15), the tale is to be used with caution, but it remains expressive of the rabbinic ethos.

With the foundation of academies such as the one at Yavneh after A.D. 70, one may speak of the transition of Pharisaism to rabbinic Judaism. The rabbis, those who directly contributed to rabbinic literature and to the Judaism that is framed by that literature, belonged to a movement much changed from the popular Puritanism of the Pharisees, initially for reasons not of their own making. The sort of leadership that a Yohanan ben Zakkai might offer became suddenly attractive, in the absence of priestly, Essene or scribal alternatives. The target of the tradition's application became correspondingly wider as the Pharisaic/rabbinic program was applied not simply to issues of purity and sacrifice but also to worship generally, ethics and daily living. To Yohanan is explicitly attributed the view that the world, which had been sustained by the temple, the law and deeds of faithful love, now was to be supported only by the last two of the three (*'Abot R. Nat.* 4). Moreover, he specifically adjudicated, on the basis of his tradition, how feasts might be kept in the gathering for reading, prayer and discussion that was called a congregation or *synagogue (*keneset*, also applied to buildings erected for the purpose of such gatherings; cf. *m. Sukk.* 3:12; *m. Roš Haš.* 4:1, 3, 4).

The development of that sort of worship, as a replacement for activity within the temple, was not without analogy during the period prior to

A.D. 70. Mishnah (*m. Ta'an.* 4:2) envisages a system in which priests, Levites and laypeople alike gathered in local synagogues while their representatives were in Jerusalem. The priestly system of courses of service was perhaps the germ of such *piety: it allowed for a substantial population of priests, which it divided into twenty-four courses. While a few priests from each group were chosen to officiate in Jerusalem during the course of the week that the group was appointed to cover, the remainder may have gathered and read the appropriate lections in the villages of Judea and Galilee where they normally lived (1 Chron 24:1-19; Josephus *Ant.* 7.14.17 §§365-67). The inclusion of the faithful in *Israel generally in such meetings was a natural development under the rabbis, and general meetings for prayer and instruction had long been a customary feature of Judaism in the *Diaspora. The development of worship in synagogues as something of a replacement for worship in the temple was therefore natural.

The transition from Pharisaism to rabbinic Judaism, however, was not accomplished immediately after A.D. 70, nor was it a matter of the same movement with the same personnel carrying on in a totally new environment. The environment was new and favored the emerging authority of rabbis uniquely. But the Pharisees of the period before A.D. 70 also were sufficiently flexible to accommodate an influx of priests and scribes into their ranks. The priestly interest of the Pharisaic movement was historically organic, and the references to priests in stories and teachings from the time of Yohanan (cf. Rabbi Yosi the Priest, *m. 'Abot* 2:8) and well into the second century is striking.

Moreover, the consolidation of the rabbis' power after A.D. 70, predicated as it was on local influence, could be assured only by means of the control of local adjudication, as well as worship and study. The tendency of scribes to align themselves with the Pharisees, together with priestly adherents and sympathizers with the movement, assured the emergence and the success of the rabbis. At the same time, the triumph of rabbinic authority assured the continuing influence of the priests in decisions regarding purity, in blessings and in receipts of payment of redemption and of tithe, while scribal influence, in the production of written materials and the convocation of formal courts, is also striking. Nonetheless, the functional consolidation of

the power of the old groups and factions was achieved only during the time of Rabbi Judah, with the emergence of a patriarchate recognized and supported by the Romans.

In the wake of A.D. 70 and the Roman confiscation of the tax formerly paid for the temple, neither Jerusalem nor its environs was amenable to the maintenance of a hub of the movement, and even Yavneh was eclipsed during the second century by centers in prosperous Galilee, such as Usha and Beth She'arim. Later, metropolitan cities such as Sepphoris and Tiberias were the foci of leadership. There was at first nothing like a central leadership or even a common policy, but rabbinic Judaism was constituted in the Pharisaic, priestly and scribal quest for the purity of the nation. The health of the movement required a shift from the highly personal authority of the Pharisees to some notion of learned consensus.

Just that shift is reflected in a Talmudic story concerning a great teacher, Rabbi Eliezer ben Hyrcanus. The story has it that, against a majority of his colleagues, Eliezer held that a ceramic stove, once polluted, might be reassembled, provided the tiles were separated by sand. The majority taught that the result would be unclean; such materials should never be used again. Eliezer's correctness was demonstrated by a tree that was uprooted at his behest, by a stream that ran backwards at his command, by a building he similarly demolished and by a voice from heaven. Despite all that, the majority held that its decision was binding (*b. B. Mes.* 59a, b). As the rudiments of an institution emerged, Eliezer's personal authority clearly diminished; the rabbis of the second century were to stress a rational, consensual achievement of purity, and by the time of the Talmud that was held to be a greater purity than charismatic authority could achieve.

The historic concern for the temple as the focus of purity nonetheless resulted in a final and nearly disastrous attempt—encouraged by some rabbis—to free and restore the holy site. The most prominent rabbinic supporter of that attempt was a student of Eliezer's renowned for his expertise in the tradition, Aqiba. Aqiba supported the claims of one *Simeon bar Kosiba to be the new prince of Israel, acting in conjunction with a priest named Eleazar. Simeon's supporters referred to him as Bar Kokhba, "son of a star," projecting onto him the messianic expectations of Numbers 24:17, while his detractors

came to know him as Bar Koziba, "son of a lie." His initial success and military acumen is attested in letters he sent his commanders during his revolt and regime, which lasted from A.D. 132 until 135. In the shape of Hadrian, the response of the empire was even more definitive than it had been in A.D. 70. The remnants of the temple were taken apart, and new shrines were built in the city; Jerusalem itself was now called Aelia Capitolina. Jews were denied entry, and Judea became Syria Palaestina.

The rabbis survived by disowning the aspirations embodied by Aqiba but keeping much of his teaching. "Aqiba, grass will grow out of your jaw, before the son of David comes" (y. *Ta'an.* 4:7; *Lam. Rab.* 2.2.4); that is to say, the messiah is to be of David, not of popular choosing, and his time cannot be pressed. But the greatness of the rabbinic response to national defeat and their consequent redefinition of Judaism consisted less in their formulation of a particular teaching regarding *messianism, which emerges in any case from time to time in many forms of Judaism, than in their textual constitution of a form of thought, discipline and life, the Mishnah (see Rabbinic Literature: Mishnah and Tosefta).

RELIGION, GRECO-ROMAN

The adjective *Greco-Roman* indicates that the cults

discussed in this article are those which were practiced in the ancient Mediterranean world during the Hellenistic and Roman periods (i.e., from the late fourth century B.C. through the fifth century A.D.). These were periods of complex political and cultural change and syncretism in which first the Greeks and then the Romans provided the dominant political and cultural frameworks for life in the ancient Mediterranean world. Thus Greco-Roman religions include not only those public and private cults which had developed out of archaic and classical Greek and Roman religious practices, but also the many native cults and *mystery religions which had arisen on ancient Near Eastern soil and which had subsequently spread to the major urban areas of the Mediterranean world, including early Judaism and early Christianity.

1. Political and Cultural Setting
2. Greek Religion
3. Roman Religion
4. Hellenistic Religions

1. Political and Cultural Setting.

The political and cultural situation of the Mediterranean world changed radically following the victorious campaign which *Alexander the Great, king of Macedonia, waged against the massive Persian Empire beginning in 334 B.C. when Alexander invaded Anatolia with a force of 37,000. His father, Philip II, had earlier defeated the Greeks at the battle of Chaeronea in 338 B.C., and upon his death in 336 B.C. he was succeeded by his son Alexander III. Alexander was successful at the battle of Granicus in Anatolia in 334 B.C., where he first clashed with the Persian army under Darius and won decisively; the final blow was delivered at the battle of Gaugamela near the Tigris river in 331 B.C. Following the premature death of Alexander in 323 B.C., his empire crumbled.

The **diadochoi*, or Greek "successors," of Alexander fought among themselves in the attempt to gain control of ever larger parts of the vast region which Alexander had conquered. The more important among these successors were able to found dynastic kingdoms in which a Greco-Macedonian elite ruled over extensive native populations until the Roman conquest of the eastern Mediterranean. Ptolemy founded the Ptolemaic dynasty, which ruled Egypt (and Palestine until 201 B.C.; see Hellenistic Egypt); Seleucus founded the Seleucid dynasty, which

ruled the territories from Syria to India; Antigonus founded the Antigonid dynasty, which ruled Macedonia, shorn of its empire; and Lysimachus and his successors ruled Armenia and Thrace.

After Rome had taken control of most of Italy shortly after the beginning of the third century B.C., she embarked on a series of wars with Punic Carthage in North Africa for control of the western Mediterranean. Following Roman victories in the First Punic War (264-241 B.C.) and the Second Punic War (220-201 B.C.), Rome turned to the eastern Mediterranean initially to punish Philip of Macedonia for the military assistance he had provided to Hannibal, the Carthaginian general. Rome fought a series of three Macedonian wars (214-205, 200-196 and 148-146 B.C.). After the conclusion of the Third Macedonian War in 146 B.C. (which included the complete destruction of Hellenistic Corinth in 146 B.C.), Rome turned Macedonia and Greece into Roman provinces. At the same time Rome permanently eliminated the economic competition afforded her by Carthage by completely destroying this Punic North African city in 146 B.C.

After the decisive Roman victories over Macedonia, Greece and Carthage in 146 B.C., Rome slowly began annexing the Hellenistic kingdoms which had achieved independence following the crumbling of Alexander's Greco-Macedonian empire. The last Hellenistic kingdom to be defeated was Ptolemaic Egypt; Octavian, the Roman general who was later to become the first Roman emperor and assume the titular name Augustus (meaning "venerable"), defeated Mark Antony and Cleopatra VII (the last Ptolemaic dynast) at the battle of Actium in 31 B.C. At this point the Romans began to refer to the Mediterranean as *mare nostrum* ("our sea").

Rome had undergone profound changes since the city was founded c. 753 B.C. (the date preferred by the Roman antiquarian Varro, 116-27 B.C.). The period of the monarchy lasted from 753 to 509 B.C., when Tarquinius Superbus, the last of seven kings, was overthrown. The monarchy was succeeded by the republic, which lasted from 509 B.C. until it collapsed during the political and military chaos of 133-31 B.C. Following the battle of Actium in 31 B.C., Octavian took firm control of political and military affairs in Rome. In 27 B.C. he became the first of a series of Roman emperors to rule until the col-

lapse of the western empire in A.D. 476, when the last Roman emperor Romulus Augustulus was deposed.

2. Greek Religion.

The Greek world consisted of hundreds of *poleis*, or "city-states," on the Greek peninsula and islands, on the west coast of Asia Minor, Sicily and in Magna Graecia in Italy (see Cities, Greco-Roman). Each *polis* was fiercely independent. Each had its own distinctive internal political and religious structure. Originating c. 750 B.C., perhaps linked to the transition from monarchy to aristocracy throughout much of the Greek world, the *polis* reached a fully developed form by the late sixth century B.C., and typically included such features as an acropolis, walls, a market, temples, a theater and a gymnasium (Pausanias *Descr.* 10.4.1). There were, in addition, a number of interstate religious institutions and sanctuaries which did not function primarily for the benefit of a particular *polis*. These institutions provided the hundreds of Greek communities, separated both by distance and topography, with a variety of cult centers which, along with the use of a common language (in many dialects), contributed to the development of Hellenic national consciousness (Herodotus *Hist.* 8.144). The religious and cultural institutions accessible to all Greeks included the pan-Hellenic games held at intervals of from two to four years (the Olympian games, the most famous, were held every four years beginning in 776 B.C.), the oracle of Apollo at Delphi, the healing cult of Asclepius at Epidaurus and the Eleusinian mysteries at Eleusis in Attica. Another pan-Hellenic religious development was the institution of the "civic cult of the Twelve Gods instituted in a number of Greek cities beginning in the late sixth century B.C. In general, Greek religion was not organized around a set of coherent doctrines, but rather centered in the observance of traditional rituals such as processions, prayers, libations, sacrifice and feasting.

2.1. The Gods. The Greek notion of deity contrasts sharply with traditional Jewish and Christian conceptions. For the Greeks the gods were not transcendent and passive, but rather immanent and active. They did not create the cosmos (which was thought to be eternal), but came into being after the cosmos. Consequently gods such as the sun, moon and stars were considered

"eternals," while gods such as Zeus, Hera and Poseidon were considered "immortals." Though the Greek gods were thought to be more powerful than humans, both were subject to *moira* ("fate"). Further, gods were sustained by ambrosia and nectar, usually inaccessible to mortals, and "ichor" rather than blood flowed in their veins. Though considered very powerful and very wise, they were neither omnipotent nor omniscient. Human beings were considered mortal, while the Greek gods were considered immortal; in archaic and classical Greek religion, immortality was not a possibility for mortals. The scores of deities worshiped by various Greek cities were placed into a comprehensive genealogical relationship by Hesiod in his *Theogony*. In the *Iliad* and *Odyssey*, epic poems created by a series of bards collectively designated "Homer," a synthetic presentation of the many originally local divinities was depicted as a pantheon of Olympian gods (though chthonic deities such as Demeter and Dionysus are not mentioned). The cult of Twelve Gods, however, first appears in the late sixth century; literary and archaeological evidence indicates that an altar to the Twelve Gods was dedicated c. 520 B.C. (Herodotus *Hist.* 6.108; Thucydides *Hist.* 6.54.6; Plutarch *Nic.* 13.2). However, this group of Twelve, while they were probably major Attic deities, was not identical with the later pantheon of twelve Olympians (which typically included Zeus, Hera, Poseidon, Hades, Apollo, Artemis, Hephaestus, Athena, Ares, Aphrodite, Hermes, Hestia). The earth deities Demeter and Dionysus (absent from Homer) are sometimes substituted for Hades and Hestia. The earliest complete list of the Twelve Olympians comes from 217 B.C. in connection with the list of gods honored at the *lectisternium* (a sacred banquet where the gods were made guests at a meal; Livy *Hist.* 22.10.9-10; Quintus Ennius *Ann.* 7.240-41).

The Greeks recognized three kinds of deities: Olympian gods, chthonic ("earth") gods and heroes. Some of the Olympian gods were of Indo-European origin and were brought with the Greeks when they migrated into the Greek peninsula c. 2000 B.C. The most important Greek deity, for example, was Zeus (the genitive form is Dios, a cognate of the old Sanskrit term *dyaus*, "bright sky"), who corresponds to the central Roman god Jupiter (derived from *Dieu + pater*, i.e., "Zeus Father"). Other Olympians, such as Athena, Apollo, Artemis and Poseidon, were

indigenous to the Greek peninsula or western Anatolia. Most of the chthonic gods, including Demeter and Dionysus, appear to have been deities indigenous to the Greek world and associated with the earth, crops and the underworld. The heroes were thought originally to have been mortals (usually with one divine parent) who were deified upon death and received cultic honors at the supposed site of their tomb. The major exception to this generalization is Heracles, a mythological figure who was worshiped as a god in some places but as a hero in others, even though he had no known tomb (Herodotus *Hist.* 2.43-45; Apollodorus *Bib.* 2.7.7). Some heroes appear to have originally been considered gods who subsequently "faded" to heroic status (e.g., Asclepius, Helen), some are mythical (e.g., Perseus, Achilles, Orestes, Oedipus, Theseus; on the last two see Sophocles *Oed. Col.* 1590-1666; Plutarch *Thes.* 35-36), while yet others are historical (the Spartan heroes Brasidas and Lysander).

In general the Greeks were extremely open to new deities and cults and often identified their own deities with some of the major foreign deities which they encountered. During the long contact that the Greeks had with Egypt, they developed an *interpretatio Graeca*, "Greek interpretation," of Egyptian religion in which they regarded various native Egyptian deities as identical with traditional Greek deities. For example, Demeter was thought to be the Greek equivalent of Isis, Athena of Thetis, Zeus of Ammon and Hermes of Thoth. The pantheon of Olympian gods was the creation of the Homeric poets, who produced a synthetic assembly of divinities unknown before the seventh century B.C.

2.2. *Prayer.* From Homer on, Greek prayer involved formulas that were intended to ensure that the god addressed would not be offended by an incorrect invocation. The hymn to Zeus in the *Agamemnon* of Aeschylus is introduced in this manner: "Zeus, whoever he is, if this name pleases him in invocation." Here the liturgical formula *hostis pot' estin*, "whoever he is," occurs (lines 160-61). An earlier example of this formula occurs in *Odyssey* 5.445: "Hear, Lord, whoever you are." In Plato *Cratylus* 400d-e, a distinction is made between the names the gods use of themselves, which are unknown to humans, and the customary names that humans use in prayers since the true names of the gods are unknown. Prayers were uttered aloud in

connection with great public sacrifices, at the beginning of public assemblies (Aristophanes *Thes.* 295-305) and before battle (Aeschylus *Sept. c. Theb.* 252-60; Thucydides *Hist.* 6.82).

2.3. Sacrifice. The primary type of sacrifice practiced in Greek religious rituals was the slaughter of approved types of domestic animals, part of which was burned on an altar and part of which was consumed by those who offered the sacrifice. Such sacrifices could be part of domestic or public religious ritual. Certain animals were thought to be required of particular divinities. Cows were sacrificed to Athena, while pigs were sacrificed to Demeter. In the Greek protocol of sacrifice a distinction was made between sacrifices made to Olympian or to chthonic (earth) deities. Sacrifices to Olympians were made on a raised altar (*homos*) during the day; the sacrificial animals were light colored; their throats were slit upward so that the blood would spurt toward the sky before running down on the altar. Sacrifices to chthonic deities, on the other hand, were made on a low altar (*eschara*) during the evening; the sacrificial animals were dark colored; their throats were slit downward so that the blood would spurt down upon the low altar or pit. The central event of many of the great civic religious festivals, such as the Hyacinthia at Sparta or the Panathenaia at Athens, was a great procession in which the priests and civic officials led the sacrificial victims to the altar, followed by the citizens. After the ritual slaughter, parts of the victims were burned on the altar, while the edible portions were divided up equally among the populace. These portions of meat were sometimes cooked and eaten on the spot or were taken to private homes for cooking and eating.

2.4. Festivals. In the *polis* of Athens, about which most is known, approximately 120 days of the calendar were devoted to religious festivals, and the number may have been even greater. Most of these festivals originated as rural, agricultural celebrations. The single festival found more frequently than any other throughout the Greek world was the Thesmophoria, celebrated in honor of Demeter, an indigenous Aegean earth goddess (see Festivals and Holy Days: Greco-Roman).

2.5. Temples. The Greek temple, a free-standing architectural form, originated in the early eighth century B.C., perhaps in conjunction with the rise of the *polis*. Most temples were rectangu-

lar (the Telesterion of Demeter at Eleusis was square), and in a central room, called the *cella*, was located a cult-statue of the divinity to whom the temple was dedicated, usually larger than life-size. The temple functioned primarily as a house for the god. Inside the temple various types of offerings and dedications to the deity were stored, and incense was burned in honor of the god. Altars where animals were sacrificed were always located in the open air, usually in front of the temple. Worshipers gathered outside the temple for festivals and sacrifices, never inside (see Temples, Greco-Roman).

2.6. Divination. Oracles and divination played an important role in the lives of the Greeks from the archaic period until the triumph of Christianity in the fourth century A.D. Divination is the art or science of interpreting symbolic messages from the gods; often these messages are of an unpredictable or even trivial nature. Some of the more typical forms of divination included cleromancy (casting lots), ornithomancy (observing the flight of birds), hieromancy (observing the behavior of sacrificial animals and the condition of their internal organs before and after sacrifice), cledonmancy (interpreting random omens or sounds) and onciromancy (dream interpretation). The general Greek term for the diviner was *mantis*, a word which is translated "diviner," "soothsayer," "seer" and "prophet." Greeks and Romans often distinguished between "technical divination" (the interpretation of signs, sacrifices, dreams, omens and prodigies) and "natural divination" (the direct inspiration of the *mantis* through trance, ecstasy or vision), though in practice there was no rigid distinction between these two types of divine revelation.

The term *oracle* could refer both to the verbal response of a god to a query as well as to the sacred place where the god was consulted. Local oracles were of several types: lot oracles, incubation oracles and inspired oracles. One of the most famous incubation oracles of antiquity was the sanctuary of Asclepius at Epidauros. There healing was believed to be accomplished through the nocturnal appearance of the god to the patient, who was often given instructions about what he or she must do to be cured. The most famous inspired oracle of ancient Greece, which was combined with a lot oracle, was the pan-Hellenic oracle of Apollo at Delphi. There on the seventh day of each month, inquirers

could pose questions to the Pythia, a priestess believed to be the spokesperson for Apollo when seated on Apollo's throne-tripod. The male priests who assisted the Pythia would convey her responses, often in verse, in oral or written form to the inquirer. Apollo gave advice on such matters of state concern as the founding of colonies, the waging of war and on issues of sacrificial ritual and protocol, and on such private matters as business trips, occupations, marriages and the whereabouts of stolen property. Thousands of such oracles have survived, most of them in literary sources, though most of them are not authentic. Since oracles were often phrased enigmatically, oracle interpreters (*chresmologoi*) would explain their meaning for a fee (see Prophecy, Greco-Roman).

2.7. Domestic Cults. The ancient Greek extended family (the *oikos*, or household) was the context for a form of cult which focused on the hearth and the tomb. The hearth was the place where meals were cooked over a fire that was kept burning for an entire year. It was ritually extinguished each year only to be rekindled again the same day for the next year. Prayers were said before the hearth at the beginning and end of each day, and libations (drink offerings usually consisting of a mixture of wine and water) were poured out on the ground or on the hearth, which functioned as a domestic altar (Hesiod *Op.* 722-24). The male head of the household functioned as a priest, and such offerings were often made to deceased ancestors, who had been made divine upon death. Offerings to these ancestors were also made at the site of their tombs, located on land owned by the family.

3. Roman Religion.

Though Rome was a single city-state that became the political seat and administrative center of an enormous empire which surrounded the Mediterranean Sea and extended north and northeast into Europe, native Roman religious cults and cultic practices were never adopted in any significant way by those who were not Roman citizens. Even when citizenship was extended to all adult male inhabitants of the Roman Empire by the emperor Caracalla in A.D. 212, the practice of the traditional Roman forms of public worship (religious rituals performed on behalf of the state by members of the college of priests and the magistrates, and rituals celebrated by all citi-

zens) and private worship (the *sacra domestica*, "domestic worship," practiced by families and clans) remained almost exclusively the concern of those who were ethnically Roman. The following description of the public and private aspects of Roman religion focuses on the stage of development which had been reached by the reign of Augustus (27 B.C.-A.D. 14).

3.1. Central Features. One of the central features of Roman religion throughout its long history was an emphasis on the *pax deorum* ("peace with the gods"), that is, the conviction that the maintenance of a harmonious relationship with the gods was the basis for temporal prosperity and success. All public disasters were assumed to have been caused by a breach in the relationship between the Roman people and the gods, and the reasons for these breaches must be diagnosed through divination and rectified by specific cultic measures. The *pax deorum* was maintained by following a number of measures: (1) deities must be placated by sacrifice and prayer; (2) all vows and oaths must be fulfilled exactly; (3) the city must be preserved from hostile influences by the ritual of *lustratio* and (4) strict attention must be paid to all outward signs of the will of the gods. By the imperial period, the most important aspect of the *pax deorum* was the support and protection of the emperor by the gods.

3.2. Roman Deities. The ancient Romans recognized three categories of divine beings. The first type was composed of the autonomous divinities, often arranged in triads (following the Etruscan model), such as Jupiter, Mars and Quirinus, or Jupiter, Juno and Minerva. These deities had a relatively fixed character and were individually honored but (unlike Greek divinities), though they could be called "Father" and "Mother," they did not have marital relationships or offspring. Consequently, the Romans had no native mythology recounting the adventures of the gods (Dionysius of Halicarnassus *Ant. Rom.* 2.19-20). Though they later absorbed Greek myths about the gods, their deities could never be arranged genealogically. Roman mythology took the form of historical accounts with a pervasive legendary component (e.g., Virgil's account of the origins of Rome in the *Aeneid*). The most important Roman god, Jupiter Optimus Maximus ("Jupiter Best and Greatest") had two partners (not wives), Juno and Minerva. Archaic Roman religion grouped Jupiter with Mars

and Quirinus. There is evidence attributed to Quintus Ennius (early second century B.C.) for the introduction of the Greek grouping of Twelve Gods in Rome, called *di consentes* ("united gods"), under the names Juno (= Hera), Vesta (= Hestia), Minerva (= Athena), Ceres (= Demeter), Diana (= Artemis), Venus (= Aphrodite), Mars (= Ares), Mercury (= Hermes), Jupiter (= Zeus), Neptune (= Poseidon), Vulcan (= Hephaestus) and Apollo (Ennius *Ann.* 7.240-41 [ed. O. Skutsch]). During the terrifying days of Hannibal's invasion of Italy in 217 B.C. during the Second Punic War, the Greek municipal cult of the Twelve Gods was incorporated into the *lectisternium* of the Twelve Gods in Rome (previous *lectisternia* honored only six gods). A *lectisternium* was a "sacred banquet," held only at times of political or social crisis, at which the images of the Twelve Gods were placed in pairs on each of six couches (Livy *Hist.* 22.10.9-10); *lectisternia* were celebrated until at least A.D. 166 (see *Scriptores Historiae Augustae, Marcus Antoninus*, 13.1-2).

The second type of Roman divinity was to be found in the countless numbers of secret beings that were jealous of their anonymity and were constantly helping or hindering the Roman people in their various undertakings. The Romans, though, were at a disadvantage because they were unable to name them and so control them through the appropriate ritual.

The third category of divinities consisted of the so-called *indigitamenta*, teams of minor deities (found in extensive lists), each with a minor function in assisting or hindering in each activity or fraction of various human activities, particularly those characteristic of rural areas and those involving private life (Tertullian *Ad Nat.* 11; *De An.* 37-39; Augustine *Civ. D.* 4.11).

3.3. Priests. There were two different terms for "priest" in Roman religion: *pontifex* (a member of a college of priests holding supreme authority in public religious matters in Rome, and later a term for an inferior grade of priest) and *flamen* (a priest charged with carrying out the sacrificial ritual of a particular deity and in the imperial period a priest of a deceased or living Roman emperor). The offices of priest and magistrate were not mutually exclusive, so that all priesthoods, with two exceptions (the *rex sacrorum*, "king of sacrifices," and the *flamen Dialis*, "priest of Jupiter"), were part-time positions which could be held for life (with the exception

of the six Vestal virgins who held office for thirty years). These customs ensured that no priestly class ever developed in Rome, just as none had developed in Greece.

During the late period of the republic and during the empire there were four main colleges of priests that developed: (1) The *collegium pontificum*, or "college of priests," consisted eventually of sixteen *flamines*, including three *flamines maiores*, "major priests," the *flamen Dialis*, "priest of Jupiter" (Aulus Gellius *Noc. Att.* 10.15), the *flamen Martialis*, "priest of Mars," and the *flamen Quirinalis*, "priest of Quirinus" (reflecting the archaic triad of Jupiter, Mars and Quirinus), together with twelve *flamines minores*, minor priests. Other members of this college included the *rex sacrorum*, "king of sacrifices" (a survival of one function of the Roman kings) and six *virgines vestales*. This college was under the jurisdiction of the *pontifex maximus*, "high priest" (Cicero *Phil.* 11.18), an office regularly held by the emperor during the imperial period. There were also (2) the college of sixteen *augures*, (3) *quindecimviri sacris faciendis*, a college of fifteen men "for conducting sacrifices," and (4) the *septemviri epulones*, a college of seven, and later ten, "supervisors of public feasts." Only the emperor could belong to all of the priestly colleges simultaneously (Augustus *Res Gest.* 7.3).

Public divination, the *ius divinum*, was an important part of Roman civic religion, for divination was the primary means for diagnosing the causes that were thought to have interrupted "peace with the gods," and for interpreting prodigies, signs sent by the gods. There were three types of public diviners whose chief task was to proclaim divine approval or displeasure by interpreting various types of symbolic messages sent by the gods: the *augures*, who interpreted the flight of birds and the meaning of thunder and lightning (Cicero *De Leg.* 2.30); *haruspices*, who interpreted the entrails of sacrificial animals; and the *quindecimviri*, who kept and interpreted the Sibylline books.

3.4. Prayer. The invocation of a god or gods by name is a universal feature of prayer. When Romans prayed or sacrificed, they always did so with their heads covered. In the polytheistic system of Roman religion, it was necessary to discover which deity one wanted to influence through invoking his or her name (Varro in Augustine *Civ. D.* 4.22; Horace *Odes* 1.2.25-26). The Romans used a kind of "to whom it may con-

cern" prayer formula so that their prayers would be properly addressed. This formula is usually phrased *sive deus sive dea*, or *si deus si dea*, "whether a god or goddess" (Livy *Hist.* 7.26.4; Cicero *Rab. Perd.* 5; Aulus Gellius *Noc. Att.* 2.28.9) or *sive quo alio nomine te appellari volueris*, "or whatever name you want to be called" (Virgil *Aen.* 2.351; 4.576; Catullus 34.21-22). A regular part of the structure of ancient prayer was the reasons given why a deity should respond favorably to the request. Two common reasons are: (1) because the god had done so in the past and (2) because it was within his competence to do so now. In Roman religious ritual, Janus was the first deity invoked in prayers and invocations (followed by Jupiter, Mars and Quirinus), while Vesta was the last.

3.5. Sacrifice and Temples. Sacrifice was one of the most important aspects of Roman religion, both public and private. One invariable rule was that male animals were offered to male deities and female animals to female deities. It was considered a good sign if animals went willingly to their slaughter. According to the Roman antiquarian Varro, the early Romans worshiped the gods without statues or temples for 170 years (Augustine *Civ. D.* 4.31), when the Etruscan king Tarquinius Priscus vowed to erect a temple to Jupiter on the capitol (Livy *Hist.* 1.38.7). Roman temples were usually rectangular buildings constructed on a raised platform and had four main features: (1) the inner room, or *cella*, contained the statue of the god to whom the temple was dedicated together with an altar for the burning of incense; (2) a room or rooms behind the *cella* for the preservation of treasures; (3) an ante-room located in front of the *cella*, surrounded by (4) a roofed colonnade, oblong in Italian temples, but square in Romano-Celtic temples. A stone altar was usually located in front of the temple, where animal sacrifices were made. With the sacrifice of smaller animals, such as goats or lambs, the priest and the sacrificers could eat the edible portions of the sacrifice. The sacrifice of larger animals, such as oxen, provided a feast for a larger number of people, and often the excess meat was sold to the public in the market.

3.6. The Imperial Cult. The antecedents of the Roman imperial cult are to be found in the civic cults of the Hellenistic kings (see 4.2 below). The Hellenistic period is characterized in part by a tendency to blur the traditional Greek dis-

tinction between mortal and immortal. From the end of the third century B.C. on, there were many cults of Roman magistrates instituted by the Greek cities they controlled. The deified Julius Caesar and the deified Augustus, who were consecrated by official acts of the Roman senate, became part of the official pantheon of the Roman people. The imperial cult was of far greater importance in the provinces than in Rome itself. In Roman Asia in particular, the imperial cult provided a presence for an absent emperor. In the traditional form of the imperial cult, the emperor was worshiped as a god only after his death and apotheosis. In the imperial cults in Anatolia, the divinized emperor was usually associated with other, more traditional, gods such as Dea Roma or various groups of Olympian deities (see Ruler Cult).

4. Hellenistic Religions.

4.1. Introduction. The Hellenistic period began with the conquests of Alexander the Great during the late fourth century B.C. Technically it concluded with the Roman conquest of the last independent Hellenistic kingdom, Ptolemaic Egypt, at the battle of Actium in 31 B.C. Nevertheless, it actually continued on into the Roman period because of the enormous cultural influence which the Greeks had on their Roman conquerors. The immense political, social and cultural changes accompanying the conquests of Alexander meant that the tension between continuity and change was one of the central features of the Hellenistic age.

4.2. Hellenistic Ruler Cults. The development of the ruler cult of Alexander the Great, followed by the cults of subsequent Hellenistic kings, was in many respects an adjustment to the political reality that the cities were no longer independent. As such they required a type of cult appropriate to their subordinate status. One of the major forms of this adjustment is reflected in the development of the ruler cult. Such cults (with priests, processions, sacrifices and often games) were founded in honor of various Greek rulers such as Lysander of Sparta and Dion of Syracuse. Alexander the Great both requested and was granted a cult with divine honors. Greek cities often benefitted from various privileges and benefactions from those Hellenistic rulers in whose honor they established cults. Cities normally took the initiative in founding ruler cults, and these cults were integral to the affairs

of each city-state. After the death of Ptolemy I (c. 280 B.C.), his son and successor Ptolemy II Philadelphus arranged for the formal deification of his father Ptolemy I and his mother Berenike, as *theoi sōteres*, "savior gods." In the 270s B.C., Ptolemy II and his wife Arsinoe II were officially deified while yet living as *theoi adelphoi*, "sibling gods," and were offered divine worship in the shrine of Alexander the Great. After Ptolemy II, each successive Ptolemaic king and queen was deified upon accession and worshiped as part of the royal household.

4.3. Private Associations. During the Hellenistic and Roman period there were three types of voluntary associations (*collegia*), each of which had a religious character: (1) professional corporations or guilds (fishermen, fruit growers, ship owners, etc.), (2) funerary societies (*collegia tenuiorum*), and (3) religious or cult societies (*collegia sodalicia*), which centered in the worship of a deity.

4.4. Mystery Religions. *Mystery religion* is a general term for a variety of ancient public and private cults which shared a number of common features (see *Mysteries*). The term *mystery* is based on the Greek term *mystēs*, meaning "initiant," from which is derived the term *mysterion*, meaning "ritual of initiation," that is, the secret rites which formed the center of such cults. In contrast to the public character of most traditional cults of the Greek city-states, the mystery religions were private associations into which interested individuals could be initiated by undergoing a secret ritual. The mystery religions did not appear suddenly in the Mediterranean world during the Hellenistic period, though the period of their greatest popularity appears to have been the first through the third centuries A.D. Many of the mystery cults in the Greek world were profoundly influenced by the oldest of all mystery cults (referred to as "the mysteries"), the Eleusinian mysteries with their cult center in Eleusis in Attica. While very little is known about these rituals of initiation (called *telete*), they appear to have consisted of three interrelated features of a mystery cult initiation ritual: (1) *drōmena*, "things acted out," or the enactment of the myth on which the cult was based; (2) *legomena*, "things spoken," or the oral presentation of the myth on which the cult was based; and (3) *deiknymena*, "things shown," or the ritual presentation of symbolic objects to the initiant. Initiants who experienced the central

mystery ritual became convinced that they would enjoy *sōtēria*, "salvation," both in the sense of health and prosperity in this life as well as a blissful afterlife (Firmicus Maternus *De Errore Prof. Rel.* 22.1). Mystery religions were once thought to share a common focus in a divinity who represented the annual decay and renewal of vegetation through his or her death and restoration to life. In recent years the great diversity among those cults formerly lumped together as "mystery cults" has become increasingly apparent. Though there were many mystery cults in antiquity, only the Eleusinian Mysteries and the Mysteries of Mithra will be summarized.

4.4.1. The Eleusinian Mysteries. This cult was native to Attica until it was taken over by Athenians upon the unification of Attica under Athens. Originating as early as the fifteenth century B.C., the cult continued to flourish until the Telecterion, the rectangular temple in Eleusis which served as the center for the cult, was destroyed by the Goths in A.D. 395. The earliest literary evidence for this cult is found in the Homeric *Hymn to Demeter*, which originated c. 550 B.C. A story about the goddess Demeter and her daughter Persephone served as the central myth of the cult. Hades, the god of the underworld, seized Persephone and took her down into the underworld as his wife. Grieving for her daughter, Demeter sought her whereabouts for nine days, when Helios (the sun god) revealed to Demeter what had happened to her daughter. In anger Demeter left Olympus and caused a drought which deprived humans of food and gods of sacrifices. Zeus therefore sent Hermes to strike a compromise with Hades. Persephone was returned to her mother on the condition that she spend one-third of every year in the underworld with Hades. In this myth Demeter is literally the "earth mother," while Persephone represents grain. Persephone's presence with her mother for two-thirds of the year represents the rainy season (primarily during the winter) when crops flourish, while her descent to Hades each year represents the dry, dormant season of the year (Hesiod *Op.* 582-88).

These vegetation deities were understood as metaphors for life and death, and those initiants who voluntarily participated in this cult believed that their ritual identification with Persephone would guarantee them a blissful afterlife (Isocrates *Paneg.* 28-29). One fragment of Sophocles (found in Plutarch *How to Study Poetry* 22F) em-

phasizes the salvific benefits of initiation: "Thrice blest are those who go to Hades after beholding these rites. For them alone is there life there; for all others there is only evil" (see also Pindar in Clement of Alexandria *Strom.* 3.3.17).

Initiation into the Eleusinian mysteries was a voluntary, two-staged process. The first stage involved initiation into the Lesser Mysteries, celebrated annually during the month Anthesterion. After the interval of at least one year, a candidate could be initiated into the Greater Mysteries, which took place during the month Boedromion (September/October). The ritual began in Athens with a gathering of the initiants and the offering of a sacrificial pig in honor of Demeter. Thereafter there was a torchlight parade to Eleusis, culminating at the Telesterion, or "hall of initiation." The initiation concluded when the initiants were led into the Telesterion, and to the innermost room of that temple called the Anaktoron. There the initiation was completed. Though ancient sources divulge very little information about the specific character of the initiation ritual, the *drōmena* ("things enacted") probably consisted of a nocturnal drama depicting Demeter's sufferings, the *legomena* ("things spoken") possibly consisted of a recitation of a myth similar to that preserved in the Homeric *Hymn to Demeter*, and the *deiknymena* ("things shown") may have consisted of the display of symbolic ritual objects such as an ear of grain.

4.4.2. *The Mysteries of Mithra.* Mithras was worshiped as the sun god, and the name is of Iranian origin. The actual Iranian connections of this cult are dubious, however. Though the earliest datable evidence for the existence of the Mithraic mysteries is the first century A.D., it is likely that this cult originated in the first century B.C. This mystery cult flourished in the second through the fourth centuries A.D., after which the triumph of Christianity resulted in its ultimate disappearance. Information about this cult is primarily available through archaeological evidence, which suggests that it was particularly popular in Italy and in the region of the Danube. Epigraphical evidence indicates that members of the cult included soldiers, bureaucrats, merchants and slaves (women were excluded). The central focus of the cult was the preparation for astral salvation, which would be realized upon death when the soul would as-

cond through the seven planetary spheres to the place of its origin. Members of the cult were initiated into seven ascending levels or grades of initiation, each of which had the protection of a planetary god: (1) *corax*, "raven" (Mercury); (2) *nymphus*, "bride" (Venus); (3) *miles*, "soldier" (Mars); (4) *leo*, "lion" (Jupiter); (5) *Perses*, "Persian" (Moon); (6) *heliodromus*, "courier of the sun" (Sun); and (7) *pater*, "father" (Saturn). This cult worshiped in artificial caverns, structures called mithraea (fifty-eight of which have been identified by archaeologists), located below grade. Every Mithraeum had an artistic representation of the *tauroctony*, or "bull-slaying" scene, in which Mithras is portrayed as slaying a bull, and it was probably the experience of this event, presented through the medium of a ritual, that constituted the central salvific events for adherents to the cult.

RELIGION, PERSONAL

Personal religion refers to those beliefs and practices of ordinary persons that were not primarily related to formal religious systems or institutions. Here piety was more a matter of voluntary and individual involvement as opposed to those religious practices in which tradition and civic responsibility played a large role. Personal religion and formal religion admittedly overlap; *prayer, for example, is common to both. However, other articles in this dictionary will treat the more formal and institutional expressions of religion (see Religion, Greco-Roman). The many phenomena gathered under the rubric of Personal Religion are loosely related to one another, and the arrangement in this article is only one way in which they can be organized.

1. Discerning the Deity's Will
2. Securing the Deity's Help
3. Beliefs and Hopes
4. Conclusion

1. Discerning the Deity's Will.

Pagans in the *Hellenistic era were by no means irreligious persons; many of them sought divine guidance in their everyday lives. The various means that individuals used to discern the deity's will included oracles, prayer, dreams and divination.

1.1. Oracles. An oracle is either an utterance given through a human mediator but presumed to be from the deity, given in response to an inquiry, or the site at which the response is given. In the classical period oracles often were consulted by official delegations concerning political and religious matters of the state; in the Hellenistic era oracles more often served the needs of individuals and communities. The most famous oracular site in antiquity was Delphi, the cultic center of Apollo, the god of prophecy (see Prophecy, Greco-Roman). It was located on the north coast of the Gulf of Corinth. Although Delphi provides the richest source of information about oracles, there were many others in *Greece and *Asia Minor. Oracles of Apollo included Didyma, Claros and Daphne; oracles of Zeus included Olympia, Do-

dona and Siwa, an oasis in the Sahara Desert where the Egyptian god Ammon came to be identified with the chief god of the Greeks' pantheon.

Oracles such as the one at Delphi were sought out to obtain advice on matters of business, *marriage or *travel, or even to solve questions of paternity (Plutarch *Mor.* 386C, 407D, 408C). While the procedure for receiving a response varied and could be as simple as casting lots, some oracles had elaborate rituals. At Delphi a prophetess known as the Pythia (see Acts 16:16) would take a seat on a tripod in an underground chamber of the oracle and would enter a trance by some means not fully understood. Inquirers, after purification and sacrifices, would enter the sanctuary, separated from the Pythia, and pose their questions to priestly attendants. These mediators would relay the requests to the prophetess and return with a response interpreting her utterances. Although some Delphic responses were famous for their ambiguous or cryptic language, more often they were practical and straightforward, advising the best course between two options or prescribing the cultic observances necessary to achieve one's aim.

The popularity of oracles declined in the Roman period and became defunct in the third century A.D. Already in the early second century, *Plutarch could write an essay on the *Obsolescence of Oracles*. Fraudulent practices and disbelief may have contributed to the decline. *Lucian of Samosata wrote a treatise in the latter half of the second century, describing a certain Alexander Abonutichos who engineered an elaborate ploy to present himself as a prophet of Asclepius. Alexander set up a cult, including an oracle, with the help of a large, mechanical snake constructed to appear partially human, which would deliver the responses. Lucian portrays Alexander as a charlatan who exploited the popular interest in oracles.

1.2. Dreams. Although not all dreams were thought to be significant, some were regarded as revelatory communications whose meanings could be given by oracles or other professional interpreters. Plutarch stated plainly, "The majority believe that the divine spirit inspires people when they are asleep" (Plutarch *Mor.* 589D). The widespread nature of this belief is evident in the various dream manuals that were written from the classical period into the Byzantine era.

The only extant example of the latter is the *Oneirocriticon* (dream interpretation) of Artemidorus of the late second century A.D. Artemidorus traveled extensively and collected anecdotes about dreams and the meanings commonly ascribed to them.

When dreams were regarded as revelatory, they had a variety of functions. Often they warned of an impending crisis such as death (Appian *Civ. W.* 1.105; 2.115; Pausanias *Descr.* 9.23.3; 10.2.6; Xenophon *Cyr.* 7.1-2). Dreams might also encourage a military leader to advance (Quintus Curtius 3.3.7; 4.2.17), reveal the perpetrator of a crime (Appian *Pun.* 1), inspire someone to found a city (Pausanias *Descr.* 7.5.1-2) or even effect healing for diseases (Pausanias *Descr.* 10.33.11).

In NT narratives dreams are often regarded as revelatory. The Greek word *onar* ("dream") is found only in Matthew. In that Gospel Joseph is reassured and instructed in a dream to take Mary as his wife (Mt 1:20-4); later both the magi and Joseph are warned in dreams about the threat of *Herod (Mt 2:12-15). Near the end of the same Gospel, Pilate's wife speaks of a troubling dream she has had that compels her to urge a hands-off policy toward Jesus (Mt 27:19). In the book of Acts several visions are mentioned, some of which occur at night and can probably be classed as dreams. (Note that in antiquity dreams are often distinguished from waking visions; see Pausanias *Descr.* 10.38.13 and LSJ, "*hypar*," 1853.) These dreams supply direction and impetus to the Pauline mission (Acts 16:9-10; 23:11; 27:23-4). Finally, in the quotation from Joel in Acts 2:17, dreams (Gk *enypnion*) are associated with the outpouring of the Spirit in the last days. In general the NT writers shared the popular ancient perspective that dreams could be revelatory communications from God.

1.3. Divination. In the broadest sense divination could include any means of discerning the deity's will: prayer, dreams, prophecy. The term is used here in the sense of augury: the belief that divine communication could be observed in everyday events and phenomena. Some people regarded divination as the way in which common folk could receive by observation the kind of revealed knowledge that prophets received directly (Plutarch *Mor.* 593D). Divination was considered important enough that Rome had an official board of *augures*, whose job was the interpretation of such events. *Augures* would ob-

serve signs and determine which of two possible courses of action should be taken. Common forms of augury included the casting of dice; the interpretation of heavenly, tectonic or meteorological signs; observing the flight or other behavior of birds (*auspicium*); and observing the entrails of sacrificial animals (extispicy or haruspicy). Even something as innocent as a sneeze, because it was involuntary and thought to be divinely caused, could constitute an omen (Xenophon *Anab.* 3.2.8-9).

Omens were taken seriously by most of the ancients. Xenophon regarded them as among the greatest benefits given by the gods (Xenophon *Mem.* 4.3.12; *Eq. Mag.* 9.9; *Symp.* 4.47-8). They were considered so essential to military decisions that sacred birds, usually chickens, accompanied armies for use in divination (Livy *Hist.* 10.40.1-5; Suetonius *Tiberius* 2.2). Not all were convinced, however, of the validity of divination. In addition to those who denied divination outright (Xenophanes, the Epicureans), there were occasional critics. Cicero, whose *On Divination* is the most significant ancient source on the subject, regarded it as part error, part superstition and a large measure of fraud (Cicero *De Div.* 2.39.83). The elder Pliny noted the highly subjective nature of the interpretations: the meaning of the omens largely resided in the eye of the diviners (Pliny *Nat. Hist.* 28.4.17). In the NT there is little that resembles divination. In Acts 1:23-26, however, the apostles resort to sortilege to choose a replacement for Judas Iscariot.

2. Securing the Deity's Help.

2.1. Prayer. Prayer was one of the most common expressions of personal religion. It was often closely associated with sacrifice and other rituals. The earliest literary example of prayer is found in the *Iliad* (1.37-42), the prayer of Chryses to Apollo when the former is grieved at the insolent treatment he has received at the hands of Agamemnon. In this prayer and numerous others, scholars have observed the following formal elements: an address or invocation usually employing divine titles, epithets and descriptions of the deity's parentage and/or attributes; the argument or rationale, usually an appeal to the worshiper's pious deeds or to the deity's past beneficence; and the petition proper, which may ask for some salutary benefit for the worshiper or something baneful for the enemies of the worshiper. In the example from the *Iliad*,

Chryses seeks and obtains a judgment against the Greeks; Apollo strikes their camp with a plague that lasts for several days. Thus petitions in prayer could involve either blessings, curses or both.

But prayers in Greco-Roman antiquity were by no means limited to selfish requests for personal advantage or punishment for enemies. There were also expressions of earnest, lofty piety and true reverence for deity. Socrates' prayer to Pan asks for inner beauty, harmony and wisdom above wealth (Plato *Phaed.* 279B-C). Cleanthes, one of the early Stoics, is famous for his *Hymn to Zeus*, a majestic prayer that extols the deity's creative power, reason and love. Ancient prayers were usually spoken aloud; silent prayer was employed for indecent petitions or imprecations. The posture of prayer was generally standing with one's arms outstretched.

2.2. Magic, Miracles and Healing. Magic in antiquity is notoriously difficult to define. The boundary between magic and religion in particular is not completely distinct. But H. S. Versnel (*OCG*, 3d ed., 909) provides a serviceable definition: "[Magic is] a manipulative strategy to influence the course of nature by supernatural ('occult') means." The manipulative or coercive aspect of magic generally distinguishes it from religion. The premise of magic is that occult formulas and rites effectively compel spiritual forces to act.

The Greek terms *magos* and *magia* originally referred to Persian wise men and their mysterious arts without necessarily carrying a negative connotation (e.g., Mt 2:7). Nevertheless, magic gathered negative associations and came to be viewed by many as deviant; the pejorative force of the term *goēs* ("sorcerer, wizard, charlatan") reflects this sentiment. Ultimately the perspective of the speaker or writer evaluates a miraculous or mysterious act. Christian miracles were sometimes vilified as the work of magic or the devil (Mk 3:22; Justin Martyr *Apol.* 1:30); Christians in turn denounced pagan miracles (2 Thess 2:9-10; Rev 13:11-14; 19:20).

In Greek myth the Olympian deities generally did not engage in magic, but Hermes, who occasionally was portrayed bearing a magic wand, was a partial exception. Hecate, however, was a goddess who was frequently associated with magic and sorcery (Euripides *Med.* 394). Female characters figure prominently in the magical arts, most famously Medea of Euripides' play

and Circe of Homer's *Odyssey* (10.274-574). In literature of a later period, two works of Apuleius provide insight on the subject of magic. His *Apology* is a speech defending himself (successfully) against the charge of sorcery. The *Metamorphoses*, or *The Golden Ass*, is a delightful and humorous novel containing many scenes involving magical spells and cures.

For details and actual examples of how magic was practiced in the Hellenistic age, as opposed to its literary portrayal, one may consult the *Greek Magical Papyri* (see *Magical Papyri*). Here one learns that the means of magic were verbal, material and performative. Verbal means involved elaborate invocations of deities using multiple divine names. Some of the invocations in the Greek magical papyri even used forms of the name Jesus or Yahweh (cf. Acts 19:13-20). In addition to divine names, verbal means included mysterious and most likely meaningless strings of syllables that were presumed to be powerful, foreign incantations (see Cato the Elder *Agr.* 160). Material means of magic included amulets, tablets, dolls and a wide variety of folk medicines. "Performative" refers to the ritual actions that employed both verbal and material means to effect the magical cures, spells or curses.

The aims of magic were many. They could be more or less benign: obtaining healing, power or wealth, securing the affections of another person, averting evil. Amulets and phylacteries were especially common as apotropaics, means of warding off evil. Alternately, the aims of magic could be harmful. Curse tablets, usually made of thin sheets of lead on which the name of the intended victim was inscribed, often invoked the gods of the underworld to do harm in revenge for injustices or injuries received. Curses might also target contingent behavior, such as funerary *inscriptions that forbid violation of a grave under penalty of divine retribution. Baneful magic was of two types: imitative, or sympathetic, and contagious. Imitative magic employed objects such as tablets and dolls, whose destruction was to have a sympathetic effect of causing similar suffering in the victim (see Plato *Leg.* 933B; Theocritus *Id.* 2). Contagious magic operated on the principle of the part affecting the whole; material from the victim (hair, fingernails, clothing) was destroyed to effect the same in the person (see Virgil *Aen.* 4.494-521; Theocritus *Id.* 2.53-56).

Healing of diseases was one of many aims of the magical arts, but healing deserves additional brief discussion because of its special association with certain deities and cultic centers. In Greece, the god Apollo was associated with healing and sometimes bore the epithet *ietros* ("physician"). Other gods and heroes, both Greek (Demeter, Heracles, Amphiaraus) and Egyptian (Isis, Sarapis), were occasionally invoked for specific cures, but pride of place goes to Asclepius, a hero/deity whose specialty was the healing arts.

Asclepius was a benevolent deity who took a strong interest in human well-being and consequently aroused deep devotion in his followers. His cult flourished in the period of the empire. A staff entwined by a snake was a common attribute of Asclepius in art. This son of Apollo, according to myth, had sanctuaries in Epidaurus, Cos and Pergamum. These sanctuaries featured temples, springs, baths and gymnasias; they were the ancient equivalents of health resorts or sanitariums. Healing was effected by a process that involved purifications, offerings and incubation (see Aristophanes *Plut.* 653-747). In incubation the patient slept in a private room and received a dream vision of the god and instructions for healing. Some of the cures obtained at Asclepius's sanctuaries may have involved auto-suggestion, but there were also some genuinely therapeutic treatments not unlike those practiced by physicians of that time. Suitably, then, physicians were sometimes referred to by the patronymic *Asclepiadae*, or sons of Asclepius.

3. Beliefs and Hopes.

All of these practices imply certain beliefs held by people in the Hellenistic world. They were generally *polytheistic and believed that the gods were knowledgeable and powerful far beyond human capabilities and that they were able to intervene in human affairs. But beyond these fundamental and nearly universal tenets, certain other beliefs must be mentioned.

3.1. Superstition, Astrology and Fate. Superstition in antiquity referred to a servile attitude toward supernatural powers, an excessive and irrational fear of the divine, sometimes accompanied by a gullibility to being exploited by those who would prey on the religious. Plutarch's essay *On Superstition* is one of the most valuable sources on the topic. He condemns superstition as more harmful than atheism. The

Greek word for superstition (*deisidaimonia*) etymologically denotes "fear of demons." This reflects the popular notion that demons were present throughout the world causing ill of all sorts. Disease, especially little-understood ailments such as epilepsy, were commonly attributed to the work of *demons. The superstitious believed that the noxious effects of demons had to be countered by some means: amulets or phylacteries, verbal formulas and other precautions (see Pliny *Nat. Hist.* 28.5.28-29).

Astrology is the observation of celestial phenomena for the purpose of predicting human events. It was based on the belief that heavenly and terrestrial events are linked by a kind of universal sympathy. It was imported to the Mediterranean world from Babylon in the East (cf. Mt 2:1-10) but eventually developed a distinctive Greek form. Astrology became a sophisticated art and gained widespread popularity with all social classes. The modern distinction between astronomy as science and astrology as something dubious was unknown in antiquity. A common form of astrology was to predict the events of persons' lives based on the position of the stars and planets at the time of their births. Astrology depended on a kind of determinism: the course of human affairs had been fixed by the movements of heavenly bodies.

Fate was closely related to the determinism of astrology. The Greeks had several words throughout their history for this idea. *Moirai* referred to one's share or portion in life. An untimely death or a reversal of fortune was thus explained as the action of fate. *Moirai* was eventually personified as a group of women, the Fates, usually three, Atropos, Clotho and Lachesis, although the number and names vary. *Tychē*, another word used by the Greeks, was equivalent to the Latin *fortuna* and meant "chance" or "luck," an outcome usually unrelated to human effort. *Tychē* was also personified as a goddess. Finally, from the fourth century B.C. on, the dominant word was *heimarmenē*. This word approached the modern sense of fate, a force ruling the world in a deterministic fashion. Between the influences of demons and the sympathetic action of the stars, many of the ancients probably thought of human events as largely determined. This kind of fatalism may strike us as undercutting meaning and motivation, but it may be that some in the Hellenistic age found it a comforting and

reassuring thought.

3.2. Death and the Afterlife. Death was understood in Greco-Roman times as the separation of the body from the soul, however the latter was understood. Proper funeral rites for the dead were essential, and the lack thereof was deemed a great indignity (see Sophocles' *Antigone*). Greeks practiced both *burial and cremation. In the Roman world, cremation was more popular in the era of the republic and early empire, with inhumation becoming dominant in the late first century A.D.

Views about the destiny of the dead varied (see Afterlife). The earliest view was that the dead live on in the tomb. A related idea, which became the popular *eschatology of antiquity, was that the good and the evil dead live on in the bleak, shadowy realm of Hades (see Homer *Odys.* 11). But Homer, along with Hesiod, also speaks of "the Isles of the Blessed," located at the ends of the earth, to which divinely favored heroes are translated. The Eleusinian *mysteries promised their initiates a happy afterlife, apparently one of continual celebration of the mysteries in the underworld. Orphism and *Pythagoreanism developed a dualistic eschatology in which the immortal soul would receive its due in the afterlife. *Plato supplied this notion with a philosophical foundation. *Aristotle limited immortality to the intellectual part of the human tripartite soul, and even it would lack sensibility in the afterlife. In the Roman era there were those who dismissed the notion of the soul surviving death (*Epicureans) and those who held that the souls of at least some persons enjoyed a postmortem existence of some duration (*Stoics). Thus, while there was nothing like a consensus, at least some inhabitants of the Greco-Roman world would have found the Christian proclamation of a resurrected Lord intriguing.

4. Conclusion.

Personal religion in Hellenistic times took many forms. It was sometimes primitive and superstitious but sometimes earnest and contemplative. The occasional biblical portrayal of Gentiles as irreligious (e.g., 1 Thess 4:5) reflects the polemical perspective of Jews and Christians. Although this caricature may have been true of some, more often it was the piety or religiosity of the Hellenistic world that made it fertile soil for the early Christian mission.

RESTORATION OF ISRAEL. See EXILE; ISRAEL, LAND OF.

RESURRECTION

Resurrection became the cardinal belief for the early church by virtue of the Easter event. But Jewish ideas of resurrection prior to Christianity were diverse, and the idea itself was not universally held. The resurrection of Jesus and the Christian belief that his resurrection was but the firstfruits of a general resurrection have given rise to intense interest in the origins of the idea

and its meaning in the time of Jesus and the early church.

1. Resurrection in the Old Testament
2. Resurrection in Second Temple Judaism
3. Resurrection and Afterlife in the Sayings of Jesus

1. Resurrection in the Old Testament.

Evidence from the Hebrew Scriptures indicates that Israel did not dwell on the question of the afterlife until late in the OT period. Rather they stressed the involvement of Yahweh in this life. The blessing of the righteous and punishment of the wicked were seen as taking place in the present age. Life and death were also related primarily to this life.

This does not mean that Israelites believed in annihilation after death. The OT maintains that in one sense death is the cessation of life—at death a person returns to the "dust" (Gen 3:19; Ps 90:3). In another sense it is not the absolute end of life, for existence continues—at death the person descends to Sheol (*š'ōl*), a term at times synonymous with "death" (Gen 42:38; Ps 89:48), the "grave" (Gen 37:35; Is 14:11) or the "netherworld" (Ezek 32:21; perhaps Ps 86:13). In some cases the dead are said to dwell in Sheol as *r'pā'im* or "shades" (Job 26:5; Ps 88:10; Prov 9:18; Is 26:14)—possibly either a shadowy, wraithlike existence or a synonym for "the dead" (Ugaritic parallels favor the former). These references to *r'pā'im* and Sheol suggest a burgeoning view of afterlife.

But while the OT does not give explicit witness to an early belief in existence after death, neither does it deny it. Moreover, two figures were "taken up" to be with God and do not experience death—Enoch (Gen 5:24) and Elijah (2 Kings 2:9-11). While these narratives do not theologially reflect on the implications of these events (we read that Enoch "was no more, for God took him"), later Judaism (cf. Heb 11:5) interpreted this as an "assumption" to eternal life. The incident in 1 Samuel 28:1-25, where Saul attempts to consult Samuel through the medium of Endor, provides further evidence for popular belief that death was not the end of existence.

Several OT statements affirm resurrection in the sense of a corporate preservation rather than individual afterlife. For instance, Hosea 6:1-3 states, "After two days he will revive us; on the third day he will restore us, that we may live in his presence." Similarly, Hosea 13:14 prom-

ises, "I will ransom them from the power of the grave; I will redeem them from death" (cf. RSV). In both cases the redemption of Israel from exile is envisaged in terms of deliverance from death (exile) to life (national restoration). In the same way Ezekiel's famous vision of the dry bones coming to life (Ezek 37:1-14) depicts the national reconstitution of Israel. Other passages are often used as evidence of a resurrection hope but seem to refer to rescue from life-threatening situations (Deut 32:39; 1 Sam 2:6).

The basic question is stated in Job 14:14, "If a man dies, will he live again?" A tentative answer is given in Job's response to Bildad in Job 19:25-27, "I know that my Redeemer (*gō 'ēl*) lives, and that in the end he will stand upon the earth. And after my skin has been destroyed, yet in my flesh I will see God." It is likely that the "redeemer" is God and that the time of deliverance is after death, thereby constituting a confession of belief in life after death.

The Psalms contain many similar statements. In Psalm 49:15 clearly and in Psalms 16:10 and 73:24 implicitly, a belief in resurrection is apparent, though without any speculation regarding the form the afterlife will take. As G. E. Ladd put it,

The hope is based on confidence in God's power over death, not on a view of something immortal in man. The Psalmists do not reflect on what *part* of man survives death—his soul or spirit; nor is there any reflection on the nature of life after death. There is merely the confidence that even death cannot destroy the reality of fellowship with the living God. (Ladd, 47)

The prophets provide additional testimony to a resurrection faith. In the so-called Isaiah Apocalypse (Is 24:1—27:13) there are two statements, Isaiah 25:8 and 26:19. The former says that Yahweh will "swallow up death forever" and is used by Paul of the resurrection (1 Cor 15:54). This leads to the affirmation of Isaiah 26:19, "But your dead will live, their bodies will rise. You who dwell in the dust, wake up and shout for joy." However, this resurrection is restricted to God's people. The next two verses (Is 26:20-21) speak of God's wrath upon "the people of the earth" but mention no resurrection to judgment. Less certain is Isaiah 53:10, which asserts that the Servant of Yahweh, after being "assigned a grave with the wicked" (Is 53:9), will "see his offspring and prolong his days." Most agree that

"prolong his days" refers to eternal life, but there is disagreement as to whether the song refers to an individual or corporate figure, the nation or the remnant.

The resurrection faith attested in the prophets climaxes in Daniel 12:1-3, 13. Here the first complete statement of a resurrection of the just and the unjust appears: "Multitudes who sleep in the dust of the earth will awake; some to everlasting life, others to shame and everlasting contempt" (Dan 12:2). There is some question whether "many" is restricted to Israel or the righteous remnant ("many *among* those who sleep") or refers to a general resurrection ("many, *namely* those who sleep"). Verse 13 adds the promise that "at the end of your days you will rise to receive your allotted inheritance."

In conclusion, the OT stresses the presence of God in the daily affairs of this life and tends thereby to ignore the larger issue of life after death. Nevertheless, it is not entirely silent, and several passages demonstrate that at a later period in Israel's history a belief in resurrection became more explicit. Two emphases emerge: (1) a close connection between the corporate and individual aspect of resurrection (i.e., national restoration and individual resurrection) and (2) a link between ethics and eschatology (i.e., resurrection is associated with reward and punishment).

2. Resurrection in Second Temple Judaism.

While Second Temple Jewish literature witnesses to a great deal more speculation regarding the afterlife, there is clearly no uniformity in the views expressed. This may be due in part to the emphasis in Judaism upon Torah and orthopraxy (correct practice) rather than orthodoxy (correct doctrine) (Ladd, 52).

Indeed, like the Sadducees of Jesus' day (see Josephus *Ant.* 18.1.4 §16 as well as Acts 4:1-2; 23:8), some Jews did not believe in a resurrection. Jesus ben *Sirach wrote in his first book that at death the person abides in Sheol, a place of unending sleep (Sir 30:17; 46:19) and silence (Sir 17:27-28); and immortality is restricted to the nation and the person's good name (Sir 37:26; 39:9; 44:8-15).

Other texts show the influence of *Hellenism, speaking of the afterlife in terms of immortality without linking it to a physical resurrection. 4 *Maccabees, in describing the same seven martyrs mentioned in 2 Maccabees, seem-

ingly substitutes an immortality of the soul where 2 Maccabees spoke of a physical resurrection (cf. 4 Macc 10:15 with 2 Macc 7:14; cf. also 4 Macc 9:22; 16:13; 18:23). Likewise, *Wisdom of Solomon speaks of the righteous finding peace (Wis 3:1-4) and an incorruptible existence (Wis 2:23-24; cf. 5:5; 6:19; and Philo *Op. Mund.* 135; *Cig.* 14). In the last book of **Enoch* (1 *Enoch* 91-104; notice that the five books contain quite variant views on this topic), there is language that at first glance seems to suggest a physical resurrection (e.g., 1 *Enoch* 92:3-5; 104:2, 4), but in 1 *Enoch* 103:4 we learn that it is their "spirits" that will "live and rejoice" and will "not perish."

Of those texts which do speak of a resurrection, some restrict it to Israel or "the saints" (1 *Enoch* 22:13; 46:6; 51:1-2; *Psr. Sol.* 3:11-16; 13:9-11; 14:4-10; 15:12-15), while several from the first century and later attest belief in the resurrection of the righteous and the wicked (4 *Ezra* 4:41-43; 7:32-38 cf. *T. Benj.* 10:6-9; 2 *Bar.* 49:2-51:12; 85:13). While the possibility of some Christian influence and interpolation cannot be discounted, the resurrection of the righteous and the wicked is itself essentially Jewish, reflecting the *eschatology of Daniel 12:2-3. Finally, an extremely literalistic concept of bodily resurrection can be found in 2 Maccabees, which speaks not only of the raising of the body but even the restoration of missing limbs or other body parts (2 Macc 7:10-11; 14:46). Similarly, the *Sibylline Oracles* states that the resurrection body will be fashioned exactly after the earthly body (*Sib. Or.* 4:176-82).

Clearly Second Temple Judaism showed a much greater interest than does the Hebrew Bible in the question of the afterlife, with interest centering on the theme of God vindicating his people. In addition, a variety of viewpoints emerged. This variety is reflected in the beliefs of the various parties or sects within the Judaism of Jesus' time. The *Sadducees rejected any idea of an afterlife (Acts 23:8; 26:8; Josephus *Ant.* 18.1.4 §16; *b. Sanh.* 90b). The *Pharisees taught a resurrection and eternal reward for Israel in the age to come, excluding only apostates (Acts 23:6-8; Josephus *Ant.* 18.1.3 §14; *b. Sanh.* 90b; *b. Ketub.* 111b). The *Essene view on the matter was not clear, as exemplified in the *Dead Sea Scrolls. Josephus asserts that they held to the immortality of the soul (Josephus *J.W.* 18.1.5 §18), but many scholars maintain that statements referring to the habitation of the faithful with the

angels (1QS 2:25; 1QH 3:19-23; 11:10-14) should be understood as the sectarians' experience in this life rather than an eschatological hope.

3. Resurrection and Afterlife in the Sayings of Jesus.

Jesus followed in the tradition extending from Daniel to the Pharisees, teaching that there would be a twofold resurrection: the righteous to reward and the wicked to judgment.

3.1. Sayings of the Triple Tradition. The clearest discussion of resurrection in Jesus' teaching can be found in the triple-tradition story of his controversy with the Sadducees (Mk 12:18-27 par. Mt 22:23-33 and Lk 20:27-38). Even those who maintain that the final form is a later catechetical elaboration accept the first pronouncement ("become like angels") as authentic. Luke in particular stresses the contrast between the "people of this age" and those "worthy of taking part in that age and in the resurrection from the dead" (Lk 20:34-35), a distinct reference to eschatological views of an afterlife. Yet the major question is the significance of the phrase "like the angels in heaven." Some conclude from this that Jesus believed in a spiritual rather than physical resurrection or that he had a view, like some within Judaism, that in heaven there would be no consciousness of prior existence. However, this reads more into the passage than is intended, since the phrase is contrasting marriage on earth with marriage in heaven rather than teaching the state of the resurrection body.

Sayings on reward and judgment also appear in the triple tradition. The query of the wealthy young man in Mark 10:17 (par. Mt 19:16 and Lk 18:18), "What must I do to inherit eternal life?" is often understood as a desire to "enter the kingdom" in its realized presence. While this is certainly part of the meaning, it does not exhaust its thrust. Jesus' final statement in Mark 10:30 (par. Mt 19:29 and Lk 18:30), "and in the age to come eternal life," forms an inclusio with the young man's question and clearly refers to the afterlife. There is both a present and future connotation in "eternal life" in Mark 10:17, 30 and parallels. The other side, resurrection to judgment, is found in the Gehenna warning of Mark 9:43, 45, 47 (par. Mt 18:8, 9; omitted in Luke). Using successive metaphors of the hand, foot and eye, Jesus exhorts the disciples to disciplined resistance against temptation, lest one (Mark and Matthew both stress the singular

"you") be cast into "hell, where the fire never goes out" (Mk 9:43; cf. Matthew's "eternal fire," Mt 18:8).

3.2. The Passion Predictions. The best-known tradition is the threefold passion prediction of Mark 8:31; 9:31; 10:33, 34 and parallels. Many interpreters have understood these as *vaticinium ex eventu* (prophecy after the event), but the absence of the type of theological elaboration found in the creeds (e.g., "for our sins," "according to the Scriptures" and the exaltation theme) makes it more likely that these are indeed historical reminiscences. The one constant in all three accounts is Jesus' prediction that "three days after" his death he would be vindicated by resurrection. The third-day theme (cf. 1 Cor 15:4) may reflect Hosea 6:2 ("on the third day he will raise us"), a more general allusion to the OT theme of the third day as a day of deliverance (cf. Gen 22:4; 42:17-18; Is 2:16; Jon 2:1), or more simply a reference on Jesus' part to a brief period of time.

Added to these direct predictions are the numerous parallel passages where Jesus presumes his future resurrection, such as Mark 9:9 (tell no one of his transfiguration "until the Son of Man has risen from the dead"); Mark 12:10-11 ("the stone the builders rejected has become the capstone"); Mark 13:26 ("the Son of man coming in clouds with great power and glory"); Mark 14:25 ("when I drink it [the eschatological cup] anew in the kingdom of God"); Mark 14:28 ("after I have arisen I will go before you into Galilee") and Mark 14:62 ("you will see the Son of man sitting at the right hand of the Mighty One and coming on the clouds of heaven").

One of the most remarkable prophecies of Jesus is not found in Luke but is recorded indirectly in Mark (Mk 14:58; 15:29) and a Matthean parallel (Mt 26:61; 27:40) and directly in John 2:19: "Destroy this temple, and I will raise it again in three days." John 2:21, 22 explains that this direct prophecy of physical resurrection was not understood by the disciples until after the resurrection itself (ironically, the chief priests and Pharisees according to Mt 27:63 correctly interpreted this saying before the disciples did). In summation, according to the Gospels, Jesus clearly expected to be vindicated by resurrection.

3.3. The Q Tradition. The Q tradition contains similar teaching. The "sign of Jonah" (Mt 12:39-42 par. Lk 11:29-32) is problematic because only Matthew spells out the sign as a cryptic refer-

ence to the resurrection ("the Son of Man will be three days and three nights in the heart of the earth," Mt 12:40). But it is just as likely that Luke has omitted the Q statement on resurrection (due to the difficulty of "three days and three nights" for his readers) as Matthew has added it.

There are also several Q passages on final reward and punishment, such as those found at the end of Matthew's Olivet Discourse. At the end of the exhortation to watchfulness (Mt 24:40-44 par. Lk 17:34-37), we have three successive short parables (men in the field, women grinding, two in a bed) demonstrating that "one will be taken, the other left." These form a severe warning regarding the sudden, unexpected separation at the Parousia (cf. Mt 24:44; cf. Lk 12:40) between those receiving salvation and those doomed for judgment. This contrast is further emphasized in the parable of the good and wicked servants (Mt 24:45-51 par. Lk 12:41-46), in which the faithful servant is given a share in Jesus' future authority while the wicked servant will be "dismembered" (Lk 12:46) and placed with the unfaithful. Finally, Matthew 10:28 and Luke 12:5 add a further saying on Gehenna, that the disciple should fear not those who can kill the body but the one who "can destroy both soul and body in hell." These passages show that Jesus followed Daniel 12:2 regarding the resurrection of good and evil alike, one to vindication and the other to judgment.

3.4. The M and L Traditions. The source material peculiar to Matthew (M) and Luke (L) adds further data. In the M tradition judgment will be universal; both good and evil people will be accountable "on the day of judgment for every careless word they have spoken" (Mt 12:35-37). While evil or "careless" speech is stressed, the "acquittal" or "condemnation" (Mt 12:37) of all speech is in mind. Two further parables address the radical separation of believer from unbeliever at the last judgment. The parable of the weeds in Matthew 13:24-30, 36-43 teaches that only at "the end of the age" (Mt 13:43) will the wicked finally be separated from the good, the former headed for "the fiery furnace" and the latter for glory (Mt 13:42-43). The parable of the sheep and the goats (also called "the judgment of the nations") has a similar theme but adds that the judgment will be determined also by the way the nations have treated God's people (the "least of these" of Mt 13:40, 45). The reward for

the merciful will be "your inheritance, the kingdom prepared for you since the creation of the world" (Mt 13:34); the punishment for the merciless will be "the eternal fire prepared for the devil and his angels" (Mt 13:41).

Several L passages demonstrate the Lukan theme of the reversal of roles at the final resurrection. At the conclusion of the sayings on proper conduct at banquets (Lk 14:7-14), Jesus says that those who invite the poor and the crippled "will be repaid at the resurrection of the righteous" (Lk 14:14). While there may be no thanks in this life, God will vindicate good deeds at the eschaton. The key is a life of servanthood which seeks the lesser rather than the greater place (Lk 14:8-11) and is oriented to the dispossessed rather than the wealthy (Lk 14:12-14).

This theme is taken further in the parable of the rich man and Lazarus in Luke 16:19-31. The rich man, who undoubtedly had a lavish earthly funeral, is described in terse clauses: "died and was buried and in Hades." The poor man, who seemingly is not buried at all, has exactly the opposite afterlife: "angels carried him to Abraham's side." There are two concurrent emphases in this parable: the reversal of roles at the final resurrection and the radical faith demands of the kingdom message. Similar warnings of final judgment are addressed to the rich and to all disciples in Luke 3:7-14; 6:24-26 (cf. 1:51-53); 12:16-21, 32-34, 42-48; 16:8-9. The implications of this parable for a doctrine of the afterlife cannot be pressed too far. The picture of a compartmentalized "Hades" does not describe "the way it is" but is a feature of the parable probably derived from a popular Jewish conception of Sheol.

3.5. The Johannine Tradition. The Johannine tradition contains a few sayings that relate to the resurrection theology of Jesus and the early church. While the Fourth Gospel primarily sets forth a realized eschatology, a growing consensus of scholarship has detected a future eschatology within this characteristic Johannine matrix. In John 5:28-29, Jesus speaks of the "coming time" when the dead will hear his voice and "come out—those who have done good will rise to live, and those who have done evil will rise to be condemned." The context centers on Jesus as the eschatological Judge in the present (Jn 5:19-24) and the future (Jn 5:25-30). Then in John 6:40, 44, 54—within a context emphasizing the united sovereignty of the Father and Son in

the salvation process (cf. "will never die" in 11:25, 26)—Jesus thrice repeats that he will "raise" the faithful "at the last day."

The other side is found in John 12:48, in which the unbeliever is warned that Jesus' words will "condemn him at the last day." Finally, Jesus promises in John 14:2, 3 that he is "preparing a place" for his disciples and "will come back" to bring them to his side. Some have interpreted this of the Paraclete/Holy Spirit (*see* Holy Spirit) "coming back" as Jesus' representative, but the consensus is that this is a reference to the Parousia. Bultmann and others have long argued that these futuristic passages were added by a later redactor and that realized passages like John 12:31 and 16:11 (the judgment "now" of the "prince of this world") are original. Yet there is no reason why the two cannot stand side by side, with present salvation and future promise inter-related.

Jesus' sayings related to resurrection teaching into the ongoing tradition from Daniel through the Pharisees, attesting to the general pattern of physical resurrection of God's people to reward and of the resurrection of the ungodly to final judgment.

REVOLUTIONARY MOVEMENTS, JEWISH

Revolutionary movements were a Jewish response to the injustice of Israel's oppressors, particularly the Roman Empire. The first century was one of the most violent epochs of Jewish history, with the cauldron of unrest reaching its apex in the *destruction of Jerusalem by the Romans in A.D. 70. This in turn was punctuated by the mass suicide of Jewish rebel forces at Masada in A.D. 74. Sixty years later the smoldering embers from this war were fanned into flame by the Jewish leader *Simon ben Kosiba, who led the second revolt against the Romans in A.D. 132-135.

The causes of this unrest were many and varied, but the following factors contributed to a milieu ripe for revolution: foreign military occupation, class conflicts, misconduct of Jewish and Roman officials, Hellenization (see Hellenism), burdensome taxation (see Taxes) and the *Sa-

maritan situation. When the Roman army occupied a land, it was accompanied by thousands of civilians (wives, children, doctors, merchants, etc.). The army lived off the occupied country, pilfering its natural resources, enslaving members of its population, raping women and generally terrorizing the populace. The gentry of Palestine collaborated with the occupying forces and, in exchange for personal safety and affluence, aided Israel's oppressors. This collusion led to class conflict between the rich and the poor, the faithful and the unfaithful, the rulers and the people (see Horsley and Hanson).

With conditions so difficult for the average Palestinian Jew, it is not surprising that a good deal of revolutionary activity arose. This took a variety of forms.

1. Social Bandits
2. Messianic Pretenders
3. Revolutionary Prophets
4. Apocalypticists
5. The Fourth Philosophy and the Martyr Tradition
6. Sicarii
7. Zealots

1. Social Bandits.

Generally speaking, social banditry arises in agrarian societies where peasants are exploited by the government or ruling class. Social bandits are the "Robin Hoods" of the land and usually increase during times of economic crisis, famine, high taxation and social disruption. The people of the land usually side with the bandits since they are champions of justice for the common people. These brigands usually symbolize the country's fundamental sense of justice and its basic religious loyalties.

In 57 B.C. Gabinius, proconsul in Syria, gave increased power to the nobility, thereby putting extreme pressure on the peasantry. In response the peasantry rebelled and not until a decade later was Palestine able to effectively govern itself again. It is therefore not surprising to find social banditry on the rise during and after this period of civil war and economic hardship. In fact, *Josephus reports that a certain Hezekiah led a band of social bandits who raided the Syrian border (Josephus *J.W.* 1.10.5-7 §§204-11; *Ant.* 14.9.2-4 §§159-74). Herod (see Herodian Dynasty), when he was governing *Galilee, caught and killed Hezekiah and many of his cohorts. These deaths, however, did not mark the end of

social banditry. Years later Herod was still trying to exterminate the brigands (Josephus *J.W.* 1.16.2 §304). In 39-38 B.C. Herod assembled an army to track down these social bandits in order to consolidate his power as Rome's client king. Josephus notes that there was a "large force of brigands" (Josephus *J.W.* 1.16.1-2 §§303-4). Undoubtedly these social bandits were attacking the gentry, who were in league with Herod.

The brigands retreated to the caves near Arbelá but were strong enough to continue to harass the gentry and challenge Herod's complete control of the land. Herod, not to be defied, formulated a strategy which Josephus narrates:

With ropes he lowered [over the cliffs] the toughest of his men in large baskets until they reached the mouths of the caves; they then slaughtered the brigands and their families, and threw firebrands at those who resisted. . . . Not a one of them voluntarily surrendered and of those brought out forcibly, many preferred death to captivity. (Josephus *J.W.* 1.16.4 §311)

An old man who had been caught inside one of the caves with his wife and seven children . . . stood at the entrance and cut down each of his sons as they came to the mouth of the cave, and then his wife. After throwing their dead bodies down the steep slope, he threw himself down too, thus submitting to death rather than slavery. (Josephus *Ant.* 14.15.5 §§429-30)

Since sources from Herod's reign contain no references to social bandits, this attack may have extinguished them, but it is an argument from silence. Indeed, until the end of the reign of Agrippa I (A.D. 44), there is very little evidence for active resistance through social banditry. In Mark 15:27, however, two "bandits" are mentioned. Josephus also mentions a certain Tholomaus as a bandit leader (Josephus *Ant.* 20.1.1 §5). Tholomaus was likely not the only one because we read that Fadus (A.D. 44-46) set out to purge the "whole of Judea" of brigands (Josephus *Ant.* 20.1.1 §5). It seems that around the middle of the first century, probably as a result of a severe famine, social banditry sharply increased. Eleazar was one of these brigands, and he enjoyed a twenty-year career (Josephus *J.W.* 2.13.2 §253). Actions taken by the authorities seem to have only proliferated Palestinian ban-

ditry. Cumanus (A.D. 48-52) took aggressive military action against the brigands, but they merely retreated into their strongholds and "from then on the whole of Judea was infested with brigands" (Josephus *Ant.* 20.6.1 §124).

Just before the Jewish revolt the rich and the poor were sharply polarized, taxation was very high, Roman oppression was grievous, justice was perverted and poverty was widespread. Consequently, Jewish banditry swelled to epidemic proportions so that a sizable number of the population were outlaws. This situation obviously took its toll on the gentry and contributed to the spiraling social unrest. Without doubt, social banditry is a major factor to be considered in any study of the First Jewish Revolt.

As the revolt broke out the bandits played an important role in resisting the Roman army's forays into Judea and Galilee, with brigand groups dominating the region of Galilee. The effectiveness of the brigands against Rome was due not only to their impressive military strength, but also to their favorable relationship with the peasants and their ability to build alliances with other rebel forces. The most important contribution made by these social bandits was their highly effective use of guerrilla warfare, which they demonstrated in routing the army of Cestius Gallus in A.D. 66. Ultimately, however, the brigands failed in their attempt to free Palestine from Roman rule.

2. Messianic Pretenders.

In Judaism prior to the first century there was no single messianic expectation held by Jews (see Messianism). Furthermore, messiah, as a title, does not appear frequently in pre-Christian literature. Only after the destruction of Jerusalem in A.D. 70, when rabbinic theological reflection standardized and popularized the term, does *messiah* appear frequently with essentially the same meaning in each usage. The scarcity of the term, however, does not suggest that there were no expectations of an anointed royal Jewish leader. The OT had begun to shape an expectation with its promises of a "branch" that God would raise for David. This notion can be seen in Jeremiah 23:5-6 and Isaiah 11:2-9, where the "shoot from the stump of Jesse" shall "judge the poor with righteousness." Micah also contributed to the expectation by identifying Bethlehem as the home town of Messiah (Mic 5:2). But it is inappropriate to speak of a widespread OT

expectation of a messiah.

During the period of Persian and Hellenistic domination, there is also little evidence of a messianic hope. The promises to David and the prophecies of a future Davidic king were known during these periods (cf. Sir 47:11, 22; 1 Macc 2:57), but the fulfillment was postponed to the distant future. This is also probably the case during the persecution by Antiochus Epiphanes, although a few references may be interpreted otherwise (cf. *I Enoch* 90:9, 37-38; 1 Macc. 3:4; see Jewish History: Greek Period). During the *Hasmonean period, however, the hope of an anointed royal figure who would deliver Israel became more prominent. At Qumran (see Dead Sea Scrolls) there were apparently two anointed figures: a high-priestly messiah and the Prince of the Congregation, a lay head of the eschatological community. And in other Jewish literature of the period an anointed royal figure begins to emerge (*Pss. Sol.* 17). But among extant writings, only those coming from the period following the death of Herod (4 B.C.) refer unambiguously to a promised anointed figure.

After the death of Herod in 4 B.C. the Jews pressed Herod's son and heir apparent, Archelaus, for a number of reforms. During the Passover, when the demands reached a feverish pitch, Archelaus sent his armies into Jerusalem and massacred thousands of worshipping pilgrims. This action catalyzed revolt in every major area of Herod's kingdom, and some of these revolts took the form of messianic movements. Josephus identifies several leaders of these movements: Judas, the son of Ezekias (Josephus *Ant.* 17.10.5 §§271-72; *J.W.* 2.4.1 §56); Simon, servant of King Herod (Josephus *Ant.* 17.10.6 §§273-76); and Athronges (Josephus *Ant.* 17.7 §§278-85). Josephus clearly indicates that they aspired to be Israel's king (Josephus *J.W.* 2.4.1 §55; *Ant.* 17.10.8 §285). All of these messianic figures were of humble origins, and their followers were primarily peasants (see Barnett).

The principal goal of these revolutionaries was to overthrow Herodian and Roman domination of Palestine. In addition to fighting the Romans, these revolutionaries attacked the mansions of the aristocracy and the royal residences. This undoubtedly reveals the frustration of years of social inequality. In response, Varus, legate of Syria, dispatched two legions (6,000 troops each) and four regiments of cavalry (500 each). This was in addition to the troops already

in Judea and the auxiliary troops provided by the city-states and client kings in the area. In spite of this military might these messianic movements were difficult to subdue.

Because of the lack of sources it is difficult to identify any messianic movements between the above-mentioned revolts and those surrounding the First Jewish Revolt (except, of course, the followers of Jesus). With regard to the First Jewish Revolt, Josephus notes two messianic movements that bear mentioning. The first is Menahem, son of Judas, the Galilean, who

took his followers and marched off to Masada. There he broke open King Herod's arsenal and armed other brigands, in addition to his own group. With these men as his bodyguards, he returned to Jerusalem as a king, and becoming a leader of the insurrection, he organized the siege of the palace. (Josephus *J.W.* 2.17.8 §§433-34; cf. 2.17.5 §§422-42)

The second messianic movement mentioned by Josephus was built around Simon bar Giora (i.e., "Simon son of a proselyte"). In A.D. 66, at the outbreak of the war, Simon helped aid the Jews against Cestius by attacking the Roman rear guard. Simon's messianic movement was also motivated by the social oppression exerted by Israel's aristocracy. When Simon had gained control of the Judean and Idumean countryside, the citizens of Jerusalem invited him to lead the defense against Rome. After a power struggle in which he forced the Zealots and John of Gischala aside, Simon took control of Jerusalem. Simon was a strict disciplinarian and did well in his struggle against the Romans, but the Roman army was overwhelmingly powerful. Adorned in a white tunic and a purple cape as the king of the Jews, Simon surrendered and was taken to Rome. There he was ritually executed. The messianic movement led by Simon was the largest of all the movements described by Josephus, lasting nearly two years. It may have been fueled by eschatological hopes. [W. J. Heard]

During the reign of Trajan, the Jewish inhabitants of Judea, Egypt, and Cyrene revolted (A.D. 114 or 115). According to Eusebius, they rallied to one Lukuas, "their king" (Eusebius *Hist. Eccl.* 4.2.1-4). Dio Cassius mentions this revolt, but calls the Jewish leader Andreas (Dio Cassius *Hist.* 68.32; 69.12-13). Eusebius says that General Marcius Turbo "waged war vigorously against [the Jews] in many battles for a consid-

erable time and killed many thousands" (Eusebius *Hist. Eccl.* 4.2.4). Although Dio's claim that hundreds of thousands perished is probably an exaggeration, the papyri and archaeological evidence confirm that the revolt was widespread and very destructive (see Schürer, 1:530-33). [C. A. Evans]

The final messianic movement in recorded Jewish antiquity (A.D. 132-35) was led by Simon ben Kosiba. Rabbi Aqiba proclaimed that Simon was indeed the Messiah, and a large portion of the Judean peasantry responded to the claim. Simon had three years of independence and even minted coins (inscribed "Year 1 of the liberation of Israel"). When Rome sent in a massive army, Simon resorted to guerrilla warfare and forced the Romans into a prolonged war of attrition. Nevertheless, the Romans finally did "annihilate, exterminate and eradicate" them from the land (Dio Cassius *Hist.* 59.13.3).

3. Revolutionary Prophets.

Despite the amount of prophetic activity prior to the first century, there is virtually no evidence for a Jewish expectation of the imminent return of the promised eschatological prophet. Nor were there vivid expectations for the appearance of the prophet like *Moses mentioned in Deuteronomy 18:18. There may have been some expectations for the return of Elijah, but a claimant to this identity never materialized. Thus the appearance of any popular prophet of reputed eschatological significance was more than just the fulfillment of a popular expectation.

R. A. Horsley has helpfully distinguished between "popular prophetic movements" and "oracular prophets." The latter group were similar in character to the classical oracular prophets such as Hosea or Jeremiah; they prophesied either judgment or deliverance. Oracular prophets proclaiming deliverance appeared just prior to and during the First Jewish Revolt. Typically those oracular prophets who pronounced judgment were not well received, being perceived by the establishment as a threat and consequently silenced.

3.1. Popular Prophets. Popular prophetic movements, on the other hand, had leaders who led sizeable movements of peasants. The political authorities generally viewed this activity as an insurrection and therefore forced a military confrontation. These prophets and their followers generally arose in anticipation of the appear-

c. 4 B.C.	Archelaus massacres Passover pilgrims in Jerusalem.
c. 36 A.D.	The Samaritan leads followers to Mt. Gerizim.
40	Caligula attempts to set up his statue in the temple
44	Herod Agrippa, the last Jewish king, dies.
45	" Theudas persuades followers to accompany him to Jordan.
50s	The Egyptian leads followers to Mt. of Olives to experience fall of Jerusalem's walls.
c. 60-62	Unnamed prophet leads people into wilderness to receive salvation.
66	Florus, procurator, antagonizes Jews by taking from temple treasury.
66-68	Simon bar Giora is popularly acclaimed king and later will play a leadership role in Jerusalem.
66 August	Jewish insurgents capture Antonia; Cestius, Syrian legate, attacks Jerusalem and retreats.
67 spring-fall	Roman army under Vespasian subdues Galilee.
67-68 winter	Zealot party formed under Eleazar controls Jerusalem.
69 spring	Turmoil divides Jerusalem with three parties vying for power.
70 spring-fall	Titus conquers and destroys temple and Jerusalem.
74	Jewish rebels at Masada commit mass suicide.
132-135	Bar Kokhba leads second revolt against Rome.

Jewish revolutionary movements and conflict with Rome

pearance of God's eschatological liberation. This liberation was perceived as imminent, and when it arrived the Jews would be freed from their political bondage and would again govern Palestine, the land God had given to them as their own possession. The leaders of these popular prophetic movements are described by Josephus in general terms:

Impostors and demagogues, under the guise of divine inspiration, provoked revolutionary actions and impelled the masses to act like madmen. They led them out into the wilderness so that there God would show them signs of imminent liberation. (Josephus *J.W.* 2.13.4 §259; cf. *Ant.* 20.8.6 §168)

These popular prophets, preying upon social conditions, apparently taught that God was about to transform their society—characterized by oppression and social injustice—into a society marked by peace, prosperity and righteousness. Responding to the call, large numbers of

peasants left their homes, their work and their communities to follow these charismatic leaders into the desert. There in the wilderness they awaited God to manifest his presence through signs and wonders, purify his people and unveil the eschatological plan of redemption which he had previously revealed to his prophet. At this juncture God himself would act and defeat Israel's enemies.

3.1.1. The Samaritan. The first of these prophets appeared when Pontius Pilate was procurator. Interestingly, this first movement appeared among the Samaritans. The Samaritans, like the Jews, revered Moses as the prophet and cultivated hopes for a future Mosaic prophet who was discussed in terms of "the restorer" (*taheb*). The *Taheb* would appear and restore Solomon's temple on Mt. Gerizim. Josephus has described one such Samaritan prophetic movement:

Nor was the Samaritan nation free from disturbance. For a man who had no qualms about deceit, and freely used it to sway the crowd, commanded them to go up with him as a group to Mount Gerizim, which is for them the most sacred mountain. He promised to show them, when they got there, the holy vessels buried at the spot where Moses had put them. Those who thought his speech convincing came with arms and stationed themselves at a village called Tirathana. There they welcomed late-comers so that they might make the climb up the mountain in a great throng. But Pilate was quick to prevent their ascent with a contingent of cavalry and armed infantry. They attacked those who had assembled beforehand in the village, killed some, routed others, and took many into captivity. From this group Pilate executed the ringleaders as well as the most able among the fugitives. (Josephus *Ant.* 18.4.1 §§85-87)

3.1.2. Theudas. Perhaps ten years later, about A.D. 45, a second major prophetic movement began. A certain Theudas (probably not the Theudas mentioned in Acts 5:36) organized one of these prophetic movements during the reign of Fadus (A.D. 44-46). Josephus also describes this prophet's ministry:

When Fadus was governor of Judea, a charlatan named Theudas persuaded most of the common people to take their possessions and follow him to the Jordan River. He said he was a prophet, and that at his command

the river would be divided and allow them an easy crossing. Through such words he deceived many. But Fadus hardly let them consummate such foolishness. He sent out a cavalry unit against them, which killed many in a surprise attack, though they also took many alive. Having captured Theudas himself, they cut off his head and carried it off to Jerusalem. (Josephus *Ant.* 20.5.1 §§97-98)

Obviously Theudas's movement attracted large numbers of Jews, so much so that Josephus hyperbolically states that Theudas deceived "most of the common people." Perhaps Theudas, in some sort of reverse exodus, saw himself as the new Moses leading the people out of bondage (like Egypt) and across the Jordan (like the Red Sea) into the wilderness to be divinely prepared for the new conquest. Fadus, not taking any chances, acted decisively, thus showing his fear of such movements. The movement's swift annihilation almost certainly indicates that, unlike the messianic movements, this prophetic band was unarmed. Theudas's posthumous public humiliation by the ceremonial parading of his severed head was intended to send a stern warning to any would-be leaders of similar prophetic movements.

3.1.3. The Egyptian. Another movement, about ten years later, involved a Jewish prophet who originated from Egypt (Josephus *Ant.* 20.8.6 §§169-71; *J.W.* 2.13.5 §§261-63; cf. Acts 21:38). Josephus records that this prophet had a following of thirty thousand who were to march from the wilderness to the Mount of Olives and then into Jerusalem. Felix sent Roman troops to slaughter all those involved in the movement. The Roman army easily defeated this prophetic band even though the Egyptian himself escaped.

It seems fairly clear that these prophetic movements viewed themselves as acting in some sort of continuity with Israel's past great historical deliverances. They also had an eschatological dimension in their claim that God was about to deliver Israel and grant their autonomy in the promised land. [W. J. Heard]

3.1.4. Jonathan the Refugee. Following the Roman victory over Israel, a certain Jonathan fled to Cyrene. According to Josephus, this man, by trade a weaver, was one of the *sicarii* (see 6 below). He persuaded many of the poorer Jews to follow him out into the desert, "promising to show them signs and apparitions" (Josephus *J.W.* 7.11.1 §§437-38; *Life* 76 §§424-25). Catallus,

the Roman governor, dispatched troops who routed Jonathan's following and eventually captured the leader himself (Josephus *J.W.* 7.11.1 §§439-42). Although Josephus does not describe Jonathan as a (false) prophet, it is likely that Jonathan viewed himself as a prophet, as the desert summons seems to imply. [C. A. Evans]

3.2. Oracular Prophets. The second category of prophets, the oracular prophets, pronounced imminent divine deliverance; these prophets were concentrated around the First Jewish Revolt. Josephus (*J.W.* 6.5.3 §§300-9) recalls with considerable detail a prophet named Jesus, son of Hananiah (see Jesus ben Ananias). This Jesus appeared four years before the First Revolt, during a time when Jerusalem "was enjoying great peace and prosperity," and prophesied against Jerusalem for seven years and five months. In the end he was struck by a stone from one of the Roman "missile engines" and was killed. As the war began and the number of prophets increased, the Jews were urged to await help from God (Josephus *J.W.* 6.5.2 §§286-87). Even at the end of the war, when the temple had already been sacked and set on fire, a prophet pronounced to six thousand refugees that they would receive "tokens of their deliverance" and "help from God." Every one of those six thousand perished (Josephus *J.W.* 6.5.2 §§283-84).

4. Apocalypticists.

The apocalypticists do not seem to have been a party per se, but many of the Jews in the period 200 B.C.-A.D. 100, including some of the oracular prophets, apparently became persuaded of apocalyptic eschatology (see Apocalypticism). For the apocalypticists, Israel's situation looked funereal. It was a depressing period of unfulfilled hopes, shattered eschatological dreams, conflict with the ruling class, with no authorized prophetic spokesperson and, above all, buffeted by persecution of the righteous who remained faithful to the *Torah. At the same time the Hellenized and severely compromised Jewish aristocracy was prospering. This situation, perceived as a crisis by some within Israel, forced a search for creative solutions. This gave rise to an apocalyptic eschatology that represented a new interpretation of human history and destiny with new emphases and insights. While maintaining continuity with the prophetic eschatology of the past, it developed in a direction that was at once dualistic, cosmic, universalistic, transcendental

and individualistic.

Apocalyptic eschatology led to an emphasis on other-worldliness and a disinterest in temporal affairs. With its stress on cosmic dualism, the apocalypticists understood the real battle to be in the heavenlies between the spiritual powers. They were called upon therefore to participate with Michael and the heavenly host in the battle against evil (see Belial, Beliar, Devil, Satan). The primary weapon of this warfare was prayer, but it also included personal holiness and faithfulness to the Torah even if that meant severe trial. In this way the apocalypticists could defeat Israel's oppressor and rightly be classified a "revolutionary movement."

5. The Fourth Philosophy and the Martyr Tradition.

Josephus mentions, in addition to the *Pharisees, *Sadducees and *Essenes, a "Fourth Philosophy." Although many have linked this Fourth Philosophy with the Zealots and the *sicarii*, recently Horsley has persuasively argued that this identification is not correct. Horsley notes that, on the one hand, Judas the Galilean was a teacher with his own party (Josephus *J.W.* 2.3.3 §118), but on the other, Judas, as part of the Fourth Philosophy, "agreed with the views of the Pharisees in everything except their unconquerable passion for freedom since they take God as their only leader and master" (Josephus *Ant.* 18.1.6 §28). At least prima facie this Fourth Philosophy was a branch of Pharisaism in which certain teachers (e.g., Judas, Saddok, etc.) advocated a strongly proactive stance against Roman rule. Horsley suggests that the advocacy of resistance against Rome was rooted in four interrelated concepts.

The first concept was related to *taxation: to pay tax was equivalent to slavery. Moreover, it was argued that Scripture prohibited it (2 Sam 24). Taxes therefore should not be paid to Rome. Second, Israel was a theocracy and to be ruled solely by God. To submit to foreign rule was no less than idolatry and a violation of the first commandment: "Thou shalt have no other gods before me." Third, God would work synergistically through his faithful people if they would stand firm and actively resist their oppressors. Fourth, if Israel would demonstrate their resistance, God would work through them to establish his kingdom on earth. If the worst case occurred, and they ended in ruin, they would "at

least have honor and glory for their high ideals" (Josephus *Ant.* 18.1.1 §§5-7).

This resistance, Horsley notes, is never stated by Josephus as armed rebellion. In fact they seem instead to be willing sufferers: "They shrug off submitting to unusual forms of death and stand firm in the face of torture of relatives and friends, all for refusing to call any man master" (Josephus *Ant.* 18.1.6 §23). The assumption that the Fourth Philosophy called people to armed rebellion has led to the mistaken identification of this Fourth Philosophy with the Zealots, with Judas as the founder of the movement. Instead of armed resistance, proponents of the Fourth Philosophy felt that if they remained firm and resisted Rome through obedience to the Torah, "God would eagerly join in promoting the success of their plans, especially if they did not shrink from the slaughter that might come upon them" (Josephus *Ant.* 18.1.1 §5). If this understanding of the Fourth Philosophy is correct, this group traced its lineage to the martyrs under Antiochus IV Epiphanes.

The martyrological tradition, though it had antecedents, largely developed in the second century B.C. when Israel was experiencing severe persecution. The aristocracy had compromised its faith and was cooperating with the oppressing nation while those faithful to Torah were experiencing severe persecution. The suffering of the righteous, however, was interpreted as "warfare." Part of the worldview of these pious Jews was the belief that their innocent suffering would be so heinous that it would almost—in a reflex action—force God to act. This notion is most obvious in the **Testament of Moses*:

If we . . . die, our blood will be avenged before the Lord and then his kingdom shall appear throughout all his creation . . . he shall . . . avenge them of their enemies . . . he will go forth from his holy habitation with indignation and wrath on account of his sons. (*T. Mos.* 9:7—10:3)

Underlying Taxo's speech to his sons is the belief that God is the kinsman redeemer of the righteous. This doctrine of divine vengeance taught that God protects and avenges the innocent and the vulnerable when they are victimized by social injustice (Ps 9:21; Is 5:4-5; 16:1-6; Jer 11:20; 15:15) or the spilling of blood (Gen 4:9; Deut 32:43; 2 Kings 9:7-10; Ps 9:11-12; Ezek 24:7-11; Joel 3:19-20). God is portrayed as not responding to the crime itself but to the prayers of

the oppressed and the cry emanating from the slain victim's blood: "You shall not afflict any widow or orphan. If you afflict him at all, and if he does cry out to me, I will surely hear his cry . . . and I will kill you with the sword" (Ex 22:22-23). It is clear, therefore, that the martyrdom of the innocent Taxo and his sons was portrayed by the author of the *Testament of Moses* to provoke God to action because of the cry of innocent blood. God's response would be no less than the complete annihilation of Israel's enemies and the appearance of the eschatological kingdom. This perspective also appears in literature from this period, especially 4 Maccabees (see 3 & 4 Maccabees).

4 Maccabees was written sometime just before the First Jewish Revolt as an encomium to the martyrs under Antiochus IV. The purpose of the book was not only to apotheosize the martyrs, but also to encourage those who were facing similar trials to stand firm and fight against the opposition with the weapons of obedience and suffering. In 4 Maccabees 9 the eldest brother, after enduring a series of appalling acts of cruelty, encourages his compatriots: "Fight the sacred and noble battle for religion. Thereby the just Providence of our ancestors may become merciful to our nation and take vengeance on the accursed tyrant" (4 Macc 9:24 NRSV).

In this verse the brother is exhorting the others not to compromise nor fight with illicit means. Rather, they are to hold fast and endure righteous suffering. In so doing they will defeat the king, because God will take vengeance upon the despot. This is equally as clear in the fourth brother's response to his torture and torments:

Even if you remove my organ of speech, God hears also those who are mute. See, here is my tongue; cut it off, for in spite of this you will not make our reason speechless. Gladly, for the sake of God, we let our bodily members be mutilated. God will visit you swiftly, for you are cutting out a tongue that has been melodious with divine hymns. (4 Macc 10:18-21 NRSV; cf. 9:9)

Again, it is the innocent suffering which elicits God's response, and therefore his judgment is precipitated upon Israel's persecutors.

Atrocities against the innocent accumulate, and the cries for vengeance rise to heaven. Thus, as each martyr dies, he knows that the testimony against the tyrant is strengthened, and

judgment upon the king has been brought nearer. We also see this clearly in 4 Maccabees 11:3, the fifth brother's speech: "I have come of my own accord, so that by murdering me you will incur punishment from the heavenly justice for even more crimes" (NRSV). This martyr believed that by his righteous suffering the perpetrator of the grave evil, Antiochus, would increase his guilt, which would soon reach the level whereupon the divine Judge would necessarily act on behalf of justice. We can see this same theological construct operating in the sixth brother's poignant speech: "I also, equipped with nobility, will die with my brothers, and I myself will bring a great avenger upon you, you inventor of tortures and enemy of those who are truly devout" (4 Macc 11:22-23 NRSV; cf. 9:32).

The strength of this avenger is found in his armor, namely, his virtue. The *innocent* death of the martyrs promptly precipitates the avenging wrath of God; the righteous victims need not wait indefinitely—judgment is at hand. This fact obviously had motivated the fourth brother as he endured the agony: "Gladly, for the sake of God, we let our bodily members be mutilated. God will visit you swiftly" (4 Macc 10:20-21 NRSV; cf. 12:20). Vengeance has even been personified as one in pursuit of the arch-villain. The author intimates that it does not take long for vengeance to stalk its prey and administer justice, "The tyrant Antiochus was both punished on earth and is being chastised after his death" (4 Macc 18:5 NRSV). And again in the same chapter we read, "For these crimes divine justice pursued and will pursue the accursed tyrant" (4 Macc 18:22 NRSV).

The author clearly perceives the martyrs' struggle as nothing less than *war*. It is a conflict of good against evil, God against Satan. This is again made clear from his comment after recounting the martyrs' eulogy:

Indeed it would be proper to inscribe on their tomb these words as a reminder to the people of our nation: "Here lie buried an aged priest and an aged woman and seven sons, because of the violence of the tyrant who wished to destroy the way of life of the Hebrews. They vindicated their nation, looking to God and enduring torture even to death. Truly the contest in which they were engaged was divine." (4 Macc 17:8-11 NRSV)
The mother of the seven sons has earned the

complete respect of the author as an assailant in the battle against Antiochus. He gives her the title "warrior" and remarks in amazement at her spirited combat. The writer goes so far as to credit her with the victory in the national struggle against the despot:

O mother, soldier of God in the cause of religion, elder and woman! By steadfastness you have conquered even a tyrant . . . you stood and watched Eleazar being tortured, and said to your sons in the Hebrew language, "My sons, noble is the contest to which you are called to bear witness for the nation. Fight zealously for our ancestral law." (4 Macc 16:14-16 NRSV)

In the battle against Antiochus the martyrs' role is to endure suffering and die; they are not to compromise nor take up arms. The martyrs are merely to acquiesce to the tyrant's torture and sword. In performing this function they provide the key element in the battle which will defeat the enemies' forces and deliver the nation from their oppressors. This is a consistent theme throughout the book. Note these representative texts:

[the martyrs are] the cause of the downfall of tyranny over their nation, they conquered the tyrant. (4 Macc 1:11 NRSV)

O mother, who with your seven sons nullified the violence of the tyrant, frustrated his evil designs. (4 Macc 17:2 NRSV; cf. 9:30)

In most of the passages commenting on the effect of the martyrs' deaths, the martyrs themselves are the agents of victory. Thus the contribution of the martyrs is the cardinal contribution in the war effort. It justifies the amount of time devoted in 4 Maccabees to the martyrs' heroics. Without them victory would have been impossible. In the author's opinion the martyrs single-handedly defeat Antiochus and his evil forces. They accomplish his downfall by clinging to their law, not compromising and giving clear testimony to their faith. Righteousness is the lethal weapon in their struggle. They fight by persevering in their righteousness and patiently enduring torture and martyrdom; these are the martyrs' only weapons. Their foe is Antiochus, to be sure, but only insofar as he is in league with evil. The martyrs' real enemy is Satan, and their souls are at stake in the war. The heavenly host aids their effort, and by dying the

martyrs are assured of victory. The picture is nearly identical to that contained in the martyrological literature written earlier.

This evidence suggests that the martyrs, by their innocent suffering, participated in the war against Antiochus and were the principle agents of victory. Their suffering was the decisive factor in the war effort. If Horsley is indeed correct in his identification of the Fourth Philosophy, these martyrs with their theology of martyrdom are likely to have been its antecedents and the Fourth Philosophy held many, if not all, of the above-mentioned theological constructs. Although this was principally a theology of suffering, the outcome was victory over Israel's enemies and therefore no less a revolutionary movement than any other.

6. *Sicarii*.

The name *sicarii* was derived from the weapon that they employed, a curved dagger like the Roman *sicae* (Josephus *Ant.* 20.8.10 §186). Josephus describes them thus:

A different type of bandit sprang up in Jerusalem known as *sicarii*. This group murdered people in broad daylight right in the middle of the city. Mixing with the crowds, especially during the festivals, they would conceal small daggers beneath their garments and stealthily stab their opponents. Then, when their victims fell, the murderers simply melted into the outraged crowds, undetected because of the naturalness of their presence. The first to have his throat cut was Jonathan the high priest, and after him many were murdered daily. (Josephus *J.W.* 2.13.3 §§254-56)

Some have identified these *sicarii* with the Zealots, others with social bandits, but as Horsley points out, these *sicarii* are a "different type" of bandit. As noted earlier, ordinary banditry is a rural activity in which the bandits pillage the wealthy. Because of their notoriety they normally congregate in hideouts and are always on the move. The *sicarii*, however, were urban assassins, or terrorists (not rural bandits), who, because of their secrecy, could live apparently normal lives (without fleeing to a hideout).

Obviously these violent tactics are not those of the Fourth Philosophy. Josephus, however, seems to suggest a connection in the leadership: "Menahem, leader of the *sicarii* at the outbreak of the revolt, was Judas' of Galilee grandson or perhaps son" (Josephus *J.W.* 7.8.1 §§253-54). If

this conclusion is correct, it means that there must be some degree of correspondence between the religio-political orientation of these two groups. The assassination strategy is, however, a new development.

The tactics of assassinations first appeared during the reign of Felix in the 50s (cf. Josephus *J.W.* 2.13.3 §§254-57; 2.13.6 §§264-65; *Ant.* 20.8.5 §§163-65; 20.8.10 §§187-88). Unlike the social bandits who preyed on Roman petty officials and supply trains, the *sicarii* apparently attacked the Jewish aristocracy. These attacks took one of three forms. First, there were the selective assassinations of the ruling elite. The assassination of the high priest Jonathan is an example. Second, the *sicarii* slaughtered selected pro-Roman members of the Jewish aristocracy who lived in the countryside. These attacks also included plundering and burning selected aristocratic estates (Josephus *J.W.* 2.13.6 §§264-66; *Ant.* 20.8.6 §172). Third, the *sicarii* practiced terrorist hostage taking.

These attacks of the *sicarii* helped precipitate a revolutionary situation. They led to distrust among the ruling elite, fear among the aristocracy and catalyzed the fragmentation of the social order. That which normally provided the upper class with security began to erode, and vague feelings of anxiety and insecurity came in their place. Anyone could be next. The fragmentation of the ruling class was inevitable; individual personal safety became society's most important value. Thus, instead of cooperative efforts to protect their interests, the ecclesiastical aristocracy and ruling class began hiring personal armies to protect their interests (Josephus *Ant.* 20.9.2 §§206-7). By responding with force and violence, the ruling class further contributed to the breakdown of the social fiber and helped set the stage for the First Jewish Revolt.

The *sicarii*'s role in the revolt itself seems quite limited. Apparently, at first they were not in the midst of the fray, but before long they entered the action. They helped in the siege of the upper city and its aristocratic inhabitants (Josephus *J.W.* 2.17.6 §425); they also helped raze the royal palaces and the residence of the high priest Ananias. Shortly thereafter conflict broke out between the *sicarii* and the rest of the revolutionary forces. Within weeks the main body of the *sicarii* either had been executed, had retreated to Masada or had fled into hiding. The *sicarii* who occupied Masada sat out the rest of

the war and preyed upon the surrounding countryside for their food supplies. In A.D. 73 the Romans attacked Masada, one of the last holdouts, only to discover that all of its occupants had committed suicide (Josephus *J.W.* 7.8.6—9.1 §§320-401).

7. Zealots.

Although Luke mentions a certain Simon "the zealot" (Lk 6:15; Acts 1:13) this is probably a characterizing name (namely, Simon was zealous), rather than a technical term identifying his affiliation with a revolutionary party. The Zealot party per se was not formed until the winter of A.D. 67-68. The party's origins can be traced back to the clash between the Roman procurator Florus (A.D. 64-66) and the Jerusalem citizenry. During his term Florus had pilfered the temple treasury, allowed his army to loot the city and attempted to capture and control the temple. With such abuses left without redress and the city in a rebellious mood, the lower priests began to agitate for war. The temple captain, Eleazar, son of Ananias, provided leadership and, together with the lower priests and the revolutionary leaders of the populace, decided to terminate the *sacrifices offered twice each day on behalf of Rome and the Roman emperor (Josephus *J.W.* 2.17.2 §§409-10). Previously, the offering of this sacrifice had been negotiated as a satisfactory substitute for emperor worship and therefore was a tangible sign of Jewish loyalty to Rome (see Ruler Cult). Thus the refusal to offer sacrifices was tantamount to a declaration of war; it broke the peace treaty and Israel was now regarded outside the *Roman Empire (Josephus *J.W.* 2.17.3 §415). The temple was subsequently cleansed, and Israel was again showing her absolute fidelity to the Torah. God was about to shower the nation with blessing.

The chief priests and leading Pharisees, however, resisted the changes, and civil war soon broke out. Eleazar was joined by the *sicarii* (Josephus *J.W.* 2.17.5 §423), and together they defeated their rivals. But a power struggle ensued, with the *sicarii* battling Eleazar and his faithful; the *sicarii* were defeated and took refuge in Masada. Eleazar was now in control in Jerusalem. In August of A.D. 66, however, Cestius, the governor of Syria, bolstered with Roman forces, attacked Jerusalem. Through an unexpected turn of events Cestius abandoned the siege of Jerusalem and, in the process of retreat, lost a good

number of troops. Buoyed by their success, most of Jerusalem and Judea rallied around the revolutionary cause. Now basically unified, the nation named Ananus, the high priest, as its head. The traditional high priests resumed their positions and Eleazar joined them as general to Idumea (Josephus *J.W.* 2.20.4 §546).

The Romans then began their reconquest. During the summer and fall of A.D. 67 they had subdued Galilee and were marching through Judea. The brigands and revolutionary forces in these areas were retreating. As these fugitives, as well as those from Idumea and Perea, took refuge in the city, their own views seemed to resonate with those lower priests who had started the revolt with the cessation of the sacrifices on behalf of Rome. This new coalition is the group Josephus calls "Zealots." The Zealots agitated against the ecclesiastical aristocracy and soon decided to assert themselves. First, they attacked some Herodian nobles against whom they still had some "ancient quarrel" and who also were accused of treason (Josephus *J.W.* 4.3.4-5 §§140-46). These "ancient quarrels" almost certainly were focused on those members of the nobility who were wealthy landowners with a large number of peasants indebted to them. The Zealots, regardless of the Roman threat, were also fighting a class war against the Jewish aristocracy.

Obviously, this activity against the Herodian nobility would give rise to anxiety throughout the rest of Israel's upper class. If this discriminate violence were not enough, the Zealots elected by lot their own people to priestly offices—even installing an uneducated layperson in the office of high priest. Without doubt the Zealots were conspiring for political control. Given the inflammatory nature of this Zealot activity, it is no surprise that the Jewish aristocracy immediately turned on the Zealots and viciously attacked them (Josephus *J.W.* 4.3.6-8 §§147-57). Incited by Ananus and Jesus son of Gamala, both high priests, the people of Jerusalem forced the zealots into the inner court (Josephus *J.W.* 4.3.12 §§197-204). Trapped in the temple, the Zealots contacted sympathizers outside of Jerusalem to free them (Josephus *J.W.* 4.4.1 §§224-32). The Idumeans responded, freed the Zealots and slaughtered Ananus and Jesus son of Gamala. While they were at it, they also assassinated a number of other nobles (Josephus *J.W.* 4.4.2-3 §§233-53). There was yet another purge of Jerusalem's nobility, and this one also included many who were formerly

in power, as well as the wealthy.

Within the Zealot ranks, however, all was not well. Many of the Zealots were not responsive to the dictatorial ways of John of Gischala. Since John could not gain absolute authority among the Zealots, he broke away to form his own revolutionary faction (Josephus *J.W.* 4.7.1 §§389-96). John's independence, however, was short lived. The messianic movement by Simon bar Giora was a threat to the Zealot regime in Jerusalem, and a good part of John's army deserted so that John and the Zealots again formed an alliance. This alliance, however, did not prevent Simon bar Giora from attempting to liberate the city from the Zealots and John of Gischala (Josephus *J.W.* 4.9.11 §§571-76). Simon was able to force the Zealots back into the temple (Josephus *J.W.* 4.9.12 §§577-84). The faction-prone Zealots split over the leadership of John. Josephus records that for a time there was even a three-way battle raging. Simon bar Giora, in control of Jerusalem, pressing in upon John of Gischala, who was fighting to control the temple courtyard and was caught between Simon and the rest of the Zealot party who were in the inner court above the temple (Josephus *J.W.* 5.1.1-3 §§1-12). Shortly thereafter, John was able to reconcile himself to the rest of the Zealot party, although he was only able to accomplish it by way of trickery. John of Gischala was now the Zealot leader again (Josephus *J.W.* 5.2.3-3.2 §§67-106).

By this time the Romans were at Jerusalem's gates. This threat galvanized the rival factions to form a united front. The Jews, however, were no match for the Romans. During the siege the Zealots were the smallest of the rival groups and therefore had the least significant role to play (2,400 Zealots, 6,000 under John of Gischala, 15,000 under Simon bar Giora). Nevertheless, the Zealots, in spite of their less significant role, did fight courageously to the end in cooperation with their Jewish rivals against the overwhelming military strength of the Romans (Josephus *J.W.* 5.6.1-9.3 §§248-374).

The Zealots should be remembered primarily for their thwarting of the nobility's plan to negotiate a settlement with the Romans. Moreover, the Zealots were not the Fourth Philosophy mentioned by Josephus; indeed, they were not a sect or philosophy at all. Furthermore, the Zealots were not in the vanguard among those who were agitating for rebellion, but once the revolt was underway and the only choice was to fight or to

flee, they stayed and fought to the death.

The centuries leading up to the First and Second Jewish Revolts were very painful for the Jewish nation. The political subjugation by foreign nations was extremely difficult as well as the erosion of religious, cultural and socioeconomic structures. Israel's general response to the unrest was revolt, but not always via armed rebellion. The social bandits, Zealots, *sicarii* and messianic pretenders generally advocated armed rebellion and agitated for a military solution. These groups, however, often fought among themselves, significantly weakening their impact. The other response, generally advocated by the apocalypticists, prophets and martyrs, believed in waiting upon God, who, they believed, was about to intervene and personally defeat the enemy. The Fourth Philosophy, generally identifiable as having a genealogical link with the Maccabean martyrs, advocated suffering and martyrdom in order to move God to deliver Israel. None of these responses, however, was adequate to deal with the Roman threat. After the Second Jewish Revolt (A.D. 132-135) Israel lost its political identity for almost two millennia. [W. J. Heard]

REWRITTEN BIBLE IN PSEUDEPIGRAPHA AND QUMRAN

Scattered among the Jewish writings of the period 250 B.C. to A.D. 135 is a loose collection of narrative texts that retell and reinterpret the biblical story. These works, known most commonly as "rewritten Bible," open a window on early Jewish exegesis around the turn of the era and demonstrate the deeply held conviction that the ancient stories bore a message for the present day. Pride of place within this corpus goes to

three compositions: **Jubilees*, *Pseudo-Philo's *Biblical Antiquities* and, among the *Qumran scrolls, the **Genesis Apocryphon* (1QapGen).

1. Basic Characteristics of Rewritten Bible
2. Exemplars Among the Pseudepigrapha and Dead Sea Scrolls
3. Rewritten Bible as Biblical Exegesis

1. Basic Characteristics of Rewritten Bible.

Works of rewritten Bible are remarkably diverse; they share a narrative framework but differ widely in manner of biblical citation, extent of narrative embellishment, apparent purpose and in what they demand of their readers. Accordingly, efforts to define and delimit rewritten Bible as a literary genre have produced little consensus. What follows are four fundamental characteristics.

1.1. Literary Framework: An Extended Biblical Narrative. Works of rewritten Bible offer a coherent and sustained retelling of substantial portions of OT narrative, generally in chronological sequence and in accord with the narrative framework of Scripture itself. By this criterion, compositions modeled on biblical law (e.g., 11QTemple [see Temple Scroll]), poetry (e.g., **Psalms of Solomon*, 1QH [see Thanksgiving Hymns], 11QPsl51, *Prayer of Manasseh) or wisdom (e.g., 11QIargum of Job, 4Q184-185) would be excluded.

Using biblical narrative as literary framework does not mean, however, that the biblical account is treated evenly; lengthy sections of narrative can be summarized in a few lines or passed over. For example, Pseudo-Philo allots only three chapters (Pseudo-Philo *Bib. Ant.* 6-8) to the patriarchs but thirty (Pseudo-Philo *Bib. Ant.* 20-49) to the period of Joshua and the judges. By contrast, more than half of *Jubilees* (19-45) concerns Jacob and his twelve sons. Each composition reiterates episodes and details that advance its own interests.

Expansions and summaries of biblical narrative could also be embedded within compositions of different genres. For example, the story of Reuben's intercourse with Bilhah (Gen 35:22) is expanded in *Jubilees* 33:1-9 but also in the *Testament of Reuben* 3:11-15. *Jubilees* (33:16) explains why Reuben and Bilhah are not executed, in accord with the law; the *Testament (T. Reub.* 4:2-4) emphasizes Reuben's contrition and warns readers of the pitfalls of promiscuity. Many important examples of early Jewish narrative exe-

genesis are thus preserved outside of rewritten Bible, in other sorts of compositions. Contrast, for example, interpretations of the rape of Dinah (Gen 34) in *Jubilees* 30, Judith 9:2-4 and *Testament of Levi* 2:1-2; 5:7. Likewise, different rewritings of the Judah/Tamar episode (Gen 38) occur in *Jubilees* 41, Pseudo-Philo's *Biblical Antiquities* 9:5 and *Testament of Judah* 10-15. And Abraham's rejection of idolatry (cf. Josh 24:2-3, 14-15) is expounded in *Jubilees* 11-12, *Biblical Antiquities* 6 and **Apocalypse of Abraham* 1-8.

1.2. Composition: An Integration of Biblical Episodes and Extrabiblical Traditions. Works of rewritten Bible construct a coherent narrative by weaving into the laconic biblical storyline extrabiblical traditions. The result is a seamless, unified composition that disguises the boundaries between biblical text (whether quoted or paraphrased) and secondary elements. C. Perrot (24-26) calls such works "texte continua" to distinguish them from "texte explicue," works that alternate between explicit biblical citations and commentary (e.g., Qumran pesharim, Philo's commentaries, many NT citations of the OT and later *rabbinic midrashim). D. Dimant (382-83) likewise contrasts this "compositional" use of Scripture that predominates in the *Apocrypha and pseudepigrapha with the "expositional" use of Scripture in various early commentaries.

1.3. Relation to Scripture: Implicit, Rather Than Explicit, Exegesis. The rich yield of early Jewish haggadic traditions preserved in rewritten Bible is not merely a loose collection of detached legends inserted at convenient points along the biblical storyline. Rather, narrative additions function as implicit biblical exegesis, by filling gaps, solving problems and explaining connections in the biblical text. Whether extrabiblical elements are novel or traditional, they arose almost certainly from a meticulous reading of the biblical story, informed by a profound familiarity with the rest of Scripture. In contrast to later rabbinic exegesis, the narrative shape of rewritten Bible generally precludes the offering of more than one interpretation and prevents the author from setting forth the exegetical reasoning behind his exegesis.

1.4. Function: Companion to, Rather Than Replacement of, Scripture. Although the storyline is largely intelligible without prior biblical knowledge, works of rewritten Bible do not seek to displace Scripture but rather offer a fuller, smoother version of the sacred story. Except for

the predominantly non-Jewish audience of *Josephus's *Antiquities*, readers of rewritten Bible would be expected to recognize and recall the underlying biblical narrative, even if they were not always sure where the embellishments began and ended. Explicitly marked scriptural citations are rare in rewritten Bible (e.g., *Jub.* 30:12, citing Gen 34:14). Pseudo-Philo typically has one of his characters recite divine sayings in Scripture (e.g., Pseudo-Philo *Bib. Ant.* 9:3 cites Gen 15:13; *Bib. Ant.* 9:8 cites Gen 6:3; *Bib. Ant.* 15:6 cites Gen 1:9), and *Jubilees* has the angel refer to what is written on the heavenly tablets (e.g., *Jub.* 4:30 cites Gen 2:17; *Jub.* 16:29 cites Lev 23:42). Occasionally biblical books are mentioned directly. *Jubilees* speaks of the "first law" (*Jub.* 6:22) and of words already written down (*Jub.* 30:12, 21; 50:6), presumably referring to the Pentateuch. Pseudo-Philo mentions by name both Judges (Pseudo-Philo *Bib. Ant.* 35:7; 43:4) and Kings (Pseudo-Philo *Bib. Ant.* 56:7; 63:5; cf. *T. Mos.* 1:5).

Some episodes assume prior knowledge of the biblical account. *Jubilees* 29:4 omits Rachel's theft of Laban's idols (Gen 31:19, 30-35) but later mentions it in passing (*Jub.* 31:2; cf. Gen 35:1-4). The language of *Jubilees* 30:3-4, 12, 23 seems to presuppose knowledge of Genesis 34:13-27. Likewise, Pseudo-Philo's passing reference to Cain "[after he had killed Abel his brother]" (Pseudo-Philo *Bib. Ant.* 2:1) assumes familiarity with Genesis 4; the offering of Isaac (Gen 22) is omitted from *Biblical Antiquities* 8:3 but invoked three times later (Pseudo-Philo *Bib. Ant.* 18:5; 32:2-4; 40:2; cf. *Bib. Ant.* 9:3; 12:5).

2. Exemplars Among the Pseudepigrapha and Dead Sea Scrolls.

The practice of biblical rewriting is as old as Scripture itself. Deuteronomy takes up and reshapes portions of Exodus, Leviticus and Numbers; Chronicles rewrites Samuel-Kings; and the apocryphal 1 Esdras (see Esdras, Books of) appears to be a modest revision of parts of 2 Chronicles, Ezra and Nehemiah. See also the narrative summaries in Joshua 24, Nehemiah 9, Psalms 78, 105, 106 and 3 Maccabees 2. (On this "inner-biblical" rewriting, see esp. Fishbane.) Accordingly, the rewritten Bible of early *Judaism followed the precedent set within Scripture itself, in order to reinterpret and apply the sacred text for subsequent generations. The shape of this reinterpretation, however, varied with each new

composition, as the following survey illustrates.

2.1. Jubilees. This reworking of Genesis 1—Exodus 16:1, dating from the second century B.C., claims to be the transcript of revelations made by the angel of the presence to *Moses during his time on Mt. Sinai (cf. Ex 24:18). This claim to inspired status (*Jub.* 1:5, 7, 26-27; 2:1; 50:13), apparently affirmed in CD 16:2-3 (and perhaps also 4Q228; see Damascus Document), is not a challenge to the authority of Torah, however. The aim was to supplement, not to supplant, Scripture (see *Jub.* 6:22). Biblical warrant for the idea of a "second written" Torah might have been found in the Torah itself: Exodus 24:12; 31:18; 32:16; 34:1 and Deuteronomy 9:10; 10:2, 4 portray God writing on the Sinai tablets, but Exodus 34:27 depicts God telling Moses to do the writing.

Jubilees has much in common with the *Genesis Apocryphon* but differs in its pervasive interest in halakic and calendrical matters and in its tendency to use narrative episodes as warrant for legal rulings. For example, Israel's laws prohibiting nakedness (e.g., Ex 20:26; 28:42-43) are grounded in God's clothing of Adam and Eve (*Jub.* 3:31; cf. Gen 3:21). Also linked to narrative episodes are laws regarding purification (*Jub.* 3:8, 10, 13), murder (*Jub.* 4:5), retaliation (*Jub.* 4:32), eating blood (*Jub.* 6:11), circumcision (*Jub.* 15:25-34), *marriage (*Jub.* 28:6), incest (*Jub.* 33:10-17) and *feasts (*Jub.* 6:17; 16:29). Narrative expansions thus serve to demonstrate the preexistence, even eternity, of Torah. They also serve to idealize biblical figures (*Jub.* 11:15—12:21; 17:17-18), explain difficulties in the text (*Jub.* 4:29-30; 17:15-18) and promote various doctrines, for example, about *eschatology (*Jub.* 1:7-18, 22-25), idolatry (*Jub.* 11:16-17; 12:2-14), *demons (*Jub.* 5:6-11; 10:1-13) and *sabbath (*Jub.* 50:1-13).

2.2. Pseudo-Philo's Biblical Antiquities. Often referred to by its Latin title *Liber Antiquitatum Biblicarum* (hence *LAB*), this work was originally written in Hebrew, probably in Palestine shortly before or soon after the Jewish war of A.D. 70 (see Jewish Wars with Rome). It selectively rewrites Genesis through 2 Samuel, bypassing some portions (e.g., Gen 1—3; almost all of Lev and Deut) and heavily compressing others (cf. Ex 3—13 and Pseudo-Philo *Bib. Ant.* 10:1; Josh 1—21 and *Bib. Ant.* 20:1-10). In sharp contrast to *Jubilees*, Pseudo-Philo omits almost all pentateuchal legal material (see Pseudo-Philo *Bib. Ant.* 11; 13).

Most notably, Pseudo-Philo devotes about one-third of the work (Pseudo-Philo *Bib. Ant.* 25—49) to rewriting Judges. The work ends, intriguingly, with the death of Saul (Pseudo-Philo *Bib. Ant.* 65; 2 Sam 1:10), though some scholars (e.g., James, Harrington; contra C. Perrot, Jacobson, Murphy) contend the original ending has been lost.

Pseudo-Philo's rewriting emphasizes Israel's covenant status (Pseudo-Philo *Bib. Ant.* 4:5; 7:4; 8:3; 9:3; 11:5; contrast Josephus), the dangers of idolatry (Pseudo-Philo *Bib. Ant.* 6:1-5; 12:1-10; 25:7-13; 44; cf. *Jub.*) and the importance of moral leadership (Pseudo-Philo *Bib. Ant.* 6; 9). It has not been successfully tied to any one school or party (e.g., *Pharisees, *Sadducees, *Essenes, Samaritans), nor does it attack the Jewish *priesthood, *temple cult or monarchy. The view of Perrot, that Pseudo-Philo *Biblical Antiquities* emerged from a pre-70 Palestinian synagogal context, although speculative, underlines the nonsectarian, homiletical tone of the work.

A distinctive feature of Pseudo-Philo's composition is his use of Scriptures from far-removed contexts to illuminate and interpret his rewritten narrative. For example, Amram draws wisdom from the story of Tamar (Gen 38) during the crisis under Pharaoh (Pseudo-Philo *Bib. Ant.* 9:5-6; cf. Ex 1). And the episode of the molten calf (Ex 32) is portrayed as a "fulfillment" of God's words to the Babel generation (Pseudo-Philo *Bib. Ant.* 12:3; Gen 11:6). These secondary texts in Pseudo-Philo may appear as explicit citations (perhaps with fulfillment formulas), unmarked allusions, biblical echoes and narrative flashbacks. Many are unique to *Biblical Antiquities*.

2.3. Genesis Apocryphon. This fragmentary Aramaic scroll from Cave 1 of the Dead Sea caves (see Dead Sea Scrolls) is an embellished paraphrase of Genesis, composed around the turn of the era. The six best-preserved columns (2, 12, 19-22) rewrite the biblical accounts of Noah and Abraham (Gen 5:28—15:4), solving what are perceived to be problems in the narrative and idealizing biblical characters. Earlier portions (through col. 20, line 22) are substantially expanded, first-person accounts, paralleling both *Jubilees* and *1 Enoch* 106—107. Thereafter the work abruptly shifts to the third person and resembles the more restrained style of the targumim (see Rabbinic Literature: Targumim). Evidence of halakic (legal) interest or sec-

tarian bias is lacking.

2.4. Other Dead Sea Scrolls. 1Q22 (1QDM) is a fragmentary scroll rewriting Moses' final farewell based on Deuteronomy. The extant fragments correspond to Deuteronomy 1:3 (1Q22 1:1-4); 1:9-18 (2:5-11); 4:25-28 (1:5-9); 6:10-11 (2:1-5); 11:17 (2:5-11); 27:9-19 (2:1-5); 28:15 (1:9-11); 31:7 (1:11-12).

4Q158 (4QRP^a) is a fragmentary scroll rewriting narrative and legal portions of Genesis and Exodus, interwoven with excerpts from Deuteronomy. Fragment 1 rewrites Genesis 32:25-33 and Exodus 4:27-28; fragment 6, Exodus 20:19-21 and Deuteronomy 18:18-22; fragments 7-8, Exodus 20:12-17, Deuteronomy 5:30-31, Exodus 20:22-26; 21:1-10; fragments 10-12, Exodus 21:32-22:13.

4Q225 (4QpsJub^a) is a fragmentary scroll of three columns named *Pseudo-Jubilees* by its editors that recounts the binding of Isaac (Gen 22) with details not in *Jubilees* 17-18, including (following Vermes's reconstruction) Isaac's request that his hands be tied and the attendance of holy angels. 4Q225 has obvious relevance for assessing the development of Aqedah traditions at the turn of the era.

4Q252 (4QpGen^a) has six surviving columns corresponding to Genesis 6:3-8:18; 9:24-27; 11:31-12:4; 18:16-33; 22:10-12; 49:2-4, 10, 20-21. Chronological details of the flood narrative are painstakingly retold to support the solar *calendar (1:1-2:5; cf. *Jub.* 5:31). 4Q254 parallels 4Q252 columns 1-2.

4Q364-365 (4QRP^b, ^c) are fragmentary scrolls that originally may have spanned the entire Pentateuch. Some are rearrangements of the biblical order. Rewritten narrative portions include Genesis 25:18-19; 28:6; 30:14; Exodus 9:9-10; 14:10, 12-20; 25:1-2; Numbers 4:47-49; 7:1; 36:1-2.

2.5. Related Compositions. Across the spectrum of early Jewish literature, many works embed rewritten biblical narratives within larger compositions. The following list is representative but by no means comprehensive. Omitted are works of a primarily legendary nature, such as **Joseph and Aseneth*, the *Ladder of Jacob*, *Jannes and Jambres*, the **Martyrdom of Isaiah* and the **Lives of the Prophets*.

2.5.1. 1 Enoch. Several sections of this important collection rewrite and expand portions of scripture: *1 Enoch* 6-11 offer an apocalyptic expansion of Genesis 6-9; Enoch's wildly sym-

bolic animal vision of chapters 85-90 summarizes all of biblical history; and chapters 106-107 recount legends about Noah's birth, built up from Genesis 5:28-29 (cf. 1QapGen 2-5). Noah traditions are also found in *1 Enoch* 65-67 (see Enoch, Books of).

2.5.2. Testament of Moses. Heavily dependent upon Deuteronomy 31-34 but influenced by other scriptures (e.g., Dan 9:4-19), **Testament of Moses* uses the transfer of leadership from Moses to Joshua as the occasion for a rapid overview of Israel's history, from the conquest under Joshua (*T. Mos.* 2:1) to the exile (*T. Mos.* 3:3), the return (*T. Mos.* 4:7) and the *Hasmonean and *Herodian dynasties (*T. Mos.* 5-6).

2.5.3. Books of Adam and Eve. Preserved in two distinct recensions, the Greek (so-called) *Apocalypse of Moses* and the Latin *Life of Adam and Eve*, this composition retells and midrashically embellishes portions of Genesis 1-5, reflecting nonsectarian Jewish theology (perhaps Palestinian and Pharisaic) from approximately the first century A.D. (see Adam and Eve) Most striking, perhaps, is the work's moving portrayal of Eve; she not only takes the blame (*Apoc. Mos.* 11:1-2; 14:2; 21:6; *Adam and Eve* 38:1-3; 44:2) but also accepts major responsibility for the Fall (*Apoc. Mos.* 9:2; 21:2; 23:4; 32:1-3; 3:1; 5:2; 35:3; 37:2). The devil even speaks through Eve to Adam (*Apoc. Mos.* 21:3).

2.5.4. The Exagoge of Ezekiel the Tragedian. Originating sometime between the third and first centuries B.C. but preserved now only in Eusebius's *Praeparatio Evangelica*, this work combines features of Jewish rewritten Bible with Greek drama to produce a poetic-narrative work the surviving fragments of which rewrite and reinterpret portions of Genesis 46 to Exodus 15. The *Exagoge* represents a creative attempt to interpret Jewish traditions for a Greek audience.

2.5.5. Demetrius the Chronographer. Five excerpts attributed to *Demetrius the chronographer are preserved by Eusebius (*Praep. Ev.* 9), and a sixth survives in Clement of Alexandria's *Stromata* (1.141.1-2). These fragments of a longer work, probably dating from the late third century B.C., retell several patriarchal tales (esp. Gen 22, 27-35, 41, 43, 46; Ex 12, 14, 15). The rewritten narratives are marked by brevity, minimal theological reflection and especially by a relentless concern to clarify details of chronology and genealogy.

2.5.6. Jewish Antiquities of Josephus. An intro-

duction to rewritten Bible must include at least brief mention of Josephus. Of the twenty books of the *Antiquities*, the first thirteen (Josephus *Ant.* 1.1.1 §27—11.7.2 §303; 12.5.1 §241—13.6.7 §214) are devoted to paraphrasing the biblical story from Genesis through 1 Maccabees for the Greek-speaking world. Thus his account is not only embellished by midrashic traditions (whether oral or written) but also shaped by Josephus's own apologetic concerns and editorial license, and perhaps it is influenced by other *Hellenistic Jewish sources, including *Philo. Although Josephus promises his readers at the outset to provide a precise rendering of the Scriptures without additions or omissions (*Ant.* 1 Proem 3 §17; cf. 1 Proem 2 §5; 20.12.1 §261), *Antiquities* includes innumerable departures from the biblical precursor. If his promise of fidelity to his sources was not an essentially meaningless stock formula, Josephus likely conceived of himself as interpreter of Israel's story, in rewritten Bible tradition, and not merely as translator.

2.5.7. *Philo's Life of Moses (De Vita Mosis)*. This work also merits inclusion because of the way it integrates biblical episodes with early Jewish tradition about Moses. Philo's introductory remarks bear repeating since they so clearly articulate an essential feature of rewritten Bible: "I will . . . tell the story of Moses as I have learned it, both from the sacred books [*ek biblōn tōn hierōn*] . . . and from some of the elders of the nation: (*para tinōn apo tou ethnous presbyterōn*); for "I always interwove what I was told with what I read [*ta . . . legumena tōis anaginoskōmenois aei synphainon*], and thus believed myself to have a closer knowledge than others of his life's history" (Philo *Vit. Mos.* 1.4). *Life of Moses* also integrates numerous features of the Greek *bios* (biographical novel; see Biography, Ancient).

3. Rewritten Bible as Biblical Exegesis.

It is helpful to identify various reading techniques or interpretive strategies at work in rewritten Bible, not only because they illuminate the nature of early Jewish exegesis, but also because they compare at numerous points with strategies employed in early Christian readings of both the OT and the Jesus traditions.

3.1. *Problem Solving*. Much of early Jewish exegesis could be described as the tradents' responses to perceived ambiguities and gaps in the biblical text. This sort of biblical problem solving is ubiquitous in rewritten Bible. For ex-

ample, the scandal of having God demand Isaac as a holocaust (Gen 22:1-2) is explained in *Jubilees* as God's decision to prove Abraham's faithfulness before Satan (*Jub.* 17:15—18:16; cf. 4Q225). And Pseudo-Philo solves the problem of having Moses break the divinely inscribed stone tablets (Ex 32:19) by having the script first disappear (Pseudo-Philo *Bib. Ant.* 12:5; 19:7). Why did God allow Jephthah's daughter to be first out of the tent (Judg 11:34)? According to Pseudo-Philo's *Biblical Antiquities* 39:10-11, it was divine punishment for Jephthah's irreverent vow. And, according to 4Q252 2:5-7, God's curse fell on Canaan instead of Ham (Gen 9:26) because God's irrevocable blessing had already fallen on Noah's three sons (Gen 9:1). In many such cases, the rewritten version does not contradict Scripture but fills in its gaps with traditional material. (For additional examples, see Genesis Apocryphon 4.2.2.)

When a biblical episode reflected poorly upon the patriarchs, the problem could be solved by omission. Thus Abraham's dubious scheme to pass Sarai off as his sister (Gen 12:10-20) disappears from *Jubilees* 13:11-15, just as the conflict between the shepherds of Abraham and Lot (Gen 13:5-11a) drops out of *Jubilees* 13:17-18. Similarly, Pseudo-Philo neglects to mention how Simeon and Levi duped Shechem by requiring circumcision before they put them to the sword (Pseudo-Philo *Bib. Ant.* 8:7; cf. Gen 34). Josephus's omission of the molten calf (Josephus *Ant.* 3.5.7-8 §§95-101; cf. Ex 32) is only the most blatant example of this phenomenon in his work.

3.2. *Exploiting Biblical Juxtapositions*. Underlying many ancient rewritings was the assumption that adjacent scriptural episodes were meaningfully related and thus mutually illuminating. Accordingly, biblical juxtapositions could be exploited in the interest of exegesis. Thus, *Jubilees* 24:2-3 explains Esau's hunger and willingness to sell his birthright to Jacob (Gen 25:29-34) by reading that episode in light of the subsequent mention of the famine (Gen 26:1). Similarly, when Pseudo-Philo inserts Abraham into the Babel episode (Pseudo-Philo *Bib. Ant.* 6:3-18; 7:4), he clearly assumes a link between Genesis 11 and 12. And *Biblical Antiquities* 16:1 explains Korah's rebellion (Num 16:1-3) as a reaction to the garment fringe legislation of the previous pericope (Num 15:37-41). Judges 17—18 and

Judges 19—21 are linked in Pseudo-Philo *Biblical Antiquities* 44—48. This reading strategy would become formalized in rabbinic exegesis (see Fishbane, 399-403).

3.3. Interpreting Scripture by Scripture. For the authors of rewritten Bible, Scripture was a single, unified story, so that interpreting one passage could readily entail citing or alluding to several others. Some of these intertexts are predictable: 1QapGen 20:22-33 imports elements from Genesis 20 in its rewriting of the parallel story in Genesis 12; 4Q158 (frags. 7-8) inserts Deuteronomy 5:30-31 between citations of Exodus 20; and 4Q252 forges links between Genesis 49:3-4 and Genesis 35:22. Other connections are imaginative, as when *Jubilees* 4:30 invokes Psalm 90:4 to explain how God kept the promise of Genesis 2:17 ("on the day you eat of it you shall surely die") even though Adam did not die the same day he sinned.

Pseudo-Philo makes extensive use of intertextual reference (see 2.2 above). He explains Moses' transfigured countenance (Ex 34:29-35) by comparing it with Joseph's appearance before his brothers (Pseudo-Philo *Bib. Ant.* 12:1; cf. Gen 42:8) and likens the parting of the Red Sea (Ex 14:21) to God's separating the waters at creation (Pseudo-Philo *Bib. Ant.* 15:6; cf. Gen 1:9). When *Biblical Antiquities* 12:7 describes Moses' destruction of the molten calf and Israel's drinking of its dust (Exod 32:19-20), we can hear echoes of Numbers 5:11-31, the bitter water rite for the suspected adulteress. Thus a ritual act of idol destruction and humiliation becomes a tribunal that rendered verdicts upon idolatrous Israel (see also Pseudo-Philo *Bib. Ant.* 11:8; 14:2; 19:11).

3.4. Idealizing Biblical Characters. Many narrative expansions idealize Scripture's central characters. Patriarchs, matriarchs and kings become model law keepers (e.g., Abraham and Jacob in *Jubilees*), exemplary leaders (e.g., Moses in Pseudo-Philo *Bib. Ant.*), healers (Abraham in 1QapGen) and champions of virtue (Sara! in 1QapGen; Moses, David and Solomon in Josephus). They deliver eloquent speeches and moving testaments, rehearsing God's deeds or calling the people to obedience (*Jub.* 20—22; 25; 36; Pseudo-Philo *Bib. Ant.* 23; 32). Their birth narratives are expanded (1QapGen 2—5; Pseudo-Philo *Bib. Ant.* 9:13; 42; 50) or created (*Jub.* 11:14-17; Pseudo-Philo *Bib. Ant.* 4:11). Their sins and character flaws are passed over

or explained away (*Jub.* 13:10-13; 41:23-24; 1QapGen 19:13-19). Angels mourn their deaths (Pseudo-Philo *Bib. Ant.* 19:16). Praiseworthy qualities of one biblical figure are transferred to another. Even lesser figures may benefit from idealization (e.g., Enoch in 1QapGen; Tamar in Pseudo-Philo *Bib. Ant.* 9; Jephthah's daughter in *Bib. Ant.* 40).

RHETORIC

Throughout the history of biblical studies, especially in the early church fathers, in German biblical criticism of the eighteenth through the

early twentieth centuries, and most recently in the latter part of the twentieth century, the study of rhetoric has been seen as an important background for interpreting the NT. By rhetoric it is usually meant ancient rhetorical theory, which emerged as a specific field of study during the Greek and Roman empires, what is often called classical rhetoric. The Greeks in particular developed *technē logōn* ("art of words/speech"), which was the exploration of human communication through language. This interest in communication is evident in early Greek literature like Homer's *Iliad* and in Greek drama. Various social constructs that emerged in the Greek city state also contributed to the importance of oral communication with the lawcourt, political assembly and public ceremonies as key contexts for oral discourse. It was in the fourth century B.C. that this oral discourse came to be labeled as *rhētorikē* ("rhetoric"), defined in particular as *peithō* ("persuasion") (Plato, *Gorg.* 453a2).

This article will examine classical rhetoric in order to evaluate its importance as a historical communicative context for the NT.

1. History and Development of Classical Rhetoric
2. The Practice of Rhetoric in the First Century A.D.
3. Jewish Rhetoric
4. The Distinctives of Christian Rhetoric
5. Relevance for New Testament Interpretation Today

1. History and Development of Classical Rhetoric.

1.1. The Sophists and Early Greek Rhetoric (Fifth Century B.C.). In fifth-century Athens, a group of teachers who came to be known as Sophists set themselves up as instructors in wisdom and eloquence in order to help male Athenians succeed in civic life. Their focus was on bringing thought or ideas to expression through techniques of proof or devices of argument revealing the two sides to every question. Their teaching style mostly included imitation of good literature or speeches and memorizing certain rhetorical formulaic devices. Aristotle criticizes their style for lacking art and being unsystematic (Aristotle *Soph. Elench.* 183a-184b).

Some of the key figures are Protagoras, Antiphon, Gorgias and Isocrates, the latter two being the more influential Gorgias (485-380 B.C.) linked eloquence and virtue as companion qual-

ities. The *Gorgias* style used parallelism and antitheses expressed in ornate schemes or figures of speech marked by their clever and poetic sound patterns: making the ideas sound good was persuasive. His model speeches that are extant include *The Encomium of Helen* and *The Defense of Palamedes*. Isocrates' (436-338 B.C.) main contribution was to establish rhetoric as a key educational method (see his *Antidosis*). He also laid the foundation for three of the major elements of rhetoric: invention (the thought), arrangement (ways to join them together) and style (ways to adorn the speech) (*Isocrates Soph.* 13.16-17). He downplayed the ornate style of *Gorgias* and developed the periodic style in which the main subject and/or verb are withheld until the end of the sentence, creating suspense in the listener.

The sophistic approach to rhetoric—wisdom as eloquence is persuasive—continued as a prominent school of rhetoric throughout the history of rhetoric. In fact, there was a period known as the second sophistic, which began around the early second century A.D. In an environment of repressed freedom of speech due to empire politics, rhetoric moved toward oratorical excess in which the emphasis was on style and delivery rather than on content.

1.2. Plato (427-347 B.C.). The move away from the sophistic style to a more philosophical (and moral) rhetoric was inaugurated by Socrates. His pupil, Plato, perfected the Socratic method: using questions and answers in dialogue or dialectic to move toward the truth of an idea. He wrote two works that had an emphasis on rhetoric, *Gorgias* and *Phaedrus*. The earlier work, *Gorgias*, focuses on the orator and by implication contains a fairly negative perspective on rhetoric suggesting it is mostly art without knowledge, a form of flattery that produces pleasure in an audience and plays upon the ignorance of the audience (see especially, *Gorg.* 462-66). In the *Phaedrus* there is a more sustained and focused discussion of rhetoric as a subject (see esp. *Phaedr.* 260-64). Plato recognizes the potential for rhetoric to "lead the soul" if practiced with the correct principles: knowledge, logic, structure (unity of the parts).

1.3. Aristotle (394-322 B.C.). It is in the writings of Aristotle, particularly *Rhetoric*, that rhetoric as a topic is given systematic treatment. Most significantly, rather than positing rhetoric against dialectic (as in Plato's *Gorgias*), he sug-

gests that rhetoric is a counterpoint to dialectic. By so saying, he elevates rhetoric as part of philosophy. *Rhetoric* is not an easy work to understand as it appears unpolished, with an elliptical style, possibly indicating it was a set of lecture notes. Internal contradictions also suggest this and possibly imply the influence of editorial hands in the extant text. Nonetheless, it remains a most significant and foundational treatise. Book 1 is essentially an introduction. He first establishes rhetoric as art (again contra the *Gorgias*) with concomitant uses. Next he sets forth a practical definition of rhetoric: "the ability in each case to see the available means of persuasion" (*Aristotle Rhet.* 1.2.1355b25-26). He sets out proofs as artistic (ethos, pathos and logos) and inartistic (direct evidence). He divides logical proofs into two types: examples (used in inductive arguments) and enthymemes (deductive syllogisms). Next, he proposes a theory of three categories of topics. Finally, he identifies the three genres, or species, of rhetoric: deliberative (a judgment about the future, usually with respect to an action), judicial (a judgment about the past) and epideictic (demonstration in the present of what is honorable). It is his concept of genres that influences almost all future theory on rhetoric. Book 2 examines material premises in depth, first as they relate to the three kinds of discourses, then as they establish ethos, then pathos, followed by a more general discussion. Book 3 looks in detail at forms of argument, in particular, enthymemes. Book 4 studies the language (or style) for presenting proofs. Book 5 discusses arrangement of proofs. Though there is a great deal that is significant, much of the terminology, definitions and categories are not found in later rhetorical theory, possibly due to the book's lack of circulation until his personal library was rediscovered in the first century B.C.

1.4. Development of Technical Rhetoric in the Roman Period (First Century B.C. to Second Century A.D.).

1.4.1. Rhetorica ad Alexandrum. While handbooks on rhetoric are alluded to as early as the fifth century B.C. through to the late classical and Hellenistic periods, the only extant one of this time is *Rhetorica ad Alexandrum* (late fourth or early third century B.C.). It also is important to mention Hermagoras of Temnos, who apparently wrote on rhetorical theory in the late second century B.C. but whose work is lost. From

Cicero and Quintilian we know he developed a theory of *stasis*, which sought to determine the question at issue in a speech; this is at the heart of rhetorical invention. Hermagoras provides a key transition from Greek to Roman rhetoric. It is during the Roman period that follows (first to fourth centuries A.D.) that the theory of rhetoric becomes standardized through the influence of handbooks and influential rhetoricians.

1.4.2. *Rhetorica ad Herennium*. One of the most important works on rhetorical theory in the Roman period is *Rhetorica ad Herennium* (late first century B.C.), written in Latin. It is the earliest extant text that sets out the standard five elements of the practice of rhetoric: invention (identifying the subject, thesis or position to be adopted, and the arguments to be used), arrangement (ordering the components into an effective whole), style (configuring and enhancing the components through the choice of words, figures of speech and various devices), memory (memorizing the speech for effect and naturalness) and delivery (use of the voice and gestures).

One of the important aspects of arrangement was the theory regarding the standard form for the rhetorical speech. Based primarily on the judicial genre, the standard pattern consisted of six parts (Quintilian *Inst. Orat.* 3.9.1-6): *exordium*, *narratio*, *partitio*, *probatio*, *refutatio*, *peroratio*. The *partitio* is sometimes seen as part of the *narratio*, and the *refutatio* as part of the *probatio*. The *exordium* is like an introduction, which seeks to set the scene, favorably dispose the audience and establish the ethos of the speaker. The *narratio* is a statement of the case at hand, clarifying the specific question or *stasis* to be addressed. The *partitio*, or *propositio*, establishes the proposition. The *probatio*, or *confirmatio*, marshals arguments in order to confirm through conventional strategies and topics the case being argued. The *refutatio* attacks the proof of the opponent's argument by anticipation or through a response. The conclusion, or *peroratio*, recapitulates the main arguments and appeals for their acceptance. Rhetorical criticism then includes the attempt to analyse a speech or text by identifying its various parts (Mack, 41-48).

1.4.3. *Cicero* (106-44 B.C.). *Cicero, who stands in this same tradition, combines sophistic and philosophical rhetoric with technical elaboration. He wrote seven influential works on rhetoric, chief of which are *De Inventione* and *De*

Oratore. Cicero not only influenced the theory of rhetoric but also espoused and embodied the duties of a civil orator.

1.4.4. *Demetrius*. Another important work of this time is Demetrius's *De Elocutione* ("On Style"), which is pseudonymous and of uncertain dating but most likely from the first century B.C. It is primarily a study of the four kinds of style: elevated, plain, elegant and forceful. Unusually, and of interest for NT studies, the section on plain style includes a discussion of letter-writing. He defines a letter as one half of a dialogue, but distinctive from conversation in its more studied character (Demetrius *Eloc.* 224).

1.4.5. *Marcus Fabius Quintilianus* (c. A.D. 40-96). Quintilian is credited with the longest Latin writing on rhetoric, *Institutio Oratoria*, or *Education of the Orator*. He was a teacher of rhetoric and held an official government-sponsored chair of rhetoric in Rome. After retirement he published his lectures as a treatise extending over twelve books. His work is important because it represents the culmination of technical rhetoric in its standard, even canonical tradition, showing little distinctive innovation but solid and helpful insight on rhetorical theory in general. His work also gives a helpful historical perspective by often providing a historical survey of the subject he discusses. Interestingly, he reveals his direct dependence on both Cicero and Greek classical rhetoric. In Books 1 and 2, he sets the study of rhetoric in a complete educational context from birth to the grammar school, and he outlines the required training and education for a good rhetorician. In Books 3 through 11, he traverses the standard fivefold elements of rhetorical theory and practice. In Book 12 he describes the perfect orator. He gives a very sophistic definition of rhetoric himself, "the knowledge of speaking well" (Quintilian *Inst. Orat.* 2.15.34). For Quintilian, Cicero is the ideal rhetor: "Cicero is not the name of a man, but of eloquence" (Quintilian *Inst. Orat.* 10.1.112).

2. The Practice of Rhetoric in the First Century A.D.

2.1. *Rhetoric and Hellenistic Society*. It is difficult to discern how widespread the knowledge and practice of rhetoric was in the Greco-Roman world. In the upper spheres of Hellenistic

society, among the free citizens and the wealthy, rhetoric played a key role. But this sector of society would comprise, at most, 10 percent of the population, probably less. And the extant literature of this period on this subject tends to be from the important political and cultural urban centers like *Athens, *Rome, *Alexandria or *Antioch. As the three genres of rhetoric imply, the main areas of life where important rhetorical oratory operated were the courtroom, the civil assembly and the important public civil and religious celebrations. To those who inhabited this realm of social life, rhetoric was perceived as being everywhere (Dio Chrysostom *Disc.* 27.6; Juvenal *Sat.* 15.110-12). Life in the provinces and rural parts of the empire probably did not experience the place of rhetoric in the same way as the major centers, but there is good archaeological evidence of Hellenistic *cities with amphitheaters, *gymnasia and markets where speech making was important. Whatever the experience of formal rhetorical theory and practice in Hellenistic society, it did influence many forms of communication.

It must be asked, however, how much the 90 percent knew and understood about rhetorical theory and practice. Even though literacy was more widespread than once thought, the literacy was limited and often very function specific, like *letter writing or business accounts (see *Literacy and Book Culture*). No doubt effective communication was important to all people, and imitation of communication skills and forms of discourse, such as those possibly overheard in the marketplace, would have occurred even without specific technical knowledge and training.

2.2. Rhetoric as Part of the Education Program. An important factor that contributed to the high profile of rhetoric in the upper social spheres was its place as a primary subject in the education program (see *Education: Jewish and Greco-Roman*). It is difficult to determine how early in the education of children aspects of formal rhetorical theory were introduced. Between the ages of twelve and fourteen, Hellenistic education appears to have included various composition exercises known as "first exercises," or "preliminary exercises," later known as *progymnasmata*. Essentially a student would begin copying and later imitating various kinds of literature in order to learn a variety of writing techniques and literary or rhetorical concepts, such as fable, tale, chreia (or anecdote), proverb, refutation/

confirmation, etc. As each stage was mastered, the exercises increased in length and complexity (see Theon [first century A.D.], Hermogenes of Tarsus [second century A.D.] and Aphthonius of Antioch [fifth century A.D.]). These exercises were the building blocks for the more advanced exercises of declamation, the creation and performance of complete practice orations on assigned topics, either political (*suasoriae*) or judicial (*controversiae*). These advanced exercises were mostly in the next stage of education between the years of sixteen and eighteen. Declamation also became a form of public entertainment during the Roman Empire.

It is clear that mastery of oral communication was very important to the education program, but this program, especially after the age of twelve, was primarily for the wealthy or elite (see *Roman Social Classes*). When certain Latin writers of the first century A.D. discuss the popularity of rhetoric (as in Pliny *Ep.* 3.18.7), they are referring to the interests of the wealthy—it was the people with both the leisure and money who could linger in the marketplace or attend the courtroom or assembly to listen to speeches. So while rhetoric was pervasive in Greco-Roman society, it is unlikely that formal rhetorical theory and skills were widespread among the general population.

3. Jewish Rhetoric.

3.1. Jewish Argumentation. There is no real evidence that Greco-Roman classical rhetorical theory or practice pervaded Jewish literary or oral discourse, though this remains an important area of future research. Jewish discourse had its own literary genres and forms of argumentation. The area where there may be some cultural interchange and influence through rhetoric is the midrashic practice of Halakah (see *Rabbinic Literature: Midrashim*). This consisted of applying a statement of law given in the Bible or from oral tradition (midrash) to some aspect of daily life. The process involved oral discourse in which the *rabbis and students engaged in lecture, disputation and discussion.

3.2. Rhetorical Analysis of Jewish Oral Discourse. Looking at practice through the rhetorical terms, such as argument, proof, style, delivery and memory, several insights emerge. Generally, argumentation included citing respected authorities, authoritative writings and presentation of facts from life. Proof, as such,

was practiced, centered on quoting an accepted scale of authorities. The best style was the clear, logical presentation of correctly cited sources, with the ability to reason out conclusions from them. There is limited use of figures and tropes, but generally the use of such rhetorical devices is condemned. Delivery was based on a loud and clear voice with precision in pronunciation. Though the speaker often planned around the subject area, it appears such discourse was generally extempore with the interruption of questions and arguments providing unplanned diversions. Because of the unpredictable interruptions, memory did not play an important part except through the recall of memorized biblical and Mishnaic material. Reconstructing the practice of such oral discourse is difficult because the sources, generally related to Talmudic writings, postdate the NT period (*see* Rabbinic Literature: Talmud). It is also questionable whether it is appropriate to speak of this form of Jewish discourse in classical rhetorical categories, but it does elucidate the distinctives of Jewish oral argumentation from Greco-Roman rhetoric.

4. The Distinctives of Christian Rhetoric.

4.1. *The Appeal to Authority.* The general modes of discourse in the NT—Gospels, various forms of epistles and the Apocalypse—are not recognized forms of rhetorical discourse according to the ancient Greco-Roman rhetorical handbooks. Nevertheless, it is clear that the NT texts are written to be persuasive. The question is the means of that persuasion and its distinctive character, if any. In general, the one distinction which many commentators note with regard to Christian rhetoric is its appeal to authority. This authority has been variously defined: God, Jesus, Holy Spirit, Hebrew Scripture, Christian tradition. In terms of rhetoric, an additional key question is whether there is a different rhetorical strategy or appeal in the different genres of the NT writings (Kennedy 1984; Mack).

4.2. *Radical Christian Rhetoric.* G. A. Kennedy, a classical scholar, has posited a definition of Christian rhetoric over against classical rhetoric: "Christian preaching is thus not persuasion, but proclamation, and is based on authority and grace, not on proof" (Kennedy 1980, 127). In a later book, Kennedy refined this wholesale distinction of Christian rhetoric from classical rhetoric to a notion that within the scriptural

writings there is Christian rhetoric that uses classical rhetorical persuasion and there is radical Christian rhetoric (Kennedy 1984, 6-8). Still using the idea of Christian rhetoric as proclamation, Kennedy notes that some parts of the Bible "give a reason why the proclamation should be received and thus appeals, at least in part, to human rationality" (Kennedy 1984, 7). Radical Christian rhetoric is different in that it does not appeal to rational argument: "When a doctrine is purely proclaimed and not couched in enthymemes I call the technique radical Christian rhetoric (Kennedy 1984, 7).

4.3. *Distinctive Argumentation.* Taking a different approach, B. Mack and A. Eriksson have noted that Christian rhetoric uses authoritative appeals to the Christian kerygma or Christian traditions as a core conviction (Mack, 96-98; Eriksson, 273-76). Where Mack and Eriksson depart is that Mack sees this appeal as outside the cultural conventions of Greco-Roman rhetoric, that is, outside the norms of rationality (Mack, 96-97), and Eriksson sees this appeal as according to such cultural convention, at least in terms of the use of logos, ethos and pathos, and more particularly as appeal to special topics (Eriksson, 273-76). T. Olbricht refers to the distinctive nature of Christian rhetoric as "church" rhetoric (Olbricht, 226-27). By this term Olbricht is hardly dismissing Aristotelian rhetoric; rather he is asserting that Greco-Roman rhetorical theory is insufficient for fully understanding the nature of Christian rhetoric. But Olbricht, like Mack, Eriksson and even Kennedy, notes that Christian rhetoric is distinctive in that it operates within a particular worldview: "God (through God's son and the Spirit) carries out divine purposes among humans" (Olbricht, 226). Olbricht is happy to use Aristotelian rhetorical theory to analyze Christian rhetoric, but he recognizes that it may not be completely sufficient to ascertain the full gamut of persuasive strategies within the NT writings. What all these scholars agree on is that there is a distinctive form of argumentation, but the question is the degree of correspondence with Greco-Roman rhetorical convention. The question regarding the distinctive nature of Christian rhetoric in the NT writings remains an open question.

5. Relevance for New Testament Interpretation Today.

5.1. *Different Rhetorical-Critical Approaches to*

the New Testament. The study of the NT that attempts to analyze the rhetoric of the different NT texts is called rhetorical criticism (see *DLNTD*, Rhetoric, Rhetorical Criticism). Assessing the rhetoric of the NT depends on the perspective one adopts about the influence of Greco-Roman rhetorical practice on the NT writings and about the nature of rhetoric. The primary debate is whether the writers themselves intended to use Greco-Roman rhetorical practice or whether they implicitly mirrored the communication context of the Hellenistic period that is to some degree rhetorical in the classical sense, or whether it is entirely inappropriate to use the categories of Greco-Roman rhetoric to analyze the NT writings. Another way to approach the question regarding the rhetorical nature of the NT is to use classical rhetorical categories to analyze the persuasive and argumentative form of the texts, either because that is the intention of the writers or because that was the universal communication practice of the time or because such categories provide a universal or heuristic means for analyzing any argumentation in any age (Stamps, 185-51). An interesting and growing rhetorical-critical perspective is socio-rhetorical criticism, which attempts to interpret and evaluate the rhetoric of the NT as a means to create a new sociocultural construct and as a text within a culture of social and literary convention and ideology (Robbins). There are others who adopt a modern rhetorical perspective to analyze the argumentation, forsaking classical rhetorical categories (Amador).

5.2. Rhetoric and the Genre of the New Testament Writings. Part of the debate concerning the rhetoric of the NT is focused on the "genre of the NT writings (Porter, 507-632). As noted above, epistles, or letter writing, seemed to be excluded from Greco-Roman rhetorical theory and practice (see Epistolary Theory). The Gospels, whether a unique genre or an adapted Greco-Roman genre like *bios* (see Biography, Ancient) also stand outside classical rhetorical theory because of the primary use of narrative discourse. Similarly, Revelation as an apocalypse or revelatory prophetic letter (see Apocalyptic Literature) is not a common form of Greco-Roman rhetorical discourse. If these issues regarding genre are so, it is questionable whether such classical rhetorical conventions should be used to analyze the NT texts (however, see *DJG*, Rhetorical Criticism, and *DPL*, Rhetorical Criticism).

There is no way to solve the debate as to the extent Greco-Roman rhetorical theory and practice has influenced the NT writings. At present, NT rhetorical criticism is practiced from several different perspectives. Rhetoric is part of the literary and communication context of the Hellenistic world that played some role, whether to a large degree or small degree, in the writing of the NT.

ROMAN ADMINISTRATION

While passages such as Polybius (*Hist.* 6.11-18) and *Cicero's *De Legibus* are useful in understanding Roman administration, much of our knowledge comes from scattered literary, epigraphic and *papyrological evidence.

1. Administration at Rome
2. Provincial Administration

1. Administration at Rome.

During the Roman republic the quaestors, aediles, tribunes, praetors and consuls were the most prominent executors of the will of the senate and people of *Rome, and these offices were not formally curtailed by Augustus (see Roman Emperors). In reality, however, the emperor became the chief legislator and the chief executive officer of the empire. New departments and officers were added in a way that made the executive branch loyal to him. Magisterial elections continued, and even though the emperor ensured the election of some candidates, many offices were still filled by genuine elections. While senators still held many of the top positions, the *equites* (traditionally translated as "knights") played increasing roles in the administration of the empire. Of equal importance was the use of the imperial freedmen and imperial *slaves, the *familia Caesaris*, in running much of the bureaucracy at Rome, especially the imperial *fiscus* and records. These were inherited by Tiberius and his successors and provided a continuity that was missing in the traditional Roman system of annual magistracies. This may have been the "Caesar's house-

hold" referred to by Paul in Philippians 4:22.

1.1. Finance. By Claudius's day there were two distinct treasuries. The *aerarium*, the traditional treasury, declined in importance while the *fiscus Caesaris*, the emperor's personal exchequer, became more prominent, though it is difficult to distinguish which revenues and which expenses were associated with each.

The chief financial officers of the *aerarium* were still the quaestors, normally twenty in number. Two served as the urban quaestors in Rome; others served in the senatorial provinces. Eventually the *aerarium* was handed over to a *praefectus aerarii*. The chief of accounts (*a rationibus*) for the *fiscus Caesaris* became the real minister of finance. Three prefects controlled a military treasury (*aerarium militare*) that paid the soldiers' discharge benefits.

1.2. Military and Police. The urban prefect (*praefectus urbi*), a senator of consular rank, commanded the three urban cohorts charged with keeping peace and order in the city. Beneath him a *praefectus vigilum* supervised seven cohorts of *vigiles* who served as a fire brigade and perhaps as a night watch. Augustus also created the praetorian guard, an imperial bodyguard of nine cohorts. It was usually led by two *praefecti praetorio* and was supplemented by a small number of cavalry and by the emperor's mounted German guard.

1.3. Public Works and Records. Although in the early empire they lost their police function, the aediles continued their function of overseeing the city streets, markets and public games, as well as supervising eating establishments, bars and inns. They divided these responsibilities with the praetors and tribunes, each taking a particular part of the city. They were assisted by street commissioners who did the work of cleaning and repairing streets and saving burned buildings.

New administrators, *curatores*, were gradually added during the early empire to oversee other important aspects of the city infrastructure, usually serving in pairs or groups of three. The *curatores viarum* oversaw the maintenance of the streets and roads outside the city walls. The *curatores aedium sacrarum et operum publicorum* supervised and maintained public buildings and shrines. The aqueduct system was maintained by the *curatores aquarum*, while a board of five senators (*curatores riparum*) was appointed to oversee the riverbed, banks and towpaths of the

Tiber. The imperial postal system (*cursus publicus*) was organized and run by the *praefectus vehiculorum* and his staff. To ensure a steady supply of grain at a stable price, a *praefectus annonae* was appointed by A.D. 14. He organized the transport and delivery of the grain dole to the populace, selling any excess on the open market. There were also three curators of public records, and the imperial archives were directed by the *a memoria*. The extensive imperial correspondence was handled by the *ab epistulis* and *a libellis*. Additional but less important posts included the *a studis*, *a cognitionibus*, *a codicillis* and *a diplomatibus*. Each of these employed imperial slaves and freedmen in lesser roles.

2. Provincial Administration.

In the late republic, the word *provincia*, previously used of the geographical area in which a consul could exercise his military command (*imperium*), denoted a district under formal Roman administration (Gk *eparcheia* or *eparcheios*, Acts 23:34; 25:1). As the number of such areas increased, the consuls had to be supplemented by praetors. The Sullan reforms of 81 B.C. provided for a second year to be added to the duties of consuls and praetors. This was to be spent administering the provinces in place of a consul (*pro consule*) or praetor (*pro praetore*).

When Augustus laid aside the consulship in 23 B.C., the senate augmented his *imperium proconsulare*, allowing him to keep his *imperium* even while in Rome itself and making his *imperium* superior (*maius*) in relation to the other proconsuls. In 19 B.C. the senate seems to have made his *imperium* equal to that of the consuls, extending his sway over Rome and Italy as well. Thus he became commander-in-chief of the army and could interfere at will in the governing of all the provinces. Some provinces he ruled directly through his personal appointees; others had governors appointed by the senate. Still other areas were left in the hands of local dynasts, such as the *Herods. Rome would officially confirm them in their kingdoms as "kings, allies, and friends of the Roman people," yet they were expected to support the policies and actions of the neighboring Roman governors (*see* Roman Governors of Palestine).

2.1. Senatorial Provinces. Augustus and his successors left in the hands of the senate the administration of those provinces in which legions were not permanently stationed. These were

governed by senators, usually ex-consuls or ex-praetors, elected by their peers and given the rank of proconsul and a normal term of one year. The senate voted funds from the *aerarium* for the governor to carry out his duties, and he was to submit an accounting upon his return. This provincial *fiscus* was augmented by the taxes collected in the province, the balance of which were forwarded to Rome.

When an area was incorporated as a province, a *lex provinciae* was issued by the conquering general, first governor or an ad hoc senatorial commission, and then approved by the Senate. It spelled out the initial terms of organization and taxation. Subsequent governors, as well as direct legislation in Rome, would add to or amend this *lex provinciae*, spelling out the current administration's policies in administering the province.

The province's chief financial officer was a *quaestor* or *procurator* who was responsible for revenues with which the emperor was directly concerned, and, by Claudius's time, over wider fiscal matters. He could communicate directly with the emperor and so at times was viewed as a spy on the governor. He could also be granted small bodies of troops to carry out his duties. A freedman procurator would often serve as an assistant to the equestrian procurator.

The governor would take along a personal staff, essentially a smaller version of his family, friends and clients (*see* Patronage), but the daily routine was handled by the governor's legates, who also formed his advisory council (*concilium* or *symbolion*, as in Acts 25:12). A legal advisor and an orderly ran his office, and he would stay in touch with the emperor by sending letters over the *cursus publicus* to the *ab epistulis* in Rome. His priorities were always to preserve Roman supremacy and military security and to protect and administer justice for Roman *citizens and Italian allies. His jurisdiction extended over local disputes, and he could appoint judges and juries, take securities and pledges, make arrests and physically punish criminals. Normally, however, he would limit his intervention to cases in which Rome or Roman citizens had a substantial interest or in which appeal was made to him, though even then he might decline to hear a case (as Gallio did in Acts 18).

2.2. Imperial Provinces. The imperial provinces were also governed by senators of consular or praetorian rank. Their terms, however,

were indefinite, and they were appointed by the emperor as *legatus Augusti pro praetore*. An exception was Egypt, where an equestrian served as *praefectus Aegypti*; the latter was also exceptional in being granted command of Egypt's three legions. Senators who headed provinces in which a single legion was stationed usually served as legionary commander (*legatus legionis*) and governor simultaneously.

In some smaller provinces (Mauretania, Thrace, Raetia, Noricum and Judea), *equites* governed with the title *praefectus* or *pro legato* and commanded the local troops. They were subject to some extent to the adjacent senatorial governors. Sometimes one man would serve as both prefect and procurator (chief financial officer) simultaneously. Pilate did both, according to *Josephus (*Josephus Ant.* 18.3.2 §60; *J. W.* 2.9.4 §175). Under Claudius, the title of this office changed to *procurator Augusti*. Thus we find Felix called the procurator in Acts 23—24 though he was obviously not just a financial officer. He was a freedman, the brother of Claudius's *a rationibus* (Pliny *Ep.* 4.12), though he may have been granted equestrian status before his appointment.

Each *legatus Augusti pro praetore* would have a staff (*officium*) made up principally of soldiers seconded from their other duties. His office was mostly involved in judicial and police duties (Acts 21:31-36). The emperor directly appointed all the important officers in the imperial provinces. His legates could draw funds from local *fisci* as necessary, and, until Nero, an accounting (*rationes imperii*) was published (Suetonius *Caligula* 16; Dio Cassius *Hist.* 59.9).

The other important department was that of the financial procurator, who represented the imperial *fiscus* and was responsible for financial accounts and seeing that revenues (taxes, mine revenues, rents) were properly collected.

Both imperial and senatorial provinces were divided into administrative districts (*conventus* or *dioceses*) in which governors convoked appeals courts with assemblies of local Roman *equites* and other respected Romans of the district. The Romans served as assessors or jurors and were presided over by a curator. They took up cases in which Rome or Romans had a vested interest or in which appeal was made to the governor. Other local matters of administration and justice were seen to by local agencies that Rome allowed to continue or helped establish. Provincial *conclia* were also formed from the local

aristocracy, and at times appointed *inquisitores* investigated cases of corruption or illegal activities (such as the Christians in Bithynia under Pliny). The *koinon* of Asia was a provincial body functioning already in the mid-first century B.C. both to coordinate embassies to Rome and to distribute information from Rome to the Asiatic cities. Its members were given the title Asiarchs (Acts 19:31). In Judea the traditional Sanhedrin and religious courts were allowed to take care of many local tasks. When the provincials were dissatisfied by a governor's decisions, action or lack of action, appeals could be made directly to Rome, in theory, but this seldom happened during the republic. Under the empire more formal systems of appeal were developed, though the exact legal status of Paul's appeal to Caesar is still debated.

2.3. Cities. While provincial government was important, city government and citizenship played a larger role for most provincials, and these structures differed according to the official status of each city. In the western empire, cities were often favored by the grant of "Latin rights" (the families of magistrates were given Roman citizenship) or by being given the status of *municipia* (citizens received citizenship and the city kept a form of its constitution). The two types of special status in the east were those of colonies and free cities.

Roman colonies were new foundations or cities in which Roman settlers were added. Their name often reflected this status. Originally colonies were armed garrisons, but by the early empire they were frequently settlements of veterans and freedmen, such as at *Philippi and *Corinth. The colonies were thus important bases for the Romanization of the provinces. Further along in the principate, new colonies were no longer necessarily associated with the army and often were mere upgradings of an existing town's rank.

The concept of the free city, a city that was part of an alliance or kingdom but was internally autonomous and not subject to exactions or tribute, had developed in the Hellenistic world (*see* Cities, Greco-Roman). Rome continued to grant this title to select cities, such as when in 196 B.C. Flaminius declared the Greek cities free, that is, free to live under their own laws and free from Roman garrisons and tribute (Polybius *Hist.* 18.46.5). However, there was still a master-subject relationship, and the status

could be revoked, as happened to Corinth and the other Greek cities that rebelled in 147-146 B.C. From Sulla on, however, the specific favors granted to a free city of *Greece, Asia or other provinces were less comprehensive and had to be spelled out for each city individually. By the late republic the advantage of being a free city had been reduced to the exemption from the billeting of troops and the enjoyment of some judicial autonomy.

Cities with no special rights were termed *stipendariae* (payers of tribute). They usually retained their constitutions, as in Asia, and continued their local citizenship rolls with citizens organized into tribes. In some areas popular assemblies still voted on local measures, but more often the important business was conducted by a town council made up of the elite. Annual magistrates were elected to serve as executive officers, judges, city treasurers, priests of public cults and overseers of public buildings and festivals. Local finances relied on election fees paid by council members and magistrates, rental of city-owned land, fines and other minor fees, but especially *benefactions by the leading citizens and its Roman patrons. By the second century these benefactory services to the city (*munera* or *leitourgiai*) had become less than voluntary in many instances and instead were required privileges that could be avoided only with ingenuity and loss of face.

2.4. Towns and Countryside. Smaller towns and villages could have single or collegial administrators. Village assemblies, whether formal or informal, gathered and deliberated as needed. Terms such as "the village" (*komē*), "the people" (*dēmos* or *koinon*) and the assembly (*boulē*) are the most common in inscriptions. At least some villages had a common treasury fattened by one or more of the following: honoraria given by magistrates entering office, fines, benefactory gifts, the rent of public buildings, lands or pastures, water fees or compulsory subscriptions to public works. As with the larger cities, public works were often assisted by local benefactors. The head tax had to be paid to Rome, either directly or through the city in whose *territorium* the village was located. The other additional taxes Rome levied on the province were applicable also to most villages, not to mention other taxes that the local city might impose for itself.

ROMAN EAST

By 200 B.C., Rome had emerged as the dominant power in the western Mediterranean and began to play a larger role in Eastern affairs as well. At that time, the *Hellenistic world consisted of a network of states and city-states in a tenuous balance of power. Aggression by one ruler or state would cause a wave of realignments rippling outward from the East and often reaching Roman interests or Rome itself. By the birth of Jesus, Rome not only dominated Eastern politics but also had annexed much of the East in the form of new provinces. We will treat Rome's entire expansion eastward (with the exception of Illyricum, which was culturally part of the West), as well as its formal organization through the first century A.D.

1. The Progress of Roman Expansion
2. Motivation for Roman Expansion
3. Policies in the East
4. Influence on Life
5. Attitudes Toward Rome

1. The Progress of Roman Expansion.

1.1. Macedonia and Greece. Rome first made military contact with the Greek world when Pyrrhus of Epirus was called into Italy to help the city of Tarentum fight Rome (270s B.C.). In the following decades Rome spread its influence southward, overrunning all of southern Italy and Sicily. The fleets that Rome had built to challenge Carthage also sailed into Eastern political waters when Macedon allied itself with Carthage, and Rome then joined the Actolian league and Pergamum in keeping Macedon in check (First Macedonian War, 215-205 B.C.; see Greece and Macedon). Three more Macedonian wars would follow before Rome would organize Macedon as a province in 148 B.C. Four administrative districts were formed and boards of *politarchs* (Acts 17:6) oversaw the administration of the cities. The Egnatian Way, which passed through the important cities of *Philippi and *Thessalonica, was built to span the province and connect it to the Adriatic. Further campaigns down to 102 B.C. expanded the province at the expense of the Thracians.

Contact with the Greeks of Aetolia and Pergamum was renewed soon after the First Macedonian War. In 200 B.C. a delegation reached Rome seeking aid in rebuffing new incursions into Greece by Macedon and the *Seleucids. Although the Roman army eventually routed Macedon (Second Macedonian War, 200-197 B.C.) and Rome declared the Greeks free (i.e., free from direct administrative control), Greece remained weak and disunited. After their short-lived revolt in 146 B.C. (the Achaean War), Rome imposed harsh conditions on much of Greece (*Corinth was razed, to be refounded as a Roman colony a century later by Julius Caesar); however, a long-term peace was established. For a time the councils of the regional leagues were disbanded, oligarchic governments were imposed in many places, and indemnities and tribute were imposed upon the ringleaders, as well as a general taxation. The governor of Macedon would intervene as necessary until a separate province of Achaia was formalized in Augustus's settlement of 27 B.C. Augustus added Macedonia and Achaia to the province of Moesia about 15 B.C., but they were made separate provinces again in A.D. 44. Achaia was freed in A.D. 67 by Nero, but this had no political significance.

1.2. Asia Minor. By the early second century B.C., *Asia Minor was also a site of Roman inter-

ests. About 190 B.C. Rome joined Pergamum in a major battle against the expansion of the Seleucid Antiochus III. This left Pergamum the major power in western Asia Minor, and at his death in 133 B.C. Attalus III of Pergamum bequeathed his vast royal lands to the Roman people. This became the province of Asia in 129 B.C. Many cities (including the NT cities of *Ephesus, Laodicea and Pergamum) were made autonomous and left free from tribute. The kingdoms of Cappadocia, Bithynia and Pontus remained independent, the latter even being granted much of Phrygia until about 120 B.C. Lycaonia and perhaps Pamphylia were added to the province of Asia by the end of the second century B.C.

However, the conflicting interests of Rome, Bithynia and Pontus led eventually to yet another major conflict (First Mithridatic War, 89-85 B.C.). Mithridates VI of Pontus took the field in 88 B.C., overrunning Asia, instigating the massacre of tens of thousands of Roman citizens and allies, and even gaining control of much of southern and central Greece. Sulla eventually expelled Mithridates and imposed far heavier taxes on Asia, except for the few cities that had remained loyal to Rome. In 75 B.C. Nicomedes III willed Bithynia to Rome, but the efforts of Mithridates VI to occupy it led to a Third Mithridatic War (73-66 B.C.). The Roman general Lucullus defeated the Pontic king and, when Mithridates fled to Armenia, took a Roman army beyond the Taurus Mountains for the first time. Few Asian cities had supported Mithridates this time, and in reward Lucullus helped improve their economic lot.

While numerous principalities in the eastern two-thirds of Asia Minor (Pontus, Cappadocia, Cilicia Tracheia, Paphlagonia, Armenia Minor) would continue to be passed back and forth between hereditary royal families for another century, Rome gradually took more and more under direct rule. *Pompey was responsible for the first major reorganization of the area from 64 to 62 B.C. Pontus was divided, the western half being added to the new province of Bithynia. The eastern half was added to the kingdom of the *Galatians (a group of Celts who had seized central Asia Minor in the third century), but it reverted to a client fiefdom in 40 B.C. Pompey also enlarged Cilicia, which had permanently become a province about 85 B.C. In about 56 B.C. Cyprus was added to Cilicia. Galatia was finally made into a province after the death of King

Amyntas in 25 B.C.; Pisidian *Antioch (Acts 13) and Lystra (Acts 14) were among the Roman colonies established there soon after. Cappadocia was annexed in A.D. 17 and on strategic grounds was joined to Galatia as a single province in A.D. 54. Lycia, a federation of cities, remained autonomous until it was annexed and joined to Pamphilia in A.D. 43. Commagene, whose king had been recognized by Rome since Pompey's day, was annexed in A.D. 18; in succeeding decades its hereditary rulers were repeatedly deposed and restored by Rome. Eventually Vespasian added Commagene and Armenia Minor to the province of Syria, giving Rome a unified border along the upper Euphrates.

1.3. Syria and Palestine. Rome had had dealings with the faltering Seleucid dynasty for more than a century before Pompey ended its history by his annexing of Syria in 64 B.C. The new province included parts of Palestine taken from the *Hasmoneans, the Jewish dynasts whose continual bickering had weakened their realm since their first contacts with Rome in the mid-second century. The Roman civil wars and the incursions of the Parthians deprived the area of much of its prosperity and peace until Augustus's accession. From 27 B.C. on, the governorship of Syria was entrusted to a senator of consular rank who was appointed by the emperor (see Roman Administration; Roman Governors of Palestine). He was the most important Roman official in the East and was based in Syrian *Antioch, the political and cultural capital of the Roman Middle East (as well as an early Christian center; see Acts 11:19-30). The province of Syria was slowly extended at the expense of small kingdoms and tetrarchies so that by Vespasian's day the middle Euphrates became an effective and stable border with Parthia.

When possible, Rome used client states in the area of Palestine as elsewhere. By 43 B.C., Antipater had become the effective ruler of the former Hasmonian realm. Marc Antony made Antipater's son, Herod, king of *Judea, and Octavian later confirmed and augmented his realm. Upon Herod's death in 4 B.C., his son Archelaus became ethnarch of Judea, Samaria and Iturea (Mt 2:22). Two other local dynasts, Philip (d. A.D. 33) and Antipas (deposed A.D. 39), were given tetrarchies in Iturea and Galilee respectively (Lk 3:1; see Herods). Arabia Petraea (Nabatea) and Emesa remained independent kingdoms for another century. Archelaus was

deposed in A.D. 6, and Judea was made into an equestrian province governed by a prefect. From A.D. 41 to 44 Judea and the tetrarchies were reunited under Agrippa I, but at his death they reverted to a province. The Jewish revolt of A.D. 66 ended in the destruction of the *temple in A.D. 70 but effected no weakening of Roman control (see Jewish Wars with Rome). Meanwhile, Agrippa II had been given Chalcis to rule, and later small areas of Galilee were added by Claudius and Nero. At his death in the 90s these areas were reattached to Judea.

1.4. Armenia and Parthia. Tigranes of Armenia had submitted to Pompey in 66 B.C. and been allowed to keep his kingdom as a friend and ally of Rome. His successor Artavasdes abandoned Antony during the latter's invasion of Parthia in 36 B.C., and two years later Antony overran Armenia and deposed the king. A coup d'état took place soon after, and most Roman citizens were massacred. Rather than intervene directly, Augustus decided to support a rival claimant and eventually sent Tiberius to crown him (20 B.C.). Rome crowned new kings again in 1 B.C. and A.D. 18. Both by its Armenian policy and by the strengthening of the province of Syria, Rome sought to secure this wealthy province against its most powerful eastern neighbor, Parthia, which had a long-standing interest in the region. Crassus had led a Roman invasion during a dispute over the throne in 53 B.C. but was himself killed along with much of his army. Parthia in turn interfered repeatedly in Armenia from A.D. 35 on. More stable relations were finally brokered in A.D. 65 when the Parthian claimant to the throne of Armenia agreed to be crowned in Rome, thus beginning a period of more peaceful coexistence in the region that would last through the end of the first century A.D.

1.5. Egypt and Cyrene. On the northeast coast of Africa the *Ptolemaic kingdom crumbled from within during the second and first centuries B.C., creating a vacuum that Rome would eventually fill. Cyrenaica was willed to Rome in 96 B.C., but it was not organized and administered as a province until between 75 and 67 B.C. It was made a joint province with Crete in 27 B.C. Egypt became a "friend and ally" in 59 B.C. but was formally annexed by Octavian in 30 B.C. It had a unique status as a personal holding of the emperor, who governed through an equestrian prefect. Soon the province was extended south-

ward to near the second cataract of the Nile, and, after some skirmishing, Rome accepted the kingdom of Meroe (the Ethiopia of Acts 8:27) under Roman protection.

2. Motivation for Roman Expansion.

The reason behind Roman expansion in the East has been heatedly debated in recent decades. W. V. Harris has argued that aggression had become a way of life during the republic and that warfare and its resultant glory and booty had become a psychological, social and economic necessity in Roman culture. Roman expansion in the East was due to the need for new triumphs to win, new economies to exploit and new captives to bolster its *slave economy. E. S. Gruen, building on the arguments of T. Frank, has argued that Rome expanded eastward almost against its will and eventually was forced to fill the vacuum of power. As he sees it, Rome almost never took the initiative in the East, constructed no Eastern policy and avoided making commitments wherever and whenever possible, often declining opportunities to form new provinces.

Both of these viewpoints have contributed important truths to the discussion. Rome in the later republican period truly was a nation built on war. It needed constant military opportunity for its citizen army with its aristocratic leadership. Throughout the last two centuries of the republic, there was an increasing demand for both slaves and booty. Both of these spoils of war fed the generals and soldiery as much as the state treasury. The chaotic first century B.C. shows us an Italy in which extremely wealthy generals, by means of military prowess but even more by the spoils of war, kept their troops loyal to themselves rather than to the state (*see Roman Military*). The East was an important area of operations in this evolving system. And a senatorial comment recorded by Livy indicates that when a province's tax receipts were eaten up by local military expenditures, the situation was viewed as unacceptable (*Livy Hist.* 29.48.7). A profit was expected.

At the same time, for most of this period Rome had more than enough military opportunities in the West. Even after the protracted engagements with Carthage, the ongoing operations in Spain, Gaul and North Africa left it few extended periods for systematic exploitation of the East. When it did commit itself there, it was

usually for a limited time. In doing so it gained booty and exacted monetary payments from the defeated. Its citizens also established economic outposts from which to exploit the opportunities the East provided. But Rome usually viewed long-term commitments as counterproductive to its economic and political interests; better to stabilize the balance of power with occasional incursions to check aggressors and enjoy the fruits of those opportunities than to take over the administration and protection of large areas far from home. Stationing legions far from home would involve serious financial and manpower commitments, and especially the latter were hard to justify while Rome was involved in numerous Western conflicts.

Thus Rome was both militaristic and pragmatic. The Roman system required that generals and legions be kept busy amassing glory and wealth. Yet it had a finite number of experienced troops and good generals. The late republic also showed the dangers of committing too many troops to a talented but ambitious general. In addition, foreign policy had until that time been firmly controlled by the senate, a group of aristocrats who spent most of their lives in Italy and often had their own agendas. Many of its members had military experience, but they met far from the fields of battle and were supplied with limited information on the realities at the front. In such a situation one would not expect that Rome could have developed and maintained a coherent long-term policy about the East. Except when serious loss of Roman life, income or political stability was at stake, decisive action far from home would not be seriously considered. Rome neither jeopardized its own excellent economic status quo by rash annexations of new area nor played Good Samaritan to distant states.

3. Policies in the East.

The complex interstate relationships of the *Hellenistic world were not based on treaties as much as on declarations of *friendship (*philia*) and military mutual-support alliances (*symnakhia*). Gruen has shown how Rome used these same categories in its relationships in the East. Until 168 B.C. it tried to keep the major powers in balance but then began to show favors more to the minor powers. Wherever possible, this took the form of backing local dynasts who could be trusted to keep the peace and not support other

powers at the expense of Rome. When disagreements did arise between states, third-party arbitration was the increasingly popular Hellenistic solution. As the second century progressed, Rome often became that third party, and its role was remembered in the many cities that hailed Rome as a *benefactor. Cities or areas could also be freed, left autonomous and without direct administrative control by Rome yet subject in other ways.

Where Roman interests were especially strong or when local dynasts failed to keep the peace, Rome turned to annexation. From Sulla on, a proconsul (a consul whose *imperium* was extended for a further year of service) would be sent to administer the province for Rome. He might have a limited entourage with him, or he might have several legions, depending on the prospects for peace in the region. Under the Augustan settlement, the emperor, through the office of legate, directly ruled areas where troops were garrisoned. In the East Augustus stationed two legions in Galatia, three or four in Syria and three in Egypt. The solid lines representing the external borders of the Roman Empire that we see on our maps were in places rather fluid and "porous," to use F. Millar's expression. Tribal raiders and adjacent dynasties could make incursions into border areas and not always meet with immediate opposition or Roman reaction. Cities and fertile farmland were what provinces were made of, and in the East the frontiers (*limes*) were drawn wherever possible with buffers to assure the peace of urban areas and farms. However, as B. Isaac has shown, areas of constant unrest such as Judea would be garrisoned with an army of occupation, and Roman roads would be constructed to allow the quick movement of supplies and troops to trouble spots. Troops were deployed in such areas to keep the peace rather than to repel invaders.

4. Influence on Life.

In many areas of the East there was little outward change when Rome took over. There was little in the way of a Roman bureaucracy that descended on the new provinces and imposed new systems. Rome in general left the people to live, work and worship as they had previously. In most provinces a few Roman colonies would be founded upon which the legionary and auxiliary veterans would be settled. Such a colony could serve as an army reserve unit if needed and also

brought some additional Roman culture into the region. Outside the colonies and the handful of cities in which legions and auxiliary units were stationed, the Roman military was not visible. Dynasts would have their own troops and might be granted some auxiliary troops to keep order.

*Taxation was where the Roman presence would be most noticeably felt, including a tax on expected harvests, a poll tax, a tax on cattle grazing on public land, as well as harbor and border excises. In addition there were the irregular burdens of billeting Roman officials and troops, and at times providing board, entertainment and transport for them (Mt 5:41). In Asia, the right to collect taxes was auctioned off to groups of Roman businessmen, the hated *publicani*. In other areas, previous methods of collection were continued, but later the proconsul or legate usually took over the responsibility for the collection. These officials, however, would expect the taxes to be gathered by the cities and other administrative districts themselves, and the locals who served as collectors were often termed *publicani* (the *telōnai* of the Gospels) and considered cheats. Although unscrupulous governors and *publicani* were common, especially under the republic, the general prosperity of most provinces would indicate that Rome's tax burden, while not insignificant, was probably not much worse than that exacted by the previous Hellenistic and local dynasts.

In general the East became increasingly Hellenized rather than Romanized during the late republic and early empire. Roman citizenship was granted to select natives in the East (e.g., Paul of Tarsus), but during our period few Eastern provincials received advancement to the Roman aristocracy as knights or senators, and most of those were from the province of Asia. While Latin became an official political language, local languages continued to flourish and Greek remained the cultural and economic *lingua franca* of the eastern empire. Only in the colonies do we find many inscriptions in Latin. Local and Hellenistic cults, festivals and entertainments were to be found side by side. A few Roman elements were added, such as gladiatorial contests and chariot races (*see* Arenas), the cult of Roma and the imperial cults (which began in the East, modeled on Hellenistic *ruler cults, and spread back to Italy). At *Jerusalem, Herod had inaugurated a daily *sacrifice in the temple for the emperor's well-being. Despite such indications,

however, Rome never matched the influence that the language and culture of Greece had on the East.

5. Attitudes Toward Rome.

Most of the sentiments of Easterners toward Rome that have come down to us have done so through Roman or at least pro-Roman filters. After considering the natural traits of the Romans, the Greek *historian Polybius concluded that Rome was destined to become a superpower and wrote his history to show how it happened. *Josephus led a Galilean army against Rome in the Jewish revolt but wrote his historical works after his surrender, when he had become pro-Roman and even gained Roman *citizenship. These men and their likes prove that not all the intelligentsia could see only horror in Roman domination. There were other Greek writers who were hostile to Rome, however, even though their works have, as a result, come down to us in much more fragmentary form.

The NT writings are themselves an important source for provincial attitudes toward Roman rule, especially since they convey attitudes of the non-elite. The Gospels and Acts reveal an uneasy peace: Jews despise the tax collectors and only grudgingly give to Caesar; some can respect the piety of a centurion (Lk 7:1-5; Acts 10:1-2), yet many eagerly await a new, independent Jewish state (Acts 1:6); life continues rather peaceably, but provocation by Rome (Lk 13:1) or by Jewish nationalists (the *sicarii* of Acts 21:38) is never far away, and it is thought plausible that the next confrontation might cause Rome to "take away our temple and our nationhood" (Jn 11:48).

Paul's life and letters sketch a picture of life in the bustling provinces of Galatia, Asia, Macedonia and Achaia, where the Christian message causes strong reactions among the Jewish *Diaspora and among Gentiles whose livelihood seems threatened by it (Acts 19:25-41). The Roman authorities are portrayed as mostly impartial and fairly competent, although Roman citizens regularly receive preferential treatment not afforded the average provincial (Acts 16:37-40; 22:25-29). Paul is writing to Christians in Rome when he argues that if one lives an upright life and prays for and obeys the government, one need fear nothing from it (Rom 13:1-4).

James discusses economic inequalities and so-

cial unrest yet never places the blame at the door of Rome. First Peter specifically commands obedience to the authority of human government and the emperor (1 Pet 2:13) yet invokes a mass of extremely negative connotations by referring to Rome as Babylon (1 Pet 5:13). All in all, the testimony is what we might expect—undercurrents of nationalistic tensions and economic hardships within the Jewish community are mixed with accounts of prosperous civic life in other Eastern provinces. First-century provincials saw Rome to various degrees as a master with whom one could live or as a satanic oppressor. The NT writers, however, saw spiritual oppression manifested by sin as the universal human predicament, and the Christian message was one of spiritual liberation leading to an emancipation of life in the present and in the age to come. Both the positive and negative sides of Rome's lordship were seen as only secondary elements.

The Jewish revolt was perhaps the only Eastern revolt against direct Roman rule that could match the scale and intensity of the revolt of Rome's own Italian allies (the Social War of 91-89 B.C.) and the several slave revolts in Sicily and Campania. A Pontic or Parthian king invading Roman land would not always find the local non-Roman populace awaiting his arrival with open gates. Roman rule was in many cases apparently viewed as no worse than that of other outsiders. After the late Hellenistic period, which had been one extended political melee in Greece, Asia Minor and the Near East, the stability that the Roman Empire brought was probably appreciated by many. The basic truth behind the **Pax Romana* made it into effective propaganda. Whenever Rome's local representatives were not too overbearing or insensitive to local culture and when the harvests and economy were good (and these seem to have been true over wide areas during the first century A.D.), many locals probably brought sacrifices to the cult of Roma without pressure and with little duplicity.

ROMAN EMPERORS

During the advent of Christianity, *Rome was experiencing a tumultuous revolution in its constitution from republican order to the rule of autocracy. The political environment of Jesus and the NT writers was far from consistent and reflects many transitions in power and the general fluidity of Roman policy and society.

1. The Beginning of Empire

2. Transitions in Power
3. Religion and Power

1. The Beginning of Empire.

1.1. Gaius Julius Caesar (100-44 B.C.). The social and civil wars of the early first century gave rise to Julius Caesar, the son of an unnoted patrician family (Suetonius *Caesar*; Dio Cassius *Hist.* 36-44). When Caesar's attempts to build his reputation through the courts were overshadowed by *Cicero, he adopted a populist approach. As aedile (65 B.C.) he funded extravagant games (see *Circuses and Games*), but this expense along with that of the intense campaigning for the offices of the pontifex maximus (63 B.C.) and the praetor (62 B.C.) left him in debt to Crassus. When the senate attempted to block Caesar's bid for the consulship (60 B.C.), he formed a coalition with *Pompey and Crassus (the first triumvirate), which not only secured the consulship (59 B.C.) but also dominated politics for the next decade. Caesar spent these years in his proconsular provinces of Cisalpine and Transalpine Gaul and Illyricum. He quieted all uprisings and subjugated the entirety, which won him great wealth and a reputation as a general beyond equal (*Caesar B. Gall.*).

The triumvirate disintegrated. Crassus was killed in his campaign against the Parthians (53 B.C.), and Pompey began favoring the conservative optimates. On January 1, 49 B.C., the senate ordered Caesar to relinquish his province before standing again for the consulship. Caesar marched on Rome. The following year he defeated Pompey at Pharsalus and became dictator (*Caesar B. Civ.*).

Caesar's dictatorship (48-44 B.C.) restored stability to Rome, which was ravaged by years of civil war. Caesar disbanded his bodyguard and implemented a policy of clemency: he pardoned many opponents and appointed some to office. He eased the problem of personal debt that had impoverished many citizens. Still, although the dictator was part of a revolution against the oligarchic control of the nobles, he was not disposed to restore the powers of the assembly but commenced an autocracy. For this he was assassinated.

1.2. (Gaius Octavius) Augustus (Caesar, 63 B.C.-A.D. 14). Caesar's murder did not restore the republic, but civil war continued for more than ten years between the Republicans and Caesareans.

Gaius Octavius, the dictator's greatnephew and adopted heir, acted quickly (Suetonius *Augustus*; Dio Cassius *Hist.* 45—56). Bolstered by Caesar's money, armies and political supporters (Caesar was deified in 42 B.C.), Octavius avenged Caesar's murder (Augustus *Res Gest.* 1-3), and when the senate limited his power, he formed a triumvirate with Marcus Antonius and Marcus Lepidus (43 B.C.). Octavius was ambitious to complete the Caesarean revolution, and thus the triumvirate was in constant turmoil. After intrigues with the younger Pompeius, Lepidus was forced into a mostly private life, and Octavius set his coalition against Antonius, whom he defeated at Actium along with Cleopatra (31 B.C.). Octavius was the sole *imperator*, a title ratified by the senate (29 B.C.).

Republican freedom was lost, but there was peace and the opportunity to revitalize the empire's infrastructure. Octavius rebuilt temples and public buildings, revived religion, reorganized the senate and expanded and settled the borders. He claimed to have restored the republic to the people, for which he was honored with the name *Augustus* (27 B.C.). Although he did resign the consulate (23 B.C.), he never relinquished tribunician power (Augustus *Res Gest.* 34-35). The poets Virgil, Horace and Varius extolled the peace, but Ovid was exiled. Liberty had a new definition.

2. Transitions in Power.

2.1. The Julio-Claudian Dynasty.

2.1.1. (*Tiberius*) *Claudius Nero* (42 B.C.-A.D. 37). Tiberius, the Caesar during the time of Jesus, was the son of Tiberius Claudius Nero and Livia. He enjoyed a distinguished military career particularly in the German campaigns but never was the favorite of Augustus, who seemed intent on leaving the *imperium* to one of his grandsons. Livia, determined to see her son at the head of the empire, arranged that Tiberius divorce Vipsania, the mother of his only son Drusus, and marry Julia, Augustus's daughter. The marriage was not happy (Augustus exiled Julia for *adultery), but Tiberius had become part of the Augustan family (A.D. 4), and when both of his grandsons died, Augustus officially adopted him (Tacitus *Ann.* 1.1-5). When Augustus died (A.D. 14), although Tiberius immediately began conducting imperial affairs, there was a month-long debate in the senate before he was proclaimed emperor. Tiberius never recovered from this in-

sult and was haunted by his fear of revolutionary plots. He eventually abandoned Rome and ruled his last ten years from the isolation of Capri (Suetonius *Tiberius* 39-72). Even there Tiberius maintained his hold on Rome and managed without returning to put down Sejanus's revolt (Tacitus *Ann.* 4.1—6.50). He commanded enough loyalty or fear to stay at the head of the unwieldy large empire.

2.1.2. (*Gaius*) *Caligula* (*Julius Caesar Germanicus*, A.D. 12-41). Rome, weary of the reclusive Tiberius, welcomed the accession of Gaius Caligula (A.D. 37), son of the popular Nero Claudius Germanicus (15 B.C.- A.D. 19) and Agrippina. Caligula promised an open policy. In his first year he recalled exiles, allowed censored writings to be published, made public the imperial budget and allowed more popular control of the magistracies (Suetonius *Caligula* 13-21; Dio Cassius *Hist.* 59.6-7). His promises of constitutional reform appeared genuine but collapsed later that same year, when a serious illness was followed by the deaths of several relatives and close advisers. Caligula quickly transformed the principate into kingship. With capricious cruelty, he eliminated all competitors. His extravagance depleted the vast imperial wealth, which he replenished by plundering his own leading citizens (Suetonius *Caligula* 34-42; Dio Cassius *Hist.* 59.9-10). He reveled in deification and revived in the provinces the language and practices of the Hellenistic *ruler cults to such an extent that the Jews of the empire were victimized politically and physically (Josephus *Ant.* 18.8.1-9 §§257-309; Philo *Leg. Gai.* 261-337). After only three years, Caligula was so hated that he was assassinated by members of his own guard (January A.D. 41).

2.1.3. *Tiberius Claudius* (*Nero Germanicus*, 10 B.C.-A.D. 54). Claudius succeeded his nephew Gaius Caligula by accident rather than achievement. Claudius, cowering in the palace and expecting the same fate as Gaius, was discovered by members of the praetorian guard, who spirited him to their camp and saluted him as emperor (Suetonius *Claudius* 10). Claudius had little political experience (Suetonius *Claudius* 4-7; Dio Cassius *Hist.* 59.6-7; Tacitus *Ann.* 1.54), since the imperial family considered his sickness and reputation as a dullard a liability (exaggerated by the sources: Suetonius *Claudius* 2; Dio Cassius *Hist.* 60.2; Seneca *Apocol.* 6).

As emperor he extended the Augustan pro-

gram: maintain an appearance of traditional constitutionalism but continue to centralize power under the leading citizen. Claudius stabilized imperial control by creating an executive staff, which effectively ended any senatorial power. This dichotomy of traditionalism combined with aggressive imperialism is clearly evident in his policy toward the Jews. Immediately after his accession (A.D. 41), which was supported by Agrippa (Josephus *Ant.* 19.4.2 §§236-45), Claudius reaffirmed that the *Alexandrian Jews were exempt from the imperial cult as under Augustus, but in the same edict he warned the Jews not to expand their privileges (P. Lond. 1912 [Smallwood, 370]; Josephus *Ant.* 19.5.2-3 §§279-91). Claudius consistently opposed *proselytizing, and when disturbances continued in the Roman Jewish community, he exiled those responsible (Suetonius *Claudius* 25.4: *Iudaeos impulsore Chresto assidue tumultantis Roma expulit*, "he expelled the Jews from Rome because they were in constant uproar at the instigation of Chrestus"; Acts 18:2) and banned meetings (Dio Cassius *Hist.* 60.6.6).

2.1.4. *Nero (Claudius Caesar, A.D. 37-68)*. Nero's atrocities are among the most remembered acts of the Caesars and are largely responsible for Rome's image as an intolerable despot (Tacitus *Ann.* 15.37; Suetonius *Nero* 20-49; Dio Cassius *Hist.* 62.15). There was, however, no opposition to his proclamation as emperor (A.D. 54), as the transition to power was well prepared by his mother, the younger Agrippina, and Burrus, the commander of the praetorian guard (Suetonius *Nero* 6-7). At first, his management of the empire was exemplary: treasury administration was reformed, grain importation and distribution improved, there was tax relief, and able governors were appointed (Tacitus *Ann.* 13.50-52; Suetonius *Nero* 10-19).

Then, Nero, who had always nursed his vices, murdered his interfering mother (A.D. 59), and when Burrus died and his influential adviser *Seneca retired (A.D. 62), the worst of the autocrat emerged. Nero ignored the provinces and armies, while he spent imperial wealth on his love for games and the *theater (Tacitus *Ann.* 14.16; 15.2-5; Suetonius *Nero* 52; Josephus *J.W.* 2.13.1 §§250-51). Rome burned (A.D. 64), and although Nero blamed the Christians (Tacitus *Ann.* 15.38-44; Suetonius *Nero* 16), the people suspected Nero (Pliny *Nat. Hist.* 17.1.5; Suetonius *Nero* 38; Dio Cassius *Hist.* 62.6). Britain (A.D.

60), Judea (A.D. 66; see Jewish Wars with Rome) and finally his own armies revolted. The disgraced emperor committed suicide (A.D. 68), and since he had massacred all the members of the Julio-Claudian family and much of the nobility, the competition to replace him plunged the empire back into civil war.

2.2. *The Flavian Dynasty.*

2.2.1. *(Titus Flavius) Vespasianus (A.D. 9-79)*.

The year A.D. 69 witnessed four emperors: Otho ousted and murdered Galba, but then facing certain defeat by Vitellius, commander of the German legions, he committed suicide. Vitellius entered Rome that June, but by July 1 the Alexandrian legions hailed Vespasian, and the Judean legions quickly followed. Before Vespasian reached Italy his allied forces had overthrown and assassinated the emperor (Tacitus *Hist.* 2-4). Vespasian had survived well the reigns of Caligula and Claudius but was threatened by Nero after he fell asleep at one of the emperor's recitals. Soon afterward, however, Nero commissioned him to end the Judean revolt (A.D. 67), which was no favor given the rebellious history of the region and the increasing messianic fervor (Suetonius *Vespasian* 4). Vespasian restored Roman rule, but *Jerusalem and the other hill fortresses fell later to his son Titus (A.D. 70; Suetonius *Vespasian* 4-5; Dio Cassius *Hist.* 65.4-7; Josephus *J.W.* 5.6-13 §§248-572). Vespasian's attention turned to the restoration of the empire: he regained public confidence by his simple and tolerant manner (Suetonius *Vespasian* 11-12, 14, 22-23; Dio Cassius *Hist.* 8-9, 11; Josephus *Ant.* 12.3.1 §§119-24), secured the borders and brought economic stability by new taxes and frugal spending policy (Suetonius *Vespasian* 16-17; Dio Cassius *Hist.* 65.2, 8). To his credit, he rebuilt the physical and political infrastructure of Rome (Suetonius *Vespasian* 9-10, 17-19; Dio Cassius *Hist.* 65.10).

2.2.2. *Titus (Flavius Vespasianus, A.D. 39-81)*.

Vespasian secured dynastic succession for his sons, first Titus and then Domitian, by making them partners in government (Suetonius *Titus* 6). Titus distinguished himself as a general, serving in Germany, Britain and most notably in the Judean campaign. After Vespasian returned to Rome, Titus captured Jerusalem, after he twice attempted to negotiate a settlement, and ended the Jewish revolt (A.D. 70). The tax previously paid by the Jews to their *temple in Jerusalem, now in ruins, was redirected to that of Jupiter

Capitolinus in Rome (the *fiscus Iudaicus*). Upon his return from the east, Titus shared a triumph (see Roman Triumph) with his father, commemorated by the Arch of Titus built under Domitian (A.D. 81), and assumed many imperial duties, including seven co-consulates (Suetonius *Titus* 4-5; Dio Cassius *Hist.* 65.4-7). His passionate affair with Berenice, the sister of Herod Agrippa, was notorious (Suetonius *Titus* 7; Dio Cassius *Hist.* 66.19). As the praetorian commander, he was feared for the swift execution of his father's critics. As emperor (A.D. 79-81), however, he was generous, murdered none and banished all informers (Suetonius *Titus* 8-9; Dio Cassius *Hist.* 66.18-19). His relief efforts for the destruction caused by the eruption of Vesuvius (A.D. 79) and another fire in Rome (A.D. 80) contrasted sharply to Nero's self-indulgence (Dio Cassius *Hist.* 66.21-24). When he died of fever, all of Rome mourned.

2.2.3. (Titus Flavius) Domitianus (A.D. 51-96). After Flavian forces secured Rome (December A.D. 69), Domitian governed until the return of his father the following year (September). Then, divested of all responsibilities, he waited for his brother to relinquish the empire (Suetonius *Domitian* 1-3; Tacitus *Hist.* 4.59-86; Dio Cassius *Hist.* 66.2-9; Josephus *J.W.* 4.11.4 §§645-49). Domitian coveted imperial power, and when Titus died (A.D. 81), he quickly reversed the open policy and returned to the autocracy of the earlier emperors. He ignored the senate and often held court outside Rome at his villa, known as the Alban fortress (Tacitus *Agric.* 45; Juvenal *Sat.* 4.145) and now the papal retreat of Castel Gandolfo. Domitian pursued a conservative policy (Suetonius *Domitian* 9).

In religion, Domitian punished Vestals for immorality and especially honored Minerva, while he relished the imperial cult and filled Rome with his statues (Suetonius *Domitian* 13; Dio Cassius *Hist.* 67.4; 8.1). His censorship heightened the hypocrisy of his own immorality (Suetonius *Domitian* 7-8). As for finances, he revalued currency to its Augustan level, which was too restrictive given imperial expenses (Suetonius *Domitian* 7, 12; Dio Cassius *Hist.* 67.4.5); an extensive building program, public banquets and games and military pay increases. Financial stress resulted in an aggressive tax policy, which included expanding the *fiscus Iudaicus* (Suetonius *Domitian* 12.2; Dio Cassius *Hist.* 65.7.2; Josephus *J.W.* 7.6.6 §218). His cruelty only increased

sedition, which worsened his fear of supposed rivals (Pliny *Panegy.* 49), such as Flavius Clemens, charged with atheism, a convenient allegation for many murders (Suetonius *Domitian* 15.1; Dio Cassius *Hist.* 67.14.1-3). Domitian was killed by his own court (A.D. 96).

2.3. Three Good Emperors.

2.3.1. (Marcus Cocceius) Nerva (A.D. 30-98). The senate, acting quickly, named as emperor one of its own (A.D. 96, Tacitus *Ann.* 15.72; Pliny *Ep.* 4.22.4-7). Nerva ended the terror of Domitian and restored a more constitutional government. He forbade all charges of treason, including those against the Jewish way of life, and restricted the *fiscus Iudaicus* to practicing Jews. Statues of Domitian were torn down, exiles recalled and property returned (Dio Cassius *Hist.* 68.1). Further, Nerva envisioned an imperial *alimenta*, which would allow small farmers to secure loans at low interest, used in turn to fund grants for poor children. The senate had its champion (Dio Cassius *Hist.* 68.2). The army, however, threatened mutiny (Pliny *Ep.* 9.13.11; Dio Cassius *Hist.* 68.3), and Nerva, lacking the military experience that could give him credibility with troops loyal to the Flavians, granted their demands to punish Domitian's assassins. To prevent a coup, he ignored the tradition of dynastic succession and adopted a Spanish provincial, Trajan, a distinguished soldier and the governor of Upper Germany. In his reign of only sixteen months, Nerva set a tone of reconciliation that dominated the next century.

2.3.2. (Marcus Ulpius) Traianus (A.D. 53-117). The sources universally acclaim the moderate reign (A.D. 98-117) and the unrivaled success of Trajan, whom the senate proclaimed *optimus princeps* for his victories in Armenia (A.D. 114). Although the formulaic and hyperbolic manner of the panegyrists obscures Trajan's private life, his public policy demonstrates a renewed imperialism. Trajan was chosen emperor because of political expediency and his ability; not dynastic succession, and his Spanish origin signaled an equilibrium between Italy and the provinces. Such balance opened trade, increased urbanization and created an economic boon for the empire. The renewed economy, strengthened further by the plunder of war, funded an extensive building program, a lasting memorial to Trajan: a forum, library, basilica, baths, harbor at Ostia and countless roads and bridges.

Trajan was master of the army, which he ex-

panded and led on two major campaigns, the first against Dacia (A.D. 101-106) and later Parthia (A.D. 114), an expedition that spread to Mesopotamia and advanced to the Persian Gulf (A.D. 116-117). Before Trajan even returned from the East, violent revolts in Parthia and the Diaspora Jewish communities throughout Cyrenaica, Egypt, Cyprus and Mesopotamia (A.D. 115-117; Dio Cassius *Hist.* 68.32; Orosius *Hist.* 7.12.6-7; Eus. *Chron.* 2.164) once again destabilized the entire region. Trajan withdrew, but he died before he could return to Rome.

Trajan's response to Pliny on the prosecution of Christians (Pliny *Ep.* 96, 97), the oldest existing official document on the subject, exemplifies his moderate approach. Trajan avoided establishing any universal rule against Christianity but presumed a personal confession was punishable by death. His concern was with the manner of investigation. Charges had to be brought by individuals; there could be no governmental searches. Further, he directed Pliny to ignore the problem of past transgressions by confining questions to the defendant's present status. Those charged need not curse Christ but only sacrifice to the gods to prove their innocence.

2.3.3. (*Publius Aelius Hadrianus* (A.D. 76-138). Hadrian quieted the empire and governed it well for more than thirty years (A.D. 117-138): his fiscal policy was sound; he was renowned for his building program (the temple of Venus and Roma, the temple of Neptune, the reconstruction of the Pantheon, Castel Sant' Angelo); he secured the borders, toured the provinces more extensively than any other emperor and extended the rights of Roman citizenship (Dio Cassius *Hist.* 69.1-9). Hadrian immediately abandoned Trajan's expansionist policy (Dio Cassius *Hist.* 69.5; Pausanius *Descr.* 1.5.5; Spartianus *SHA Hadr.* 10) and settled the East by giving up the provinces of Armenia, Mesopotamia and Assyria. He conceded the lower part of Moesia beyond the Danube and continued to pull back to the Flavian boundaries, which he strengthened with long palisades, fortified walls and garrisons. The empire had reached its zenith.

When Hadrian gave up the trans-Euphrates provinces and replaced the harsh governor of Palestine, Lusius Quietus, with his favorite Q. Marcus Turbo, he fired the Jewish messianic fervor and its hope for liberation, which just recently had caused vast destruction (A.D. 115-117; Eusebius *Hist. Eccl.* 4.2-3). Hadrian's policy more than disap-

pointed, it antagonized (Dio Cassius *Hist.* 69.12; *Gen. Rab.* 64). He finished the temple of Antiochus Epiphanes in Athens and on his tour through Palestinian regions erected a monument over the burial mound of Pompey the Great, who himself had desecrated the temple (63 B.C.). The Jews began to militarize under the leadership of another messiah, Bar Kokhba (Dio Cassius *Hist.* 69.12-13; Eusebius *Hist. Eccl.* 4.6.1-4; *Iam. Rab.* 2; see Simon ben Kosiba). Hadrian issued a series of decrees aimed at limiting the practice and growth of Judaism, which included a proscription against circumcision. Guerrilla attacks against Roman forces turned to open revolt, which lasted almost four years (A.D. 131-135). Not only was the loss of life on both sides catastrophic, but also large numbers of the surviving Jews were sold into slavery. Most settlements in Judea were destroyed, and Hadrian built a new Roman town, Aelia Capitolina, with its temple to Jupiter on the site that had been Jerusalem (Dio Cassius *Hist.* 69.14-15).

3. Religion and Power.

3.1. *The Roman Empire and the Kingdom of Israel.* The Romans, particularly in the republic and early years of the empire, had treated Judaism with tolerance and even respect, if only for its antiquity. Jews were exempted from obeisance to the gods, given allowances for sabbath observances and later excused from worshipping the emperor. Conflict, however, was inevitable, since neither the Romans nor Jews separated their religion from the existence and welfare of the state. The power of one's god(s) was evidenced in the strength of the nation. For the Jews this included control over the land promised to them in the Abrahamic covenant (*Gen* 12:1-7).

The NT environment is one of increasing tension between Rome and Judaism, which is reflected in the Jewish leaders' hostility to Jesus (*Jn* 11:47-50; *Mt* 24:1-2; 25:59-61). Pontius Pilate, appointed by Sejanus under Tiberius, circulated coins and displayed standards with the image of the emperor. Caligula determined that the Jews would worship his image and was only barely dissuaded by Agrippa (Josephus *Ant.* 18.8.7-8 §§289-304). When the Jews revolted in the time of Nero (66; Josephus *J.W.* 2.16.4 §§345-401), the ultimate price was paid in the sack of Jerusalem and the destruction of the temple (A.D. 70). Still, a messianic hope survived and led the Diaspora Jews to revolt (A.D. 115-117) and later pushed

Hadrian to a final solution, when in the aftermath of the Bar Kokhba revolt he attempted the Romanization of Jerusalem (A.D. 135).

3.2. The Roman Empire and the Kingdom of Heaven. In contrast to Judaism, the ascent of Christianity was aided by a certain compatibility to the Roman concept of empire. Roman *ingenium* (spirit), never monolithic but a mixture of diverse influences, Etruscan, native Italic and Greek, harshly criticized Judaism for its exclusivity and sense of superiority (Cicero *Flac.* 66-69; Horace *Sat.* 1.4.141-43; Juvenal *Sat.* 14; Tacitus *Hist.* 5.5). It was dangerous to defy Rome's authority, but Rome did not strip the provinces of their own identity. Christianity, nurtured by its Caesarean-styled clemency (Mk 9:40; Suetonius *Caesar* 75.3-6) and mission to the Gentiles (Mt 8:11-13; Acts 15:1-29; Eph 3:1-10), was likewise inclusive and quickly began to bridge territorial and cultural boundaries.

This is not to dismiss any conflict. It was not until the Neronian *persecution that Rome made any distinction between the Christians and Jews, and it is likely that both suffered together under Domitian's religious conservatism (Suetonius *Domitian* 15.1; Dio Cassius *Hist.* 67.14.1-3). Christians, especially in the eastern provinces (see Roman East), were subjected to intense local persecutions often provoked by their proselytizing, and even though emperors restricted state-sponsored investigations, they still considered Christianity a divisive superstition deserving capital punishment (Trajan [Pliny *Ep.* 96, 97]; Hadrian [Justin Martyr *Apol.* 1 68.6-10; Eusebius *Hist. Eccl.* 4.9.1-3]). Within the confrontational context of the earthbound kingdoms of Rome and Judea, the Christian writers advanced the superiority of a spiritual kingdom not ruled by Caesars (Lk 20:19-26; Jn 18:35-36; 19:10-11; Eph 6:12) or the priestly hierarchy (1 Pet 2:5; Rev 5:9-10). Christians could respect these rulers as representatives of a lesser power, while they regarded them as subservient to the will of their God (Rom 13:1-7; 1 Tim 2:1-2; 1 Pet 2:13-14). Caesar Augustus took a census and consecrated it with a *lustrum*, practices that had been neglected during the republic; Mary and Joseph traveled to Bethlehem, where, in accordance with Scripture, the promised Messiah was born.

ROMAN EMPIRE

*Rome was a city in the west-central coastal area of Italy that rose from a small agricultural settlement in the eighth century B.C. to become a world power dominating the Mediterranean and beyond by the birth of Christ. The Roman Empire dominated the background of the ministry of Jesus and the development of the early church, as attested by everything from the crucifixion of Jesus for treason to the persecutions of early Christians.

1. Archaic or Pre-Republican Rome (753-509 B.C.)
2. The Roman Republic (509-31 B.C.)
3. The Late Roman Republic
4. The Empire (31 B.C.-mid-fifth century A.D.)
5. The Late Empire

1. Archaic or Pre-Republican Rome (753-509 B.C.).

The earliest period of Roman history is only known through the works of historians who lived in the first century B.C. and later—more than five hundred years beyond the founding of Rome. History and legend are not easily separated in these accounts. M. Terentius Varro (first century B.C.) claimed that Romulus founded Rome in 753 B.C. as a fortified settlement on the Palatine Hill. Historians do not have archaeological evidence sufficient to establish the date independently of such literary accounts, but archaeology dates a settlement on the site to the end of the Bronze Age (1000 B.C.).

In any case, Rome was founded on the Tiber River by Latin peoples as a small agricultural village. There was initial conflict with the Sabines, another Latin people, which led to the combining of the towns and villages of these Latin peoples into a capital called Rome. Rome was ruled as a monarchy with elected kings who received advice from a council, the senate (*senatus*), composed of the male heads or elders (*patres*) of prominent clans (*gentes*), and from a civic council, the *comitia curiata*, composed of all the official *citizens of Rome.

The Etruscans, a commercial and industrial people, came to prominence in Rome about 600 B.C. and developed it into a prominent city-state dominating central Italy. The swamps between

the hills of Rome were drained to provide suitable foundations for a city of brick and stone. The Etruscans placed a wall around the city, paved its streets and erected public buildings. They also built the institutions of Rome by adapting their legal and religious systems to the needs of the city. Their direct influence ended in 510 B.C. with the expulsion of the Etruscan king, due in part to the unwelcome adoption by the Etruscans of the tyrannical model of kingship from *Greece.

2. The Roman Republic (509-31 B.C.).

The monarchy was ended by an aristocratic coup, and republican Rome was established in 509 B.C. as an oligarchy of patricians. It lasted almost five centuries. The king was replaced by two magistrates called *praetors* (later *consuls*) elected annually. The senate was now more than a consulting body—it was the real power of the government.

The oligarchy was modified in the mid-fourth century B.C., when conflict escalated between the two social classes, the patricians, from whose ranks the consuls were elected and religion controlled, and plebeians (*plebs*). The wealthy plebeians wanted more voice in the government, and the poorer plebeians wanted debt reduction, equitable land distribution and relief from food shortages. The plebeians made moves to secede to form an alternative state. This conflict resulted in new lands being used to form colonies peopled by the plebeians and elimination of debt bondage. Also, the constitution was modified and the plebeian assembly, the *concilium plebis*, was recognized as a legislative body. Eventually influential plebeians were included in the government, even as consuls. This reform process was completed in 287 B.C., when legislation of the *concilium plebis* became binding on the people. The patrician and plebeian elite consolidated their power, dominating the senate and higher offices.

After the fall of the monarchy Rome found itself in conflict with its Latin neighbors. During this time the city-state of Rome began to unify the Italian peninsula and its Latin peoples under its control, using alliances or military might. As territory came under its control, Rome established colonies connected by military roads in order to secure its influence. Each subject community was treated as benefited Rome, some receiving full citizenship and others having their relationship

to Rome outlined by treaty. Local aristocrats who proved useful were left in power. All new territories were required to supply soldiers for the Roman army. All of the Italian peninsula south of the Rubicon was united by 270 B.C.

Once the Roman peninsula was united, Rome set its sight on expansion beyond Italy. This included wars with Greece, the three Macedonian wars (214-205, 200-197 and 171-167 B.C.) resulting in Macedonia and Greece becoming Roman provinces. The chief rival of Rome was the Phoenician city of Carthage in North Africa. Within the span of just over a century Rome waged three wars with Carthage, initially for control of Sicily. Together these wars were known as the Punic Wars (264-241, 218-201 and 149-146 B.C.) and ended with the defeat of Carthage and the annexing of its territory as a province of Rome. The defeat of Carthage gave Rome dominion over the eastern Mediterranean (see Roman East), including northwest Africa, Spain and southern Gaul (France). Rome governed these subject lands directly through a succession of senatorial proconsuls and praetors. These administrators were responsible for maintaining order and collecting taxes. Some areas were governed by client kings and aristocrats subject to the senate.

By the middle of the second century Rome had become a cosmopolitan city and the center of culture, trade and industry. Hellenistic influence was evident everywhere in this growth in architecture, the arts and literature, especially in historiography, epic poetry and drama. Along with urbanization Rome had an increasing problem with landless urbanites who began life in agriculture, came to the city and were unemployable in urban trades. They relied upon the public dole and became a powerful source of votes for local politicians. The problem was aggravated by the new emphasis upon absentee landlords holding vast landed estates that created a land distribution problem and mass displacement of small farmers.

3. The Late Roman Republic.

In its last century the republic was destabilized by many factors. There was competition between social classes and their interests, especially at Rome. The wealthy senatorial class and the equestrian class (a privileged class once providing cavalry for the legions of Rome) were trying to retain their privileged status and large

estates while the urban poor were seeking land and more public dole. There was provincial unrest due to a lack of a bureaucracy capable of administering an empire (see Roman Administration) and autocratic and corrupt provincial *governors. Allies demanded *citizenship and threatened to withdraw from the empire. German tribes in the north and Pontus in the east posed military threats from without the empire. The senate had too little power to effectively deal with these economic and military difficulties.

Three civil wars were waged to resolve these social and political tensions. The Social or Marian War (91-89 B.C.) was fought to stop Italian peoples from taking arms and leaving the republic because they had not received citizenship. After the war they were awarded citizenship. The other two wars were waged over the control of the government, including Marius against Sulla (80s B.C.) and Caesar against *Pompey (40s B.C.). The *military was reformed from mandatory service that was due from landowning citizens to a volunteer army in which allegiance was to the commander. This reform made the military a vital force for solving political problems in which the commander was involved.

These civil wars marked the transition from the republic to the empire. Julius Caesar's struggles with Pompey had the consequence of adding much territory in the western Mediterranean to the empire and creating political stability. In the end Caesar was named king (*dictator perpetuus*), but his assassination for his monarchical tendencies resulted in a new round of civil wars, this time between Octavian, his adopted son, in league with Marc Antony and others seeking to reestablish the republic. After a parting of the ways, Octavian defeated Antony, his chief rival, and Cleopatra VII, queen of Egypt, at the battle of Actium (31 B.C.). Egypt itself was incorporated as a Roman province. Octavian took the title *princeps* ("first citizen") and became known as Emperor Augustus Caesar. His consolidation of power marks the true beginning of the empire.

When the civil wars were over, all of Italy was united politically, culturally and economically. It was a time of great literary achievement in *rhetoric and *poetry, witnessing the works of *Cicero, Caesar, Virgil and Varro, to name a few. It also witnessed a great shift in the economy from small farm agriculture to large agricultural tracts run by tenant farmers. A business and

commercial class arose. Industry was limited largely to supplying agriculture and the military. Finance and investment were well-developed in the republic and centered at Rome.

4. The Empire (31 B.C.-mid-fifth century A.D.).

Augustus established the Julio-Claudian emperors. At the death of Nero and the civil war caused in part by his excesses and tyranny, the Julio-Claudian emperors were replaced by the Flavian emperors in A.D. 69. At the end of the first century the Flavians were replaced by emperors who were elected by the senate and were themselves senators. These emperors ruled according to constitutional forms and the help of the senatorial and equestrian orders. However, with few exceptions the power was passed in dynastic succession from emperor to son or adopted son.

Although Augustus was the sole ruler, his government was outwardly similar to that of the republic. He shared power with the senate. He controlled the military, foreign policy and supervision of the government. The senate was given legislative and judicial roles, controlled government administration and was consulted on policy. Augustus and his successors controlled the provinces that had military power through appointment of governors from men of consular or praetorian rank, with the length of term determined by the emperor. The senate controlled the provinces that did not have military power, usually in Asia and Africa, through its appointment of proconsuls or propraeors appointed as governors for one-year terms. Governorships of important imperial or senatorial provinces were staffed by ex-consuls. A governor kept the peace of his province, commanded troops in its borders, applied the law and collected the taxes. Any decision of a governor could be overruled at any time by the emperor, who had *imperium maius* ("superior command"). Much of the administration of the empire was performed by freedmen of the imperial household, in charge of finance, roads, public works and aqueducts. No large-scale bureaucracy was established. This form of government was called the principate and lasted into the third century A.D. (see Roman Administration).

The senate created the laws for the emperor and also provided judicial functions, becoming the highest court. Its laws did not have to be ratified by the popular assemblies (*comitia*). Legisla-

tion by the popular assemblies became infrequent. Augustus reconfigured a man's career path to the senate. He entered the senate by being elected a *quaester* (finance) around the age of twenty-five, then an *aedile* or tribune (municipal administration) and at about age thirty a *praetor* (judicial). A former praetor could become a governor of a province or a commander of a legion. The most sought-after positions in the government of the empire were the two consulships, or heads of state, that opened up each year to men age forty-two or older. Praetors and consuls had *imperium*, which gave them power to administer laws and command in war in the provinces that they served.

Augustus reformed the system of *taxation. He used the census to create a system of assessment and direct taxation (cf. the tax census decreed by Augustus in Lk 2:1). Tax money and his own resources were used to buy tracts of land for colonization by retiring soldiers and to provide the grain dole to the inhabitants of Rome. This helped solve the problem of land distribution and the plight of the urban poor—two key problems of the late republic. Augustus also instituted a professional army with set terms of service. He maintained loyalty by appointing all the senior commanding officers and limiting legion commanders and governors of military provinces to three-year terms of service.

Augustus used his new military to complete the conquest of Spain. However, for the most part Rome maintained its traditional boundaries. During the first century A.D. the Roman Empire encompassed the entire Mediterranean basin and surrounding territory. It extended as far north as Britain, with the Rhine and Danube Rivers forming the boundary with the Germanic tribes, east with the Euphrates River forming the boundary with the Parthian Empire, south to Egypt and northern Africa and west to Spain. Legions were stationed at the frontier borders of the empire and worked in conjunction with local garrisons to protect the boundaries.

Whereas Rome was the administrative center for the entire empire, *Antioch in Syria served as the administrative center for the eastern portion of the empire. The empire was divided into provinces ruled by governors of senatorial ranking who relied heavily upon local officials for administration and tax collection. Each province had a provincial council composed of aristocrats from key cities. It could appeal directly to

the emperor about its needs or abuses of the governor, independent of the governor.

After a century of civil war the populace welcomed the empire. It brought a long-lasting peace and economic prosperity, including urbanization and massive building projects throughout the empire, even to the extent of building entire cities. The capital of Rome was transformed in gleaming marble. Rome is estimated to have had a population of one million people and Antioch in Syria, Carthage and *Alexandria, Egypt, to have had populations of perhaps half that. The population of the empire is estimated to have been between fifty and sixty million. *Travel was slow, but all regions of the empire were accessible. Regional languages continued, with Latin in the west and Greek in the east providing a common language, especially among the upper classes. This confluence of accessibility and common language greatly facilitated the early missionary work of Christianity, as the travel and ministry of Paul attest.

Divisions in society were along economic lines rather than ethnic or nationalistic lines. There was an enormous gap between the upper classes of senators and equestrians and the lower classes of free men, freedmen and *slaves. The one notable exception was the Jews of Judea, with which Rome fought two wars (A.D. 66-73 and 132-135; see Jewish Wars with Rome), where social division was along ethnic and nationalistic lines. The Roman economy was mainly based on agriculture with an admixture of light industry. Poverty was rampant in the big cities.

Within the population there was an increasing dissatisfaction with traditional religion, its pantheon and its worldview. Religions offering a personal relationship with deity were increasingly popular, including Christianity and Mithraism (see Mysteries; Religion, Personal). The Christian gospel offered a personal relationship with deity, as well as the promise of participation in the kingdom of God that gave the poor masses a hopeful worldview. Emperor worship became popular in the first century A.D., and its claims for the divinity of the emperor were antithetical to Christianity's claim that Jesus was Lord (see Ruler Cult). This tension led in part to sporadic *persecutions of Christians throughout the empire. It was during the persecution of Nero, who blamed Christians for the burning of Rome in A.D. 64, that Paul and Peter lost their

lives, and the book of Revelation helps the churches of *Asia Minor cope with the persecution under Domitian, who demanded worship as "Lord and God" (c. A.D. 95-96).

One of the most lasting contributions of the empire was its rule of *law (see Roman Law and Legal System). The body of law amassed by legislation and decree was administered by the praetors. The method of adjudication of cases was to appeal to legal precedent and the interpretation of legal experts. Both the civil and criminal law were different for Roman citizens and non-citizens. Citizens enjoyed the full measure of the law, but noncitizens did not. We may compare Paul's appeal to his citizenship and ultimately to the emperor, a privilege he invoked as a Roman citizen when he realized that local jurisdiction was not going to be impartial (Acts 25:11). And we may also note the dismay of the Philippian magistrates when they discovered that Paul and Silas were Roman citizens after they had treated them as a noncitizens—stripping, flogging and imprisoning them (Acts 16:35-39). The distinction between citizen and noncitizens broke down in the third century, when most free inhabitants of the empire were given citizenship by the *Constitutio Antoniniana* of A.D. 212. Social status became the major distinction in administering the law. The propertied classes (*honestiores*) were treated less harshly by the law than were the poorer classes (*humiliores*). Slaves had no rights under the law.

5. The Late Empire.

The third century A.D. saw great instability in the empire. There was a rapid succession of emperors ruling in Rome between the death of Severus Alexander (A.D. 235) and the accession of Diocletian (A.D. 284), as well as would-be emperors and local rulers governing areas of the empire that Rome could no longer control. Civil wars were common. The Parthians to the east and Germanic hordes to the north took much territory from Rome. Its frontier garrisons fought among themselves for rival claimants to power, destroying both the economy and the frontier defenses. Aurelian (A.D. 270-275) and his successors regained this territory. Diocletian (A.D. 284-305) reestablished stability. He reformed the military by creating mobile armies that could be moved to the frontier to help local garrisons defend the boundaries. He formed a tetrarchy of emperors who administered smaller

portions of the empire called dioceses, which were in turn composed of provinces. This system of government led to a decade of rivalries between emperors, civil war and persecution of the Christians. Constantine (A.D. 306-337) emerged to reunify the empire under one emperor and established Byzantium (Constantinople) rather than Rome as the capital of the empire. Christianity was now a recognized religion of the empire.

The late empire witnessed many economic and social changes that were the precursors of the feudalism of the Middle Ages. Urban life declined as agriculture thrived. People became less socially and physically mobile. They were tied to their land and the jobs of their ancestors. Local aristocrats provided the military protection for their geographical locations until the mobile Roman forces could arrive. Cities near the frontier of the empire thrived as the resources of the empire were directed there to bolster the frontier defenses. Professional bureaucracy increased with greater delineation of roles and functions. There was stability in education, trade, administration and the judiciary. Christianity provided a common culture and ideology of power to ruler and ruled alike.

The western portion of the empire was finally overrun by Germanic tribes in the fifth century. The eastern portion continued until 1453, when Byzantium was conquered by the Turks. However, Roman culture and the Christian faith that it eventually adopted have been major influences on Western civilization ever since.

ROMAN GOVERNORS OF PALESTINE

The office of the Roman governor in the first century A.D. was the most prominent and distinctive expression of the dominion of Rome over the land and people of the Jews. Through this office and with the varied nuances of consideration or brutality that each appointee brought to it, the will of the emperor and the Roman people was enforced. In this article the office of Roman governor and the governance of three particular appointees will be considered.

1. Rome and the Jewish State
2. Roman Governors in Palestine
3. Pontius Pilatus

4. Antonius or Claudius Felix
5. Porcius Festus

1. Rome and the Jewish State.

1.1. Early Roman-Jewish Relations. *Rome's presence in the Near East was at first seen to be a comfort to the Maccabean rulers of Palestine who early sought a friendship treaty and several times renewed it for the protections it might afford (1 Macc 8; 13:36; Josephus *Ant.* 12.10.6 §§414-19; 13.5.8 §§163-65; 13.9.2 §§259-66). All changed, however, in 63 B.C., when against the resistance of Aristobulus II, *Pompey took *Jerusalem by force (Josephus *Ant.* 14.4.1-5 §§54-79). Thereafter the Jewish people were ruled by Rome, whether they were constituted a province or a client kingdom under nominated royals (Tacitus *Hist.* 5.9).

1.2. Orientation Within the Roman Orbit. The NT period begins with the Idumean ruler *Herod the Great. The young Herod's successes in governing Galilee from 47 B.C. resulted in the Roman senate's voting him king of the Jews in 40/B.C. Herod's de facto reign as king from 37 B.C. until his death in 4 B.C. was characterized by zeal for Rome and an absolutely ruthless elimination of threats, whether these were Arab designs on territory, real or supposed intrigues of political leaders, friends and family, or news of the birth of a Davidic claimant to the throne (Mt 2). Herod died master of an extensive and generally stable kingdom whose subject population for the most part hated him.

At his death, Herod's three sons went to Rome to vie for the sole kingship (Josephus *Ant.* 17.9.3-4 §§219-27; 17.11.1 §303). Augustus (see Roman Emperors) divided the kingdom between Herod's sons but withheld the royal title. Archelaus was made ethnarch of about half of Herod's kingdom, comprising Idumea, *Judea and *Samaria. Antipas became tetrarch of *Galilee and Perea. Philip was made tetrarch of Batanea, Trachonitis and Auranitis (Josephus *Ant.* 17.11.4 §§317-20; cf. Lk 3:1).

Archelaus's government was brutal and tyrannical. It lasted ten years. He was deposed in A.D. 6 by Augustus on the successful complaint of a Samaritan and Jewish delegation (Josephus *Ant.* 17.13.1-5 §§339-55; *J.W.* 2.7.3 §111). Excepting the brief reign of Herod Agrippa I from A.D. 41 to 44 over a much enlarged Jewish realm (Josephus *Ant.* 18.6.10 §237; 19.5.1 §§274-77; *J.W.* 2.9.6 §§181-83; 2.11.5-6 §§214-20), the area of

Idumea, Judea and Samaria, including much of the rest of Herod's domain (Josephus *J.W.* 2.11.6 §§218-20; 2.12.8 §247), was after A.D. 44 ruled by Roman governors.

1.3. Provincial Status. Augustus's options for the governance of the former ethnarchy of Archelaus were several. At the death of Herod the Great, some Jews pled that Augustus annex the kingdom to Syria (Josephus *J.W.* 2.6.1 §§80-92; cf. Zeitlin, 2:128). This was not done. But documents describing the territory after Archelaus's deposition call it both a province (Josephus *J.W.* 2.8.1 §117; 2.9.1 §167; cf. Tacitus *Ann.* 2.42; *Hist.* 5.9; Suetonius *Claudius* 28) and an annex to Syria (Josephus *Ant.* 17.13.5 §§55; 18.1.1 §1). Records attest to the significant interventions of Syrian governors in its politics throughout the NT period. Syrian legates made military incursions to keep the peace, entertained the appeals and complaints of Jewish delegations and exercised power over both governors and high *priests. The Syrian legate Vibius Marsus even dissolved a gathering of client kings, which included Herod Agrippa I (Josephus *Ant.* 19.8.1 §§338-42; cf. Stern, 314, on the motives). After the Bar Kokhba revolt (see Simon ben Kosiba), it received a governor holding the formal title of *legatus Augusti pro praetore provinciae Iudaea* who possessed, in addition to full civilian powers, military charge over legionary forces (*ILS* 1035-36, 1056).

1.4. Provincial Seat. While Palestine's governors occupied the palace built by Herod the Great on the west side of Jerusalem during *festivals and for the conduct of official business, their normal residence was Herod's praetorium (Burrell; Acts 23:35) at *Caesarea Maritima, the administrative seat of the province (Josephus *Ant.* 18.3.1 §57; 20.5.4 §116; *J.W.* 2.9.2 §171; 2.12.2 §230; Tacitus *Hist.* 2.78).

2. Roman Governors in Palestine.

2.1. Title. The Roman governors in Palestine are variously designated. The title *hēgemōn* is a general term and indicates a governor, whether a Roman proconsul (Lk 2:2; cf. Acts 18:12), a legate (Josephus *Ant.* 15.11.4 §405; 18.4.2 §88) or some more subordinate Roman official (e.g., Mt 27:2; Mk 13:9; Lk 3:1; 20:20; Acts 23:24, 26; 26:30; 1 Pet 2:14; Josephus *Ant.* 18.3.1 §55). Two more specific designations for governors of Palestine were *praefectus (eparchos)*, appropriate to a military commander of five hundred to one thousand

auxiliary troops, and *procurator* (*epitropos*), which referred to a financial officer of a province or a governor (see DJG, "Pontius Pilate"). The 1961 discovery of a Latin inscription at Caesarea referring to Pontius Pilatus as *praefectus* has led to an inference that pre-Claudian governors in Palestine were officially known as prefects (= *eparchos*: Josephus *Ant.* 18.2.2 §33) but thereafter as procurators (= *epitropos*: Josephus *J.W.* 2.11.6 §220; 2.12.1 §223; 2.12.8 §247; 2.14.1 §272; *Ant.* 15.11.4 §406; 20.1.2 §14; 20.5.1 §97). On this assumption, the descriptions of Coponius and Pilatus as procurators (Josephus *J.W.* 2.8.1 §117; 2.9.2 §169; Tacitus *Ann.* 15.44) and Cuspius Fadus and Luceius Albinus as prefects (Josephus *Ant.* 19.9.2 §363; 20.9.1 §197) are anachronistic.

2.2. Qualifications and Appointment. Except for the imperial freedman Felix, the governors of Palestine belonged to the Roman equestrian order. They were persons of military and administrative experience whose abilities and/or connections recommended them. While the governors of Palestine up to the reign of Claudius were Italians or Latins, at least three of the seven thereafter were of Greek or Oriental origin. The Jewish apostate Tiberius Julius Alexander (A.D. 46-48) governed the Jews with some sensitivity (Josephus *J.W.* 2.11.6 §220). But Greco-Roman prejudice generally prevailed, and grinding tension is the context to first-century A.D. events.

The governors were appointed and dismissed directly by the emperor (e.g., Josephus *J.W.* 2.9.2 §169; 2.12.6-8 §§244-47; *Ant.* 20.1.2 §14; 20.8.5, 9 §§162, 182) or his surrogate (Reicke, 175). In exceptional circumstances, the Syrian legate might send an errant governor to Rome and install a caretaker (Josephus *Ant.* 18.4.2 §89). Their term of office varied according to imperial policy. Augustus's Palestinian appointees served an average of three years. In the twenty-four years of Tiberius's reign, however, there were only two governors (on his motives, see Tacitus *Ann.* 1.80; Josephus *Ant.* 18.6.5 §§170-77). In the post-Tiberian period, outside of Marullus (A.D. 37-41), Ventidius Cumanus (A.D. 48-52) and Felix (A.D. 52-60), the terms were for two years.

2.3. Powers. The governor of Palestine had no recourse to legions, only auxiliary forces levied largely from the Greek populations of Caesarea and Sebaste and probably led by a Roman citizen officer class. The bulk of these forces were normally garrisoned at Caesarea but win-

tered in Jerusalem (Josephus *Ant.* 18.3.1 §55). One cohort, however, was permanently quartered in Jerusalem in the Fortress Antonia attached to the temple precincts. Their peace-keeping had special focus to monitoring temple officiants and worshipers (Josephus *Ant.* 20.8.11 §192; *J.W.* 5.5.8 §§244-45; Acts 21:31-37).

Except where a non-Jew desecrated the temple by entering beyond the barrier (Josephus *Ant.* 12.3.4 §145; 15.11.5 §417; *J.W.* 5.5.2 §§193-94; 6.2.4 §§124-26; Philo *Leg. Cai.* 31 §212; Eph 2:14), capital punishment was the exclusive preserve of the governor (Josephus *J.W.* 2.8.1 §117-16; *Ant.* 18.1.1 §2). The emblems of this power were the right to wear a military uniform and to carry a sword (Dio Cassius *Hist.* 53.13.6-7; 53.14.5; Rom 13:4). The power was absolute over non-Roman provincials (Mt 27; Mk 15; Lk 23; Jn 18-19). It probably also included the right to execute both citizen soldiers and civilians after due process. In the case of citizen civilians, governors could try, condemn and execute provided there was no appeal (Garnsey 1966, 54; cf. Acts 22-26).

The power to nominate and depose high priests and administer the high-priestly vestments were rights delegated by Rome. From Josephus's record (*Ant.* 18.4.3 §93; 18.2.2 §§34-35) we learn that these significant powers resided directly in the hands of Roman governors from A.D. 6 (Coponius) to A.D. 36 (Pilatus). Before Coponius, they were the responsibility of Herod the Great and Archelaus (Josephus *Ant.* 18.4.3 §92; 20.10.5 §247). After Pilatus, the Syrian legate Vitellius possessed the power but relinquished control of the vestments to the Jewish priests (Josephus *Ant.* 18.4.3 §§90-95). At the death of Herod Agrippa I, who as monarch possessed all the powers, the governor Cuspius Fadus and Syrian legate Cassius Longinus petitioned Claudius to regain control. Claudius refused the request in favor of Herod Agrippa II (Josephus *Ant.* 15.11.4 §407; 20.8.8, 11 §179, §196; 20.9.1, 4, §§197-203, §213, §§222-23).

The governors of Palestine were responsible for the province's financial affairs, including the levying of various taxes (see Zeitlin, 2:137, on the types). After Archelaus, a census was taken to that end (Josephus *Ant.* 17.13.5 §395; Tacitus *Ann.* 6.41). Collections were farmed out to state contractors called publicans (*publicani*) and their agents (*conductores*). While Romans were at the top of the ladder, Jews were hired for direct collections (e.g. Mk 3:13-19; Lk 19:1-10).

The governors of Palestine also possessed the right to mint *coinage. Jewish religious scruples called for the avoidance of pagan symbols on coins. This was generally followed by even the harshest of the governors.

2.4. Salaries and Accountability. As agents of the emperor, procurators were paid an annual stipend from the treasury. The title of their procuratorial grade or rank actually reflected the amount of their annual stipend. They were known as *sexagenarii*, *centenarii*, *ducentarii* or *tricenarii*, indicating that they received 60,000, 100,000, 200,000 or 300,000 *sesterces* respectively (Dio Cassius *Hist.* 53.15.1 [cf. LCL 6:231 n.2]; Suetonius *Claudius* 24 [cf. LCL 2:46-47, n.c]). The equestrian governors of Palestine probably got an annual salary of 100,000 *sestertii*, in keeping with their military grade and the forces in their charge (Stern, 320). Legitimate salaries, however, were invariably supplemented incredibly by means of illicit exactions. In a factionalized province a governor could multiply the take by playing sides. The administrations of Felix, Albinus and Florus illustrate the problem well.

Herod Agrippa II declared that it was not by Rome's order that a governor was harsh but that Rome could not easily see or hear of oppressions committed at a great distance (Josephus *J.W.* 2.16.4 §§352-53). Governors were generally immune from prosecution while in office. Only in the year following their return to Rome could they be prosecuted (Josephus *Ant.* 20.8.9 §182). Term renewals and promotions only extended this immunity. Appeals against a governor by cities and even whole provinces needed approval from the offending governor himself (Josephus *Ant.* 20.8.11 §§193-94) or his nearest superior (Josephus *Ant.* 18.4.2 §§88-89; *J.W.* 2.12.5-7 §§239-46). Unsanctioned embassies were both less successful and more risky. A fair trial and conviction was remote given the governor's being an imperial appointee and the judges his peers. Moreover, money and/or influence could purchase acquittal (Josephus *Ant.* 20.8.9 §§182-83).

3. Pontius Pilatus.

3.1. Dates. Pontius Pilatus, the fifth prefect of Judea, came to his appointment in the year A.D. 26 and served until A.D. 36. What we know of his career comes from Josephus (*Ant.* 18.2.2 §35; 18.3.1-3 §§55-64; 18.4.1-2 §§85-89; *J.W.* 2.9.2-4 §§169-77), *Philo of *Alexandria (*Leg. Gai.* 38 §§299-305), Tacitus (*Ann.* 15.44), the 1961 *praefec-*

tus inscription from Caesarea and the NT (Gospels *passim*; Acts 3:13; 4:27; 13:28; 1 Tim 6:13). Information on Pilate from later church tradition and *apocryphal literature is of doubtful veracity (Sandmel, 3:813-14).

3.2. Origin and Appointment. The *nomen* Pontius suggests that Pilatus was from the region of Samnium in central Italy. While governorship was an imperial appointment (Josephus *J.W.* 2.9.2 §169), Pilatus's preferment was probably sponsored by Tiberius's anti-Semitic praetorian commander Sejanus (Philo *Leg. Gai.* 24 §§159-61). The notice that Pilatus's wife accompanied him (Mt 27:19) is confirmed by a policy change in A.D. 21 that permitted such an arrangement (Tacitus *Ann.* 3.33-34).

3.3. Governance. Pilatus was contemptuous of Jewish religious sensibilities and deliberately provocative. Under cover of darkness and against the practice of earlier Roman governors, Pilatus on one occasion brought military standards bearing images of the emperor into Jerusalem. He ignored the demonstrations and rebuffed the pleas of those who pursued him to Caesarea. Secretly surrounding the Jews who gathered before his tribunal in the stadium with troops, he threatened them with death. Jewish resolve to get satisfaction even if it meant a wholesale slaughter, however, caused Pilate to remove the standards (Josephus *Ant.* 18.3.1 §§55-62; *J.W.* 2.9.2-3 §§169-74).

Pilate provoked further hatred by financing the construction of an aqueduct through the seizure of Jewish sacred funds. Protests were met with brutal force, resulting in a panic that took many Jewish lives (Josephus *Ant.* 18.3.2 §§60-62; *J.W.* 2.9.4 §§175-77). Some identify this event with the NT notice of Pilatus's slaughter of certain Galileans (Lk 13:1-2; 23:12).

Even in the minting of coins, Pilatus was careless of Jewish sensibilities. Coins during the period A.D. 29 to 31 feature Roman religious emblems. Serious Jews were scandalized (Wheaton, 1280).

Soon after Sejanus's execution in A.D. 31, Pilatus erected a set of golden votive shields at his Jerusalem residence bearing the names of Tiberius and himself. Protests were again registered by the Jewish elites, including Herod's four sons, and letters of supplication were sent to Tiberius. The emperor was sorely displeased with Pilatus's action and ordered that the shields be immediately removed to Caesarea (Philo *Leg.*

Gai. 38 §§299-305).

Pilatus's dismissal came about over a military action against the Samaritans. In A.D. 36 a certain Samaritan commanded an armed following by declaring he knew the whereabouts of sacred vessels hidden by *Moses near Mt. Gerizim. Pilatus blocked their way, and in the ensuing battle many Samaritans were slaughtered or taken prisoner and their leaders executed. A subsequent Samaritan deputation brought complaint to the Syrian legate, representing Pilatus's action as a vicious slaughter of innocents. Vitellius (*Tacitus Ann.* 6.31-32) ordered Pilatus to Rome and sent Marcellus as caretaker (*Josephus Ant.* 18.4.1-2 §§85-89). Tiberius died (March 16, A.D. 37) before Pilatus reached Rome. We know nothing more of him after this.

3.4. Characteristics of Governance. Philo describes Pilatus as a proud and vindictive man who possessed a fiery temper, and in describing his administration speaks of "the briberies, the insults, the robberies, the outrages and wanton injuries, the executions without trial constantly repeated, the ceaseless and supremely grievous cruelty" (*Philo Leg. Gai.* 38 §§302-3). Actions were engaged provocatively and resistance was met with brinkmanship that led either to embarrassing climbdowns or appalling bloodshed. The duration of Pilatus's oversight was more a reflection of Tiberius's inattention and policy of not changing governors quickly than of Pilatus's success in governance.

3.5. New Testament Record. The NT accounts of Pilatus's conduct in the trial and condemnation of Jesus fit well the other notices of his governorship. The relationship between Pilatus and Herod Antipas in the referral of Jesus (Lk 23:12), Pilatus's malleability under Jewish threats (Mt 27:15-26; Mk 15:6-15; Lk 23:13-25; Jn 18:39—19:12) and the cynical and provocative phrase he placed on Jesus' *titulus*, the inscription on the cross (Mt 27:38; Mk 15:26; Lk 23:38; Jn 19:19-22), exemplify the consistency.

4. Antonius or Claudius Felix.

4.1. Dates. There is disagreement on the dates of the eleventh governor Felix. Tacitus describes a shared governance, with Felix in charge of Samaria from A.D. 48 and Ventidius Cumanus in charge of Galilee. In A.D. 52, the Syrian legate Quadratus removed Cumanus on charges of provincial maladministration and elevated Felix to oversight of the entire area (*Taci-*

Ann. 12.54). Josephus has Felix newly arrived from Rome as successor to the disgraced Cumanus with a remit over Judea, Samaria, Galilee and Patrea (*Josephus J.W.* 2.12.8 §247; *Ant.* 20.7.1 §137; 20.8.5 §§162-63).

Some scholars have argued for Felix's earlier dismissal from office in A.D. 55 because his brother Pallas was removed from administering the imperial *fiscus* that year. Pallas could not have protected Felix against Jewish accusations after that. Several things can be said, however, in defense of Felix's remaining in office until A.D. 59 or 60. Pallas's dismissal was not a fall or disgrace; it was a political and policy move (*Josephus Ant.* 20.7.1 §137; 20.8.9 §§182-84; *Tacitus Ann.* 13.2, 14). Pallas left office honored, "exonerated" and fabulously wealthy (*Tacitus Ann.* 13.14, 23; *Dio Cassius Hist.* 62.14.3; *Pliny Ep.* 7.29; 8.6). His murder in A.D. 62 was more out of Nero's greed than hostility (*Dio Cassius Hist.* 62.14.3; *Tacitus Ann.* 14.64-65). If one assumes the earlier dismissal date, *Josephus's War* (2.13 §§250-70) reports too many activities for the one year when Nero was emperor and Felix governor. Changes in Judean coinage also seem to favor the date of A.D. 59 or 60. Finally, Paul's *captatio benevolentiae* at Acts 24:10—better taken to be accurate and influential historical summary rather than a risky piece of insincere fawning (see Winter)—in speaking of the "many years" that Felix had been judge over "this nation," probably refers to a period of eight or nine years rather than a half time less.

4.2. Origin and Appointment. Tacitus gives the name Antonius Felix (*Hist.* 5.9), suggesting that, like his brother Pallas (*Josephus Ant.* 18.6.6 §182), Felix had received his freedom from Antonia, the mother of Claudius. Notice of Felix's marriage to the granddaughter of Antony and Cleopatra appears to reinforce the Antonian connection (*Tacitus Hist.* 5.9). However, some manuscripts of *Josephus (Ant.* 20.7.1 §137) and Suidas refer to him as Claudius Felix, and a Greek inscription notes an *epitropos* named Tiberius Claudius (Schürer, 1:460 n. 19).

In any event, favorable connections to the imperial household not only garnered Felix the governorship that the Jewish high priest Jonathan had requested for him (*Josephus Ant.* 20.8.5 §162) but also ensured its continuation beyond Claudius's death and that its excesses would be ultimately survivable. Among his three marriages to royal women (*Suetonius Claudius*

28) was a liaison in Judea that may have purposely connected him with the Herodian dynasty (Josephus *Ant.* 20.7.2 §§141-44).

4.3. Governance. Felix pacified the countryside by capturing bandit leaders and sending them on to Rome, crucifying their followers and punishing their supporters. Eleazar the son of Deinacus, who had ranged the province for twenty years, was captured by a ruse (Josephus *Ant.* 20.8.5 §§160-61; *J.W.* 2.13.2 §253). Felix also put down less militant movements by slaughter (Josephus *J.W.* 2.13.4 §§258-60). About the year 54, he dealt with a popular movement led by a self-proclaimed prophet from Egypt. Many were killed and a good number taken prisoner, excepting the Egyptian who escaped. This action renewed banditry in the countryside (Josephus *Ant.* 20.8.6 §§167-72; *J.W.* 2.13.5-6 §§261-65). Several years later, the apostle Paul was mistaken for the Egyptian (Acts 21:38; see Revolutionary Movements, Jewish).

Felix both fought against and at times collaborated with urban terrorists known as *sicarii* (*sica* = a curved dagger). The high priest Jonathan was assassinated by *sicarii*, at Felix's instigation, when Jonathan grew openly restive about Felix's actions (Josephus *Ant.* 20.8.5 §162; *J.W.* 2.13.3 §§254-57).

Near the end of Felix's tenure, the substantial Jewish population of Caesarea claimed proprietary rights over the city against Greco-Syrian counterclaims. Local magistrates having failed to keep the peace, Felix intervened. He put down the disturbances by military means. Many Jews were killed, and the soldiers were permitted to plunder their property. Felix was eventually moved by certain Jewish notables to recall his forces (Josephus *Ant.* 20.8.7 §§173-78; *J.W.* 2.13.7 §§266-70).

4.4. Characteristics of Governance. Tacitus's comment that Felix "practiced every kind of cruelty and lust, wielding the power of a king with all the instincts of a slave" (*Tacitus Hist.* 5.10) is heavy with upper-class disdain. But Felix's crimes were more than the expression of character flaws. His imperial connections gave him a sense of invincibility and encouraged a disposition to harshness (*Tacitus Ann.* 12.54). His confidence was well founded. The Caesarean Jewish delegation that accused Felix of provincial maladministration before Nero was unsuccessful (Josephus *Ant.* 20.8.9 §182).

4.5. New Testament Record. While the rhetor

Tertullus and the apostle Paul could refer in general to Felix's peacekeeping and legal reforms (Acts 24:2; cf. Acts 21:38) and his judicial equity and competence (Acts 24:10) respectively without blushing, Felix's reaction to the Pauline preaching on justice, self-control and future judgment (Acts 24:25) hints at the truthfulness of the excesses of secular description. Moreover, notice of Felix's play for a bribe (Acts 24:26) and his grant of the "favor" of Paul's continued imprisonment (Acts 24:27) compare with the general practice of "sweating" individuals or factions for personal advantage (cf. Josephus *J.W.* 2.14.1 §273; *Ant.* 20.9.5 §215).

5. Porcius Festus.

5.1. Dates. Porcius Festus succeeded Felix, probably around A.D. 59 or 60, as the twelfth governor. At his death in A.D. 62, he was succeeded by Lucceius Albinus.

5.2. Governance. Festus came to a province again convulsed by banditry and assassinations. He bent considerable efforts to capture and execute large numbers of malefactors. Josephus notes how he also pursued and slaughtered a self-proclaimed messiah and all his followers (Josephus *Ant.* 20.8.10 §§185-88; *J.W.* 2.14.1 §271).

Festus sided with Herod Agrippa II against the priests on one occasion. Agrippa had built an addition to his palace that allowed him to observe priestly activity and particularly the temple sacrifices. The offended priests blocked Agrippa's view by erecting a wall on the inner temple arcade. This also blocked the view of Roman patrols on the porticoes, so Festus ordered the wall's destruction. The priests refused, arguing that this was tantamount to ordering the temple's destruction. Nero sided with the priestly deputation out of deference to his wife Poppaea, who was "religious" (*theosebēs*: Josephus *Ant.* 20.8.11 §§189-96).

5.3. Characteristics of Governance. Festus comes off better in the scanty sources than both his immediate predecessor and any of the governors who followed him. But it was too little and too late as the province continued to plunge toward war with Rome.

5.4. New Testament Record. The NT gives the reader a view of Festus's first days of governance. While he was courteous to the Jewish ruling elites (Acts 25:1), swift in trying cases (Acts 25:6) and cognizant of due process (Acts 25:16), it is clear that the newly arrived Festus was vul-

nerable to influence and power (Acts 25:1-6; cf. Kelly). This was the value in the "favor" of Felix's leaving Paul in prison, and it raised sufficient alarm to trigger Paul's unusual appeal (Acts 25:9-12). The formal reception of Agrippa II and his queen Berenice and the showcasing of Paul for Agrippa's assessment probably served a dual function—to furnish information for a document specifying charges (Acts 25:26; on *litterae dimissoriae* see Justinian *Dig.* 49.6.1) and to encourage warm official relations.

ROMAN LAW AND LEGAL SYSTEM

"Roman law" refers neither to all legal systems within the *Roman Empire nor to the legal procedures of Italy but rather to the law of imperial *citizens, Roman colonies and governors' courts throughout the Roman Empire.

The brightest in *Greece turned to *philosophy; the brightest in Rome, to law (see Law/Nomos in Greco-Roman World). The practical nature of the Romans and their concern for tolerance led to the development of a set of generally consistent rules—involving both statute and juristic law—within a flexible and distinctive legal system.

At the same time, Roman law was not consistent throughout the empire; provincial law differed from place to place. As a result, it frequently is difficult to know what laws were valid in a particular province. When the Gospel of John presents the Jewish leaders in *Jerusalem as saying "We are not permitted to put anyone to death" (Jn 18:31), that may well have been the case (Stephen and James may have been lynched). Examples from other provinces—of locals having the right to engage in capital punishment—do not serve as ultimately compelling evidence. Laws differed from province to province.

In examining Roman law and the NT, it is initially helpful to recognize extant sources of Roman law and to see how the Roman legal system developed in the principate. An overview of trial procedure in the provinces will then serve to illuminate a number of examples of various trials and courtroom activity within the NT. A discussion of legal metaphors and allusions in the NT, particularly in Paul's epistles, will follow, with some concluding remarks on one later trajectory: Constantine and Roman law in the service of the church.

1. Sources of Roman Law

2. General Characteristics of Roman Trials in the Provinces
3. Trials and Courtrooms in the New Testament
4. Allusions to Roman Law and Legal Processes in the New Testament
5. Constantine and Roman Law in the Service of the Church

1. Sources of Roman Law.

Christians who lived during the so-called classical period of the empire, during the first and second centuries A.D., were most familiar with Roman law and legal procedures from mundane sources: from Roman officials, from urban life and from fellow Christians.

In the announcement of edicts and the development of policy, Roman officials throughout the empire would have communicated the law: *emperors (Augustus, Claudius, Tiberius, Nero), provincial *governors (Felix, Festus, Pilate and Quirinius) and proconsuls (Gallio and Sergius Paulus)—all mentioned in the NT—would have had occasion to make public declarations of Roman law.

With Rome as capital of the empire, with *Corinth, *Philippi and the cities of *Galatia as Roman colonies, with *Thessalonica as a province capital and with *Ephesus and other cities as major trade centers, urban life would have left many Christians familiar with fundamental concepts in Roman law. Interest in the law was not reserved for the elite: the comic playwright Plautus filled his plays with legal jokes and parodies.

Finally, Christians would have heard about Roman legal procedure from others in the faith: some of whom were Roman citizens; some of whom could read; some of whom were trained in the law; some of whom had been persecuted or had been taken to trial.

Modern readers' knowledge of Roman law and legal institutions comes primarily from written sources: numismatics, ancient art and archaeological remains are only of limited use. Allusions to Roman law and legal practices are frequently indirect. Historians like Livy, *Josephus, *Tacitus and *Suetonius and *rhetoricians like *Cicero and Quintilian all refer to law and legal traditions familiar to them. In addition, the epistle exchanges between the emperor Trajan and *Pliny the Younger (preserved as book 10 of Pliny's letters), along with private and public *papyri, contain numerous references to Ro-

man law, practices and customs.

Our primary sources for understanding written law are statutes and *plebisca* (state-enacted law), *edicta* (pronouncements from magistrates), *senatusconsulta* (decrees of the senate), the decisions of the emperors and *interpretatio* (the replies of the jurists).

Roman law was shaped by legal developments during the republic and by basic legal principles dating from the Law of the Twelve Tables (451-450 B.C.). In addition, during the first two centuries of the empire, decrees of the senate (*senatusconsulta*) and emperors' pronouncements also came to have the force of law (cf. Galus *Inst.* 1.5). The emperor's judicial decisions (*decreta*) on individual lawsuits, his written responses (*rescripta*, *epistulae*, *subscriptiones*) to requests or an embassy and his instructions (*mandata*) to officials throughout the empire came to have binding effect.

During the principate, however, the most significant development in Roman law came from jurists, who were under the authority and guidance of the emperor. Augustus gave special status to the *responsa* of specific jurists who received legal questions from judges and, by the time of Hadrian, these responses were collected, standardized and binding. Because of the imperial backing, there was much juristic literary activity in the first 250 years of the empire: numerous textbooks, legal monographs and commentaries on praetorian edicts came from this classical period; from jurists such as Salvius Julianus (second century), Gaius (second century) and Ulpian (early third century).

The standard textbook on Roman law, the only complete lawbook from the classical period, was a manual known as Gaius's *Institutes* (*Institutionum Commentarii Quattuor*; c. A.D. 161). Although nothing is known about Gaius himself, this work consists of four books, each reflecting the law of the previous century.

The collection and organization of many jurists' materials is most evident in the codes of Theodosius (fourth century) and of Justinian (sixth century). Justinian's work (A.D. 527-565) is the most impressive legal codification of the ancient world. Now known as the *Corpus Iuris Civilis*, this work consists of three parts: the *Digest*, the *Code* and the *Institutes*. The *Digest* (A.D. 533) records excerpts from jurists of the first three centuries. These excerpts, arranged by topic, are said to have come from the researching of some

two thousand books. The *Digest* preserves earlier traditions, but it also does so with an eye towards the function of the law for the present. Some revision and editing occurred; laws were altered and adapted. Justinian's *Code* (final form, A.D. 529) is a collection of imperial legislation from the second through the sixth centuries, and the *Institutes* (A.D. 529) essentially reflect Gaius's second century textbook, supplemented with other examples and sources.

2. General Characteristics of Roman Trials in the Provinces.

During the early principate, the *praetores* oversaw the courts in Rome; the *governors, in the provinces. Because of the provinces' significance for the NT, trial procedures in province courts are particularly illuminating. In the provinces, Romans tended to let local indigenous laws and legal customs prevail, challenging them only when they posed a threat to the empire. Thus, local magistrates followed their own systems of law. Governors, whether proconsuls, imperial legates or equestrian procurators, were involved primarily in serious cases, frequently capital trials, that involved the defense and preservation of public order.

There were no public prosecutors in the Roman legal system, so the procedure of both civil and criminal trials had to be initiated by a private party who drew up charges and then brought a formal accusation (*delatio*) against the defendant. As a safeguard against abuse of this system, those who made false accusations would themselves bear the brunt of the penalty of their accusations. Before approaching the governor, the accusing party would need to state the charges in a manner such that the governor would be sympathetic and willing to hear the case. When a governor took office, he would issue an edict, stating what *formula* he would find acceptable and what sorts of court cases he would be willing to hear. It would be wise for the accusing party to refer to that edict before presenting charges.

In determining whether to accept the charge, the governor had to decide whether the alleged act was a crime. Thus, in Corinth, when the proconsul Annius Gallio had Paul brought before him (Acts 18:12-17), he subsequently chose to dismiss the case, seeing the affair as an internal dispute between Jews.

If the governor felt there was justification

and grounds for the charge, both parties would appear in court. After the governor announced the terms and parameters of the trial's proceedings, a civil case could be tried either by a judge or a jury. Judges and jury members generally were of a higher social status: jury members needed to be male, over twenty-five years of age and owners of property worth not less than seventy-five hundred denarii. As might be assumed, judges and jury members tended to favor plaintiffs who were also of a higher social status. The magistrate would then decide the punishment or penalties to be imposed.

If the governor felt there was justification for a criminal case, he would hear the case while seated on his tribunal (Jn 19:13; Acts 18:12), frequently surrounded by a *consilium*, a council of friends and officials who served as legal consultants. With criminal cases, the governor had two options in terms of procedure: he could look to precedents established by the Roman *ordo iudiciorum publicorum* (a list of crimes, procedures and punishments, established and binding in Rome), or he could go outside the *ordo* (*cognitio extra ordinem*), particularly in cases where he felt there was no adequate precedent. The governor was not bound to follow the *ordo*, in part because such legislation might interfere with local laws or customs or with gubernatorial legal precedent within that particular province. In trials heard *extra ordinem*, the magistrate had no limitations placed on how he came to his knowledge (*cognitio*) of the crime.

With the authority of the *imperium*, the governor found himself accountable only to the emperor and the senate. Just as magistrates in the city of Rome had *imperium* related to their sphere of charges, just as they formulated policies and law, so, within the provinces of the Roman Empire, governors had been given the absolute authority of *imperium*. This allowed them to make decisions and determine the law as they saw fit. Because each governor exercised the authority of *imperium*, because there was no set manual that he would follow, there was a great deal of latitude involved in the penalties and punishment for crimes, just as there was in determining charges and procedures.

Furthermore, the penalties themselves frequently depended less on the crime committed than on the person who was alleged to have committed it. The rank of both the accuser and the accused had bearing on the case. The con-

cept "equal before the law" was not assumed in Roman society. Differences in treatment under the law are particularly evident in areas related to social rank and status, citizenship and legal status.

Before a person could testify, he was asked what his place in society was. The higher one's rank, the greater one's opportunities in the courtroom. A plaintiff of lower social status generally was not allowed to initiate an action against a superior, nor could he have afforded to do so. In general, those of higher rank (*honestiores*) were treated better and not punished as severely as those of lower rank (*humiliores*). *Honestiores* were not to be tortured, they were frequently sent into exile rather than face execution, and if they did face the death penalty, they were killed in as painless a manner as possible. Although legislation at the end of the second century A.D. made these differences in punishment into law, previous to such formal distinctions there was still a *de facto* recognition that status played a large role in determining how one was to be treated.

Citizens (*cives Romani*) and aliens (*peregrini*) also were treated differently. Initially, the only Roman citizens were those patricians who lived in Rome. Others became citizens by holding certain offices, by being army veterans, by being manumitted from slavery, by having been born of citizens or by having bought their citizenship (Lysias in Acts 22:28). The emperor, the senate or a general in the field also had the right to confer citizenship on individuals or entire cities. Finally, in A.D. 212, the *Constitutio Antoniniana* made citizens of almost all persons who were subject to Rome.

During the time of the writing of the NT, Roman citizenship had some distinct advantages. Citizens could vote in popular assemblies, they were exempt from payment of certain taxes, they could be tried by either local or Roman courts, they could appeal capital sentences, and they were protected from scourging, whipping, torture and injury. In capital cases, a Roman citizen had the right of appeal (*provocatio*). There is not a scholarly consensus on whether the terms *provocatio* and *appellatio* could have been used interchangeably for the same appeals process, or whether *provocatio* involved an appeal before the trial (as in Paul's case, Acts 25:11) and *appellatio* involved one after the trial and sentence. Most scholars seem to see the existence of two

different types of appeals, with the latter type (*appellatio*) developing in the later empire.

Finally, *slave and free were treated differently. Slaves could be crucified, they could be tortured during trial, they could be treated like property.

At other times, status *per se* did not have as much to do with how one was treated. *Pecunia* (judicial bribery) was expected, and such bribes served to speed up the judicial process, to pay for lawyers, witnesses, judges, juries or the opponents' counsel. In Acts 24:26 Felix is presented as being receptive to financial favors; he hopes to get some money from Paul.

A magistrate's ability to act according to his own discretion, coupled with an accepted concept of inequality before the law, allowed for a wide degree of differences in terms of what charges were heard in court, how trials were conducted and how individuals were treated, both prior to and after sentencing.

3. Trials and Courtrooms in the New Testament.

3.1. The Trial of Jesus. Trials in the NT can be understood best by acknowledging the governor's imperium in both setting the parameters of a trial and arriving at a verdict. The accounts of Jesus' trial before Pontius Pilate reflect the typical process of *cognitio*.

The accusers—the Jewish officials—had an initial deliberation, referred to as a trial, among themselves, where they determined what charges the governor would be most likely to find acceptable. After they had made their case, Pilate could have stopped the trial, seeing the charges as unjustifiable. He chose not to: the accompanying charges of treason or sedition (described only in Lk 23:2 and Jn 19:2) linked religious with political concerns and in the process may have given Pilate the excuse to listen to the more influential of the parties before him. Jesus' noncitizenship and his apparent lack of defense, coupled with the sort of threat made in John 19:12, only helped make Pilate's eventual decision easier.

How Pilate conducted the trial and how he determined the punishment both fell within the jurisdiction of his imperium. Outside of Rome, Pilate could follow less formal and technical procedures, having the right to conduct the trial as he saw fit. The punishment, similarly, could have fallen across a wide range of punishments, since there are wide degrees of interpretation

on laws of treason, but crucifixion clearly could be seen as an option available.

One of the freedoms the governor had was to ask for advice. In Luke 23:6-12, Jesus is said to have been tried by Herod Antipas, the tetrarch of Galilee and Perea. Because Jesus came from Galilee, under *Herod's authority, scholars have debated whether Jesus legally needed to be tried by Herod. Some claim that the accused needed to be tried in the *forum domicilii*, the province in which he lived. Others believe that the accused was to be tried in the *forum delicti*, the province in which the crime was said to have been committed. It does appear that accused criminals were transferred only rarely. In Acts 23-24, Felix finds out that Paul is a Cilician, but he does not feel in any way obliged to send the case to Syria-Cilicia. Apparently Pilate was under no legal obligation to turn Jesus over to Antipas. Rather, in dealing with an awkward case, he followed the *extra ordinem* parameters and turned to Antipas for advice.

3.2. The Trials of Paul. Paul's Roman citizenship allowed him rights and opportunities not available to the majority of provincials. Roman citizens could not be examined under torture. If they were, their tormentors could be severely punished. After being beaten with rods in *Philippi (Acts 16:37-39) and when faced with the possibility of a scourging in Jerusalem (Acts 22:25-29), Paul appealed to his citizenship. In both cases the magistrates, aware of the consequences of their actions, were afraid.

Paul's other encounters with magistrates represent fairly typical processes of Roman law in the first century. This can be seen in his encounters with Gallio, Lysias, Felix and Festus.

In Acts 18:12-17, when Gallio was proconsul of Achaia, a group of Jews accused Paul of "persuading people to worship God contrary to the law." This formulation of the charge seems to be an attempt to anticipate what charges Gallio would have been willing to consider. Gallio, however, saw the disagreement as an inter-Jewish squabble. Because he did not have to listen to the case, he chose not to, driving the accusers away from the tribunal. Under the procedure *extra ordinem*, Gallio had considerable flexibility in his decisions, with such decisions clearly being shaped by political considerations.

Conversely, when the tribune Claudius Lysias knew that Paul was a Roman citizen, he commanded a special meeting of the chief

priests and the *Sanhedrin in Jerusalem, so he could understand better why these people had brought accusations against Paul (Acts 22:30-23:10). Although this encounter is not a trial, it too represents the sort of evidence-gathering possible under a system of *extra ordinem*.

The trial before Felix followed the *cognitio* procedure: the plaintiffs were required to prosecute and the accused defended himself. The trial would not take place unless the accusers were present (Acts 23:30-35; cf. 25:5, 16). Ananias, some elders and Tertullus—an orator—accused Paul before Felix. The charges (Acts 24:5-7) were framed in political terms, intending to show Paul as an agitator and a threat to the government, and designed to appeal to Roman concerns about security. Paul refuted the charges, and Felix postponed a decision on the case until Lysias arrived (Acts 24:22). Lysias, as an independent witness to the disruption that had occurred, could have been seen as a necessary part of the trial.

Felix kept Paul imprisoned, apparently expecting a bribe. When none came and when he was succeeded by Porcius Festus, he left Paul in prison, as a favor to the Jews (Acts 24:25-26). When Festus took office, some Jews from Jerusalem initiated proceedings against Paul and raised serious charges. Paul pleaded his innocence and then, when Festus considered sending Paul to Jerusalem to be tried on a capital charge, Paul said "I appeal to Caesar" (Acts 25:11).

Paul's statement here is seen as the best example of a Roman citizen's right of appeal (*provocatio*). This allowed Festus to pass a delicate issue on to a higher authority in Rome, and it allowed Paul to have his case removed to a place that, for him, would have been a safer jurisdiction, free from political pressures. Before Festus, the charge against Paul was a political one; the evidence, theological. Thus it is not surprising that, before sending Paul to Rome, he felt the need to consult with King Herod Agrippa II (Acts 25:13-26:32).

3.3. First Corinthians 6:1-11. Some Christians willingly went to provincial courts, where they brought civil litigation against other Christians. That is the situation Paul faced in Corinth (1 Cor 6:1-11). Higher-status Christians were bringing litigation against those of lower status.

Here Paul asks the Corinthians to turn to private arbitration instead of provincial courts (he

implies that some Christians in Corinth could serve as arbitrators; 1 Cor 6:2; cf. 6:5). Such an extrajudicial procedure, available under Roman law, eliminated the expenses and biases faced by those who appeared in secular courts. In addition, it helped members of the lower class, and it ensured that the mores of the world would not define what constituted Christian behavior and relationships.

3.4. Romans and 1 Peter. Although Paul discourages the Corinthians from having outsiders resolve their differences, in Romans 13:1-7 he implores Christians to recognize the government's right to engage in criminal litigation. The imperium is seen both as divine imperium and as necessity.

Romans 13:1-7, emphasizing respect for government authorities, is closely related to the admonitions in Romans 12:14-21, which emphasize moral behavior. This connection is particularly understandable in light of charges made against Christians in Roman trials. As governor of Bithynia, Pliny the Younger had Christians brought before him as criminals, but he was unsure what, in their case, constituted a crime under Roman law. In his letter to Trajan (Pliny *Ep.* 10.96), he asks if it is a crime simply to be a Christian, if the crime is the immoral behavior associated with the name *Christian* (regardless if the behavior actually occurred) or if the Christians' obstinacy was enough to justify charges against them.

Just as Romans 13:1-7 sees the state as correcting immoral behavior, just as these verses exhort their readers to respect the state's criminal proceedings, so the author of 1 Peter encourages his readers to be subject, for the Lord's sake, both to the emperor and to governors (1 Pet 2:13-14). The author of 1 Peter also encourages his readers to be ready to defend themselves (1 Pet 3:15-17) and in doing so to be clear to the magistrates that they suffer only for the Christian name, not because of immoral behavior (1 Pet 4:15-16). Pliny may have faced "inflexible obstinacy" from some Christians, but 1 Peter encourages readers to state their defense "with gentleness and reverence" (1 Pet 3:16).

Romans 12:14-13:7 and 1 Peter 2:13-14 encourage Christians to respect the criminal proceedings of the state and to clearly articulate their faith in such a manner so that they will not be persecuted for inappropriate reasons.

4. Allusions to Roman Law and Legal Processes in the New Testament.

In the NT, legal concepts are also used rhetorically and metaphorically. Paul, a Roman citizen with a background in Jewish law, had a particular interest in Roman law. In writing to Gentiles and others in Roman colonies, Paul's allusions can be seen in terms of both forensic rhetoric and specific legal themes.

4.1. Forensic Rhetoric. Paul's epistle to the Galatians has a form that would have been familiar to its first readers but becomes clear to us only with a basic knowledge of court speeches and legal procedures in the Roman Empire. Paul's defense of himself in Galatians follows the same rhetorical strategies seen in ancient handbooks for courtroom success. This letter functions as a defense speech, an example of forensic rhetoric, which sees its readers, Paul and his opponents as, respectively, jury, defendant and accusers. Paul's defense of himself in Galatians 1 is underscored with an oath, an oath being one of three ways in which a trial could be shortened.

4.2. Citizenship. According to the book of Acts, Paul's Roman citizenship shaped how he was treated: it protected him from a variety of punishments and gave him a number of legal rights. Writing to a Roman colony like Philippi, Paul refers to Christians' citizenship in heaven (Phil 3:20), knowing that the Philippians would have valued such a metaphor. The author of Ephesians, similarly, acknowledges that his readers are "fellow citizens with the saints and members of the household of God" (Eph 2:19; cf. 2:12; 4:18).

That citizenship is not to be found in this world is particularly clear from non-Pauline writings. Hebrews repeatedly makes that point by referring to the city that is to come (Heb 11:9-10; 12:2; 13:14). The addressees of 1 Peter are seen as a "chosen race . . . God's own people" (1 Pet 2:9), but they are also seen as "aliens and exiles" (1 Pet 2:11), who should be subject to the emperor and governors in this world (1 Pet 2:13-18).

Citizenship was highly valued in the Roman Empire. The NT writers use this desideratum to acknowledge that citizenship is important, but only the citizenship that is conferred on those who are people of God. All Christians in this world, even those who are Roman citizens, are aliens. Their true citizenship is in heaven.

4.3. Societas and Commercial Language. Familiarity with *societas* (*koinōnia*, in Greek) illumi-

nates Paul's description of three of his relationships. In Roman law, *societas* refers to a unique, voluntary partnership contract that did not require witnesses, written documents or a public announcement and that could be made even with slaves (Justinian *Dig.* 17.2.58.3). Most characteristic of such contracts was that each partner contributed, frequently financially, with a view toward a shared goal.

When Paul refers to the "giving of the right hand" to James, Cephas and John (Gal 2:9-10), such an expression does not make sense within Jewish tradition but does appear in the papyri as a means of establishing contract. Paul's arrangement with "the pillars" is seen as an example of *societas*, with clearly articulated goals and expectations.

Similarly, the imprisoned apostle also sees his relationship with the Philippians in terms of *societas*: he writes a receipt for their gift to him (Phil 4:10-20); he uses *koinōnia* in the sense of a *societas* contract (Phil 1:5; cf. 1:7; 4:15); and he employs terminology (e.g., "to have the same mind," Phil 2:5) characteristic of *societas*. Later, again in a prison epistle, Paul discusses a partnership with Philemon (Philem 17), using legal language of commerce and accounting (Philem 18-19).

Through the terminology of *societas*, Paul emphasizes his concern about sharing the gospel, a goal he shared with the pillars in Jerusalem, with the Philippians and with Philemon.

4.4. Slavery. Paul's epistles contain many references to slaves: to those born of slaves; to those who willingly choose slavery; to those who should see themselves as slaves of Christ; and to those who should see themselves as freedmen.

In the allegory of Hagar and Sarah (Gal 4:21-31), Paul draws on the notion that a person who was born to a slave mother would take on that status at birth. The legal institution of slavery thus clarifies a theological point: Christians are born of faith, not of law; they should not enslave themselves to something that had nothing to do with their birth in the faith.

In Romans 6:15-23 Paul emphasizes that his readers are not to be slaves of sin. In discussing human choosing to sin, Paul alludes to another provision of Roman law: if one pretended to be a slave, that status could be confirmed; if one sold oneself into slavery, in order to receive money for one's family, for instance, one would

be considered a slave. In a world in which slavery was not an attractive option, the metaphor was particularly strong.

At the same time Paul acknowledges that not all slavery is bad, since his readers, who had been "slaves of sin," were "set free from sin and have become slaves of God" (Rom 6:22; cf. Tit 1:1; note also the references to "slaves of Christ" in Rom 1:1; Phil 1:1; Eph 6:5-8). Gaius, *Institutiones* 1.52-57 notes that slaves are in the power of their masters. Paul is concerned in Romans (cf. 1 Cor 7:23) that those Christians who had been "bought with a price" may return to their previous lives of slavery, enslaved either to sin or to humans.

Paul's admonitions in I Corinthians 7:22 make sense only under Roman law: "For he who was called in the Lord while a slave is a freedman of the Lord. Likewise he who was free when called is a slave of Christ." Under Roman law, a freed slave still maintained a relationship with his former owner; those ties served as security for the former slave. Thus Paul does not simply say that slaves have become free. By referring to slaves as freedmen of the Lord, he recognizes that a new relationship has developed, a relationship based on security with a new master.

4.5. Adoption. Under Roman law, if a man were adopted at any age, his relationship to his natural parents would end, his previous debts would be cancelled, he would start a new life, take a new family name and be entitled to an inheritance. The new father (*paterfamilias*) would then expect the same of him and provide the same for him as he would any natural children: he would claim his property, control his personal relationships and assume responsibility and liability for his actions (see Family and Household). After the *paterfamilias* died, the son would continue to represent his adopted family before the family god.

The apostle Paul found the legal principle of adoption to serve well in expressing theological principles. In Romans 9:4, the Israelites are seen as having been adopted; believers in Christ are seen as adopted (Rom 8:15; Gal 4:5-6; Eph 1:5); and believers are also seen as "groaning inwardly, waiting eagerly for adoption as sons, the redemption of our bodies" (Rom 8:23). Just as Jesus was known as the Son of God, so believers come to be seen as sons by adoption: God has paternal rights over believers; all that believers

have and are belong to God.

4.6. Inheritance. In many legal systems an heir does not exist until after a person dies; until then, there exists only an heir apparent. Under Roman law, however, the heir was seen as a continuation of the *paterfamilias*'s legal personality, not as a separate legal entity, and, as a result, he had legal standing as heir during the life of the *paterfamilias*. One was heir not through the father's death but through one's own birth or adoption.

In Romans 8:16-17 Paul writes, "we are children of God, and if children, then heirs." In Galatians 4:7 he says, "you are no longer a slave but a son, then also an heir, through God" (cf. Eph 3:6; Tit 3:7). Paul's references to heirship make best sense within Roman law: there is no implication that heirship necessitates the death of God. Christians' status as heirs comes from their relationship with God: birth and unity of personality create this relationship.

5. Constantine and Roman Law in the Service of the Church.

Before Decius, in A.D. 250, there was no formal legal foundation for a systematic, empire-wide persecution of Christians. Under the *cognitio* system in Roman law, provincial governors chose whether or not they would hear cases against Christians. Some did; some did not.

After the Decian and Diocletian persecutions ended and after the rise of Constantine, specific legal structures developed to support Christian social ideals. Roman law came to forbid crucifixion, gladiatorial shows, the branding of slaves' faces and abandonment of infants. Constantine also repealed Augustus's marriage laws, which penalized celibates, childless couples and widows who did not remarry. Sunday labor was discouraged except where it was necessary on farms, and in A.D. 321 a law was passed that closed all courts on Sundays, unless they were engaged in freeing slaves.

The church itself came to play a greater role in public life. It was given public grants, property that had been taken away was restored, new buildings and copies of the Bible were financed by the government. In addition, bishops and deacons were given new privileges and came to resemble their secular counterparts. Canon law mirrored Roman law, the clergy's role and vestments were similar to that of their counterparts in civil life, and, from A.D. 318, bishops were per-

mitted to rule in civil suits. Eventually, through Theodosius's edict of A.D. 380, Roman law ensured the dominance of Christianity and the silencing of its rivals.

ROMAN MILITARY

The specter of the Roman military machine was seen and felt across the NT world. According to Matthew, Jesus himself compared his heavenly Father's angelic army to the vast number of the

Roman legions (Mt 26:53). The Roman army reached new heights of might, organization and efficiency for which it remains proverbial to our own day.

1. Sources
2. The Legion
3. The Legionary
4. Other Military Units
5. The Army in Peacetime

1. Sources.

The most important extant ancient literary sources on the Roman military are the *Summary of Military Matters* of Vegetius, Arrian's *Tactics*, the treatise on legionary camps by Pseudo-Hyginus, Josephus's *Jewish War* (especially *J.W.* 3.4-5 §§59-109 and 5.1.6—2.3 §§39-70) and book 6 of Polybius. Other written sources of major importance are the *Code* of Justinian, the many tombstones of soldiers, bronze military diplomas, military *papyri and the wooden tablets from Vindolanda. Among archaeological contributions must be mentioned the numerous excavated forts and camps, especially in Britain and Germany; the increasing amount of armor and weaponry that has been discovered; and the pictures on Trajan's Column in Rome.

2. The Legion.

2.1. Organization and Deployment. The basic army unit of the Romans, the famous legion, was organized as follows. A unit of 8 men was called a *contubernium*, sharing a mule and a tent or two rooms in a permanent barracks. Ten *contubernia* made up one *century* (80 men), six *centuries* made up one *cohort* (480 men), and ten *cohorts* made up one *legion* (4,800 men). Included in this number were 120 horsemen distributed among the centuries to serve as scouts, escorts and messengers. Many of the legionaries were also trained to serve in special capacities as doctors, surveyors, masons, smiths and engineers, though these would be counted among the normal legionaries and would serve in the ranks during battle. At some time during the first century the first *cohort* was changed to six double *centuries* (960 men), raising the total to 5,280 fighting men at full strength. Still higher numbers quoted in some ancient sources probably include the *slaves assigned to the legion, as J. Roth has argued. They helped with the transport of tents and supplies, performed menial functions for the soldiers

and guarded the camp during battle.

Augustus (*see* Roman Emperors) had parts of sixty legions under his command at the time of his accession, and he reduced these eventually to twenty-five. Tacitus lists their deployment in A.D. 23: eight were on the Rhine, three in Spain, two in Africa, two in Egypt, four in Syria, two in Pannonia, two in Moesia and two in Dalmatia (*Tacitus Ann.* 4.5). Each legion was numbered (I-XXII), though often several had the same number and were distinguished by nicknames or *cognomina*. Seven or eight new legions were established and an equal number were disbanded during the first century, keeping the overall strength at about twenty-five legions.

When troops were deployed for battle, a triple or double battle line was normally used, the first line being made up of cohorts 1 to 5 arranged from right to left, and behind them the sixth to the tenth, again ranged from right to left. The least-seasoned troops were usually put in cohorts 2, 4, 7 and 9, all of which had seasoned troops on either side. A frontal charge by the seasoned troops was augmented by the cavalry attacking on the wings and attempting to outflank and encircle the enemy. A reserve unit was maintained wherever possible to be deployed as needed. The legion always camped within a wall surrounded by a trench. Within were two main intersecting streets leading to four gates, and with headquarters (*praetorium*) at the intersection. The legions were usually divided into smaller units for winter quartering and reassembled in the spring.

The legionary standards (*signa*) were poles bearing emblems that served as a rallying point and helped identify one's friends during the dusty confusion of an ancient battlefield. They were also thought to embody the soul (*genius*) of the legion and hence were given honor and kept in a special shrine in the camp. Among the standards belonging to each legion was an eagle; a hand symbolizing the vow of loyalty, which was renewed each year; and designs distinctive to each cohort of the legion. The image of the emperor was borne on a similar shaft and included among the standards.

2.2. Command Structure. The commander of a legion (*legatus legionis*) was usually a senator in his late twenties or early thirties and with prior experience as a Roman magistrate, usually as *praetor*. He was appointed by the emperor and given total command in the emperor's place (*imperium*,

epitagē; cf. Rom 16:26; 1 Tim 1:1; Tit 1:3; 2:15), with a normal term of office of three to four years. His top assistants were the senior tribune, a senator designate who served in this position before entering the senate as a quaestor, and the prefect of the camp. The latter, an elder soldier who had risen through the ranks to become the top centurion and would retire after serving in this position, saw to the food supply, munitions, weapons training and equipment maintenance, general camp or fortress maintenance and medical services. An additional five tribunes, usually *equites*, rounded out the senior staff, taking care of administrative and judicial functions. Additional legates would command other troops as assigned by the legionary commander.

The most important officers from a military standpoint were the sixty centurions (Gk *hentyrion* [Mk 15:39-47] and *hekatontarchos/-ēs* [Mt 8:5, etc.]). Each had full responsibility over his *century*—command in battle, administration, training and discipline. All centurions were graded, the highest being the *primus pilus*, the centurion of the first century of the first cohort. This one-year appointment held wide responsibilities and great honor and led to a discharge with a bonus sufficient to qualify for equestrian rank. Beneath him, in order of rank and honor, were the other centurions of the first cohort, followed by the centurions of the other cohorts. The centurion of the first century of each cohort had command of the entire cohort. Centurions received double the pay of the ordinary soldier and were regularly posted from legion to legion over great distances, often remaining in the army until death. On the basis of past service or outstanding merit, the legionary commander or provincial governor appointed the centurions from the ranks of the lesser officers or from the praetorian guard, or from among civilians (especially the *equites*) as an act of *patronage*. It often took fifteen to twenty years for a soldier to work his way up to centurion rank. A centurion who was not a harsh, haughty man was an exception (Lk 7:2-9; Acts 10:1-2).

Below the centurion were the lesser officers (*principales*), the two chief ones being the head standardbearer (*signifer*), who also did the paperwork necessary for the century, and the assistant commander (*optio*), who took charge in the centurion's absence. Also of importance were the sentry and picket supervisor and the weapons and armory chief.

3. The Legionary.

While Roman *citizenship* was a prerequisite for service as a legionary, by the early first century one-third came from outside Italy, and by the end of the century Roman citizens from the provinces made up 80 percent of all legionaries. Recruits had to be in good health, have an adequate physique with a minimum height of 6 Roman feet (5'10"), and were usually eighteen to twenty-three years old. A candidate with all the qualifications except *citizenship* could be awarded the latter during the interview process (*probatio*); he was enrolled in the Pollian tribe with his birthplace given as the military camp (*castra*). All recruits would take an oath of loyalty (*sacramentum*) to the legionary standards and to the emperor as commander-in-chief, swearing to obey his orders and to protect the state. Breaking this oath was a religious as well as a military crime. The recruit would then receive traveling money to reach his unit. His training would include marching in step, parading, traveling twenty miles in five hours, swimming, basic tactics, battle maneuvers and hand-to-hand combat.

The legionary wore a linen undergarment covered by a knee-length woolen tunic, and he wore boots. His battle armor (*panoplia*, Eph 6:11, 13) included a breastplate (*thōrax*, Eph 6:14) of mail or, from Claudius on, of articulated iron strips, and an iron or bronze helmet (*perikephalaia*, Eph 6:17) with long cheek protectors and a wide flaring neck protector in the back. He carried a large rectangular shield (*scutum*, *thyreos*, Eph 6:16) and two six-foot javelins (*logchē*, Jn 19:34), and he had a short two-edged sword (*gladius*, *machaira*, Eph 6:17), as well as a dagger at his belt.

Rank and special honors were indicated by armbands, gold or silver bosses or similar military decorations. A legionary who was first into a besieged town, saved the life of a citizen or did some other heroic act might be awarded a crown. The spoils of war distributed to the troops during the republic were for the most part replaced by imperial donatives given on an emperor's accession and on other special occasions. The triumph (*see* Roman Triumph) granted republican commanders and their armies for extraordinary victories turned into imperial propaganda parades (cf. 2 Cor 2:14; Col 2:15); a scaled-down version was the ovation.

During the course of the first century, the

minimum term of service for legionaries rose from sixteen years plus four years as reservists to twenty years plus five as reservists. Pay during that same period rose from 900 to 1,200 sesterces annually. At retirement a soldier received a plot of land (individually or in a colony) or more commonly a cash gratuity (12,000 sesterces under Augustus). In addition they continued to be exempt from some taxes and personal services and immune from some punishments. Most retirees remained in the provinces, settling near their last camp. To encourage a single-minded loyalty and mobility, soldiers could not legally marry (*see* Marriage). Nonlegal unions, however, were common; a complicated series of laws was enacted to deal with matters of civil rights and inheritance for soldiers, veterans and their offspring. In other ways also, especially with the formal requirements for making wills and the buying and selling of property, soldiers were given legal privileges not enjoyed by ordinary citizens. They were often shown favor in provincial courts and hence could take advantage of the local population.

An army calendar from Dura-Europos shows that festivals in honor of the traditional Roman deities were part of legionary life (*see* Religion, Greco-Roman). Of especial importance were the Capitoline triad (Jupiter, Juno and Minerva), Urbs Roma and imperial cults (*see* Ruler Cult). Foreign cults, especially those of Jupiter Dolichenos and Mithras (*see* Mysteries), while not officially encouraged, were widespread in the army. The lower ranks formed one of the last strongholds of paganism after the Christianization of the empire.

4. Other Military Units.

4.1. Auxiliaries. The *auxilia* made up for the traditional Roman lack of sufficient cavalry and light-armed troops. They were recruited from the provinces, initially remaining as ethnic units and stationed in their areas of origin, though a few units were made up of Roman citizens. While units were of varying type and function, gradually these became more standardized. The basic types were (1) the more elite cavalry, grouped in wings (*alae*) of five hundred (later in the first century often one thousand) and subdivided into squadrons (*turmae*); (2) the similarly sized *cohortes* of light-armed infantry; (3) equestrian cohorts combining cavalry and infantry; and (4) groups

of archers and slingers. By the mid-first century, units of double size were also in existence. Local nobles and, later, Roman *equites* commanded the auxiliary units, while its smaller divisions were led by decurions and centurions.

*Herod the Great and his successors had troops that were used as auxiliaries when needed, and they included Thracians, Germans and Gauls, as well as local troops, with some Roman officers (Josephus *J.W.* 1.33.9 §672; 2.3.4 §52). Before the Jewish uprising, such auxiliary units were probably the only Roman troops stationed in Palestine. A centurion named Cornelius was part of the Italian Cohort (Gk *speira*) stationed in *Caesarea Maritima (Acts 10:1). In Acts 27:1 Paul is sent to Italy under guard of a centurion named Julius from the *Sebastēs* Cohort (either the descendants of the crack troops from Samaria mentioned by *Josephus [*J.W.* 2.3.4 §52, etc.] or a cohort named after Augustus, as Jerome translates it). The unit manning the Fortress Antonia when Paul was arrested was commanded by a Roman tribune (Gk *chiliarch*, Acts 21:31), Claudius Lysias, probably an equestrian, who was in charge of at least a double equestrian cohort and several centurions (Acts 21:32; 23:23-26). The troops that arrested Jesus, even though John calls the commander a *chiliarch* and the soldiers a *speira*, was made up "both of men from the high priest's service and from the Pharisees" (Jn 18:3), and thus were not regular Roman auxiliaries.

From Claudius on, all auxiliaries were given citizenship upon their discharge. Their new status was spelled out on two bronze tablets (*diplomata militaria*) verifying their military service, honorable discharge, grant of citizenship for themselves and their existing children and their right to be legally married. On the march, cavalry would make up a forward party and rear guard, while the legionary cavalry preceded the infantry and the *alae* followed the latter. In battle they often charged, first using their lance-like spears and then engaging in hand-to-hand combat with their long broadswords. They were also often used for rear-guard actions or in outflanking or surrounding the enemy.

4.2. Navy. Augustus organized two main standing fleets with a combined strength of seventy-five to one hundred ships. One was based on the Gulf of Naples at Misenum and was responsible for the western Mediterranean; the other was based at Ravenna and controlled the

Adriatic and eastern Mediterranean. For a while another base at Fréjus on the south coast of Gaul had some importance. The fleet commanders were equestrians, often ex-tribunes with experience in the auxiliary forces, and held the rank of prefect. Under Vespasian the commander of the Misenum fleet became one of the highest equestrian posts. Squadron commander and ship captain were also coveted ranks, and retirees were highly honored in their municipalities. The crew itself was recruited from the lower strata of freemen, and often from non-Italian stock, with the term of service rising through the century to twenty-six years, followed by retirement with citizenship. Smaller fleets patrolled the Black Sea, the Rhine and the Danube.

4.3. Praetorian Guard. The praetorian guard served as the emperor's personal troops and bodyguard. They were recruited mainly from Italy, served for a period of sixteen years and enjoyed significantly higher pay and status than did normal legionaries, as well as the immense donatives given them by new emperors. They were normally commanded by two praetorian prefects of equestrian status. Augustus kept three cohorts, probably of 480 men each, in Rome, with one of them always on guard at the palace. Six other cohorts were stationed in nearby towns. Tiberius built a praetorian camp on the edge of Rome for the entire corps. If Philipians was indeed written from Rome, the statement in Philipians 1:13 would indicate that Paul's preaching infiltrated the praetorian guard. The *speculatores Augusti* were an elite group of praetorian horsemen who cleared the emperor's way through the streets, and, until A.D. 69, the *Germani corporis custodes* formed an additional mounted guard, hand-picked from the auxiliary *alae*.

5. The Army in Peacetime.

In peacetime, the routine duties for legionaries and auxiliaries included guard duty, patrols, foraging expeditions, serving as messengers and guards for the provincial governor (Acts 27:1) and manning outposts. In addition there might be road and bridge building and maintenance, as well as routine maintenance of the camp structures and facilities, including brick and tile making and smithing. A centurion could be seconded by a provincial governor to serve in a police or security function, to help with tax and tribute collections or to be used as a diplomatic

envoy. A provincial who met a soldier or an army unit on a road might well become nervous of having his property confiscated for "official use" (Lk 3:14; Apuleius *Met.* 9:39-40; Juvenal *Sat.* 16), or of being himself forced to do labor (*aggarreuō*, cf. Mt. 5:41, or Simon of Cyrene in Mt 27:32).

ROMAN POLITICAL SYSTEM

The immediate background to the NT is the *Roman Empire under the control of an emperor (*see* Roman Emperors). This control had emerged from the republic, which had been removed during the civil war between Julius Caesar and Gnaeus *Pompey and which had seen the emergence of the emperor Augustus. Many of the Roman political institutions and offices can be traced back to the republican period, though in scope and power there had been many changes.

1. The Senate and Consuls
2. The Emperor
3. Provincial Administration

- 4. Client Kingdoms
- 5. Colonies and Cities

1. The Senate and Consuls.

Under the republic the senate had been the main political body of the state. The people had been able to express their view in the political process; however, this effectively ceased under the empire. Although the nature of the senate changed, it nevertheless continued to have a role in the life of *Rome, often as a champion of traditional values; it is noteworthy that all emperors down to the early third century had first been a member of the senate. Most emperors sought to have good relations with the senate, and technically the senate confirmed the emperor in his office. This can be detected with the accession of Tiberius on the death of Augustus in A.D. 14, as up to this point there had been no precedent. However, the acclamation of the emperor by his troops, for example in the case of Vespasian in A.D. 69, might predate the senate's decision.

The conferring of power to the emperor by the senate is well illustrated by the record of a decree (termed in this case a *lex*) of the senate that indicates the range of power for Vespasian (*CIL* 6. 930). This included the right to conclude treaties, to convene the senate, to put and refer proposals to the senate and to expand the empire. Often the titles used by an emperor were awarded by the senate. After the emperor's death, the senate voted on whether or not to grant him deification or, in some cases, damnation (as was the case for Domitian in A.D. 96). Alongside this was the confirmation or annulment of the actions of the deceased emperor.

Although the senate was largely without power of its own, during the first century A.D. there are two key moments when it sought to make changes to the existing Roman political system. The first was in A.D. 41, when Gaius (Caligula) had been murdered and the senate discussed the possibility of returning to a republic; Claudius received his acclamation by the praetorian guard. The second came when Nero fled Rome and the senate gave its support to Galba.

The senate met twice a month, and attendance was technically obligatory. Surviving attendance records show that this was not adhered to; for example, in A.D. 45 only 383 senators attended. In the imperial period, the em-

peror presented legislation through a formal speech to the senate, and the legislation was usually accepted without emendation. Apart from legislation the senate made decisions on matters pertaining to the provinces, such as religious festivals; it also received formal embassies from cities and provinces. It became responsible for investigating corruption of provincial governors as well as for looking into acts of treason.

Membership of the senate was based on a property valuation of 1,000,000 or 1,200,000 sesterces. Members had usually held a magistracy. Often this was linked to holding the post of quaestor, a financial post associated with provincial proconsuls, which could first be held at the age of twenty-five (*see* Roman Administration). Senators were excluded from certain activities, including commerce. They were eligible to be appointed as provincial governors—with the exception of Egypt, which for historical reasons could be governed only by a member of the equestrian order—as well as to take command of legions (*see* Roman Military). As Roman *citizenship expanded, so the senate became open to provincials.

The two consuls remained the chief magistrates of the city of Rome, and they were responsible for presiding over the senate. In effect the emperor acquired some of the functions of the consul or even held one of the posts himself.

2. The Emperor.

The role of emperor had been established by Augustus. It assumed the powers of proconsuls as well as of the tribunes. The emperor could also hold the office of consul. The emperor held a number of titles of a religious, political and military nature: he was *pontifex maximus* in charge of Roman religious ritual, as well as being *pater patriae*, father of his country. He also assumed the title *imperator*, or commander.

It was to the emperor that Paul appealed (Acts 25:12). Interestingly the book of Acts (Acts 25:21, 25) also uses the Greek form *Sebastos*, or *Augustus* (and *see* Lk 2:1), an honorific title of the emperor. Elsewhere in the NT the term *Caesar* (Gk *Kaisar*) is used (e.g., on Roman *coinage, Mt 22:21).

3. Provincial Administration.

Provinces (*provinciae*) had first formed part of the Roman political structure in the late third century with the acquisition of the islands of Sic-

ily, Sardinia and Corsica. These areas were placed under the authority of a Roman magistrate. As Rome expanded in the East new provinces such as *Macedonia or *Asia were added.

3.1. Governors. Augustus's reforms in 27 B.C. included the return to certain republican practices, including the appointment of governorships by lot; those appointed were known as proconsuls, and their provinces are usually designated as senatorial. However, the emperor retained the right to appoint to some provinces—known as imperial—especially those where there were concentrations of legions. Strabo (*Geog.* 17.3.24-25) made the point that imperial provinces needed a military garrison either because the territory bordered on territory yet to be subdued or because it might be the center of rebellion; in reality the distinction between the two types of provinces was more complex. In the east Syria was one of the more important imperial provinces. The governors of these imperial provinces, though they were also of senatorial rank and had usually held the rank of either praetor or consul, had a different title and were known as *legati Augusti*. They held office until they were recalled by the emperor.

In spite of this apparent distinction between the types of province, in the imperial period both types of governor received *mandata*, or instructions, from the emperor. For example, the proconsul Gnaeus Domitius Corbulo, proconsul of Asia under Claudius, had to draw attention to his *mandata* when the people of the island of Cos appealed to the emperor (Oliver 1979); he pointed out that matters for the emperor had "first to be submitted to the provincial governors." The governor himself was expected to conduct his authority in the light of the *lex provinciae*, which was established when the province was incorporated.

There were two types of provincial governors in the Roman Empire. The first, more usual type, was drawn from the senatorial class and had usually held other positions prior to their appointment. The governor was conceived of as having proconsular power in the fashion of the governors of the Roman republic. There were set protocols to be adopted by the senatorial governors. For example, they had to announce the day on which they were expected to arrive in their province. The arrival itself was carefully controlled; for example, the governor of Asia had to arrive at Ephesus. There were set proto-

cols to avoid people being seen before the governor arrived in their city; this was to avoid the problems of favoritism and corruption. Finally, the proconsul was expected to administer justice until his successor arrived in the province. The usual Greek word for governor was *anthypatos* (i.e., proconsul), which is how it is applied to Sergius Paulus for Cyprus (Acts 13:7, 8, 12) and L. Junius Gallio for Achaia (Acts 18:12); proconsuls, presumably of the province of Asia, are alluded to by the clerk of the city of Ephesus during the riot (Acts 19:38). Quirinius, governor of the imperial province of Syria, is referred to as *hēgemōn* (Lk 2:2).

The second type of provincial governor, notably in the eastern Mediterranean for Egypt and Judea, was drawn from the equestrian class. He normally was given the title of prefect (Gk *eparchos* or *epitropos*), although in the case of Judea, the title was changed in the middle of the first century A.D. to procurator. Pontius Pilatus is described as prefect in a Latin inscription found in the theater at *Caesarea Maritima. The NT often uses the Greek term *hēgemōn* to refer to the prefect of Judea, whether Pontius Pilatus (e.g., Mt 27; Lk 20:20; cf. Lk 3:1), M. Antonius Felix (Acts 23:24, 26, 33; 24:1, 10) or Porcius Festus (Acts 26:30). Felix was an imperial freedman, and his brother Pallas had been freed by the emperor Claudius.

Governors had a judicial function, and there were set circuits where they had to hear cases. It was deemed to be a privilege to have such hearings in a city (in the Greek east they were known as *metropoleis*) especially as people gathered from over a wide area for the event. It was to be in this capacity that Jesus' disciples were to be brought before governors (Mt 10:18; Mk 13:9; Lk 21:12). In effect the authority of the governor was an extension of that of the emperor (see 1 Pet 2:14). Governors might be expected to intervene in the affairs of individual cities during times of crisis. One such example is the case of Pisidian *Antioch when the governor, Lucius Antistius Rusticus, had to intervene in A.D. 93 during a time of food shortage due to a harsh winter (Sherk no. 107). Individuals were to declare how much grain they had in store, and the price of grain was restricted. Sextus Sotidius Strabo Libuscidianus, governor of Galatia in A.D. 14-15, had to pass an edict about the abuse of requisitioned transport in the province. Details about the duties of the governor were written by

Ulpian (from Tyre) in the early third century A.D. This is preserved within the Roman *Digest* that was issued in 529 by Justinian.

3.2. Provincial Officials. In senatorial provinces the governor was assisted by a magistrate, the quaestor, also of senatorial rank (usually an ex-praetor; see Strabo *Geog.* 3.4.20) and also chosen by lot and serving for one year. He was usually in charge of the finances of the province. The quaestor might later become the governor of a province in his own right, as in the case of Lucius Novius Crispinus Martialis Saturninus, who served as quaestor of the province of Macedonia in the early second century A.D. (*ILS* 1070). He had previously held a number of offices at Rome, including being part of the board responsible for road maintenance, and a military tribuneship in the Ninth Legion. Subsequently he held the praetorship at Rome, judicial posts in Spain, command of a legion in Lower Germany and then in Africa, and proconsul for Narbonensian Gaul; he finally held the consulship in A.D. 150. Altogether he was active in six different provinces over a period of about twelve years.

Also part of the administrative team was a procurator who was in charge of properties belonging to the emperor. As the procurator could have his own staff, he could challenge the role of the proconsul. An example of a procurator for the province of Asia is presented by the honorific statue awarded to Gaius Minicius Italus by his hometown of Aquileia in Italy in A.D. 105 (*CIL* V 875). He had been prefect of Egypt and was procurator of two separate provinces; when in Asia he had to act as governor when Gaius Vettulenus Civica Cerealis was put to death by Domitian in A.D. 89.

In an imperial province the financial side of the administration was looked after by a procurator. As imperial provinces often contained large numbers of troops he would be responsible for their payment (see Strabo *Geog.* 3.4.20). These procurators were of a lower rank than the quaestors, being drawn from the equestrian order, who had a property qualification of 400,000 sesterces; in some cases they were imperial freedmen, that is, former slaves of the emperor's household. Imperial property, such as mines, would also be their responsibility. The *mandata* for Claudius Athenodoros, procurator of the imperial province of Syria and dating to the reign of Domitian, was found at Epiphaneia.

It records instructions about how to deal with the issue of transport through the province, and in particular the concern that the province should not be overburdened.

Attached to the governor of both types of province was a small number of military officials under a centurion. The governor himself might be accompanied by friends from Rome or even recruit members of the local elite to act as his advisers. An inscription, dated to May 1, A.D. 165, from the sanctuary of the Great Gods on the island of Samothrace, records the proconsul of Macedonia, Publius Antius Orestes, attending the *mysteries attended by four friends who are clearly all Roman citizens, several lictors carrying his badge of authority, several messengers, fifteen slaves, five auxiliary soldiers (one a deputy centurion) and an imperial slave. Further individuals are clearly attached to the governor's friends.

3.3. Provincial Councils. Within a province there could be loose provincial councils that might come together to present a single voice on behalf of several cities. For example, in Asia there was a council of the Hellenes, that is, the Greek cities of the province. Influential figures in the province of Asia were the Asiarchs who appear at Ephesus (Acts 19:31).

4. Client Kingdoms.

Alongside provinces, Rome sought to maintain friendly relations with free kingdoms that adjoined its territory. Special alliances could be formed, giving the rulers the official title "king, friend and ally of the Roman people." Augustus particularly encouraged client kings as part of his control of the empire (Suetonius *Augustus* 48). For example, Cappadocia continued to be a client kingdom until A.D. 17. *Herod the Great (e.g., Mt 2:1) was appointed king of the Jews by Marcus Antonius and Octavian (who was later to become the emperor Augustus); on Herod's death in 4 B.C., the emperor Augustus ratified Herod's will to allow his sons Archelaus, Herod Antipas and Philip to rule their specified territories. Agrippa I of Judea was brought up with members of the imperial household. Some territories were controlled by a federation of cities, such as Lycia in southwest Turkey (Strabo *Geog.* 14.9.2), which remained independent until A.D. 43. The Nabatean kingdom to the east of the province of Judea for a short time included Damascus (cf. 2 Cor 11:32).

5. Colonies and Cities.

Traditional forms of civic administration continued in the Greek cities (Gk *poleis*, Lat *civitates*) of the Roman East (see Roman East). There are recognizable bodies such as the *demos* ("people"), which might meet as the *ekklēsia* ("assembly"). There would normally be a representative body, commonly known as the *boulē*, in which decisions would be made. A personification of these groups appears on the first-century A.D. funeral monument of C. Julius Zoilos at Aphrodisias, a freedman of Augustus. There the *boulē* and *demos* of the Aphrodisians come to honor Zoilos, who is dressed in Greek style.

A number of magistrates, sometimes known as *archōn*, would be appointed to the city (see Acts 16:19, at the Roman colony of *Philippi). In Macedonia one of the regular terms for civic magistrates who were elected on an annual basis was the *politarch*. Many of the examples of individuals holding this post come from *Thessalonica (Acts 17:6-9), but not exclusively so. There would also be a number of officers to carry out the operations of the city. For example, at Ephesus the *grammateus* (city clerk) tried to calm the rioting crowd in the theater (Acts 19:35).

The urban landscape of the provinces included a number of new colonies established by Rome to settle its veteran soldiers. These had a Roman form of government that in many ways reflected the political structures of Rome itself. The *populus* of a colony had two main elements, the *cives*, or colonists, and the other inhabitants, or *incolae*. The *populus* was divided into tribes—for example, at *Corinth twelve tribes are attested—which voted as a body in the *comitia tributa*, the equivalent of the Greek *ekklēsia*. This body was responsible for electing magistrates, most significantly the *duoviri*. The colony itself was administered by a committee or *decurio* (Gk *boulē*); it was responsible for the finance of the colony as well as building projects. Like the senate at Rome, membership of the *decurio* was based on a property qualification. Below the *duoviri* were the *aediles*, who were in charge of the financial arrangements for the city. The land of the colony was considered to be under *ius Italicum*, which meant that it was exempt from Roman tribute as those to whom it belonged were Roman citizens.

A possible civic official at Corinth appears in the form of Erastus, who is referred to as *oikonomos tēs poleōs* (Rom 16:23). The *oikonomos* may

have been in charge of estates belonging to the colony; this may solve earlier attempts at arguing that the *oikonomos* was the Greek translation of the Latin *aedile*. Roman colonies such as Corinth, Philippi and Pisidian Antioch feature in the NT.

ROMAN SOCIAL CLASSES

Roman social stratification was assessed according to economic class (access to wealth and means of production), status and power. Roman social classes in the late republic and early imperial periods were determined primarily by birth and legal status rather than by *education, wealth or ethnic background as social class is determined today. Being born into a social class with its legally determined privileges, duties and parameters was generally more socially determinative than personal achievement in education or amassing of wealth. Some social mobility was built into the system and usually granted from the top down.

The Roman world had two main classifications of people: the upper and lower classes or orders (*ordines*). The very small upper classes controlled the vast majority of the property, wealth, power and status and constituted less than 1 percent of the population. As a way of establishing and reinforcing status the wealthy were expected to contribute financially to local schools, baths, *temples, feasts and games (see Athletics). They sat in the best seats at public events and received more of the public doles. The lower classes had little or no property, wealth, power and status and constituted 99 percent of the population. Early Christians fell almost exclusively within the lower classes.

1. The Three Upper Classes
2. The Lower Classes
3. Social Mobility
4. The Social Level of the Early Christians

1. The Three Upper Classes.

The three aristocratic classes or orders established by law and qualifications of property ownership, especially under Augustus, were called the *honestiores* ("possessors of honor"). These were the *ordo senatorius* ("senators") and the *ordo equester* ("equestrians" or *equites*) of *Rome, and the *decurions*, the provincial aristocracy. By the first century A.D., most wealth was concentrated in the Italian homeland in the hands of the senators and equestrians. Wealth in all three orders was kept primarily in the form of land—country estates worked by *slaves and furnishing the means for the owner to live in luxury in the city.

The rich despised manual labor. They upheld the life of leisure as the truly satisfying one because it is self-sufficient and allows attendance to virtue. Their occupations revolved around social, *political and *military activities, as well as gentleman farming, trading (in small quantity) and advanced teaching and architecture.

Members of the upper orders were entitled to more at any imperial dole of cash, food or wine. Compare Jesus' words: "For to those who have, more will be given" (Mk 4:25 par. Mt 13:12; Lk 8:18 NRSV). They had the preferential seats at theater productions and *banquets, where they were also served better food. They were tried in different courts and given more lenient sentences for convictions of the same crimes as members of the lower classes (see Roman Law and Legal System).

1.1. The Senatorial Order. During the republic the senators were magistrates who represented the aristocratic families of the Roman city-state (patricians). In the emperor's fight to consolidate power during the early days of the empire, many of these senators were purged and replaced by senators from outside the city of Rome and even by those of non-Roman origin. During the empire senators were appointed by the emperor as representatives from all over the *Roman Empire. They were six hundred to nine hundred in number, with qualification for the order being 250,000 denarii worth of property (a denarii is roughly a day's wage for a laborer), the equivalent of 1,000,000 sesterces. Because the empire was an agricultural economy, the senators' money was usually built and maintained from landed estates. They held the highest government offices in Rome, running the legions (praetorians), administering the provinces (consulars) and functioning as ceremonial priests. R. MacMullen estimates that senators made up less than two-thousandths of 1 percent of the population.

1.2. The Equestrian Order. The equestrians were originally wealthy landowners who could afford to ride to war on a horse. During the republic they were rich Romans who had not entered political or military life. Unlike the senatorial order, there was no set number of equestrians. The emperor could appoint anyone to this order who met the qualifications of being a *citizen of free birth with property worth at least 100,000 denarii (= 400,000 sesterces). During the reign of Tiberius, to keep too many freedmen from aspiring to be equestrians, the qualification was modified to two generations free. MacMullen estimates that the equestrians comprised less than one-tenth of 1 percent of the population.

Like that of the senatorial order, the wealth of equestrians was usually built from agriculture on landed estates. They usually held a series of salaried positions, including in the army, procuratorial appointments involving financial administration (especially in small provinces that did not need large numbers of troops), appointments involving food doles in Rome and to the imperial fleets, and, at the highest levels, prefectures of Egypt and the praetorian guard. Senators were frequently replenished from this order.

1.3. Decurions. Decurions were provincial,

monied aristocrats. They obtained their fortunes through inheritance, landowning (the main source of wealth), trading and manufacturing. Rome utilized decurions to administrate the provinces. They served as magistrates on the local council that formed the highest local authority, working alongside the popular assembly. There were about one hundred decurions to a council, but the number could range from thirty to five hundred and was generally larger in the East. The property requirement was usually 25,000 denarii, or one-tenth that needed to be a senator. Decurions collected taxes, supervised markets and harbors and served as ambassadors. For a job well done and with other necessary qualifications met, the emperor could appoint decurions to the equestrian order. The decurions probably constituted less than 5 percent of the population of the provincial cities.

1.4. Caesar and His Household. Of course the emperor was at the top of the social order. His honorable status was shared by members of his imperial household and officials of the central administration, the *Servi Caesaris* or *Familia Caesaris*, who lived very comfortably on his property. At one time his household numbered about 20,000 and was mainly composed of slaves. Their roles ranged from being domestics to heads of state bureaus, supervising the emperor's property and collecting his revenue. As a boy, a slave received training in Latin, Greek and mathematics and worked in domestic service. From ages twenty to thirty he occupied minor posts in civil service. He was manumitted at thirty but could move to more important posts such as record officer, accountant, paymaster or correspondent. Upon manumission these former members of the imperial household usually became prominent among the monied freedmen.

2. The Lower Classes.

The lower classes, the *humiliores* ("of lowly birth and status") constituted the vast majority of the population. These classes were distinguishable yet overlapping. There was no middle class within the urban commercial and industrial portions of society as we would think of middle class. There was intermediate wealth represented by the aristocracy of smaller cities and towns. Also, within the lower classes there were small landowners, craftsmen, shopkeepers and soldiers with some economic means. However, none of

these formed a middle class. There was an enormous chasm between their wealth and power and even the decurions at the lower end of the three upper orders.

2.1. Owners of Small Farms and Businesses. At the top of the lower classes were owners of small farms and businesses. These owners usually employed slaves, whether the owners were the masters of the slaves or the owners were free men or freedmen hiring slave labor. Sometimes these farms and businesses were run by free men or freedmen for their rich *patrons. The small businesses included such ventures as auctioneer, baker, barber, butcher, dyer, fuller, grocer, innkeeper, moneylender, potter, shipper, smith, tanner, trader, weaver and wine and oil exporter. These artisans and craftsmen took pride in their work and handed down the trade to their children. They could rise to be magistrates and decurions in the aristocracy of their local communities. These often formed *collegia*, or guilds, that were social organizations formed around a shared trade (see Associations).

2.2. Free Poor. The plebs were freeborn Roman citizens, both urban and rural. As much as one-third of the population of Rome may have fallen into this category. Socially the plebs had an advantage over freedmen, slaves and freeborn non-Roman citizens (*peregrini*), but economically they were disadvantaged. Slave labor was cheaper, and plebs could not get funding to engage in business activities as freely as could freedmen. Freedmen could more readily obtain financing from their savings during slavery or from their former masters.

The free poor often had no means of production and relied upon work on farms and docks and in construction. They were often fishermen, fowlers, hunters, shoemakers, barbers and other occupations in which the equipment was not expensive. Their lot was uncertain, depending as it did upon the availability of work and the beneficence of others. They could attach themselves as clients to patrons, which would make their lot more reliable, or they could beg or steal. If they were Roman citizens within the cities they could be fed by the Roman monthly grain dole, which supplied about two-fifths of their food needs. Those faring better owned means of production and employed slaves, such as bakers or those in construction where they could be superintendents of buildings, dressers of stone or plasterers.

2.3. Freedmen. The freedmen (*libertini*) were a class of former slaves who had been manumitted. Their lot was mixed. While they were slaves, some were taught a trade, given a wage and were able to leave slavery to practice their professions or start their own businesses. They could also remain in the business ventures of their former masters as agents in business transactions thought too unseemly for the master to be conducting in person. Others found themselves as day laborers without the certainty of food, clothing and shelter that they enjoyed as slaves; that is, they found their lot even less than a slave's lot. In the upheaval of the last century of the republic large numbers of slaves were manumitted, and the class grew enormously, causing considerable social dislocation.

2.4. Slaves. Slaves were legally classified as commodities (*res*). They were of two main types: those born in slavery to a family already in slavery and rooted in society, and those reduced to slavery by conquest or pirates. Possibly a quarter of the population of the Roman Empire consisted of slaves, and within Rome it may have been 25 to 40 percent. They were workers on farms, road construction, harbors, shipping and mining. Slaves in rich households could count on shelter, food, clothing, some wages and advancement for their children. Many were well-educated and often themselves served as tutors to the children of their masters (especially those of Caesar's household) and were managers of their masters' households. Usually overlooked is the fact that even poor free men and freedmen had their own slaves working within their small farms and businesses. Thus slave ownership was found among people of widely divergent economic means.

Slaves were primarily occupied with agricultural crops and domestic service on large estates. Other jobs filled by slaves (rarely by freedmen) revolved around food and clothing, in both the household and in business. Slaves provided food as fishermen, fowling and hunters; prepared food as millers and bakers; and served food, whether in a household or a bakery business. They provided clothing as spinners, weavers, fullers, menders and cobblers, whether in the household or a small shop. They also provided domestic service on large estates and worked in inns and baths. In transportation, slaves took care of horses in stables and drove mules and wagons.

3. Social Mobility.

The upper and lower classes were separated by a number of legal and cultural barriers (e.g., those of the senatorial class could not marry former slaves). However, as P. Garnsey, P. R. C. Weaver and J. E. Stambaugh have pointed out, some social mobility did exist. *Peregrini* could become citizens, slaves could become freedmen, plebs and freedmen could become equestrians, and equestrians could become senators.

One could move up the social scale by marriage to someone further up the social scale. Women could gain wealth and power through inheritance or investment but were expected to remain in private life and not assume public office. However, many became involved in manufacture and commerce and became benefactors to cities by providing public buildings and temples. Even before manumission, slaves of the household of Caesar could marry a free-born woman, own slaves and acquire wealth; and after manumission they continued in government positions. This put them ahead socially, beyond others in the lower classes.

Usually mobility was initiated by a person in a higher social position who sponsored a person of a lower class on the basis of the latter's great personal achievement. For example, the emperor could appoint a notable person to the senatorial or equestrian order. Locally some people could rise to the local aristocracy by appointment of the governor or emperor on the advice of worthy citizens and on the basis of meritorious achievement or service.

Obtaining Roman citizenship was also a factor in social mobility. Citizenship could be granted from the emperor, senate or generals to individuals or whole communities. Citizenship was also acquired upon discharge from military service or upon manumission from slavery. During the empire, however, citizenship did not confer significant or enforced privileges.

Manumission from slavery made slaves freedmen. Freedmen from Caesar's household had great opportunities for upward social mobility that other segments of the population did not. However, generally the social mobility of freedmen was restricted. They became patrons of their former masters, and these obligations could be litigated if not performed. Freedmen could not hold public office or serve in the Roman legions. They could not join the equestrian order no matter how much wealth they garnered. They could

not marry within the senatorial order. The children of freedmen were free from birth, so unlike their parents, they could rise to the equestrian and senatorial orders. Many of these restrictions were created to keep the freedmen from overwhelming the aristocracy.

It must also be noted that social mobility moved in both directions. People could also move down the social scale by losing their fortunes or through conviction as criminals. The emperor could remove a person from the senatorial or equestrian orders.

4. The Social Level of the Early Christians.

The second-century pagan author Celsus wrote against Christianity, seeing it as a religion of "the foolish, dishonourable and stupid, and only slaves, women, and little children" led by "wool-workers, cobblers, laundry-workers, and the most illiterate and bucolic yokels" (Origen *Cont. Cels.* 3.44, 55, trans. Chadwick 1965), that is, a lower-class movement of slaves, women and children; of uneducated day workers. In the last century, A. Deissmann, noting that the language of the NT is akin to the language of the common people of the nonliterary *papyri (*koinē*), concluded that the early Christians were poor, uneducated and dispossessed within Roman society. Until recently this has been the assessment in NT studies.

However, *Pliny (Pliny *Ep.* 10.96.9; c. A.D. 112) said that Christians were of every social rank. When addressing the Corinthians, Paul said "not many of you were wise by human standards, not many were powerful, not many were of noble birth" (1 Cor 1:26 NRSV), a statement implying that some Christians did fit this description. *Koinē* Greek was also the language of very educated people within the upper classes. These indications and recent study, especially of Paul's letters by W. A. Meeks, A. J. Malherbe and G. Theissen, among others, indicate that Christianity was drawn from a cross-section of the population. The upper classes of Greco-Roman society do not seem to be represented in Paul's letters: senators, equestrians and decurions. The extreme bottom is also not well-represented: the subsistence day laborers. The groups that are present are the slaves, freeborn poor, freedmen, small business owners and some of moderate wealth. This assessment is confirmed in the second century by Justin Martyr (*Apol. II* 10.8), Tatian (*Or. Graec.* 32), and Minucius Felix (*Oct.*

8.3-4; 31.6). It was not until the third century that Christians appear within the upper orders of Roman society.

Some early Christians were wealthy (although not aristocracy) as indicated by their possessing houses able to accommodate church meetings, ownership of slaves and ability to travel. Some Christians were rich patrons who accommodated Paul and the fledgling church in their homes, including the mother of John Mark (Acts 12:12), Lydia (Acts 16:15, 40), Jason (Acts 17:5-9), Titius Justus (Acts 18:7), Nympha (Col 4:15), Philemon (Philem 2) and Aquila and Priscilla (Acts 18:2-3, 18; Rom 16:5; 1 Cor 16:19). Several could travel: Aquila and Priscilla (Acts 18:18-19; Rom 16:3-5; 1 Cor 16:19), Phoebe (Rom 16:1-2) and Chloe's people (1 Cor 1:11). As Theissen has pointed out, social stratification explains several of the conflicts in the Corinthian church. For example, at the agape feast and Lord's Supper the wealthy may have excluded the poor. The problem may have been that a wealthy patron of the agape feast acted like a patron at a banquet and only allowed food distribution according to social status—the best for the rich, the worst for the poor (1 Cor 11:17-34).

Small business and crafts people were well-represented in the early church. There are references to Jesus as a "carpenter's son" (Mt 13:55), Simon a tanner (Acts 9:43), Paul and Aquila and Priscilla as leather workers (Acts 18:2-3; see *DPL*, Tentsmaking) and Lydia as a dealer of luxury textiles (Acts 16:14). There were slaves and freedmen of the household of Caesar in the church (Phil 4:22), as well as slaves and slaveowners (Onesimus and Philemon). Paul even legislates for slaves and masters in the church (1 Cor 7:20-24; Eph 6:5-9; Col 3:22-25). Erastus in *Corinth (Rom 16:23) may be the aedile (superintendent of public works) who paved the courtyard outside the theater of Corinth. He may have been a freedman with Roman citizenship. Paul addresses several passages to those who work with their hands, perhaps as artisans and day laborers (Eph 4:28; 1 Thess 4:11; 2 Thess 3:6-19).

ROMAN TRIUMPH

By the time of the NT, the spectacular parades that entered through the *Porta Triumphalis* ("triumphal gate") of *Rome had become perhaps the most important and well-known political-

religious institution of the period. Images of the *emperor in a triumphal chariot were even frequently used on imperial *coins. These lavish pageants or triumphal processions, known as the Roman triumph (Gk *thriambos*; Lat *triumphus*), were carried out by special decree of the city of Rome in order to celebrate great victories, to honor the general, consul or emperor who had achieved them and to render thanksgiving to the deity who had granted them. According to the ancient historian Orosius (A.D. 385-418(?)), 320 such triumphs were celebrated between the founding of Rome and the reign of Vespasian in A.D. 69-79 (Orosius *Hist.* 7.9). It is widely recognized that there are two explicit references to the institution of the Roman triumph in the NT: 2 Corinthians 2:14 and Colossians 2:15. In addition, J. R. White has argued that it informs the corresponding metaphor of death in 1 Corinthians 15:29-31. Finally, T. E. Schmidt has suggested that the imagery of the Roman triumph is implicit in Mark 15:16-32. An understanding of these important passages is therefore dependent on an awareness of the nature of the Roman triumph itself and of what it meant to lead and to be led through the streets of Rome in such a procession.

1. The Nature of the Roman Triumph
2. The Use of the Triumph Imagery in the New Testament

I. The Nature of the Roman Triumph.

H. S. Versnel has argued that the Roman triumph in the *Hellenistic period was the result of a long development that extends back into the pre-Roman period of the Etruscan dynasties (late sixth century B.C.). Originally, the triumph was most likely a sacral New Year's festival in which the king, dressed to represent the deity in his yearly arrival or renewal, was carried into the city in anticipation of a sacrifice, at which time there was a cry for the epiphany of the god in his triumph (Gk *thriambe*; Lat *triumpe*). This rite was later transferred to Zeus in *Greece, to Dionysus in Egypt and then to Jupiter in Rome (see Religion, Greco-Roman).

But during the days of the republic, the idea of a human being representing a deity, not to mention embodying his or her presence, was offensive to Roman sensibilities (cf. Diodorus Siculus *Bib. Hist.* 14.117.6; Livy *Hist.* 5.23.5; Plutarch *Cam.* 7.1; Dio Cassius *Hist.* 52.13.3). As a result, the victorious generals now took the place of the

god, so that the triumph celebrated their military triumphs and the political supremacy of Rome rather than being directly linked to the enthronement of a deity. The triumphator's former role as an epiphany of the deity was now replaced by his identity as the bearer of good fortune who returns to bring welfare to Rome and who in turn leads in the worship of Jupiter for his blessing (cf. Tacitus *Hist.* 4.58.6; Livy *Hist.* 45.39.10). However, by 20 B.C. the triumphs had again become the exclusive privilege of the emperor, forming an essential part of the imperial quest for power. By the mid-first century A.D. the significance of the triumph had therefore come full circle, since once again the triumph portrayed the ruler as a god. But now the triumph not only publicized the caesar's conquest and domination but also pictured his own deification.

Central to the Roman triumph, in contrast to the minor triumph or ovation awarded for lesser feats, was the portrayal of the general, consul or caesar as victor and savior (*sōtēr*, in the sense of one who brings good fortune). As the focal point of the procession, the triumphator rode the triumph in a chariot. He was dressed in a purple toga, wore a tunic stitched with gold palm motifs and had a crown upon his head. His face was painted red and he carried an eagle-crowned scepter in his hand, all of which were elements taken from the depiction of Jupiter in the temple of Jupiter Capitolinus. The victor was surrounded by his soldiers and by leading exhibits of the spoils of war, graphic representations of the significant battle(s) on billboards and placards announcing the peoples conquered.

Most significantly, the victor led in his triumph representative samples of the vanquished foes and leaders, the former being paraded through the streets as slaves, the latter in mockery of their former royalty. The parade route ended at the temple of Jupiter Capitolinus, where the people offered sacrifices of thanksgiving and petitions for the future health of Rome. At the climax of the pageant, those prisoners and royalty who had been led in triumph and were not destined to be sold into slavery were executed in honor to the victor as the ultimate sign of his conquest and in homage to Rome's deity (Versnel, 58-63, 83-87). Indeed, the accounts of the NT period often highlighted the fact that the Roman triumph culminated in the death of those captives being led in it (cf., e.g., Plutarch *Aem.* 33.3-34.2; 36.6; *Anton.* 84.2-4;

and esp. Josephus *J.W.* 6.9.4 §§433-34; 7.5.4 §§123-57, which details Titus's triumph after his victory over the Jews and is the most extensive of the extant ancient accounts). The glories of the spoils, the story of the battles, the strength of the prisoners of war, the humiliation of the conquered rulers and the final sacrifices and death of the captives were all meant to display vividly the glory, wisdom, power and sovereignty of Rome and its leaders.

Moreover, the entire event took place in recognition of the favor of the supreme god, to whom the triumph as a whole was intended to be an act of worship. Thus, as Versnel has observed, "In no other Roman ceremony do god and man approach each other as closely as they do in the triumph" (Versnel, 1). Hence to be granted such a triumph was the greatest honor Rome could bestow (Livy *Hist.* 30.15.12). Conversely, to be led to death in such a triumphal procession was the ultimate act of defeat and humiliation.

2. The Use of the Triumph Imagery in the New Testament.

Though the noun *thriambos* (the triumph) is not found in the NT, its corresponding verb *thriambeuō* ("to lead in a triumphal procession," cf. Plutarch *Rom.* 25.4; *Theb.* 4.2; *Pomp.* 45.1-5) occurs in both 2 Corinthians 2:14 and Colossians 2:15, where Paul employs the image of the Roman triumph metaphorically to describe God's role as the sole, divine ruler and sovereign victor over his enemies. It is striking, however, that in both these texts the focus is on the direct object of the verb, thereby calling attention to the role of those led in triumph in revealing, ultimately through their death, the glory of the one who had conquered them. Read against this cultural backdrop, Colossians 2:15 affirms that God, having previously conquered and disarmed the rulers and authorities of this age, is now leading them in a triumphal procession (*thriambeuō*). Just as being led in a triumphal procession meant being led to death, so too the result of God's triumph over the rulers of this age is the manifestation of his sovereign glory through the public display of their destruction.

In 2 Corinthians 2:14 Paul himself in his role as an apostle (hence the use of the literary or apostolic plural in this verse) is now the object of the verb: "But thanks be to God who always leads us in his triumphal procession (*thrium-*

beuō) in Christ and [in this way] makes known through us the fragrance of the knowledge of him in every place." In addition, some scholars have taken the image of the fragrance in this passage (cf. 2 Cor 2:14-16a) to refer to the incense that was sometimes carried along in the triumph, while others (more correctly in my opinion) view it as a reference to the incense of the OT sacrifice.

But ever since John Calvin found it impossible to imagine that Paul could be praising God for leading him like a prisoner of war in such a triumphal procession, the more significant issue has been the application of the metaphor of the Roman triumph itself. Calvin himself, for theological reasons, gave the verb a causative sense, which he recognized was different from the common meaning of the verb, and translated the verse, "Thanks be to God who causes us to triumph." Rather than being led in the triumph to his death, Paul was now portrayed as sharing in God's triumph like a general walking alongside of the chariot.

Although such a rendering is impossible both linguistically (in 1879 Findlay demonstrated that *thriambeuō*, being a transitive verb, was never used in such a factitive sense) and historically (those led in triumph were not the victors), this reading of the text has influenced the translation and interpretation of the passage ever since (cf. Egan's attempt to redefine it to mean "display," "noise abroad" or "publicize," even though there is no textual or linguistic support for such a reading).

More recently, J. M. Scott has argued that although Paul does picture himself as being led in triumph, the image refers not to being led to death but to Paul's vision of the triumphator's chariot in front of him, which in the Roman triumph helped to symbolize the deity. Taken in this way, the metaphor points to Paul's experiences of a Jewish *merkabah* (= chariot) mysticism, as in 2 Corinthians 12:1-6, since Paul associated the Roman chariot with the chariot vision of God's glory in Ezekiel 1:15-21 as picked up in the imagery of Psalm 68(67):18-19 (cf. Eph 4:8). In 2 Corinthians 2:14, Paul is thus speaking of being led into mystical experiences of God's glory, by which he makes God known to others. On the other hand, C. Breytenbach has argued that the metaphor should not be pressed so far but refers simply to Paul's role as the one who reveals God's glory as victor, without including

the other images of the Roman triumph. In his view, Paul is referring only to his ministry as an apostolic mediator of the knowledge of God in a general sense.

However, such attempts to emphasize a different aspect of the triumph other than Paul's being led to death as the key to the metaphorical image in 2 Corinthians 2:14 cannot do justice to the immediate context of 2 Corinthians 2:12-13, where Paul has just described his anxiety over the welfare of the Corinthians as he awaited news from Titus, which he reminds the Corinthians in 2 Corinthians 11:28 was one of his greatest experiences of suffering. For Paul, to be led into such situations of suffering as an apostle is to be led to his "death" in Christ and for the sake of the gospel. Nor can it make sense out of the exact parallels between 2 Corinthians 2:14 and 1 Corinthians 4:9 and 2 Corinthians 4:10-11, where Paul's suffering as an apostle is also pictured in terms of being sentenced to death or delivered over to death as the means by which God reveals his resurrection power (= life) in the world.

In light of these parallels and within the context of 2 Corinthians 2:14 itself, it becomes clear that for Paul, being delivered over to death is a metonymy for suffering (see too 2 Cor 1:8-11). In 2 Corinthians 2:14 Paul praises God for his suffering because, rather than calling his apostolic ministry into question, Paul's suffering is the very means through which God reveals himself in the world (cf. Duff's helpful analysis of the force of the metaphor as an epiphany procession). Only if the image is taken here in all of its grim reality does the text make sense within its own context and within Paul's larger apologetic for his legitimacy as an apostle. As the former enemy of God's people who had been conquered by God in his conversion call on the road to Damascus, Paul, now a "slave of Christ" (his favorite term for himself in his *tole* as an apostle), was always being led by God in a triumphal procession "to death" (i.e., into situations of weakness and suffering; cf. 1 Cor 15:31).

In this way Paul makes known the majesty, power and glory of his conqueror, either through his experiences of divine deliverance (cf. 2 Cor 2:8-11) or through his divinely enabled endurance in the midst of adversity (cf. 1 Cor 2:2-5; 4:8-13; 2 Cor 4:7-15; 6:3-10; 11:23-33; 12:7-10; Phil 1:12; 2:25-30; see *DPL*, Suffering). Hence, 2 Corinthians 2:14 is not an abrupt break in

Paul's argument but the necessary and logical response to the suffering introduced in 2 Corinthians 2:12-13 (Hafemann, 35-72, 80-83). In 2 Corinthians 2:14 Paul praises God for the very thing his opponents maintained called his apostleship into question.

This interpretation of 2 Corinthians 2:14 has found confirmation in White's argument that this same Pauline use of "death" as a metonymy for suffering is the key to understanding not only 1 Corinthians 15:31 ("I die every day") but also the image of "being baptized on account of the dead" in 1 Corinthians 15:29. Instead of being an obscure reference to an unknown ritual lost in history, Paul is referring to the Corinthians' baptism under the ministry of Paul, here pictured in terms of his suffering (i.e., his being dead) as an essential, legitimizing aspect of his apostolic calling and of the gospel of the resurrection that he preached. To be baptized in Christ also meant being identified with those who preached Christ and suffered for his people (cf. 2 Cor 4:5). Thus 1 Corinthians 15:29 refers to the convert's identification with Paul's ministry as an apostle, once again pictured in terms of "death" as a metonymy for the daily suffering that Paul endures in hope of the resurrection and final reign of God in Christ (cf. 1 Cor 15:28, 30-32). In Paul's words, "For what will those do who are being baptized on account of the 'dead' [i.e., in response to the ministry of the apostles who suffer for the sake of the gospel]? If the truly dead are not being raised, why then are people being baptized on account of them [i.e., on account of the apostles, since their gospel offers no hope]?" (1 Cor 15:29). Paul would not willingly suffer, and the Corinthian believers would not have accepted his suffering as legitimate, being baptized as a result, were it not for the truth of Paul's gospel.

Finally, Schmidt has speculated that Mark selected and arranged key elements of the passion narrative in Mark 15:16-32 to recall the image of the Roman triumph: the gathering of the whole guard in Mark 15:16; the ceremonial royal robe and crown in Mark 15:17; the real mockery by the soldiers in Mark 15:18-19, who in the triumph would deride the victor to keep him humble; the offer and refusal of the myrrhed wine in Mark 15:23, which in the triumph was given to and refused by the victor and then poured out on the altar of sacrifice; and the placement on the right and left of those crucified with Jesus in

Mark 15:27, in mock parallel to those who sometimes surrounded the enthroned ruler in these positions of power during the triumph. For Mark's Roman audience, these elements would highlight that the death of Jesus took place in ways that ironically recalled the adoration of the emperor who led the triumphal procession in his attempts at self-glorification and even deification. Now, however, the real triumph had been celebrated by a defeated king who, though executed himself, was in reality the true Son of God. Against the backdrop of the triumph, "Mark is presenting an *anti*-triumph in reaction to the contemporary offensive self-divinization efforts of Gaius and especially Nero" (Schmidt, 16). The purpose of such a portrayal is clear: one of the same Roman soldiers who first mocked Jesus as a triumphant king is the one who joins God himself in confessing Jesus' lordship.

ROMANCES/NOVELS, ANCIENT

Ancient romances, or novels, are modern terms that scholars use for a number of ancient narratives that typically involve an extraordinarily beautiful young couple who fall in love but who must endure various temptations, hardships and humiliations before they, with the help of the gods, can live happily ever after.

1. Romances and Related Narratives
2. Recent Scholarship on the Romances
3. The Romances and the New Testament

1. Romances and Related Narratives.

1.1. Extant Romances. Five classic Greek romances have survived intact and are readily available in English translation (see Reardon 1989, 17-588). They are, in chronological sequence, Chariton's *Chaereas and Callirhoe*, Xenophon's *Ephesian Tale*, Achilles Tatius's *Leucippe and Cleitophon*, Longus's *Daphnis and Chloe* and Heliodorus's *Ethiopian Story*. Chariton may have written his romance as early as the mid-first century A.D. and certainly by the early second. The next three—Xenophon, Achilles Tatius and Longus—all belong to the second century A.D., the first two to the early part, the last to the latter part of the century. Heliodorus's dates have been less secure, vacillating between the third and fourth century, but recently resolved in favor of the fourth (Bowersock, 149-55).

1.2. Evidence of Further Romances. These five complete romances are the most important examples of the genre, but hardly the only ones. References in literature point to other romances—for example, Philostratus mentions a romance called *Araspes and Panthea* and attributes it to the early second-century sophist Dionysius of Miletus (*Vit. Soph.* 524). Summaries of still other romances are preserved in the *Bibliotheca* of Photius, ninth-century patriarch of Constantinople (Reardon 1989, 773-97). But it is the sands of Egypt that continue to provide new, if very fragmentary, papyrus evidence of previously unknown novels, about a dozen to date, all of which are now readily available (see Stephens and Winkler; Reardon 1989, 799-827).

1.3. Related Narratives. Finally, a number of

related narratives are often included with the romances, such as Dio Chrysostom's "Hunters of Euboea" (= *Or.* 7.1-80), the *Alexander Romance*, the epistolary novel of Chion of Heraklea, the Jewish novella **Joseph and Aseneth* and the Christian apocryphal Acts (see Morgan and Stone-man, 117-271; see Apocryphal Acts and Epistles).

2. Recent Scholarship on the Romances.

Scholarship on this considerable body of literature was long dormant, despite occasional contributions, most notably E. Rohde's massive and erudite *Der griechische Roman und seine Vorläufer* and B. Perry's *Ancient Romances*. Since the 1970s, however, interest in the romances has burgeoned, so much so that they have become, as one recent assessment puts it, "one of the hottest properties in town" (Bowie and Harrison, 159). The reasons for this renewed interest are many: the current interest in the Second Sophistic, which is the broader literary and intellectual context for the romances; the fascination with contemporary literary theory that has grown out of studies of the romances' contemporary counterpart, the modern novel; and the increased communication and collaboration among scholars that has been fostered by international conferences and bibliographical newsletters like G. Schmeling's *Petronian Society Newsletter*.

In any case, scholarship on the romances is growing rapidly, and the growth has not outrun sophisticated and insightful analysis. For example, new editions of the texts continue to appear, including the recent addition of Chariton's *Callirhoe* in the Loeb Classical Library (Goold). In addition, excellent introductory studies of the romances are now available (Hägg; Holzberg; Schmeling), and scholarship on individual romances progresses on a number of fronts. Not surprisingly, much of this scholarship is concentrated on literary analysis, both of the genre of romance and of specific narratological techniques in the romances (Reardon 1991; Bartsch; Schmeling), but scholars are also using the romances as sources for reconstructing ancient social life, in particular their portrayal of *women, their understanding of love and their conventions of *marriage (Egger; Konstan; Schmeling).

3. The Romances and the New Testament.

Consequently, given the ready availability of texts and translations, along with an extensive and impressive secondary literature, it is a good

time for NT scholars to become more familiar with the romances and to appreciate their value for understanding the NT at a variety of levels.

3.1. Romances as Sources for Social Life. Taken as a whole, the romances provide a detailed, comprehensive and coherent account of the lives of people in the regions that witnessed the spread of Christianity in the first and early second centuries. The romances place us in *Antioch, Tyre, Tarsus, *Ephesus, Miletus, *Alexandria, Paphos, Syracuse and Tarentum, to name just a few of the cities that the romances and NT share. We observe people in these regions at all social levels—from leisurely aristocrats and their households in the cities to the most marginalized shepherds and brigands in the countryside and beyond. Moreover, the stories involving these people are so detailed that we can discover the specific conventions that govern their attitudes and behavior; we observe them, for example, attending symposia (see Banquets), *traveling, being attacked by brigands, abusing *slaves, being put on trial, celebrating festivals, *burying loved ones and being engaged in harvests. Perhaps no other source is as rich in data of social life as the romances are.

3.2. Specific Parallels. But the romances provide more than a general if comprehensive picture of life during NT times. They also corroborate and clarify many specific NT texts, from minor matters of Greek grammar to the central concern of christology. A sampling of specific parallels will illustrate the value of reading ancient romances, as is beginning to be realized (see Hock et al.).

3.2.1. Linguistic Parallels. For example, the romances share many features of Koine Greek with the NT: the partitive use of *apo* or *ek* ("of") with a suppressed *tinēs* ("some") (Mt 23:34; Mk 12:2; Jn 7:40; cf. Longus *Daphn. Chl.* 4.15.4); the ascensive use of *alla* ("but") in the phrase *alla kai* ("and what is more") (Lk 16:21; cf. Xenophon *Ephesian Tale* 1.5.8); the perfective sense of the present *parasin* ("have come") (Acts 17:6; cf. Chariton *Chaer.* 1.1.14); and the identical litotes that Paul uses when describing Tarsus as "no mean city" (*ouk asēmou poleōs*) (Acts 21:39; cf. Achilles Tatius *Leuc.* 8.3.1).

3.2.2. Social Parallels. The parallels, however, go beyond language to various social conventions, thereby corroborating many social details in the NT: counting seeds to judge the quality of a harvest (Mk 4:8; cf. Longus *Daphn. Chl.* 3.30);

being interested in different burial practices (Jn 19:40; cf. Xenophon *Ephesian Tale* 5.1.10); and using various epistolary conventions—writing a letter with tears (2 Cor 2:4; cf. Chariton *Chaer.* 4.6.6), sending greetings to individuals (Rom 16:3-16; cf. Chariton *Chaer.* 8.4.6), closing with an authenticating sentence or two in one's own hand (1 Cor 16:21-24; Philem 19; cf. Chariton *Chaer.* 8.4.6), sending letters by means of slaves (Eph 6:21; cf. Xenophon *Ephesian Tale* 2.12.1; Achilles Tatius *Leuc.* 1.3.5; 4.11.1) and giving them oral messages to deliver as well (Eph 6:21; cf. Chariton *Chaer.* 8.4.9; Achilles Tatius *Leuc.* 5.21.1).

At times parallels from the romances do more than corroborate; they also clarify. For example, the brief mention of a pit into which a sheep might fall (Mt 12:11) finds clarification in Longus's romance, where the practice of digging pits is more fully described: they are the work of a whole village, are six feet across and four times as deep, are camouflaged with branches and are designed to trap marauding wolves (Longus *Daphn. Chl.* 1.11.1-2).

3.2.3. A Christological Parallel. Clarification extends to the central concern of christology. For example, the christological claims of the so-called Philippians hymn (Phil 2:6-11) find considerable clarification from both the narrative structure of the romances and their detailed accounts of master-slave conventions. Structurally, the protagonists of the romances belong to the highest social classes at the beginning of the story but soon suffer the humiliations of capture and enslavement before some deity raises them back to their original status at the end of the story. The Philippians hymn is similarly structured: at the beginning Jesus' status is virtually equal to that of God (Phil 2:6), but then he accepts the humiliation of being an obedient slave (Phil 2:7-8) before God raises him to a status so high that all beings—in heaven, on earth and under the earth—bow at the sound of his name and confess him as "Lord" (*kyrios*, Phil 2:9-11), the same title used by slaves for their "master" (*kyrios*; cf. Chariton *Chaer.* 2.3.5-6).

An incident in Xenophon's romance provides further clarification: Habrocomes, after being enslaved and then punished severely for supposedly raping his master's daughter, finds himself locked up and near death (Xenophon *Ephesian Tale* 1.13.6; 2.3-7); the master, however, soon learns of his innocence and then quickly

summons him, apologizes to him and makes him manager of his household, where he rules everyone (Xenophon *Ephesian Tale* 2.10.1-9). In other words, here are the precise social conventions that provide plausibility to the religious claims of the Philippians hymn: just as Habrocomes, enslaved and near death, can have his status reversed so quickly and completely so that he rules all in the household, so could Jesus, enslaved and obedient to death by crucifixion, be raised up by God to the status of master of all in creation. Consequently, the romances are valuable indeed if they can help clarify, as here, the meaning and truth of the christological claims of the NT.

ROME: OVERVIEW

Rome was the chief city in Italy and the capital of the *Roman Empire. Because of its prestige and importance its name is used both for the city and for Roman civilization.

1. Historical and Cultural Background of the City and the Empire
2. The City of Rome in the First Century A.D.
3. The Romans in Palestine

1. Historical and Cultural Background of the City and the Empire.

1.1. The Roman Republic. Rome began as a small settlement on the east bank of the Tiber River. Traditionally founded by Romulus by about 753 B.C. and ruled by kings, Rome became a republic in 509 B.C., governed by a senate under two consuls. It rapidly expanded, conquering its neighbors and establishing the dominance of its language, Latin. In the third to second centuries, Rome became a naval power, defeating its rival Carthage in two Punic wars. The Romans also gained ascendancy in the East with the defeat of Antiochus III of Syria and the conquest of *Macedon and *Greece (in 146 B.C. *Corinth was sacked). By this time Rome had a highly efficient and well-disciplined professional army.

After class struggles, political rivalries and civil wars, the republic came to an end in a contest for power, initially among *Pompey, Crassus and Julius Caesar (assassinated 44 B.C.), and then between Marc Antony and Octavian, who emerged victor at Actium (31 B.C.). In 27 B.C. Octavian, taking the surname Augustus, or "venerable" (cf. Lk 2:1), "restored the republic." This was the beginning of an empire that was to last for many centuries.

1.2. The Early Empire. For the purposes of studying the background to the NT, only the first phase of the Roman Empire, notably the Julio-Claudian and Flavian dynasties, is of direct importance. Knowledge of this period is indebted especially to *Tacitus's *Annals* and *Histories*, Suet-

tonius's *Lives of the Caesars*, Cassius Dio's *Histories* and *Josephus's *Jewish War and Antiquities*, and to *inscriptions, papyri and data derived from *coins and other material remains (see Balsdon; Jones and Milns; Avi-Yonah).

Augustus (27 B.C.-A.D. 14) is rightly famous for establishing and maintaining peace (the **pax Romana*, although this was not kept without a price; see Wengst); for his efficient administration, including legal and financial reforms; his upholding of traditional Roman values and morality; and his patronage of the arts. Modest in his lifestyle, he preferred to be known as *princeps*, "first citizen," rather than *imperator*, "emperor." The principate of his stepson Tiberius (A.D. 14-37) proved more tyrannical and ended in a reign of terror. The evils of autocratic power became still more evident under Gaius (Caligula, A.D. 37-41), who may have been insane. He offended the Jews by ordering his statue to be placed in the *temple at *Jerusalem (the Syrian legate Petronius averted a confrontation by delaying tactics). After Gaius's assassination, Claudius's reign (A.D. 41-54) provided stability with the development of the civil service, the strengthening of empire and the generous extension of Roman *citizenship. He continued Augustus's policy of allowing the Jews freedom of worship and was a friend of Herod Agrippa I, whom he set up as king (see below). In the later part of his reign, he expelled the Jews from Rome, an event that Suetonius (*Claudius* 25.4) claims was precipitated by disturbances caused by Chrestus ("at the instigation of Chrestus" [*impulsore Chresto*], perhaps a distortion of "Christ," although this is not certain; see Stern, 113-17). Nero's eccentric and extravagant reign (A.D. 54-68) was marked by a great fire at Rome, probably accidental but attributed to Christians. It led to the first concentrated Roman persecutions of Christians.

On Nero's death different military factions fought over the succession (A.D. 68-69, the Year of the Four Emperors), until Vespasian, a plebeian and commander of the army in the East, emerged victorious (reigned A.D. 69-79). This period saw the Jewish revolt of A.D. 66 to 70 with the brutal sack of Jerusalem by Vespasian's son Titus, who commemorated the event by his arch in Rome (see *Jewish Wars with Rome*). After this, Judea became an imperial Roman province. Titus reigned only two years (A.D. 79-81) and was followed by his brother Domitian (A.D. 81-96), an

efficient administrator who carried out a public building program. But his rule, like that of Tiberius, ended in a reign of terror. He claimed the title "lord and god" (Suetonius *Domitian* 13) and was responsible for a major persecution of Christians. In contrast, the reigns of Nerva (A.D. 96-98) and Trajan (A.D. 98-117) brought peace and stability.

One can understand why the Romans are famous for their military and administrative abilities, their law and their skills in architecture, engineering and road building (see *Roman Administration; Roman Emperors; Roman Law and Legal System; Roman Military; Roman Political System; Art and Architecture: Greco-Roman*). Deeply indebted to Greece in the areas of literature, *philosophy and the creative arts, they nevertheless had their own gift for the lucid expression of ideas in precise and elegant language (see Howatson; Bandinelli). Traditionally the Romans valued family life and the virtues of *gravitas* ("dignity") and *pietas* ("devotion" or "dutifulness"). But like all peoples they had their darker side, and many instances are recorded of corruption, sexual immorality, brutality and murder. One should be wary of either idealizing or denigrating them as a people or in terms of their accomplishments.

1.3. Roman Religion and Politics.

1.3.1. *Religion and Politics.* Roman religion was originally animistic, involving the spirits of the woods, springs and mountains. The Romans also worshiped anthropomorphic gods such as Jupiter, Juno, Mars and Minerva, whom they identified with their Greek counterparts. They came successively under the influence of the Etruscans, the Greeks and various Eastern peoples and imported foreign cults, including those of Cybele, Isis and Mithras, so long as these were compatible with state policies. Roman religion and the state's policies toward religion affected the reception that the Roman people gave to foreign religions, including *Judaism and Christianity, since Roman religion was closely bound up with the government of Rome. A good example of this linkage is emperor worship (see *DLNTD*, Emperor, Emperor Cult), which seems to have originated in the East, where *Hellenistic monarchs had long been recognized as divine saviors. In the empire it became a focus and test of political loyalty (Pliny *Ep.* 10.96-97), even though at Rome it was at first

restricted either to the deceased emperor (cf. the earlier worship of ancestors) or his "genius" (guardian spirit). In the provinces and later at Rome also, the emperor often shared his cult with the goddess Roma, personification of the power and spirit of Rome. [R. B. Edwards]

The tie between religion and politics was felt in other ways, however. The priests of the state religion served as advisors to the senate. They were consulted for discerning the divine will through signs and purifying significant areas (*augures*), setting the calendar and establishing religious law (*pontifices*), making war in religiously correct ways (*fetiales*) and keeping and interpreting the Sibylline Books (*duoviri* [later *decemviri*] *sacris faciundis*). Priests, by their function of interpreting foreign books, especially in the third century B.C., called for the acceptance of certain foreign religions into Rome. At the end of the republican age the *haruspices* (lit., "soothsayers") were organized as a priestly college. Its members were trained to discern the divine will from the entrails of sacrificial animals.

Everywhere in first-century Rome there were reminders of the gods. On the hill known as Capitoli-um a large temple was dedicated to Jupiter, Juno and Minerva in the first year of the republic. Though it burned in 83 B.C., a new temple was built in 69 B.C. This was repaired and embellished by Augustus in 26 and 9 B.C.. The temple therefore dominated the city when Christianity first made inroads there. On the southern border of the political center, the forum, were temples of Saturn, the Castores, Vesta and the office spaces of the *pontifices* and another member of their priestly college, the *rex sacrorum* ("king of sacred things," a religious post representing the ancient kings of Rome). Privately, the *lares* (shrines for dead family members) and *di penates* (gods of the family cupboard) were constant reminders in the home of the connection in the Roman religious mind between this world and the other.

Participation in religious ritual was a way of life for Romans. The possibility of choosing a religion and joining a group defined only for its religious identity was unknown. Groups that were organized solely for religious purposes, with the exception of vocational priesthoods in the state religion, Jewish *synagogues, and later the churches, were unknown. Though there were *collegia* named after certain deities, the members of such associations were joined by a

common occupation or ethnic background. The churches in Rome arguably showed their faith as the organizing principle more than synagogues, since the churches likely consisted of a greater variety in ethnic and class backgrounds.

1.3.2. Legal Orientation. In public and in private, Roman religion was in essence the performance of ritual; hence there was great emphasis on the proper observance of ritual (Pliny *Nat. Hist.* 19.10). The priesthoods were closely linked with the legislative government; this fact and the elaborate rules within Roman religion point to the essential legal character of religion. Far from espousing a personal relationship with the gods, Roman religion taught that if one followed the rituals correctly, a contract would be made that obtained the "peace of the gods" (*pax deorum*; cf. Rom 5:1-2, where Paul states that believers have "peace with God" on the basis of faith).

Since the Romans considered religion as essentially a legal matter, it is possible to interpret Paul's presentation of his gospel in the book of Romans in legal terms: God's general moral law (Rom 2:14-16), Torah (Rom 3:21; 10:4) and political law (Rom 13:1-7). Paul's focus on questions of law (Rom 2:12-27; 4:13-16; 7 passim) and his acknowledgment that his readers "know law" (Rom 7:1) may not simply reflect the Jewish preoccupation with Torah or the high percentage of secular lawyers in Roman society but Paul's recognition that Romans viewed religion as a matter of law. The Roman emphasis on legal etiquette in religion presupposed that the gods were rational, a point not shared with most foreign cults introduced to Rome. The religious vow of 217 B.C. (Livy *Hist.* 22.10) illustrates how a Roman priest could treat the gods as rational bargaining partners, much as one person would reason with another. Paul's *letter to the Romans emphasizes being rational in religion. The rational God hails over those who ignore him "to an unfit mind" (Rom 1:28); acting against one's mind is perceived as acting against God (Rom 7:20-24); and presenting one's body to God is reasonable religion, accompanied by a renewed mind (Rom 12:1-2).

1.3.3. Roman Policies and Attitudes to Foreign Religions. As one of the later foreign religions to seek entrance into Rome, Christianity inherited stereotypes and government policies developed from past encounters between the Roman government and foreign religions, such as Judaism.

Any study of church-state relations not only must begin with the state religion of Rome but also must include the reception Rome gave to the foreign religions that antedated Christianity, since foreign religions could not be introduced in Rome without official approval from the senate and Romans viewed religion as a concern of the state. Since the late republic, Rome looked at all foreign religions with much suspicion. At the same time, it was ready to attempt the introduction of a foreign religion when it perceived that cults offered a solution to an unmet need in Rome. For example, the Asclepius cult (known in Rome as *Aesculapius*) was brought from Epidaurus to Rome when in 293 B.C. the Roman priests who kept the Sibylline Books called for its importation to quell a plague. Its temple on the island of Tiber was dedicated on January 1, 291 B.C. The minor deity Hygieia was also worshipped there, to whom the Romans later attached the name of their Italian goddess, Salus.

The official importation of a new cult did not mean that the state religion was abandoned. There was no mechanism in Roman religion for abolishing any traditional practice. Rather, new cults were brought to Rome and new interpretations of state religion were made as history progressed. Religious exclusivism, such as was found in Judaism and Christianity, was therefore unheard of to the Roman religious mind. While earlier more tolerant, Rome was more cautious regarding new religions after events in 186 B.C. that raised the government's suspicions about foreign religions. In this year, the Roman senate forbade the practice of the Dionysian *orgia*, or *bacchanalia*. The Dionysus cult had entered Rome from Campanian Italy. In response to the senate's measures (*CIL* 1.196; *HS* 18), the people of Rome reacted violently, and an outbreak of crime spread through the city (*Livy Hist.* 39.8-18). This incident, known now as the Bacchanalia, helped shape the Roman stereotype that foreign religions inevitably brought disorder. Hence, when Christianity entered Rome, it too was viewed with suspicion. [M. Reasoner]

1.4. Roman Provincial Administration. The first Roman provinces, in the West, were acquired in the third century B.C. After Rome's expansion into the East, Asia (i.e., western Turkey), Cilicia and Bithynia were added, followed by Syria and Egypt. Augustus annexed several more provinces, and Claudius added Britain (A.D. 43).

Under the empire provinces were of two

kinds: public or consular, governed by proconsuls under the authority of the senate (these were generally the richer and more settled provinces); or imperial, governed by legates, appointed by the emperor (mostly frontier provinces, such as Syria, where legions were stationed). Both these types of governor were of senatorial rank. There was a third class of governors, known as prefects or procurators, of lower equestrian rank, who were in charge of smaller provinces (e.g., Judea). These were often experts in financial administration. All governors had judicial and military powers. The number of troops available might be quite small (e.g., one cohort, consisting of three hundred to six hundred men) but in frontier provinces could rise to three or four legions (a legion consisting of some three thousand to six thousand infantry and one hundred to two hundred cavalry). Governors could not be prosecuted for mismanagement until after their term of office.

Roman provincial government has been described as "supervisory rather than executive" (Sherwin-White, *ISBE* 3:1027), which meant that few Roman officials were involved, detailed administration being in the hands of municipal authorities or, in the case of Judea, councils of elders grouped into toparchies. Revenue was raised by a system of tax farming. Local laws and religious customs were usually respected as long as they did not interfere with smooth government. Roman citizens came under Roman law. Citizenship could be granted both to whole communities and to individuals (e.g., to men with long service in auxiliary units of the army) and was passed down from father to son. In the Eastern provinces members of the wealthy upper classes often acquired their citizenship through influence. [R. B. Edwards]

2. The City of Rome in the First Century A.D.

2.1. Size and Character. With a population of about one million people, the city of Rome in the first century drew people from every corner of the empire and beyond. During Augustus's reign an urban police force (*cohortes urbanae*) and fire prevention units (*vigiles*) were added to keep order in the growing city. Like the great cities of today, Rome was the place to visit in the imperial period. Paul's declaration that he had intended many times to visit the Roman Christians before writing his letter to them (Rom 1:13) was therefore similar to what any provincial

would say before making final arrangements for a trip to Rome.

From at least the third century B.C., Rome had been a drawing point for people of a variety of ethnic backgrounds. The immigration of provincial Italians and Greeks that was occurring under the republic was eclipsed in the early principate by immigration from Syria, *Asia Minor (modern Turkey), Egypt, Africa, Spain and later Gaul and Germany. Juvenal's statement that "long ago the Orontes has overflowed into the Tiber" (Juvenal *Sat.* 3.62) shows his perception of the high number of Semitic people living in first-century Rome. Record of a Jewish presence in Rome dates from 139 B.C., and it is known that the number of Jewish residents in Rome increased when, in 62 B.C., Pompey brought back a large number of Jewish captives for use as *slaves. By the time *Cicero defended Flaccus in 59 B.C., it appears that the Jews were a significant political interest group in Rome (Cicero *Flac.* 66). In the civil war that began in 49 B.C., the Jews in Rome and throughout the Mediterranean world supported Julius Caesar against Pompey, thus explaining why Jews mourned the death of Caesar in 44 B.C. (Suetonius *Julius* 84.5). It is estimated that there were at least forty thousand Jews in Rome during the first century A.D. Literary sources from the late republic and early empire show, however, that these foreign residents in Rome (*peregrini*) were not fully accepted and experienced racial discrimination. Africans were reportedly despised (Livy *Hist.* 30.12.18; Sallust *Jug.* 91.7), the Jews were the victims of such discrimination (Cicero *Flac.* 66-69; Horace *Sat.* 1.9.71-72), and even Greeks received slurs (Cicero *Ep.* 16.4.2; *Tusc.* 2.65; *De Orat.* 1.105; 2.19).

2.2. *Judaism in Rome.* Scholars disagree whether Judaism had been accorded the status of a legal religion (*religio licita*), but it appears that Jews were given tacit permission to meet for religious purposes in their synagogues, and the Jews' observance of the *sabbath was not used to their disadvantage. It is true that Jews were expelled from Rome in 139 B.C. (Valerius Maximus *Fact. ac Dict.* 1.3.2), in A.D. 19 (Josephus *Ant.* 18.3.5 §§81-84; Tacitus *Ann.* 2.85.5; Suetonius *Tiberius* 36; Dio Cassius *Hist.* 57.18.5) and in A.D. 49 (Suetonius *Claudius* 25.4; Acts 18:1-2; some scholars think this expulsion took place in A.D. 41). The first two cases were probably a Roman response to active proselytizing by the Jews, but

the third was perhaps due to unrest within the Jewish community about Christianity (see above). But these expulsions were not permanent measures, and at least in the latter two cases probably did not apply to Jews who were Roman citizens.

Judaism in Rome was also closely tied to Judaism in Jerusalem. Around 140 B.C., the high priests in Jerusalem sent emissaries to Rome in order to offset the power of the *Seleucids. Later, ruling priests in the first century politically endorsed Julius Caesar (and not Pompey, who had entered the temple in 63 B.C.), and *Herod the Great was in political alliance with Augustus. In the first century A.D., princes in the family of Herod such as Agrippa II, who would later hold the rights of appointing high priests in Jerusalem, were reared in Rome under imperial patronage. Far from being an unruly cousin of Judaism in Jerusalem, then, Judaism in Rome was rather a devoted son. Within the synagogues of Rome, Christianity first gained its inroads there.

2.3. *Christians in Rome.* Although Christianity first appeared as a sect of Judaism, the Roman church by the time of Paul's initial visit (A.D. 60) was already making its break with Judaism, a break that must have been complete by A.D. 64, when Nero focused persecution on Christians, blaming them for the fire in the city. The churches in Rome represented a body of Christianity that Paul could not ignore. Their strategic potential came from their close connection with Jerusalem, their location in the world capital and their connections with the rest of the empire through people groups represented in Rome's congregations.

2.3.1. *Origins.* The connection between the Jews in Rome and Jerusalem and the Jewish element within early Roman Christianity lead to the probable conclusion that Christianity was brought to Rome by Jewish Christians from Palestine. This is confirmed by the note that Jews from Rome were in Peter's audience in Jerusalem at Pentecost (Acts 2:10). Jewish Christians most probably entered into dialogue with fellow Jews, and this resulted in tumultuous encounters and some conversions. One such encounter possibly occurred in A.D. 49, when Claudius expelled the Jews from Rome. Suetonius's brief description of this event (see above) is generally taken to mean that the Jews were arguing among themselves about Christ. As a result,

Priscilla and Aquila, two Jewish Christians, left Italy when Claudius expelled the Jews from Rome (Acts 18:2).

The Jewish component in early Roman Christianity suggests that house churches may have developed in association with various synagogues, indicating that Christianity in Rome arose not in a single church but in a plurality of house churches. Paul's greeting in the letter to the Romans is given not to a church (cf. 1 Cor 1:2; 2 Cor 1:1) but to "all those who are in Rome, beloved of God, chosen saints" (Rom 1:7). Paul still used the singular "church" to describe the Christians who met in Rome, while acknowledging that they did so probably in a variety of places.

2.3.2. Jewish Presence. Because of its likely origin in the synagogues of Rome, Jewish Christianity retained a close connection with its Jewish roots in Jerusalem. Paul's letter to the church is evidence for this (Rom 1:16; 3:1-30; 9-11). Half a century later, when Tacitus describes Christianity, he links it to Judea (Tacitus *Ann.* 15.44.2). Roman Christianity must have included a distinctly Jewish element. Theologically such a presence within the church most representative of the world's peoples forced Paul to outline his gospel in a manner that accounted for God's dealings with all people (Rom 2:1-16; 15:7-13). A letter and visit to this church provided apologetic opportunities for Paul to defend himself to people with close ties to the groups that most criticized and resisted Paul's ministry, the Judaism and Christianity of Jerusalem. Thus, for the Romans, Paul defends his theology (Rom 6:1-2) and mission strategy (Rom 15:14-24). His upcoming visit to Jerusalem is explained and addressed to them as a worthwhile and spiritual endeavor (Rom 15:25-32). While Roman Christianity was primarily composed of Gentiles, as Paul's letter shows, it is probable that there was an ethnically Jewish presence in the Roman churches.

2.3.3. Servile Presence. Since many Jews first came to Rome as slaves, it is likely that some of the Jews within the Roman churches were of the servile classes (either slaves or freedmen and freedwomen). The slaves in Rome were primarily of foreign origin in the first century of the principate. While there were some freeborn foreigners in Rome, the possibility that many were servile foreigners fits with Suetonius's conviction that Nero administered Roman law prop-

erly when crucifying Christians (Suetonius *Nero* 16.2; 19.3), since Roman law prohibited crucifixion of its citizens. Further evidence for the servile nature of the Roman church are the references to those of certain "households" (Rom 16:10-11), a standard euphemism for the servile classes.

2.3.4. Asceticism. G. La Piana has suggested an ascetic element within the first-century Roman church. This seems fully in accordance with extrabiblical evidence and indications in Paul's letter to the Romans. Vegetarianism was taught in the school of Quintus Sextius in the early first century. The philosopher Sotion led *Seneca to practice vegetarianism for a time (Seneca *Ep.* 108.22). Another philosopher who was influential during the reign of Nero, *Musonius Rufus, also taught vegetarianism (*Peri Trophes*, ed. Hense, 95). Vegetarianism is reflected in *1 Clement* 20.4, while asceticism in dress is mentioned in *1 Clement* 17.1. Biblical evidence for asceticism in Roman Christianity comes from Hebrews 13:9 and Romans 14:1-3, 21. In the latter reference the strong and weak are differentiated within the Roman church by different postures toward ascetic practice. The mind/body dualism common to ascetics is found in Romans 1:24; 6:19; 7:23-24; 12:1-2. The ascetic tendencies of Roman Christianity were later worked out in one of its leaders, Tatian (fl. in Rome A.D. 160-172). The ascetic movement within the Roman church at the time Paul wrote his letter may well have prompted him to delineate an ethic of responsibility in which the strong in conscience was to respect the weak, more ascetic, Christians (Rom 14:14-17; 15:1-3).

2.3.5. Influence. By the time Paul wrote Romans, it is clear that the Roman church was ascendant in influence among churches of the Mediterranean world. Paul's uncharacteristic desire to visit the church in Rome that he had not founded (Rom 1:9-13; cf. 15:20) and his need for the Roman church's endorsement and support (Rom 15:22-24) show the influence that this church carried in the Mediterranean world. The influence of the Roman church is also seen in *1 Clement*, a letter written as early as A.D. 96, in which the Roman church expects its directives to its sister church in *Corinth to be followed (*1 Clem.* 7.1-3; 62.1-3; 65.1).

Though the church in Rome was not founded by an apostle, Paul is associated with its early history. As apostle to the Gentiles, he con-

sidered this within his sphere of ministry (Rom 1:11-15). One's understanding of the relationship that Paul had with Roman Christianity before his visit in A.D. 60 affects one's conception of early church history and hence one's interpretation of the letter to the Romans. While it is true that Romans is the most systematic of Paul's letters, its occasional nature cannot be denied. The influence that Roman Christianity enjoyed likely meant that Christians throughout the empire knew something about the Roman church. Paul's statement "your faith is announced throughout the whole world" (Rom 1:8) is probably more than epistolary flattery. Paul met Christians from Rome at least by A.D. 50, after Aquila and Priscilla had come to Corinth from Rome (Acts 18:1-2; cf. Rom 16:3-5). Christians in Pauline circles no doubt had associations with other Christians in Rome. While Romans 16 has been assigned an *Ephesian destination by T. W. Manson, later works by H. Gamble, P. Lampe and W.-H. Ollrog have demonstrated the integrity of this chapter with the rest of the letter. On the basis of Romans 16, then, it is probable that Paul knew a number of people in Rome. The letter is written in order to strengthen an existing relationship.

By the time Paul arrived in Rome in about A.D. 60 (Acts 28:14-16) in order to stand trial before Nero's representative, the praetorian prefect, Nero had murdered his mother, his advisor Burrus had died, and Seneca had retired. Rumors were probably spreading that the imperial government did not seem as stable as in the earlier part of Nero's reign. According to tradition, Paul was freed after his first trial. From the testimony that Paul "reached the limits of the West" (*1 Clem.* 5:7), it is possible that Paul then reached Spain as intended (Rom 15:24). It is then most likely that Paul was arrested and imprisoned again at Rome, where he was executed sometime between A.D. 64 and 67. *First Clement* 5:2-5, in citing "pillars of the church," mentions Peter first and then Paul as examples of endurance under suffering. Today one can see a carving of both apostles baptizing their jailers in the Mamertine Prison (Rome's state prison), testimony to the tradition that both men suffered for their faith in Rome. The details of Paul's second trial (if he had one) and martyrdom are unknown. Tradition tells us that he was beheaded on the Ostian Way at about the same time and place as Peter (*Eusebius Hist. Eccl.* 2:25.7-8). [M. Reasoner]

3. The Romans in Palestine.

3.1. To Herod the Great. The history of the Roman government of Palestine is complex. In 66 to 63 B.C., Pompey conducted his celebrated Eastern campaign, during which he was called into Palestine by the two sons of Salome Alexandra in their dispute over the succession (*see* Hasmonaeans). He captured Jerusalem and entered the temple but ordered its cleansing and reinstated Hyrcanus as high priest. After this, Syria became a Roman imperial province, with the Decapolis and *Samaria, now freed from Jewish rule, under its wing. Judea, Galilee, Idumea and Perea were retained by the Jews as client kingdoms, dependent on Rome. Julius Caesar appointed Antipater procurator of Judea. His son *Herod, who had been governor of Galilee, won from Rome the title king of the Jews, a title which he had to make a reality by force of arms. Herod reigned from 37 to 4 B.C.; he extended his territories and restored the Jerusalem temple on a lavish scale, including Greco-Roman architectural features (*see* Archaeology of the Land of Israel; Art and Architecture: Greco-Roman; Art and Architecture: Jewish). Herod was both a lover of *Hellenism and an admirer of Roman culture. He encouraged Hellenistic education and social mores; he built *theaters, amphitheaters and other civic amenities such as aqueducts. Under his rule, Judea was materially prosperous. But he was also violent and cruel. The massacre of the innocents at Bethlehem (Mt 2), though not confirmed by external sources, is consistent with his character.

3.2. After Herod the Great. On Herod's death his kingdom was split into three with Herod Antipas as tetrarch of Galilee and Perea (4 B.C.-A.D. 39); Philip tetrarch of Trachonitis and Iturea (4 B.C.-A.D. 34); and Archelaus ethnarch in Judea, Idumea and Samaria (4 B.C.-A.D. 6; cf. Mt 2:22; Lk 3:1). Archelaus's rule ended in riots, and he was banished. Judea now came under the control of Roman governors (*see* Roman Governors of Palestine).

Pontius Pilate was governor of Judea from A.D. 26/27 to 36. Tacitus (*Ann.* 15.44) refers to him as procurator and mentions that "Christus" was put to death by him when Tiberius was emperor. However, an inscription from *Caesarea, the Roman capital of Judea, shows that his title was more correctly prefect. He was of equestrian rank, presumably a former military tribune, and had five cohorts of infantry and a cavalry regi-

ment under his command. He had absolute authority in his own province but was responsible to the legate in Syria. *Josephus and *Philo say that his governorship was marred by bloodshed, including a massacre of some Galileans (possibly alluded to in Lk 13:1) and the slaughter of many Samaritans in an ugly incident that resulted in protests to the legate Vitellius in Syria and Pilate's recall to Rome. According to Eusebius he later committed suicide.

In A.D. 41, Herod Agrippa I, who had previously governed northern Palestine and Galilee, was made king of the Jews (cf. Acts 12), but in A.D. 44 Palestine reverted to Roman governors. In A.D. 66 to 70 the tragic Jewish war erupted, with the siege and fall of Jerusalem in A.D. 70 (see Jewish Revolts). The Jewish patriots held out at Masada until A.D. 73 and committed suicide rather than submit to Rome. In A.D. 132 to 135 the Bar Kokhba revolt finally sealed the fate of Judea, and Jerusalem became a Roman colony (Aelia Capitolina) inhabited by non-Jews.

In Palestine the Jewish leaders and people varied immensely in their attitudes to the Romans. The Herodian rulers and their party were naturally pro-Roman. The high priests also generally favored cooperation, as did the *Sadducees. At least some of the *Essenes withdrew to the desert, while the Zealots worked for armed rebellion. The *Pharisees saw as their first loyalty absolute adherence to the Mosaic law and traditions, so they refused to take an oath of loyalty to Herod (Josephus *Ant.* 17.42); some actively resisted Roman rule, but others were more acquiescent. The common people must have simply scraped a living in a society where there was great inequality between rich and poor and much scope for oppression (see Economics of Palestine). [R. B. Edwards]

RULE OF THE COMMUNITY/MANUAL OF DISCIPLINE (1QS)

The *Serek ha-yahad* (*Rule of the Community*) is a document that records the beliefs and rules of the *Essene community living at Khirbet *Qumran near the Dead Sea at the period before, during and after the life of Jesus of Nazareth (c. 150 B.C.-A.D. 68). It is important not only for understanding the Essenes but also for shedding light on the NT at many significant points.

1. The Preserved Manuscripts and Their Publication History
2. The Contents of the Best-Preserved Manuscript (1QS)
3. The Textual History of the Document
4. The Relationship to Other Texts of the Qumran Community
5. The Relevance of the Document for New Testament Studies

1. The Preserved Manuscripts and Their Publication History.

The *Rule of the Community* (1QS) was among the first manuscripts found at Qumran in 1947, and it was published in 1951. It is almost completely preserved and comprises eleven columns written on five leather sheets stitched together. It was first entitled the *Manual of Discipline*, which aptly describes its contents, for the majority of its sections contain regulations governing the life and order of the community. The currently used title, the *Rule of the Community*, translates the Hebrew title in the opening line of the document.

A total of twelve copies were found: in addition to the complete copy from Cave 1, ten fragmentary copies were found in Cave 4 (4QS^{a-j}) and another in Cave 5 (5QS). The manuscript from Cave 5 was published in 1962, but due to its

fragmentary nature it has been of fairly limited use for the analysis of the *Rule*, or *Serek*. The DJD volume containing the Cave 4 manuscripts was published in 1998, and their analysis is still at an early stage, but it is clear that some of them show remarkable differences compared with the copy from Cave 1.

2. The Contents of the Best-Preserved Manuscript (1QS).

1QS 1:1-15. The main manuscript starts with an introduction that mentions several topics essential for life in the community. The centrality of the law of *Moses is emphasized; the community is dualistic in its thinking, and this involves strict separation between "the sons of light" and "the sons of darkness," that is, the community members and those outside. The community understands itself as the true keeper of the covenant, and its members strive for perfection in their ritual conduct. A command is given for proper observance of cultic *festivals according to the (solar) *calendar used in the community. The members of the community hand over their property to the community.

1QS 1:16-3:12. The liturgical section is divided into three parts. The first part contains a ceremony for entry into the covenant. The second part describes the annual renewal of the covenant, which presumably took place in the same ceremony. The third part includes condemnation of those who (after the novitiate period?) refuse to enter into the covenant.

1QS 3:13-4:26. A theological section expounds the doctrine of the Two Spirits. The basis for the doctrine is the assumption that while God is predestinator of all, there are two opposing superhuman powers working in the world, the spirit of truth and the spirit of wickedness, also called the spirit of light and the spirit of darkness, that influence the life and destiny of every human being. The perspectives are both cosmological and anthropological. On the one hand, every person is allotted to the dominion of either one or the other of the two spirits. On the other hand, every person is simultaneously influenced by both of the spirits: the spirits fight in the heart of a person who does either good or evil according to which of the spirits dominates more. A wrongdoing committed by a righteous person is to be understood as caused by the angel of darkness.

The dualism of the *Rule of the Community* is

not absolute in the sense that evil would be considered as an independent force, for it is explicitly stated that God created both the spirit of light and the spirit of darkness. They have been appointed to influence the lives of human beings until the predetermined end of the existence of the spirit of darkness, after which the spirit of truth will reign. The dualistic beliefs of the community seem to have been closely related to the community's conviction that they were living in the end time and that God would soon intervene in the course of human history, destroy evil and create an era where his dominion would not be challenged.

1QS 5:1-6:23. The order of the community is expounded in columns 5 and 6, commencing with an introductory account of the principles of the community's life. This is followed by a passage describing the oath to be taken by each member: "to return to the law of Moses with all his heart and soul, following all that he has commanded, and in accordance with all that has been revealed from it to the sons of Zadok, the priests who keep the covenant and seek his will, and to the multitude of the men of their covenant who together willingly offer themselves for his truth and to walk according to his will" (1QS 5:8-10). Further regulations of community life continue, such as rules for separation from outsiders, for the meeting of the full members of the community, "the many" (*ha-rabbim*) and for accepting new members into the community. The manuscripts 4QS^b and 4QS^d provide a shorter and perhaps more original form of the text for these columns.

In order to become accepted as a full member of the community, the novice was tested through a lengthy probationary period. After the "the officer in charge" (*ha-paqīd*) at the head of the many had preliminarily accepted the candidate, he was investigated by the many. If the many also approved of the candidate, he was able to begin his first probationary year. During this period the candidate was not allowed to "touch the purity of the many," which mainly involved the common cultic meal. After the probationary year the candidate was reexamined, now by the *priests and the many. If he was accepted, his property was handed over to "the overseer" (*ha-m^cbaqqēr*) to be listed in the community records. The final decision as to whether the candidate was accepted into the full membership of the community took place after the sec-

ond year. The only decision maker mentioned in this connection is the many.

1QS 6:24-7:25. The section containing the penal code of the community is connected to the preceding section of columns 5–6 in that together they form the set of regulations governing the inner life of the community (5–7). The penal code is very heterogeneous, the rules apparently having been collected somewhat haphazardly, but all of them reflect tensions in the community's life. The penal code may have been compiled as the result of the court proceedings in the meetings of the many. The penalties vary from the punishment of ten days—the exact meaning of which is unclear, possibly it involved cutting the food ration—to permanent expulsion. The literary genre of this section is that of casuistic law, as paralleled, for example, in the Book of the Covenant (Ex 20:22–23:33).

1QS 8:1–9:26a. A major part of the material in columns 8 and 9 may have been inserted into the composition fairly late, for *1QS 8:15–9:11* is not included in the manuscript *4QS^e*. The scribe who inserted the section into the *Rule of the Community* apparently borrowed an older source. A number of scholars maintain that the text originates in the period when the founding of the community still lay ahead, and they label the section a manifesto or the program of the new community. The section begins with an introduction that, like the one at the beginning of column 5, lists the basic principles of the community's life and is followed by a penal code, the regulations of which are set out in far more general terms than those of the penal code of column 6. The section is characterized by strong idealism that could indicate that the movement was still at an early stage. The latter part of column 9 comprises two sections addressed to the "wise leader" (*ha-maskil*). They describe the qualities and responsibilities of the community's spiritual leader.

1QS 9:26b–11:22. The document concludes with a *hymn, which includes a calendric section listing the community's times of *prayer. In the manuscript *4QS^e*, the hymn is replaced by the calendric text *Otot*.

3. The Textual History of the Document.

E. F. Sutcliffe proposed in 1959 that columns 8–9 of *1QS* represent the earliest material of the *Rule*. J. Murphy-O'Connor in 1969 argued that

there was a three-stage development from the nucleus or manifesto formed by *8:1-16* and *9:3–10:8* (*1QS 8:16–9:2*; *1QS 5:1-13 + 5:15–7:25*; *1QS 1:1–4:26 + 10:9–11:22*). The redactional stages corresponded to the archaeological phases of Khirbet Qumran. His theory was developed and modified in the 1970s and 1980s in publications by various scholars, but no one presented a serious alternative.

The evidence of the Cave 4 copies both illuminates and complicates the textual history. J. T. Milik in 1977 suggested that *4QS^{b,d}* with a shorter text represent an earlier form of the document than *1QS*. G. Vermes agreed in 1991, paying special attention to a variant referring to the authority of the community: the words "according to the many" in *4QS^{b,d}* were replaced by a longer formulation in *1QS 5:2-3*: "according to the sons of Zadok, the priests who keep the covenant, and to the multitude of the men of the community who hold fast to the covenant; on their word the decision shall be taken on any matter having to do with the law, with wealth, or with justice." Whereas Vermes speaks of two different traditions, C. Hempel has developed the thought further, speaking of a Zadokite recension, the marks of which she also detects in the text of the *Rule of the Congregation* (*1QSa*), a different manuscript copied on the same scroll with *1QS*.

P. S. Alexander begins from the principle that the order in which the manuscripts were copied holds the key to the order in which the different recensions were created. *1QS*, which is generally dated to about 100 to 75 B.C., contains a longer version. The manuscripts *4QS^b* and *4QS^d*, which are dated a half century later, to the last third of the last century B.C., have preserved a shorter version of the document than *1QS*. Alexander, in contrast to Milik and Vermes, considers *4QS^{b,d}* a result of intentional omissions from the longer document. His explanation of the variant in *1QS 5:2-3* versus *4QS^{b,d}* (above) is that *1QS* reflects an early stage in the history of the community when the Zadokites held a leading position, whereas *4QS^{b,d}* belong to a later stage when their position had weakened. The manuscript *4QS^e* lacks the large section *8:15–9:11* in *1QS*. Alexander thinks that this was an intentional omission, after the redactor observed contradictions and repetitions in that section. As to the relationship between *4QS^{b,d}* and *4QS^e*, Alexander sees *4QS^e* as the

latest redactional stage. Thus, his suggestion of the order of the MSS is 1QS (oldest), 4QS^{(b),d}, 4QS^c (youngest).

S. Metso, in a literary- and redaction-critical analysis of the Cave 4 manuscripts (4QS^{a,j}), presents a comprehensive treatment of all the *Serek* variants. She sees 1QS as a relatively late stage in the development of the document and considers the forms transmitted by 4QS^c and 4QS^{b,d} as forerunners of that in 1QS. The main characteristic of the redaction that can be detected by comparing 4QS^{b,d} and 1QS was the need to provide scriptural legitimization for the rules of the community and to strengthen the group's self-understanding as the true keeper of the covenant and the law. The redaction observed by comparing 4QS^c and 1QS, however, aimed at bringing the text up to date. Thus 4QS^c and 4QS^{b,d} represent two lines of tradition that derive from an earlier version, a version that (1) as witnessed by 4QS^d did not include the material parallel to 1QS 1—4; (2) as witnessed by 4QS^d commenced with the text parallel to 1QS 5 and was addressed to the *maskil*; (3) as witnessed by 4QS^{b,d} did not yet have the scriptural quotations or the additions aimed at strengthening the community's self-understanding; (4) as witnessed by 4QS^c did not yet include the section parallel to 1QS 8:15—9:11; and (5) as witnessed by 4QS^c lacked the final psalm found in 1QS 10—11 but possibly included (as does 4QS^c) the calendric text *Otot*. The redaction as found in 1QS is a combination of both lines of tradition as in 4QS^c and 4QS^{b,d} and thus includes both the final psalm and the scriptural quotations and community-oriented additions. The latest stage of redaction is to be seen in the revisions and additions made even later by the scribal corrector in 1QS 7—8. Thus the plurality of textual forms indicates that the community had continued copying older versions even when newer, expanded versions were available. In this she points to the parallel of the biblical manuscripts, where the same phenomenon is documented.

4. The Relationship to Other Texts of the Qumran Community.

Two other works, the *Rule of the Congregation* (1QSa) and the *Book of Blessings* (1QSB), were copied on the same scroll as 1QS, and scholars question the rationale for compiling these works together. Are 1QSa and 1QSB to be seen as independent works in a collection with 1QS or as

two appendices to 1QS? The question has even been raised whether the community that created 1QS was the same as the community behind 1QSa. The three works share some common vocabulary, yet there are significant differences between them. The literary genre of 1QSB is different from that of 1QS and 1QSa, and, while 1QSa describes an *eschatological community, 1QS describes the historical community that lived at Qumran.

The **Damascus Document* (CD) shares many features with the *Rule of the Community* in vocabulary, themes and theology, but there are clear dissimilarities as well. The *Damascus Document* has long sections describing the history of the community, whereas the *Rule of the Community* shows no particular interest in the events of the community's past. The CD has references to *women and *children, whereas 1QS never mentions them. There is nothing comparable to the doctrine of the Two Spirits (1QS 3:13—4:26) in the *Damascus Document*. Puzzling differences occur in the thematically parallel sections found in both 1QS and CD. For example, the novitiate for membership in the community is longer according to the *Rule of the Community* than according to the *Damascus Document*; and in 1QS it is the many (*ha-rabbim*) but in CD it is the "the overseer" (*ha-m^cbaqqer*) who approves candidates for membership. The differences in the organizational terminology (e.g., the different functions attributed to *ha-m^cbaqqer*, *ha-paqid*, *ha-maskil* and *ha-rabbim*) are particularly difficult to explain.

The differences between the two documents have often been explained using sociological and historical factors. That is, 1QS was viewed as written for the community centered at Qumran, whereas CD was aimed at the larger Essene membership in the towns. Some of the recently published Cave 4 documents that were previously unknown, however, do not seem to represent clearly either one group or the other. A manuscript called *Miscellaneous Rules* (4Q265; *olim Serek Damaseq*), for example, contains features from both the *Rule of the Community* and the *Damascus Document*. *Miscellaneous Rules* includes rules that are typical for the *Damascus Document* (e.g., *sabbath regulations), and like the *Damascus Document* mentions women and children. However, it lists transgressions that occur in the *Rule of the Community*, such as complaining against those ranked higher in the

community, lying about a neighbor, insulting or betraying a neighbor, falling asleep in the community meeting and guffawing stupidly. Similarly, two Cave 4 manuscripts of the *Damascus Document* (4Q266 = 4QD^a and 4Q270 = 4QD^c) include a penal code, which does not have a parallel in CD but is clearly based on the same text as the one in 1QS 7. Although the parallel sections in 4QD contain some regulations that are absent in 1QS, the order of the regulations is the same. The analysis of the parallel sections clearly indicates that the writers behind 1QS and 4QD^{a,c} used the same source.

These complexities have implications for methodology in studying rule texts. Since different groups used common sources and borrowed material from each other, it is problematic to distinguish and identify the specific groups behind the manuscripts. If whole blocks of material in manuscripts are borrowed and adapted, what are the criteria that make it possible to assign a manuscript to a particular group (e.g., a celibate community versus a community where *marriage was a common practice)? The composite nature of the documents needs to be taken into account, and analyses should concentrate on separate passages, acknowledging the developmental history of texts rather than only on the complete final redaction.

5. The Relevance of the Document for New Testament Studies.

At least four areas can be mentioned where it is fruitful to compare the NT material with the *Rule of the Community*.

5.1. Citations of the Old Testament. First, the *Rule of the Community* as well as other rule texts found at Qumran (e.g., CD and IQM), which combine citations into a prose narrative, come close to the way citations are used in the NT. Often an OT citation serves to bolster up or illustrate an argument, or it may act as a kind of proof-text. For example, both 1QS and all four Gospels cite Isaiah 40:3. In 1QS 8:12-16 it is used for the Qumran community's self-understanding in its withdrawal into the desert. In the NT the same verse is used by all four Evangelists to explain John the Baptist's presence in the desert (Mt 3:3; Mk 1:3; Lk 3:4-6; Jn 1:23). Deutero-Isaiah's original proclamation was that Yahweh was about to put himself at the head of his people and lead them to freedom from exile across the desert, as he did at the exodus from Egypt

into the promised land. Both the *Rule of the Community* and the four Evangelists have in analogous ways disregarded the historical context, detached the verse from its original message and accommodated it into their new environments—the Qumran community to explain its withdrawal into the desert, and the Evangelists to explain John the Baptist's annunciation of the coming Lord.

5.2. Concepts and Theological Ideas. There are many concepts and theological ideas held in common. The strongly dualistic language of the doctrine of the Two Spirits (1QS 3:13—4:26) has similarities with the ethical and eschatological dualism in the Gospel of John:

God created man to rule the world, and he assigned two spirits to him that he might walk by them until the appointed time of his visitation; they are the spirits of truth and of injustice. From a spring of light come the generations of truth, and from a well of darkness the generations of injustice. Control over all the sons of righteousness lies in the hand of the prince of lights, and they walk in the ways of light; complete control over the sons of injustice lies in the hand of the angel of darkness, and they walk in the ways of darkness. (1QS 3:17-21, trans. M. A. Knibb)

For the opposition of light and darkness in John, see John 1:4-5; 3:19; 12:35-36 (see also 1 Jn 1:5-6) and of truth and falsehood, see John 3:21; 8:44 (see also 1 Jn 2:21, 27; 4:6). But though some parallels are striking (e.g., "spirit of truth" in Jn 14:17; 15:26; 16:13 and 1QS 3:18-19; 4:21, 23; "sons of light" in Jn 12:36 and 1QS 3:13, 24, 25), Johannine dualism—in which Jesus is truth incarnate—is not identical with that of the Essenes, for whom the truth is revealed in the Torah. Dualistic thinking is broadly attested in Judaism and later Christianity, as can be seen in **Jubilees* 7—12, **Sirach* 33, 1 *Enoch* 2—5 and 41—48 (see *Enoch, Books of*) and **Testaments of the Twelve Patriarchs* (*T. Jud.* 20:1-4; *T. Asher* 1:3—6:5; 3—6; *T. Benj.* 4:1—8:3). Moreover, this dualistic thinking can be compared with the idea of the Two Ways expressed in Matthew 7:13-14 and in later Christian literature, such as *Didache* 1—6 and *Epistle of Barnabas* 18—21.

A transition toward Paul's central belief of justification by divine grace (e.g., Rom 3:21-31) can be seen, for example, in 1QS 11:9-15. Though based on OT ideas, the Qumran theology shows a Palestinian Jewish development

that has risen to a new plane, having synthesized the ideas of universal sinfulness, dependence on the mercy of a gracious God and a new state of righteousness derivative from that of God:

And I belong to the Adam of wickedness and to the assembly of evil flesh. My iniquities, my transgressions, my sins along with the perversities of my heart belong to the assembly of worms and of those who walk in darkness. . . . To God belongs judgement and from his hands comes perfection of way. . . . But for me, if I falter—the mercies of God are my salvation for ever; and if I stumble in the iniquity of flesh, my judgement is with the righteousness of God, which shall endure for ever. . . . In his compassion he has drawn me near and in his mercies he will bring in my judgement. In the righteousness of his truth he will judge me and in his great goodness he will cover for ever all my iniquities; and in his righteousness he will purify me from the uncleanness of mankind and the sin of the sons of men, that I may praise God for his righteousness and the most high for his majesty. (trans. A. R. C. Leaney)

The idea of *mysteries that are revealed only to the chosen of God but hidden from others, which has its prototype in the book of Daniel (e.g., Dan 2:19, 28-30, 47) and is a theme used in Matthew and Luke (e.g., Mt 10:26 par. Lk 12:2; Mt 11:25 par. Lk 10:21; Mt 11:27 par. Lk 10:22; Mt 13:35; Lk 18:34), may be compared with that in the *Rule of the Community* and other Qumran writings (1QS 4:6; 5:11-12; 1QH 9:21; 20:13; 4QpHab 7:4-5).

5.3. Hebrew/Aramaic Expressions. Some expressions attested in the *Rule of the Community* and other Qumran writings provide the Hebrew or Aramaic equivalents of NT phrases, documenting that these Hebrew or Aramaic expressions were in use in the period when the NT writings were being formulated. Fitzmyer lists, for example, the Pauline expressions "deeds of the law" (*erga nomou*; Rom 3:20, 28; Gal 2:16; 3:2, 5, 10; cf. 4QFlor 1:7, 4QMMT C 27; 1QS 5:21; 6:18), "the righteousness of God" (*dikaïosynē theou*; Rom 1:17; 3:5, 21, 22; 10:3; 2 Cor 5:21) and "a spirit of holiness" (*pneuma hagiōsynēs* in parallelism with *kata sarha*; Rom 1:3-4; 1QS 4:21; 8:16; 9:3).

5.4. Community Structures and Practices. Certain community structures and practices are sim-

ilar in the *Rule of the Community* and the NT. At Qumran the term "the many" (*ha-rabbim*) designates the group of full community members that had judicial functions (e.g., 1QS 6:11-12; see 2 above). This Hebrew word probably lies behind Paul's reference in 2 Corinthians 2:5-6 to a discipline by "the majority" (see also Acts 6:2, 5; 15:12, 30). Again, the eucharistic words "my blood of the covenant that is poured out for many" in Matthew 26:27-28 and Mark 14:23-24 may echo the way this term was used at Qumran. Though the designation of "the many" is somewhat unclear in Matthew and Mark, the parallel in Luke 22:20, "poured out for you," suggests that Luke understood "the many" as referring to the group of disciples. Likewise, the Hebrew word for "the overseer" (*ha-m^obaqqēr*) is the translational equivalent of *episkopos* ("overseer/bishop") in the NT (Phil 1:1; 1 Tim 3:1-7; Tit 1:7-9).

Another feature in common with the Essenes and the followers of Jesus and the early church is the division into twelve (Jas 1:1; Mt 19:28; Lk 22:30). According to 1QS 8:1 there should be twelve men and three priests in the council of the community, apparently signifying the twelve tribes of *Israel and the three clans of the tribe of Levi (cf. Num 3:17-20).

Finally, the practice of sharing property in common is attested at Qumran (1QS 1:11-13; 6:16-23, 24-25). The correlation between spirituality and one's attitude toward wealth is parallel to that seen in Acts 2:44-47; 4:34-37; 5:1-11 (see also Lk 3:10-14; 8:1-3; 12:33).

RULE OF THE CONGREGATION/ MESSIANIC RULE (1QSa)

The *Rule of the Congregation* (1QSa) is part of one of the original seven scrolls found in Cave 1 near Khirbet *Qumran. It is also known as the *Messianic Rule* as well as the *Messianic Banquet*. Its relationship to NT literature may be attributed to a common Jewish background that begins with the OT. The scroll is important for the insights it gives us into early Jewish messianic expectations.

1. Text, Title and Content
2. Contribution to New Testament Studies
3. The Congregational Meal

1. Text, Title and Content.

The text was originally published by D. Barthélemy (1955). A critical edition has been done by J. H. Charlesworth and L. Stuckenbruck (1994), but the most extensive and important study of the text was done by L. H. Schiffman (1989).

The composition is two columns long (51 lines) and was originally included on the same scroll as the larger, more well-known **Rule of the Community* (1QS) along with the **Book of Blessings* (1QSB). This short text was composed in Hebrew sometime before 75 B.C. The scroll has proved one of the more enigmatic of the Qumran scrolls for a variety of reasons, including the poor state of preservation and the carelessness of the scribe. The language is archaizing, recalling OT literature, albeit in an indirect way (e.g., cf. 1QSa 1:11 and Ex 30:11-16; 1QSa 2:11-12 and Ps 2:7).

The *Rule of the Congregation* gets its title from the opening words of the text: "This is the rule of the whole congregation of Israel in the last days" (1QSa 1:1). This also indicates one of the main interests of the scrolls, namely, proper conduct in the eschaton. What follows suggests that the writer assumed that his readers, by following the community rules, were preparing the way for and living proleptically in the final messianic age (see Eschatologies).

The content of 1QSa may be outlined as follows: (1) introduction (1:1-5), (2) stages of life

before full initiation into the community (1:6-18), (3) disqualifications from the community (1:19-22), (4) the work of the Levites (1:22-25), (5) purity of the convocation (1:25-27), (6) those invited (1:27-2:3), (7) those not invited (2:3-10) and (8) proper conduct at the messianic banquet (2:11-22). The stages of life here are paralleled by a similar list in Mishnah 'Abot 5:21, where a person is supposed to begin Scripture study at age five, Mishnah study at age ten, to take up business at age twenty, and so on until the age of one hundred. Another example of this genre is found in the rabbinic midrash on Ecclesiastes illustrating the widespread use of the genre (see *Eccles. Rab.* 1:2 §1). We may assume that each list was shaped by the views of its authors; in the case of the Qumranites this meant outlining the gradual induction into "the holy congregation" (e.g., 1QSa 1:12-13).

2. Contribution to New Testament Studies.

The *Rule of the Congregation* is clearly a Qumran sectarian composition. Two other documents on the scroll, the *Rule of the Community* (1QS) and *Blessings* (1QSb), are the most important for contextualizing the text. Other important texts include the *War Scroll* (1QM) and the *Temple Scroll* (11QTemple) (e.g., 1QSa 1:14-18 with 1QM 6:12-13 and 1QSa 2:3-4 with 1QM 7:3-6 and 11QTemple 45:7-18). These and other parallels are discussed at length by Schiffman. The parallels, however, do not suggest direct dependence between the various scrolls but rather point to a common background within the Qumran community.

Perhaps one of the most interesting aspects of the *Rule of the Congregation* is the role of *women. When the Men of God's Counsel assemble, they are supposed to bring "children along with women" and all will hear the "statutes of the covenant" (1QSa 1:4-5). Likewise, the restriction that a fledgling of the community should not lie with a woman until age twenty implies *marriage among the community (1QSa 1:9-10). This all flies in the face of the conventional wisdom, no doubt heavily influenced by *Pliny's and *Josephus's descriptions of the *Essenes, that the Qumran sectarians lived without women. It is clear that the rule speaks of the messianic age so that one must admit that women and children had a place at the messianic banquet of the final eschaton.

In spite of its fragmentary condition, the *Rule*

of the Congregation contributes to our understanding of Qumran sectarian *messianism. First, the text strengthens the conventional interpretation of Qumran messianism as configured with two messiahs, royal and priestly. Second, it describes the otherwise unknown messianic banquet in the last days. There has been much debate about an apparent lack of unanimity across the whole Qumran corpus about messianic expectations, particularly whether there was one or two messiahs (e.g., Abegg). Much of this problem stems from the diversity of the corpus, which stretches over at least three centuries and which includes clearly nonsectarian compositions (most obviously biblical books, **Enoch*, **Jubilees*). There seems more unanimity among scrolls of unquestioned sectarian origin (e.g., 1QS 9:11; 4QFlorilegium; CD 7:14-21; see Damascus Document). 1QSa focuses particularly on the role of the Messiah of Israel; the role of a priestly messiah in the messianic banquet is secondary and unfortunately appears in some of the most heavily damaged parts of the text (1QSa 2:11-13, 19).

One point of particular contention in 1QSa concerns Barthélemy's original reading of the last word column 2, line 11 as "begets" (Heb *yôlid*); hence, God begets the Messiah. The text here is broken and difficult, and ironically computer enhancement of the scroll has supposedly helped both confirm (Vermes) and correct the reading (Charlesworth, who reads "leads forth" [Heb *yôlik*]). In truth, the text is so badly damaged that even computer enhancement does not completely vindicate any reading. The original reading is certainly in accord with the idea of the Messiah as "son of God" (see Son of God Text [4Q246]), and it is even anticipated by Psalm 2:7 (also Ps 110:3), in which God declares to his anointed: "You are my son, today I have begotten you [Heb *y'lidîkā*]." Such ideas certainly run against the grain of rabbinic conceptions of the Messiah. The idea of Jesus as "begotten" stems from the OT and gave rise to early developments in christology and to later christological debates (see, for example, *1 Clem.* 36; *Letter of Arius to Eusebius*, c. A.D. 321).

3. The Congregational Meal.

The idea of a congregational meal was critical not only to the messianic age but also to the present age of both the Qumran community and the early Christian church. For the Qumran sec-

tarians, the ideal of a community meal undoubtedly meant that their present age was intended to mirror the expected messianic age (see Banquets). The same was true for the early Christian community. Indeed, Jesus' parables that refer to the royal wedding banquet in the kingdom of heaven (Mt 22:1-14; 25:1-12) and the common meal of the early Christians (Acts 2:46) should now be read in light of the Qumran community meal and their vision of a messianic banquet.

RULER CULT

The imperial cult was an important expression of loyalty and gratitude toward the *emperor: since his gifts matched those of the gods, so also should the thankful response. The cult both articulated the position of the emperor in the world and provided provincial elites with a language for diplomacy and strategy for developing relations with this powerful figure. For those who were committed to the worship of one God, however, imperial cult became a point of high tension with the larger society.

1. Ruler Cult in the Greco-Roman World
2. The Imperial Cult and the Jews

3. The Imperial Cult and the Early Church

1. Ruler Cult in the Greco-Roman World.

The cult of the Roman emperor, the form of ruler cult most important for the NT and its environment, was primarily a sacral articulation of the role and significance of the emperor within the *Roman Empire. It gave visual and ritual expression to the stature of this imposing figure and provided a language for understanding one's relatedness to this figure, whether as beneficent *patron or as *paterfamilias*, the head of a vastly extended family. The specific form of the cult differed in the various parts of the empire, especially between the eastern provinces, which had a long history of offering divine honors to rulers, and the western provinces, especially Italy (Earl). Nevertheless, imperial cult in all parts of the empire focused attention on the emperor as the patron of the world. Since his gifts matched those of the deities, it was deemed only fitting that the expressions of gratitude and loyalty should take on the forms used to communicate with the patron deities themselves.

1.1. Eastern Provinces. The East had a long history of ascribing divine honors to powerful figures. Most pronounced in Egypt, where pharaohs had been hailed as sons of the Sun God for many centuries, this became more common in the other territories of the eastern Mediterranean after the career of *Alexander the Great. Such honors were rooted first in the awareness of the power of a ruler. A papyrus fragment, apparently from a child's book, reads: "What is a god? That which is powerful. What is a king? He who is equal to the divine." The person who can do exponentially more than others, whether a governor, a general, a pharaoh or a Hellenistic monarch, was placed by such thinking close to the deities, having more in common with that order of being than with the common person. The power that the Roman emperor had over the known world—legions moving at his command, movement of enormous amounts of resources at his direction, and so forth—would make the distinction between himself and the gods all the more blurred.

Cultic honors were also rooted in the more basic institution of *patronage. If a rich person provides grain for a poor family in times of famine, that family owes a deep debt of loyalty, gratitude and obedience to the patron. The family is obliged to spread the good report of the patron's

virtue and beneficence, to serve the patron when called upon and to remain loyal to the patron against his or her rivals. When a general liberates a city from tyranny, or a governor provides ongoing stability, or a benefactor provides relief for an entire province in times of famine, how can the beneficiaries show ample gratitude? The honors due the gods seemed the only appropriate form of thanks for a patron who gave gifts such as were normally sought from the gods. When *Athens greeted its successful general, Demetrius Poliorketes, it used cultic language:

The other gods must be far distant, or have no ears, or even do not exist, or, if they do, care nothing for us—but you we see as living and present among us, not of wood or of stone, but truly present. Thus we pray: above all, make peace, Most Beloved, for you are Lord [*kyrios*]. (FHG 76 F13)

The city's safety and continued peace rested on the efforts of this military figure, and since he provided what people normally looked to the gods to provide, it was deemed fitting to render thanks worthy of the divine.

A similar picture emerges from Nicolaus of Damascus's firsthand observations concerning the origin of the cult of Augustus:

People gave him the name [Augustus] in view of his claim to honor; and, scattered over islands and continents, through city and tribe, they revere him by building temples and by sacrificing to him, thus requiting him for his great virtue and acts of kindness toward them. (Nicolaus of Damascus *Life of Augustus* 1)

The *pax Augusti* (see *Pax Romana*) was viewed as relief of divine proportions, and the return of thanks must be equal to the gift. Augustus thus succeeded in the East to the tradition of according divine honors to benefactors, generals and, during the Roman republic, governors (Bowersock). As long as the emperor was strong and his clients faithful, peace and prosperity would remain and the horrors of civil war and foreign invasion be prevented.

The imperial cult brings together these two aspects of power and patronage. The cult gave expression to the power of the emperor over the life of the province and the dependence of provincials on his favor and aid. The cult, however, also provided a means of access to the emperor. The language of the imperial cult became the language of diplomacy (Price). Provinces sought

imperial aid (benefactions) through the mediation of the priests of the imperial cult, who both officiated at a distance and became the official ambassadors to Rome on behalf of the province (Price; Thompson). The cult not only provided the province with a representation of its emperor, but it also provided the emperor with a representation of the province (Thompson). It was essential that this image be one of uncompromising loyalty and gratitude, so that the province could be assured of ongoing favor. The Jewish author of *Wisdom of Solomon, a non-participant observer of the ruler cult, provides an intriguing testimony (Wis 14:17-21) supporting the interpretation of the cult as the forging of links of patronage between province and *princeps* (emperor).

The imperial cult was embedded in the cults of the traditional deities. Frequently, the statues of the emperor and traditional deities shared the same sacred space, emphasizing their connectedness. The emperor was not simply a god but the vessel by which the traditional gods established order and showered their gifts upon humanity. He was himself an object of veneration but also the chief priest of the Roman world, *pontifex maximus*, and therefore he stood as mediator between the gods and the human race (see *Patronage*). *Coins often feature the portrait of the emperor with his titles (including *divi filius*, "son of the deified," and *pontifex maximus*) on the obverse and portraits of one or another deity on the reverse, showing that his rule was grounded in the rule of all gods. He ruled by divine right, and his achievements were signs of divine favor.

Roman imperial ideology expressed itself not only in the cult of the emperor but also in the cult of Roma. Smyrna appears to have been the first to design a cult for Rome, raising a temple to her in 195 B.C. (Earl). Augustus refused to have any temple consecrated to himself, except in tandem with the goddess Roma. *Rome was chosen by the gods to rule the world, to subdue all nations and lead them into a golden age, united under its banner. Temples everywhere were dedicated to *Roma Aeterna*, "Eternal Rome," which would reign forever. Her dominion over the earth was thus promoted and welcomed as the will of the gods and the cause of lasting peace and well-being.

Imperial cult was not imposed on the eastern provinces by the emperor or his staff. Divine

honors and cult were motivated from below and from the periphery of the empire as a means of establishing meaningful and favorable connection with the center of power and beneficence. Local provincial elites fostered active cults, enjoying the opportunities that holding priesthoods in these cults brought for advancing their prestige and ambitions for higher offices in the emperor's administration. At the same time, the fear of the return of civil disorder and the ever-present threat of invasion from foreign kingdoms like Parthia made the strength of Rome a welcome bulwark for those under its protection. Rome's power meant order and security, and the cult of the *Augusti et Roma* became an important expression of loyalty to that sheltering power. The emperors needed only to regulate this cult, and most of them push in the direction of moderation rather than intensification of cultic honors.

1.2. Rome and the West. In Italy, the custom of according divine honors to a living person had no precedent. Here, imperial cult took shape around the well-established family religion of the *genius*. Each family performed rites honoring its *genius*, the guardian spirit of the head of the household, and its *lar*, the spirit of the family's founding ancestor. When Augustus became the head of the state, rites began to be offered in public sites and in private homes to his *genius*. This articulated Augustus's role as head of the vastly extended family of the Roman state. He was the *pater patriae*, "father" or "patron of the country," the *paterfamilias* of the empire. Such cultic honors practiced throughout Rome and Italy "took natural root as an expression of that Roman gratitude for peace and stability established and guaranteed by the person and power of Augustus" (Earl, 174). Imperial cult failed to take substantial root in Gaul or the German frontier regions, there being nothing in the local, tribal, indigenous religions to which to attach the figure of the emperor. Cultic centers were established in the more Romanized areas but never reached the fervor that the cult enjoyed in the East (*see Roman East*).

2. The Imperial Cult and the Jews.

The Jewish people, because of their exclusive commitment to one God, offered sacrifices to this God on behalf of the emperor rather than to the emperor, and these were accepted by most emperors as a suitable display of loyalty and goodwill. Jews throughout the empire were

officially given the same consideration, although this did not guarantee that local populations of Greek cities would accept the Jews, who refused to take part in the cults of the traditional gods and the emperor, as fellow citizens and equal sharers in the life of the city.

Two incidents involving imperial cult deserve attention, since the impression these made on Jews was widespread and long-lasting. *Josephus (*J.W.* 2.10.1-5 §§184-203; *Ant.* 18.8.2-9 §§261-309) tells of Gaius Caligula's attempt to erect a statue of himself in the Jerusalem *temple, thus giving the God of the Jews a face that would also link the site with imperial cult. The Jews refused to allow the installation of the statue, which would have been another "desolating sacrilege." When Petronius, the governor of Syria, realized that carrying out the emperor's order would result in massive loss of life, he appealed to Gaius to reconsider. Only the timely assassination of Gaius averted a disaster in Judea.

*Philo (*Leg. Gai.* 193-54; *Flacc.* 41-52) and Josephus (*Ant.* 18.8.1 §§257-60) both record how imperial cult was used as a weapon against Jews in Egypt during the escalating ethnic violence there between A.D. 38 and 41. Some anti-Jewish elements seized upon Gaius's zeal for divine honors as an excuse to break into the *synagogues of *Alexandria and install statues of Gaius and other tokens of imperial cult. The Jews could not remove them, which would be punishable as sacrilege, nor could they use the sites for their own worship while the idolatrous trappings were in place. Philo served on an embassy to Gaius seeking the restoration of their privileges under his predecessors, but only Gaius's death and the accession of Claudius brought a return to normalcy in Alexandria for the Jewish population. The riots in Alexandria, occasioned in part by Jewish attempts to clarify their position as full citizens of the Greek city, also highlight the connection of cult and citizenship: Jewish abstinence from the cults of the traditional gods and the emperor was a sign of their lack of any claim to "equal citizenship" in the eyes of many non-Jewish neighbors (Josephus *Ant.* 12.9.1-2 §§121-26).

3. The Imperial Cult and the Early Church.

3.1. Gospels. The command of Jesus to "give back to Caesar what belongs to Caesar and to God what belongs to God" (Mt 22:21 par.), while

responding in the first instance to the narrower question of paying taxes to a foreign Gentile power, articulated a basic distinction between the emperor and God and between the honors due to each. Jesus also set the fear of God above the fear of any mortal with the *ius gladium*, the authority to execute the body (Mt 10:28 par.). Such sayings would reinforce the Christian commitment to offer divine honor exclusively to the one God and to protect that exclusivity with one's life should the need arise.

Luke's infancy narrative resonates with, and tends to supplant, claims for a Golden Age inaugurated by Augustus. An inscription from Priene in Asia Minor bears witness to the attribution of Augustus's rule to the generous provision of providence, speaking of Augustus as the virtuous benefactor of the human race and bringer of peace. Augustus has surpassed the hopes of preceding generations and leaves no expectation that his benefactions will be surpassed in the future. The "birthday of the god" signifies for the world the "beginning of his good news." Luke declares in narrative form that God's provision for the benefit of humanity arrives not in Augustus but in Jesus, the announcement of whose birth is truly *euangelion* ("good news") and the sign of God's favor. The divine gift of *salus* ("well-being") becomes available not in the emperor but in Jesus, the Savior and Benefactor of the human race. It is in Jesus that all former hopes for a time of blessedness (articulated in the Jewish prophets) find fulfillment and whose provision for deliverance and wholeness make it impossible ever to hope for better. Such a text again serves to direct highest honors toward Jesus and the one God, calling for a more moderate assessment of the emperor's importance.

3.2. Epistles. Romans and 1 Peter contribute to an alternative ideology of the emperor, one that will allow the Christian to honor the emperor within the framework of an exclusive worship of God and God's Anointed. The authorities are "servants of God" (Rom 13:4, 6) who restrain bad deeds and promote doing good (Rom 13:3-4; 1 Pet 2:14). The Christian response is to be subject to them precisely as God's agents (Rom 13:1, 5) and to give them the taxes, respect and honor that is their due. This is, however, precisely to give the emperor less than the Christians' neighbors believe to be his due, namely, cultic honors. Such obedience, which should show the unbelieving critics of the

church that Christians are not a dissident and base element (1 Pet 2:15), is at the same time a critique of the extravagant and idolatrous displays of loyalty and obedience. While the emperor may be supreme among human authorities, the Christian's response to the emperor is qualitatively different from his or her response to God: "Revere God; honor the emperor" (1 Pet 2:17).

3.3. Revelation. Imperial cult was extremely active in the province of Asia Minor: most of the cities addressed by Revelation contain archaeological evidence of a highly active imperial cult (Price; Friesen), and several were already in competition for the title of *neokoros*, "temple warden," of the provincial imperial cult. Ephesus and Pergamum were each honored as "twice *neokoros*" by the end of Trajan's reign (A.D. 117; Ferguson). Christians were routinely exposed to the cult and faced strong pressures to participate lest they arouse the ill will of their neighbors and local elites.

John's visions provide a cosmic perspective on this prominent phenomenon, undermining the imperial ideology at every point (deSilva 1991; Krodell; Cuss). The true center of power is not the emperor in Rome but God and the Lamb (deSilva 1993), who have an unrivaled claim to cultic honors as the creator and redeemer of humankind (Rev 4:1—5:14). They alone are "worthy" of acclamation as "savior" and "creator" (the first being used of civic benefactors, the second of "founders" of cities or colonies). Revelation 13 presents the imperial household and its cult (organized locally by the provincial government) as the manifestations not of divine governance but of Satan's rebellion against divine order (Rev 12:7—13:2). The emperor is not a model and object of piety but rather a blasphemer whose titles are an affront to the one God (Rev 13:2, 4-6). The imperial cult that sought to unify the empire in loyalty to its center (Rev 13:7, 12) competes with the church as God's means of unifying the world in true worship (Rev 5:9-10). Imperial cult is not a manifestation of divine power at work but a manufactured cult imposed by the local elites (notably not by the emperor, even here) upon the population (Rev 13:11-17).

The emperor's partner in worship, the goddess Roma, is unveiled as a prostitute whose reign means corruption. Rome and its emperors have brought not peace, law and security, but

rather stand under God's judgment for their violence, economic injustice and corruption of the known world. Revelation calls for ongoing critique of the imperial regime and the ideology that supports it. Incensed that God's honor has been so severely assaulted, John calls for protest and nonparticipation, sending the churches on a course of escalating tension with the larger society over the issue of who is worthy of worship (deSilva 1991; 1999).

3.4. Second-Century Developments. Imperial cult became increasingly a focus of confrontation and resistance in the second century. Pliny, governor of Bithynia and Pontus in A.D. 110, writes a revealing letter to the emperor Trajan concerning charges brought against Christians (Pliny *Ep.* 10.96). Pliny allows those who are so denounced the opportunity to repudiate Christ and to demonstrate their loyalty by offering wine and incense before the images of Trajan and the traditional gods. According to Pliny's report, many accept his invitation. Trajan confirms Pliny's procedure—releasing those who offer cultic displays of loyalty, punishing those who refuse—and thus sets a troublesome precedent for the legal prosecution of Christians (Downing).

The *Martyrdom of Polycarp* shows this policy at work several decades later (see *DLNTD*, Polycarp). After Polycarp is denounced and arrested, the chief of police counsels him to say "Caesar is Lord" and to offer incense so as to save his life (*Mart. Pol.* 8). The governor urges him likewise to take an oath "by the fortune of Caesar" (*Mart. Pol.* 9-10). Polycarp dies witnessing both to the civil obedience of Christians, "taught to pay due respect to God's appointed rulers and authorities" (*Mart. Pol.* 10), but also to the qualitative difference between the honor due to emperor and the honor due God and God's Christ. Such confrontations again serve to highlight the political and civic importance of cultic expressions of loyalty to the emperor.

S

SABBATH

The English "sabbath," like the Greek *sabbaton*, is a transliteration of the Hebrew *šabbāt*. The term designates the seventh day of the Jewish week, a day marked by the cessation of work and by religious and ceremonial observances. All four Gospels depict Jesus in conflict with his contemporaries on matters of sabbath observance. The traditions, rooted in Jesus' ministry, are used to accentuate themes central to each Evangelist.

1. Sabbath Law
2. Sabbath in the Gospels
3. Sabbath in Acts and the Epistles

1. Sabbath Law.

A prohibition of work on the sabbath is found in the Decalogue (Ex 20:8-11; Deut 5:12-15) and several other OT texts (e.g., Ex 31:12-17; 35:2), and its transgression is treated in the law codes as a capital offense (Ex 31:14-15; 35:2; cf. Num 15:32-36). Different motivations for the interruption of normal activities on the seventh day are given. The Israelite community was to be allowed to rest (the emphasis of Deut 5:12-15; cf. Ex 23:12); but the day was also to be considered holy (Ex 20:8; Deut 5:12), a portion of the Israelites' time which was consecrated to Yahweh (Ex 20:10; 35:2) just as the tithe of their produce was to be reserved for him. Israel's observance of the sabbath was to be a sign of its special covenantal relationship with Yahweh (Ex 31:12-17; Ezek 20:12, 20), an imitation of God's own rest after the completion of his creative work (Gen 2:2-3; Ex 20:11) and a reminder of the relief God granted his people in delivering them from slavery in Egypt (Deut 5:15). Those whose vision failed to extend beyond their pursuit of business naturally found the interruption an irritation to be evaded (Amos 8:5; cf. Jer 17:19-27; Neh 13:15-22). For Yahweh's faithful, however, the

day's observance was a delight (Is 58:13-14).

In the Second Temple period (515 B.C.-A.D. 70) the words of Scripture became the object of interpretation by legal experts (*see* Scribes). Their goal was to spell out the duties of God's people by defining the terms and limits of God's revealed commands. The sabbath provided a significant challenge since, from this point of view, the faithful needed to know precisely what constituted the "work" which was to be avoided if the command was not to be transgressed. Lists were drawn up (*Jub.* 2:29-30; 50:6-13; CD 10:14-11:18). Scripture itself provided some guidelines. Fires were not to be lit (Ex 35:3). Burdens were not to be carried (Jer 17:21-22), though from this point of view the term "burden" now needed legal definition. Similarly, a general prohibition of travel could be derived from Isaiah 58:13 (and *see* Ex 16:29). When such a prohibition took on the force of a legal statute, it became necessary to define the limits of a legitimate journey (cf. a "sabbath day's journey," Acts 1:12). That sowing and reaping are forbidden could be based on Exodus 34:21 (cf. Ex 16:25-30).

Further problems arose when the prohibition of work on the sabbath was perceived to conflict with other commands or with considerations of practicality or prudence. The principle that the prohibition may be disregarded when human life is in danger became well established (*see* 1 Macc 2:29-41). The service of the temple was conceded to take precedence over the sabbath (cf. Num 28:9-10; 1 Chron 23:31), as was circumcision. The extent to which considerations of practicality were allowed to influence sabbath regulations varied considerably with different interpreters. [S. Westerholm]

Sabbath law was interpreted very strictly at Qumran. According to the **Damascus Document* (esp. CD 10:14-11:18), prohibitions included walking further than 1,000 cubits (CD 10:21).

wearing perfume (CD 11:9-10), lifting a stone or dust at home (CD 11:10-11), aiding an animal in giving birth (CD 11:13) or lifting an animal that has fallen into a pit (CD 11:13-14). On this latter point, compare Jesus' remark in Luke 14:5. The **Songs of the Sabbath Sacrifice* from Masada and from Qumran's Cave 4 present heaven itself and its angelic liturgies in a sabbath framework. The **Temple Scroll* (11Q19) adds several interesting features pertaining to sabbath law and **calendar*. [C. A. Evans]

Jewish observance of the sabbath was well known and distinctive in the ancient world. It called forth both admiration (Josephus *Ag. Ap.* 2.39 §282; Philo, *Vit. Mos.* 2.21) and scorn (Josephus *Ag. Ap.* 2.2 §20-21) from outsiders and led, for example, to the excusal of Jews from service in foreign military forces (Jews would neither march forbiddlen lengths nor carry arms on the sabbath; see Josephus *Ant.* 14.10.12 §226-27). With laws whose scriptural background seemed clear, and with customs long and widely established, many Jews could be expected to comply. It can also be seen, however, that questions of proper observance were often a matter of interpretation. The various religious parties of Jesus' day not infrequently differed in their practice. And though each group doubtless pressed on others the claims of its interpretation to represent the will of heaven, such claims in our period were terrestrially unenforceable.

Positively, Jews met in **synagogues* on the sabbath day for prayer, Scripture readings and edifying discourses. The welter of prohibitions may strike the outsider, and surely struck the half-hearted, as a burden grievous to be borne; still, it should not be doubted that faithful Jews continued to find in their observance an occasion for joy.

2. Sabbath in the Gospels.

2.1. Mark. Jesus is said to have participated in synagogue services on the sabbath in Mark 1:21; 3:1 and 6:2. Instances of sabbath observance may be noted in Mark 1:32 (the people wait until sabbath is over to carry the sick to Jesus) and Mark 16:1 (the women wait until sabbath has passed before attending to the body of Jesus). Interestingly, Mark connects no queries with the sabbath healings reported in Mark 1:21-28 and 29-31. In the latter case, Jesus is depicted among friends; in the former, he is in the synagogue. That not every record of a sabbath

healing is linked with a dispute suggests that Jesus' activities were not in flagrant transgression of existing formulations of sabbath law and that, perhaps in the initial stages of his career, public enthusiasm may have silenced whatever private compunctions may have been felt. That objections are recorded on other occasions suggests that healing was liable to be construed as work and that in the absence of a life-threatening situation the scrupulous might well find cause for offense.

The issue in Mark 2:23-28 appears more clear-cut. Though gleaning in the fields of another was expressly permitted by pentateuchal law (Lev 19:9-10; 23:22), such activity on the sabbath breached the prohibition of sabbath reaping. Since the prohibition has a scriptural base (Ex 34:21; cf. 16:25-29), it is hazardous to apply the claim here that Jesus merely challenges scribal additions while conforming to scriptural commands. Nor does the defense of the disciples' activity in Mark 2:25-28 follow that tack (David's transgression, cited as a precedent, was clearly of pentateuchal law). Rather a precedent is cited from Scripture (1 Sam 21:1-6) for activity which, on the strict application of scriptural commands, was "not lawful."

The force of the illustration has been differently construed. (1) Some see the point of the comparison in the hunger felt by both Jesus' followers and those of David. The point would then be that, though the sabbath prohibitions insisted on by Jesus' opponents are valid in principle, they must yield to the higher claims of human need. But Mark makes no mention of the disciples' hunger, as he would surely have done if hunger had been the crux of the defense. Nothing suggests that their need was so extreme as to legitimate the transgression of the law. And indeed the unlawfulness of what David did is explicitly mentioned (Mk 2:26) in the defense of the disciples' activity. The point can hardly be that when the extenuating circumstances are taken into account, nothing unlawful has been done.

(2) Others note that the illustration records the behavior of David and suggest that Jesus is tacitly claiming a similar right as David's son, the Messiah, to somehow transcend the law. But the necessary implication of this view is that David was entitled by his calling or office to transgress divine commands applicable to other people, a point which neither scriptural law nor its later interpreters would concede.

(3) Most likely is the view that the example illustrates how Scripture itself countenances the breaking of the law strictly construed and thus calls in question the facile identification of God's will with a rigid interpretation of the terms of the law. Verse 27 (perhaps an independent logion introduced here because it was felt appropriate; so at least the new introduction and the absence of the logion from the parallels in Matthew and Luke may suggest) can be construed as advancing the previous argument on either the first or third reading given above. The divine origin of the sabbath is granted on either reading. Following interpretation (1) above, the logion represents a fresh insistence that humanitarian concerns must take priority over sabbath commands. In the case of the third interpretation proposed above, the point would now be that God's design in giving the sabbath for his people's good is overthrown when human behavior is subjected to rules developed in the casuistic interpretation of the law.

Finally, Mark 2:28 clearly and remarkably insists on Jesus' superiority as Son of Man over the sabbath law. It is not evident whether the verse is intended to represent a claim on Jesus' own lips or one added by the Christian community as a commentary on the preceding episode.

According to Mark 3:1-6 a healing performed by Jesus on the sabbath was found objectionable and occasioned the plotting of *Pharisees and Herodians (see Herodian Dynasty) against his life. For his part Jesus is said to be grieved by the attitude of those more concerned with the niceties of the law than with the well-being of a person (Mk 3:5). The defense of Jesus' activity given in Mark 3:4 is striking. No attempt is made to show that the healing does not overstep the command prohibiting "work." The interpretation of the terms of the command, by which the legal experts of contemporary *Judaism defined the divine will, is not here an issue. Rather, the Markan Jesus insists that God can hardly be offended or his will transgressed by the doing of good and the restoring of health on the sabbath (regardless, apparently, of whether or not the deed may be construed as "work"). God's will is rather disobeyed when evil is done or life "killed." It is debated whether the "evil" intended is that of leaving unperformed the miracle of healing or the active plotting against Jesus' life in which, according to the pericope, his opponents were involved on the sabbath.

It seems unlikely that sabbath observance was a significant issue for the Second Evangelist or the community for which he wrote. The two relevant episodes do not appear to focus on the community's need of either guidance or a defense for its sabbath behavior. Rather, the first incident celebrates the authority of the community's Lord over the institutions of Israel's law; the second is clearly meant to account for the hostility which Jesus' ministry aroused.

2.2. Matthew. For Matthew and his community, on the other hand, proper sabbath observance may well have remained an issue. Admittedly, the prayer in Matthew 24:20 (that the community's flight might not occur on the sabbath) does not point unambiguously in that direction. Even a Christian congregation not observing the sabbath would be exposed to hardship and danger if its people attempted to flee on that day in a Jewish environment. Nor does Matthew's Gospel preserve instances of sabbath conflict or discussions of proper sabbath behavior not found in Mark. But the parallels to Mark 2:23-28 and 3:1-6 in Matthew 12:1-14 show differences designed apparently to show that the sabbath command, when properly interpreted, had not been transgressed. Its continuing relevance may therefore be implied.

Perhaps the explicit reference to the hunger of Jesus' disciples (Mt 12:1) is intended to provide a humanitarian legitimation for their behavior. Matthew 12:5 adds an illustration from the Torah (cf. Num 28:9-10) by which priests violate the sabbath law without incurring guilt. Verse 6 then at least claims that the coming of the kingdom ("something greater than the temple") in the person of Jesus causes the sabbath laws to pale in significance. But perhaps the legal argument is implied that the activity of those in the service of the kingdom, like that of *priests in the temple, takes precedence over sabbath laws. In verse 7 a favorite Matthean OT citation (Hos 6:6) is repeated, indicating that sabbath laws are to be interpreted in such a way that divine mercy is emphasized rather than strict conformity with ritual prescriptions.

In the second pericope (Mt 12:9-14) verse 12 preserves but a fragment of the argument of Mark 3:4. The main emphasis in the Matthean account falls rather on a logion shared with Luke (Lk 14:5) which Matthew introduces here. Though the stricter construction of the law forbade the drawing up on the sabbath of an ani-

mal from a pit (CD 11:13-14; *L. Šabb.* 14:3), the logion assumes that in ordinary practice compassion prevailed and assistance was given. This being the case, no objection should be raised when a human being (who is, after all, worth far more than a sheep) is healed on the holy day. Proper sabbath observance does seem here to be a concern, but priority is given to claims of compassion over strict adherence to sabbath rules.

2.3. Luke. In the two conflict pericopes common to the three Synoptic Gospels, Luke (Lk 6:1-5, 6-11) follows Mark quite closely without the Matthean additions. But two new instances of controversy arising from sabbath healings are recorded. In Luke 13:10-17 the ruler of the synagogue objects to the healing of a woman with a chronic deformity. Work is allowed, he says, on six days of the week, and healings are then in order. There is therefore no need to desecrate the sabbath with such activity. The Lukan Jesus finds the objection hypocritical, noting that domestic animals are commonly "unbound" and led to water on the sabbath. Far more justified, surely, is the "unbinding" of a daughter of Abraham from a satanic affliction. Jesus' opponents are said to have been shamed by the response and the crowd delighted by the whole episode. In Luke 14:1-6 a variant of the argument presented in Matthew 12:11-12 is presented and leaves potential objectors speechless. The sabbath discussions in Luke seem designed to show compassion on the part of Jesus, the ready acceptance it meets from the crowds and the speechless shame to which opponents are reduced.

2.4. John. Johannine irony is undoubtedly to be seen in John 19:31 (cf. Jn 18:28), where punctilious sabbath observance is grimly juxtaposed with the crucifixion of God's Son. Sabbath healings lead to disputes in John 5 and 9; the former is recalled in John 7:22-23. In no case does the Evangelist evince a concern for guiding the sabbath behavior of his readers. In John 5 offense is first raised when, at Jesus' command, a pallet is carried on the sabbath (Jn 5:10) and exacerbated when it is learned that Jesus has healed on that day (Jn 5:15-16). Remarkably, the Johannine Jesus concedes that he "works" on the sabbath (Jn 5:17)—precisely what the law prohibits—but claims that he is merely acting as God his Father does. The charge that Jesus breaks the sabbath is thus conceded (Jn 5:18), but the interest of the Evangelist is rather on the

christological claim to which it leads.

In John 7:22-23 the unreasonableness of Jesus' opponents seems the point: they permit sabbath circumcision but object to the restoration of a man's health. Similarly, in John 9 the sabbath healing gives the Evangelist the opportunity to show Jesus' opponents as blind to the manifest workings of God in their midst (Jn 9:30-33), a blindness induced by their insistence that a divine representative must conform to the niceties of the old code (Jn 9:16). The memory of sabbath disputes aroused by Jesus is preserved in John, but it becomes the starting point for the pursuit of favorite Johannine themes: the divine sonship of Jesus and the necessity of faith in him.

2.5 Conclusion. As we have seen, sabbath controversies are found in Mark (Mk 2:23-28; 3:1-6), in material common to Matthew and Luke (Mt 12:11-12 par. Lk 14:5), in material unique to Matthew (Mt 12:5-7) and Luke (Lk 13:10-17; the incident of Lk 14:1-6), and in John (Jn 5; 7:22-23; 9). Furthermore, the authenticity of crucial logia (Mk 2:27; 3:4, etc.) is widely conceded. At the roots of the Gospel tradition, then, are memories of opposition to Jesus' sabbath behavior aroused among his contemporaries.

Opponents saw the divine will as requiring conformity with the terms of Torah's statutes as interpreted by legal authorities. Hence activities which could be construed as the "work" which Torah forbade were to be avoided unless extenuating circumstances (as defined by the legal experts) could be found to legitimate the activity. Jesus' behavior (and, according to one story, that of his disciples) was found to violate this stricture. The basic line of Jesus' defense as portrayed in the Gospels shows a different approach to the understanding of the divine will. No more than Jesus allows the terminology of Deuteronomy 24:1-4 to define the propriety of divorce (Mk 10:1-12) or the terminology of scriptural law to define norms for oaths (Mt 5:33-36), does he allow that the divine will for the sabbath rests in the proper interpretation of the word "work." When opposed he does not reply by arguing that, counter to his opponents' claims, "work" has not been done nor the command transgressed. He insists that doing "good" can never be wrong on the sabbath (Mk 3:4—a criterion quite different from the question whether or not "work" has been done), that compassion is a better guide to proper behavior than rules defined by legal experts (Mt 12:10-11), that God's

intentions with the sabbath are distorted when humans are subjected to a rigid code (Mk 2:27). Implicit in each case, and explicit at various points in the Gospel narrative, is the claim that Jesus has authority to interpret the divine will.

Only for Matthew is it likely that proper sabbath observance remained an issue. Only in this Gospel is it likely that the relevant pericopes were intended to provide guidance in the matter. In the other Gospels the traditional material serves other ends. Sabbath discussions provide the opportunity to highlight Jesus' authority, his compassion and the nature of his opposition. [S. Westerholm]

3. Sabbath in Acts and the Epistles.

3.1. Sabbath in Acts. Christian observance of the sabbath is presupposed in the book of Acts. Paul is portrayed as routinely entering synagogues on the sabbath, in order to preach the Christian gospel (e.g., Acts 13:14, 42, 44; 17:2 ["as was his custom"]; 18:4). There is no direct evidence that the sabbath had been abrogated by early Christians (Turner, 135-17), though the gathering "on the first day of the week" (Acts 20:7-12) may suggest that Christians had begun gathering on Sunday, in addition to attendance of the synagogue on Saturdays.

3.2. Sabbath in the Epistles. There are very few references to the sabbath in the NT epistles.

3.2.1. Paul. In Colossians 2:16 Paul urges his readers not to allow themselves to be judged "in questions of food and drink or with regard to a festival or a new moon or a sabbath" (RSV). The meaning of this verse is disputed; it does not necessarily teach that Christians should not assemble on the sabbath.

In 1 Corinthians 16:2, Paul commands the Christians of Corinth, "On the first day of every week [*mian sabbatou*], each of you is to put something aside and store it up, as he may prosper, so that contributions need not be made when I come" (RSV). This passage may presuppose Christian assembly on Sunday (as possibly in Acts 20:7-12), but it is not clear that assembly is in fact in view. In any case, nothing is said directly concerning observance of the sabbath.

3.2.2 Hebrews. The author of Hebrews admonishes Jewish Christians to enter God's "rest" (Heb 3-4). The author infers from Scripture and Israel's history that "there remains a sabbath rest [*sabbatismos*] for the people of God" (Heb 4:9). The reference here is not to weekly

sabbaths or to any particular holy day, but to the eschatological fulfillment of God's will. At this time all believers will enter God's rest, or sabbath. [C. A. Evans]

SABBATH SACRIFICE, SONGS OF THE See SONGS OF THE SABBATH SACRIFICE (4Q400-107, 11Q17, MAS1K).

SACRED SPACE. See ISRAEL, LAND OF; TEMPLE, JEWISH; TEMPLES, GRECO-ROMAN.

SACRIFICE AND TEMPLE SERVICE

Prior to the destruction of the temple in A.D. 70, the temple, its services and its priesthood lay at the heart of any identifiable "common" Jewish vision of Israel's life rightly ordered before God. Even Jews who lived at some distance from Jerusalem and its temple would have regarded the temple as the center of sacred space and of their mental map of the world (e.g., Dan 6:10; 9:21; Ezra 9:5; Jdt 9:1; *m. Kalim* 1:6-9; see Israel, Land of). Synagogue worship functioned as a sort of mirror site of the temple, reflecting aspects of temple worship and drawing its authority from the temple while also adding its own innovations. Central to temple worship was the liturgical act of sacrifice or offering.

Our knowledge of the duties of priests and Levites, the actual practice of sacrifice and worship, as well as the daily functioning of the temple is incomplete. The Torah, particularly in Leviticus and Numbers, provides a starting point for understanding the sacrifices and priestly service. Yet the Torah implicitly allowed for some variation in interpretation and implementation, and while Chronicles and Nehemiah offer occasional insights, we must reckon with centuries of historical development as well as the innovations of the Herodian temple. Various sources, such as Josephus (who was of a priestly family) and Philo in the first century A.D., the *Letter of Aristeas* from about the second century B.C. and *Jubilees* from about the middle of the second century B.C., provide insights into actual practices (see Hayward for selection of relevant texts). The Dead Sea Scrolls, such as the *Temple Scroll*, sometimes offer reflexive views of sacrifice and temple service. Later rabbinic sources, particularly Mishnah (c. A.D. 200), afford intriguing and sometimes detailed considerations of what went on in the temple. Although Mishnah views the temple service through nearly a century and a half of rabbinic tradition and debate, ideals and imagination, its recountings of temple services such as the daily sacrifices and the Day of Atonement are priceless for giving structure to our own critically informed historical imagination. In this article we will follow Mishnah in several instances, posting the caution here that in many cases we cannot discern which details are historical and which are not.

1. Function and Meaning of Sacrifice
2. Types of Sacrifice
3. Appointed Sacrifices
4. Provisions for Sacrifice and Temple Service
5. Access to Worship
6. Officials: Levites, Priests and High Priests

1. Function and Meaning of Sacrifice.

A distinction can be drawn between sacrifices and other gifts, or oblations, to God. Sacrifices (Heb *z'bah*) are gifts that are presented in whole or in part on the altar (*mizbēah*). These would include the burnt offerings, peace offerings, purification offerings, reparation offerings and grain offerings. Distinguished from these sacrifices proper are the gifts of firstfruits, wave offerings, heave offerings and tithes. We should observe that although the shedding of blood was an important element in the Israelite conception of sacrifice, this criterion does not prove adequate in distinguishing sacrifices from other gifts, for grain was also burned on the altar and was acceptable as a purification/sin offering for those who were very poor and could not afford two doves or pigeons (Lev 5:11-13; see below).

Numerous theories of Israelite sacrifice have been constructed, frequently answering the impulse to find a unified or underlying meaning for the variety of forms of sacrifice and how they evolved. As our purpose here is primarily to set out the phenomena of sacrifice and temple worship, we will not explore this question in any detail. Some fundamental features of Israelite and Jewish sacrifice should, however, be noted:

(1) Sacrifices and other oblations are gifts offered by humans to God, and their type, occasion and manner of presentation are prescribed by God.

(2) The offering of sacrifice is mediated by a male priesthood, and the layers of mediation were greater for Israelite women than for men.

(3) The giving, or "offering," of a sacrifice implies a personal cost and intentionality on the part of the one who offers, and in the most ideal circumstances the thing offered represents the labor or investment of the person's own time and labor (a relationship that is preserved in theory but indirect in experience when an animal, grain or wine is purchased at the temple).

(4) In sacrifices involving the slaying of an animal, perhaps particularly from the flock or herd, there is evoked a strong sense of substitution or representation of the animal's life for the

person or community, particularly symbolized in the action of placing hands on the head of the animal.

(5) The shedding of blood had particular atoning significance. Israelites were reminded that "life is in the blood," and blood was not to be consumed (Lev 17:11; Deut 12:23; *Jub.* 21:17-19; 1QapGen 11:17) but was reserved for God alone, the giver and Lord of life. Blood evoked the presence of a numinous power in animate life, and in cultic sacrifice it could symbolize expiation of sin or a purification from an unclean condition. Its use and disposal was strictly regulated.

(6) Where the sacrifice is offered for particular or for generalized sins, it is implicit that the animal is paying a price for an offense committed by the person or community offering it (though this is mitigated in the case of grain offered by the poor). The prevailing and strong impression is that, apart from the gift of divine forgiveness, sin would ultimately result in estrangement from God and death. (This perspective find its counterpart in the numerous scenes of judgment in Hebrew Scripture [e.g., Num 25:6-13], including the "ban," or "devotion" to Yahweh, of the Canaanite peoples in the wars of Yahweh [cf. Is 34:1-7; Ezek 39:17-20].)

(7) Israelite sacrifice (like that of other ancient Mediterranean cultures) evokes the notion of food offered to God (with the altar as table), and in all but the burnt offering or a sin/purity offering for the priest or community, this food is shared by humans, whether by priests exclusively or by the person and family of the one who offers it (peace offerings and Passover). While a literal understanding of this image is subverted in Israel's Scriptures by a passage such as Psalm 50:12-14, the archetype of table fellowship with a deity was significant for Judaism as it was also for Jesus and the early church (see Banquets).

Despite the centrality of sacrifice for Jewish worship, when the temple was destroyed by the Romans in A.D. 70, sacrifice ceased as an actual element in Jewish worship. Torah had prescribed that sacrifice was to be conducted at the "place" of God's choosing, where God would cause the divine name to "dwell" (Deut 12:15-17), and this place was the Jerusalem temple. When the temple no longer existed, and Jews no longer had access to its sacred site, sacrifice ceased. Some evidence suggests, however, that by the first century the centrality of the temple

and its sacrifices had suffered a degree of ambiguity (see Scott, 152-58). We learn of a rival temple at Leontopolis, Egypt, founded by a Zadokite priest (Josephus *J. W.* 1.1.1 §§3; 7.10.2-3 §§423-36) and perhaps even viewed as the fulfillment of a prophetic text (Is 19:18-23). But this would not have been regarded as acceptable by the mainstream of Jews, whether in the Diaspora or in the land of Israel. From the Dead Sea Scrolls we learn that the priestly oriented Essenes of Qumran, galvanized in their opinion that the current temple and its leadership were corrupt, had withdrawn themselves from participation in the temple services, adopted an interim mode of worship and life that excluded animal sacrifice (1QS 9:4-5; Josephus *Ant.* 18.15 §§18-19) and awaited the establishment of a new temple (11QTemple). Nevertheless, their perspective was focused on the centrality of the temple in Jerusalem and the hope of a new Jerusalem and restored temple. We should also bear in mind that some Jews living in Diaspora communities might seldom or never visit the temple. Despite all that may be affirmed of the central role of sacrifice in temple worship and the importance of the temple for Judaism of the first century, prior to the fall of Jerusalem there already existed modes and strategies for living faithfully as a Jew while not participating directly in temple sacrifice. Some of these perspectives and practices had been initially shaped during the experience of Babylonian exile.

Chief among these strategies was the association of prayer with sacrifice. Within the context of the temple cult, the morning and evening sacrifice was an occasion for prayer by the priests and the gathered laypeople (see Falk, 285-92). There is good reason to conclude that synagogue prayers in the first century were also conducted along the same lines, in correspondence with temple worship (see Safrai, 904-5). The Essene community of Qumran could speak of itself as constituting a spiritual temple engaged in a spiritual worship apart from the temple (1QS 8:1-10), and the *Songs of the Sabbath Sacrifice* envision an angelic worship in a heavenly sanctuary where atonement is made (apart from animal sacrifices) "for those who repent of sin" (4Q400 frag. 1 ii 16). These lines of evidence suggest that the early church and post-A.D. 70 Judaism found ready vectors within the Jewish tradition for an understanding of spiritual sacrifice apart from the temple.

2. Types of Sacrifice.

The Torah does not neatly categorize the sacrifices and present them all in one place. While Leviticus may have functioned as a sort of handbook for priests, sacrificial instructions are also found in Numbers, and relevant material occurs elsewhere in the Pentateuch. Some fundamental patterns and distinctions appear and are helpful to keep in mind regarding sacrifices. First is the basic distinction between sacrifices offered on behalf of the individual and the community. Second, some sacrifices were occasional, called forth by particular sins or blessings or deliverances, and others were regularly prescribed, such as the daily morning and evening sacrifices, the weekly sabbath sacrifices, the monthly new-moon sacrifices, or the yearly Passover and Day of Atonement sacrifices. Third, not all sacrifices were specifically an atonement for sin or guilt; some were for worship and communion with God, for thanksgiving and celebration. Finally, the things sacrificed varied also, from the four-legged animals of the herd (cattle) and flock (sheep and goats) to the birds of the air (doves or pigeons) to the inanimate (and thus bloodless) produce of the field (grain) and vineyard (wine). In some cases the object of sacrifice was determined by a scale of economic means, with those who were financially able offering a sheep and the poor offering a bird or even grain (for pagan sacrifice, see Religions, Greco-Roman).

2.1. Burnt, or Holocaust, Offering (*ʿōlā*). The Hebrew term for this type of sacrifice suggests an "ascending" sacrifice, evoking the conveyance of the burning sacrifice "up" to God as the smoke ascends skyward. This sacrifice was to be a male without defect of the herd or flock, or it could be two birds. After the animal was slain, its blood was thrown against the altar; it was skinned (hides were never offered but were the priest's portion), cut in pieces, washed and salted (as were all sacrifices salted with the "salt of the covenant": Lev 2:13; *Jub.* 21:11; Josephus *Ant.* 3.9.1 §227) and placed on the altar. In the case of birds, the head was wrung off and placed on the altar, the crop (and probably the feathers) discarded, the body torn open and the whole placed on the altar to be burned; no part of a burnt offering was to be consumed by priests (Lev 1:3-17; Josephus *Ant.* 3.9.1 §§226-27).

As Leviticus states, the burnt offering "makes atonement" (NIV) for the one who brings it (Lev 1:4), and it is "an aroma pleasing to the LORD"

(Lev 1:9, 13, 17 NIV). This "atonement" might suggest that the offering is for sin, perhaps sins in general. But the Hebrew term *kipper* may more accurately be translated "to purge," and the broader contexts for which this sacrifice is prescribed or voluntarily given suggest it functions as a means of approaching Yahweh with an entreaty. Josephus does not indicate it is an atonement for sins, and Philo regards the burnt offering as rendering honor (*timē*) to God apart from any other motive or self-interest (Philo *Spec. Leg.* 1.195-97). This may well have been its significance, at least in the first century.

2.2. Peace Offering (*š'lamim*). Sometimes called a "fellowship" offering, this type of sacrifice was offered with cakes and wafers, the blood of the animal (a male or female from the flock or herd) was sprinkled against the sides of the altar, the fat burned on the altar and the breast "waved" before the altar (as an act of presentation to the Lord). The right thigh was then presented to the officiating priest as his portion to be consumed and the breast given to be shared among the priests in general for their family ("sons and daughters," Num 18:18-19; see 4Q513 for restriction against priests' daughters who married Gentiles) consumption (Lev 7:28-36; cf. Deut 18:3, includes jowls and maw; *m. Hul.* 10:1). The remainder of the meat was then returned to the offerer to be consumed as a meal with his family and friends for up to two days, after which any remainder was to be burned (Lev 7:11-21, 28-36; Josephus *Ant.* 3.9.2 §§228-29). This offering epitomizes the notion that sacrifice is a shared meal of communion between God and humans. The occasion for such a sacrifice could be thanksgiving (*tōdā*) for a blessing received, the completion of a vow to the Lord or simply the freewill offering of a glad heart.

2.3. Purification/Sin Offering (*hattā't*). For unwitting sins committed or for specified states of impurity, a purification offering was to be made. The common designation of *sin offering* is less satisfactory because it does not adequately account for conditions of uncleanness for which this offering was made, such as childbirth (a dove or pigeon, along with a burnt offering, Lev 12:6-8), infectious skin disease (with a guilt and burnt offering, Lev 14:19-20), bodily discharge (with a burnt offering, Lev 15:14-15) or unusual menstrual flow (with a burnt offering, Lev 15:29-30).

The purification/sin offering might be occa-

sioned by and offered for various parties, with an appropriate sacrifice assigned to each instance: for the unwitting sin of a priest/high priest, a young bull (Lev 4:3-12); for the entire community, a young bull (Lev 4:13-21); for a leader of Israel, a male goat (Lev 4:22-26); for an individual, a female goat or lamb (Lev 4:27-35). In each instance the procedure was basically the same: the individual (or the elders of the community) laid a hand on the head of the animal and slaughtered it (with a deft cut of the jugular vein, and a bowl ready to capture the blood). In the case of the sin of a priest or the community, the priest sprinkled some of the blood seven times in front of the sanctuary curtain, but in all cases the priest took some of the blood and put it on the "horns" of the altar and then poured the rest at the base of the altar. The fat with the kidneys was then taken from the animal and burned on the altar. In the case of the sin offering for the priest or the community, the entire remainder of the carcass, including the hide, was taken outside the sanctuary to a designated, ceremonially clean place (where ashes were dumped), and it was burned on a wood fire (Lev 4:11-12, 21; see 4QMMT, where taking the ashes "outside the camp" is interpreted as "outside Jerusalem"). But in the case of sacrifices for a leader or an individual, the meat was to be eaten by the priest who offered it or by any male of his family, but it was only to be eaten within the sanctuary, for it was "holy" (Lev 6:24-30).

2.4. Reparation/Guilt Offering (*'āšām*). This offering is prescribed for unintentional violations and sins of sacrilege regarding "any of the LORD's holy things" (NIV, Lev 5:14) or against "any of the LORD's commands" (NIV, Lev 5:17) or for sins against one's "neighbor" involving a breach of faith, such as cheating, stealing, swearing falsely, deceiving regarding property held in trust, dealing dishonestly with lost property that one finds or any like sin in which one seeks gain at the expense of another member of the covenant community. Restitution is to be made to the offended party with a fifth of the value added (cf. Num 5:5-9; see Ex 22:1, 7, 9 for examples of restitution in cases where guilt is not voluntarily confessed), and a reparation/guilt offering is to be made (Lev 5:16, 18; 6:1-5). In the case of "holy things," restitution is to be made to the temple. The fault is to be confessed to the priest, and the prescribed sacrifice is a ram (i.e., a male sheep) without defect (Lev 5:15,

18; 6:6). The procedure for slaughtering the ram was the same as for the purification/sin offering, with the individual placing his hand on the head of the ram. The blood was collected and sprinkled against all four sides of the altar, and the fat along with the kidneys was to be offered on the fire of the altar (Lev 7:1-5). The meat was to be eaten by the officiating priest and any male of his family in a "holy" place, and the hide became the property of the priest (Lev 7:7-8). There were other instances in which the reparation/guilt offering was prescribed, such as a cleansing from an infectious skin disease (Lev 14:10, 12-14) and a Nazirite cleansing him or herself from corpse impurity (Num 6:12).

2.5. Grain Offering. Grain offerings were offered in various contexts, either alone or accompanying animal sacrifice. The grain (semolina, or grits) could be presented as uncooked, as baked cakes or wafers, or as cooked on a griddle or fried in a pan. In most cases (but not for a sin offering, Lev 5:11) it was prepared with olive oil, and depending on the preparation, the grain was mixed, spread or fried in the oil. In most cases (but again, not for a sin offering, Lev 5:11) incense was offered with the grain. Never was the offering to contain yeast or honey (Lev 2:11), and (as with other sacrifices) it was always to be salted (Lev 2:13). The priest placed a "memorial portion" of the offering on the altar, along with all of the incense, and kept the rest of the offering for consumption "in a holy place" in the courtyard of the sanctuary (Lev 6:14-18), unless, of course, it was offered on behalf of the priest, in which case it was all burned on the altar (Lev 6:19-23). A grain offering could be made by a poor person in lieu of a burnt animal offering, and a very poor person, who could not afford two doves or pigeons, could make a purification/sin offering of grain without oil or incense (Lev 5:11-13). The status of this "bloodless" offering is illuminated by latter rabbinic tradition (*Lev. Rab.* 3:5 [on Lev 1:17]): "Once a woman brought a handful of fine flour, and the priest despised her, saying: 'See what she offers! What is there in this to eat? What is there in this to offer up?' It was shown to him in a dream: 'Do not despise her! It is regarded as if she had sacrificed her own life'" (see also *Sipra* §62 [on Lev 5:11-13]).

2.6. Firstfruits and Firstborn Offering. (*Ex* 22:29-30; 23:16, 19; 34:22; *Num* 18:12-19). The firstfruits of the harvest and every firstborn son

of Israel and male of domestic animals was to be devoted to Yahweh. The firstfruits of the harvest (grain, oil and wine, Num 18:12) were to be brought to the sanctuary and given to the priests as their portion. The firstborn son was to be redeemed by a monetary payment (Num 18:15-16). The firstborn of unclean animals were to be redeemed by a set price (Num 18:15-16; Ex 13:13, for a firstborn donkey, allows a lamb offering or killing the animal). But the firstborn of clean animals—the ox, sheep or goat—were to be presented at the sanctuary as a sacrifice. The blood was to be sprinkled on the altar, the fat burned upon the altar and the meat presented to the priest for household consumption (Num 18:18-19). The firstfruit and firstborn offerings thus provided food for the priests, who had no land inheritance in Israel (Num 18:20).

According to Deuteronomy 26, one is to present the firstfruits of one's harvest to the priest at "the place" (i.e., the temple, which of course in Deuteronomy's storyline is not yet built) and make the "confession" in which one recites how God made a covenant with Abraham and rescued his descendants from Egypt and how one has remained loyal to the covenant. This confession (or declaration/avowal) of Deuteronomy 26 is discussed in Mishnah at *Bikkurim* 1:1—3:12 and *Ma'aser Seni* 5:10-15 and offers a plausible setting for the Pharisee and publican in Jesus' parable (Lk 18:9-14).

3. Appointed Sacrifices.

3.1. Morning and Evening Burnt Sacrifice. Exodus 29:38-43 commands the Israelite community to offer a daily morning and evening sacrifice of a year-old lamb without defect, a tenth of an ephah of flour mixed with a quarter hin of olive oil and a quarter hin of wine. These daily burnt offerings (*'olat hattamid*, Num 28:10) were to be made at dawn and at about three in the afternoon (about the ninth hour; Josephus *Ant.* 14.4.3 §65; *m. Pesah.* 5:1; earlier it had been at dusk), and thus opened and closed the day of temple service throughout the year. Numbers 28:3-8 repeats and expands the instruction of Exodus, pointing out that these sacrifices are an aroma pleasing to the Lord (Num 28:6, 8). The procedures for carrying out these daily sacrifices were developed over time and in continuity with the principles laid out in Torah. Mishnah tractate *Tamid* describes the procedure in great detail, and though it is perhaps idealized and

elaborated in this memorialized tradition of the sages, the description is probably reliable in its basic outline. Because of its central role in the functioning of the temple cult (it was being carried out daily even as the temple was falling to the Romans in A.D. 70; Josephus *J.W.* 6.2.1 §§94-95), it is worth outlining the morning sacrifice in some detail. Included with this offering was the morning and evening offering of the high priest, which consisted of flat cakes of grain mixed with oil (Lev 6:12-16; Sir 45:14).

Before dawn the priests who had spent the night in the temple immersed themselves in a purification pool and cast lots in the Chamber of Hewn Stone to determine which priests would perform the tasks, the first of which was to clean and arrange the altar that had remained smoldering through the night. The appointed priest entered the courtyard in darkness, and two groups of priests filed along the east and west colonnades of the court, inspecting the premises for any infractions of purity. After he had purified his hands and feet with water from the bronze basin, the appointed priest took up the utensil and began work on the altar. At a prescribed moment he was joined by others, and the remaining sacrificial portions on the altar were placed aside, the ashes removed, new wood carefully arranged and then ignited from the hot embers, and the unconsumed portions of sacrifice were placed back on the altar fire. Choice pieces of fig wood from the altar of sacrifice were set aside to ignite the altar of incense. Meanwhile the grain cakes of the high priest's offering were being prepared in a chamber designated for that task near the Nicanor Gate.

Their work completed, the priests returned to their chamber to again draw lots, this time to choose thirteen priests who would perform the next phase of work: the slaughter of the lamb, the sprinkling of the blood, the tending of the altar of incense, the cleaning of the lampsstand and the carrying of the various sacrificial portions (parts of the lamb as well as flour, cakes and wine) to the altar (cf. *m. Yoma* 2:1-3).

After the selection, a lookout was sent to see if the sun had lit the horizon "as far as Hebron" (*m. Tamid* 3:2; *m. Yoma* 3:1), which was the signal to begin the sacrifice. The preselected, unblemished lamb, which had been inspected the night before, was fetched from its chamber, the ninety-three (so *m. Tamid* 3:4) silver and gold utensils were brought forth, and the lamb was

given a drink of water from a golden bowl and then reinspected. A procession of priests went forward, led by the two who would prepare the altar of incense and lampstand (bearing utensils, ash bin, oil and keys for the gate) and followed by the appointed priest with the lamb and the entourage of those who would offer the parts. The lamb was taken to the area north of the altar where there were slaughterhouse fixtures: rings for tying the beasts, hooks on pillars for suspending their carcasses and marble tables for preparing and cleaning the slain animal parts for sacrifice (*m. Tamid* 3:5). Ascending the steps to the porch of the sanctuary, the appointed priest opened the great gate and entered with his companions to tend the altar of incense and lampstand. Meanwhile, in the court of priests the lamb was slaughtered, with the blood carefully caught in a bowl. Blood was sprinkled on the sides of the altar and the remainder poured at the base of the altar. The slain lamb was skinned and carved into its prescribed parts, which were then given to the six appointed priests, who carried them in procession up the altar ramp, along with three priests carrying the flour, the grain cakes and the wine, and laid them on the ramp. There all the offerings but the wine were salted.

All of the participating priests then returned to the Chamber of Hewn Stone to recite the Shema and various prayers and blessings. Lots were again cast to choose one from among the priests who had not yet had the privilege of offering the incense. Once chosen, the appointed priest carried the incense while one of his two companions went to the altar of sacrifice and placed burning cinders into a golden fire pan. They then proceeded with the appointed priest to enter the sanctuary and perform the ritual of burning the incense. (This is the privilege, Luke tell us, that had fallen to Zechariah, the father of John the Baptist, to perform [Lk 1:8], during which the angel Gabriel appeared to him at the right of the altar of incense [Lk 1:11-20].) In the morning the incense was to be offered first, before the offerings on the altar of sacrifice; in the evening it was to be offered last, thus bracketing the day of temple service. Only a few of the flames on the candelabra were left burning during the day, and in the evening all seven were lit. As the priests proceeded to the altar of incense, a signal was sounded for the Levites to gather for singing, the priests from about the

temple to assemble and the people who were to be purified that day (e.g., women and those healed of skin disease) to gather at the eastern gate called Nicanor (cf. Lk 1:10). Within the holy place the altar of incense was lit (two others also returned to finish their work on the lamps) and the appointed priest was then left alone to offer the incense (see *m. Tamid* 6:1-3 for details). Meanwhile the designated priests returned to the altar to prepare to make the offering on the altar. The priests who had entered the holy place now had returned to stand on the steps facing the Court of Priests, and raising their hands, they said a blessing (Num 6:24-26) on the people, so uttering the divine name Yahweh (cf. Lk 1:21-22 and Zechariah's silence). The priests at the altar could now offer the pieces of lamb as well as the flour, cakes and wine. At a signal, two trumpets sounded and the people and priests who had assembled before the court prostrated themselves. As the wine was poured out, the Levites broke out in song (one of the set psalms determined by the day of the week), accompanied by stringed instruments. At pauses in the singing the trumpets blasted, and the people fell prostrate (*m. Tamid* 7:3). Thus began the day of temple service, and the work of offering the people's individual sacrifices was underway. The pattern of the morning sacrifice was repeated with only small variation in the afternoon for the evening sacrifice, which closed the day of temple service ("the time of prayer" at the "ninth hour," when Peter and John go up to the temple in Acts 3:1). The same priests served in the afternoon as in the morning, with the exception of a new appointment for the offering of incense.

3.2. Sabbath Sacrifice. On the sabbath, in addition to the daily morning and evening sacrifices (see 3.1 above), an additional sacrifice of two lambs a year old, along with a wine offering and grain offering, were offered on behalf of Israel. This ritual followed the daily morning sacrifice, and these were the only sacrifices offered on the sabbath (sacrifices for individuals were not offered). The sabbath was also the time designated for the changing of the priestly divisions, which took place after the sabbath offering. As the new division began service, they replaced the previous week's twelve loaves of shewbread with fresh loaves (Lev 24:5-9; *m. Menah.* 11), accompanied by the burning of frankincense. The previous week's loaves were given to the priests to eat within the sanctuary.

3.3. Day of Atonement Sacrifices. On the tenth day of the seventh month, five days prior to the Feast of Booths, the annual Day of Atonement was observed. From the evening of the ninth day until the evening of the tenth was a fast day on which Israelites were not to work (Lev 16:29; 23:26-32; Num 29:7) and, according to Mishnah, were forbidden to eat, drink, bathe, put on oil or sandals, or engage in sexual relations (*m. Yoma* 8:1-7). It was not a pilgrimage festival, but it was to be observed throughout Israel, with attention focused on confession of sin. The central enactment of the observance was carried out in the temple, and there the focus of attention was on the high priest, who performed the vital rite for himself, his household, the priesthood and all Israel. It was an annual day of purification for the temple, its altars, furnishings, instruments, its officiants and an atoning for the sins of Israel (Lev 16:30; *m. Sabb.* 1:6-7). It was the only day of the year on which the high priest entered the holy of holies (and he was the only one ever permitted to enter). The evidence from Mishnah tractate *Yoma* reflects the extreme care with which the rite would have been carried out in the first century A.D., for it was fundamental to the maintenance of the status of Israel before God and, in the eyes of many, the fulfillment of Israel's promised redemption.

Seven days prior to the Day of Atonement (*m. Yoma* 1:1) the high priest took up residence in his chamber within the temple (along the southern edge of the sanctuary, adjoining the Chamber of Hewn Stone) in order to carefully maintain his ritual purity. During that time he carried out the daily morning and evening offerings and, under the tutelage of the elders of the priesthood, reviewed and memorized the rite of the coming Day. (This practice, related by Mishnah, gains historical plausibility when we remember that the office of high priest was filled by Herodian or Roman appointments during the NT era, and many of these were short lived; see 6.2 below). The high priest was not allowed to sleep the night before the Day of Atonement lest he jeopardize his cultic purity by a nocturnal emission (see Josephus *Ant.* 17.6.4 §§165-66). At dawn the high priest carried out the daily morning offering (see 3.1 above), and when that was completed, he bathed, dressed in linen and turned to the centerpiece of the day's activity: the sacrifice of a young bull for a sin offering for himself and his household, a ram for a burnt of-

fering (Lev 16:3) and the sacrifice for Israel of two male goats for a sin offering (one a sacrifice and one a scapegoat) and a ram for a burnt offering (Lev 16:5; each of these sacrifices accompanied by specified grain offerings).

Briefly outlined, the high priest first confessed his sins over the bull, then cast lots to determine which of the goats would be sacrificed and which would be the scapegoat (*m. Yoma* 3:9; 4:1). He returned to the bull, confessed his sins again, and slaughtered it (its blood was captured in a bowl). Then he entered the holy of holies to place a censer of burning incense on the stone where the ark of the covenant had once rested (*m. Yoma* 5:2). He returned to get the blood of the bull, reentered the holy of holies, and sprinkled some of the blood in the direction of the stone (*m. Yoma* 5:3). Now he returned to the sacrificial goat, slaughtered it, captured its blood and took the blood into the holy of holies, where he sprinkled it on the stone and on the curtain. The blood of both bull and goat was then mixed and used to sanctify the altar, with blood being applied to the four horns of the altar as well as sprinkled against its sides and the remainder being poured out at the base. The high priest then put his hands on the head of the scapegoat and confessed the sins of Israel. A designated person then led the goat out into the "wilderness." Mishnah speaks of ten "booths," or stations, along the goat's processional way to the ravine into which it was pushed head over heels to its death (*m. Yoma* 6:3-6). Meanwhile the high priest shed his linen garments, bathed, and put on his regular high-priestly garments (Lev 16:23-24). He then placed the fat from the bull and goat on the burning altar as a sin offering along with their respective grain offerings, and the remainder of the animals, including the hide, was taken out of the temple and burned completely. Mishnah tractate *Yoma* tells us that the high priest then proceeded to the Court of Women, where the people were assembled, and he read the instructions for the Day of Atonement from the Torah—Leviticus 16; 23:26-52 and Numbers 29:7-11—and uttered eight blessings (for a somewhat different picture, see Sir 50:14-21). What followed was a matter of disagreement among the sages. Rabbi Eliezer maintained that it was now that the high priest offered his ram and the ram of the people as a burnt offering (Lev 16:24) along with the seven lambs (Num 29:8). But Rabbi Aqiba held that the

lambs had already been offered with the daily offerings at dawn, and the bull, goat and burnt offerings of rams were made with the daily evening sacrifice in the afternoon (*m. Yoma* 7:3).

It remained for the high priest to take off his clothes, don white garments, purify his hands and feet, and return to the holy of holies, where he retrieved the incense censer. Then, after another immersion and change of clothes (now in his full high-priestly regalia), he proceeded to offer incense on the golden incense altar and light the candelabra for the evening (see 3.1 above). After a final immersion and change into his own clothes, the high priest went home for a feast with his friends, celebrating the safe accomplishment of his duties (*m. Yoma* 7:4). Thus ended the high point of the cultic year. It is this event the author of Hebrews has in mind when he speaks of the high priest entering the inner room of the earthly tabernacle once a year, but Christ entering once into the most holy place of the heavenly tabernacle with his own blood rather than the blood of bulls and goats (Heb 9:6-14). When Paul in Romans 3:25 speaks of Christ being set forth as a *hilasterion*, he has in mind the "mercy seat," or covering of the ark of the covenant, on which the blood was originally to be sprinkled in the holy of holies on the Day of Atonement. Jesus is the mercy seat of the new temple, and by the blood of his death he fulfills this yearly rite of atonement, far surpassing it in finality and scope.

3.4. Passover Sacrifice. Passover, with Tabernacles and Pentecost, was one of the great festivals of Israel's calendar. The prominence of the Passover sacrifice in the life of Israel and the Gospel accounts calls for some comment here (for festivals in general, see *Festivals and Holy Days: Jewish*). Deuteronomy instructs the Israelites to sacrifice the Passover animal "at the place the LORD will choose as a dwelling for his Name" (Deut 16:2 NIV; cf. Ex 12:14-20; Lev 23:4-8; Num 28:16-25). This "place," as it turns out, is the temple in Jerusalem, and in the first century Jews who were able made a pilgrimage to Jerusalem to celebrate the Passover on the fourteenth day of Nisan (see Mk 14:12-15 par.; Jn 2:13; 11:55-56). The seven days following Passover were the Feast of Unleavened Bread.

The sacrifice of the prescribed "lamb" (a year-old male goat or sheep, Ex 12:5) took place in the temple, and the crowds that kept this festival necessitated their being divided into three

groups who would successively enter the court and carry out the sacrifice en masse (as described and discussed in *m. Pesah.*; but see discussion in Sanders, 136-37). Each Passover lamb was to be shared by a household or group, generally including at least ten men (*m. Pesah.* 8:7; cf. Jesus and the Twelve celebrating Passover), though 4Q265 frag. 4 expresses a sectarian view in prohibiting "a young boy or a woman" from eating the Passover. The sacrifice took place between the ninth and eleventh hours (roughly 4:00 to 6:00 p.m.; Josephus *J.W.* 6.9.3 §423). Mishnah tells us that when the first group entered the court (it is not clear which court, the Court of Israel seems far too small, and a larger area of the temple may have been sanctified for this purpose), the gate was closed behind them. The choir of Levites was assembled and sang the Hallel, Psalms 113-118 (or Songs of Ascent). At the sounding of the shofar, the priests lined up in rows, with gold or silver basins in their hands. Each Israelite male representative would slit the throat of his group's lamb, and a priest would catch the blood in a bowl. The bowl was then handed down the line of priests, and the one closest to the altar would throw the blood against the altar. The priest would then hang the lamb on a hook, slit it open, remove the sacrificial portions of fat and place them on the altar fire. The lamb was then returned to its owner, and when the entire group had finished, the gates would be opened and the second group would enter. The lamb was taken to the household's selected spot within the walls of Jerusalem, roasted over a fire, and eaten with unleavened bread, bitter herbs, a fruit puree, salt water and wine—the prescribed foods of Passover. By one estimate, there were approximately 300,000 pilgrims and Jerusalemites who would gather for Passover, which would represent approximately 30,000 lambs needing to be slaughtered within a two-hour period (Sanders, 136). The activity of the priests, the bleating of lambs, the flow of blood and the traffic within the temple courts is staggering to imagine. It is easy to see why at Passover (and the other major festivals) all of the priests and Levites were on duty. Moreover, we should not forget that pilgrims would take the opportunity while in Jerusalem to offer other sacrifices. In addition, the required daily sacrifices during Passover and Unleavened Bread were augmented by two young bulls, one ram and seven male lambs for

a burnt offering, and a male goat as a sin offering (Num 28:19-24). There is evidence that Jews in the Diaspora, for whom a regular pilgrimage to the temple was impractical or prohibitive, celebrated the Passover within their homes. In this case, every house became a temple and every Israelite male a priest (Philo *Spec. Leg.* 2.145-49; cf. Josephus *Ant.* 14.10.24 §260). For this they could appeal to precedent in the origin of the festival as a household event at the time of the exodus from Egypt.

4. Provisions for Sacrifice and Temple Service.

4.1. Animals. The needs of the temple and individuals for specific and unblemished animals—both four-legged and birds—was one of the most obvious features of the functioning of the temple. Numerous doves, sheep, goats and, to a lesser extent, cattle were daily being led through the courts of the temple toward the altar. Jews who lived in the environs of Jerusalem would perhaps be most likely to bring their own animals to the temple for sacrifice. But pilgrims from more distant places such as Galilee, and certainly the Diaspora, would welcome the opportunity to buy their animals in Jerusalem. Not the least of a worshiper's concerns would be whether the animal was unblemished by priestly standards, and if the owner (or local priest) did not overlook a blemish before starting out on the journey to Jerusalem, the hazards of travel could well result in an injury that would disqualify the beast from the altar. In Jerusalem, say our rabbinic sources, they could buy rams from Moab, calves from Sharon, sheep from Hebron and doves from the Mount of Anointing (see Safrai, 882).

The Gospels, in the scene of Jesus' temple "cleansing" (Mt 21:10-17; Mk 11:11, 15-17; Lk 19:45-46; Jn 2:13-17), give us a snapshot of animals being sold within the temple precincts. Matthew and Mark speak only of doves being sold (and moneychangers, see 4.6 below), but John adds "cattle and sheep" (Jn 2:14-15). As we have seen, it is easy to see how the sale of animals within the temple precincts, perhaps in the porticos around the perimeter of the exterior Court of the Gentiles, would have been a valuable service to worshipers. The authenticity of the Gospel scene, particularly John's introduction of "cattle and sheep," has been questioned (for objections see, e.g., Sanders, 86-89). Not the least of the apparent problems is that maintain-

ing animals in their stalls (even if only during the daylight hours) would have polluted the sacred space of the temple with dung, fodder and noise. Formerly the sale of the animals had taken place in an area called the Hanuth, on the Mount of Olives, but there is some rabbinic evidence that the innovation of selling within the temple precincts was undertaken during the tenure of Caiaphas the high priest, some forty years prior to the destruction of Jerusalem (see Eppstein; Jeremias, 48-49; Chilton; see *DLNTD*, Temple §2). Such a practice would no doubt have disturbed some pious Jews, not least the Pharisees with their concern for purity, and probably Jesus also. For the administration of the temple, this commerce—whether operated or simply licensed by the high priest—represented another stream of revenue.

4.2. Salt, Oil, Grain, Wine and Incense. In addition to animals for sacrifice, the temple service required a steady supply of salt, oil, grain, wine and incense. All of these items were required for the offerings that were part of the regular functioning of the temple on behalf of Israel, and except for the incense and salt, which were supplied by the temple, these items were called for in various offerings of individuals. Worshipers might bring their own oil, grain or wine, but if they were traveling a distance they would find it more convenient to purchase it when they arrived, and in so doing they would be better assured that it met the strict temple standards for quality. This need was also accommodated at the temple.

Salt was a constant necessity since all offerings on the altar were accompanied by salt, and it was also used to preserve the hides that became the priests' property. Rabbinic sources mention that the salt was supplied from Sodom, near the Dead Sea, the incense (including frankincense) came from Arabia, the olive oil from Tekoa and Gush Halav in Galilee, and the grain and wine from Judea. The procurement and quality of these supplies was regulated by the temple administration, as was its sale. For example, we read in Mishnah that those who wished to offer a drink offering would pay for it at an office in the temple, receive a token and then exchange the token for the drink offering at another place (*m. Seqal.* 5:4). All of these daily material needs of the altar, not to speak of vestments, gold, silver, curtains, furnishings, building supplies for the protracted construction and

finishing of Herod's temple, and the "tourist" trade of pilgrims in Jerusalem, contributed to making the temple a vital centerpiece of the local and regional economy (see Hanson and Oakman, 146-54; see *Economics of Palestine*).

4.3. Wood. The altar of sacrifice burned daily and consumed vast quantities of wood throughout the course of a year. The wood was routinely supplied by particular families in Israel (listed in *m. Ta'an.* 4:5; cf. *Neh* 10:3), for whom it was regarded a privilege (see Safrai, 882-83). The wood was delivered to the temple with ceremony, and the fifteenth of the month of Ab was a day designated for Israel in general to bring their offerings of wood to the temple (Josephus *J.W.* 2.17.6 §425). The *Temple Scroll* of Qumran calls for a festival of wood offering in its vision of an ideal temple (11Q^{Temple} 23; also 4Q325). The types of wood accepted are listed in *Jubilees* 21:12-15 and *Testament of Levi* 9:12, but Mishnah allows any wood but olive or vine for the altar of sacrifice (*m. Tamid* 2:3) and specifies only fig wood for the altar of incense (*m. Tamid* 2:5). Within the temple the wood was stored in bulk in the Chamber of Wood located in the northeast corner of the Court of Women. There it was inspected, and worm-eaten pieces were culled by priests who were disqualified from service within the sanctuary due to their own physical blemishes (*m. Midd.* 2:5). Individual worshipers could also offer a sacrifice of wood for the altar, which they could purchase in the temple.

4.4. Water. Large volumes of water were necessary for the operation of the temple (*Ep. Arist.* 88-90). Most prominently, water was needed for filling the great bronze laver in the Court of Priests, for the immersion pools used by the priests, and for the pools used for the ritual cleansing of every person who entered the temple courts. Water for the laver was drawn up from below the floor level of the temple by a wheeled mechanism located in a chamber immediately south of the laver (*m. Mid.* 5:4). In addition, water was needed for cleaning the floor of the temple, particularly the area north of the altar where the animals were slaughtered. By the first century, the water was supplied from two sources: cisterns that captured rain water (*m. Mid.* 5:4 and *m. Erub.* 10:14 mention two large cisterns, and over thirty have been discovered by archaeologists) and a sophisticated aqueduct system that transported water from Solomon's Pools, south of Bethlehem and twelve miles

south of Jerusalem. The *Letter of Aristeas* speaks of a complex of channels running beneath the temple and being able to hear the rush of the waters from a certain spot about eight hundred yards outside the city (*Ep. Arist.* 90).

4.5. Blood and Animal Waste Disposal. The blood that was poured at the base of the altar descended through two drains. Aristeas (writing in the second century B.C.) comments that the drains (*m. Mid.* 3:2) operated with the effect that "large amounts of blood which collected from the sacrifices were all cleansed by the downward pressure and momentum" (*Ep. Arist.* 90; cf. *m. Yoma* 5:6). The blood, mixed with water, then flowed into the Brook Kidron where, Mishnah states, the accumulated blood product was collected and sold to farmers as fertilizer (*m. Yoma* 5:6). Ash from the altar (as well as from the fires in the Chamber of the Hearth and Chamber of Baked Cakes) needed to be collected and disposed of, and this was taken outside the temple. The tremendous amount of animal waste, particularly at a festival season, no doubt posed a challenge. That which was not to be offered on the altar or consumed by the priests was to be burned at a designated and "holy" spot outside the temple. In picturing the scene we should not miss an obvious fact: the smell of a slaughterhouse would have permeated the Court of Priests and its surroundings, particularly on a warm day, and most twenty-first-century westerners placed on the scene would find it revolting.

4.6. Temple Treasury. Some of the expense of the temple services was borne by direct gifts (such as wood), the portions of sacrifices that were the priests' allotment and perhaps income from the sale of items and animals for offerings. In addition, freewill offerings of money could be made by depositing them in one of the thirteen trumpet-shaped coffers located in the temple (see *Mk* 12:41-44 par. *Lk* 21:1-4). But the most significant source of temple revenue was the annual half-shekel tax levied on every Israelite male, whether in the land of Israel or in the Diaspora. Though this was the prevailing practice, it was not beyond dispute. 4Q159 maintains that it should be paid only once in a lifetime, probably appealing to its origin as a one-time payment in Exodus 30:13-14, and this opinion may have been shared by Jesus (*Mt* 17:24-27; see also *m. Šeqal.* 1:4; *Mek.* on *Ex* 19:1; *b. Menah.* 65a). In Diaspora communities the tax was collected and transported to Jerusalem with cere-

mony (*Ep. Arist.* 40; *Josephus Ant.* 14.7.2 §§110-14; 16.2.3-4 §§28-41; see *Jewish Communities in Asia Minor* §2). Other Jews, such as Galileans on their yearly pilgrimage to the temple, could pay the tax on the temple grounds. The standard currency for this tax, and for any other donations to the temple, was a Tyrian coinage of silver (*m. Bek.* 8:7), which could be acquired at the temple, though an exchange fee was involved (thus the money changers whose tables Jesus overturned in the temple courts). This money was deposited in the temple treasury and was chiefly used to support the daily morning and evening sacrifices of the temple. In this manner all of Israel joined in offering ceaseless corporate worship to Yahweh.

The amount of money that was received and paid out in various transactions, including purchasing temple provisions, selling sacrificial elements, disbursing charity to the poor, as well as the business affairs related to temple land holdings, would have required a substantial office, chief treasurer(s), accountants, purchasers and other personnel (*m. Seq.* 5:2; *Josephus Ant.* 15.11.4 §408; 20.8.11 §194). The treasury was also responsible for the safekeeping of valuables related to worship, such as the high priest's vestments. In fact this arm of the temple operated much like a bank, with private funds also being held on deposit (2 Macc. 3:6, 10-12, 15, 22; 4 Macc. 4:3; cf. *Josephus J.W.* 6.5.2 §282).

5. Access to Worship.

5.1. Males and Females. Sacrifice, the central act of worship, was carried out by an exclusively male priesthood, and Israelite males were the only ones allowed in the Court of Israel, which immediately bordered on the Court of Priests. Only a male Israelite was allowed to place his hands on the head of the sacrificial victim (probably by leaning over a low barrier separating the Court of Israel from the Court of Priests), confess his sins and slay the animal. Women and children could look on from the Court of Women or perhaps from elevated galleries (*m. Mid.* 2:5), if they in fact existed. In any case, the inner courts were progressively elevated and the altar was situated near the center so that it was at least partially visible through the gateway. Gentiles, on the other hand, were kept at some distance, being forbidden (on pain of death) from crossing beyond the balustrade that separated

the Court of the Gentiles from the Court of Women.

5.2. Restricted Persons. Mishnah tractate *Menahot* 9:8 specifies that the deaf mute, idiot, minor, blind person, Gentile, slave, agent and woman may not lay their hands on the head of the sacrificial animal, and consequently may not slay the animal (cf. *m. Hul.* 1:1). This restriction reflects the categories of people who were restricted from the Court of Israel (and for some, the Court of Women). The Qumran sectarian document 4QMMT is of a stricter opinion, applying the levitical restrictions on priestly service (Lev 21:17-23) to Israel as a whole. Banned from entrance to the temple are not only the Ammonite and Moabite (Deut 23:3) but those with impure male conditions (e.g., a bastard or one with crushed testicles or a severed penis). Neither should the blind and the deaf be permitted to enter the temple, for the deaf have not heard the laws of purity and the blind cannot visibly discern impurities and so are helpless to guard against defilement. Both are judged a hazard to maintaining the sanctity of the temple and its functions. David's restriction of the "blind and lame" from entering the house of God (2 Sam 5:8; rendered "sinners and guilty" in *Tg.*), where the temple would eventually be built, finds a reversal in the "Son of David" who heals the "blind and lame" at the temple, probably in the Court of the Gentiles (Mt 21:14-15).

5.3. Gentile Offerings. Gentiles, particularly those of influence and power, were known to have their sacrifices accepted by the temple. In fact, *Josephus* tells us, the votive offerings of prominent Gentiles had long adorned the temple. Tellingly, the refusal of these sacrifices and offerings marked the outbreak of the Jewish revolt of A.D. 66 (*Josephus J.W.* 2.17.3 §§48-21; 5.13.6 §§563; *Ant.* 13.5.4 §§145-47; 13.5.8 §168; 13.8.2 §242; see Schürer, 2:309-13). Mishnah indicates that Gentiles could bring freewill or votive offerings (*m. Seqal.* 1:5). These would have included drink offerings, grain offerings and burnt offerings (*m. Sequl.* 7:6; *m. Menah.* 5:3, 5, 6; 6:1; 9:8) but not purification, reparation and peace offerings. The Qumran sectarian document 4QMMT expresses a dissenting opinion against any offerings of Gentiles in the temple. The evidence is somewhat ambiguous regarding the rights of full proselyte males (Gentile converts who had been circumcised) to offer sacrifices in the Court of Israel. We do know that

proselytes offered sacrifices, but we cannot be certain that they did so on the same footing as Israelites by descent.

The emperor Augustus instituted a daily burnt offering of two lambs and a bull "for the Emperor and the Roman people" (Philo *Leg. Gai.* 23.157; 40.317; Josephus *J.W.* 2.10.4 §197). By this means the Jews were able to honor the emperor and yet avoid sacrificing to the emperor (see Ruler Cult), though the practice had more ancient precedent (Ezra 6:9-10; Josephus *Ant.* 3.3 §140; *Ep. Arist.* 45; 1 Macc 7:33). Philo tells us this sacrifice was undertaken at the emperor's expense (Philo *Leg. Gai.* 23.157), but Josephus holds that it was borne by the Jewish people (Josephus *Ag. Ap.* 2.6 §77). Perhaps the truth lies in the middle, with the sacrifices being paid out of the Roman taxation of the Jews.

6. Officials: Levites, Priests and High Priests.

6.1. Priests and Levites. Priests and Levites served in the temple according to a set schedule. Each priest and Levite was a member of one of twenty-four "courses," or divisions (1 Chron 24:7-19; Josephus *Life* 1 §2; *Ant.* 7.14.7 §366), and each course served a one-week period twice a year (see 4Q328, 329 for sectarian opinion on the rotation of priestly families). However, during the major festivals of Passover, Weeks and Booths, all priests and Levites were on duty at the temple. This meant that, apart from four or five weeks of the year, much of the time priests and Levites were at home and otherwise occupied. Their place of residence might be anywhere in the land of Israel (or even outside the land, e.g., Joseph, called Barnabas, of Cyprus, Acts 4:36). For example, we learn that Zechariah, the father of John the Baptist, lived in "a Judean town in the hill country" (Lk 1:39 NRSV) and that he was serving in the temple as his division (Gk. *ephēmeria*, Lk 1:8) was on duty. We may picture, then, a number of priests and Levites scattered throughout the cities, towns and villages of Judea and Galilee (excluding a place such as *Tiberias, which was ritually defiled by reason of being built over a graveyard). However, it appears a great number of them lived in Jerusalem or its immediate environs (e.g., even at the time of Nehemiah, there were approximately 1,500 priests and Levites in Jerusalem; Neh 11:10-18). Since the priests and Levites were not given a family inheritance within the land of Israel, they were not farmers. Some of them

were probably engaged in common and honorable trades, and we know that Herod had priests trained as stonecutters and carpenters for the construction of the inner courts of the temple (Josephus *Ant.* 15.11.2 §390). But it is reasonable to assume that a good number of the priests and Levites, and particularly the priests, served in capacities adjunct to their holy calling (see Sanders, 170-82): as teachers of Torah (Deut 31:19, 25; Sir 45:17; Josephus *Ant.* 4.8.44 §304), village magistrates (Josephus *Ag. Ap.* 2.22 §187; 2.24 §194), scribes (which included a number of functions) and synagogue leaders (Philo *Hypoth.* 7.13; Theodotus inscription). Their support from tithes and offerings (see Schürer, 2:257-74) allowed them to undertake these functions that were strategic for Israel's corporate life before God. Dispersed among the various communities of Israel, priests would have been ready resources for teaching, advising and ruling in matters of purity (e.g., skin diseases), sacrifice and the numerous facets of Torah, as well as providing a vital link to the inner life of the temple, the heart of Judaism.

A priest who was a teacher of Torah and lived in Jerusalem might spend a good deal of time within the temple's outer courts, where instruction and reading of the Torah was carried out. For example, we read that Rabbi Johanan ben Zakkai (though not identified as a priest) would "sit and teach in the shadow of the sanctuary" (*b. Pesah.* 26a), and in the NT we find Jesus and the apostles teaching on the temple grounds (Mt 26:55; Lk 21:37; Acts 2-4). The Theodotus inscription, discovered in Jerusalem, informs us that Theodotus was a priest and third-generation ruler of a Greek-speaking synagogue established for "reading of the law and for teaching of the commandments." Although there were other synagogues in Jerusalem where instruction also took place, the temple, with its porticos and open areas, its worshipers and its gradations of sacred space, was a natural venue for instruction in Torah (Lk 2:46-47). The Jerusalem temple was not exceptional in this regard, for Greek and Roman education also took place in public venues such as temple environs.

Scriptures were kept in the temple (Josephus *Ant.* 3.1.7 §38; 5.1.17 §61; *J.W.* 7.5.5 §150), and we can safely surmise that scribal activity of all sorts was carried out in the temple, probably by priests and Levites who were professional scribes apart from their routine temple duties.

The psalm scrolls from which the Levites sang needed to be copied, stored and cared for. The priestly genealogies (Josephus *Ag. Ap.* 1.6-7 §§28-37), temple records and documents, and all sorts of work related to copying and preserving sacred Scriptures (including a master copy of the Scriptures) would have kept scribes well occupied. It is not impossible that some of the biblical scrolls found at Qumran were produced by the hands of temple scribes.

In general, the Levites' work was to assist the priests. Like the priests, they were not allotted land within Israel. They were supported by the tithe but did not receive a share of the sacrifices as did the priests. The Levites may have assisted in ushering animals to the Court of Priests and in taking the sacrifices of women to the priests. They carried firewood, swept the grounds and cleaned up refuse. They were responsible for the festal branches at the Feast of Tabernacles. We know that some of them sang in choirs and played instruments, and they would also have cared for the psalm scrolls and instruments. They manned the gates of the temple, keeping the keys, opening the gates in the morning, closing them in the evening, guarding them throughout the day (Philo *Spec. Leg.* 1.156), checking to see that worshippers carried nothing into the temple grounds that was unrelated to sacrifice and making certain that unauthorized persons did not trespass upon courts where they were forbidden. Levites were likely a part of the armed temple guard, and we may surmise that during festivals the Levites would have been responsible for crowd control. Rabbinic sources indicate that some Levites occupied permanent positions in the temple, and this seems historically probable. For instance, there was a "director of music," a "director of singers," a "chief doorkeeper," a "keeper of the keys" and a jailer, who was also in charge of administering the scourge (see Jeremias, 167-72; see Hanson and Oakman, 141, for an organizational chart of the temple).

We have already observed many of the duties of the priests as they engaged in offering sacrifices and other functions within the Court of Priests and sanctuary. Clearly the task of struggling with reluctant animals, lifting carcasses, skinning and cutting, carrying portions up to the altar, transporting wood and working around the heat of the altar while always being observant of purity regulations was not for the physi-

cally frail. In fact it called for strength, fitness, efficiency and perspiration. Working in linen garments, with sleeves laced tightly around their arms, they engaged in "a combination of liturgical worship and expert butchery, mostly the latter" (Sanders, 79). The *Letter of Aristeas* 92-93 gives us a glimpse of their work in the second or third century B.C. For the priests, a day of work in the temple was demanding and tiring, though *Aristeas* tells us that a "break room" was set aside for their rest, and they rotated in and out of duty. *Aristeas* speaks of "more than seven hundred ministers" being on duty at one time (*Ep. Arist.* 95), an improbable number if we are to think of them all in the Court of Priests at one time or even half of them resting (Sanders, 79). But the figure likely includes Levites, and it may be derived from the combined number of priests and Levites in each of their twenty-four courses. If we consider the probability that each course was divided into daily courses for the week of service, and half of these were on duty while the other half rested, a more manageable figure of approximately fifty priests and Levites working at one time comes into view (Jeremias, 200). But this too is conjecture; we simply do not know. During important feasts, when all of the priests and Levites were on duty (serving on shifts), their numbers must have been impressive. Josephus tells us that there were about twenty thousand priests during the time of Jesus (Josephus *Ag. Ap.* 2.108), but we do not know whether these were all fit for service or if some were retired. The accuracy of this figure simply cannot be tested reliably (see Jeremias, 200-205; Sanders, 78-79).

6.2. High Priest and Chief Priests. Beginning with Jonathan in 153/152 B.C. and extending for 120 years, the high priesthood was filled by *Hasmoneans, who joined priestly privilege with kingship. Traditionally the office had been filled by priests of the lineage of Zadok (see Priests and Priesthood). There were dissenters to this change, and it is probably around this time that the *Essenes of Qumran formed their priestly community in response to this perceived crisis. Over time the supporters of the Hasmonians, including some priestly families in Jerusalem, came to enjoy the benefits of elite status, power and wealth (splendid homes of priests have been excavated on the Western Hill of Jerusalem). When Herod the Great became king, he overcame this power bloc by various

means, including replacing the Hasmoneans with priests of his own appointment and eventually eliminating the male heirs of the Hasmonean house. A total of eight high priests were appointed during the reign of Herod, and Josephus counts twenty-eight high priests from Herod the Great to the fall of Jerusalem, with several lasting only one year (Josephus *Ant.* 20.10 §§247-51). After Herod the Great, the high priests were appointed by Archelaus (4 B.C.-A.D. 6), then by Roman legates or prefects (A.D. 6-41), and then (by permission and under authority of the Romans) by Agrippa I (A.D. 41-44), Herod of Chalcis (A.D. 44-48) and Agrippa II (A.D. 48-66). The effect of this circulation of high priests was that there could be a number of individuals living at one time who had served as high priest and might be referred to as such (e.g., Annas, the father-in-law of Caiaphas, the high priest that year, Jn 18:12-24; see Caiaphas Ossuary).

The Gospels refer to "chief priests," which in Greek is the plural form (*archiereis*) of the word used for high priest (*archiereus*). In the Gospels the chief priests appear in conjunction with "elders" (nobility or lay aristocracy), scribes and Pharisees. Josephus mentions them in conjunction with "the powerful" and "best known men" (i.e., the Gospels' "elders"), the Pharisees and "the council" (or Sanhedrin). The most likely identification of the chief priests is that they were male members of the three or four priestly families (Phiabi, Boethus, Ananus/Annas, Camith) from which the high priests were chosen (see Sanders, 328; Goodman, 120; Schürer, 2:232-36; contra Jeremias, 179). The chief priests would thus have included former and future high priests as well as others of this priestly aristocracy, with the current high priest having a status of "first among equals." Their concentration of power was in Jerusalem, but their influence extended throughout Judea. Many of them were probably Sadducees. Their rise to power seems to have been concurrent with the direct rule of Judea under Roman procurators (A.D. 6-41). Under this direct Roman rule, the appointed high priest was responsible for mediating Roman rule by governing the temple and Jerusalem and keeping the peace (cf. Lk 23:2; Jn 11:48), while the prefect or procurator resided for much of the year in Caesarea. Placed between Rome and Israel, the high priest used whatever means of diplomacy were available, attempting to please Rome, on the one hand, and

his fellow Jews on the other. He carried out his charge with the assistance of the chief priests (see Sanders, 327-32, 481-90) and a council. One of these chief priests was the "captain of the temple" (*stratēgos tou hierou*, Acts 5:24, 26; cf. Lk 22:4, 52), a deputy of the high priest who was placed over the temple guard and was responsible for policing the temple and enforcing the jurisdiction of the high priest (cf. leaders in 1QM 2:1-2).

The primary liturgical role of the high priest was conducting the ceremony of the Day of Atonement (see 3.3 above). There was a daily grain offering of the high priest (see 3.1 above), but that was usually offered on his behalf by the priests performing the daily sacrifices. During the Second Temple period the office of high priest extended well beyond a liturgical role in the temple (and the office was never only that) and took on the authority of political leadership, first in the wedding of priesthood and kingship by the Hasmoneans and later in the role of political go-between during the era of direct Roman rule. A prominent duty of the high priest was to preside over the Sanhedrin. Nevertheless, in the eyes of the faithful in Israel, the high priest's role in the temple, as a representative of corporate Israel, was fundamental for Israel's atonement and hope of restoration. *Jubilees* (3:12, 26-27; 4:25-26; 8:19) even evokes cosmic overtones by applying Edenic imagery to the temple (see Hayward, 88-107). And as if to fill out this picture, Sirach 49:15-50:26 portrays the Hasmonean high priest Onias as an Adamic figure, clad in his "robe of glory" (Sir 50:11) and ministering at the altar in Edenic splendor (see Hayward, 79-84 for text and commentary). For later rabbinic Judaism, heaven and earth intersected at the altar. "The Temple sacrifices celebrate creation, leading to Eden" and "priests serve as bearers of the sin and embodiment of the atonement of Israel" (Neusner, 1291-92). At the apex of this representation of Israel is the high priest.

SADDUCEES

The Sadducees were a group of Jews that arose sometime during the Maccabean period and disappeared sometime in the first two centuries of the common era. The Hebrew is *šaddūqī*, so that

they have often been related to *Sadoq*, David's high priest; however, there is little justification for this connection. *Josephus and the *rabbinic texts often place them in opposition to the *Pharisees. We know relatively little about the Sadducees, and all of the documents we now have suggest that they were much less important than the Pharisees. However, because we do not have any Sadducean documents, all of our information comes from texts written by people who were not Sadducees and some of whom actively opposed them. Josephus, the Gospels and Acts and the rabbinic texts provide our information about the Sadducees.

1. Beliefs
2. Place in Jewish Society
3. Exegetical Traditions

1. Beliefs.

Josephus identifies the Sadducees as one of the three varieties of *Judaism that existed during the Maccabean period and enumerates their beliefs in four places (Josephus *J.W.* 2.8.14 §164; *Ant.* 13.5.9 §173; 13.10.6 §293; 18.1.4 §§16-17); however, not one element of the Sadducean system of beliefs so impressed Josephus or his source(s) that it immediately came to mind when he wrote about the Sadducees. Josephus tells us that the Sadducees (1) rejected the concept of fate and accepted the idea of free will, so that God could not be held responsible for evil, (2) did not believe that the soul exists after death and (3) did not believe that there were rewards and punishments after one died. Josephus also mentions that the Sadducees observed nothing apart from the law and that they considered it a virtue to dispute with their teachers. He further states that the Sadducees did not have the support of the masses, that they only enjoyed the "confidence of the wealthy" (Josephus *Ant.* 13.10.6 §297), and that only a few men of the "highest standing" know the Sadducean doctrines (Josephus *Ant.* 18.1.4 §17). He claims that the Sadducees were "boorish" (Josephus *J.W.* 2.8.14 §166) and "more heartless" than other Jews (*Ant.* 20.9.1 §199). He claims that the Sadducees frequently accepted Pharisaic doctrine. He names only one high priest, Ananas, as a Sadducee.

The NT considers the Sadducees' rejection of resurrection as their primary characteristic, for the issue of resurrection was central to the early church. The Gospel of Mark does not place the

Sadducees in opposition to the Pharisees, and Matthew often places them together as if they were two similar groups. Luke mentions the Sadducees only in his discussion of resurrection. John does not mention the Sadducees. Only in Acts do we find the two groups disagreeing; however, the disagreement centers only on the issue of resurrection. While some Sadducees seem to be attached to the *temple, the NT does not equate them with the priests, or the priests with them.

The *Mishnah contains several passages in which the Sadducees disagreed with the Pharisees, frequently over matters of purity: *Yadayim* 4:6, whether or not Scripture renders the hands unclean; whether or not the bones of an ass or the high priest are clean; *Yadayim* 4:7, whether or not certain types of water are unclean; *Parah* 3:7, the importance of the setting of the sun in rendering one clean; *Niddah* 4:2, the state of cleanness of Sadducean *women. They also disputed some matters of civil law: *Yadayim* 3:7, whether or not a *slave's master is responsible for the damage caused by the slave and *Makkot* 1:6, whether or not a false witness is executed only when the one against whom he testified is executed. The Mishnah contains only one reference to a disagreement concerning a matter of holiday law: *Erubin* 6:1 suggests that the Sadducees hold their own views concerning the *erub, the establishment of the *sabbath limit. Tosefta records disputes only on matters of purity.

The early midrashim add some new information. *Sipre Numbers* 112 takes Numbers 15:31, "for he despised the word of Yahweh," as a reference to the Sadducees; this is our earliest reference in the rabbinic texts to the position that some accepted that the Sadducees did not follow the Word of God. *Sipre Deuteronomy* 190 contains a story about a Sadducean high priest who did not burn the incense on the Day of Atonement in accordance with the sages' rules.

The Babylonian Talmud contains a number of references to the Sadducees; however, the medieval censors often replaced the words "Gentiles" and "heretics" with "Sadducees." The following are those passages in which the reference to the Sadducees is not suspect. *Erubin* 68b concludes that the Sadducees should be equated with Gentiles in matters of the sabbath limit, for neither know rabbinic law. *B. Yoma* 19b informs us that the Sadducean high priests who offered incense on the Day of Atonement were afraid of

the Pharisees and generally followed the rulings of the latter. The high priest who ignored Pharisaic tradition when he offered the incense soon died.

B. Niddah 33b informs us that if the attitude of a Sadducean woman is unknown, she is considered to have followed the rules concerning her menstrual period to which all other Israelite women adhere, that is, the Pharisaic/rabbinic injunctions. The Sadducean view concerning the importance of the sun's setting in matters of cleanness is discussed on *b. Yoma* 2b, *b. Hagiga* 23a and *b. Zebahim* 21a.

On *b. Yoma* 4a the Sadducees are excluded from the "students of the sages" and "the students of Moses." *b. Hagiga* 16b and *b. Makkot* 8b refer to the matter of the execution of the false witness. On *b. Baba Batra* 115b we learn that the Sadducees and the Pharisees disagreed concerning a daughter's right of inheritance in certain circumstances. On *b. Sanhedrin* 52b, R. Joseph, a third-generation Babylonian Amora, refers to a Sadducean court; however, he had no firsthand knowledge of the court system in the first century. *B. Menahot* 65a tells us that the Sadducees believed that individuals, and not the community, should pay for the daily offering. *B. Horayot* 4a and *b. Sanhedrin* 33b discuss a court that incorrectly ruled according to Sadducean law.

B. Sanhedrin 90b refers to the Sadducees' rejection of resurrection. The Palestinian Talmud does not add any new information, except that a Boethusian high priest lights the incense incorrectly.

The *'Abot de Rabbi Nathan* version A, 5 states that Antigonus of Soko had two disciples who "arose and withdrew from the Torah" forming two groups: the Sadducees and the Boethusians. The Sadducees derive their name from Zadok, one of the disciples, and the Boethusians take their name from Boethus, the other disciple. The split was over the issue of resurrection. We are further told that "they," the Boethusians and/or Sadducees, used silver and gold vessels not because they were ostentatious, but because it was Pharisaic tradition to inflict themselves in this world, hoping to receive a reward in the world to come. *'Abot de Rabbi Nathan* version B contains a shorter version and omits the reference to the gold and silver vessels.

2. Place in Jewish Society.

Based on Josephus's remarks with a slight nod

to the *'Abot de Rabbi Nathan*, scholars have often claimed that the Sadducees were the priestly aristocracy of Jewish society; however, Josephus named only one Sadducean priest, and the rabbinic texts know many priests who were Pharisees. Also, the NT sometimes connects Sadducees with the temple, at times implies that the Pharisees acted in concord with the priests and also indicates that the priests acted on their own. Josephus alone argues that the Sadducees influenced the aristocracy, although he pictures the Pharisees as politically influential at times. But this is as much to underscore the support that the Pharisees have with the populace as to provide us information about the Sadducees.

Scholars have made a good deal about the opposition between the Pharisees and the Sadducees; however, the disputes are few and limited to minute details of law. We have no information about the matters they agreed upon, which given what we have must have been extensive. The Gospel writers do not draw clear and consistent distinctions between the two groups, which suggests that from the outside they must have looked similar. The earliest rabbinic texts suggest that the groups differed over small details of purity law, civil law and sabbath law. The further removed in time we get from the first century, the more extensively these disputes are detailed. Newly published materials from *Qumran have brought to light a few parallels between the legal positions at Qumran and those assigned to the Sadducees in the rabbinic documents. But one cannot claim a clear relationship between Qumran and the Sadducees or even that both reflect priestly law.

3. Exegetical Traditions.

Following Josephus, many have argued that the Sadducees were biblical literalists, but we have no evidence for that other than Josephus's claim that they held that resurrection was not a biblical concept. The few exegetical comments assigned to them do not make them biblical literalists; but again, we have little evidence about them. While one may claim that they rejected the Pharisaic or some of the Pharisaic scriptural interpretations and legal exegeses, one must also assume that like those at Qumran, the Pharisees and the early Christians, the Sadducees had their own exegetical traditions, some of which probably deviated quite a bit from the literal meaning of the biblical text, as did many

of the exegetical remarks of all of the other Jews from whom we have information (see *Biblical Interpretation, Jewish*).

SAMARITAN LITERATURE

The relationship between the first-century Samaritans and the community that produced the NT becomes clearer with the help of comments on the Samaritans by *Josephus; early *rabbinical literature; the literature of the Samaritan community, including the Samaritan Pentateuch, which would predate the NT; and later

Samaritan theological works and chronicles. In the latter part of the twentieth century, the literature regarding that relationship is far too rich to ignore. More than one scholar has compared the value of Samaritan studies to that of the *Dead Sea Scrolls from *Qumran and the *gnostic materials from Nag Hammadi as a source of illumination of the NT (e.g., Scobie, 414).

1. Josephus's Comments on the Samaritans
2. Early Rabbinical Literature on the Samaritans
3. The Samaritan Pentateuch
4. Later Samaritan Literature
5. The New Testament and the Samaritans
6. Conclusions

1. Josephus's Comments on the Samaritans.

The first-century Jewish historian Josephus provides one of the few contemporary glimpses of the Samaritans in the NT period and reflects the animosity or at best condescension of the Jews toward the Samaritans. To explain the background of the Samaritans, Josephus essentially relates the biblical account of 2 Kings 17, which claimed that the inhabitants of Samaria were foreigners forcibly transported there by the Assyrians in the eighth century B.C. In *Antiquities* 11.4.3 §84, which tends to be pro-Jewish and anti-Samaritan, Josephus identifies the enemies of Judah who request to be partners in the rebuilding of the Jerusalem *temple in Ezra 4:1 (where they are unnamed) as the Samaritans. When the Jews rejected the request, the Samaritans reported the building project to the king and continued their own harassment of the Jews. According to Josephus, they also hindered Nehemiah when he was rebuilding the walls of the city of Jerusalem (Josephus *Ant.* 11.5.8 §174).

Josephus characterizes the Samaritans as pro-Greek, a fact that would not endear them to the Jews of the first century, who would well remember their own oppression under the Greeks and their partial deliverance under the leadership of the Maccabees, a Jewish rebel family of the second century B.C. (see *Jewish History: Greek Period*). Josephus helps make the connection by giving an account (Josephus *Ant.* 12.7.1 §§287-92) of a Samaritan general, Apollonius, attacking the Maccabees during the time of their first leader, Judas. Apollonius was defeated. In *Antiquities* 12.5.5 §261 Josephus reports that the Samaritans asked to have their

temple named Jupiter Hellenius in honor of a Greek deity.

Josephus reports disparagingly on *Herod's close relationship to Samaritans. Herod had a Samaritan wife (Josephus *Ant.* 17.1.3 §20; *J.W.* 1.28.4 §562), even though Jews were prohibited from marrying Samaritans. Further, he had a Samaritan tutor for his son (Josephus *J.W.* 1.30.5 §592). He reports that the Samaritans defiled the temple by strewing bones in it (Josephus *Ant.* 18.2.2 §29) and that Agrippa I borrowed money from a Samaritan (Josephus *Ant.* 18.6.4 §167).

In the *Jewish War*, which tends to be pro-Roman and more sympathetic to the Samaritans (perhaps he is using a *Hellenistic source), Josephus describes two incidents in which Samaritans were massacred by Roman troops, the latter episode leading to the dismissal of Pontius Pilate (Josephus *J.W.* 3.7.32 §§807-15; *Ant.* 18.4.1-2 §§85-89).

2. Early Rabbinical Literature on the Samaritans.

Jewish self-consciousness of its difference from Samaritanism is expressed in the Talmudic sources that emerged from the second to the sixth century A.D. Samaritans were welcome to seek the advice of rabbinical authorities in settling disputes (*b. B. Mes.* 69a), but *marriage between the two groups was forbidden by the same rabbinical authorities (*b. Qidd.* 4.3). Some of the concern felt by Jews regarding the Samaritans involved rituals. Jews felt that Samaritans were not ritually clean (*b. Nid.* 4.1), that they made unacceptable offerings (*b. Bek.* 7.1), did not observe *holy days correctly (*b. Roš Haš.* 22b) and could not be relied on to give legal testimony (*b. Git.* 1.5). A booklet in the Babylonian Talmud summarized the basic differences with the Samaritans by asking when the Samaritans would be acceptable to the Jews. The response: "When they renounce Mount Gerizim, and confess Jerusalem and the resurrection of the dead" (the conclusion of the *Masseket Kutim*).

3. The Samaritan Pentateuch.

The final revision of the Samaritan Pentateuch probably dates to the latter part of the second century B.C. The text type reflected there has been found among the Dead Sea Scrolls, and although it may not have been unique to the Samaritans (for example, it shares many readings with the *Septuagint), its presence both at Qum-

ran and in certain NT passages strongly suggests the possibility of Samaritan influence. There are several thousand variants between the Samaritan Pentateuch and the Masoretic Text, though most of them are minor differences in spelling. Those differences do make it possible to identify which text type is used in many quotations. Its use by NT writers is suspected in Acts 7:4, 5, 32, 37 and Hebrews 9:3-4. The first reference (Acts 7:4) is found in Stephen's speech, which has other indications of sensitivity to Samaritans. He emphasized Samaritan heroes and modified the Hebrew text in favor of Samaritan concerns. Many scholars deduce that he is either of Samaritan background or targeting an audience of Samaritan background. If Stephen was a member of a Samaritan Christian group, he was uniquely equipped to bring a *Hellenized Christianity to Jerusalem, but also equipped to arouse the resentment from Jerusalem-based Jews that led to his martyrdom. Stephen's identity has been a central focus in Samaritan studies.

4. Later Samaritan Literature.

Samaritan works other than the Pentateuch date later than the NT period, clustering primarily during periods of Samaritan renaissance in the fourth century under the leadership of Baba Raba and the fourteenth century led by the high priest Phineas. These later works contain likely vestiges of interaction between the Samaritans and the NT documents, particularly as they highlight vocabulary and ideas that are prominent in the NT.

4.1. The Memar Marqah. The *Memar Marqah* contains the thought and biblical interpretation of the third- or fourth-century Samaritan theologian Marqah. It reflects the Samaritan acceptance of many NT terms, especially from the Gospel of John and the book of Hebrews. This leads some scholars to conclude that both of these NT books were written with Samaritan Christians very much in mind. They share with the *Memar Marqah* references to the waters of life, the glorification of the dead or elect upon the arrival of the Messiah, the curious supernatural powers, the importance of the Word, the equation of belief in Jesus (or for the Samaritans, *Moses) as belief in God and naming of each as the Word and the Light of the world and Son of God (Marqah calls Moses son of the house of God). This close tie of Samaritan and Christian theological terminology may be a sig-

nificant key to understanding early Christianity.

4.2. The Samaritan Chronicles. The Samaritan Chronicles, particularly that of Abu'l Fath, contain a few comments about Jesus and the NT period, and the general temper is sympathetic. Abu'l Fath, commissioned to organize various Samaritan traditions and chronicles in the middle of the fourteenth century, preserved some Samaritan memories of first-century Christianity. He refers to Jesus as the Messiah, son of Mary and Joseph, born in Bethlehem and claiming messiahship in Nazareth. His numbering of the disciples is curious, referring to seven in one place, fifteen in another and commenting that Jesus was crucified with twelve of his companions. He notes that another source says that only two were crucified with him. The chronicles also have brief comments on John the Baptist. The sources are unknown, but they do reflect a tradition of amity between Christians and Samaritans. That amity is reflected on the Christian side as well, both in the NT and in early Christian interpretations of the story of the Good Samaritan. Very early Irenaeus (c. 180), Clement of Alexandria, Origen (c. 200) and Ambrose of Milan (c. 400) were depicting the Good Samaritan as Jesus rescuing the earthly traveler beset by temptations after the priest and Levite, representing the OT, failed. Likewise in the earliest visual depiction of this scene, in the Codex Rossanensis, the role of the Good Samaritan is portrayed by Jesus.

5. The New Testament and the Samaritans.

The vocabulary and concepts drawn from these Samaritan sources illuminate the NT, and many scholars have written on these issues. The Gospel of John has been the focus of major works by J. Bowman, G. Buchanan, E. Freed, J. MacDonald, W. Meeks, H. Odeburg and J. Purvis. Attention has been given to Stephen's speech by R. Coggins, S. Lowy, W. Mare, Purvis, E. Richard, A. Spiro and D. Sylva. The book of Hebrews has been the subject of studies by R. Eccles, M. Haran, E. Knox, C. H. H. Scobie and R. Trotter.

The NT has several explicit references to Samaritans, and they could be the sometime referent to the terms "Israelite," "Hebrew" and even "Galilean." Several terms characteristically used by the Samaritans in their later writings (e.g., *to-por* ["place"]); the use of the demonstrative pronoun "this" before a proper name, as in "this Jesus" (which occurs six times in Stephen's

speech) and "this" *Melchizedek (Heb 7:1); and "our Father" (several places in John) could be used intentionally to appeal to the Samaritans. The several passages condemning the temple in Jerusalem would have been attractive to the Samaritans, whether they influenced them or not. Abraham, Moses and Joshua have particular significance for the Samaritans, and each has been seen as a sign of influence on the NT. Luke may have emphasized the priestly parenthood of John the Baptist and the priesthood in general to appeal to the priestly-centered Samaritans (Bowman, 70-71).

Detailed NT information on the Samaritan sect is sparse and ambiguous. They are not mentioned in Mark. Matthew alludes to their cities, along with pagan cities, as places the disciples should not visit (Mt 10:5). Only Luke-Acts and John describe Christian experience of the Samaritans and imply Christian attitudes toward them. The cryptic account in Luke 9:51-56 almost certainly involves representatives from the Samaritan sect rather than simply inhabitants of Samaria, for it is only upon hearing mention of Jerusalem that they refuse hospitality to Jesus and his disciples. One of the significant aspects of the story is the refusal of Jesus to allow the disciples any form of retaliation, implying a conciliatory stance taken by Jesus (and probably the early church) toward the Samaritan sect. Luke's stories of the Good Samaritan (Lk 10) and the thankful Samaritan leper (Lk 17) also imply an openness to the Samaritans.

Samaritans, both in the sense of inhabitants of Samaria and as members of the sect focused at Mt. Gerizim, were viable and actual converts to Christianity. John 4:9 implies that many Samaritans were drawn to Christianity by Jesus himself. In that story it is clear that Jesus is dealing with members of the Samaritan sect. The woman in the conversation with Jesus at the well is aware of the distinction between Jew and Samaritan (Jn 4:9), and that self-conscious distinction involves the preference of Gerizim over Jerusalem as the proper place of worship (Jn 4:20). Finally, John 4:39 implies that "Samaritan" is not coequal with inhabitants of the region, for the Samaritans were not the only inhabitants of the city in which the woman made her home.

It is very likely that some Samaritans were an audience and soon participants in Christianity. *Galilee was the early point of origin and focus

for Christianity, and the Samaritans were geographical neighbors. Acts 8:5-6 indicates that the first converts to Christianity from among the Samaritans were a result of the preaching of Philip.

There are good arguments that Mark, John and Q, the hypothetical unique source that many believe was used by Matthew and Luke, are products of Galilee. In the Gospel of John, Galileans and Samaritans are equated (Purvis, 171-72). C. H. H. Scobie argues for another hypothetical source, akin to Q and sharing the same provenance, that was the Samaritan source used by Luke (Scobie, 397). This would confirm that Samaritans were involved in the Christian movement very early. Certainly their low economic-social status would predispose them to the appeal of the Christian message.

Several scholars believe John was intentionally creating a bridge between Samaritans and Jews in the person of Jesus. Salvation may be from the Jews but is for all Israel, the former northern kingdom, home of the Samaritans, as well as the Jews of the southern kingdom. Therefore John emphasized many Samaritan concepts such as "light" and "word" and a preexistent Christ (echoing a preexistent Moses for the Samaritans); he diminished the role of Peter and exalted the role of the "beloved disciple"; he implied that Jesus was rejected only in Jerusalem and not in Galilee and Samaria; he made a conscious attempt to relate Galileans and Samaritans and possibly used the Samaritan ascent/descent motif to facilitate Samaritan receptivity to the gospel. Jesus specifies that his ultimate audience is the Israelites, the total of the twelve tribes, which could be understood as part of an early Christian polemic against orthodox *Judaism but is more likely an expression of Jesus' vision of inclusiveness. Inspired by Ezekiel and his vision of a unification of all Israel, John used Ezekiel's term "Son of Man" for the Messiah.

Simon Magus (Acts 8:9-24) and *Melchizedek (an important focus of Hebrews) may tie together Gnosticism, Christianity and the Samaritans. That Simon was a Samaritan is implied by the fourteenth-century Samaritan Chronicler Abu'l Fath and by the early church fathers who also identified him as a Gnostic, though both labels are still debated. Simon and Stephen represent diametrically opposed expressions of Samaritan Christianity—gnostic versus historical Christianity.

Gnosticism, which denied Jesus a real body, Jewish or otherwise, would have allowed members of a gnostic Samaritan Christian sect to de-judaize Jesus and elevate him above the Samaritan-Jewish conflict. Separated from a hostile Jewish context, Jesus would be more acceptable to the such Samaritans. It is possible that the Gnosticism that Paul seems so often to attack is one form of Samaritanism.

6. Conclusions.

Later Samaritan literature, brought into dialogue with Josephus, early rabbinical literature and the NT itself, illuminates the first-century Samaritan community and its relationship to early Christianity, suggesting strong ties and mutual appreciation. Later Samaritan literature gives us a Samaritan vocabulary of words and concepts that clue us to recognize a wider Samaritan presence in some NT works addressed to or by the Samaritans or Samaritan Christians. Further, the text type of the Samaritan Pentateuch is detectable in some parts of the NT, further implying significant Samaritan presence or influence.

SAMARITAN, THE. See REVOLUTIONARY MOVEMENTS, JEWISH.

SAMARITANS

In NT times the Samaritans were a substantial religious group inhabiting parts of the central hill country of Samaria between *Galilee to the north and Judea to the south, but with *Diaspora communities in addition. Physically, they focused on Mt. Gerizim, close to the ancient town of Shechem, while religiously the focus of their faith was on a form of the law of Moses, the Pentateuch, which differed only slightly, but in one or two respects crucially, from the form of the Pentateuch familiar to us from its Masoretic recension.

6. Samaritans in the Book of Acts

1. Sources and Their Difficulties.

Despite the explosion in recent years in the publication of Samaritan texts and secondary discussions based upon them, considerable problems still confront us regarding most questions relating to the Samaritans in the first half of the first century A.D.

1.1. Samaritan Sources. Apart from the Samaritan Pentateuch itself, all Samaritan sources date from periods considerably later than the NT. Moreover, many of these sources, whether historical, doctrinal or liturgical, are known only from manuscripts of far more recent date still. In addition, it must be remembered that the Samaritan community has survived in unbroken continuity to this very day and that during its history it has both developed internally and, being usually a minority group, has inevitably been influenced by external pressures in its quest for survival. Scholars thus disagree, often quite widely, over the extent to which these sources can help in reconstructing early Samaritan history and belief.

Among the more important texts which incorporate valuable earlier traditions are (1) the *Memar Marqah*, a fourth-century composition but also including later material; it is an expansive retelling of the biblical account of Moses, incorporating many midrashic supplements (see Rabbinic Literature: Midrashim); (2) the *Kitab al-Ta'rikh* ("annals") of Abu'l-Fath, composed in A.D. 1355, and now generally recognized as the most valuable of the various Samaritan "Chronicles"; and (3) the *Samaritan Targum* (see Rabbinic Literature: Targumim). Of course, even though the greatest caution has to be exercised before historical conclusions can be drawn from these and other such Samaritan sources, they have considerable significance on their own account in terms of heightening our appreciation of the Samaritans' sense of self-awareness.

1.2. Jewish Sources. Pride of place here belongs to *Josephus, who both recounts a version of the origin of the Samaritans and includes frequent references to them in his *Antiquities* and *Jewish War*. This material has to be evaluated in the light of Josephus's evident anti-Samaritan stance and his historical confusion (which can be independently verified) surrounding especially the last part of the Persian period and the start of the Hellenistic period, precisely the time in which he locates the most important step in the development of the Samaritan community.

There are also references of varied significance in the Second Temple literature and in the later Mishnah and Talmud (see Rabbinic Literature). Though generally negative, scholars have frequently remarked on the fact that several of these are a good deal more ambivalent than might at first have been supposed, reflecting, no doubt, the fact that the status of the Samaritans was extremely problematic from a Jewish point of view.

1.3. Other Sources. The NT itself contains important material from a historical point of view. In the context of our present discussion, we need therefore to be particularly aware of the dangers of circular argumentation. Some of the early church fathers also include potentially relevant material. Finally, archaeology is a particularly important source of information in an area where the textual data are so uncertain. Shechem has been extensively excavated, and work is currently in progress unearthing the remains of a substantial Hellenistic town on Mt. Gerizim itself, so that

we may hope for further advances in our understanding in the coming years.

A full survey of all these sources is now available in *The Samaritans*, a magisterial compendium by a number of leading experts and edited by A. D. Crown (1989).

2. Origins and Early History.

Several views of Samaritan origins are attested in antiquity. Though each contains problems from a modern perspective, they retain their importance as evidence for how the situation was perceived in the first century. The following survey represents a heavy simplification for the sake of clarity.

2.1. Samaritan Views. The Samaritans have always believed that they are the direct descendants of a faithful nucleus of ancient Israel. From their perspective, Israel's apostasy began as early as the time of Eli (eleventh century B.C.), when the nation's cultic center was removed from Gerizim to Shiloh (and thence eventually to Jerusalem); they would thus not have regarded themselves as the remnant of the old northern kingdom of Israel but as a separate group alongside them. This helps explain their acceptance of the Pentateuch alone as authoritative. For them, therefore, the question of origins should be directed more toward *Judaism than to themselves.

2.2. Jewish Traditions. The origins of the Samaritans are linked with the account in 2 Kings 17:24-41 about how, following their conquest of the northern kingdom, the Assyrians colonized the area by settling it with people from a number of Mesopotamian towns, including Cuthah. These colonists adopted the Israelite faith alongside their own religion (1 Kings 17:41), and their descendants, often called "Cuthaeans" in Jewish polemical sources, are the Samaritans of later times. The hostilities between Judah and her northern neighbor recorded in the books of Ezra and Nehemiah demonstrate the antiquity of the division between the two groups.

2.3. Josephus. While sharing the previous opinion, Josephus adds a further significant ingredient, namely, that at the end of the Persian period the priest Manasseh was expelled from Jerusalem and that a sanctuary was built for him shortly thereafter at the start of the Hellenistic period by Sanballat, his father-in-law, on Mt. Gerizim. Over the course of time other priests from Jerusalem joined him there. Josephus thus

recognizes a certain degree of Samaritan priestly legitimacy (at least in terms of descent), and his account helps him explain the Jewish character of much Samaritan practice.

2.4. Critical Reconstruction. After decades of discussion (which cannot be surveyed here) as new pieces of evidence have come to light, scholars are now agreed that none of these positions can be maintained as an accurate reflection of the situation. While disagreement inevitably remains, there is a widespread measure of agreement on some of the salient issues, the upshot of which for our present purposes is that the situation as reflected in the NT developed far more recently than had previously been thought and that the division was by no means as clear-cut as the earlier views might be thought to imply. The following points deserve notice.

2.4.1. The Question of 2 Kings 17. The account in 2 Kings 17 should be discounted in discussions of Samaritan origins. (1) The word *haššōmrōnīm* in 2 Kings 17:29, often translated "the Samaritans," seems merely to mean "inhabitants of [the city or province of] Samaria," and this fits the context best. (2) There is no evidence to link the later Samaritans with Samaria. The earliest certain references to them all point clearly to their residence at Shechem, as we should expect on the basis of their theology (Sir 50:26; 2 Macc 5:22-23; 6:2), and one of Josephus's sources refers to them as "Shechemites" (Josephus *Ant.* 11.8.6 §§340-47; 12.1.1 §10). Shechem was rebuilt only in the early Hellenistic period, following an interruption in settlement of some 150 years. (3) Despite earlier mistaken suggestions, it is now clear that nothing of later Samaritan religion and practice owes anything to the proposed pagan influence of 2 Kings 17 or Ezra 4.

2.4.2. The Resettlement of Shechem. It is not known for certain precisely who resettled Shechem (and Mt. Gerizim itself?) at the start of the Hellenistic period. Most probably an important element comprised a group of religious purists who were descendants of the original Israelite population in the north who had not been exiled by the Assyrians (that there were some is recognized by the OT itself; cf., for instance, 2 Chron 30; 34:6; Jer 40:5). Following the severe suppression of a revolt in Samaria in the time of Alexander the Great and the complete Hellenization of this city, the ancient site of

Shechem would have been an obvious place to settle. "It often happened that when a Greek colony was established, native villages under its control formed a union around an ancestral sanctuary" (Bickerman, 43-44). The discovery of over two hundred skeletons in a cave in the *Wādī ed-Dāliyah* is generally thought to reflect part of this same upheaval.

Less certain, but in the present writer's view very attractive, is the suggestion that they were joined, or even preceded, by a group of *priests from Jerusalem who had been forced to leave the *temple service there because of the rigorous policies of those who succeeded Ezra and Nehemiah. Josephus's account may include some memory of this; there is strong circumstantial evidence in the OT for a major reorganization of the Jerusalem priesthood at about this time; it would help account for Samaritan claims to a legitimate priesthood, their close association with a number of inner-Jewish developments (e.g., in Halakah), and the apparently continuing inner-Samaritan tensions between the priesthood and the laity (see below). The later establishment of the Qumran community (see Dead Sea Scrolls), this time by a more strict group of priests and their followers, forms an interesting parallel development.

2.4.3. Conflict and Identity. The formation of this community and the building of a temple soon after would not of themselves have caused a decisive breach or schism. Purvis (1986), however, notes four possible reasons for a steadily deteriorating situation during the third and second centuries B.C.: (1) political tensions because of different alliances with the Ptolemies and the Seleucids; (2) Jewish resentment because of Samaritan acceptance of a greater degree of Hellenization and their consequent failure to join in the resistance to Antiochus IV Epiphanes; (3) tensions between their respective Diaspora communities; and (4) Hasmonean expansion.

This last element was probably decisive, for in 128 B.C. John Hyrcanus captured Shechem and destroyed the sanctuary on Mt. Gerizim. Apart from natural resentment, this drove the Samaritans to a closer religious rationale of their situation (compare the effect of the destruction of the Jerusalem temple in A.D. 70; see Destruction of Jerusalem). As Purvis (1968) has shown, it was at this period that the Samaritan Pentateuch began its own separate history in terms of script, orthography and, crucially, tex-

tual tradition and recension. From this point on, therefore, though one should certainly continue to regard Samaritanism as a form of Judaism ("sect" would be an anachronistic term to use), it became crystallized as by far the most distinct by virtue of its wholesale rejection of the Jerusalem-centered *Heilsgeschichte*, something which cannot be said of any other variety of Judaism in antiquity.

Not surprisingly, relations continued thereafter at a low ebb, and isolated events that are recorded from the first century A.D. may be regarded as symptomatic, though told from a Jewish standpoint. For instance, between A.D. 6 and 7, some Samaritans scattered bones in the Jerusalem temple during Passover (Josephus *Ant.* 18.2.2 §§29-30), while in A.D. 52 Samaritans massacred a group of Galilean pilgrims at *Engannim* (Josephus *Ant.* 20.6.1 §118).

3. Varieties of Samaritanism and Principal Beliefs.

Just as it is clearly mistaken to speak of normative Judaism in the first century in view of the number of groups which often differed quite sharply from one another, so recent research has suggested that the same was probably true of the Samaritans (cf. Kippenberg; Isser).

3.1. The Dositheans. Because of the fragmentary nature and late date of all our relevant sources, it is not possible to go beyond informed conjecture, but Isser has made out a strong case for the view that "Dositheus was an early first century A.D. eschatological figure among the Samaritans, who applied the 'Prophet like Moses' passage of Dt. 18 to himself" (Isser, 163). He further argues that he became prominent within a Samaritan sect which had already been formed during the previous century and which, as a *synagogue-based lay movement, was somewhat akin to the pharisaic movement within Judaism, in contradistinction to the more Sadducee-like orthodox Samaritans, who were no doubt predominantly priestly and centered on Gerizim.

Such distinctions need to be borne in mind when evaluating references to contacts between the Samaritans and Jesus or the first Christians as well as between Jews and Samaritans, for the degrees of affinity between different groups across the divide may have varied far more than our severely fragmented knowledge allows us to recognize.

3.2. Principal Beliefs. The previous remarks also mean that it is difficult to speak in general terms about Samaritan beliefs. However, from the Samaritan Pentateuch, whose primary recension should be dated, as we have seen, earlier than the first century, a few comments may be made. From the text-type of the Pentateuch which they elected to adopt for themselves, it is probable that already the passage in Deuteronomy 18:18-22 about a future "prophet like Moses" had been joined to the Exodus version of the Sinai account (following Ex 20:21). They will themselves, however, have added to the Decalogue the commandment, based on Deuteronomy 27, to build an altar on Gerizim.

Thus we can be reasonably certain that the following elements of their later creed were already established in early times: belief in one God, in Moses the prophet, in the law and in Mt. Gerizim as the place appointed by God for *sacrifice. The other two elements of the creed are less certain: the day of judgment and recompense, and the return of Moses as *Tahab* (the "restorer" or "returning one"). The latter is of particular interest in view of what we have seen about Dositheus, while in addition we may note the unrelated report of Josephus (*Ant.* 18.4.1 §§85-87) that in A.D. 36 a Samaritan fanatic assembled a crowd on Gerizim, promising to reveal the sacred vessels thought to have been hidden there by Moses. These indications, coupled with the Samaritan Pentateuch, suggest that from early times an important element of Samaritan belief, especially amongst the laity, was the coming of the "prophet like Moses," but that only later did this develop into the more crystallized concept of the *Tahab* (cf. Dexinger in Crown); beyond that it would be hazardous to speculate. [H. G. M. Williamson]

4. Jewish-Samaritan Conflicts and Polemics.

Jewish-Samaritan polemics emerged in the post-exilic period, from time to time exploding into violence. Because of these hostilities, Jewish pilgrims from Galilee often crossed over to the East Bank of the Jordan River in order to detour around Samaria. Those who chose to pass through Samaritan territory did so at great risk. According to Josephus, "Hatred also arose between the Samaritans and the Jews for the following reason. It was the custom of the Galileans at the time of the festival to pass through the Samaritan territory on their way to

the Holy City. On one occasion, while they were passing through, certain of the [Samaritan] inhabitants of a village . . . joined battle with the Galileans and slew a great number of them" (*Ant.* 20.6.1 §118; see also *J.W.* 2.12.3 §232).

Some Jews regarded the Samaritans with contempt, considering them fools (*Sir* 50:25-26; *T. Levi* 7:2) and idolaters (*Gen. Rab.* 81:3 [on *Gen* 35:4]), who were killed with divine approval (*Jub.* 30:5-6, 23). Later traditions in rabbinic literature regard Samaritans as apostate, wholly unclean and destined for Gehenna. [C. A. Evans]

5. Samaritans in the Gospels.

Although we have sought not to go beyond the available evidence in our treatment of Samaritan history and belief, we probably now have enough data to do justice to the references to the Samaritans in the Gospels.

5.1. The Synoptic Gospels. In the first three Gospels there are references to the Samaritans at Matthew 10:5; Luke 9:52; 10:93 and 17:16. These can all be understood against the background described above, once it is additionally borne in mind that they are told from a predominantly Jewish standpoint. Thus, in order to make a point similar to that in Luke 7:1-10, the foreignness of the grateful Samaritan is emphasized in Luke 17:11-19, even though he is instructed according to Jewish law along with the other nine lepers in v. 14. Similarly, Jesus' instruction to his disciples to go only to "the lost sheep of the house of Israel" (Mt 10:6) is contrasted not only with the negative command concerning the Gentiles but also, as in a separate and distinctive category, "any city of the Samaritans" (Mt 10:5). The incident in Luke 9:51-56 reflects typical Jewish-Samaritan personal antipathies of the time, though it is of interest to note both here and elsewhere that Jesus did not always bypass Samaritan territory (by taking a circuitous route through Transjordan) as many Galilean pilgrims to Jerusalem did. At the same popular level, the selection of a Samaritan for the positive role in the parable told in answer to the question "who is my neighbor?" (Lk 10:25-37) is telling and in a veiled manner anticipates the Jewish acknowledgment (recorded much later) that the Samaritans were often more punctilious in their observance of the law than the Jews (*b. Qidd.* 76a).

5.2. John. It is John 4 that gives the most extended account of an encounter of Jesus with

the Samaritans (the only other reference in this Gospel being Jn 8:48). Despite its popularity, the title "woman of Samaria" is misleading. The incident takes place at Sychar (Jn 4:5), clearly identified as being close to Shechem and Mt. Gerizim (cf. Jn 4:5-6, 20; *Gen* 48:22 [LXX]). The parenthetical comment in John 4:9 about Jewish-Samaritan relations following the woman's expression of surprise that Jesus should ask her for a drink is probably not a general statement, but reflects a halakic ruling (mid-first century?) that "the daughters of the Samaritans are menstruants from their cradle" (*b. Nid.* 31b) and hence that the vessels which they handle are unclean. If so, the comment may reflect more the time of the Evangelist than of Jesus himself, and the woman's surprise may not have been so specifically motivated. The woman's question about the right place to worship (Jn 4:20) is, as we have seen, entirely appropriate as reflecting the issue that stood at the heart of Samaritan identity and is just the kind of easily grasped popular polemic which someone of her status might have been expected to raise. Her response to Jesus' reply (Jn 4:25), however, is more problematic; talk of a "messiah" would probably have been foreign to a Samaritan (though our earlier caveat about diversity in this particular area of eschatology must be borne in mind). If historical tradition lies behind the saying, its present expression must be regarded as a Johannine paraphrase for his more Jewish-orientated readership. A reference to the prophet like Moses in the context of a discussion of the right place and mode of worship would have fitted well here, as is clear from our earlier discussion. [H. G. M. Williamson]

6. Samaritans in the Book of Acts.

In the book of Acts, Samaria plays a significant role in the report of the progress of the gospel. We see this in Acts 1:8, where the risen Christ tells his disciples that they shall be his "witnesses in Jerusalem and in all Judea and Samaria and to the end of the earth" (RSV). Here Samaria appears to function as a bridge between the Jewish people and the Gentiles. Persecution in Judea scatters the young church into Samaria (Acts 8:1, 5, 14, 25), where Simon the magician makes his appearance in the narrative (Acts 8:9). We are later told that the "church throughout all Judea and Galilee and Samaria had peace and was built up; and walk-

ing in the fear of the Lord and in the comfort of the Holy Spirit it was multiplied" (Acts 9:31; cf. 15:3). [C. A. Evans]

SANHEDRIN

The sanhedrin was the supreme Jewish religious, political and legal council in Jerusalem in NT times. The term was also used of the smaller courts governing the affairs of the Jewish communities throughout Palestine and the Diaspora.

1. Terminology
2. Theories
3. Origin and History
4. Membership
5. Powers and Functions
6. Times and Procedures

1. Terminology.

There are a number of Greek terms that may refer to various religious and political groups. In the NT a variety of these Greek terms is used but not all with reference to the body we know as the Sanhedrin.

1.1. Synedrion. In the LXX *synedrion* (*syn*, "together," and *hedra*, "a seat") had no fixed meaning and translated a variety of Hebrew words (*mat*, Ps 25(26):4; *sôd*, Prov 11:13; *dîn*, Prov 22:10; *qâhâl*, 26:26). By the end of the Maccabean period *synedrion* is widespread in the Greek literature for the supreme Jerusalem council. The Hebrew word *sanhēdrîn*, a transliteration of *synedrion*, is also used in the Mishnah for the Jerusalem court (*m. Soṭa* 9:11).

In the Gospels *synedrion* refers to the Jerusalem council (Mt 26:59; Mk 15:1; Jn 11:47; cf. Acts 5:27). In Matthew 5:22 and 10:17 (par. Mk 13:9) any judicial body may be in mind, such as the Sanhedrin, a local Jewish council or a group in the Christian community. In Luke 22:66 *synedrion* probably refers to the assembly room.

Synedrion occurs some fourteen times in the book of Acts, with the same meaning as found in the Gospels. The Twelve are brought before the Sanhedrin and commanded to stop proclaiming the gospel (Acts 4:1-22). The apostles continue to preach and are again brought before the Sanhedrin (Acts 5:27-41). Stephen is also brought before the Sanhedrin (Acts 6:12), as well as Paul on various occasions (Acts 22:30; 23:1, 6, 15, 20, 28; 24:20). In Acts we are told that Pharisees and Sadducees number among the members of the Sanhedrin (Acts 5:34; 23:6).

Josephus also uses the term for the Jerusalem council (Josephus *Ant.* 14.9.2-4 §§167-80; *Vit.* §62) and for the five districts and councils created in Palestine by Gabinius (Josephus *Ant.* 14.5.4 §§89-91). In other Greek literature of the period a *sanhedrin* was often a council of representatives from various constituencies (e.g., *Diodorus Siculus Bib. Hist.* 16:41).

1.2. Gerousia. Generally translated as "senate" or "council," *gerousia* was a word used mainly for the Greek and Roman nondemocratic senates (Aristotle *Pol.* 2.6.15) and was an older term than *synedrion* for the Jerusalem council from the end of the Persian period and the beginning of the Hellenistic period (Josephus *Ant.* 12.3.3 §198 and especially the Apocrypha, *Jdt* 4:8; *2 Macc* 11:27). Only in a puzzling verse in Acts 5:21 is the term used in the NT

where the high *priest "called together the council [*synedrion*] and all the senate [*gerousia*] of the sons of Israel." Luke may have thought there were two supreme bodies in Jerusalem, though it is more likely that, for the sake of his Greek readers, he means to say "the Sanhedrin, that is, all the senate."

1.3. Presbyterion. In Luke 22:66 *presbyterion* ("council of elders"; also Acts 22:5 and 1 Tim 4:14) may refer to the group of elders, one of the constituents of the Sanhedrin, but probably refers to the supreme Jerusalem council.

1.4. Boulē. Josephus often uses *boulē* ("council") for the senate in Rome (Josephus *J.W.* 1.14.4 §284; *Ant.* 13.5.8 §164), local Roman city councils (Josephus *Ant.* 14.10.13 §230), local Jewish city councils (Josephus *Vit.* §64), the Jerusalem Sanhedrin (Josephus *J.W.* 5.13.1 §532) and its meeting place (*bouleuterion*, Josephus *J.W.* 5.4.2 §144). However, the NT does not use the word in this way (cf. Lk 7:30; 23:51).

2. Theories.

According to the Greek literature (Apocrypha, NT and Josephus) there was a single body in Jerusalem. However, the Mishnah says that there were two major courts in Jerusalem: "The greater Sanhedrin was made up of one and seventy [judges] and the lesser [Sanhedrin] of three and twenty" (*m. Sanh.* 1:6). The conflicting sources and multitude of terms has resulted in a number of theories about the Sanhedrin. A. Büchler proposed that before A.D. 70 there was a political body (*boulē*), a college of mostly priests (*synedrion*), and the Great Sanhedrin, which oversaw Jewish religious life. M. Wolff argued that the high priest presided over a little Sanhedrin and there was also a Great Sanhedrin (*gerousia*) of *scribes that condemned Jesus. S. B. Hoenig's theory was that there were three Sanhedrins: a political as well as a priestly and also a scribal one, which was the Great Sanhedrin. However, it is difficult to determine how far the Mishnah has preserved reliable traditions on the Sanhedrin, for it is now generally agreed that it is reflecting the entirely different situation at Jamnia, not that in Jerusalem before A.D. 70. On the other hand the Greek sources are more contemporaneous to the time of Jesus and are therefore to be favored in reconstructing the history of the Sanhedrin before A.D. 70.

3. Origin and History.

The rabbis at Jamnia legitimized their govern-

ing body by tracing it back to Moses and his seventy elders (Deut 27:1; *m. Sanh.* 1:6). However, apart from a supreme law court in Jerusalem (Deut 17:8-13; 19:15-21) and the occasional mention of "elders" (Ex 3:16; Deut 5:23), there is no hint of the existence of such an institution as the Sanhedrin in this period.

The actual seeds of the Jerusalem Sanhedrin in the time of Jesus were planted in the time of Ezra and Nehemiah. Joshua the high priest and the Davidic governor of Jerusalem, Zerubbabel, ruled the community together (Hag 1:1; Zech 4:14). The community was headed by a priestly nobility that formed an aristocratic council (Neh 2:16; 5:7) representing the people in negotiations with the Persian provincial governor, Tattenai, in the reconstruction of the *temple (Ezra 5:5, 9; 6:7-8, 14). With the death of Zerubbabel the house of David came to an end and the high priest emerged as the head of the *gerousia* and Jewish state (1 Macc 12:6).

From Hecataeus of Abdera, a contemporary of *Alexander the Great, we learn that the council was dominated by the priests: "He [Moses] picked out the men of most refinement and with the greatest ability to head the entire nation, and appointed them priests. . . . These same men he appointed to be judges in all major disputes, and entrusted to them the guardianship of the laws and customs. For this reason the Jews have never had a king, and authority over the people is regularly vested in whichever priest is regarded as superior to his colleagues in wisdom and virtue. They call this man the high priest" (Diodorus Siculus *Bib. Hist.* 40.3.4-5).

Under the relative freedom provided by the Hellenistic Kings, the influence of the Jerusalem court increased. The Seleucid king, Antiochus III (223-187 B.C.), said that it was his will that the Jewish nation "shall have a form of government in accordance with the laws of their country, and the senate [*gerousia*], the priests, the scribes of the temple and the temple-singers shall be relieved from poll-tax" (Josephus *Ant.* 12.3.3 §142).

From the beginning of the Maccabean revolt (167 B.C.) the power of the high priest increased (1 Macc 12:6) and with Simon being established as high priest, military chief and ethnarch (140 B.C.), the power of the Sanhedrin was reduced (1 Macc 14:24-49). With the reign of Queen Alexandra (76-67 B.C.) the Sanhedrin's power increased and the domination of the priests and nobility was exchanged for that of the *Phari-

sees. Alexandra permitted "the Pharisees to do as they liked in all matters, and also commanded the people to obey them; and whatever regulations, introduced by the Pharisees in accordance with the traditions of their fathers, had been abolished by her father-in-law Hyrcanus, these she again restored" (Josephus *Ant.* 13.16.2 §408).

Gabinus (57-55 B.C.), the Roman governor in Syria, divided the nation into five districts with councils (*synedria*) in Jerusalem, Gadara, Amathus, Jericho and Sepphoris (Josephus *Ant.* 14.5.4 §91). In 47 B.C. Caesar overturned this arrangement so that the high priest and the Jerusalem council were responsible for the affairs of the whole nation even though these local councils survived (Josephus *Ant.* 14.10.2 §§192-95). The Sanhedrin became sufficiently confident in its authority that the high priest and ethnarch Hyrcanus II (68-40 B.C.) summoned Herod to stand trial on capital sentences he had passed without the Sanhedrin's authority (Josephus *J.W.* 1.10.5-9 §§204-15). When *Herod took Jerusalem in 37 B.C. he retaliated by killing the entire membership of the Sanhedrin (Josephus *Ant.* 14.9.4 §174, though *Ant.* 15.1.2 §6 says only forty-five leading men were killed). Herod abolished the privilege of serving as high priest for life and appointed high priests with ceremonial duties and no political power.

Under the Roman procurators (A.D. 6-41), the Sanhedrin's power increased again (Josephus *Ant.* 20.9.1 §200; 20.10.1 §251). So, in the NT the Sanhedrin is represented as the supreme court of justice (Mk 14:55).

After the destruction of Jerusalem and the temple in A.D. 70 (see Destruction of Jerusalem), the Sanhedrin was recreated at Jamnia (Yavneh in the OT; 2 Chron 26:6) in the northwest of Judea (*m. Sofa* 9:11; *m. Sanh.* 11:4) before moving to Galilee in A.D. 118.

4. Membership.

The Mishnah is probably correct in saying that prior to A.D. 70 the Sanhedrin in Jerusalem had seventy-one members (cf. Num 11:16; Josephus *J.W.* 2.18.6 §482; *Ep. Arist.* 46-50; *m. Sanh.* 1:6).

After the exile the Jerusalem council was composed of Levites, priests and heads of families (2 Chron 19:5-11). In the Maccabean period the Sanhedrin consisted of lay aristocracy and priests of Sadducean sympathy (1 Macc 7:33; 11:23; 14:28). In the time of Queen Alexandra,

pharisaic scribes belonged to the assembly.

Both the NT and Josephus agree that in the first century the chief priests (*archiereis*) were the key figures in the Sanhedrin (Mt 27:41; Mk 14:53; Josephus *J.W.* 2.14.8 §301; 2.15.2-16.8 §§316-42). These were probably the former high priests and members of the priestly aristocracy from which the high priests were chosen and belonged to the party of the Sadducees (Acts 4:1; 5:17; Josephus *Ant.* 20.9.1 §199). The scribes (*grammateis*) were the second major component of the Sanhedrin and dominated the body (Acts 5:34; 23:6; Josephus *Ant.* 18.1.4 §17; *J.W.* 2.17.3 §411). In the Persian period all the members of the Sanhedrin (*gerousia*) were called "elders" (*presbyteroi*, 1 Macc 14:20; 2 Macc 4:44). By NT times the term "elders" was used for a third group consisting of priests and lay members of the nobility (Mt 26:3; 27:1; 28:11-12) within the Sanhedrin. From observing the synonyms for these elders we learn that they are leading men of the people (Lk 19:47; Josephus *Life* §194), the leading men of Jerusalem, the powerful and the dignitaries (Josephus *J.W.* 2.15.2 §316; 2.17.2 §410; *Life* §9).

Josephus says that, along with Ishmael the high priest and Helcias the treasurer, ten leading men were sent on a delegation to Nero (Josephus *Ant.* 20.8.11 §194). Also, as Greek cities had a committee of ten leading men, there may have been a group of the ten foremost members within the Sanhedrin.

The high priest was always the president of the Sanhedrin (1 Macc 14:44; Mt 26:57; Acts 5:17; 24:4; Josephus *Ag. Ap.* 2.24 §194; *Ant.* 20.9.1 §200; 20.10.1 §251). From the time of Herod the Great the high priest was often appointed arbitrarily and out of political considerations. Otherwise, the office was hereditary (Num 3:32; 25:11-13; 35:25, 28; Neh 12:10-11) and the Palestinian Talmud says that the high priest would not be elected high priest if he had not first been captain of the temple (*y. Yoma* 3:8, 41a. 5. Cf. Josephus *J.W.* 2.17.2 §409).

Second in rank to the high priest was the captain of the temple (Hebrew, *sāgān* or *segen*, Aramaic *sēgan*, Greek, *stratēgos*, Josephus *Ant.* 20.6.2 §131; Lk 22:4, 52; Acts 4:1, 24, 26; *m. Yoma* 3:1). Josephus also mentions a secretary of the Sanhedrin (Josephus *J.W.* 5.13.1 §532).

We know little of how people were appointed to the Sanhedrin, though they may have been co-opted (*m. Sanh.* 4:4) from among those of le-

gitimate Israelite descent (*m. Qidd.* 4:5). Actual admission was through the laying on of hands (*m. Sanh.* 4:4; cf. Num 27:18-28; Deut 34:9).

5. Powers and Functions.

At least theoretically, the Jerusalem Sanhedrin's sphere of authority extended over the spiritual, political and legal affairs of all Jews (*m. Ta'an.* 3:6). Thus, the Mishnah says that where members of a local court disagreed on a point of law, the matter was referred to the Jerusalem court which sat at the gate of the Temple Mount. If the dispute could not be resolved, it went to the court which sat at the gate of the temple court. If a resolution was still not found, the Sanhedrin heard the dispute. Thereafter, on the pain of death, local judges were to follow the decision (*m. Sanh.* 11:2; cf. Josephus *Ant.* 4.10.8 §§214-18; *J.W.* 2.20.5 §§570-1). However, the sphere of authority and geographical area over which the Jerusalem Sanhedrin exercised jurisdiction varied greatly over time according to the relative freedom of the Jews in relation to the succession of foreign oppressors.

In the time of the Hasmonaean rulers the whole of Palestine was a single political unit over which the Sanhedrin exercised oversight. When Gabinius (57-55 B.C.) divided Jewish territory into five areas, the authority of the Jerusalem Sanhedrin may have covered only one third of Judea (Josephus *Ant.* 14.15.4 §91; *J.W.* 1.8.5 §170). From the death of Herod the Great, Galilee and Perea were separate administrative regions so that the civil jurisdiction of the Jerusalem Sanhedrin did not extend beyond Judea. Thus while Jesus remained in Galilee, the Sanhedrin had no judicial authority over him. Even so, Luke says that the Sanhedrin authorized Paul to arrest Christians in Damascus (Acts 9:1-2; 22:5). Then Josephus says that in a peaceful period after the first stages of the Jewish War in A.D. 60, magistrates and members of the Sanhedrin dispersed from Jerusalem and collected the Roman taxes from the whole of Judea (Josephus *J.W.* 2.17.1 §405).

In A.D. 6 Augustus appointed a procurator for Judea "with full powers, including the affliction of capital punishment" (Josephus *J.W.* 2.8.1 §117). That the Sanhedrin could no longer order and execute a capital sentence is reflected in John 18:31 and in the rabbinic literature (*y. Sanh.* 18a; 24b; *b. Sanh.* 41a; *b. 'Abod. Zar.* 8b). On the other hand, Josephus says (Josephus *J.W.*

5.5.2 §§193-94) that the second court of the temple was surrounded by a stone balustrade on which at regular intervals stood slabs giving warning in Greek and Latin: "No foreigner is to enter within the forecourt and the balustrade around the sanctuary. Whoever is caught will have himself to blame for his subsequent death" (*CJJ.* 1400 n. 85). This could be a special case granted to the Jews. In any case it is more likely to be a warning against being lynched (cf. Acts 6:8-8:2; Jn 10:31).

Also, Josephus says that the Sanhedrin condemned James, the brother of Jesus, to be stoned. In this case the procurator Porcius Festus had died and Ananus took the opportunity of convening the Sanhedrin before Albinus the new procurator had arrived (Josephus *Ant.* 20.9.1 §§197-203). Further, the Mishnah relates the burning of a priest's daughter convicted of adultery (*m. Sanh.* 7:2). Those who argue that the Sanhedrin did not have the power of death under the Roman procurators suggest that this took place during the brief reign of Agrippa I (A.D. 41-44) when the Jews had their own independent state. Whether or not the Sanhedrin was able to execute capital punishment, the Romans maintained the right to intervene when a political crime was suspected (Acts 22:30; 23:15; 20:28).

6. Times and Procedures.

The Sanhedrin probably met on the western boundary of the Temple Mount (Josephus *J.W.* 5.4.2 §144; 6.6.3 §354) in the "Hall of Hewn Stone" (*lishkat ha-gazit*), indicating that it was next to the gymnasium or *Xystus* (*gazit* = *xystos*, 1 Chron 22:2; Amos 5:11).

The night meeting in Mark 14:53 (par. Mt 26:57; Lk 22:54) was probably to be considered a preliminary hearing in the high priest's palace because trials could only be held in the hours of daylight (cf. Mk 15:1; *m. Sanh.* 4:1).

No record remains of the proceedings of the Jerusalem Sanhedrin. However, the Mishnah gives details of the judicial procedure of the lesser Sanhedrin of Twenty-Three, which may reflect procedure of the Jerusalem Sanhedrin before A.D. 70. Members sat in a half-circle so they could see each other. Before them stood two scribes, one writing down what was said in favor and the other what was said against the accused. Before them sat three rows of students, who could participate in noncapi-

tal trials (*m. Sanh.* 4:1-4).

Noncapital trials began with either case, but capital trials were to begin with the case for acquittal. A majority of one was sufficient in non-capital trials to acquit the accused of a capital charge. A majority of two was required for a guilty verdict on a capital charge. Verdicts could be reversed but not from an acquittal to a conviction in a capital trial. Those participating in the case could speak for and against the accused in non-capital trials. In capital trials a speaker in favor of conviction could only change and argue in favor of the accused, not the reverse. In non-capital cases the daytime trial could be followed by reaching a verdict that same night. In capital cases the verdict for an acquittal could be reached that night, but a verdict of conviction had to wait until the following day (*m. Sanh.* 4:1). In that way members of the Sanhedrin could go off in pairs to eat a little (no wine was permitted) and discuss the matter all night before meeting in court early next morning (*m. Sanh.* 5:5). Therefore, trials were not to be held on the days before a *sabbath or *festival (*m. Sanh.* 4:1). In capital cases voting began with the most junior members standing, each giving their verdict (*m. Sanh.* 5:5).

SCHOLARSHIP, GREEK AND ROMAN

In a broad definition, encompassing the whole range of the intellectual activities of the human mind, the scholarship of late antiquity would undoubtedly include the analysis, systematization, codification and conservation of hitherto attained knowledge as well as new expressions of literary and other scientific accomplishments. This broad perspective would necessitate a discussion of all the different fields of literature and natural sciences—inasmuch as these too have come down to us in writing—in which important advances were made during the period under our purview, such as the various types of poetry and prose, literary criticism, grammar, lexicography, historiography, music, mathematics, geometry, geodesy, geography, astronomy, physics, mechanics, pneumatics, medicine, pharmacology, jurisprudence, *philosophy and *rhetoric. In this way the grandiose achievement of the *Hellenistic age and its significance as the matrix of the NT literature and its thought would come to its rightful place. However, the limits imposed upon the present article make it imperative to abandon the broader perspective and to concentrate instead on what is normally perceived to be the peculiarly original contribution of the times, that is, the scientification of the various literary disciplines. Nevertheless, a brief treatment of certain scientific discoveries, important for the worldview current in NT times, can hardly be omitted.

- 2.5. The Decline of Latin Literature in the First and Second Centuries A.D.

1. Greek Scholarship.

1.1. Beginnings: Athens. The rudimentary beginnings of textual, literary, grammatical, lexical and stylistic criticism were made in *Athens. The incentive was undoubtedly given by the collection of the Homeric epics and later also Hesiodic epics, which were made the basis of the *educational system. This, according to one view, probably went back to Solon (fl. 594/3 B.C.), who had decreed how the epics were to be recited (Diogenes Laertius Vit. 1.57) at the Panathenaea (Plato *Hipparch.* 228 b); according to another view (Cicero *De Orat.* 3.137; Pausanias *Descr.* 7.26) to Peisistratos (ruled 560-527 B.C.), who had committed the task to Onomacritus (Tzetzes *Prolegomena on Aristophanes*). The first concern was to produce an edition of the "scattered" Homeric texts (Pausanias *Descr.* 7.26); however, tampering with old texts was not unknown (cf. Herodotus *Hist.* 7.6) and may even have been considered necessary.

1.1.1. Textual Criticism. The influence of Homer on later poets—Alcman (fl. 657 B.C.), Archilochus (fl. 650 B.C.), Stesichorus (fl. 620 B.C.), Pindar (518-448 B.C.), to mention only a few—was enormous. The great tragedians Aeschylus (c. 535-456 B.C.), Sophocles (496-406 B.C.) and Euripides (c. 485-406 B.C.), especially the former two, often exploited his themes in their verse, though the last frequently showed independence. Aristophanes freely admitted his debt (*Frogs* 1034ff.), while historians such as Herodotus (c. 484-post 430 B.C.) and Thucydides (c. 460-400 B.C.) were indebted to him. Homer's influence on Athenian and generally on Greek *paideia* was without rival: the motto of excellence in competition having being inspired from *Iliad* 6.208: "May you always excel and surpass (all) others." In his expeditions *Alexander the Great slept with a copy of *Aristotle's edition of the *Iliad* under his pillow (Plutarch *Alex.* 8). Of this edition we hear from Strabo (64 B.C.-A.D. 21; *Geog.* 13.1.27) and Plutarch (A.D. 46-120). The first philological critic, who is also credited with the first known edition (recension?) of Homer (Ἰστορία τοῦ ἑλληνικοῦ ἔθνους 5.906) was the epic-elegiac poet and scholar Antimachus of Colophon (born c. 444 B.C.). *Plato's interest in this poet was great enough to send Heraclides to Colophon to collect his works (Proclus *In Tim.* 1.90). All this implies not only that Homer and other poets were widely read and studied but also copied, edited and disseminated.

1.1.2. Criticism-Commentary. Although we can hardly speak of a strictly literary-critical treatment of ancient works at this period, Homer, Hesiod and other poets had had their critics, some friendly, others more hostile. One of the earliest admirers of Homer, who appreciated the poet's genius and lofty diction, was the atomic philosopher Democritus (460-357 B.C.) (cf. Dio Chrysostom *Or.* 53.1). The orator Isocrates (436-338 B.C.) extolled Homer for eulogizing those who had fought against foreign enemies, attributing to this the high esteem in which he was held at Athens (Isocrates *Paneg.* 159; *Panath.* 33-34). One of the foremost rhapsodists of classical times, Ion, claimed to be divinely inspired in transmitting the poet's inspired interpretation of the gods to the listeners (Plato *Ion* 533-535). He had apparently written the earliest commentary on Homer.

1.1.3. Sachkritik. Among the earliest critics of Homer's pantheon was Xenophanes of Colophon (c. 570-470 B.C.). In rationalistic fashion he accused Homer and Hesiod of having created their gods in human form, attributing to them "whatever is shameful among men" (Xenophanes frag. 11.2). Heraclitus of Ephesus (540-480 B.C.) declared that Homer should be "expelled from the contests and be beaten" (Heraclitus frag. 42), while the most merciless critics of Homer's theology were Euripides (e.g., Euripides frag. 63, *Heracl.* 211) and Aristophanes (e.g., Aristophanes *Pax* 57-63; *Au.* 554-60; *Eq.* 32-34, *Nub.* 366). Plato detested the Homeric pantheon (e.g., Plato *Leg.* 10.903, see also 885 c.) and had no place for Homer or Hesiod in his ideal state (e.g., Plato *Rep.* 377d-378e; 607a). Here we have the beginnings of the higher-critical occupation with Homer's ideas, theology and morals, that is, the beginnings of *Sachkritik* ("content criticism").

1.1.4. Literary Criticism. Literary criticism too makes its first appearance in Athens. The award of prizes at the various rhapsodical, lyric and dramatic contests presupposes competence in literary criticism. A decisive step is taken by Plato and Aristotle, but even here the subject is treated more or less as an interesting aside rather than as a serious scientific pursuit. Plato's view of poetry has its point of departure in his idealistic philosophy and his conception of the ideal state. It is true that in several of his dialogues (Plato *Phaed.* 245a; *Apol.* 22a-c; *Leg.* 719c, and especially in *Ion* 533-34d), Plato looks upon the poet

as inspired, possessed, out of his mind, completely under the control of the Muses. But when he comes to speak of the poets' and the dramatists' place in his state, he speaks of their work not as inspiration and possession but as imitation. However, imitation has no place in his state because it is an imitation of the imitations of the real (Plato *Rep.* 394-95; 597c). Plato is also the first to treat of grammar in a broader sense. In his *Cratylus* he takes up a number of terms for etymological analysis. Although many of his etymologies are quite fanciful, the importance of the work is that words and in a sense language begin to attract attention as worthy objects of scientific inquiry.

Aristotle had inherited Plato's idea of poetry and other arts as imitation, but in his hands such artistic creations become the vehicle of universal truth (Aristotle *Poet.* 9). Hence, in his *Poetica* Aristotle takes up poetry for detailed analysis: "Severely scientific and masterly in method . . . it . . . stands out conspicuously in Greek literature as the earliest example of a systematic criticism of poetry . . . we shall find nothing in Greek literature until, in the Roman age, we ultimately reach the celebrated treatise *On the Sublime*" (Sandys, 1:75).

1.1.5. Rhetoric. The contribution of rhetoric in this connection is not negligible. Brought from Sicily by Gorgias (483-376 B.C.), the celebrated pupil of Teisias, rhetoric took firm root in Athens. At least one of the great orators of the canon, Isocrates, was Gorgias's disciple. The Sicilian school had the tendency to intermingle poetical elements in their prose aiming at achieving beauty of language (*euepeia*), whereas the other branch of rhetorician-Sophists whose leader was Protagoras (c. 485-415 B.C.) and his disciples Prodikos (fifth century), Hippias (481-411 B.C.), the most encyclopedic teacher of his day, and possibly the Sophist Antiphon (fifth century; not to be confused with the orator Antiphon of Rhamnus) aimed at correctness of language (*orthoepia*). If some of these authors had the tendency to succumb to an involved and ponderous style, such as the one we find in Thucydides, others, among them Lysias (459-380 B.C.), captivate by their simplicity and straightforwardness. Thrasymachus of Chalcedon (457-400 B.C.) chose a middle course, and in this he was followed by Isocrates and Plato. Lacking the natural gifts required for addressing great crowds, Isocrates established the first rhetorical

school in Athens, which became duly famous, and through his many speeches he influenced as few others the political climate during his long life.

Prodicus is important for his etymological studies and his analysis of synonyms, while Hippias appears to have written one of the earliest handbooks on rhetoric (not extant). Other handbooks on rhetoric include those of Isocrates (lost); Anaximenes of Lampsacus's *Rhetoric to Alexander* (before 340 B.C.), wrongly attributed to Aristotle; and Aristotle's *Rhetorica* (both extant), which develops ideas put forth by Plato in his *Phaedrus*. The rhetoricians and Sophists contributed in particular by their analysis of speech into several parts and their emphasis on a cultivated and effective use of language aimed at gaining control over the minds of the listeners. With them words, etymology, synonyms, syntax and the effective use of oratory become subjects of analysis and inquiry.

1.1.6. Grammar. With respect to grammar, the Sophists were the first to distinguish gender in nouns: male, female and things. Plato distinguished between noun (or more correctly subject) and verb (predicate) (Plato *Soph.* 261e-262c) and between substantive and adjective (Plato *Parm.* 131a; *Soph.* 225d; *Phaed.* 238a). He recognized number (Plato *Soph.* 237d), tenses (Plato *Soph.* 262d; *Parm.* 151c; 156a) and active-passive (Plato *Soph.* 219b; *Phileb.* 26c).

In his *Cratylus* Plato touches on the problem of the meaning of words, on derivation and on etymology, and discerns onomatopoeic words. He seems to hold that language is based on nature (*physis*) but that it is modified by convention (*nomos*). Words normally have their meaning from their nature, but many of them are conventionally so named.

Aristotle categorizes the letters and speaks of declensions and conjugations, but these passages are thought to be interpolations. Elsewhere he speaks of the parts of speech as noun, verb and conjunctions. He is the first to have drawn a clear distinction between the subject (*hypokeimenon*) and the predicate (*kategoroumenon*) (Aristotle *Int.* 17-21).

1.2. Alexandrian Scholarship. With the Alexandrian age Greek scholarship passes from its faltering, rudimentary beginnings to a mature and sure handling of the various disciplines, from amateurish attempts at literary and grammatical criticism to a methodical, scientific treatment.

Alexandrian scholarship is connected with two famous institutions: the museum and the library (see Alexandrian Library; Alexandrian Scholarship).

1.2.1. *Precursors of the Alexandrian Library: Early Book Collections and Libraries.* The dissemination of the Homeric epics in archaic times presupposes the art of book production. During classical times we hear of bookstores in Athens selling works of contemporaries cheaply (Eupolis [430 B.C.], frag. 304; Plato *Apol.* 26d; *Phaed.* 97b; Aristomenes frag. 9; Nicophon frag. 14.9; Theopompos frag. 77), and around 400 B.C. cargoes of books shipped to Pontos (Xenophon *Anab.* 7.5.14). This need not mean that books were published in large editions or that the majority of people owned books. However, men of letters and persons in high positions must have had their private libraries. We hear of the book collections of Polycrates of Samos (fl. 540 B.C.), Peisistratos of Athens (fl. 560-527 B.C.), Euripides (485-406 B.C.), Euclides, the Athenian Archon, who in 403 B.C. ratified the twenty-four-letter alphabet still in use, and Nicocrates of Cyprus (Athenaeus *Deipn.* 1.3a). Seleucus Nicanor had the books taken by Xerxes from Athens (480 B.C.) returned to their place (Aulus Gellius *Noc. Att.* 7.171-72). This implies the existence at the time of a public library or at least of book collections. It is assumed that Plato had his own library at the Academy. Aristotle (384-322 B.C.) had his private library, which he bequeathed to his pupil Theophrastus (372-288 B.C.), who in turn left it to Neleas (Strabo *Geog.* 13.1.54; Athenaeus *Deipn.* 1.3a; Diogenes Laertius *Vit.* 5.52). Epaphroditus of Chaeronea (first century A.D.) is said to have amassed a private library of some thirty thousand volumes (*Suda* E 2004; see also *OCD*³, Libraries).

One of the first public libraries was apparently founded by Clearchus of Heraclaea in Pontus (390-353 B.C.) (Memnon 1.1, 2; Photius *Bibl.* 222b). At a later date libraries were found in Pella, *Antioch, Rhodes, Cyprus and especially in Pergamum. Cities such as *Ephesus, Smyrna and Tarsus were renowned for their rhetorical schools, which imply the existence of libraries, some of them founded after the Alexandrian one. The Alexandrian museum and library thus constitute the apogee of a long tradition of centers of learning and research.

1.2.2. *The Museum and the Library.* In Greece the museum was a sanctuary for the worship of

the Muses. It had an altar and open colonnades and was adorned with various statues. The Muses, nine in number (see Hesiod *Theog.* 75ff.), were deities, daughters of Zeus and Mnemosyne (= Memory), and were connected with music, dance, poetry and other fine arts. Being patrons of intellectual activities, they were the center around which both Plato's Academy and Aristotle's Lyceum (or Peripatos) were structured.

The link between Athens and *Alexandria was Demetrius Phalereus (c. 350-?283 B.C.), a pupil of Aristotle. Having been Cassander's regent in Athens (318-308 B.C.), this able politician and scholar took up service under Ptolemy I Soter, around 297 B.C., and was probably the instigator of the museum and the library (cf. Strabo *Geog.* 17.1.8; Plutarch *Mor.* 1095d-e, which do not, however, mention Demetrius). Having advised against the succession of Ptolemy II Philadelphus on the accession of the latter prince, Demetrius was banished and died soon thereafter. The museum, whose director was a priest, had a large number of researchers, who were furnished with free meals, received a high annual salary and were exempted from taxes.

The library, which was probably a separate institution but housed in the museum complex, was under the directorship of a librarian (see Fraser, 1:305-35; 2:462-94). The **Epistle of Aristaeas* (9-10) states that Demetrius was the first librarian, but this is considered at least unlikely. The library's holdings are given for the time of Philadelphus as two hundred thousand books (*Ep. Arist.* 10), for the time of Callimachus as four hundred thousand (Tzetzes *Prolegomena to Scholia on Aristophanes* 11a.2.10-11), and in the first century B.C. as seven hundred thousand (Aulus Gellius *Noc. Att.* 6.17). This was a research library situated in the Broucheion district, where the palace was, there being another, smaller library with about forty thousand books, in the Serapeion district, open to the public.

To stock the library, the *Ptolemies spent large sums of money (though Aristaeas's information of the mythical sums paid for the *Septuagint [LXX] is unworthy of credit), but sometimes they also resorted to deceitful means (e.g., they borrowed the Athenian edition of the tragedians to copy it, giving fifteen talents as guarantee for its return, but then kept the original, sending back a copy and relinquishing the fifteen talents). They were also in the habit of confiscating all books found in ships visiting Alexandria (Ca-

len *Hypomn. Hippoc., Epid. III*, Kühn, 17a:606-7). It was their ambition to include not only all Greek literature but also all literature written in any language. It is against this greater context that the translation of the LXX ought to be viewed.

Henceforth the history of scholarship is more or less bound up with the work of the Alexandrian librarians and other museum scholars. The main sources for Alexandrian scholarship are the few remains of their many and varied works, the scholia of Byzantine scholiasts, which take up their text editions or recensions, treatises, commentaries, grammars and lexica; the erudite Byzantine scholar Ioannes Tzetzes; and the *Suda* lexicon. The dates of the librarians and certain other scholars are only approximate.

Who the librarians were and in which order they succeeded one another had long been a standing problem until the discovery of *Oxyrhynchus Papyrus 1241* (second century A.D.). According to the second column of this document the librarians were

[Apollo]n[i]os the Alexandrian, son of Silleus, called Rhodios—he was succeeded by Eratosthenes, who was followed by Aristophanes Byzantios, son of Appelos, and Aristarchos; thereafter Apollonios the Alexandrian, called [E]idographos; after him Aristarchos the Alexandrian, son of Aristarchos (originally Samothrax)—after him Kydas one of the Lancers; under the ninth [k]ing there flourished the Grammarians: Ammono[n]ios, Zeno[d]otus, Dio[k]les, and Apollo[d]oros.

This document is problematic: the list begins with Apollonius of Rhodes, but we know that Zenodotus had preceded him (*Suda* Z. 74). It is therefore generally surmised that the name of Zenodotus was written at the end of the first column, now lost. Moreover, between Aristophanes of Byzantium and Apollonius of Eidographus the papyrus interjects another Aristarchus, who has never existed.

Alexandrian scholarship is usually divided into three periods: the formative period, the period of maturity and the period of decline.

1.2.2.1. *The Formative Period.* Zenodotus of Ephesus (325-260 B.C.), pupil of Philitas, is the first librarian (284-?260 B.C.) and the first great scholar. His *Glossai*, a kind of alphabetically arranged glossary on rare Homeric words, was probably the first attempt at a lexicon, giving im-

petus to the critical study of language. His lasting work was his recension of Homer (he also edited Hesiod, Anacreon and Pindar), the first critical edition ever by means of collation of different manuscripts. Zenodotus is probably the scholar who gave the definitive form to the *Iliad* and the *Odyssey*, dividing them into twenty-four books each. Of even greater importance was his introduction of critical marks (developed further by Aristophanes of Byzantium and Aristarchus), like *obeloi* (-), asterisks (*) and *diple* (>), to mark doubtful lines. (Similar critical marks were later used by Origen, who was nurtured in the Alexandrian tradition, in his edition of his *Hexapla*). Zenodotus's scientific insight and objectivity is attested by the fact that he did not remove any text that appeared to him suspect, but he marked it and left it in place, thus enabling future scholars to continue their critical work. He occasionally emended the text, for which he has been maligned by ancients and disparaged by moderns, but many of his rejected corrections have now turned up in old papyri. He is the link between the older tradition of the Homeric text—not available to later scholars—and the Alexandrian recensions. With no prototype to follow, he was the great pioneer.

Apollonius of Rhodes (born c. 295 B.C.), disciple of Callimachus, succeeded Zenodotus around 270 or 260 B.C. and, following his quarrel with Callimachus, retired to Rhodes around 247 B.C. He is the greatest epic poet of this period through his celebrated *Argonautica*, an epic of 5,884 dactylic hexameters. As a scholar his main work seems to have been an attack on Zenodotus's edition of Homer. He preferred the pre-Zenodotian form of Homer, and he worked on Hesiod and Archilochus. In Rhodes he exerted considerable influence on scholarship.

Callimachus of Cyrene (c. 305-240 B.C.), one of the most illustrious Alexandrian poet-scholars, worked in the library, though according to *Oxyrhynchus Papyrus 1241* he never served as librarian. He wrote on antiquities, language and literary criticism. Drawing inspiration and models from works of the past, he produced a novel, independent and exquisite poetry (e.g., *Aetia*, fragments survive). His main work, and his significance from the standpoint of scholarship is, however, the *Pinakes* (*Tables of Persons Illustrious in Every Department of Learning, as Well as of Their Writings*) in 120 books. Of this important and influential work (see Pfeiffer, 127-34)—a first sci-

entific attempt at literary history—which must have been of incalculable value in cataloging the library and classifying its treasures, almost nothing remains. These *Pinakes* may have been the source for many biographical details found in later authors (e.g., Hesychios, *Suda*, Tzetzes). He also wrote another, similar *Pinakes* on *Didaskaloi* (dramatic poets). In the area of prose Callima-

chus wrote several books on strange and paradoxical phenomena in various places. According to *Suda* (K 227) he wrote more than eight hundred books.

The successor of Apollonius of Rhodes was Eratosthenes, also of Cyrene (285-194 B.C.). Eratosthenes, a pupil of the philosopher Ariston, the grammarian Lysanias and Callimachus

SCHOLARS OF ALEXANDRIA

(*Suda* E 2898), was the first real scholar whose research interests were truly universalistic: as chronographer he was the first author to disregard the mythical element in his *History* from the fall of Troy to Alexander the Great; he was the first writer to treat geography in a scientific way. He was a not inconsiderable mathematician, astronomer (e.g., he compiled a list 675 stars) and geodesist, and he succeeded in measuring the circumference of the earth with stupendous precision; as poet he was praised by that excellent literary critic [pseudo-] Longinus [hence "Longinos"] (*Peri Hypsous*). As philosopher he belonged to the Platonic school; finally, as a literary critic he wrote his masterpiece on Old Comedy in twelve books, in which he corrected previous views (Lycophron, Callimachus), on such questions as authorship, dating, textual criticism and subject matter. He was the first to assume the title of *philologos*, that is, a man of erudition. He also had a modern outlook on Homer: asked about the wanderings of Odysseus, he replied: "The scenes of Odysseus' wanderings will be found when you find the cobbler who sewed up the bag of winds, and not before" (*Strabo Geog.* 1.2.14).

With Eratosthenes ends the first period of Alexandrian scholarship. The museum and the library had now been established as renowned institutions of research, unique in the world; books had been amassed as never before; the fundamental authors in Greek education had been edited and recensions seeking to establish the original text had followed one upon another. Principles of criticism had been laid down, commentary work had been commenced; lexicography and grammar had seen the light of day; and literary analysis had become an established science. Applied mathematics and natural sciences—geography, geodesy, astronomy and others—had advanced, and the answers presented had become more satisfactory. In short, the worldview of the times was beginning to wear a modern garb.

It now remained to consolidate the gains and to push the frontiers of research further, nearer the ultimate goal. This was to be achieved in the next period, the period of maturity.

1.2.2.2. The Period of Maturity. With Aristophanes of Byzantium (257-180 B.C.), successor of Eratosthenes and pupil of Zenodotus and Callimachus, we pass into the era of maturity. Aristophanes was a mature scholar of sixty-two

when he became head of the library. He carried the work of his predecessors so far that he overshadowed their contributions. His work was many-sided. He improved on Eratosthenes in the edition of Homer, in which, like him, instead of removing lines or taking to conjectures, he indicated his critical work and preferences by means of critical symbols in the margins, augmenting Eratosthenes' text-critical sign-system considerably. He is also the scholar who established the use of punctuation marks (some of which are witnessed in very early inscriptions, are mentioned by classical scholars and are used occasionally in early papyri) and was the first to use accents. His editions of the lyric poets surpassed even his work on Homer, and he was the first scholar to divide the songs into colometric lines. Not much of his work on the tragic poets remains, but some of his plots to the various plays survive. Through his work *Lexeis* ("Words") he opened up a new area of research, which addressed the evolution of the Greek language: it treated old, dialectal and colloquial forms of his time, morphology and etymology. He also propounded the linguistic theory of analogy, that is, the regularity of declension of substantives. Aristophanes was one of the greatest scholars of the Hellenistic age.

Aristophanes was succeeded (c. 180 B.C.) by his pupil Apollonius Eidographos (i.e., Classifier). We know practically nothing of his work, except that he had special abilities in classifying the holdings of the library according to their literary genre—a service that must at this stage have been most welcome.

One of the greatest scholars of late antiquity is Aristarchus of Samothrace (217-145 B.C.), the successor of Apollonius Eidographos (in 153 B.C.) and a disciple of Aristophanes. With Aristarchus's philological work we reach the zenith of literary scholarship. His work covers many areas: grammar, orthography, etymology, and literary and philological criticism. He was called *Grammatikotatos* (the Grammarian par excellence), as well as *Mantis* ("wizard") on account of his critical and hermeneutical excellence. He surpassed the previous librarians in pure scientific knowledge. Among his writings may be mentioned recensions, commentaries and treatises on Homer and other authors. It is said that he wrote more than eight hundred commentaries on authors down to his own time (*Suda* A 3892). He used polemics against earlier

scholars, especially those who denied the unity of Homer. He was the first to comment on a prose author such as Herodotus (possibly also Thucydides). In his grammarian's work he developed further Aristophanes' declension rules and recognized eight parts of speech. He developed further Aristophanes' principle of analogy in the declension of substantives and verbs, and he drew the attacks of the Pergamene scholars, who propounded the opposite principle of anomaly or irregularity in declension.

1.2.2.3. *The Period of Decline.* With Aristarchus ends the period of maturity, and scholarship is set on trial. Ptolemy VIII Euergetes II (Physcon) (145-116 B.C.) broke the benevolent tradition of the Ptolemies toward the intelligentsia, and the persecuted Alexandrian scholars found themselves scattered in various parts of the Greek world. This led to the establishment of many institutions of learning in other Greek cities such as Rhodes. The *Oxyrhynchus Papyrus* 1241 speaks of Cydas, the next person in charge of the library, as one of the lancers. Nothing is known of this person, and it is surmised that he served in some capacity other than as an ordinary librarian. There was apparently a hiatus in the function of the library, since the successor to Aristarchus, his disciple Ammonius, is said to have flourished together with his own successors—Zenodotus, Diocles and Apollodorus—during the reign of Ptolemy IX Soter (116-107 B.C.). Nine years is a brief period for four librarians, and there is the added difficulty that Apollodorus had left Alexandria in 145 B.C. for Pergamum and Athens, apparently never to return to Alexandria. Perhaps this document, which has been taken as basic for the order of the librarians, is not so well informed after all.

Dionysius Thrax (170-90 B.C.) is one of the better known pupils of Aristarchus and the only Alexandrian whose *Grammatikē Technē* (sometimes attributed to another) has survived. Being the oldest grammarian, he defines grammar as an *empeiria* ("experience," "acquaintance," "knowledge," "practice") "of the usual subject matter found in poets and prose authors" (*Grammatikē estin empeiria tōn para poietais te kai syngrafeusin hōs epi to poly legomenōn*). He treats letters and syllables, the parts of speech, cases (four, to which he adds the vocative), moods, tenses, accents, spirits and stops. The article includes the relative pronoun. His book takes up declensions and conjugations but contains nothing

about syntax. This grammar reigned supreme and through Latin came to influence the grammatical terminology and approach to grammar in most European languages. Dionysius migrated to Rhodes probably during Euergetes II's persecution of the Alexandrian scholars.

The last great Alexandrian is Didymus Alexandrius (80-10 B.C.). He lacked somewhat in originality, but he had an enormous capacity for work, earning the sobriquet *Chalkenteros* ("having intestines of bronze"), and his works are computed to more than thirty-five hundred books (*Suda* D 872). Among his works may be mentioned his lexica on rare and obscure terms, as well as on the tragic and comic poets. His commentaries were steeped in literary, philological, mythological and historical notes. As the last in the long line of eminent Alexandrian scholars, he summarizes their great and lasting achievement.

With the fall of Egypt, the center of interest moves to various Greek cities as well as to Rome.

1.3. Scholarship in Other Greek Centers.

1.3.1. *Pergamum.* No sooner had the foundation of Pergamum as the capital of the new kingdom by that name been laid than its kings conceived the design of establishing their city as a center of learning, able to compete with Alexandria. Already its first ruler, Eumenes I (268-241 B.C.), showed himself a patron of letters, while his successor, Attalos I (241-197 B.C.), the first king properly speaking, made strenuous efforts to attract men of letters to his city and began collecting books. The library was apparently erected under his successor, Eumenes II (197-159 B.C.) (*Strabo Geog.* 13.1.54; 4.2). In its greatest extent the library had some two hundred thousand volumes. The scholar who set his stamp upon Pergamene scholarship was Crates of Mallos, a follower of Stoic teaching. He introduced the allegorical interpretation of Homer. He was an opponent of the great Alexandrians, Aristophanes and Aristarchus in this as well as in propounding anomaly against their principle of analogy in grammar. This dispute was bequeathed to their successors. His visit to Rome (c. 168 B.C.) had unexpected results: owing to an accident, he took to lecturing during his recuperation (*Suetonius Gram.* 2). These lectures awakened the Romans' interest in scholarship and libraries.

Pergamum is usually credited with the momentous invention of parchment (*Gk perga-*

mēnē), when Ptolemy V Epiphanes refused to export papyrus to Eumenes II (Varro, according to Pliny *Nat. Hist.* 13.70). However, since parchment had been used as writing material earlier in the Greek world, Pergamum's contribution may have been a more refined method of producing such material.

Other famous scholars in Pergamum were Crates' disciple Panaetius (185-110 B.C.), as well as Apollodorus of Pergamum (102-20 B.C.) and Alexander Polyhistor (105-c. 35 B.C.), both of whom settled in Rome. The interests of the school of Pergamum differed from those of Alexandria. Besides literary matters, they attended to such pursuits as the history of art (Antigonus of Carystus), the study of inscriptions and travel (Polemon of Ilium), chronology (Apollodorus of Athens) and topography (Demetrius of Scepsis).

1.3.2. *Athens*. As the mother of arts, Athens held throughout antiquity its place of honor. In importance of scholarship, however, it could not compete with Alexandria or Pergamum. Nevertheless, it was the home of the four schools of philosophy, the Academy (Platonists), the Peripatos (Aristotelians), the Stoa (Stoics) and the Garden (Kēpos) (*Epicureans). The first and oldest of these was also the last to close down (in 529 A.D. under Justinian).

1.3.3. *Pella*. The *Macedonian capital was a literary center only during the reign of Antigonus Gonatas (275-239 B.C.). The king, himself a pupil of Megarian philosopher Euphantus, and a friend of Zenon, attracted to his capital philosophers and poets such as Timon of Phlius, Alexander Aetolus and Aratus (315-?240 B.C.), whose *Phaenomena* (1.5) is quoted in Acts 17:28.

1.3.4. *Rhodes*. Already in the mid-third century B.C. Rhodes had welcomed the greatest epic author of Hellenistic times, Apollonius of Rhodes, while a century later it received a new impulse from another Alexandrian, Dionysius Thrax (Strabo *Geog.* 14.2.13), who helped establish Rhodian scholarship and was teacher of Panaetius. Rhodes was also famous as a school of rhetoric, and among its celebrities it numbered the Stoic Panaetius, his disciple, the great Poseidonius (138-45 B.C.), and Molon, the last two of whom had taught such Romans as *Cicero, *Pompey and Castor and (esp. Poseidonius) deeply influenced Caesar, Sallust, Lucretius and Livy.

1.3.5. *Antioch*. Little is known of Antiochean scholarship, but it is well-established that the

*Seleucids were patrons not only of medicine but also of the literary arts. We know of a public library that reckoned as one of its librarians Euphronion of Chalcis (born 276 B.C.) under Antiochus the Great (224-181 B.C.) (cf. *Suda* E 3801).

1.3.6. *Tarsus*. Tarsus was well known for its philosophical and rhetorical schools, but it catered only to native pupils—foreigners were not attracted to it—and even these completed their education in other cities, with most of them never returning to their native city (Strabo *Geog.* 14.5.10-15).

1.4. *Greek Scholarship in the First and Second Centuries A.D.* The first two centuries of the Christian era see a change in the interests of scholarship. It is above all the age of grammar and lexicography, as well as of literary criticism.

1.4.1. *Grammar and Lexicography*. One of the main grammarians of this period was Theon (first century A.D.) son of the Tarsian grammarian Artemidorus. He wrote commentaries on epic as well as Hellenistic writers; lexica on tragedy and comedy and one of the earliest works on syntax. Another writer on syntax was Lesbos (first century A.D.). He treated difficult points of syntax, important for researching the spoken language as well as various dialects.

Apollonius Dyscolus and his son Herodianus are the greatest grammarians of the second century. Apollonius, who died in extreme poverty in what once was a thriving center of learning, the quarter of the Alexandrian library, had one of the finest scientific minds and a deep dedication to his work. Of some twenty important contributions only portions of four have survived: on pronouns, conjunctions, adverbs and syntax. But these give us a sufficiently clear view of his greatness. He put the study of grammar and syntax in particular on a scientific basis. Herodianus's main work was his *Katholikē Prosōdia*, in twenty-one books, fragments of which survive through later citations. In this work he dealt with the accentuation of sixty thousand words. The rest of his works treat the parts of speech, figures, conjunctions and declensions, as well as include an Atticist lexicon (*Philetairos*). He was a moderate adherent of analogy, disagreeing with his father's extreme position. He was the last great, original grammarian.

With regard to lexicography, from this period dates the great lexicon produced by Pamphilus (fl. 50 A.D., lost) in ninety-five books. This lexicon was condensed by Diogenianus (second

century A.D.) into five books, whose edition was used by Hesychius (fifth century A.D.) for his own lexicon (extant: fifty-three thousand lemmata), and later by *Suda* and Photius. Other authors of this period include Herennius of Byblos (first to second centuries A.D.), who wrote a lexicon on synonyms, on which a certain Ammonius based his own work; Polydeuces of Naucratis (second century A.D.) wrote an *Onomastikon*, extant in summary form, and Harpocration (first to second centuries A.D.), an epitome of whose lexicon on the ten orators has come down to us.

Of strict Atticist lexicographers mention may be made of Phrynichus and Moiris. Phrynichus (fl. 180 A.D.) wrote his *Sophistic Preparation*, a lexicon in thirty-seven books, parts of which are preserved by Photius, as well as his *Attikistēs* (extant), in which he condemns un-Attic forms (many of which occur in the NT). Of the work of Moiris (slightly younger than Phrynichus), his *Attic Words* (extant) investigates points of diction and style, the choice of correct vocabulary, which must be Attic, and other topics.

1.4.2. Rhetoric, Asianism and Second Sophistic.

*Rhetoric had been attacked by Plato as unphilosophical and unethical in its pursuits (e.g., *Gorg.* 461b-481b; *Phaedr.* 259c-262c), though his relations to Isocrates, the leading rhetorician of his day with a school, are not quite clear. By his strictly scientific *Technē Rhētorikē* Aristotle had raised rhetoric to the level of a serious discipline based on philosophical foundations. However, by the middle of the third century B.C. rhetoric had lost its original, fresh charm and was reduced to a scholastic enterprise. This transformation was effected by a new current that flowed from certain cities in Asia Minor, which gave it the name "Asianist zeal" (Plutarch *Anton.* 2.5). Asianism was characterized by profuse, bombastic and flowery styles, which had no interest in the subject matter, their chief purpose being to flatter and persuade ("to tickle the ears," Aelius Aristides *Or.* 50, 405). This new genre, initiated chiefly by Hegesias of Magnesia (fl. 250 B.C.; cf. Strabo *Geog.* 14.1.41; for criticism of Hegesias see Dionysius of Halicarnassus *Comp.* 18; *Ant. Or.* 1). Later Asianists include M. Antonius (Plutarch *Anton.* 2.5), Polemon of Laodicea (A.D. 90-145; cf. *Suda* P 1889) and (partly) Aelius Aristides (cf. his *Or.* 14: *Encomium of Rome* and *Or.* 15: *On Smyrna*), who became a model for later times, and came to dominate

Greek education. This led to a renewed attack by the philosophical schools, but this attack was soon offset by Hermagoras's (fl. 150 B.C.) reforming measures, which paid greater attention to the subject matter of speeches. From the following century on the Romans became interested in it, not least the *emperors, who needed the rhetoricians to sing their praise, and this gave rhetoric not merely a new lease of life but a period of popularity and luster. Rhetoric had triumphed over philosophy.

Many of these rhetoricians, having lost their political independence, now also surrendered their personal freedom and abjectly served the base interests of their *patrons, overlooking Roman corruption and injustice (their wretched life is depicted in Lucian *Salaried Posts*, passim. For similar treatment of Romans, see Juvenal *Sat.* 1.1-5). In the words of "Longinus's" philosopher friend (Longinus *Subl.* 44.1-3), who echoed the current view, "democracy is the good nurturer of greatness, and great authors flourished with democracy and died with it . . . we who live now . . . seem to have learned in our infancy to live under justified slavery . . . we end up as masters of flattery." His maxim was "No slave should be a rhetor!" Even more serious rhetoricians like Dio Chrysostom (A.D. 40-112) and Aelius Aristides (c. A.D. 129-181), who occasionally pointed out injustice (e.g. Dio Chrysostom *Or.* 34.51: "fellow slaves"; 38.37: "use you like small children") not infrequently sang encomia on Romans and counseled Greek cities to submission (e.g., Dio Chrysostom *Or.* 1.15-36; 34.45-51; Aelius Aristides *Or.* 14). The times and the political situation made impossible the exercise of true rhetoric. The days of Demosthenes were long past.

This bitter experience led already in the middle of the first century B.C. to the Atticist revival. This movement rejected Asianism in all its forms, advocating a return to the classical standards. But even this new direction was exploited in the interests of rhetoric. Early in the second century A.D. begins the last phase of old rhetoric. It is now known as the Second Sophistic; its chief representatives are Herodes Atticus (A.D. 101-177) and Aelius Aristides (on the sophists see Philostratus's *Lives of the Sophists*). Having established itself in the educational system and having drawn inspiration from the Atticist revival, it came under the influence of such Asiatic centers as Ephesus, Smyrna and Tarsus. It gave

up its earlier doctrines and was reduced to a scholastic movement, whose chief contributions to theory and practice were the *Progymnasmata*, that is, preliminary exercises (cf. Theon, Hermogenes, et al.).

1.4.3. *Atticism and Literary Criticism.* The Atticist movement was not solely a reaction to Asianist rhetoric. It was also a reaction to a new double-faceted situation. The unification of the Greek states under Alexander had led to the amalgamation of the Greek dialects producing a new linguistic medium, the *Koinē*, in which Attic formed the basic understructure. In Alexander's vast empire the majority of Greeks spoke a language that was relatively different in vocabulary, form and syntax from Attic Greek. This was now felt to be a downgrade development. To crown it all, Alexander's conquests had brought under the Greek umbrella countless types of peoples of diverse linguistic backgrounds and varying proficiency in Greek, who consciously or unconsciously had introduced barbarous elements into the Greek language (cf. the Egyptian papyri). This situation continued to obtain even after the Roman conquest.

The other reason was political. The Roman conquest proved a traumatic experience to most Greeks. Having been nurtured in the spirit of democracy, many Greeks found themselves caught up first in Macedonian despotism and then in Roman imperialism. All that went to make a free citizen with dignity and honor, they felt, was denied to them. Unqualified freedom in debate, which had been the Greeks' sphere of life, was stifled. The hopelessness of ever being able to free themselves from the Roman yoke induced many of them to play along to survive.

Thus, the same historical reality that had reduced rhetoric, Asianist or otherwise, to encomiastic compositions singing the praises of their Roman "benefactors" was also at work behind the Atticist revival, though here it took the opposite course. The Atticist revival was a reawakening of the Greeks' national consciousness. It was an outlet for their frustrations. The climate not being conducive to creative and original intellectual work, they turned to dreaming of their glorious past, extolling their ancestors, reassuming their Greek names, which they had abandoned for Roman ones (cf. the criticisms of Apollonius of Tyana *Ep.* 71, and of the Stoics generally) and voicing their opinion that a higher civilization had been defeated by an in-

ferior one (cf. the young Stoic's taunt "The Latin race in general were uncivilized rustics," Aulus Gellius *Noc. Att.* 1.2.4; *IEE* 6:560-81). The astute Romans not only allowed this but even encouraged it, because it had the potential for peace: the turning of the Greeks' attention to their glorious past correspondingly took it away from their present predicament and made their plight more bearable. Further, the Romans' adopting of the Greek culture—which was inevitable, given its superiority and ubiquity—and the opening of the highest offices of the empire (consul and senator; see Roman Empire) to Greeks were also promulgated consciously in order to render impossible any permanent rift between them and the Greek world.

But notwithstanding what the causes that had brought about the Atticist revival were, Atticism became a powerful movement, reaching its peak in the second century A.D., though its force was all expended on linguistic battles and never took any other form, political or military. Nevertheless, Atticism, Asianism, literary criticism and rhetoric and Second Sophistic were all entangled in a literary tug of war, and it is this intellectual climate that formed the context, the stage in which Christianity and the NT appeared. Atticism had many advocates who distinguished themselves in various literary fields: Dionysius of Halicarnassus: literary theory and criticism, rhetoric; Plutarch (A.D. 46-post 120): moral philosophy; Herodes Atticus: the most famous representative of the Second Sophistic; Dio Chrysostom and Aelius Aristides: rhetoric; Harpocration (? second century A.D.) and Polydeuces (late second century A.D.): lexicography; Phrynichus (fl. 180 A.D.) and Moiris (fl. 185 A.D.): Attic diction; Lucian (c. A.D. 120-post 180): criticism and satire; Athenaeus (fl. 200 A.D.): banqueting sophists; Philostratus (A.D. 160-244): biography.

The achievement of the Atticist movement was that it arrested the downgrade course that the Greek language had taken through its multifarious users. It set a stop to the importation of foreign elements for which there were Greek equivalents; it condemned forms and syntax not witnessed in the best classical authors; it preserved the high ideals of linguistic perfection set in classical times; in short, it preserved the language intact throughout Byzantine and into modern Greek times (the *Katharevousa*, pure or Atticistic Modern Greek). This puristic move-

ment received a mortal blow in the legislation of 1975, whereby the popular, Demotic form of Greek (descended from Koine Greek) was declared the official language of Greece in place of *Katharevousa*, but it is still not quite dead.

The Atticist revival has often been criticized for looking back, especially by advocates of the Demotic form of Modern Greek. However, its beneficial influence upon the Greek language cannot be overestimated. It is thanks to the Atticist movement that Modern Greek is, after more than two thousand years, still Greek, in fact, closer to ancient Greek than any other European language is to its own past of only a few centuries.

Of the many important Atticists, only a few specimens will be taken up briefly, to illustrate their contribution to scholarship in general and to literary criticism in particular.

In the four centuries that elapsed between Aristotle's *Technē Rhētorikē* and "Longinus" *Peri Hypsous* (or *On the Sublime*) no other writer addressed literary criticism as successfully as did Dionysius of Halicarnassus (d. 30-8 B.C.). His work covers many areas: history, rhetoric, literary criticism, grammar. His literary theories are expounded in his *On Literary Composition* and *Comments on the Ancient Orators*. As one of the founders of the Atticist movement, Dionysius's main aim was to portray the Attic authors, and in particular Demosthenes, as the highest example of prose to follow. His writings reveal a genuine feeling for style best achieved in charm (*hēdonē*) (Dionysius of Halicarnassus *Comp.* 10), that is, freshness, gracefulness, euphony, sweetness, persuasiveness (*Comp.* 11) and beauty (*to kalon*): grandeur, forcefulness, solemnity, dignity (*Comp.* 10). This was partly directed against the bombastic traits of the Asianist movement in rhetoric, though Dionysius's concerns were constructive rather than polemical, and his work has been greatly appreciated in ancient, medieval and even modern times.

Another Atticist was Dionysius's friend probably of Jewish background, Caecilius of Calacte, Sicily, who wrote on the Ten Orators of the Canon, a *Technē Rhētorikē*, *Against the Phrygians*, attacking Asianism, a lexicon on Attic Greek with the Hellenistic Greek equivalents, as well as a treatise, *Peri Hypsous* (or *On the Sublime*) criticized with some appreciation by "Longinus" in his own work by that title.

Plutarch of Chaeronea, one of the most pop-

ular authors of antiquity, was a Platonist with a deep concern for ethics. His preserved works fall into two parts: his *Lives* (or *Vitae*) and his ethical writings (*Moralia*). His *Lives* contain twenty-two pairs of one Greek and one Roman, usually with a comparison, with a view to drawing ethical conclusions. To these must be added four more single biographies. The second part of his work, his ethical writings, take up a wide variety of ethical questions (where Plutarch's pedagogical concerns are obvious) and even literary aspects. He has thus preserved many quotations of works otherwise lost; he treats of Homer and other poets (disapproving of Aristophanes as a model on account of his coarse language), making literary remarks on them, but these are always subordinate to his chief aim, to moralize. Plutarch's relevance for NT studies lies in the genre of his biographies, preceded by Aristoxenos, fourth century B.C. and followed by Suetonius, Diogenes Laertius, Philostratus, Eusebius, et al., in which he states his purpose to be to present portraits of character rather than merely historical facts (Plutarch *Alex.* 1.2-3; see also *Nic.* 1.5), the relevance of which is obvious for the Gospel genre (see *Biography, Ancient*), and in his ethical writings, which were found by many church fathers to be precursors of Christian teaching.

*Lucian of Samosata is a most versatile author, but above all the great satirist of Sophists and rhetors. He parodied the superficiality of the Sophists, the affectations of rhetors and the blunders of fanatic Atticists, although he was an Atticist himself. His writings exhibit considerable wit, but he has not given us much of special value as far as literary criticism is concerned.

The greatest piece of literary criticism in antiquity is a brief writing of which only two-thirds survive: *Peri Hypsous* (*On the Sublime*). The manuscripts often bear the doubtful ascription "Dionysius [i.e., Dionysius of Halicarnassus] or Longinus" (i.e., Cassius Longinus, d. 273 A.D.), while a Florentine manuscript ascribes it to an anonymous author. It is usually assigned to the first century A.D. The aim of the author is to treat of literary criticism in general, but with special emphasis on the qualities that make style elevated. These qualities are grandeur in conception, intensity of emotion, elegance, nobility in diction and dignified and elevated composition (Longinus *Subl.* 8.1-2). Negatively, it implies the avoidance of bombast, puerility, inelegance,

bad taste and the like (*Subl.* 3-5; cf. 41-43). He subjects a great number of classical passages to a penetrating criticism to illustrate sublimity and the absence of it. According to the author sublimity is the absolute criterion of real poetry. It is the echo of a great soul (*Subl.* 9.1). Sublimity is thus akin to divine high-mindedness. Sublimity is possible only for a poet with a great, heroic nature. Real genius is aware of the laws governing literary composition but is never enslaved to them. In his worldview the author seems to admire not so much the order and harmony of each part as the magnitude and grandeur of the whole. In all this the influence of the Stoa is perhaps to be suspected. This writing is unique in pagan literature in quoting a biblical text. At 9.9 it cites Genesis 1:3: "God said: 'Let there be light,' and there was light," as an example of true sublimity. With "Longinus's" *Peri Hypsous* we reach the zenith of literary theory and criticism in poetry as well as prose. His precepts are equally valid for rhetoric.

1.5. A Few Other Types of Literary Writing.

1.5.1. *Historiography.* The long tradition of Greek historiography (Hecataeus, Hellanicus, Herodotus, Thucydides, Xenophon), was continued during our period by such authors as Polybius (203-120 B.C.), Poseidonius (first to second centuries B.C.), Diodorus Siculus (first century B.C.), Dionysius of Halicarnassus, Appian (first to second century A.D.), Arrian (first to second centuries A.D.), and others. Polybius was the first historian to perceive the new situation that faced the world with Rome's victory over Hannibal and its meddling in Greek affairs, and he braced himself to present this new reality. It was now seen that Rome had come to stay for some considerable time. The centralized rule of Rome and its intercommunication system give an awareness of the unity of the world, and from now on history assumes a world perspective absent in previous history writing. Ancient historiography as a particular genre of ancient writing has once again become relevant for interpreting the Acts of the Apostles. Luke not only shares the universalistic perspectives of the historians of Rome, he even transcends it, when he paints the onward march of the gospel in conquering not merely the Roman Empire but also the whole world. Another important area of comparison are the speeches of Acts as compared with those of ancient history writing.

1.5.2. *Astronomy.* Scientific astronomy begins

with Thales of Miletus (fl. c. 600 B.C.), who predicted the sun eclipse of May 28, 585 (*Herodotus Hist.* 1.74). Anaximander (b. 610 B.C.) taught that the sun was purest fire. First the Pythagorians (around 525 B.C.) declared the sphericity of the earth (as well as of all heavenly bodies), which was demonstrated by Aristotle (*Cael.* 297a). Hicetas (? fifth to fourth centuries B.C.) and Ecphantus (fourth century B.C.), both of Syracuse, were first in propounding the theory that the earth revolved around its axis (also Plato *Tim.* 40c), while Heraclides of Pontus (390-310 B.C.) specified that this happened in twenty-four hours, while the sun was stationary. Plato and Aristotle, as Anaximander before them, believed the universe to be spherical (e.g. Plato *Phaedr.* 247d; *Phaed.* 109a; *Rep.* 616a-e; Aristotle *Cael.* 2.4).

With the preceding positions taken for granted, the astronomers of our period went on to achieve greater exactness. Aristarchus of Samos (310-230 B.C.) argued that the earth makes one revolution around the sun each year (the same applied to other planets). Hipparchus (second century B.C.), the greatest astronomer of antiquity (worked in Rhodes and Alexandria), who, however, went back to the geocentric theory, founded applied trigonometry, perfected the instruments of measurement, mapped 850 stars and discovered the precession of the equinoxes. He also determined the solar year to be 365 days, 5 hours and 55 minutes, not 365 days and 6 hours, as was believed until then. Finally, studying a lunar eclipse Hipparchus calculated the distance to the moon to be 59 times that of the earth's radius. This gives $6,378 \times 59 = 376,302$ kilometers (confirmed by Ptolemy, who applied the method of triangulation). The distance of the moon as known today is 384,400 kilometers. The last great astronomer was Ptolemy (Claudius Ptolemaeus, second century A.D.). Working in Alexandria, he systematized the findings of earlier astronomers, particularly those of Hipparchus, added his own observations, enlarged Hipparchus's list of stars to more than one thousand and produced a book on astronomy that was standard until the time of Copernicus.

It is obvious that the Greek view of the universe has importance for the interpretation of certain passages of the NT. For example, Greek astronomy knew that the moon had no light of its own but reflected that of the sun (e.g., Plato *Crat.* 409b). It is interesting to find that Matthew 24:29 (= Mk 13:24) has changed the wording of

(LXX) Isaiah 13:10, in particular *phôs* to *phēggos*, making the inability of the moon to shine the result of the sun's being darkened (*phēggos* = properly the weak reflection of light from the moon; cf. Plato *Rep.* 508c; Xenophon *Symp.* 1.9; *Cyn.* 5.4; Hesychius s.v.; A. E. Sophocles *Greek Lexicon of the Roman and Byzantine Periods* s.v.; in medieval and modern Greek *phēggari* [on] = the moon).

1.5.3. Geography and Geodesy. Greek geography begins early in the first millennium B.C. with the colonization of the Mediterranean and the Euxine (or Black) Sea and continues with voyages in the Atlantic, north to the British Isles and Thule, "near the Frozen Sea" (= Norway, Iceland or Hebrides?) (Pytheas, fourth century B.C.), and in Hellenistic times with the exploration of the Red Sea, the Persian Gulf, the East of Africa down to Mozambique, and of India, Malaysia and China. The maps that were created (the first by Anaximander, c. 550 B.C.) were very imperfect, though Hecataeus of Miletus (fourth to fifth centuries B.C.) had concluded that the dry land was surrounded by water.

Aristotle divided the earth into zones; Dicaearchus (fl. 310 B.C.) drew a basic latitude from Gibraltar to Rhodes, Issus and the Himalayas; Eratosthenes added several latitudes as well as meridians and divided the earth into two hemispheres, while Hipparchus (150 B.C.) divided Eratosthenes's main latitudes into 360 degrees. To Eratosthenes we owe the measurement of the earth. Learning that in the summer solstice the sun cast no shadow from a perpendicular gnomon in Syene, Upper Egypt, which he calculated to be five thousand stadia from Alexandria, he found that in Alexandria the sun's rays had an angle of $7^{\circ}12'$. This figure, being $1/50$ th of the 360° of the circle, gave him $50 \times 50,000 = 2,500,000$ stadia as the earth's circumference (Cleomedes 96-100; Strabo *Geog.* 2.5.7). We are uncertain as to the length of his stadion, but if Pliny's figure is correct (Pliny *Nat. Hist.* 12.5.3), it was $157\frac{1}{2}$ meters, giving about 39,690 kilometers. If, as there is also reason to believe, 10 stadia equaled 1 mile, then $2,500,000$ stadia = 25,000 miles = 40,233 kilometers (see Fraser, 1:414-15 and 2:597-600). The circumference of the earth, as known today, is 40,072 kilometers. The work of Eratosthenes has been preserved in the summaries of Strabo (66 B.C.-A.D. 24). Strabo discussed critically his predecessors, adding his own observations from his extensive travels. He

describes Europe, Asia and Africa. His work is not confined to geographical features but is what might be called an ethnological and cultural geography. Strabo's work was continued by Ptolemy's more exact descriptions and measurements. He gives a list of no fewer than eight thousand place names and directed the drawing of ten maps for Europe, four for Africa and twelve for Asia. Ptolemy's geography became a standard book for fifteen hundred years.

1.5.4. Medicine. As in other disciplines, so in medicine, the concern of the Hellenistic age was to conserve the research of the past by editing, copying and commenting on the works of previous doctors and to carry research further. Medicine was practiced in Greece before Hippocrates (c. 460-370 B.C., or later). Even granting that many or most of the writings in the Hippocratic corpus are not his own (see Hippocratic Letters), Hippocrates must have dealt with many of the main areas of medicine: natural causation, diagnosis, diet, climate, the importance of the organism in the process of healing, which needs the assistance of medicines. He was apparently the first to assert that epilepsy had its natural causes rather than (as was thought) possession. The scientific seriousness that characterized Hippocrates may be seen in the ethos he inspired in his pupils, a concrete example of which is found in the famous Hippocratic Oath.

It is in the Alexandrian period that medicine becomes properly speaking a science. The great anatomist, Herophilus (fourth to third centuries B.C.), was the first to dissect human bodies (only animals had been dissected previously) and to write a manual of anatomy. He discovered the nervous system with its sensor and motor functions as well as that the brain was the seat of thinking; he described accurately the eye, the brain and the genitals, and he discovered the pulse. Erasistratus (fl. early third century B.C.) maintained that the body was composed of minute atoms that were surrounded by vacuum. He described the heart (the circulation of the blood was obviously already known; cf. Plato *Tim.* 70b) and contributed further to physiology, pathology and pathological anatomy. Soranus (first to second centuries A.D.) of Ephesus specialized in gynecology and obstetrics.

It is at this time that the science of pharmacology develops. Among its representatives may be mentioned Heraclides of Tarentum (fl. 75 B.C.), an empiricist physician; Crateuas (second

to first centuries B.C.), whose work contained color drawings of pharmacological plants; and Pedanius Dioscurides (first century A.D.), who wrote the most important book on medicines in antiquity.

Surgery also followed on the advances of anatomy. Hegetor (second century B.C.) operated on the hip, while Archigenes (first to second centuries A.D.) describes amputations. Heliodorus (first to second centuries A.D.) performed skull operations; Antyllus (second century A.D.) operated on eye cataracts. The book by Aulus Cornelius Celsus, written in Latin, summarizing Hellenistic medicine, describes operations for goiter, stones in the bladder, probably tonsils and facial operations as well as dentistry.

The last great physician of antiquity was Galen of Pergamum (A.D. 129-199). In the huge corpus that is attributed to him, he dealt with almost every conceivable area of medicine. He summarized the work of his predecessors, and as the undisputed master of physicians of his day, added his own observations and experience. His medicine was standard for Europe until the end of the Middle Ages. This gives a fair idea of Luke's medical background.

2. Latin Scholarship.

Latin literature and scholarship have been of fundamental importance for European culture. In their own right they are worthy objects of detailed investigation. However, from the standpoint of the NT they are of comparatively little importance. The reasons for this are many. First, no NT author gives any evidence of knowing Latin, much less of ever having read or been influenced by any Latin authors (the Latin words in the NT are a negligible factor). Second, the eastern part of the empire, in which Christianity arose and with which the NT is concerned, was saturated by Greek thought and culture. Third, Roman culture before its contact with Palestine had itself come under the spell of Greek culture. Fourth, Latin literature is from the outset inspired, derived and even copied from Greek literature, with little that is original. Thus the Roman presence in the NT, which is substantial, is invariably on the level of administration and military force (*see* Roman Administration; Roman Military). For these reasons and the fact that Latin literature is only a fraction of the size of the Greek literature, the discussion of Latin scholarship will be briefer.

2.1. The Beginnings of Latin Literature. The Roman biographer Suetonius begins his study of Latin grammarians as follows: "In early days when Rome was uncivilized and embroiled in war, with no leisure for the liberal disciplines, the study of grammar was not even pursued, much less held in esteem" (Suetonius *Gram.* 1). He then goes on to mention the first writers in Latin: the *semigraeci* Livius Andronicus (284-202 B.C.), who translated the *Odyssey* in Saturnian verse, and Ennius (239-169 B.C.), but he insists that real scholarship begins with Crates of Mallus, Pergamum's envoy to Rome about 168 B.C. (Suetonius *Gram.* 2). Ennius, the father of Latin poetry, established the Greek hexameter in Latin (*Annales*), developed further by Lucretius, and introduced many literary genres: tragedy, comedy, satire, epigram. He was also the first to turn his attention to grammar and spelling.

Between Livius Andronicus and Ennius comes Naevius (c. 264-194 B.C.), the first to set up a Greek play in Latin. The dramatists Plautus (c. 254-184 B.C.) and Terence (195-159 B.C.) laid under tribute for their plays such New Comedy authors as Philemon and Menander; they were in fact more translators than authors. Terence, for example, had to defend himself for occasional departures from the originals!

The visit to Rome of the head of the Pergamene school, Crates of Mallus, marks the beginning of interest in scholarship. Another early Greek visitor to Rome (155 B.C.), who whetted the Romans' appetite for learning by his famous lectures, was the head of the Platonic Academy, Carneades (Cicero *Lucullus* 137). The elder Cato (234-149 B.C.), alarmed by Greek influence on Rome, sought to prevent the spread of Greek learning (Plutarch *Cato* 22.1-23.2), but his efforts proved fruitless (cf. Horace *Ep.* 2.1.156), and in his old age he learned Greek himself and modeled his speeches after Thucydides and Demosthenes. Many of his apophthegms were merely translations from Greek (Plutarch *Cato* 2.4). Crates influenced L. Accius (170-90 B.C.) as well as Lucilius (180-103 B.C.) in matters of orthography and literary criticism. This was still the time when even histories of Rome were being written in Greek (e.g., G. Acilius, Carneades's interpreter [Dionysius of Halicarnassus 3.67.5; Livy *Per.* 53] and P. C. Scipio, son of Africanus [the Greek historian Polybius had been the tutor of the two Scipio brothers]).

Since many authors wrote under more than

one genre, their work may be discussed under more than one category.

2.2. Grammatical and Lexicographical Scholarship. The first real Roman scholar was L. Aelius Stilo Praeconinus (c. 150-74 B.C.). Around 100 he spent two years in Rhodes, during which time Dionysius Thrax resided in that city; his influence is probably to be seen in Stilo's introduction of Aristarchus's text-critical symbols in his own work. Stilo became very learned in Greek literature, and Stoic influence is perhaps discernible in his grammatical and etymological studies (Suetonius *Gram.* 3). Among his works are a critical list of Plautus's genuine plays and the works of Q. M. Numidius, as well as a glossary on etymological, historical and antiquarian matters.

Lucius Ateius of Athens came to Rome in 86 B.C. and contributed much to the study of Latin. Owing to his wide learning (he claimed to have written eight hundred works) he took, like Eratosthenes, the title of Philologus. He provided Sallust with material to write his history and advised Asinius Polio on rules for the art of composition (Suetonius *Gram.* 10).

Stilo was the teacher of M. Terentius Varro (116-27 B.C.), the most learned Roman up to this time. Varro, a universal scholar, wrote some 620 books on such subjects as *Antiquitatum Rerum Humanarum et Divinarum Libri xli*, on the relation between Trojans and Romans, and a book entitled *Aetia*, patterned on Callimachus's book by that title. He wrote literary works on Plautus, on poetry, style and so forth. He compiled the first encyclopedic work in Latin, *Disciplinarum Libri Novem*, containing grammar, logic, rhetoric, geometry, arithmetic, astronomy, music, medicine and architecture. In the satirical genre Varro wrote his *Saturae Menippeae*, in which he followed Menippus. His *Imagines* contained some seven hundred portraits of illustrious Greeks and Romans. His grammatical writing, *De Lingua Latina*, the first extant work on grammar by a Roman, included books on etymology, analogy and anomaly and syntax. In grammar he followed Dionysius Thrax to the extent of translating the latter's definition (see 1.2.2.3 above): *grammatica est scientia eorum quae a poetis historicis oratoribusque dicuntur ex parte maiore* ("Grammar is the science of the usual subject matter found in poets, historians and orators"). He dedicated most of this work to *Cicero, who reciprocated in the second edition of his *Ac-*

demica, in which he greatly praised Varro (Cicero *Acad.* 1.9). The debate between the Alexandrians and the Pergamene scholars over analogy and anomaly was inherited by the Romans; Varro was an analogist, like Cicero, though they allowed convention (*consuetudo*); so were also *Pliny the Elder and Quintilian. Varro's influence on Cicero, Horace, Caesar, et al. was great.

In the person of *Neo-Pythagorean P. Nigidius Figulus (98-45 B.C.) Varro had his greatest rival in learning. Through his *Commentarii Grammatici*, in which, besides grammar in general, he took up etymology and orthography, Figulus shares the honor with Varro of having shaped the terminology of Latin grammar.

During the Augustan age the greatest scholar was the librarian C. Julius Hyginus (from Spain or Alexandria), a follower of Alexander Polyhistor. Verrius Flaccus (fl. 10 B.C.), one of the most erudite scholars of the time, is known chiefly for his *De Verborum Significatu*, the first Latin lexicon. One of the greatest grammarians of the first century A.D. was Q. Remmius Palaemon (fl. A.D. 85-70), teacher of Persius and Quintilian. His *Ars Grammatica* was the first comprehensive grammar of Latin and was used by all subsequent grammarians. He was the first to distinguish four declensions of nouns (Suetonius *Gram.* 23).

During the reign of Nero, grammar was one of the safest subjects to write on, and it was to this that Pliny the Elder (A.D. 23-79) devoted himself, writing what his nephew, Pliny the Younger, calls *Dubius Sermo* (3.5.5) or Priscian *Ars Grammatica*. This may be the source for Quintilian (1.5.54—6.287). Pliny, who was an analogist, probably influenced Valerius Probus of Berytus (fl. A.D. 56-88), an "illustrious grammarian" (Aulus Gellius *Noc. Att.* 1.15.18). Pursuing text-critical work, Probus used the text-critical signs of the Alexandrians and Stilo in his recensions of Terence, Lucretius, Virgil, Horace, Persius and probably Plautus. He wrote on anomaly, tenses, nouns and verbs, and he composed other grammatical works (Suetonius *Gram.* 24). Palaemon, Pliny the Elder and Probus are responsible for the basic form of traditional Latin grammar.

2.3. Libraries in Rome. Latin letters received a great impetus by the establishment of libraries. Books found their way to Rome originally as spoils of war from Greece. Following the battle

of Pydna (168 B.C.), L. Aemilius Paullus carried off the library of Pella (the first of more libraries to follow: e.g., Sulla plundered the library of Athens; the consignment from Alexandria burned down before being shipped [Dio Cassius *Hist.* 49.38; cf. Plutarch *Caesar* 49; Aulus Gellius *Noc. Att.* 7.17.3; Fraser, 1:326 and notes]). Plutarch (*Luc.* 42) speaks of Lucullus's private Greek library, whose "use was more honorable than its acquisition."

The first public library was founded by Pollio in 39 B.C. (Pliny *Nat. Hist.* 7.30; 35.2). Augustus founded two libraries, one on the Campus Martius, the other on the Palatine, which, in accordance with Greek custom, were connected with temples. Each had a Greek and a Latin section (Suetonius *Augustus* 29.3). The second library, founded in 28 B.C., whose first librarian was Hyginus (64 B.C.-A.D. 17, Suetonius *Gram.* 20), was of decisive importance for Roman scholarship. Tiberius, Vespasian and Trajan founded more libraries, until in the end their number rose to twenty-six.

2.4. Latin Literature and Literary Scholarship at Its Height. Latin literature and literary criticism reached their peak around the Augustan age, roughly from the middle of the first century B.C. to the early decades of the first century A.D. Rhetoric, poetry and prose were perfected as never before, and literary criticism became more refined.

2.4.1. Rhetoric. According to Suetonius (*Rhet.* 1), "Rhetoric was brought to our country in a similar way as grammar, but it faced greater difficulty, because, as is well known, its exercise was at times prohibited." Suetonius speaks of leading Romans, such as C. Pompeius, M. Antonius, Caesar and Nero as espousing Greek rhetoric and popularizing it. Rhetoricians flocked to the capital, many of whom lived in the miserable conditions described by Lucian of Samosata (see *Merc. Cond.*, *passim*, and Juvenal *Sat.* 1.1-5).

Cicero is perhaps the greatest figure in Latin literature, and in particular in rhetoric. He studied philosophy with the Epicurean Phaedrus, the Stoic Diodotus and the Academic Philon. He continued his education (79-77 B.C.) in Athens with Antiochus of Ascalon and then turned to rhetoric, first in Athens and later in Rhodes under Poseidonius. He read avidly Dicaearchos, Theophrastus and Theopompus. The beginning of his first rhetorical treatise, *De Inventione Rhetorica*, is probably indebted to Poseidonius,

while later parts have borrowings from Hermagoras. He is more original in his *De Oratore* and *Brutus*, but his *Orator* seems to be inspired by Isocrates, Plato, Aristotle, Demosthenes and others. He translated several Platonic dialogues. His *De Republica* and *De Legibus* have Plato's *Res Publica* and *Leges* as prototypes, while even the dream of Scipio in *De Republica* corresponds to the vision of Er in the *Res Publica*. In his *Tusculan Disputations* he follows Panaetius, Antiochus and probably Poseidonius. The first books of *De Officiis* are evidently based on Panaetius. In his *Consolatio*, for his daughter, he follows Crantor's "On Mourning" (*Peri Penthou*). In a letter to his friend Atticus, he admitted that the works he was writing then were mere "copies" ("*apographa sunt*"). In addition to his impressive literary output, Cicero, by his translations of Greek philosophical works (e.g., Aratus, *Epicurus, Philodemus, Chrysippus), enriched the Latin language with a large number of Greek concepts, and through it modern European languages.

From 86 to 82 B.C. dates *Rhetorica ad Herennium*, traditionally ascribed to Cicero but nowadays considered the work of an unknown person. In this work rhetoric is treated under five heads: Invention, Arrangement, Delivery, Memory and Style. This writing is a combination of various Greek systems of rhetorical theory adapted to Roman needs.

Mention may also be made of Seneca the Elder (55 B.C.-c. A.D. 40). A follower of Cicero, only parts of his work on *Oratorum Sententiae Divisiones Colores* survives. "Shrewd observation, a phenomenal memory, and an experience extending from Cicero's age into the reign of Gaius make Seneca's work a most valuable source for the literary history of the early Empire" (C. J. Fordyce, "Seneca," *OCD*, 1st and 2d eds.).

2.4.2. Poetry. Lucretius (97-53 B.C.) was an Epicurean poet-philosopher (or philosopher-poet, as he claimed). He had studied Heraclitus, Anaxagoras and Democritus; he evinces borrowings from Empedocles, possibly Poseidonius, and from Thucydides, whom he sometimes misrepresents. He imitates Hesiod and Euripides, translates Homer and lays other authors under tribute. His only work is *De Rerum Natura*, in which, in massive and majestic if somewhat rough and unfinished verse, he presents Epicurus's physical theory. He thinks of the world as finite, with a beginning and an end, and pro-

pounds the mortality of the soul and hence the unreasonableness of fearing death. He had a great appreciation for Ennius's poetry. His great feat is to have put philosophical thought in hexameter. Conscious of the poverty of Latin, he often invented new words.

In the first century B.C. Roman poetry takes on a new swing: many poets turn their attention from the classical Greek poets to the Alexandrian masters, and the attempt is made to give poetry greater technical perfection, *ars gratia artis*. The initiators of the new school, *poetae novi*, or *neoterici* (Cicero *Att.* 7.2.1), were Lucilius and Accius. Its chief representatives were Cato (born c. 100 B.C.), Catullus (84-54 B.C.) and Calvus (82-47 B.C.), but even such works as *Culex* and *Ciris*, attributed to Virgil, exhibit Alexandrian influence. However, Alexandrian influence is evident even in poets of the older school (cf. Dihle, 2:26-40).

One of the greatest of Latin poets was Virgil (70-19 B.C.). He studied Theocritus, whom he follows in no fewer than seventeen passages of his *Eclogues* (e.g., 8.97-41 is a [mis]translation from Theocritus 11.25-26; 2.82). For his *Georgics* he borrows freely from Homer and Hesiod and even later Alexandrian poets such as Apollonius of Rhodes, Callimachus and Eratosthenes. His magnum opus, the *Aeneid*, is based in its first part on the *Odyssey* and in its second on the *Iliad*. Many of his similes are drawn from Homer and Apollonius of Rhodes. Virgil was repeatedly accused of pilfering from Homer, to which he replied "Why don't my critics try the same thefts?" Virgil is not the only plagiarist. Various degrees of plagiarism were practiced by all Romans. But so far from considering it ignoble, the Romans "made it a proud boast to have been the first to introduce a particular Greek genre into Latin poetry" (R. L. Palmer, "Plagiarism," *OCD*, 1st ed.). Perhaps they felt that as the masters of the empire, they were entitled to everything their subjects had produced or invented.

In his early *Epodes* Horace (65-8 B.C.) imitates Archilochus, while in the meter of his more mature *Odes* he imitates Alcaeus and Sappho and further shows acquaintance with Pindar. In his *Ars Poetica* he takes up the most important injunctions of Neoptolemus of Paros, and with regard to style he counsels the imitation of the Greek models. Horace also distinguished himself in the only literary genre developed by the Romans, the satire. With his better finish he im-

proved on Lucilius (180-103 B.C.), whom he criticized for slovenliness.

Virgil and Horace became classic almost immediately and were imitated by Lucan (A.D. 39-65) and Persius (A.D. 34-62) respectively, though by the time of Quintilian and Juvenal they had become mere school textbooks. Virgil was also criticized by Hyginus, the librarian, as well as by Cornutus (born A.D. 20), the teacher of Lucan and Persius. The first critical edition of Virgil's works (as also that of Horace) was made in the latter part of the first century A.D. by the Berytian scholar M. Valerius Probus, who apparently wrote a commentary on the *Eclogues* and *Georgics*. No extant commentary on his masterpiece, the *Aeneid*, dates from our period.

Ovid (43 B.C.-A.D. 18), who had studied at Athens, produced a number of works, of which the *Heroides*, the *Ars Amatoria* and the *Metamorphoses* became famous. The first contained fictive letters of love addressed by famous women of the past to their husbands or lovers; the second described the erotic art, for which Augustus banished him to the Euxine (Black) Sea. The *Metamorphoses* were evidently drawn from two Greek books: one by Parthenius under the same title and one by Nicander. In one of the stories he gives two divergent versions, which were each preferred by different Greek authors. He shows evidence of imitating Homer, Sophocles, Euripides, Euphorion and others. This great poem has inspired European artists as well as literati such as Chaucer and Shakespeare.

2.4.3. Prose. Prose is chiefly represented by historiography. Pompeius Trogus has the honor of being the first Latin author of a universal history (9 B.C.). This was patterned on Timagenes of Alexandria and used as sources Ephorus, Timaeus, Phylarchus, Polybius and others. Sallust has already been noticed. Livy (59 B.C.-A.D. 17), the greatest historian of Augustan times, in his massive work follows Cl. Quadrigarius and Valerius Antius for Roman events but Polybius for Rome's relations with Greece (*Livy Hist.* 33.5-10 is almost an exact translation of Polybius *Hist.* 18.18-27). Later historians include Tacitus and the biographer Suetonius.

2.4.4. Literary Criticism. The beginnings of literary criticism go back to the first century B.C. The decisive influence comes from Aristotle's *Technē Rhētorikē* and *Peri Poiētikēs* as well as Theophrastus's *On Style* (lost). Volcacius Sedigitus (fl. 100 B.C.) drew up a canon of ten poets in

the following order: Caecilius, Plautus, Naevius, Licinius, Atilius, Terence, Turpilius, Trabea, Luscius and Ennius (Suetonius *Vita Ter.* 5; Aulus Gellius *Noc. Att.* 15.24). Varro, like Theophrastus, recognized three types of style: the grand (*ubertas*, exemplified by Pacuvius), the plain (*gracilitas*, by Lucilius) and the moderate (*mediocritas*, by Terence) (Aulus Gellius *Noc. Att.* 6.14).

For Cicero great style must combine all the elements of excellence (Cicero *De Orat.* 3.96-97, 101). He reviewed ably the styles of such authors as Antonius, Crassus, Caesar, Hortensius, the leader of Roman Asianism (114-50 B.C.), and others. In *De Oratore* he develops a theory of the beauty of oratory based on the combination of words or on rhetorical figures and thought. He indicated certain limitations in Thucydides and Lysias and commended Demosthenes as the supreme model.

Another literary critic, Horace, in his *Satires*, criticized Lucilius's untidy style, while in his so-called *Ars Poetica* he tried to direct his countrymen away from Ciceronian and Alexandrian principles to those of classical Greece. It has been described as "the only complete example of literary criticism that we have from any Roman" (Saintsbury, 1:221). It deals with artistic unity, meter, style, genius, originality and imitation and painstaking performance. He insisted on perfect finish and was indifferent to the older poets, whom Varro and Cicero admired and Ovid appreciated. Horace's legacy was the establishment of classic norms in poetic theory (see Atkins, 2:66-103).

In a later age Petronius in his *Satyricon* (1.2.118) briefly protests against the rhetoricians' bombastic style, insisting on refined language that avoids vulgarity. Finally, with M. Cornelius Fronto (A.D. 100-166) and Aulus Gellius (A.D. 123-165) literary criticism is redirected into the furrow of archaism.

2.5. The Decline of Latin Literature in the First and Second Centuries A.D. Already by the first century A.D. Latin literature is in decline, and the explanations for this are many and varied: decay of morality (both Senecas), bad taste (Petronius), natural after a brilliant period (Velleius Paterculus), the end of republican life (Tacitus).

Tacitus (A.D. 55-120), regarded as one of the best historians of antiquity (*Annales* and *Histories*), advocated a relativity in literary standards, turning against classical rigidity. His *Dialogus de Oratoribus*, has been described as "a work of the

highest originality, profundity and historic insight" (Sandys, 1:207).

By far the most important work on rhetoric ever written in Latin is Fabius Quintilianus's (c. A.D. 35-95) *Institutio Oratoria*. This massive work is essentially a summary of Greek rhetorical principles as adapted by Romans. Evidently Quintilian draws on Palaemon (*Inst. Orat.* 1.4.1-5.54), Pliny (*Inst. Orat.* 1.5.54-6.27), Verrius Flaccus (*Inst. Orat.* 1.7.1-27), Dionysius of Halicarnassus (*Inst. Orat.* 10.1, where he admits to be citing the views of others rather than his own) and even on Theophrastus, Aristophanes and Aristarchus. He suggests a modification of classicism, a new understanding of imitation of the classics, whereby room is made for creativity. Quintilian is the culmination of Cicero's efforts to apply, in the midst of changing circumstances and rivaling influences, the highest possible standards. His system is thus mainly a restatement of Cicero's views. Quintilian's work is a complete system of rhetoric, in which the author culled what he considered best in Greek and Latin literature, backed by his own experience. The work contains discussions of grammar and language, various schools of rhetoric, the structure of speeches, the arrangement of the material, argumentation, style, figures of speech, rhythm, a recommendation for the rhetor to read Greek and Latin authors, delivery, gestures and the importance of the rhetor's character, and it even discusses the education of children. It has been hailed as a monument to Latin rhetoric.

By comparison, the younger *Seneca (4 B.C.-A.D. 65) betrays a contempt for scholarship. He was disdainful of those who studied "useless letters" and derisive of the Greeks for raising scientific literary questions. He ridiculed the *grammatici*, disparaged Didymus's learning and regarded the Alexandrian library a monument of extravagance.

Petronius (died A.D. 66), probably the *Arbiter elegantiarum* in Nero's time, wrote a partly extant picaresque novel, *Satyricon*, "the most original literary work in the history of Roman prose" (Dihle, 2:126), without a real Greek model to follow other than the Greek novel in general. It was patterned on the Menippean satire, that is, prose intermixed with verse. The main characters are of the lowest sort, their language is vulgar and obscene, and the book went unnoticed in ancient times. Persius (A.D. 34-62) satirizes professional poets, their affectations and the

mania after Greek themes, preferring Roman ones.

Juvenal (c. A.D. 55-140), the greatest of Roman satirists, who like Martial, lived under humiliating conditions as a client of wealthy Romans, has left us sixteen satires in hexameter (he was the last Roman to use hexameters). Among other things, he satirized Roman ladies for preferring to speak Greek rather than Latin (Juvenal *Sat.* 6.185-87). His satirism of Domitian led to his banishment. His satires and invective often turn on the corruption of the rich and powerful.

C. Suetonius Tranquillus (c. A.D. 75-160) is our main authority on Latin scholarship. His *De Vita Caesarum* is extant; however, of his other important work on *De Viris Illustribus* on poets, orators, historians, philosophers, grammarians and rhetoricians, only fractions survive; best preserved are the brief *Lives of Grammarians*. To him, mainly, we owe our knowledge of the use of critical signs used in manuscripts.

For the second part of the second century A.D. mention may be made of the work of M. Cornelius Fronto (c. A.D. 100-166) and Aulus Gellius (c. A.D. 123-165). Fronto, a classicist, admires the earliest of Roman writers—Plautus, Ennius, Cato, Terence, Sallust—but bypasses Virgil, Horace and Tacitus. He praises Cicero but disparages Seneca. Gellius, who along with other Romans had "left Rome for Greece in search of culture" (Aulus Gellius *Noct. Att.* 1.2), spent a year or more in Athens, often as the guest of the celebrated Herodes Atticus, where in the winter he began collecting material for his famous anecdotal work, *Noctes Atticae*, in twenty books, most of which has survived. He discusses points of grammar, antiquities, lore, history, biography and textual and literary criticism. The work has preserved citations from some 275 authors otherwise lost. He is less than careful about his sources and plagiarizes others. At least a fourth of his book is devoted to Latin lexicography. This work, which exhibits interest in many scholarly fields, may here form a fitting conclusion to the present discussion of Latin scholarship.

BIBLIOGRAPHY. The basic sources for both Greek and Latin scholarship are the ancient works themselves. The main editions are Oxford Classical Texts; Bibliotheca Teubneriana; Loeb Classical Library; The Bude Series. The greater part of ancient Greek authors is found in the CD ROM *Thesaurus Linguae Graecae* (TLG). The greater part of Latin authors and a great number of inscriptions and papyri are found in the Packard Humanities Institute (PHI) CD-ROM (5.9). **Greek Scholarship. SCRIBES

In Second Temple Judaism the scribes were a class of professional exponents and teachers of the law.

1. Background
2. Scribes and Pharisees
3. Work of the Scribes
4. Scribes in the Gospels
5. Jesus and the Scribes

1. Background.

In ancient Near Eastern civilizations the highly prized skill of writing made the scribes significant members of the community, especially as political advisors, diplomats and experts in the ancient sciences and mysteries, including astrology.

In Israel's history we find that scribes began as recorders and copyists of official data (2 Kings 12:10) and formed themselves into guilds (1 Chron 2:55). They came to hold high political office (1 Kings 4:3; 2 Kings 18:18; 25:19; 1 Chron 27:32; 2 Chron 26:11; Is 22:15) and became the heirs of the *priests and Levites as interpreters of the law (2 Chron 34:13; Ezra 7:12) because of their familiarity with and understanding of the Scriptures (1 Chron 27:32).

In exilic times the scribes emerged as wise men of understanding (see Proverbs) as the Jews in a foreign land depended on them for interpreting the *Torah in a new situation. Baruch was a scribe taking down Jeremiah's dictation (Jer 36:4, 18), collecting the prophet's sayings (Jer 36:32) and acting as his representative (Jer 36:6-15).

From the fourth century B.C. Ezra, the priest and scribe, embodied all that was expected of a scribe in that period (Ezra 7:6-26; Neh 8:1-9). By about 180 B.C., when Jesus ben Sirach, a scribe who probably had a school in Jerusalem (Sir 51:23), assembled his book, the scribes were a well-developed and distinct class of high social status alongside the priesthood (Sir 38:24—

39:11; Jub. 4:17-25). In the crisis perpetuated by Antiochus IV Epiphanes, the reputation of lay scribes rose as they were zealous for the law to the point of martyrdom (2 Macc 6:18-31), while the priestly scribes succumbed to *Hellenism.

After the fall of Jerusalem in A.D. 70, the most respected scribes settled at Jamnia as well as Lydda (*m. Roš Haš.* 1:6; 4:1-2). In *Judaism the learned were also known as elders, experts, sages and scholars. The Mishnah says that they were to be "deliberate in judgement; raise up many disciples and make a fence around the 'Torah" (*m. 'Abot* 1:1).

1.1. Leading Scribes. Little of historical value is known about individual scribes before A.D. 70, the most famous pair being *Hillel and *Shammai (*m. 'Abot* 1:1-18). Hillel came to Palestine from Babylon and, because of his poverty, hired himself out as a day laborer. His kindness and gentleness characterized his school and the leniency of his decisions (*b. Šabb.* 30b-31a; *b. Soṭa* 48b). He drew up seven hermeneutical principles in order to establish the harmony between Scripture and tradition (*t. Sanh.* 7:11).

Shammai, a native of Judea, is said to have been more stringent than Hillel in his interpretation of the law. Even though both agreed on the need to fulfill the letter of the law, the two schools met to discuss their differences (*m. Šabb.* 1:4-11).

As the regulations of the scribes were intended to be applicable throughout the Jewish community, the most respected authorities lived and worked in one place to reach common conclusions.

After the fall of Jerusalem (see Destruction of Jerusalem), Rabban Yohanan ben Zakkai, who lived mainly in Jamnia, was the most distinguished scribe. Another celebrated scribe, well known in the NT, was Gamaliel I, who, according to Acts 5:34-39; 22:3, taught Paul.

1.2. Lifestyle. Some scribes came from the priestly aristocracy (*m. 'Abot* 3:2; *m. Šeqal.* 8:5). Others were ordinary priests (*m. 'Abot* 2:8) or members of the lower orders of clergy (*b. 'Arah.* 11b). The vast majority of scribes came from every other section of society, some supporting themselves by carrying on a trade. The literature gives evidence of a commander of the temple fortress, a wine merchant, a carpenter, a leather worker, a flax comber and a day laborer being scribes. For economic reasons even the most respected rabbis undertook writing and copying of

Scripture (*b. Git.* 67a).

With the need to spend time studying the law and with no set fee for giving instruction, even the most respected of these scribes could be poor and depended on gifts from their students, funds from the distribution to the poor and the temple treasury (*b. Yoma* 35b; *b. Ned.* 49b-50a). Also, it was meritorious to show *hospitality to a scribe, to give him a share of one's property or to run his business for him (*b. Ber.* 34b). Scribes were also exempt from *taxes (*m. 'Abot* 3:5). On the other hand, some scribes were over-zealous in receiving this kindness (Josephus *J.W.* 1.29.2 §571). Others, with many pupils, were very wealthy (*b. Ketub.* 67b).

2. Scribes and Pharisees.

Along with the chief priests, these two groups are often associated in the Gospels. Some have denied that there is any relationship between them. Others have understood the scribes to be the Pharisees learned in the law or an elite amongst them. The phrase "scribes of the Pharisees" (*Mk* 2:16; *Acts* 23:9) indicates the probability that scribes were associated with various sects and associations within first-century Judaism.

3. Work of the Scribes.

In relation to their knowledge of the Scriptures the scribes occupied themselves with a number of tasks (*Sir* 38:24—39:11).

3.1. Interpretation and Preservation of the Law. On the basis of existing regulations and by recourse to ancient customs which had become binding as common law (*Mk* 7:5-8), the scribes applied the general instructions of the Torah to daily living and even extended the law to theoretical situations to build a safety fence against inadvertent breaches (*m. Hor.* 1:5). In turn, the findings of the scribes, related mainly to *festivals, prayers, cleanness and uncleanness (see Purity) and the temple, became common law (*m. Šabb.* 1:1—24:5; *m. Hag.* 1:8; *m. Ned.* 4:3). In some places writing down the tradition of the scribes is forbidden (*b. Šabb.* 115b; *b. Git.* 60b), so continuous study was required to maintain a working knowledge of the traditions.

3.2. Teaching the Law. Instruction usually began at an early age (Josephus, *Life* §9; *b. Git.* 58a). A student was expected to give allegiance to his teacher above that of his parents and, certainly after the NT period, teachers were generally addressed as "my lord" or "master" (*rabbi*). A

student was expected to reproduce every word and expression of his teacher. In NT times teaching took place "in the temple," probably in rooms associated with the main building (cf. *Mk* 14:49). In other centers instruction took place in "houses of instruction" (*Sir* 51:23; *m. Ber.* 4:2; *m. Ter.* 11:10), which sometimes may have been the home of the scribe (*m. 'Abot* 1:4). The scribe sat on a raised area and the pupils on rows of benches or on the floor (*Acts* 22:3). The scribe posed questions for the students to answer. The teacher repeated his material over and over so it could be memorized. When the student had mastered the material and was competent to make his own decisions, he was a nonordained student. When he came of age (*b. Sotā* 22b says forty years of age), he could be received into the company of scribes as an ordained scholar.

3.3. Scribes as Lawyers. Any Jew could be asked to judge a case by a community (*b. Sanh.* 3a). But where there was a scribe he would invariably be chosen for a judicial office (*Sir* 38:33), and some were members of the *Sanhedrin. Aside from these major functions the scribes also attended to the following tasks.

3.4. Scribes as Theologians. Some scribes gave more attention to studying and elaborating the doctrine in the text of Scripture rather than its legal elements. While preaching was not restricted to specific people, these scribes were well qualified to speak in the *synagogues.

3.5. Scribes as Guardians of Tradition. The significance of the scribes in Jewish society was also associated with their being guardians of an esoteric tradition (*Lk* 11:52). They considered secrecy necessary because Scripture was silent on the reasons for many laws (*b. Sanh.* 21b), because of the offense of some stories (*m. Meg.* 4:10), because the teaching might be misused (e.g., amelioration of purity laws, *b. Ber.* 22a) and because genealogical traditions might discredit public figures (*b. Qidd.* 70b). According to the Mishnah this secret knowledge also included the story of creation and the vision of the chariot (*m. Hag.* 2:1; see Heavenly Ascent). From the description of such things in the *apocalyptic writings (*1 Enoch* 69:16-25; *2 Esdr* 6:38-56) as well as direct evidence (*2 Esdr* 14:45-48; *As. Mos.* 1:17-18), it seems that these writings contain the theological constructions and teachings of the scribes.

3.6. Scribes as Curators of the Text. Copying Scripture was considered divine work (*b. Sotā*

20a), and temple funds may have been used to pay for corrections in scrolls (*b. Ketub.* 106a). Even though the sacred text was known by heart, a written edition had to be set before the copyist (*b. Meg.* 18b), who would read aloud the text as he worked (*m. Meg.* 2:2). The *Qumran scriptorium may have been modelled on something similar in the Jerusalem temple.

4. Scribes in the Gospels.

"Scribe" occurs fifty-seven times in the Synoptic Gospels (and Jn 8:3 in some MSS). Twenty-one times they are mentioned with the chief priests and eighteen times with the Pharisees. The scribes are depicted as scholars and teachers of Scripture, the custodians of Jewish traditions, the major opponents of Jesus and heavily involved in his trial.

4.1. Mark. The scribes, mentioned twenty-one times, are the chief opponents of Jesus in this earliest Gospel and appear throughout the Gospel. In the first report of Jesus' teaching, his teaching with authority is contrasted with that of the scribes (Mk 2:22). Unlike the scribes, Jesus did not appeal to tradition but acted as having an authority direct from God.

Mark depicts the scribes as opposing Jesus in a number of ways. When the Pharisees are mentioned with the scribes they are questioning Jesus' understanding of the law. They ask why he contaminates himself by eating with sinners and tax collectors (Mk 2:16; see Taxation) and why he eats with defiled hands (Mk 7:5). The scribes also question the identity and credentials of Jesus (Mk 2:6; 3:22; 11:27) and so provide a foil over against which Mark highlights the identity, teaching and powerful authority of Jesus. On learning of Jesus cleansing the temple they seek to destroy him (Mk 11:18; 14:1, 43) and are involved in his condemnation (Mk 15:1). While he is on the cross the scribes mock Jesus (Mk 15:31). Indeed, in predicting his death, Jesus twice mentions the scribes as some who will be involved (Mk 8:31; 10:33). One scribe, however, who questions and approves Jesus' answer is said not to be far from the kingdom of God (Mk 12:28-34).

Part of Jesus' teaching is his criticism of the scribes (Mk 12:35-40) and his highlighting the new understanding of Scripture in the light of his coming (Mk 9:11-13). He says they do not understand who he is (Mk 12:35-37). The scribe is the antithesis of a disciple (Mk 3:15; 6:7; 8:29;

9:35; 10:31, 43-44) in that scribes like to go about in splendid clothes (*stolai*, cf. Mk 16:5) and, even though they do not have authority (Mk 1:22), they desire recognition and positions of honor in the synagogue and at feasts* (Mk 12:38-39). They also exploit the poor to support their religion (Mk 12:40; see 11:17-18). In showing the scribes also in conflict with the disciples (Mk 9:14), Mark may be conveying to his readers the message that they will continue to face opposition in the same areas as Jesus.

4.2. Matthew. The scribes play a more important role in Matthew than in the other Gospels. The Pharisees, chief priests, elders of the people and the scribes are brought together to represent Jewish opposition to Jesus and, in leading the people astray, they carry responsibility for the fate of Jesus (Mt 2:4; 23:1-39; 26:57; 27:19-26, 41).

One aspect of Matthew's complex presentation of the scribes is the desire to rehabilitate them, apparent in his omission of material where his sources have them portrayed negatively (e.g., Mt 12:24 par. Mk 3:22). Also, when the scribes are depicted negatively, they are always associated with another group, especially with the Pharisees (e.g., Mt 5:20; 23:2-29) but also with the chief priests (e.g., Mt 16:21; 27:41) and elders (Mt 16:21). However, Matthew's antagonism is probably only toward the scribes of the Pharisees, for he makes a distinction between the scribes of the Pharisees and other scribes (Mt 7:29 par. Mk 1:22). And, in chapter 23, where Matthew is most vicious in his attack on the scribes and Pharisees, he reverts to calling them Pharisees in verse 26 (see also Mt 12:24 par. Mk 9:34; Mt 22:34-36 par. Mk 12:28; Mt 22:40 par. Mk 12:32-34; Mt 9:11 par. Mk 2:16).

Matthew also treats scribes positively (Mt 23:2), and the terms "scribe" and "disciple" of Jesus are interchangeable (cf. Mt 8:19 and 21), though disciples are not to use the title "rabbi" (Mt 23:8). Like the students of the traditional scribe, a disciple of Jesus is to leave his family (Mt 8:21-22), follow Jesus wherever he goes (Mt 8:19-20) and have a righteousness—set out in the Sermon on the Mount (cf. Mt 7:29)—that exceeds the pharisaic scribe (Mt 5:20). Such a Christian scribe will gain new understanding of the secrets of the kingdom of heaven as well as treasuring "old things" through the teaching of Jesus (Mt 13:11, 52), which he is to do and teach (Mt 5:19). In 23:34 Matthew seems to be warning the Christian scribe of the impending dangers

of being a disciple of Jesus (cf. Mt 5:10-12).

4.3. Luke. Luke also uses *nomikoi* ("lawyers": Lk 7:30; 10:25; 11:45, 46, 52; 14:3) and *nomodidaskaloi* ("teachers of the law": Lk 5:17; Acts 5:34) for the scribes.

In Luke 11:37-54, the first of two series of criticisms, Luke softens the criticism by omitting (cf. Mt 23:23-36) references to the scribes until Luke 11:45. The second series of criticisms of the scribes, following an attack on their theology (Lk 20:41-44), is in the form of a warning to the disciples to beware of the cruelly selfish lifestyle of the scribes (Lk 20:45-47). Also, following his tradition, Luke shows the scribes antagonistic to Jesus' ministry (Lk 5:21 par. Mk 2:6; Lk 5:30 par. Mk 2:16; Lk 14:1-6; Lk 20:1 par. Mk 11:27). Furthermore, Luke shows the scribes among those attempting to destroy Jesus (Lk 19:47 par. Mk 11:18; Lk 22:2 par. Mk 14:1; Lk 22:66 par. Mk 15:1) and into the hands of whom Jesus expected to be delivered (Lk 9:22 par. Mk 8:31).

There are a number of passages where Luke removes criticism of the scribes (e.g., Lk 20:47 par. Mt 23:15; Lk 4:32 par. Mk 1:22) or softens an attack by using the term "ruler" (Lk 23:35 par. Mk 15:31), "someone" (Lk 9:57 par. Mt 8:19) or by including the Pharisees in criticism (Lk 5:21 par. Mk 2:6; Lk 5:30 par. Mk 2:16). In fact Luke only once mentions the scribes alone in a criticism of their lifestyle (Lk 20:46). This probably means that Luke does not single out the scribes as being especially antagonistic to Jesus or any more worthy of Jesus' censure than any of the other Jewish rulers. On the other hand, Luke has Jesus compliment a lawyer on his knowledge of the law (Lk 10:25).

5. Jesus and the Scribes.

Embedded in the traditions about Jesus generally held to be reliable is a contrast between the teaching and lifestyle of Jesus and the scribes. In his teaching Jesus is not only critical of the Jewish traditions (Mk 7:1-23), but also in his teaching he placed himself above, not under, the Torah (Mk 2:23-28; 10:9; cf. Deut 24:1-4). So while Jesus was addressed as a rabbi or teacher, his teaching was recognized to be authoritative in that it was charismatic rather than dependent on tradition or the Scriptures (cf. Mk 1:22). In contrast to pupils of scribes choosing their own teachers, Jesus selected his own students (Mk 1:17; cf. Jn 15:16). As with a student of a scribe,

Jesus' disciples were expected to place their relationship with Jesus above all other relationships. As with some scribes Jesus is depicted as being poor and dependent on others for his support (Mt 8:20 par. Lk 9:58; Lk 8:1-3).

Numbered among the opponents of Jesus are the scribes. One reason for the scribes' disapproval of Jesus was his claim to speak and act for God (Mk 2:7). This not only provoked jealousy among the scribes but, among those including Sadducean scribes in the Sanhedrin, concern for the delicate peace with Rome being disturbed by the popular excitement Jesus caused (Mk 11:15-19). Jesus further discredited himself in the eyes of the pharisaic scribes because of his frequent association with less desirable elements of society (Mk 2:15-17).

In turn Jesus criticizes the pharisaic scribes in particular for their hypocrisy in knowing the Scriptures and how to enter the kingdom of God yet, by placing insurmountable legal burdens on people, preventing them from entering it. They also live a lifestyle which the disciples are warned not to follow (cf. Mt 23:1-36 par. Lk 20:45-47). At least those scribes who were members of the Sanhedrin shared the guilt of handing Jesus over to be crucified. Yet there is evidence that Jesus found some of the teaching of the scribes acceptable (Mk 9:11-13), and it is reported that on one occasion Jesus complimented a scribe for his understanding of Scripture (Mk 12:34).

SECRET OF EXISTENCE (4Q412-413, 415-421)

The *Secret of Existence*, technically known as *Sapiential Work A*, is a wisdom writing inscribed in Hebrew and extant in (apparently) seven copies found in the caves near Khirbet *Qumran. Almost entirely unknown even to scholars before access to the *Dead Sea Scrolls became general in late 1991, serious study of the *Secret of Existence* has just begun, and much about it remains unclear. Still, the work has already markedly enhanced our understanding of Israel's wisdom tradition as it developed within Second Temple Judaism.

1. Content of the *Secret of Existence*
2. Issues of Interpretation

1. Content of the *Secret of Existence*.

Somewhat in the tradition of Proverbs and the Wisdom of Ben Sira (see Sirach), the *Secret of Existence* has no apparent overarching organization. The writing is a farrago wherein topics are taken up, dropped, then resumed as the writer sees fit. The fact that the work is fragmentary—even factoring in all seven copies, no more than 50 percent of the original content is preserved—further hampers any attempt at summarizing the contents. In general, the *Secret of Existence* is a catechism: a senior sage instructs a junior sage about various aspects of life in this world and about ideas of how to prepare for the next. Hovering in the background, and sometimes made explicit, is the *eschatological notion of impending judgment.

One recurrent theme is that of poverty. In contrast to Proverbs, which views poverty as the unfortunate result of foolish action, in the *Secret of Existence* poverty is the assumed condition of the ideal disciple. As E. M. Cook has noted, this high view of poverty presages that of some early Christians (e.g., 1k 6:20). Cook has further noted that the genre of the *Secret of Existence*, ethical instruction under the threat of impending judgment, parallels that of the Sermon on the Mount (Mt 5—7).

Reconstruction of the *Secret of Existence* is necessarily still tentative, but the proposal of one of the official editors of the work, T. Elgvin, is well considered and reasonable. Using the twenty-three-column 4Q416 as the basis for his reconstruction, with twenty-one or twenty-two lines of text per column, Elgvin suggests the following overview of contents (columns without numbers

are completely missing):

- | | |
|-----------|--|
| 2:17-21 | Arguing with a neighbor |
| 3:1-20 | The elect in relation with God and humanity; loans, property |
| 3:21—4:3 | God as provider for all creation |
| 4:3-18 | Ethics in business dealings |
| 4:18—5:3 | Life in poverty |
| 5:3-6 | Returning a deposit |
| 5:6-8 | The righteous have hope in death |
| 5:8-15 | The study of God's mysteries |
| 5:15—6:13 | Family relations: parents, wives, children |
| 6:17—8:15 | Eschatological teachings |
| 10 | God's plan for creation and history; the <i>Book of Hagu</i> |
| 11 | Purity and resisting temptation |
| 15 | The lot of the elect as the firstborn of God |
| 20 | Heritage of the elect and the ungodly |
| 22 | Farming in light of the story of Eden |
| 23 | Warning: disobedience leads to trouble and death |

2. Issues of Interpretation.

A fundamental issue that requires further study is precisely which Qumran manuscripts ought to be assigned to the *Secret of Existence*. The matter is not straightforward because of three considerations: the fragmentary character of the remains, the similarity a number of Qumran wisdom writings bear to one another and the possibility of more than one recension of the *Secret of Existence*, a phenomenon well known from the **Rule of the Community*, the **Damascus Document*, the **Thanksgiving Hymns* and the **War Scroll*, among others. Elgvin argues for seven exemplars as numbered above, but he has considered whether 4Q419 ought to be included as well. Other scholars have also proposed greater inclusiveness. Cook, while tentative, has included six additional Qumran manuscripts as constituting the *Secret of Existence*: 4Q410, 4Q412-413 and 4Q419-421. A consensus has yet to be reached among Qumranologists.

A second controversial aspect of research on the *Secret of Existence* is the question of whether or not it is a sectarian writing. Elgvin has argued that the *Secret of Existence* is sectarian, by which he means a product of a putative Qumran community. His criteria for this categorization are

twofold: the work's terminology and the orthography of the copies. The book does contain a phrase already known from works that are sectarian: "and according to their knowledge let them be honored, one man more than his fellow" (4Q418 55 10; Elgvin compares 1QH 18:29-30 [new numbering], overlooking another, expanded parallel at 1QS^a 1:17-18). Also, the *Secret of Existence* mentions the mysterious *Book of Hagu*, which several sectarian writings (CD, 1QS^a) require a sectarian leader to know. These seem to be strong sectarian connections.

Another phrase that the *Secret of Existence* uses to describe the elect, "eternal planting," is known from *1 Enoch, the *Thanksgiving Hymns* and the *Damascus Document*. Since 1 Enoch is not a Qumran writing, however, citing this phrase does not materially improve Elgvin's case. Other phrases and terms used by the *Secret of Existence* are similar yet not identical to the wording of sectarian texts. In short, apart from one phrase that requires some sort of literary relationship between the *Secret of Existence* and sectarian writings and the mention of an unknown book that may or may not have been sectarian, there is no concrete literary evidence in favor of Elgvin's thesis that people at Qumran wrote the work. Equally possible is the notion that the sectarians merely knew and treasured an older wisdom writing. This is the thesis of the original editor, J. Strugnell, and of H. Stegemann, who helped Strugnell in the early years of work on the text.

Elgvin's argument from orthography is weaker than the literary one. Here he has adopted the thesis of E. Tov, who has proposed that it is possible to identify works copied at Qumran on the basis of a fuller orthography and certain aspects of Hebrew morphology. Elgvin's argument is thus only as good as Tov's, and Tov's is not very good. It can be shown, for example, that copies of two of the most sectarian writings found at Qumran, the *Rule of the Community* and the *Thanksgiving Hymns*, employed by Tov's definition non-Qumran orthography. It has further been demonstrated that the scribes of the Dead Sea Scrolls were, as a rule, faithful to their *Vorlagen*. They copied what they saw without wholesale changes such as Tov's theory would require happened at some point (Lübbe). Yet another problem for Tov, and therefore for Elgvin, is that almost none of the works supposedly copied at Qumran uses only the required orthography. Rather, their orthography is

mixed, Qumran and non-Qumran. This is an odd situation if the scribes really were employing a uniform standard at the site. Further, various writings in the so-called Qumran orthography have turned up at Masada; only by special pleading can this fact be explained by suggesting that people from Qumran brought the works to Masada. As F. M. Cross has suggested, Tov's fuller orthography is best understood simply as an alternate system used in the Palestine of the scrolls (Cross, 3-5). It did not attach to Qumran specifically.

Thus, though argument will doubtless continue, no strong evidence requires the connection of the *Secret of Existence* to sectarians living at Qumran. Such people may well have treasured the work; but that they wrote it cannot be demonstrated. Indeed, Strugnell and Stegemann had as their working hypothesis that the *Secret of Existence* was composed in the third century B.C., well before the rise of the sectarian movement on any theory. What seems more likely than their extremely early date is an origin in the late second century B.C., among the same circles who read but did not write the earliest Enoch literature. These same circles may have composed **Jubilees*; in any case, they treasured it also. It is attractive to think that the author or authors of the *Secret of Existence* were wisdom teachers attached to the precursor movement out of which the Teacher of Righteousness arose. The Teacher eventually founded a new movement, and it was this movement that produced the specifically sectarian writings known from Qumran. If so, the *Secret of Existence* is a writing of the second century B.C., probably incorporating earlier traditions, that came to be read by the Teacher's movement and, later, others in the first century A.D. In this way it may have been known in early Christian circles.

SECTS, JEWISH. See THEOLOGIES AND SECTS, JEWISH.

SELEUCIDS AND ANTIOCHIDS

The Seleucid Empire was created in the *Hellenistic period. It is important as its territory became much of the administrative landscape of what was to become the *Roman Empire, especially in Anatolia and the Near East.

1. Founding of the Seleucids
2. The Seleucids in Anatolia
3. The Seleucids and the Jews

1. Founding of the Seleucids.

The Seleucid dynasty was founded by Seleucus I Nicator (c. 358-281 B.C.), one of *Alexander the Great's generals. In 321 B.C. Seleucus acquired the former Persian satrapy of Babylonia after Alexander's death. Although he was ejected from Babylonia by Antigonus I, he regained control in 312 B.C. He was then able to initiate eastern expansion as far as the Indus. The eastern emphasis of his control is indicated by the establishment of Seleucia on the River Tigris around 305 B.C.

Following the battle of Ipsos in 301 B.C., the Seleucids gained control of northern Syria. The city of *Antioch (e.g., Acts 11) was built in 300 B.C. to serve as a further royal capital; the city itself was served by a new port, Seleucia, just to the north of the mouth of the River Orontes. This port, which was taken by the *Ptolemies on two separate occasions (under Ptolemy Euergetes and Ptolemy Philometor), is mentioned as the point of embarkation for Paul and Barnabas, who were traveling to Cyprus (Acts 13:4). The

structure of Seleucid Syria, as laid out by Seleucus I, was retained when the region became the Roman province of Syria with the governor based at Antioch (see Roman Administration).

2. The Seleucids in Anatolia.

Lysimachus, Alexander the Great's former bodyguard, had acquired territory in Asia Minor at the end of the fourth century. However, due to court intrigues, members of his family appealed to Seleucus I to invade Asia Minor. The two forces met at the battle of Corupedium, Lydia, in 281 B.C., when Lysimachus was killed. This gave Seleucus control of *Asia Minor.

After Seleucus's murder later that year, and the accession of his son Antiochus I, Greek cities addressed the Seleucids as "saviors" (e.g., Ilion, *OGIS* 219). The Ionian league was quick to acknowledge Antiochus's control and sought to view him as a god (*OGIS* 222).

Although parts of Seleucid territory were raided by the *Galatians, there was relative stability in the region. This was helped by the establishment by Antiochus I of a series of military colonies along the main routes to the west coast; these included Thyatira at the head of the River Caicus (Acts 16:14; Rev 2:18-29), Pisidian *Antioch (Acts 13:14; 14:21), Hierapolis (Col 4:13) and Laodicea (Col 4:13; Rev 3:14-22).

During the reign of Seleucus II (246-225 B.C.) the Anatolian territory was handed over to Antiochus Hierax, in part to gain support during continued conflict with the Ptolemies. Seleucus attempted to reclaim the territory but was defeated by a coalition of Antiochus, Mithridates II of Pontus and the Gauls (Galatians) from the region of Ancyra. As a result the Seleucids lost control of much of their former territory. This was to be reversed under Antiochus III (223-187 B.C.), who regained much of the territory from the Attalids of Pergamum. However, Seleucid expansion was to be checked by Roman forces under the command of Scipio Africanus—along with Eumenes II of Pergamum—at the battle of Magnesia ad Sipylum, Lydia, probably in January 189 B.C. This led to the peace of Apamea in 188 B.C. (Polybius *Hist.* 21.43), which effectively meant that the Seleucids gave up their empire in Asia Minor north of the Taurus mountains; they retained Pamphylia and Cilicia.

3. The Seleucids and the Jews.

Judea, which had been part of the Ptolemaic

kingdom, was acquired by Antiochus III, along with Phoenicia and the southern part of Syria (Coele Syria), during 202 to 198 B.C. Although control of the *temple initially remained with the Jews, Antiochus IV Epiphanes (175-164 B.C.)—seen through Jewish eyes as a “sinful shoot” (1 Macc 1:10)—appointed a Hellenizer, Jason-Jesus, to be high *priest, an appointment for life. As a result Greek institutions such as a *gymnasium were introduced to the city; there may even have been a move to rename *Jerusalem Antioch.

Jason was deposed and replaced by one Menelaus, who was implicated in the murder of a deposed high priest, Onias III. When Jason attempted to reclaim his post, Antiochus IV intervened while on the way back from Egypt, and the temple itself was looted and the treasures carried off to Antioch (1 Macc 1:10-25). An edict was apparently passed to the effect that throughout the Seleucid kingdom all the different peoples should give up their ancestral customs. Such a view has been challenged, given that the Seleucids were accustomed to ruling a diverse range of cultural groups within their empire. Indeed some of the desire for cultural change may have come from Jews backing Jason. This meant that the Jewish religion was suppressed and the temple in Jerusalem rededicated to a new cult of the Lord of Heaven; the cult itself may have been associated with a royal *ruler cult with Antiochus in the guise of Zeus Olympios. Such oppression directly led to the outbreak of the Maccabean revolt of 166 B.C. (see Hasmonaeans). The death of Antiochus in 164 B.C. allowed the Jews to return to their former status under Seleucus IV.

The Hasmonean dynasty of Jewish high priests emerged from this difficult period. In particular Jonathan recovered Jerusalem. One of the last Seleucid interventions in Judea was by Antiochus VII (188-129 B.C.). His letter to Simon the priest is preserved (1 Macc 15:1-9). Although Antiochus promised to restore the fortunes of Judea, he went against his word and besieged Jerusalem; however, he was killed in an expedition against the Parthians in 129 B.C. In effect the Seleucids now lost control of Judea even though they continued to consider it their own. Rivalries between Hasmonaeans, in particular John Hyrcanus and Aristobulus, led to the Roman general *Pompey's intervention in 63 B.C. and Judea's effective annexation with Syria.

The interference in Judea by the Seleucids, notably Antiochus IV, and especially his encouragement of Hellenization, can be seen as the direct influence on many of the tensions in Jewish culture and society in the NT documents.

SEMITIC INFLUENCE ON THE NEW TESTAMENT

The Semitic influence on the NT may show itself in the language, form and content of the NT. Recent studies and discoveries of texts from the Judean desert have thrown new light on the general question of Semitisms in the NT, as well

as on the phenomena of bilingualism in first-century Palestine and the Aramaic of Jesus and his first followers.

1. The Nature of Semitic Influence
2. Semitisms in Greek Texts Outside the New Testament
3. The Semitic Factor in the Gospels and Acts
4. Considerations in Reconstructing the Aramaic of Jesus and His First Followers
5. The Intricacies of Ancient Bilingualism and Translation

1. The Nature of Semitic Influence.

1.1. Language. A "Semitism" (or "Semiticism") in the Greek text of the NT may be defined as an element of vocabulary, grammar, syntax, idiom or style, which (1) deviates from expected Greek usage, and in that deviation coincides with idiomatic Aramaic or Hebrew usage, or (2) although attested in Greek is relatively more frequent in the NT, possibly because it coincides with idiomatic Aramaic or Hebrew use.

1.2. Form. The Gospel tradition presents much of Jesus' teaching in literary forms akin to those characteristic of rabbinic literature. Such "forms" include miracle stories, parables, disputations, and "cases" (examples drawn from real-life situations) (see Fiebig).

1.3. Content. Distinctively Jewish material may be detected at certain points in the New Testament. This includes: (a) traditional Jewish interpretations of Scripture (Haggadah), such as the reference to "Joseph's bones" in Hebrews 11:22b; (b) matters of rabbinic law (Halakah) or custom; (c) occasional hints at political events and Jewish aspirations and slogans, known from coins, documents and reports of historians and others. The "liberation" theme in Luke is a case in point. Thus, Luke 2:36-38 (and specifically verse 38) recalls the dating formula used on many coins and documents of the First and Second Jewish Revolts against Rome: "Year X of the liberation of Israel/Jerusalem," and "Year X of the liberation of Israel at the hand of Shimeon ben Kosiba Prince of Israel" (see XHcv/Se 8, recto, upper, line 8).

Again, in Luke 24:21, Cleopas and his colleague tell the unknown stranger of their dashed hopes for Jesus of Nazareth: "We had hoped that he was the one who was about to liberate Israel." This statement encapsulates historical hope within a clear citation of a midrash identifying Moses as "the man who is about to

liberate Israel" (PRE 48:82-86; see Wilcox 1992).

Features such as these serve to anchor the NT text to its historical setting and strengthen the case for the validity of any apparent "Semitism" found in the same context.

2. Semitisms in Greek Texts Outside the New Testament.

Historically, the identification and evaluation of NT Semitisms have been treated almost exclusively as a philological matter aimed at discovering their probable origins. But Semitisms are not confined to the NT. They also occur in the LXX, in other Greek versions of the Hebrew Bible and in other quasi-biblical literature. The publication of four fragmentary texts of Tobit in Aramaic and one in Hebrew from Qumran have facilitated study of the translation process. Indeed, the discoveries in the Judean desert, from Qumran, Masada, Murabba'at, and Nahal Hever, have marked a turning point in the debate over the quest for Semitisms in the NT. Actual documents, not only religious but also political and personal, in Aramaic, Hebrew (both classical and proto-Mishnaic), Nabatean and Greek, are now available. Many of the "secular" texts have precise Roman datings and throw light on daily life in Roman-occupied Palestine in the first and early second centuries A.D., the Jewish social and cultural context within which Jesus and his movement lived and worked.

The Masada material indicates that many inhabitants of Judea were "bilingual or even trilingual," with Aramaic as the main language of the ordinary people. Hebrew was also used for everyday matters but was "dominant" in references to the priestly shares and where questions of ritual purity were involved. (Yadin and Naveh, 32-39). More interestingly, Aramaisms occur in everyday personal documents from Nahal Hever, written in Greek by bilingual (or trilingual) scribes on behalf of Aramaic-speaking Jews. They date from late first to early second century A.D. and are thus very close in time to the emergent NT.

2.1. Semitism as Interference of Aramaic or Hebrew on Greek.

2.1.1. Interference of Aramaic on Greek. Two types of interference of Aramaic and Greek are clearly documented from among the texts from Nahal Hever.

The first is in a deed of gift, in Greek, on pa-

pyrus, a double document dated November 9, A.D. 129, from Mahoza (XHev/Se 64). Its Greek is so ungrammatical and unidiomatic that the editor (Cotton) found it at times understandable "only when translated back into Aramaic." Her solution was to translate it "literally, with no adaptation, into the original Aramaic."

The second is the presence of clear Aramaisms and Hebraisms in a number of Greek documents forming part of the Babatha archive (P. Yadin) and ranging in date from June 2, A.D. 110, to August or September A.D. 132 (?). Most of these Semitisms also occur in the NT and are plainly due to interference of Aramaic on the Greek. Indeed, the same document may contain both a semitized expression in one line and its correct idiomatic Greek equivalent in another. This also occurs in the NT and has been claimed there as proof that the alleged Semitisms in question were not genuine translation errors.

Further, P. Yadin 11, dated May 6, A.D. 124, actually identifies lines 29-30 as a Greek translation (*hermeneia*) of the borrower's (Aramaic) acknowledgement of debt. The original, with his signature in Aramaic, was retained by the lender.

2.1.2. *Semitisms Found in the Babatha Documents.* Examples of Semitisms from the Babatha documents include the following:

(a) Introduction of direct speech by *legōn, legousa* ("saying"). It is very common in the Gospels, Acts and Revelation. In the Septuagint this translates the Hebrew *l'mr*. Its Aramaic equivalent would be *lm'mr*. (See P. Yadin 14.25; 15.20; 24.3; 25.15, 25, 47, 60; 26.12; 35.7.)

(b) The use of *ek/ex* (= "from") in partitive expressions, representing Hebrew or Aramaic *mn* (see P. Yadin 5 b i.2; cf. Mk 14:18, *heis ex hymōn*, "one of you"; lit. "one from you"). The correct Greek idiom occurs just two verses later in Mark 14:20: *heis tōn dōdeka* ("one of the twelve"). In passing, note that the semitized form in Mark 14:20 occurs in words ascribed to Jesus.

Two NT Aramaisms found in the Greek documents from the Babatha archive also occur in the Greek version of Tobit 2:3 in Codex Sinaiticus. Only one word survives in the Aramaic of that verse, namely *ʾhmq* = Greek *estragalētai* = "strangled." The two Aramaisms are (1) *apokritheis eipen* = *nh w'mr* = "he answered and said" (P. Yadin 25, lines 24-25) and (2) *heis ek tou*

ethnous hēmōn = "one of [lit. 'from'] our community."

3. The Semitic Factor in the Gospels and Acts.

3.1. *The Question of "Septuagintalism."* In the quest for Semitisms in the NT we frequently meet the widely held view that the Semitisms of the Gospels and Acts are in reality "Septuagintalisms." That is, they are not true Semitisms but are due to conscious or unconscious imitation of the translation idiom of the LXX by the authors of the NT books in question. It is even argued that in Luke and Acts they have been put there deliberately by the author(s) to give the material a Jewish and/or "biblical" tone. The LXX is itself largely a set of translations from Hebrew and Aramaic, made at different times by different people (see Septuagint/Greek Old Testament). Its Semitisms are due to interference of Hebrew and Aramaic on Greek.

The Gospels and Acts are largely about people whose first languages were Aramaic or Hebrew, like Babatha and the author of Tobit. It is time to take them seriously. The "Septuagintalism" view is essentially based on internal evidence: we simply do not know the literary intentions of the NT authors, only what they actually wrote.

3.2. *Evidence of Jesus' Spoken Aramaic.* The Gospel of Mark clearly affirms that Jesus spoke Aramaic and probably Hebrew. Whether he also spoke Greek we can only surmise, but a hearing before Pilate would presumably have been conducted in Greek. Examples of Jesus' spoken Aramaic include *Talitha koura(i)* (Mk 5:41), *ephphatha* (Mk 7:34), *abba* (Mk 14:36, see also Rom 8:15; Gal 4:6), and the cry from the cross, *elōi elōi lama sabachthani* (Mk 15:34 = Tg. to Ps 22:1a; see Mt 27:46). All of these words are expressed in Greek characters and provided with Greek translations. This material, though sparse, is very precious and, taken with other examples of Aramaic speech in the NT, may throw light on the question of which dialect Jesus and his followers spoke.

Elōi Elōi lama sabachthani (Mk 15:34; cf. Mt 27:46). The most striking of these is the cry from the cross: "My God, my God, why hast thou forsaken me?" Here *sabachthan(e)i* agrees precisely with the Aramaic text of the targum to Psalm 22:1a, against the form *zaphthan(e)i* found in Codex Bezae (= "*zablāni* found in the Heb original). It is all the more impressive in that it

portrays Jesus in his darkest hour speaking in his mother tongue.

Talitha kōum/kōumi (Mk 5:41). Of these two readings *kōum* is by far the better attested. The problem is (a) that the subject is feminine, and (b) *kōum* represents the masculine singular imperative of *qum*, "to stand up," while *kōumi* = *qūmī*, the feminine singular imperative. In Syriac and Christian Palestinian Aramaic, the *i*- of *qūmī* would be silent. Does this tell something about Jesus' spoken Aramaic, possible influence of Syriac or Christian Palestinian Aramaic, or perhaps dictational transmission of the text?

Ephphatha (Mk 7:34). Mark's Greek version of this word is *dianoichēti*, "be opened." The *t* of the reflexive-passive prefix (*t*) of the verb *pth*, "to open," has become assimilated to the *p/f* of the root. This can be documented (a) as *'pth*, "was opened," in a Haggadah found at Genesis 49:1 in the *Fragmentary Targum* in Cod. Vat. Ebr. 440 and (b) in the formula *l' lmpth* in four first-century A.D. Aramaic ossuary inscriptions meaning either "not to open," or better, "not to be opened" (Wilcox 1984, 998-99; Fitzmyer and Harrington, nos. 67, 70, 71, 95).

3.3. Other Semitisms in the Gospels and Acts.

3.3.1. *Akeldamach* (Acts 1:19). The phrase *Akeldamach* in Acts 1:19 represents Aramaic *hql dmh* ("field/portion of blood"). Compare with this the phrase *hql prds* ("a field," "an orchard/garden") in a papyrus deed of sale (XHev/Se 9, lines 3 and 14), dated, on the basis of its script, to the end of the Herodian period. As elsewhere in XHev/Se 9, *prds* has its definite state in *-h*, not *-'* and suits first-century Jewish Aramaic.

In the wider context, Acts 1:16-18, there is a reference to fulfillment of the Scripture "concerning Judah." Genesis 44:18 opens the section, "And Judah drew near." In *Targum Neofiti* and a Cairo Genizah fragment (D), there is a piece of Haggadah in which Judah speaks of his determination to avenge Benjamin (if he should come to harm): "For he [Benjamin] was numbered with us amongst the tribes, and received lot and inheritance [with us] in the division of the Land." Judah had forfeited his portion or lot among the Twelve, and his successor was also appointed by lot.

3.3.2. *Apo mias* (Lk 14:18). This phrase reflects *mn hd'* or *mhd'*, idiomatic Syriac and Christian Palestinian Aramaic, meaning "suddenly," "at once."

3.3.3. *Epi to auto* (Acts 2:47). By itself this

phrase is used in the LXX to translate the Hebrew *yhd, yhdw*: "together," "in the same place." That does not fit Acts 2:47. However, the full idiom in Acts 2:47 is really *prostithenai epi to auto* = Hebrew *lhwsyp lyhd*, "to add to the Yahad." Compare 1QS 5:7; 8:19, where the idiom means "to join the community [the Yahad]." Similarly, in Acts 1:15 and 2:1, the complete idiom is *einai eis to auto* = Hebrew *lhywt lyhd*, "to belong to the community [Yahad]" (cf. 1QS 5:2; 6:23; 8:12; and possibly 2:24). The Greek is thus a fairly literal translation of the Hebrew idioms (Wilcox 1965, 93-100).

3.3.4. *Mark 10:11-12*. The problem in this passage is that it assumes that divorce can be at the instance of either the husband or the wife, whereas the Mishnah at *Gitin* 8:1-5 assumes that it is the prerogative of the husband. A new text from Nahal Hever, XHev/Se 13, is dated 20 Sivan, year 3 of the liberation of Israel in the name of Shim'on bar Kosibah, Prince of Israel (A.D. 134/135) and is an Aramaic deed of divorce (a "Get") issued by the wife, Shalamzion b. Joseph *Qbsn*, to her ex-husband, Eleazar ben Hananiah. The document was issued some eighty-five years before the usual date of the codification of the Mishnah.

4. Considerations in Reconstructing the Aramaic of Jesus and His First Followers.

Several clues emerge in examination of the words of Jesus and Peter, cited in Aramaic in Mark and Acts respectively. While the basic Aramaic used seems to fit reasonably well with that of the material from Qumran, there are indications of some links with Syriac and Christian Palestinian Aramaic.

Further, in Tobit 2:1, in 4Q196 (4QpapTobit^a ar), frag. 2 line 11, the word *šrw*, which is not listed in the Aramaic lexica, occurs. It is found in Syriac, however, with the meaning "meal," "repast," "banquet." This meaning agrees with the Greek text of Tobit in Codex Sinaiticus, which renders *šrw* by *ariston* ("dinner" or "banquet"). 4Q196 is described as "carefully written in a late semiformal Hasmonaean script" and dated to about 50 B.C. This is far earlier than we might have expected to find Syriac. Is the influence really Syriac, or were the dialect boundaries less rigid than accepted at present? This would support E. M. Cook's thesis that we should not divide Aramaic into "Eastern" and "Western" but should include a "Central" area as well.

He sees the origin of *Targum Onqelos* and *Targum Jonathan* in the Central Aramaic area, as supported by "the undoubted connection of the Peshitta [Syriac] to the targumic interpretative tradition" (Cook, 156).

A second point is that at a number of places in the NT, we find elements of Jewish midrash for which the NT material is apparently the earliest known evidence. In Acts 13:22 we have what appears to be a mixed quotation. It is usually represented as in three elements: "I found David" (Ps 89:20), "a man after my own heart" (1 Sam 13:14), "who will do all my wishes" (Is 44:28). However, the targum to 1 Samuel 13:14 replaces the phrase "a man after my own heart" with the words: "a man doing his [the Lord's] wishes" (*qbr 'byd r'wtyh*). Acts 13:22 is thus the earliest known evidence for the targumic interpretation of 1 Samuel 13:14 (Wilcox 1965, 21-22). There are many more such "targumic" readings in the NT. Clearly the NT writers were not quoting the apparently late targums of Onqelos and Jonathan (see Rabbinic Literature: Targumim). There must have been at least an oral link between the first-century A.D. form of these traditions of Scripture interpretation and the later written forms of them in targumim and/or midrashim.

Against this background it seems wise not to be too ready to dispense with the evidence of the written targumim. It is in this area that some of the most promising discoveries are likely to be made.

Ideally we need free, spoken Aramaic, not under suspicion of being a translation and documented for the first century A.D. in Palestine. It should also be available in statistically credible quantity and range of vocabulary. J. A. Fitzmyer has argued that Qumran Aramaic along with other first-century Aramaic, such as tomb and ossuary inscriptions, is the latest Aramaic that should be used for philological comparisons of the Aramaic basis of the Gospels and Acts. Much of this material, however, does not appear to provide us with the type of free, conversational Aramaic needed for comparison with the language and style of the Gospels and Acts. *Talmud Yerushalmi and the midrashim in many ways meet the situation except for date.

Next, there is the practical problem that there are always words and idioms which we need for reconstructing the language but which are not available in Qumran Aramaic. We have

seen above that some help is to hand from Syriac and Christian Palestinian Aramaic. Indeed, Casey is right when he argues that all the dialects of Aramaic are to be checked when paucity of vocabulary bars further progress. Again, despite the gaps in date, at least where midrashic material is found in the NT, it is well worth asking whether the traditional links between the midrashic material and the NT may not supply the missing words. Further, the fact that a given Aramaic word has not yet been found in texts from the period 200 B.C. to A.D. 200 does not mean that it did not exist earlier. Again, that a word or element of syntax is attested in Aramaic material from Qumran, for example, does not in itself mean that it was known to Jesus.

5. The Intricacies of Ancient Bilingualism and Translation.

The fact of genuine Semitisms in the Greek text of the NT requires consideration of the intricacies of bilingualism (and/or trilingualism) and translating. Clearly both activities are affected by the speaker's or translator's knowledge and facility in both the source language and the language in which the material is to be expressed. In XHcv/Se 64, the writer's Aramaic was no problem, but his or her Greek was minimal. The result was ungrammatical, unidiomatic and all but incomprehensible as Greek. However, rewritten *word for word* in Aramaic, the document was idiomatic and clear. Where a bilingual person or translator is either speaking or writing directly in the second ("target") language, he or she is relatively free to choose words and idioms which come naturally to mind.

But translating a (written) *text* in language "A" restricts the translator's choice of vocabulary, syntax and idiom because of the need to turn the source in language "A" into credible language "B."

The process may be further complicated if the translator is obliged, personally or by others, to put the material in language "A" into the best language "B" as he or she can, or whether, for example, the need is to produce a translation that is as nearly "word for word" as possible. The more authoritative the original material, the less free a translator will be to compose the translation idiomatically and according to sense. J. Joosten has drawn attention to the case of the Syriac Peshitta version of Matthew, where he notes that its "author" shows a tendency to rep-

resent each Greek word of that Gospel by one Syriac equivalent (Joosten, 164). Nearer to the Greek NT situation, there are intermittent Aramaisms in a number of the Greek documents from the Babatha archive (P.Yadin). From time to time, the bilingual scribe has slipped from expressing in idiomatic Greek what Babatha presumably said in Aramaic, and instead he has produced an (unidiomatic) word-for-word Greek "translation" of the original Aramaic.

M. Casey has investigated the question of bilingualism and translation techniques in connection with his project of utilizing the available first-century Aramaic to attempt a thorough reconstruction of possible source material in the Gospel of Mark (Casey, 93-110).

SENATORIAL ORDER. *See* ROMAN SOCIAL CLASSES.

SENECA

Lucius Annaeus Seneca was a Roman moralist, politician and playwright. Born between 4 and 1 B.C. in Spain to an elite family of Italian descent, he was educated in *Rome, spent time in Egypt and achieved political prominence at an early age. Implicated in intrigue surrounding the Emperor Caligula, he was exiled to Corsica, from which he was recalled by the emperor Claudius at the encouragement of his new wife Agrippina. Seneca served as tutor of the young Nero, then as adviser during the early years of Nero's reign. Opting for retirement after Nero's behavior made his own position at court untenable, Seneca spent his final years writing philosophy. In A.D. 65 he was forced by Nero to commit suicide for his alleged participation in the Pisonian conspiracy. From the account of the Roman historian *Tacitus, it appears that Seneca modeled his suicide on that of Socrates, thus turning his

death into an act of political theater celebrating the spiritual liberty of the wise man. His continuing influence on the culture of Rome is attested by the later writer Quintilian, among others.

While Seneca's prose writings include discussion of *Stoic physics (*Naturales Quaestiones*) and technical investigations of ethical issues (some of the later *Epistulae Morales*), by and large they are best considered as exhortations. They encourage the addressee, who is often a prominent political figure or a member of Seneca's family, as well as the reader to relate Stoic doctrine to the particularities of Roman life. Topics addressed include management of anger (*De Ira*), responsibilities to self and others (*De Brevitate Vitae*) and consolation on the loss of a loved one (*Ad Marcium, Ad Polybium*). Seneca's emphasis on the therapeutic and practical aspects of Stoicism has led to an undervaluing of his achievement by modern students of *philosophy, as have alleged contradictions between his teaching and his practice. Seneca's tragedies, which employ scenarios from Greek mythology, also articulate Stoic concerns and doctrine, although in a less straightforward manner than do the prose writings.

Similarities between Senecan philosophy and Christianity were early on noted by Tertullian (*De An.* 20). A forged correspondence between Seneca and Paul, already familiar to Jerome and Augustine, as well as a later legend of Seneca's conversion to Christianity, contributed to his continuing popularity among Christian writers of the Middle Ages and beyond. His brother L. Iunius Gallio Annacanus, as proconsul of Achaia, presided over Paul's arraignment (Acts 18:12-17).

SEPTUAGINT/GREEK OLD TESTAMENT

The Septuagint is the name often and usually given to the Greek version of the OT/Hebrew Bible and a few other books, on the basis of the tradition that seventy or, more accurately, seventy-two Jewish scholars were involved in its translation. Some scholars confine the term *Septuagint* to the translation of the Pentateuch, since this was the portion translated according to the early tradition, but most include the entire OT (see Greenspoon, 156). Although the translation was the Bible of the early church and of Judaism until the late first century A.D., the Septuagint has not figured nearly so importantly in the Western church as it should have, no doubt due to the church's ultimately following the Jewish canon of the OT. However, a number of factors—including discovery of Septuagint Greek papyri, and appreciation of the role of Greek in the Greco-Roman world, among others—have maintained scholarly interest in the Septuagint.

1. Contents.

The Septuagint or Old Greek version includes the twenty-four books of the Hebrew Bible (OT), plus a number of other books, not necessarily arranged in the same order in the Hebrew and Greek texts (see Kenyon, 16-17; Rost; Swete, 197-230). Even some of the Septuagint versions of the canonical twenty-four books are not the same as their Masoretic equivalent, which suggests that the earlier Hebrew versions, at least as they existed in some circles, were different from later texts. Major differences are to be seen in Jeremiah, Job and Proverbs, as well as there being additions to Daniel and Esther (see Müller, 40). Earlier scholarship thought that there was a peculiar *Alexandrian canon, which consisted of books that were part of the canon of Scriptures of the Jews of Egypt (Nairne). This canon consisted of not only the twenty-four canonical books but a number of books that were translated from Hebrew into Greek (e.g., 1 *Esdras, *Sirach [Ecclesiasticus],

*Judith, *Tobit, *Ba-ruch, Letter of Jeremiah, 1 *Maccabees, possibly the additions to Daniel; see Daniel, Esther and Jeremiah, Additions to) or that were originally composed in Greek (e.g., 2, 3 and 4 Maccabees, *Wisdom of Solomon, additions to Esther, *Prayer of Manasseh), although there is still dispute over the original language of a number of these books (see Müller, 13-15). This group of additional books is now usually called the OT *Apocrypha (although a few of the books above are not included in this group). Most scholars do not now believe that there was ever an Alexandrian canon that set its Scriptures apart from those of Judaism elsewhere but that the Greek Bible was in use not only throughout the Diaspora but in Palestine as well. This is now attested by the Greek OT fragments, including the *Minor Prophets Scroll*, which is one of the Judean Desert documents (see Müller, 39-40). A number of other books that seem to have been attached to this corpus in various ways and by various groups were also considered to be sacred by some Jews of the time. These consist of some of the pseudopigrapha, such as **Psalms of Solomon* and **1 Enoch*, which has been found in Greek fragmentary form, as well as 4 Esdras (= 2 Esdras of the English Apocrypha; see Esdras, Books of). *Psalms of Solomon* appears to have been attached to Codex Alexandrinus (according to the table of contents; see Swete, 202), and may well have been a part of the Greek Bible for some groups, although the other two listed above are more doubtful as to their scriptural status.

2. Theories of Origin.

The label "Septuagint" comes from the account in the **Letter of Aristeas* of seventy—actually seventy-two—Jewish scholars who were purportedly involved in the translation of the Jewish Bible into Greek. There are four ancient historical accounts of the origin of the Greek OT. The first is contained in the *Letter of Aristeas* (see Müller, 46-58; Jellicoe, 29-58). This document, probably written in the late second century B.C., is ostensibly written by Aristeas, a contemporary of the events reported and an official at the Egyptian Ptolemaic court. Among a myriad of other details, much of them irrelevant, he records that Demetrius of Phaleron, who was director of the **Alexandrian Library* (this is a mistaken identification; see Müller, 47), was instructed by the king, Ptolemy II Philadelphus

(285-246 B.C.), to gather together all of the books in the world. He noticed that the Jews' Law needed to be translated into Greek from their language for its inclusion. Gifts were sent to the temple in Jerusalem, and some exiled Jews returned to convince the high priest to send seventy-two Jewish scholars to translate the law into Greek. This they did on the island of Pharos, completing it in seventy-two days. The translation was reportedly well received by both the people and the king, and curses were placed upon any who would dare to tamper with it.

The second account of the translation of the Hebrew Bible is that of **Aristobulus*, the Jewish philosopher who lived in Alexandria in 181-145 B.C. when Ptolemy VI Philometor was king (Müller, 58-61). His discussion on the translation, since it is only available to us through the work of other ancient authors, has often been questioned regarding its genuineness. Aristobulus (in Eusebius *Præp. Ev.* 13.12.1-2) claims that the Law was translated before the time of Plato and that Plato drew upon it in his thinking. It is unclear whether Aristeas used the work of Aristobulus or whether they both relied on common tradition, but Müller thinks that they both reflect a tradition in which the Egyptian king was motivated to promote the translation.

The third account is that of **Philo* (Müller, 61-64). In a number of ways Philo's account in *De Vita Mosis* 2.26-44 is very similar to that of *Aristeas*, prompting the question of whether Philo is using *Aristeas* and presenting an abbreviated form of his story, or whether they are each drawing on independent tradition. In any case, Philo adds several interpretive dimensions of his own to the account. One is that Philo tends to see the translation as done in accordance with the divine will, with the result that the product was inspired. As Müller notes, "This means that the Greek Bible is not a daughter version, but a 'sister' enjoying equal rights" (Müller, 63). The second is that, as a result, the translators themselves are seen to be priests and prophets, which acts as a guarantee of their translation.

The fourth and final ancient account is that of **Josephus* (Müller, 64-66). As many have noted, Josephus in his *Jewish Antiquities* 12.2.1-15 §§11-118 presents an abbreviated account of *Aristeas's* version, and in *Against Apion* 2.4 §§45-47 he includes the *Aristeas* account. The emphasis in Josephus's account is upon the ac-

curacy of the translators' work.

Scholars have assessed the historicity of the *Aristeas* account (and those similar to it) and come to differing conclusions: from nearly factual and historical to complete and bogus fiction, with nearly every view between these extremes represented. The current position is that probably there is some basis in fact for what *Aristeas* relates—that the Law, or Pentateuch, was translated into Greek in Egypt beginning in the third century B.C. (Kenyon, 14). However, there are other parts of the account that are held to be less reliable, such as the claim that it was Palestinian Jews who performed the translation. Almost assuredly the translation of the Hebrew Bible into Greek was occasioned by the fact that the vast majority of Jews—certainly those outside of Palestine, and especially in Egypt where there was a significant number of Jews—did not have linguistic access to their Scriptures in Hebrew and required a Greek version (Müller, 38-39). The translation itself seems to reflect these realities. There is the possibility that the *Aristeas* account is given as an apologetic for a new translation meant to displace previous ones (Kahle, 212), although what may be indicated is simply that the Hebrew manuscripts were in such poor condition that it was necessary to establish a reliable text before translation could proceed (see Müller, 52). This possibility, as well as one that admits of the difficulties of creating such a translation because it would imply interpretation, is not broached by Philo or Josephus.

Although the above account is the one most widely regarded as satisfactorily explaining the basic origin of the Septuagint, there are other, modern theories that have been proposed as well (see Jellicoe, 59-73). As noted above, Kahle (209-28) thought that the *Letter of Aristeas* was written in the late second century B.C., long after Greek translations of the Hebrew Bible had been made by Jews in Egypt (not from Palestine). *Aristeas* would thus have been written in defense of a recent revision of these Greek translations in order to establish this one as the standard edition. He finds in support of this theory not only *Aristeas*'s imposing curses on those who would tamper with the text but the testimony of Ben Sira in his prologue concerning knowing the Law, Prophets and other Writings, and textual characteristics of some of the earliest manuscripts, such as P. Fouad 266, P. Rylands

Greek 458, the Judean Desert Greek Bible fragments, and the *Minor Prophets Scroll*. Gaster believed that the Greek Pentateuch originated not in Egypt but in Palestine, since only an origin in Palestine would have given the translation the necessary prestige for acceptance. The Jews were by this translational act taking the initiative in confronting their religious rivals, including the Samaritans.

Thackeray (1921, esp. 9-15) believed that the origins of the Septuagint and Jewish worship went closely together and that the latter gave rise to the former. Neither Aramaic nor Hebrew was understood in Egypt, and worship needs of these Diaspora Jews demanded a form of the Scriptures rendered into their vernacular tongue. Thackeray accepted much of the *Aristeas* tradition, such as the Pentateuch being translated first, the origin of the version in Egypt, its dating to the third century B.C. and the Hebrew scrolls being brought from Palestine. But he rejected the notion of seventy-two translators being commissioned by the king for royal purposes. Instead, he thought the task was undertaken by a very small group, perhaps five, who translated it for liturgical reasons. The Pentateuch was translated first, followed by the Prophets, and finally the Writings, although they were translated along different lines. A final theory is the transcription theory of Tychsen and Wutz (see Jellicoe, 70-73), who posited that the Hebrew text was first transliterated before it was translated.

As Jellicoe has observed in assessing these theories, some of them have been ignored (such as Gaster's), others have been pretty much discredited (such as Tychsen and Wutz's), while others have been rightly criticized (such as Kahle's) and still others have not been appreciated as fully as they should be (such as Thackeray 1921). Current Septuagint scholarship tends to treat positively the basic elements of the *Aristeas* tradition and to respond usually in the negative to the theory of Kahle. It thus accepts that the Pentateuch was translated first, in the third century B.C., followed by the Prophets and the Writings, most of which were translated by the second century (see Tov 1992, 136-37).

3. Revisions and Other Greek Versions.

Besides the translational tradition that is now identified as the Septuagint, or Old Greek version, there have been many other Greek ver-

sions of the OT. As might be expected for a text that by the turn of the era already had a lengthy history of textual transmission, there were revisions and retranslations undertaken, possibly in conjunction with revision of the Hebrew text, but probably for other reasons as well (see Tov 1992, 143). Some of the Judean Desert Septuagint documents are themselves thought to reflect such revisions. It has been accepted by many Septuagint scholars that the *Minor Prophets Scroll* reflects what is sometimes called the *kaige* recension, named after the use of this particular translational linguistic feature of the Hebrew word for "also" (see Greenspoon, 160). The *kaige* revision of expanded Daniel is also in the Septuagint (Tov 1992, 144). Other revisions have been identified with other of the early manuscripts (such as P. Ryl. Greek 458 with Lucianic features), but the nature of the revision cannot always be established (see Tov 1992, 147).

Several of the other versions of the Greek OT came about, however, as reactions to the Christian appropriation of the Jewish Bible in Greek. The Septuagint was the early Christian Bible, and Christians were quick to use various passages for apologetic purposes, such as the rendering of Isaiah 7:14 with *parthenos* ("virgin") in support of the virginal conception of Jesus. The three major Jewish or Judaistic recensions prepared in reaction to the earlier version of the Greek OT were those of Theodotion (second century A.D.), which reflects the *kaige* revision noted above and is now often referred to as the *kaige*-Theodotion recension; Aquila (early second century A.D.); and the supposedly Ebionite Christian Symmachus (late second or early third century A.D.). The Christians themselves were responsible for three revisions of the earlier Greek OT, all apparently made in the third century A.D. (see Kenyon, 22-26; Jellicoe, 100-71). These include Origen's *Hexapla*, a presentation of the Bible in six columns (the Hebrew text, a Greek transliteration, and four Greek translations) and now known only through a few later minuscule manuscripts; Lucian's Syriac or Antiochene revision, which is known in a number of minuscule manuscripts (typified by the filling of omissions, conflated readings, interpolations and additions, and word substitutions—what is also called the Byzantine or Koine text in NT textual criticism; see Metzger); and Hesychius's revision, which many scholars question as to its actual existence (see Greenspoon, 159-62).

4. Translation Technique and Relation to the Hebrew Text.

The two major questions in assessing the Septuagint as a translation are its relation to the Hebrew text and the type of translational technique used. These questions are closely related and will be handled together here, along with the related question of the kind of Greek to be found in the Septuagint (see Porter 1989, 145-47).

Thackeray was one of the first to attempt to categorize the translational techniques of the individual authors. Thackeray specifies the following categories of translation (1909, 13):

Good Koine Greek translation: Pentateuch, Joshua (part), Isaiah, and 1 Maccabees.

Indifferent Greek translation: Jeremiah (1—28), Ezekiel, the Minor Prophets, 1 and 2 Chronicles (except for the last few chapters of 2 Chron), some of Kingdoms, Psalms, Sirach and Judith.

Literal or unintelligent translation: Jeremiah (29—51), Baruch (1:1—3:8), Judges, Ruth, some of Kingdoms, Song of Solomon, Lamentations, Theodotion Daniel, 2 Esdras (possibly Theodotion), Ecclesiastes (Aquila).

Literary paraphrase: 1 Esdras, Daniel, Esther, Job, and Proverbs.

Literary and Atticistic free Greek: Wisdom, Epistle of Jeremiah, Baruch (3:9—end), 2, 3 and 4 Maccabees.

Vernacular, free Greek: Tobit (perhaps a paraphrase).

On the basis of these kinds of findings, Thackeray (1907) also thought that he could determine the number of translators involved in a particular book, especially Kingdoms. Much subsequent work has shown that Thackeray and other attempts at classification had perhaps underestimated some of the factors of the Septuagint as a translation (cf. Gehman, who posited a form of Jewish Greek used in synagogues). Brock (1972, 12, 14) has noted that the translation of the Pentateuch was a difficult task, since it was without precedent in the Hellenistic world, there being no tradition of Greek translation of oriental religious documents. This required the translators to develop their method as they proceeded, but since the translators were probably Egyptians, there is the question of whether they always understood what it was that they were translating (Barr, 15; Tov 1984). In many cases it is arguable that they did not (Lee, 18), since there are numerous oddities such as

neologisms, transliterations and odd syntax. As a result, it is difficult to make the kinds of distinctions that Thackeray did, and more recent scholars are wanting to see the Septuagint as containing a mixture of literal and free translation even within a single book, as well as a historical development in the translation itself, especially from a freer to a more literal rendering as the conception of the product as "Scripture" became better recognized.

The translation is often a compromise that is not consistently literal or free (Brock 1972, 16, 18, 20-21; cf. Barr, who gives six standards for judging the ways a translation may be literal and free at the same time), and a religious text with a fair amount of "semantic tolerance" (Rabin, 9-10) in terms of its definitely being Greek in syntax and lexis, but having a distinctly Hebrew cast in certain places (Thackeray 1909, 27-28; Horrocks, 56-57). This kind of tolerance may well have prompted some of the earliest alternative translations or revisions of the Greek OT, such as those of Aquila, to some extent Symmachus and some of the Lucianic alterations, which were concerned to make the Greek text a more literal rendering of the Hebrew. Nevertheless, the Semitisms are not necessarily consistent, and the translators vary in their use of expressions, on the basis of their translational perspective (Brock, 1979, 74-79). Since many, if not most, of the users of this sacred text did not have access to the original Hebrew (in some instances, of course, there was no original Hebrew to consider), attention needs to be given to the Septuagint as a free-standing Greek religious document used in ancient worshiping communities (contra many of the studies on the language of the Septuagint, which concentrate on isolated instances of translational equivalence; see, e.g., Acjmelaus; but cf. the standard grammars and descriptions of Swete, 289-314; Thackeray; Conybeare and Stock, 25-100).

5. Editions of the Septuagint.

The primary manuscripts for establishing the editions of the Septuagint consist of a number of important Greek papyri, especially the major majuscule codices and the numerous minuscules. Since the papyri have been only fairly recently discovered and published the majuscule and minuscule manuscripts have formed the basis of editions of the Septuagint.

Like editions of the Greek NT, the first

printed editions of the Greek OT were created in the Renaissance. Unlike the editions of the Greek NT, however, most of the Septuagint editions were based upon one of the major codices, thus establishing an enduring tradition of textual criticism in Septuagint studies for the creation of single-text editions (or what Tov calls diplomatic editions [1992, 140]). However, again like editions of the Greek NT, in more recent times eclectic editions of the Septuagint have been produced (what Tov somewhat misleadingly calls critical editions [1992, 140]).

The first published edition of the Septuagint was part of the Complutensian Polyglot authorized by Cardinal Ximenes de Cisnos in 1514-1521 (Alcalá, Spain). This edition utilized a number of Byzantine manuscripts reflecting the Lucianic tradition, but it also has other readings as well. This text provided the basis for a number of later Polyglot Bibles (see Metzger, 7). Most of the subsequent major editions of the Greek OT tended to follow a single majuscule codex text. For example, the Sistine Bible, published in Rome in 1586 (named after the Pope, Sixtus V, who commissioned it), utilized Codex Vaticanus as its basis (Trebolle Barrera, 305), although the editors did not apparently follow this manuscript strictly (Kenyon, 60). This edition proved very important, nevertheless, since it was the basis of Walton's Polyglot published in London in 1657 and, more importantly, the edition by Holmes and Parsons (Oxford, 1798-1827, in 5 vols.). Begun by Holmes, who finished the first volume before his death, it was completed by Parsons, and has proved to be an enduring and valuable source of information. This edition, while based upon the Sistine Bible, includes variants from 164 manuscripts and assembled the first list of minuscules, providing much useful text-critical information (see Kenyon, 49; Jellicoe, 2-3). The editions of Tischendorf are also based on the Sistine edition, but he confined himself to comparing the major codices, sometimes from inferior editions (as in Codex Vaticanus; Jellicoe, 3-5). The edition of Swete (Cambridge, 1887-94, in 3 vols.) is also based on Codex Vaticanus where this manuscript is available, but uses either Codex Sinaiticus or Codex Alexandrinus where it is not. The last of the single-text editions to mention is that by Brooke, McLean and Thackeray. Begun in 1906, and using the same principle of relying on Codex Vaticanus where possible and Codex Sinaiticus or

Codex Alexandrinus elsewhere, this edition appeared in nine parts until 1940 (8 vols. from Cambridge), but the death of the last of the editors in 1947 meant that the edition was never finally completed. The edition includes the Pentateuch, Joshua—Ruth, 1-4 Kingdoms, Chronicles, 1-2 Esdras, Esther, Judith and Tobit (Kenyon, 60-61; Jellicoe, 21-24).

Eclectic editions of the Septuagint essentially begin with the edition of Rahlfs. He followed in many ways the work of his teacher, Lagarde, who pioneered Septuagintal research into manuscript types. Lagarde claimed that all of the texts were mixed and that an attempt to arrive at the original text necessarily must involve an eclectic process of comparing and weighing evidence (see Jellicoe, 6). As a result, Rahlfs's edition of the Greek OT (Stuttgart, 1935, 2 vols., published by the Württemberg Bible Society) relied on the three major codices: Vaticanus, Sinaiticus and Alexandrinus. This means of arriving at the text in many ways resembles the principles used by Nestle in the creation of his Greek NT edition. Rahlfs prepared this edition in part as a stopgap measure while the Göttingen Septuagint Project got underway (see Jellicoe, 9-21). First edited by Rahlfs, who published an edition of the Psalter in 1931, and then by Kappler, Hahnhart and now Aejmelus, this current project is undertaking to edit eclectic texts for every book of the Septuagint, providing a very detailed critical apparatus for each volume. The publication of these volumes is sometimes accompanied by separate volumes that describe the text-critical decisions in more detail.

While there is no doubt that the Göttingen Septuagint editions marshal a phenomenal amount of text-critical information and are probably providing the most thorough analysis of these data, the question remains whether a single-text edition or an eclectic text is to be preferred. In creating a single-text edition one must recognize the incomplete or late state of some of the textual evidence (e.g., Genesis is often created out of Codex Alexandrinus for Gen 1:1—41:28, since it is lacking in Codex Vaticanus). However, along with questioning whether the Hebrew text has priority over the Greek in trying to get back to the earliest text of the OT, an assumption of most eclectic editions (see Müller, 114), one may also question the premise (from Lagarde) that all of the manuscripts of the Septuagint are mixed and have a built-in eclecticism

that merits creating a hypothetical text that does not match any ancient manuscript.

6. The Septuagint and the New Testament.

The importance of the Septuagint for study of the NT cannot be underestimated. Its importance lies in at least the following areas, not all of which have been fully studied:

(1) The language of the Septuagint, despite any Semitisms, is part and parcel of the Hellenistic Greek of the period in terms of its grammar and lexis, and hence it is an important body of evidence for studying the Greek of the NT and that of the Greco-Roman period (see Horrocks, 56-57, 92-93; Porter 1989, 141-56). Along with this recognition (as noted in 4 above) goes the importance of the Septuagint as an ancient translation. The insight that the Septuagint offers into translational technique in the ancient world has importance for studying the language of the NT, including the issue of the translation of the Aramaic words of Jesus into Greek (see Black).

(2) The Septuagint constituted the set of sacred writings for early Christians and many if not most Jews, even many in Palestine, in the first century. The Septuagintal papyrological finds in Egypt and Palestine bear witness to the widespread importance of the Septuagint, especially the Pentateuch, in a variety of Jewish and Christian milieux.

(3) Most important, perhaps, is the fact that the NT authors use the Septuagint form of the OT more than they do that of any other version. As Swete says, "every part of the N. T. affords evidence of a knowledge of the LXX., and that a great majority of the passages cited from the O. T. are in general agreement with the Greek version. . . . the LXX. is the principal source from which the writers of the N. T. derived their O. T. quotations" (Swete, 392). It is not surprising that recent research into Paul's use of the OT confirms the importance of the Septuagint (see Ellis; Stanley, 254-55), since he was a native Greek speaker and wrote to Greek-speaking audiences throughout the Greco-Roman Mediterranean world. Worth noting also, however, is that the Synoptic Gospels use the Greek version as well, including many quotations spoken by Jesus (see *DJG*, Old Testament in the Gospels §1, where Evans notes that this does not invalidate their possible authenticity). Again, this might not seem surprising since the Gospels are Greek

documents addressed to Christian congregations in the same world as Paul's. However, Longenecker (60-66) has noted not only that the great majority of OT quotations of Jesus are apparently from the Septuagint but that in several instances the point that Jesus makes in the Gospel account is based on the Septuagint reading (e.g., Mk 7:6-7 and Mt 15:8-9, citing Is 29:13). He notes further that in Matthew's Gospel the narrator often uses a more Semitic form of quotation while Jesus' quotations are Septuagintal, thus arguing against the narrator assimilating quotations to the Greek form for his audience. Longenecker contends that a number of explanations for this phenomenon must be taken into account, including the multilingual character of first-century Palestine. He even suggests that "it may be that in his applications of the OT, Jesus, who normally spoke in Aramaic but could also use Greek and Mishnaic Hebrew to some extent, at times engaged himself in textual selection among the various Aramaic, Hebrew and Greek versions then current, and some of the septuagintal features in the text-forms attributed to him actually arise from him" (Longenecker, 65-66; cf. Porter 2000, 126-80).

(4) There is a theological dimension to the use of the Septuagint in the NT that merits attention as well. There is the question of how the earliest Christian writers, those found in the canonical NT, interpreted their sacred writings, and in what ways this influenced later interpretation of not only the OT, but what was to become the NT (see Müller, 130-39; Longenecker, 205-20).

7. Recent Research Initiatives and Projects.

To date, when compared with scholarly work on the Hebrew OT and the Greek NT, work on the Septuagint has languished behind. Although there was significant interest in the Septuagint in the early part of the twentieth century, no doubt fueled by then-recent discoveries of Greek papyri in Egypt and the revision in perspective that this caused, and though there has continued to be steady interest in some circles (e.g., the University of Toronto has long been a center of Septuagint study in North America), there has been far less scholarly publication overall. For example, one does not find nearly so many introductions, translations or commentary series on the Septuagint as one does on the Hebrew OT or the NT.

A number of Septuagint projects are now un-

derway, however, that will, if successful, move Septuagint study forward in these areas. The first is the French initiative entitled *La Bible d'Alexandrie*. This is an attempt to translate and make brief comments upon the books of the Septuagint from the standpoint of its place in the Hellenistic world. The project is headed by Marguerite Harl (for her perspective on the Septuagint, see Harl, Dorival and Munnich), and is well along, with a number of volumes published to date. The next project to mention is the New English Translation of the Septuagint (NETS), organized by the International Organization for Septuagint and Cognate Studies (IOSCS). Whereas the French project approaches the text from a Hellenistic standpoint, the NETS project emphasizes its translational nature and its derivation from the Hebrew original, sometimes using "unidiomatic" renderings of the Greek (see Greenspoon, 153). This project is supposedly nearing completion. The third and final initiative is the Septuagint Commentary Series to be published by Brill. To fill a definite lacuna in commentary literature in English, this series—for which most of the volumes have been assigned but none has yet appeared—takes an approach more like that of the French project. The text, translation and commentary are to be based on one of the major codex manuscripts, providing detailed commentary on the Greek text as a living document for its original context.

SHAME. See HONOR AND SHAME.

SHAMMAI, HOUSE OF

The House (or school) of Shammai apparently was the first major academy of sages. Soon after it was rivaled by the House of Hillel. Rabbinic writings divide up first-century sages into these two houses, founded by the great teachers Shammai (first century B.C.) and Hillel (turn of the era).

Prior to A.D. 70 the rulings of the House of Shammai prevailed; afterwards the House of Hillel gained ascendancy. "These are among the Halakoth (i.e., rulings) that the sages enjoined while in the upper room of Hananiah ben Hezekia ben Gorion, the head of the House of Shammai. When they went up to visit him they voted, and they of the House of Shammai outnumbered them of the House of Hillel; and eighteen things did they decree on that day" (*m. Sabb.* 1:4; see also *m. Miqw.* 4:1). Several of these decrees are delineated in *m. Sabbath* 1:5-11.

Generally the House of Shammai ruled more stringently than did the House of Hillel, though in some instances (perhaps 20 percent) the Hillelites ruled more stringently.

Rabbi Simeon [some MSS. read Ishmael] reports three opinions in which the House of Shammai follows the more lenient [ruling] and the House of Hillel the more stringent ruling. According to the House of Shammai the book of Ecclesiastes does not render the hands unclean. And the House of Hillel says: "It renders the hands unclean." According to the House of Shammai, sin-offering water that has fulfilled its purpose is clean; and the House of Hillel declares it unclean. The House of Shammai declares black cummin insusceptible to unclean-ness; and the House of Hillel declares it susceptible. So, too, [do they differ] concerning [whether it is liable to] tithes. (*b. 'Ed.* 5:3; on the canonical status of Ecclesiastes, see also *m. Yad.* 3:5)

One of the major differences between the Shammaites and the Hillelites concerns the manner in

which one is to recite the Shema (i.e., Deut 6:4-9; 11:13-21; Num 15:37-41). "The House of Shammai says: 'In the evening all should recline when they recite [the Shema], but in the morning they should stand up, for it is written, "And when you lie down and when you rise up" (Deut 6:7).' But the House of Hillel says: "They may recite it every one in his own way, for it is written, "And when you walk by the way" (Deut 6:7).'" Rabbi Tarfon comments that on one occasion he recited the Shema after the fashion of the House of Shammai and so put himself in danger of robbers (by reclining beside the road). His colleagues said to him, "You deserved whatever befell you in that you transgressed the words of the House of Hillel" (*m. Ber.* 1:3).

Several differences between the Houses of Shammai and Hillel are recorded in *m. Berakot* 8:1-8. For example, "The House of Shammai says: '[On a sabbath or a festival day] they say the Benediction first over the day and then over the wine.' And the House of Hillel says: 'They say the Benediction first over the wine and then over the day'" (*m. Ber.* 8:1). "The House of Shammai says: 'They wash the hands and then mix the cup.' And the House of Hillel says: 'They mix the cup and then wash the hands'" (*m. Ber.* 8:2).

Critical scholarship suspects that the Shammaites were more influential than the later *rabbinic writings admit, their authors having adopted most of the Hillelite rulings. Mystical and *eschatological traditions speculate that in the world to come the Shammaite rulings will once again dominate.

SIBYLLINE ORACLES

The sibyl is a figure of Greek and Roman legend. She is always depicted as an aged woman, uttering gloomy prophecies. Ovid (*Met.* 14.132) tells us that she was granted by Apollo that she might live as many years as there were grains of sand on the seashore, but she neglected to ask for youth, and so she remained for thousands of years a shriveled, shrunken old woman. According to Heracleides Ponticus (fourth century B.C.) she was older than Orpheus.

The legend seems to have originated in *Asia Minor, where she was claimed by the localities of Marpessus and Erythrae. The legend was brought to Italy by Greek settlers, probably about the beginning of the sixth century B.C. There the sibyl made her home in a cave at Cumae, which was made famous by Virgil, who described a consultation of the sibyl by Aeneas (Virgil *Aen.* 6). Virgil also immortalized the sibyl in the opening line of the fourth *Eclogue*, which referred to the *ultima aetas*, or final age of the Cumaean (sibyl). In the Hellenistic and Roman periods there were supposed to be several sibyls. The Roman antiquarian Varro, in the first century B.C., listed ten sibyls: Persian, Libyan, Delphic, Cimmerian, Erythrean, Samian, Cumaean, Hellespontian, Phrygian and Tiburtine. Other authors mention Chaldean, Egyptian and Hebrew sibyls. There is no evidence, however, that sibylline oracles were ever produced in any language other than Greek.

7. Enduring Influence

1. Sibylline Oracles.

Like other Greek prophecies, sibylline oracles were usually written in epic hexameters. We have only scattered examples of pagan sibylline verses. They were often predictions of war or natural disasters. There was an official collection of sibylline books in Rome, where they were consulted by the senate in times of emergency. According to legend, the sibyl offered nine books to Tarquinius Priscus, king of Rome

in the early sixth century, for a price. He refused, so she burned three and repeated the offer at the same price. He refused again, so she burned three more. Finally he bought the three surviving books, and these became the core of the official collection.

About fifty consultations are reported between 496 and 100 B.C. These typically tell of some plague, famine or prodigy, and some details of a ritual prescribed by the sibylline books. Only one direct quotation survives, in the *Memorabilia* of Phlegon. This passage of seventy hexameters reports the birth of an androgyne and prescribes a long list of rituals and offerings to the gods. The Roman collection was destroyed when the temple of Jupiter was burned down in 83 B.C. When the temple was rebuilt seven years later oracles were collected from various places, especially Erythrea. When the emperor Augustus collected and destroyed some two thousand unofficial oracles in A.D. 12 he kept the sibylline books but edited even those (Suetonius *Augustus* 31.1).

Virgil's reference to a final age in the fourth *Eclogue* raises the possibility that pagan sibyls may also have been credited with extensive prophecies of the course of history and its division into periods. Such prophecies are typical of the Jewish and Christian sibylline books. No example of such a pagan sibylline oracle has survived, however, and it is possible that the extended prophecy of the course of history was a Jewish innovation in the genre.

2. The Standard Collection of Sibylline Oracles.

The standard collection is made up of Jewish and Christian *pseudepigraphic writings. There are two distinct collections in the manuscripts. One group contains books 1—8; the other begins with material from books 6—8, followed by book 4. These books should be numbered 9 and 10, but since they repeat material from the first group they are omitted. The remaining books are numbered 11—14, although there are only twelve books in the collection. These oracles were collected no earlier than the sixth century A.D., but some of the oracles clearly date to the pre-Christian period. It is generally agreed that the oracles in books 3—5 are of Jewish origin. Books 1—2 and 8 contain Jewish oracles that have been incorporated into Christian compositions. Books 6 and 7 are Christian. The provenance of books 11—14 is unclear, but at least book 11 appears to be Jewish, and there is no

sign of Christian authorship.

3. The Jewish Oracles.

3.1. Sibylline Oracle 3. The oldest Jewish oracles are found in the third book. This is a loosely structured collection of oracles from different sources. *Sibylline Oracle* 3:1-96 seems to have been originally part of a different book. *Sibylline Oracle* 3:1-45 is different from the rest of the collection except for some fragments. They have a philosophical character and affirm the transcendence of God and denounce idolatry. *Sibylline Oracle* 3:46-92 contains three distinct oracles from the Roman period. There is also an oracle from the Roman period in *Sibylline Oracle* 3:350-80. Two anti-Macedonian oracles are found in *Sibylline Oracle* 3:381-400. *Sibylline Oracle* 3:401-88 are prophecies of various disasters, and possibly of diverse provenance. They are often attributed to the Erythrean sibyl. There is nothing Jewish or Christian in these verses, but they are very similar to other pagan sibylline oracles. They were probably incorporated into the collection to establish the sibylline character of the Jewish oracles.

The main corpus of Jewish oracles in book 3 is found in verses 97-294 and 545-808. These oracles are dated by three references to the seventh king of Egypt in *Sibylline Oracle* 3:193, 318 and 608. While seven was a sacred number and may indicate an ideal king, the number could not have been introduced with any credibility later than the reign of the seventh king of the Ptolemaic line, the Greek rulers of Egypt after the conquests of *Alexander the Great. The *Ptolemies did not bear a number as part of their title in antiquity, and so there is some ambiguity as to the identity of the seventh king, depending on whether one counts Alexander and how one counts the overlapping reigns of Ptolemies 6, 7 and 8 in the second century B.C. The most likely date of composition is in the reign of Ptolemy VI Philometor, who reigned from 180-164 B.C. and 163-145 B.C. The seventh king was still in the future when these oracles were written.

The references to the seventh king indicate the time when history will reach its climax and turning point. They do not explicitly credit the king with bringing about the change. In *Sibylline Oracle* 3:652-56, however, we are told that "God will send a king from the sun who will stop the entire earth from civil war . . . in obedience to

the noble teachings of the great God." In Egyptian mythology, kings were closely associated with the sun, and this mythology was appropriated both by the Ptolemies and by anti-Ptolemaic Egyptian nationalists. (The phrase "king from the sun" is also found in the roughly contemporary anti-Ptolemaic "Potter's Oracle.") The king from the sun cannot be distinguished from "the seventh king of Egypt . . . numbered from the dynasty of the Greeks" (*Sib. Or.* 3:608). It appears then that the Jewish sibyl not only expected dramatic change in the reign of the seventh king but also looked on the Ptolemaic ruler as a virtual messiah, just as Second Isaiah had regarded Cyrus of Persia in an earlier period (cf. *Is* 45:1).

Ptolemy VI Philometor was especially benevolent to the Jews. The exiled high *priest Onias IV became a general in his army and was allowed to build a Jewish temple at Leontopolis. The confidence that the sibyl places in the Ptolemaic king is understandable if the author was a supporter of Onias.

Despite the sibyl's endorsement of a Ptolemaic ruler, she engages in a vigorous polemic against some aspects of Hellenistic and Egyptian culture and contrasts it unfavorably with *Judaism. Her favorite targets are homosexuality and idolatry. She urges the Greeks to send offerings to the *temple of the great God (presumably in *Jerusalem) and envisions a time when all people will send gifts to the temple and ponder the law of the great God (*Sib. Or.* 3:715-19). The interest in the temple is also intelligible if the author was a supporter of the exiled high priest. The sibyl concludes with a vision of eschatological bliss, modeled on Isaiah 11, where the wolf will lie down with the lamb (*Sib. Or.* 3:767-95).

3.2. Additions to Sibylline Oracle 3. As noted already, several oracles from the Roman era were added to *Sibylline Oracle 3*. *Sibylline Oracle 3:350-80* contains a powerful oracle against Rome, which predicts that the wealth it has taken from Asia will be returned and that a mistress will cut Rome's hair and restore peace to Asia. The mistress is most probably to be identified as Cleopatra. Other oracles, however, show a different attitude to Cleopatra. *Sibylline Oracle 3:75-92* was written shortly after the battle of Actium and portrays Cleopatra as a widow who has brought disaster on the world. *Sibylline Oracle 3:46-62* was also written after Actium and presupposes that Rome has gained control of Egypt.

Sibylline Oracle 3:68-74 predicts that *Beliar will come *ek Sebastenōn*. This phrase should probably be interpreted as the line of Augustus, and Beliar should be identified as Nero, as he also is in the *Ascension of Isaiah* 4:1 ("a lawless king, the slayer of his mother").

3.3. Sibylline Oracle 5. A later stage of the Egyptian sibylline tradition can be found in the fifth book of the collection, written in the early second century A.D. The tone of this book is far more bitter than that of book 3 and reflects the deteriorating circumstances of the Jewish community in Egypt. The first fifty verses introduce the book by reviewing history from Alexander to Hadrian. The next four oracles may be delimited as *Sibylline Oracle 5:52-110*, 111-178, 179-285 and 286-488. These oracles show a common pattern: (1) oracles against various nations (in *Sibylline Oracle 5:52-110* and in 5:179-285 the oracles are mainly against Egypt; in the other oracles they are mainly against Asiatic countries); (2) the return of Nero as eschatological adversary; (3) the advent of a savior figure; (4) destruction, usually by fire.

The sibyl is even more bitter against Rome than against Egypt. Rome is denounced because of immorality, *adultery and homosexuality, but especially because of the destruction of Jerusalem (*Sib. Or.* 5:162-78). The evil of Rome is focused in the person of Nero. There was a popular legend that Nero had fled to the Parthians and would one day return. There are explicit allusions to Nero in *Sibylline Oracle 5:137-54* and 214-27 (both passages refer to his attempt to cut through the isthmus of *Corinth) and again in *Sibylline Oracle 5:363* ("a man who is a matricide will come from the ends of the earth"). He may also be the Persian who is said to come like hail in *Sibylline Oracle 5:94*. It should be noted that the sibyl does not envision the return of Nero from the dead, and so we cannot yet speak here of Nero redivivus. The myth of Nero redivivus is already implied in Revelation 17:11, which was probably written before the oracles in *Sibylline Oracle 5*.

The savior figure in *Sibylline Oracle 5* is a king sent "from God" (*Sib. Or.* 5:108). In *Sibylline Oracle 5:414* he is said to come from the expanses of heaven. In *Sibylline Oracle 5:256* he comes "from the sky," but this is followed by a clearly Christian gloss in *Sibylline Oracle 5:257*. The notion of a king from heaven is paralleled, however, in the roughly contemporary Jewish apocalypse of

4 Ezra 14 (see *Esdras, Books of*), in which the deliverer is a man who rises from the sea and rides on the clouds. The Ptolemaic line was long defunct, and the Egyptian Jews of the early second century had no reason to expect deliverance from any Gentile ruler.

Sibylline Oracle 5 concludes with a long oracle that is mainly concerned with Egypt (*Sib. Or.* 5:484-530). The sibyl predicts the destruction of Isis and Sarapis, a prediction that may reflect the violence against Egyptian sanctuaries in the Jewish *Diaspora revolt of A.D. 115-117. Then there will be a temple to the true God in Egypt. But this too will be destroyed by marauding Ethiopians. The book ends with a battle of the stars, concluding with a starless sky. This oracle eloquently expresses the despair of Egyptian Jewry at the end of the Diaspora revolt. *Sibylline Oracle 5* has many significant parallels to the book of Revelation, including the interest in Nero and the designation of Rome as Babylon (*Sib. Or.* 5:484).

3.4. Sibylline Oracle 4. A different strand of Jewish sibylline tradition is found in the fourth book of the collection. Egypt receives no special attention in this book. In sharp contrast to books 3 and 5, the sibyl here declares that God does not have a house or temple (*Sib. Or.* 4:8). The place of composition is uncertain. Egypt may be ruled out. *Sibylline Oracle 4* is sometimes located in the Jordan Valley or Syria because of the importance attached to baptism.

The core of *Sibylline Oracle 4* is an overview of history in the guise of prophecy. Two schemata are employed: four kingdoms (cf. Dan 2, 7) and ten generations. First the Assyrians rule for six generations, then the Medes for two and the Persians for one. The Macedonians rule in the tenth generation. It would seem that this was the original climax of the oracle. The conclusion would have predicted the downfall of *Macedonia. This original oracle may or may not have been Jewish. In the present text of *Sibylline Oracle 4*, however, the fall of Macedonia is followed by the rise of Rome, although Rome is not integrated into the sequence of either generations or kingdoms. The sibyl recounts the flight of Nero to the Parthians (*Sib. Or.* 4:119), the destruction of Jerusalem (*Sib. Or.* 4:126), the eruption of Mt. Vesuvius (*Sib. Or.* 4:130) and the return of Nero ("the fugitive from Rome," *Sib. Or.* 4:138). In light of these upheavals, the sibyl calls on people to abandon violence and "wash

your whole bodies in perennial rivers"—that is, to accept baptism as a sign of repentance. This oracle is therefore an important parallel to the baptism of John the Baptist. The sibyl concludes with a prediction of a coming conflagration and the bodily resurrection of the dead. Belief in resurrection was notably absent in *Sibylline Oracles 3* and 5.

4. Jewish Oracles Revised by Christians.

4.1. Books 1 and 2. The first two books of the standard collection are one long oracle that divides history into ten generations, as does *Sibylline Oracle 4*. The first seven generations are preserved without interruption in *Sibylline Oracle 1:1-323*. Then follows a passage on the incarnation and career of Christ in *Sibylline Oracle 1:324-400*. After a transitional passage in *Sibylline Oracle 2:1-5* the original sequence is resumed, but a considerable portion of the original oracle has been lost. There is no reference to the eighth or ninth generations, but we move directly to the tenth. The remainder of *Sibylline Oracle 2* is an account of eschatological crises and the last judgment. There are several clearly Christian passages, while some passages could have been written by either a Jew or a Christian. It appears that an original Jewish oracle structured by ten generations has been revised by a Christian. The Christian redaction knows the fall of Jerusalem, is probably no earlier than the second century A.D. and could be significantly later. The original Jewish stratum was composed no earlier than the Roman era, since Rome is the only power singled out for destruction in the tenth generation. This oracle could be as early as the turn of the era, but since it has been so heavily altered by the Christian redactor little can be said with confidence. The Jewish oracle is thought to come from Phrygia, which is said to be the first land to emerge after the flood and to be the nurse of restored humanity.

4.2. Book 8. *Sibylline Oracle 8* falls into two clearly distinct sections. *Sibylline Oracle 8:1-216* is mainly concerned with political prophecies, especially against Rome. These verses are probably Jewish in origin. There are several oracles on the return of Nero, presumably from the dead. First, his return is predicted in the time of Marcus Aurelius (A.D. 161-180). There is another reference to his return in *Sibylline Oracle 8:155*, where the anonymous "man of secret birth" is said to cut through the isthmus (of Corinth, as

Nero had attempted to do). Nero is probably also the figure who will come to ravage the nation of the Hebrews (*Sib. Or.* 8:140-41). The fact that the Hebrews alone are singled out argues for Jewish origin. This oracle must have been composed in the time of Marcus Aurelius, since it predicts the return of Nero before the death of that emperor. It is primarily a powerful indictment of the greed of Rome.

The Christian stratum of this book (*Sib. Or.* 8:217-500) is taken up with christology, the Incarnation and the praises of God. It begins with an acrostic poem that spells out the words *Iesous Christos Theou Huios Sôtêr Stauros*, Jesus Christ, Son of God, Savior, Cross. The latest date for this section is provided by Lactantius (c. A.D. 240-320), who quotes extensively from the whole book.

5. Christian Oracles.

5.1. Book 6. *Sibylline Oracle 6* is a short (twenty-eight-verse) hymn to Christ. Nothing in the text suggests sibylline authorship or even that it is an oracle. The hymn refers to the baptism of Christ in the Jordan and mentions fire in this connection. The allusion to the Jordan is the only possible clue to geographical provenance, and that is not very compelling. The hymn was quoted by Lactantius about A.D. 300.

5.2. Book 7. *Sibylline Oracle 7* is poorly preserved and seems to be loosely structured. There is reference to the flood in *Sibylline Oracle 7:7-15*, and Phrygia is again hailed as the first land to emerge after it. The book concludes with an eschatological passage that predicts a conflagration, eternal punishment of sinners by fire and the restoration of the earth (*Sib. Or.* 7:118-51). Much of the intervening material consists of a chaotic sequence of oracles against various places. *Sibylline Oracle 7:40-50* refers to a rout of Rome by the Parthians, possibly at Carrhae in 53 B.C. This is followed by an oracle about Troy (*Sib. Or.* 7:51-54). Later the sibyl returns to Rome in *Sibylline Oracle 7:108-11*, but the reference is to the rise of Rome after the fall of Macedonia.

A number of unusual references in the book have gnostic parallels (e.g., "the noble mothers of God," *Sib. Or.* 7:72-73, referring to Hope, Piety and Holiness, and the Ogdoad in *Sib. Or.* 7:140), but these references are out of context and do not make the book gnostic. Claims that it is Jewish Christian are also unfounded. Much of the interest of the book concerns its interest in ritu-

als. *Sibylline Oracle 7:64-75* describes the baptism of Christ; in *Sibylline Oracle 7:76-91* sacrifice is replaced by a rite commemorating the baptism, in which water is sprinkled on fire and a dove is released toward heaven. *Sibylline Oracle 7:85-91* prescribes a rite for accepting supplicants. The eschatology of the book resembles that of *Sibylline Oracles 4* and 1—2. *Sibylline Oracle 7* was cited by Lactantius, and so it was probably composed in the second century. The place of origin is uncertain.

6. Sibylline Oracles 11—14.

The last four books of the *Sibylline Oracles* (11—14) provide a more or less continuous outline of history from the flood down to the Arab conquest of Egypt in the seventh century, with a brief eschatological conclusion in *Sibylline Oracle 14:351-61*. The books are marked off by introductions and conclusions, but these are secondary. The text is continuous. It was probably composed over centuries, being repeatedly updated and extended. There is no sign of Christian authorship, and large parts could have been composed by a pagan. *Sibylline Oracle 11* reviews history from the flood to Cleopatra. This book is clearly Jewish, as it eulogizes the Jewish people under the name "Assyrians" (*Sib. Or.* 11:80-103), but it lacks the religious and ethical interests of *Sibylline Oracles 3—5*. Since the review of history only extends to the time of Cleopatra, *Sibylline Oracle 11* may have been composed around the turn of the era, but it is not certain that it was composed as a discrete unit. Egypt is the focus of much interest and was presumably the place of composition. (Egypt is said to be destroyed as punishment for its treatment of the Jews [*Sib. Or.* 11:307].) It passes negative judgment on Cleopatra (*Sib. Or.* 11:279-97) but refrains from any criticism of the Romans. This book evidently does not come from the same tradition as do *Sibylline Oracles 3* and 5.

Sibylline Oracle 12 borrows the first eleven verses from *Sibylline Oracle 5* but otherwise continues the review of history down to the third century. *Sibylline Oracle 13* continues it to the middle of that century. *Sibylline Oracle 14* is almost indecipherable, but it appears to refer to further Roman emperors and finally to the Arab conquest of Egypt. These books are of interest for the ways in which various Roman emperors were perceived in the East, but they are virtually without any religious or theological interest.

7. Enduring Influence.

The *Sibylline Oracles* were cited hundreds of times in the church fathers and were important enough to be quoted in Constantine's "Speech to the Saints." New sibylline oracles continued to be produced down to the Middle Ages. They had an important impact on millenarian thinking through Joachim of Fiore. The Tiburtine sibyl was especially popular. The sibyl is mentioned in the *Dies Irae* of Tomas a Celano. Michelangelo juxtaposed five sibyls (Persian, Erythrean, Delphic, Cumean and Libyan) with the OT prophets on the ceiling of the Sistine Chapel, and Raphael used four sibyls (Cumean, Persian, Phrygian and Tiburtine) to adorn the church of Santa Maria della Pace in Rome.

SIMON BEN KOSIBA

The last significant Jewish freedom fighter of late antiquity, Simon ben Kosiba, also known by various sobriquets, attempted to cast off the Roman yoke in A.D. 132 but was finally defeated in 135. His defeat was a disaster for the Jewish people, ending any hope of rebuilding the temple that had been destroyed in A.D. 70 and ending the Jewish state until its refounding in 1948. Of great interest to NT interpreters is whether or not Simon was viewed as a messianic figure and, if so, in what way.

1. Simon and the Jewish Revolt
2. The Messianism of Simon
3. Importance for Understanding the Messianism of Jesus

1. Simon and the Jewish Revolt.

Jewish, Christian and Roman sources refer to a major Jewish revolt led by one Simon ben (or bar) Kosiba or Kokhba (see Jewish Wars with Rome). Both Kosiba and Kokhba are sobriquets, the former meaning "lie" and the latter "star." Letters found at Nahal Hever have revealed that Simon's name was Kosiba, with the vowels themselves supplied by a letter written in Greek. Evidently Simon was dubbed bar Kokhba, or "the son of the star," by his admirers. But after defeat, his critics, as seen especially in rabbinic literature, referred to him as bar Kosiba, or "the son of the lie."

The rebellion broke out in A.D. 132 (as papyrological, numismatic, literary and archaeological evidence suggests), not long after Hadrian completed his tour of the eastern Roman Empire (cf. Dio Cassius *Hist.* 69.12.1-2: "so long as Hadrian was close by in Egypt and again in Syria, they remained quiet . . . but when he went farther away they openly revolted"; *Seder 'Olam Rab.* §30; Jerome *In Ezek.* 7.24; Epiphanius *Men. Pond.* 14; *Pan.* 30.12), and perdured for nearly three years, as the numismatic evidence suggests (see Coinage: Jewish).

Almost nothing is known of Simon ben Kosiba, the leader of the rebellion. Not until the discovery at Nahal Hever of some of his correspondence were scholars able to determine his surname. The exact cause of the rebellion is not clear. Dio Cassius says it was Hadrian's refound-

ing of *Jerusalem as Aelia Capitolina and the plan to build a temple in honor of Jupiter on the spot where the Jewish temple stood that brought on the war (Dio Cassius *Hist.* 69.12.1-2). According to the so-called *Scriptores Historiae Augustae*, which provides extracts of the lives and accomplishments of Rome's *emperors, "At this time [i.e., following Hadrian's visit to the East] also the Jews began a war, because they were forbidden to mutilate the genitals [i.e., practice circumcision]" (*Vita Hadriani* 14.2). The repeal of this ban early in the administration of Antoninus Pius (A.D. 138-161; *Digesta* 48, 8.11.1) supports this assertion, though the point is debated. Both factors may have contributed to the rebellion: imperial plans to renovate Jerusalem as a pagan city and an imperial ban that may have been interpreted as outlawing the practice of circumcision.

Although Dio says that "many outside nations" joined the Jewish rebellion (Dio Cassius *Hist.* 69.13.2), the archaeological and numismatic evidence suggests that the conflict was confined principally to parts of Judea and neighboring territory (in contrast to the first war [A.D. 66-73], which ranged throughout *Israel, and the North African war [c. A.D. 115-116], which involved much of Libya, Egypt, parts of Israel and other regions). D. Barag has pointed out that the geographical distribution of the Bar Kokhba coins suggests that Simon's forces controlled a not insignificant area, 20 to 30 kilometers north, west and east of Jerusalem, south of Jerusalem, including Bethlehem and Hebron, and the western shores of the Dead Sea as far south as Masada. Whether or not Simon controlled Jerusalem itself is disputed—the two coins found in the city may have been brought there as souvenirs by Roman soldiers. According to Appian (*Syriaca* 50.252) and Eusebius (*Hist. Eccl.* 4.5.2; 5.12.1), the Roman army had to reconquer Jerusalem. The city, which probably still lay in ruins, would have had little strategic value but would have had great symbolic value.

Dio also says that the Jewish rebels did not fight the Romans in the open but occupied places of advantage, including subterranean passages, making it necessary for the Romans to shut them up and starve them out (Dio Cassius *Hist.* 69.12.3; 69.13.3). According to rabbinic stories, Jews hid in caves, where many starved (*Lam. Rab.* 1:16 §45; *Midr. Ps.* 17.13 [on 17:14]). Jerome also passes on tradition about Jews hid-

ing in caves during the war (Jerome *Comm. in Isa.* 2:15). The tunnels and cisterns of Masada and the Herodium, along with the relatively recent discoveries in several caves in Nahal Hever of letters, shoes, clothing, cooking utensils, personal effects and human remains from the Bar Kokhba revolt confirm the general truthfulness of these stories.

Simon minted his own coins, overstriking previously minted coins, with patriotic legends that read "Simon Prince of Israel," "Year One of the Redemption of Israel," "Year Two of the Freedom of Israel" and so forth (Mildenberg; Schürer, 606). The part of his correspondence that has been recovered suggests that Simon ben Kosiba had difficulty maintaining discipline among his following. He implores his lieutenants to bring badly needed supplies and fresh recruits, while also ordering that the insubordinate be disciplined (Benoit, 155-63; Yadin 1961, 41-51; 1962, 249-55).

The Roman army finally overwhelmed Simon's forces at Betar (spelled variously; cf. Septuagint Th Josh 15:59), which is situated in the southern part of Judea. The configuration of the camp is visible, though the site has not yet been excavated. According to Dio, the losses on both sides were heavy. With regard to the Jews he says: "Fifty of their most important outposts and nine hundred and eighty-five of their most famous villages were razed to the ground. Five hundred and eighty thousand men were slain . . . and the number of those that perished by famine, disease and fire was past finding out. Thus nearly the whole of Judea was made desolate" (Dio Cassius *Hist.* 69.14.1-2; cf. Appian *Rom. Hist.* 11: *The Syrian Wars* 8 §50: "Vespasian destroyed [Jerusalem] again, and Hadrian did the same in my time"). Scholars suspect that these numbers are inflated, though their exactness makes one think that they may have been drawn from actual if greatly exaggerated reports. Dio also admits that "many Romans perished in the war" and that Hadrian found it necessary in his reports to the senate to omit the usual salutation, "I and the legions are in health" (Dio Cassius *Hist.* 69.14.3). The heaviness of Rome's losses is confirmed in Fronto's consoling letter to Marcus Aurelius Antoninus (A.D. 162), in which he reminds the grieving emperor: "under the rule of your grandfather Hadrian what a number of soldiers were killed by the Jews" (*Parthian War* 2).

The extent of the disaster is presented in

graphic and exaggerated terms in later Christian and Jewish sources. According to rabbinic legends, "Emperor Hadrian slew eighty thousand myriads of human beings at Betar" (*Lam. Rab.* 2:2 §4; *Gen. Rab.* 65:21 [on 27:22]; "eight hundred thousand," according to *y. Ta'an.* 4:5; "not a soul escaped," according to *'Abot R. Nat.* A §88). We are told that Hadrian said to Aquila: "See how I have degraded [the people of Israel], and how many of them I have slain" (*Exod. Rab.* 30:12 [on 21:1]). Elsewhere we are told that Hadrian "killed in the city of Bethar four hundred thousand myriads, or as some say, four thousand myriads" (*b. Git* 57b). God will judge Rome, according to Rabbi Berekiah, because "Hadrian slew in Bethar four hundred myriads of thousands of human beings" (*Song Rab.* 2:17 §1). "How many battles did Hadrian fight? Two teachers give an answer. One said it was fifty-two and the other fifty-four" (*Lam. Rab.* 2:2 §4). The modest dimensions of Betar (Yadin 1971, 192) expose the exaggeration of these numbers. The site has not yet been excavated, but preliminary soundings have been taken (see Ussishkin).

The rabbis spared no hyperbole in describing the extent and gruesomeness of the Jewish slaughter: Rivers of blood flowed to the sea; Hadrian built a fence out of corpses from Tiberia to Seppharis; only his successor (Antoninus Pius) permitted burial; the Gentiles fertilized their vineyards with the blood of the slain; great numbers of phylacteries were found at Betar; children were wrapped in Torah scrolls and burned (*b. Git* 57a, 57b-58a; *Lam. Rab.* 2:2 §4; *Seder Elijah* §28 [151]). The memory of the disaster was such that ben Kosiba's generation became known as the "generation of destruction" (*Esth. Rab.* 3:7 [on 1:9]; *Song Rab.* 1:3 §3; 8:6 §4; *Midr. Ps.* 16:4 [on 16:4], where it is identified as one of the three generations of suffering). These traditions have no historical value beyond corroborating in colorful ways the magnitude of the disaster in Judea and its enduring painful memory.

Eusebius adds: "We have seen in our own time Zion once so famous ploughed with yokes of oxen by the Romans and utterly devastated, and Jerusalem, as the oracle says [Is 1:8], deserted like a lodge" (Eusebius *Dem. Ev.* 6.13). Jerome adds a little to what has already been seen. He says that the "citizens of Judea came to such distress that they, together with their wives, their children, their gold and their silver, in which

they trusted, remained in underground tunnels and deepest caves" (Jerome *Comm. in Isa.* 2:15).

2. The Messianism of Simon.

One of the most debated questions concerning Simon ben Kosiba is whether or not he was regarded by his following as the awaited Messiah (see Messianism). The evidence suggests that he was probably so regarded.

2.1. Rabbinic. The earliest and most important rabbinic tradition concerning the messianic recognition of Simon is found in the Palestinian Talmud: "Rabbi Simeon ben Yohai taught: 'Aqiba, my master, used to interpret "a star [*kōkhab*] goes forth from Jacob" [Num 24:17]—*Kōzeba* goes forth from Jacob.' Rabbi Aqiba, when he saw Bar Kozeba, said: 'This is the King Messiah.' Rabbi Yohanan ben Torta said to him: 'Aqiba! Grass will grow on your cheeks and still the son of David does not come!'" (*y. Ta'an.* 4:5 [8] = *Lam. Rab.* 2:2 §4; *b. Sanh.* 98b; on messianic interpretation, cf. *y. Ned.* 3:8). Two features of this tradition are clearly secondary: (1) The reference to Simon as *Kōzeba*, instead of *Kosiba*, reflects the later, post-Aqiba negative assessment of the leader. After all, Aqiba would hardly hail the man he believed to be the fulfillment of Numbers 24:17, which in the *targums and earlier traditions (e.g., IQM 11:4-7; IQSb 5:27-29; CD 7:18-21; see War Scroll; Book of Blessings; Damascus Document) is understood in explicit messianic terms, as the "liar" who "goes forth from Jacob."

(2) The immediate rebuke by Yohanan ben Torta is probably artificial and represents a later correction of the famous rabbi. It is more probable that Aqiba's recognition of Simon was widely shared, at least initially. Centuries later Moses Maimonides, over against the Talmud itself, believed that Simon enjoyed widespread support among the rabbis: "Rabbi Aqiba, the greatest of the sages of the Mishna, was a supporter of King Ben Kozeba, saying of him that he was King Messiah. He and all the contemporary sages regarded him as the King Messiah, until he was killed for sins which he had committed" (*Mishneh Torah, Melakhim* 11:3, emphasis added). Later rabbinic tradition is completely legendary in nature, including another explanation for why Aqiba recognized Simon as the Messiah: "And what used Bar Koziba to do? He would catch the missiles from the enemy's catapults on one of his knees and hurl them back, killing

many of the foe. On that account Rabbi Aqiba [proclaimed him Messiah]" (*Lam. Rab.* 2:2 §4).

2.2. Christian. In his first *Apology* Justin Martyr refers to Simon by his positive sobriquet bar Kokhba:

[The prophetic books] are also in the possession of all Jews throughout the world; but they, though they read, do not understand what is said, but count us foes and enemies; and, like yourselves, they kill and punish us whenever they have the power, as you can well believe. For in the Jewish war which lately raged, Barchochebas, the leader of the revolt of the Jews, gave orders that Christians alone should be led to cruel punishments, unless they should deny Jesus the Christ and blaspheme. (Justin Martyr *Apol.* 1 §1.5-6)

Eusebius, possibly dependent on Justin, similarly states that "Cochebas, prince of the Jewish sect, killed the Christians with all kinds of persecutions, when they refused to help him against the Roman troops" (Hadrian Year 17). Why did the Christians refuse to support Simon's bid for freedom? The most probable reason is that Simon was regarded as the Messiah, as both Jewish and Christian sources relate (Eusebius *Hist. Eccl.* 4.6.1-4). Therefore, Christian allegiance to Jesus as the Messiah contradicted Simon's claims and undermined his authority. Christians "alone" were dealt with severely, because among the Jews they alone regarded someone else as Israel's Messiah. This interpretation is consistent with Jerome's polemic against Simon: "That famed Bar Chochebas, the instigator of the Jewish uprising, fanned a lighted blade of straw in his mouth with puffs of breath so as to give the impression that he was spewing out flames" (Jerome *Ruf.* 3.31).

2.3. Coins and Letters. The numismatic and epistolary evidence lends a measure of support to the messianic interpretation of Simon's leadership. In both coins and letters he is called Prince of Israel (*nasi 'yisrael*). Some of the coins depict the temple, which Simon probably hoped to rebuild, a task that the Isaiah Targum thought belonged to the Messiah (*Tg. Isa.* 53:5: "and [the Messiah] will build the sanctuary"; cf. *Tg. Zech.* 6:12-13; *Tg. Song* 1:17). The designation "prince" does not argue against a messianic identification, for the expected Messiah was often referred to in this manner in eschatological material from late antiquity (e.g., 1QM 3:15; 5:1; IQSa 2:12, 14, 20; CD 7:19; 4Q285 4 2, 6; 5 4; 6 2;

4Q376 frag. 1 iii 1, 9). The messianic employment of the epithet *prince* may derive from Ezekiel (Ezek 34:24; 37:25; cf. *Tg. Ezek.* 34:24; 37:25, which substitutes "king" for "prince"). The absence of the self-designation as "Messiah" should hardly surprise, for a direct claim of messiahship would be viewed as highly presumptuous. One's messianic identity was to be recognized by God's people and confirmed by signs.

The most compelling datum that urges a messianic interpretation of Simon's leadership is the sobriquet bar Kokhba. Given the widespread and consistent messianic interpretation of Numbers 24:17, usage of this title strongly suggests that Simon was viewed by many of his supporters as the awaited Messiah.

3. Importance for Understanding the Messianism of Jesus.

Aqiba's recognition of Simon ben Kosiba as Messiah may shed light on the messianism of Jesus of Nazareth. According to the Babylonian Talmud, Aqiba interpreted the plural "thrones" of Daniel 7:9 as implying one throne for God and one throne for David, that is, the Messiah (*b. Sanh.* 38b; cf. *Midr. Tanhuma* B on Lev 19:1-2 [*Qedoshim* §1]). As in the tradition in the Palestinian Talmud (cited above), Aqiba is again rebuked. His interpretation is seen as a profanation of God's holy presence, for what mortal can sit beside him? Aqiba then abandons his interpretation. Again the great rabbinical authority is corrected. But on the historical level Aqiba evidently did envision a heavenly enthronement of the Messiah, which parallels closely Jesus' assertion that high priest Caiaphas and his priestly colleagues will some day "see" Jesus as "the son of man seated at the right hand of Power, coming with the clouds of heaven" (Mk 14:62). Jesus' understanding of Daniel 7, in combination with Psalm 110:1, is similar to Aqiba's interpretation and to the interpretation held by other rabbis (cf. *b. Sanh.* 96b-97a, 98a; *Num. Rab.* 13:14 [on Num 7:13]; *Midr. Ps.* 21:5 [on Ps 21:7]; 99:1 [on Ps 99:1]).

In some exegeses Daniel 7:13 and Psalm 110:1 are combined (cf. *Midr. Ps.* 2:9 [on Ps 2:7]; 18:29 [on Ps 18:36]). Aqiba's belief that Simon ben Kosiba was the Messiah, playing on his name and the "star" passage in Numbers 24:17, shows that its messianism did not necessarily entail expectations of a supernatural figure (pace

Mildenberg, 76) but of a mortal whom God might endow with his Spirit in power and wisdom (cf. Is 11:1-5). It also shows that the christology of Mark 14:61-62 is Jewish, Palestinian, and not necessarily the product of Easter faith and *Hellenistic ideas of a supernatural being. On the contrary, there is every reason to conclude that the christology of the early church originated in Jesus himself.

SIRACH

The Wisdom of Ben Sira, also known as Sirach or Ecclesiasticus, is a collection of sayings and lengthier instructions written by a devout Jew of the late third to early second century B.C. The author identifies wisdom with the Torah of Moses, thus anchoring his students who seek wisdom and honor firmly in the Jewish way of life at a time when commitment to Torah was no longer taken for granted among elite or upwardly mobile Jews. The author also provides guidance on a wide array of practical, domestic, social and religious topics. The collection was preserved by and widely used within the early church. It can be found in the OT canons of the Roman Catholic and Greek Orthodox churches, or in the *Apocrypha to the OT of Protestant churches.

1. Author, Date and Setting
2. Sirach and Hellenism
3. Sirach's Teaching
4. Impact on the New Testament

1. Author, Date and Setting.

1.1. Sirach and Jerusalem Before Antiochus IV. Yeshua ben (son of) Eleazar ben Sira names himself as the author of this collection (Sir 50:27) and locates himself in *Jerusalem, where it is believed the sage had a school (the "house of instruction," Sir 51:23; Di Lella; Crenshaw; Hengel). As a teacher of wisdom, his originality lies not only in the composition of new proverbs (Sir 13:26) but also in the selection, expansion and interpretation of traditional wisdom material. Ben Sira was a student, first of *Torah and the Scriptures of Israel (Sir 38:34—39:1; 39:8), then of traditional wisdom material both from native soil (although Proverbs, for example, already shows marked similarities with foreign wisdom) and from other lands (Sir 39:1-4). Ben Sira traveled extensively (Sir 34:12-13; 39:4; 51:13), acquainting himself with the wisdom traditions at least of Greece and Egypt (Sanders). One finds in Ben Sira, however, that Torah remains the measuring rod of all wisdom; if a tradition leads one away from Torah observance, it

is not the road to wisdom. The famous passage on the "sage" or "scribe" (Sir 38:24—39:11) provides a window into the source of Sirach's own learning (von Rad) and no doubt his curriculum for his students: a thorough investigation of sayings and traditions, but always within the bounds of wholehearted commitment to the Torah of Moses.

The date of this collection can be determined with some certainty. In the prologue to the *Septuagint (LXX, the Greek translation), Ben Sira's grandson tells of his arrival in Egypt in the thirty-eighth year of Ptolemy VII Euergetes II, or 132 B.C. (Hengel, Di Lella). This would place his grandfather's period of flourishing in the last decades of the third and first decades of the second century B.C. The hymn in praise of the ancestors concludes with a laudatory reflection on the high priest Simon II (219-196 B.C.) but contains no references to the deposition of Onias III or the Hellenization crisis of 175-164 B.C.—a period whose harsh lessons would have reinforced his position that departure from Torah means ruin and disgrace. This places the date of the compilation between 196 and 175 B.C. (Hengel; Di Lella; Duesberg and Auvray).

Ben Sira lived and taught in a time of cultural tension. Some Jews were increasingly attracted to the Greek way of life while others were concerned to preserve the Jewish way of life or discover some viable synthesis between the two (*see* Hellenistic Judaism). First Maccabees 1:11-12 and 2 Maccabees 4:7-15 point to the role of elite Jews initiating the Hellenization of Jerusalem in 175 B.C., suggesting that pro-Hellenizing sentiments were advancing in Jerusalem in the decades leading up to the radical steps taken by Jason and Menelaus. Ben Sira sought through his teaching to turn his pupils back to a commitment to live according to Torah and to stem the tide of the growing desire to become, once again, "like the nations" (Duesberg and Auvray; Di Lella; Siebeneck).

1.2. The Translator and Textual Transmission of Ben Sira. Ben Sira wrote in Hebrew, but his work was translated by his grandson into Greek for the benefit of the Jewish community in Egypt after he had moved there in 132 B.C. Just as Ben Sira wrote so that "those who love learning might make even greater progress in living according to the Law," so his grandson publishes his translation for the sake of those who "are

disposed to live according to the Law" (from the Prologue). He thus takes his grandfather's promotion of a conservative ideology into a major center of *Diaspora Judaism.

For centuries, Ben Sira's work was known to us only through this Greek translation (preserved in a number of codices of the LXX, such as Alexandrinus and Vaticanus). In the late nineteenth century, extensive portions of a Hebrew version were found in the storage room of a synagogue in Cairo. These portions have been further supplemented by finds at *Qumran and Masada (fragments dating from the turn of the era), such that two-thirds of Ben Sira is now represented in Hebrew, opening up new avenues for textual critics to work toward establishing Ben Sira's original Hebrew text. His grandson attested to the impossibility of rendering an exact translation of a text from its original to a new language, pointing in his prologue to the discrepancies between the Greek version of the Pentateuch and other Scriptures used by Diaspora Jews and the Hebrew texts in use in Palestine in the second century B.C. (a source, perhaps, of some friction between Palestinian Jews reading in Hebrew and those Jews relying on a Greek translation of Torah), "for what was originally expressed in Hebrew does not have exactly the same sense when translated into another language." Recent studies of the translation technique of Ben Sira's grandson have demonstrated that he provides an interpretation rather than a mechanical reproduction of his grandfather's original (Wright; Skehan and Di Lella). The grandson's Greek version remains the most important witness to Ben Sira's work, but the Hebrew witnesses help distinguish between the author's original words and the translator's work.

2. Sirach and Hellenism.

While Ben Sira fought against the tendency among Jewish elites to abandon their Jewish heritage in favor of Greek ways, he nevertheless shows himself to be fully a product of Hellenization in its less radical sense. The spirit of the age allowed for a freer flowing of ideas between cultures, and Ben Sira, true to this spirit, incorporated the wisdom of foreign cultures into his instruction. J. T. Sanders has carefully evaluated parallels between Ben Sira and older Greek literature, and he presents a balanced assessment of the extent of influence of the Greek classics

on this Jewish author. Sirach 14:18, for example, seems to use an image from *Iliad* 6.148-49: both passages speak of humanity as a tree that is forever losing leaves (i.e., individual human beings die) to make room for new leaves. This does not imply that Ben Sira had read the *Iliad*, for it would have been easy enough for him to learn this simile from common parlance, just as so many people today may quote Shakespeare without ever having read him. Theognis, a sixth-century B.C. Greek author, may well have been on Ben Sira's reading list. Especially noteworthy are the sayings in Theognis about the character of the true friend as opposed to the fair-weather friend, and sayings about wine as a fire that shows the mettle of a person (cf. Sir 6:10, 15; 9:10; 10:6; 13:1; 31:26).

Sanders has also demonstrated Ben Sira's familiarity with Egyptian wisdom. Striking parallels exist between Ben Sira and Demotic wisdom texts with regard to the occupation of the scribe and its favorable comparison against all other occupations (e.g., artisans, engravers, smiths; cf. Sir 38:24—39:11). Similarly, shared proverbs about being a temperate eater at banquets, avoiding the gluttony or greed that would be seen as antisocial acts, testify to a broader wisdom tradition in these practical areas. In particular he appears to have learned much from the wisdom sayings of an Egyptian sage named Phibis. These two collections emphasize the dangers of gluttony and lust as causes of ruin for the fool, the merits of frugality and the need for moderation in mourning. Both also advise moderation in eating specifically for the sake of health, circumspection in approaching one's sociopolitical superiors and avoidance of the sexually promiscuous woman (while also praising the benefits of a good wife).

Such borrowing shows that Ben Sira was not closed-minded to the wisdom of non-Jews where this wisdom could coexist with commitment to Torah. What he opposed, rather, was the forsaking of the Jewish way of life in favor of the Greek way of life. This is evident in his complete identification of wisdom and the Mosaic law (von Rad; deSilva). His most extended reflection on wisdom (Sir 24:1-29) climaxes in the assertion that "all this is the book of the covenant of the Most High God, the law that Moses commanded us" (Sir 24:23 NRSV). While Proverbs claimed that the "fear of the Lord was the beginning of wisdom," Ben Sira adds that "to fear the

Lord is the whole of wisdom" (Sir 1:16) and the "crown of wisdom" (Sir 1:18). He counsels his students that walking in wisdom means walking always in accordance with the Jewish Torah: "the sum of wisdom is fear of the Lord, and in all wisdom there is the doing of Torah" (Sir 19:20). God causes wisdom to dwell in Jerusalem (Sir 24:8-12): those who seek wisdom and its promised rewards must seek it first in the temple (cf. Sir 51:13-14) and the Torah; firmly anchored there, they can begin to test the wisdom of foreign peoples. Foreign wisdom that leads one away from "fear of the Lord," such as perhaps the *Epicurean teaching that, while the gods exist, they do not inquire into the affairs of human beings or hold human beings accountable (cf. Sir 16:17-23; Hengel), is to be rejected as folly.

After nearly one-and-a-half centuries of Hellenization (since the campaigns of *Alexander the Great), Jews, like other groups that had held onto their native culture, found themselves at the frontier of an emerging world culture, superior in power and, for some, superior in promise for personal achievement and enjoyment of life's pleasures. Internal desires to join with this dominant culture and Antiochus IV's ambitions to fulfill Alexander's dream of a single world united by a common culture would soon precipitate a severe crisis for Judaism. Ben Sira lives at a time when certain age groups—notably the young, who must be the more strongly admonished to honor the traditions and teachings of the older generation (Crenshaw; Hengel)—and classes—notably the elite—no longer took it as given that, being born Jewish, they would adhere to Jewish law and piety. The world was changing, and Israel was a small place in a corner of that world, continually passed back and forth from *Ptolemaic to *Seleucid control. It was a minority culture in the world of competing kingdoms that nevertheless shared a dominant culture, Hellenism. Within such a setting, Ben Sira shapes his wisdom teaching to promote adherence to the values and customs of Judaism (deSilva), combating strong tendencies to assimilate and become "like the Gentiles" (Duesberg and Auvray; Di Lella).

3. Sirach's Teaching.

3.1. Style and Sources. While Proverbs consisted mostly of discrete sayings and only a few more fully developed instructions, Ben Sira tends to expand sayings into a longer instruc-

tion (Sanders; Metzger). Where he does not develop an argument, he will frequently at least group together individual sayings that treat a shared topic. Ben Sira combines a wide array of literary forms in his collection. One finds not only the proverbs and instructions typical of wisdom literature but also a psalm of lament, a psalm of deliverance, an autobiographical poem and an encomiastic reflection on prominent figures of Israel's sacred history.

We have noted a number of non-Jewish sources for Ben Sira's work. The primary sources of his thought must be sought in the Jewish tradition in which the sage was steeped. As a diligent sage, Ben Sira occupied himself with the study of Torah (Sir 38:34; 39:8; see also the translator's prologue); in his teaching, he directs students first and last to Torah as the path of all wisdom (cf. *inter alia* Sir 19:20). Much of Ben Sira's wisdom may be read as an extended meditation on the precepts of Torah: care for the poor, avoidance of *adultery, honor for parents and truthfulness in speech all have a basis in the Deuteronomic law code. When Ben Sira declares that "fire and water," "life and death" have been set before his pupils, and when he urges them to choose to keep Torah (Sir 15:15-17), he echoes the similar choice set before the Hebrews in Deuteronomy 30:19. Wisdom, for him, means making the right choice in the ancient, Deuteronomic set of alternatives.

Ben Sira also occupied himself with "prophecies" (Sir 39:1; prologue). His passion for the poor, the widow and the orphan (cf. Sir 35:17-26), coupled with his declaration of God's visitation upon those who oppress such people, captures the spirit of the Hebrew prophets. Similarly, his awareness of God's sovereignty over nations and the succession of nations (Sir 10:4-5, 8) may also have arisen from his reflection upon the prophetic literature, which would include what Protestants call the Historical Books. Finally, his encomiastic survey of Israel's past includes numerous references to the prophets of Israel, even to the collection of the twelve Minor Prophets (Sir 49:10).

Finally, we may be sure that Ben Sira reflected on the Psalms in worship and in study. Not only does he imitate their form (a psalm of lament, Sir 36:1-22; a psalm of thanksgiving for deliverance, Sir 51:1-12), but also he incorporates their content and spirituality. His original psalms are replete with parallels in the canoni-

cal psalms. His reflection on God's majesty and sovereignty as revealed in the wonders of creation (Sir 42:15-43:33) recalls the appearance of the same ground for praise and awe in many psalms. Ben Sira would be particularly at home reciting the psalms that celebrate Torah as the path for instruction and for living wisely (Pss 1, 19, 119; cf. Sir 6:37; 15:1). The psalmist's declaration that "the Torah of Yahweh is perfect, reviving the soul; the commands of Yahweh are dependable, making the uneducated wise" (Ps 19:7) stands behind Ben Sira's entire curriculum.

A major source for Ben Sira remains the wisdom tradition of Israel (cf. Sir 8:8-9; 39:1-3). Proverbs especially has left a clear mark on the later tradent of that tradition. Not only does Ben Sira share common forms but also numerous topics with the older collection. Both urge the pursuit of wisdom, strong parental discipline, marital fidelity and circumspection in one's conduct around social superiors; both warn against arrogance, impropriety of speech and dishonesty in business dealings; both describe the character of the good wife and her opposite. The list could be multiplied. Ben Sira, however, intensifies the claims made in Proverbs for the rewards of pursuing wisdom (Sir 1:11-19). "Fear of the Lord," that is, caution with regard to provoking God by showing disregard for God, is no longer simply the beginning of wisdom (Prov 1:7; Sir 1:14) but also its fullness (Sir 1:16) and its crown (Sir 1:18; Skehan and Di Lella). Ben Sira is much more vocal about his commitment to the Mosaic covenant.

3.2. Wisdom and Torah. Ben Sira, like Proverbs, presents the figure of Wisdom in personified form (Sir 24:1-22; 1:4-20). Wisdom is the first of God's creation (Sir 1:4; 24:3) and God's special gift for those who revere God and God's law (Sir 1:10, 26). Unlike earlier reflection on Wisdom, Ben Sira places her home squarely in Jerusalem (Sir 24:8-12) and in effect demythologizes this personification: Lady Wisdom is none other than Torah (Sir 24:23; 19:20). This line of identification has survivals in later Jewish (*rabbinic) reflection on the eternity of Torah and on Torah as the first creation of God. While wisdom is God's gift, it is also a goal diligently to be sought by human beings, requiring labor and discipline (Sir 4:17-19; 6:23-31). The pursuit of wisdom is frequently likened to a yoke or burden, which again has survivals in the *Pharisaic and later rabbinic "yoke of Torah" (Sir 6:24-25; 51:26).

Wisdom teachers from antiquity promoted their instruction as the way to *honor, wealth, influence and a noble end. In Ben Sira's setting, abandonment of Torah was increasingly regarded as the path to greater honor for the individual as well as the nation. *Families who were willing to soften the boundaries between Jew and Gentile had already proven that this was a viable way to international prestige and economic advancement. Prominent in Ben Sira is the promotion of Torah as the sole path to honor and a good name (Sir 10:19-24; deSilva). Ben Sira condemned riches gained through transgression as a source of dishonor (Sir 11:4-6; 13:24) but commended fidelity to the Mosaic law—even if the result was poverty—as always honorable (Sir 25:10-11). Fear of the Lord is promoted throughout as one's only claim to honor (Sir 9:16; 10:22). Those who forsake the law (e.g., for the sake of advancement in the broader Hellenistic environment) will come to lasting disgrace (Sir 41:6-8; Crenshaw). Seeking what pleases God—living according to God's requirements (i.e., Torah)—is therefore promoted as the wise course of action (Sir 1:27; 2:15-17; 3:18, 20).

3.3. Wisdom and Piety. For Ben Sira, the path of wisdom was the path of piety. He himself first sought wisdom in prayer and temple services (Sir 51:13-14). Wisdom bestows her gifts on the life that is lived in the fear of God and God's law (Sir 1:14-20, 26; 32:24—33:3; 34:14-20). Wisdom cannot enter where attention to piety is lacking. Ben Sira therefore provides instructions not only on practical wisdom but also on matters of pious living.

Ben Sira warns against the dangers of transgression of Torah. "Fear of the Lord" means not presuming upon God's forgiveness and mercy but rather taking sin seriously and avoiding its path to ruin (Sir 5:1-7). The slowness of divine punishment does not mean that sin is without consequences, so one must repent swiftly and not turn again to the same sins (Sir 34:28-31). Ben Sira also cautions strongly against harboring unforgiveness against one's fellow mortals. One cannot hope for forgiveness from God if one refuses to forgive other people (Sir 27:30—28:7).

Ben Sira's celebration of Simon II officiating at the temple liturgies (Sir 50:5-21) reveals his appreciation of the beauty and marvel of liturgy. He urges his students to honor God through the giving of tithes to God's *priests (Sir 7:29-31) and encourages generous offerings to God (Sir 35:6-

13). God will not, however, accept tithes from ill-gotten gains: defrauding one's fellow human being in business makes for blemished tithes. Lawful income alone makes for pleasing offerings (Sir 34:21-24). Ben Sira does not permit *piety to be divorced from ethics, and there is no room for lack of moral integrity in his religion. Indeed, moral conduct, returning a kindness, giving aid to those in need, turning a neighbor from sin and following the commandments are all counted as acceptable *sacrifices and offerings in God's sight (Sir 35:1-5). Here again one notes the strong influence of the Hebrew prophets (Is 1:11-17; 58:3-10; Jer 7:21-23; Hos 6:6).

Ben Sira's concern for the poor and marginalized runs throughout his collection. Almsgiving and works of mercy are to characterize the lives of the wise (Sir 3:30—4:10; 7:10, 3-36; 12:1-7; 29:8-13; 35:17-26). God stands ready to avenge those who are left without aid and oppressed, who cry out to God for help: the curse of the poor is powerful, for the Lord hears their cry (Sir 4:1-6; 35:17-26). Positively, generosity and care for the needy is part of God's character: those who are generous are "like children of the Most High" and are especially beloved by the God whose character they share (Sir 4:10). Investment in the poor becomes a treasure in heaven for the giver, a safeguard against calamity in the day of trouble (Sir 29:8-13).

In *prayer, the wise person seeks God's good counsel (Sir 37:15); one is to seek spiritual counsel here and not through dreams, divination and omens (Sir 34:1-8). As Ben Sira secures a place for prayer in the life of the wise person (Sir 7:10), so he also includes personal expressions of his own piety in his original psalms and praises of God. These prayers articulate a strong election theology, according to which Israel is God's own portion and the nations that dominate Israel the objects of God's wrath (Sir 36:1-3, 8-9). Gentile rulers act arrogantly, failing to honor God as God deserves (Sir 36:2, 5, 12). Ben Sira passionately hopes for the gathering of the exiles of Israel, the restoration of their inheritance and the elevation of Zion to the glory that is its due as the dwelling place of the one God (Sir 36:13, 16-19). This commitment to the particularistic destiny of Israel also reinforces the boundaries between Jew and non-Jew in a time that witnessed other Jews' attempts to erase such distinctions. The psalm of deliverance (Sir 51:1-12) bears witness to Ben Sira's reliance on God's

help and not merely his own wisdom to rescue him from difficult situations: ultimately, one's surest defense is God's favor.

3.4. Wisdom and God. Wisdom for Ben Sira included theology: our created nature includes a consciousness of God, placed by God in the human heart, together with an impetus to consider creation and give praise to the Creator (Sir 17:1-12; von Rad). Ben Sira himself shows this impetus in action (Sir 42:15—43:33). The conclusion of that hymnic reflection on God through the mirror of God's marvelous creation is that God is greater than all God's creatures (Sir 43:27-28): God alone is all-seeing and all-knowing (Sir 15:18-19; 39:19-20). God is ultimately the judge of all, and it is God whom one must please in public and in private (Sir 2:15-17; 23:18-21).

Ben Sira frequently invokes God's justice. Creation itself serves the justice of God, as natural elements (such as wind, fire, hail, famine, disease and wild animals) serve to punish the ungodly (Sir 39:28-31; 40:9-10); similarly creation also serves the needs of the righteous. This is an original contribution to Jewish theodicy, one that would be developed further in **Wisdom of Solomon* (Crenshaw 1975). If God does not punish sin speedily, it is not because God's justice is faulty but because mercy leads God to delay punishment and allow time for repentance (Sir 5:4; 17:15-32).

Ben Sira does not articulate a doctrine of retribution beyond death, positing rather that God's justice works upon sinners entirely during this life. God may, for example, make the last hours of the wicked so terrible that the joys of a life of sin are erased (Sir 11:26-28; Metzger). Furthermore, the reputation one left behind would enact God's justice: the pious would attain a lasting, honorable remembrance (see 3.7 below), while the name of sinners would be forever stained and disgraced (Sir 41:6-8). When pious Jews encountered the trials of the decades that followed Ben Sira's death, the doctrine of retribution and reward after death would become much more important (cf. 2 Macc 7:9, 11, 14, 23; Wis 3:1-9; 4:16—5:8; 4 Macc 9:8-9; 12:12; 13:14-17; 15:2-3; 16:25). So prominent did this view become that it found its way back into later recensions of Ben Sira's own work, beginning with his grandson's translation (Sir 7:17; 48:11; Di Lella).

3.5. Wisdom and Humanity. The lot of human beings is toil and anxiety by day, unrest by night, and calamity: what is of earth will at last return

to the earth. Ben Sira derives this view of the lot of the "children of Adam" from his reflection on the primeval curse (Sir 40:1-11; cf. Gen 3:17-19). Although the first couple failed to exercise free choice correctly, humanity continues to have the power to choose obedience or disobedience. God has not decreed that any should sin, and so individuals remain responsible for their own sin (Sir 15:11-20). Living in obedience to Torah and avoiding sin is admittedly a difficult path—Ben Sira knows from his own experience that the human being is apt to stray into all manner of sin, in thought, word and deed, and requires constant vigilance (Sir 22:27—23:6). Ben Sira himself cries out to God for divine aid in discipline (Sir 23:1, 4). The passions of the flesh, particularly lust, are strong and must never be given free reign lest they drag a person to ruin (Sir 6:2-4).

Nevertheless, life holds out the promise of joy for human beings, which unfolds as people walk in the paths of God's law (Sir 40:18-27). A happy life is the goal of wisdom (Sir 30:21-25), but wisdom teaches that happiness will be found only as one shuns vice of every kind and cultivates the virtues necessary for a harmonious life with other people and a pleasing life before God. His identification of damaging vices such as arrogance (Sir 10:6-18), stubbornness (Sir 3:25-29), slander (Sir 27:22—28:26) and self-indulgence (Sir 18:30—19:3) seeks to steer his pupils away from the traps that destroy harmony and happiness. Similarly, he devotes much of his book to the promotion of the cultivation of virtues such as prudence (Sir 8:1-19), humility (Sir 3:17-24; 7:16-17; 11:1-6) and truthfulness (Sir 20:24-26) in order to lead his pupils to the lifestyle that permits the enjoyment of what blessing life has to offer (e.g., **friendship*, a good **marriage*, *esteem* in the eyes of superiors and equals alike).

3.6. Practical Wisdom. Ben Sira provides guidance on a host of practical topics, as do most collections of wisdom literature. Many of these focus on domestic life (Sir 7:18-28): the discipline and rearing of children (Sir 30:1-13; 41:5-10), safeguarding the virginity of daughters (Sir 26:10-12; 42:9-14), treatment of **slaves* (Sir 33:25-33), management of property (Sir 33:20-24), caution regarding invitees (Sir 11:28-34), honor due parents (Sir 3:1-16), the selection of a wife (Sir 36:23-31) and the preservation of marital fidelity (Sir 9:1-9; 26:1-4, 13-18). Ben Sira has been justifiably criticized for his often derogatory statements about women (cf. Sir 22:3; 25:13,

19, 24; 42:14; Di Lella, McKeating). These statements, however, are reflections of a society in which women were viewed as either assets or liabilities but not as independent, equal entities. The good woman could provide a stable and well-managed home for a man (Sir 36:29-31) and was regarded as necessary for a man's well-being (McKeating), but a shameless woman (one who shows sexual initiative) is a source of danger to a man's honor, whether her father if she is unmarried or both father and husband if she is married (Sir 42:9-14).

Ben Sira also offers advice for the economic, social and political spheres. He urges his students to show integrity in business dealings, acquiring wealth only through moral means and using wealth to benefit others (Sir 14:3-10; 26:29-27:3; 31:1-11, 23-24; 34:21-27; 40:12-17). He offers guidance in proper table etiquette and conduct at a symposium (Sir 31:12-18, 25-31; 32:1-13; *see* Banquets) and cautions his students to approach social superiors with great care and circumspection (Sir 13:8-13). He has much to say about choosing, testing and keeping friends and associates and about distinguishing between reliable and fair-weather friends (Sir 6:5-17; 7:18; 9:10-16; 12:8-18; 22:19-26; 26:28-27:21; 37:1-6, 12). He even provides medical advice about temperance in eating for the sake of physical health (Sir 31:19-22; 37:27-31) and urges those who are sick to seek out the aid of physicians, preserving however a balance between seeing illness as a punishment from God, for which repentance is due, and the potential for the physician's skill (Sir 38:1-15).

3.7. Hymn to the Ancestors. The last major section preserves the famous hymn in praise of illustrious ancestors. This is a distinctive feature of Ben Sira's work, as no other surviving collection of Jewish wisdom includes a hymn celebrating the deeds not of God but of human heroes of the past (Lee). More than simply a celebration of Israel's heritage, this encomium serves to reinforce the values and motivations—most particularly, loyalty to the Mosaic covenant—promoted throughout the work. The hymn begins with an invitation to praise the distinguished people of Israel's past (Sir 44:1-2), and the examples that follow set forth the behaviors and commitments that result in a lasting, honorable remembrance. Classical rhetorical handbooks demonstrate that praise and blame of a person's or group's conduct motivated the hearers to

adopt or avoid a similar course of action.

T. R. Lee argues that the whole hymn (Sir 44:1-50:24) is an encomium celebrating the high priest Simon II. His attempt to fit the hymn into that specific genre is, however, forced, not to mention the fact that *synkrisis*—the explicit comparison of the subject of an encomium to figures of the past to demonstrate his or her equality or superiority—is absent. He is correct, however, insofar as the hymn falls properly within the broader genre of epideictic rhetoric, which is primarily concerned with strengthening the audience's commitment to certain values of particular importance for the culture (deSilva).

Ben Sira's choice of exemplars and his enumeration of their praiseworthy acts point again to Torah obedience as the path to honor and lasting distinction. Abraham enjoys "incomparable honor" (Sir 44:19) because "he kept the law of the Most High, and was taken into covenant with him; he established the covenant in his flesh, and when he was tested he was found faithful" (Sir 44:20 RSV). Fidelity to God (cf. Sir 2:10) and perseverance in the covenant (Sir 41:19) lead to a praiseworthy remembrance. Phinehas distinguishes himself through his zeal "in the fear of the Lord" (Sir 45:23). The source of his honor is his commitment to the exclusive worship of the God of Israel and the strict maintenance of boundaries between the people of God and the Gentiles (cf. Num 25:1-9). Caleb is held in high repute for his steadfastness before God's command, even if it seemed difficult: God's elevation of Caleb and Joshua above their whole generation shows that "it is good to follow the Lord" (Sir 46:10 RSV). Ben Sira hopes that his teaching will lead to the fulfillment of his prayer that "the name of those who have been honored [may] live again in their sons" (Sir 46:12 RSV). He fervently hopes that his pupils, the children of such committed ancestors, should continue in their ancestral ways—should embody the values, behaviors and commitments that marked the distinguished people of Israel's past.

This series of positive models is reinforced by brief considerations of their negative counterparts. Solomon, whose youth is marked by all the fine virtues that would make for eternal fame, mars his honor through the indiscretions of his old age—again (cf. Phinehas) centering on the transgression of boundaries between the chosen people and the Gentiles (Sir 47:19-21).

Among the kings of Judah and Israel, only David, Hezekiah and Josiah receive high praise: all the others receive lasting disgrace because "they forsook the law of the Most High; . . . they gave their power to others, and their glory to a foreign nation" (Sir 49:4-5 RSV). Forsaking Torah, they lost their sole claim to honor. This sounded a timely warning for the inhabitants of Jerusalem flirting with radical Hellenization.

4. Impact on the New Testament.

Ben Sira has had such a thorough and profound impact on the authors of the NT that a complete analysis here is impossible. As a wisdom teacher lodged in Jerusalem, Ben Sira was well placed to leave his mark on the soil on which the church would take root two centuries later. His redefinition of wisdom as fidelity to the Jewish law would have been a welcome word for the Jewish minority culture struggling to maintain its self-respect and identity. From his influence on Talmudic and other rabbinic materials (Di Lella counts eighty-two citations), one may surmise that Ben Sira's work remained a frequently consulted collection among sages and scribes throughout the intertestamental period into the first centuries of the common era.

Especially striking are parallels between Ben Sira and the sayings of Jesus preserved in Matthew and Luke. It seems certain that Jesus ben Joseph knew and valued some of the sayings of Jesus ben Sira, though one need not go so far as to posit literary dependence: Ben Sira's teaching permeated Judea sufficiently to become part of the common cultural heritage, and the presence of scores of allusions to Ben Sira in rabbinic writings suggests that Jesus may have been exposed to this teaching in the settings of local synagogue instruction.

Matthew's compilation of the Sermon on the Mount contains numerous points of connection with Ben Sira. Jesus' method of expounding on the law by extending the range of the commandments (e.g., extending the prohibition of murder to include anger and demeaning speech) appears also in Ben Sira, for whom economic oppression is also prohibited by the sixth commandment (Sir 34:26-27). Both even link obedience to the commandments of God with setting aside anger against a neighbor (Sir 28:7; cf. Mt 5:21-22). Both urge giving to the one who asks (Sir 4:4; cf. Mt 5:42) and claim that mirroring God's generosity makes one like "a child of

the Most High" (Sir 4:10; cf. Mt 5:45). Both warn against "vain repetition" in prayer (Sir 7:14; cf. Mt 6:7); both address God as "Father" in prayer (Sir 23:1, 4; cf. Mt 6:9; Jas 3:9). Most arresting is Ben Sira's teaching that those who expect forgiveness from God must not harbor unforgiveness against mortals like themselves. If we expect God, whose honor is incomparably greater than ours, to forgive offenses, we must not presume to cherish grudges (Sir 28:2-5; cf. Mt 6:12, 14-15).

Ben Sira promotes almsgiving as "laying up treasures in heaven," and Jesus will also urge his followers to "distribute to the poor" so as to "have treasure in heaven" (Lk 18:22; cf. Mt 6:19-21; 19:21; Lk 12:33). Finally, Jesus' invitation to all to come to him, take up his yoke of instruction and find rest with little labor (Mt 11:28-30) brings together elements from Wisdom's invitations to do the same (Sir 6:24-28; 24:19; 51:23-27). These, and many parallels beside, suggest that Jesus took up the best of the Jewish wisdom tradition into his proclamation of the life that pleased God.

The connections between Ben Sira and the epistle of James also command attention and are all the more understandable if we place James in a Palestinian Jewish Christian setting. James's instructions concerning the dangers of the tongue build on a foundation laid by Ben Sira, who also noted that the unbridled tongue was a source of ruin (Sir 22:27; cf. Jas 3:6). Ben Sira wondered that from the same source—the mouth—could come wind to fan a fire or spit to extinguish a flame (Sir 28:12) and proceeded to urge putting a fence about one's tongue so as not to sin or err with it. James also is struck by the anomaly that the same source should put forth blessing and cursing and urges that the tongue be reserved for the former (Jas 3:9-12). James even quotes Ben Sira's proverb: "Be quick to hear, but deliberate in answering" (Sir 5:11; cf. Jas 1:19). The two authors share other concerns as well. Both point out that God is not the cause of sin or enticements to sin, which rather are lodged in human choice (Sir 15:11-20, esp. 15:12; cf. Jas 1:13-14). Both regard testing as the natural outcome of walking in God's ways and urge the acceptance of testing as an opportunity for the cultivation of steadfastness and for being proven acceptable (Sir 2:1-6; cf. Jas 1:2-4; also cf. Sir 2:5 with 1 Pet 1:7).

Finally, Ben Sira's teaching on almsgiving

has left its mark on the *Didache*, an early Christian manual for conduct and liturgy (c. A.D. 100-125). *Didache* 4.5 quotes Ben Sira's admonition: "Do not let your hand be stretched out to receive and closed when it is time to give" (Sir 4:31, NRSV) and promotes almsgiving as a "ransom for sins" (*Did.* 4.6; cf. Sir 3:30). *Didache* 1.6 also cites a proverb the second half of which preserves an admonition from Ben Sira: "Know to whom you are giving" (Sir 12:1), so as to be a good steward of charity.

D. A. deSilva

SLAVERY

Slavery is holding a person in servitude by violence, natal alienation and personal dishonor as the chattel of another. Slavery is neither simply the loss of freedom, nor the same as coerced labor nor equatable with loss of civil rights. Classical slavery means slavery in at least two different contexts: *Greece (specifically fifth- and fourth-century B.C. *Athens) and *Rome (mainly of the middle republic to the end of the Principate, 200 B.C. to A.D. 235).

1. Problems of Definition and Comparison
2. The Usefulness and Limits of the Primary Sources
3. The Sources, Number and Position of Slaves
4. Manumission

1. Problems of Definition and Comparison.

Currently no general theory allows a single definition of slavery for all cultures and times. Earlier studies took the objectivity of slavery for granted as a categorical and transcultural concept. Recent decades have seen both important advances and fierce scholarly debate, making this more controversial a subject than any other in the study of ancient literature and society.

One definition affirms Roman legal distinctions as crucial to understanding slavery as one form of dependent labor, but not the only form (Finley). Unlike peasants, helots, clients, peons or serfs, slaves are chattel that can be bought and sold. Roman jurists held that slavery was an institution of the law of nations by which, contrary to nature, a person is subjected to the power (*dominium*) of another. Slavery is remarkably the only case in the extant corpus of Roman law in which the law of nations and the law of nature are in conflict. Although Roman law, in contrast to *Aristotle, considered slavery to be against nature, this did not mean that it was considered morally wrong; the jurists clearly presumed slavery to be legitimate, proper and morally right.

An alternative definition avoids this law-ori-

ented approach and describes slavery as a dynamic process of alienation and dishonor termed *social death* (Patterson). Social death means denying a person all dignity (as understood in that particular culture) and ties of birth in both ascending or descending generations (see Honor and Shame). Although they are not biologically dead, slaves in effect are socially dead to the free population.

Slavery in the Greek world of classical Athens differed markedly from slavery in Roman times. For example, Athenian freedmen were denied citizenship and thus, unlike their Roman counterparts, were excluded from political life, ineligible for all magistracies, forbidden to own land and excluded from acquiring mortgage loans; their children remained noncitizens. The term "Greco-Roman slavery" thus proves problematic. Evidence from the Greek period cannot be used as background for the Roman period of the NT authors. Additionally, ancient slavery, unlike modern, was not based on race. Racism and slavery do not necessarily go together, and neither of the two phenomena serves as the exclusive explanation for the other's existence. Comparative material from slavery in the antebellum United States South must be used with control.

2. The Usefulness and Limits of the Primary Sources.

The first task in any historical inquiry is to determine the nature of the available primary source material, and for slavery the problem is formidable. Virtually all evidence comes from the slaveholders, not the slaves themselves. Considering the ubiquity and significance of slaves in ancient daily life, there is surprisingly little discussion of them by ancient authors. Because ancient historiography concerned itself with politics, wars and great personalities, such narratives frustrate efforts to reconstruct the lives of slaves. Much of the historical material on slaves is anecdotal and mentioned only in passing, since ancient authors considered writing about the lives of individual slaves beneath the dignity of a historian. One of the longest surviving passages by a Latin historian describing an episode concerning slaves is only two pages in length; and *Tacitus includes it in his narrative only to make a rhetorical point about an attempt by the populace to influence polity (Tacitus *Ann.* 14.42-5).

Some archaeological evidence provides lim-

ited insight into the physical conditions of slave life. For example, the structural remains of excavated Roman houses reveal that the Romans did not ordinarily build separate, free-standing slave quarters; slaves typically lived in rooms within the master's walls. Other archaeological evidence includes unearthed objects relating to slavery, such as the Roman whip (*flagellum*) whose thongs had pieces of metal attached to them in order to make deep wounds into the flesh. The evidence proves the torture of ancient slaves to have been far more severe than the punishments sanctioned by the law in the slave society of Brazil, the most brutal of the modern world.

Moral exhortation literature offers additional evidence, but it has been misused in NT scholarship. One of the most sustained discussions of slavery by an ancient moralist is *Seneca's *Epistle 47*, in which he delineates the elements of the model master-slave relationship according to *Stoicism. Seneca condemns "harsh" punishment of slaves as injurious to the master's character but sees no problem with more moderate, regular disciplining of one's slaves. Such calls to kindness toward slaves were not criticisms of the institution but of its abuse by arrogant masters not abiding by Stoic ideals. These statements calling for humane treatment of slaves—analagous to modern calls against cruelty toward animals—were articulated to strengthen the institution, not to abolish it. Despite claims by some NT scholars, ancient slavery was not more humane than modern slavery (see *DPI*, and *DLNTD*, *Slave, Slavery*).

3. The Sources, Number and Position of Slaves.

The main sources of ancient slaves were warfare, piracy, brigandage, the international slave trade, kidnapping, infant exposure, natural reproduction of the existing slave population and the punishment of criminals to the mines or gladiatorial combat. Above all else, warfare remained throughout classical antiquity an important supplier of slaves. In his campaigns in Gaul between 58 and 51 B.C. alone, Julius Caesar is reported to have shipped back to Italy nearly one million Gallic prisoners of war. Slaves by the tens of thousands poured into the markets of Sicily and peninsular Italy as early as the First Punic War (264-241 B.C.), a direct result of the annual pattern of warfare and military expansion of Rome's borders during the late republic.

Despite the inadequacy of evidence, some scholars estimate that in urban areas of Roman imperial society slaves made up one-third of the population, but others place the figure lower, within the range of 16.6 to 20 percent. We do not know for sure.

In contrast to previous scholarship, Roman historians now dispute the theory that natural reproduction, in the NT era, replaced warfare as the primary source of Rome's slaves. Although continuous expansion ceased by the time of the empire, wars and other conflicts did not. This finding challenges an idea popular among some NT scholars that under the empire slaves were treated kindly because they were raised in homes and not taken by violence in battle. Slave populations, however, rarely reproduce enough to replace themselves. Furthermore, while the slave population of the antebellum South did reproduce itself after the official closure of the Atlantic slave trade in 1809 (government census documents indicate that by 1860 slaves made up 33 percent of the Southern population), no American historian claims that having home-grown slaves caused masters to treat them kindly.

Unlike their counterparts in modern slave societies of the New World, Roman slaves were not segregated from freeborns in work or types of job performed, with the notable exception of mining operations. A few manumitted slaves enjoyed social mobility. The Latin poet Horace, for example, was the son of a freedman. Some held positions of considerable power not only over fellow slaves but also over freeborns. Imperial slaves and freedmen (belonging to the Roman emperor) were considered the most powerful of all. They were the *familia Caesaris*, the "emperor's household" (note Phil 4:22) and were assigned administrative positions. The apostle Paul met one of them, Felix, the imperial freedman of the emperor Claudius, who served as Roman procurator of Judea (Acts 24:22-27; see Roman Administration; Roman Governors of Palestine).

In modern slavery, slave illiteracy was often required by law; in ancient slavery, an educated slave was prized. In cities throughout the ancient Mediterranean world, slaves were trained and served as physicians, architects, craftspeople, shopkeepers, cooks, barbers, artists, thespians, magicians, *prophets (e.g., Acts 16:16-24), teachers, professional *poets and *philoso-

phers. Some slaves could accumulate considerable wealth from their occupations.

However, most slaves were of quite modest means and worked as ordinary laborers or specialized domestics. Larger Roman households even had slaves whose sole job was to fold fancy dinner napkins. Because slaves could be found in all economic levels of society, they had no cohesion as a group and lacked anything akin to class consciousness. This analysis challenges Marxist interpretations that lump slaves into a single economic class and identify a so-called slave mode of production.

4. Manumission.

Manumission was an act that liberated a slave; the former slave was then termed a freedman or freedwoman. It was a legal procedure, not an attempt to effect political change, and so differs dramatically from emancipation, synonymous with the abolition of slavery.

It is often stated that manumission was regular in the Roman world and that this practice is unusual in the world history of slavery. Compared with classical Greece and the antebellum South this claim is true but only with strong qualification. A common misunderstanding among some NT scholars is that manumission was automatic after six years of servitude or when the slave turned thirty years of age. The only literary evidence for this claim is *Cicero (*Eighth Philippic* 32), who writes that after six years a slave could expect to be freed. But Cicero's report is more rhetoric than social description. He does not mention six years because it is a statistical minimum or average; these are the six years from Caesar's crossing of the Rubicon in January 49 to February 43, during which the Roman state was politically enslaved. Any Roman senator would understand and accept Cicero's argument even if it would never occur to him to manumit his own slaves after six years. Cicero himself did not manumit his own slave Tiro until 53 B.C., Tiro's fiftieth birthday.

Manumission in the Roman context, however, should not be exaggerated. The vast majority of slaves and especially those in agriculture were never freed. Romans saw manumission as the regular reward for their deserving urban slaves. It suited the master's interests and reinforced the institution and ideology of slavery. It is against this background that one must interpret Paul's exhortation to slaves in 1 Corinthians

7:21. By saying that believing slaves at *Corinth may take opportunities for freedom, Paul makes room in this theology for the institutionalized exercise of urban manumission.

SOCIAL VALUES AND STRUCTURES

The phenomenon we think of as early Christianity was shaped by and in turn helped to shape the values and structures of the societies and cultures in which it took root and grew. This article aims to identify and explain a representative selection of values and structures, awareness of which makes possible a clearer understanding of what it was like to be a Christian in the first century. Since the range of possible examples is vast and the study of what has become known as the social world of early Christianity has grown apace in the past few decades (Hanson; Elliott 1995; Malina 1996), the selection here will focus on values and structures pertinent especially to the interpretation of 1 Corinthians. More than any other NT text, this *letter reveals the extraordinarily complex mixture of Greek, Roman, Jewish and Christian elements that helped constitute early Christian existence.

1. Values
2. Structures

1. Values.

1.1. Holiness. One of the fundamental values lying behind what Paul writes in 1 Corinthians is the idea of holiness as basic to the formation of a godly community. This idea was available to him from his biblical and Jewish moral tradition (cf. Ex 19:5-6; Deut 7:6-11) and was given distinctive interpretation in contemporary groups like the *Pharisees (to whom Paul had belonged) and the *Qumran covenanters. One well-known text from Qumran, for example, expresses clearly the *priestly idea of holiness practiced by the sect and shared in certain respects by Paul:

When these are in Israel, the Council of the Community shall be established in truth. It shall be an Everlasting Plantation, a House of Holiness for Israel, an Assembly of Supreme Holiness for Aaron. They shall be witnesses to the truth at the Judgement, and shall be the elect of Goodwill who shall atone for the Land and pay to the wicked their reward. It shall be that tried wall, that precious corner-stone, whose foundations shall neither rock nor sway in their place (Isa. xxviii, 16). It shall be a Most Holy Dwelling for Aaron, with everlasting knowledge of the Covenant of justice, and shall offer up sweet fragrance. It shall be a House of Per-

fection and Truth in Israel that they may establish a Covenant according to thy everlasting precepts. And they shall be an agreeable offering, atoning for the Land and determining the judgement of wickedness, and there shall be no more iniquity. (*Rule of the Community* 8:4-10; translation in Vermes, *DSSE*, 85)

In an effort to give the Corinthian Christians a stronger sense of their identity as a distinct people, members of God's new *eschatological creation, Paul also draws heavily on holiness language: "To the church of God which is at Corinth, to those sanctified [*hēgiasmenois*] in Christ Jesus, called to be saints [*hagiois*]" (1 Cor 1:2 RSV). This is the language of holiness understood as separation and obedience, but whereas in the Bible it refers primarily to the separation of *Israel from "the nations" (the Gentiles), and in the **Rule of the Community* to the separation of the righteous from the unrighteous within Israel as well as beyond it, in Paul it refers to the election and identity of a new people made up of those previously separated, Jews and Gentiles (1 Cor 12:13; cf. Gal 3:27-8; Eph 2:11-22). This ideal of holiness has a dual focus. It means that internal relations are to be governed by disciplined obedience to the will of God as revealed in Scripture and taught by the apostle. With regard to "those outside"—and without going "out of the world" (1 Cor 5:10) as the Qumran covenanters had done—it also means that believers are to live in ways that bear witness to the rule of God over all things.

This ethic of holiness helps to explain the way Paul's teaching proceeds at certain points by establishing boundaries that separate the holy from the unholy. The basic presupposition is the holiness of the temple (as at Qumran), where temple is extended metaphorically to stand for the community of God's people: "Do you not know that you are God's temple [*naos*] and that God's Spirit dwells in you? If any one destroys God's temple, God will destroy him. For God's temple is holy [*hagios*], and that temple you are" (1 Cor 3:16-17 RSV). Thus, because immorality (*porneia*) in the life of the church has a contagious, polluting effect, the polluting agent has to be expelled. Indeed, his brothers and sisters in Christ are prohibited even from eating with him (1 Cor 5:1-12). The same ethic also explains Paul's opposition to church members' recourse to the civil courts to settle internal

disputes (1 Cor 6:1-11). For Paul it is a contradiction in terms, a mixture of what should not be mixed. How can "the saints" (*hoi hagioi*)—those who will judge not only "the world" but also angels (1 Cor 6:2-3) and who have been "washed," "sanctified" and "justified" (1 Cor 6:11)—take their mundane disagreements before "the unrighteous," those who are not sanctified and who will not inherit the kingdom of God?

Then there is Paul's teaching on mixed marriages. Contrary to what we might expect and to what may have been the practice of some in the church, the believing partner should not separate from the unbeliever: "For the unbelieving husband is consecrated [*hēgiastai*] through his wife, and the unbelieving wife is consecrated [*hēgiastai*] through her husband. Otherwise, your children would be unclean [*akatharta*], but as it is they are holy [*hagia*]" (1 Cor 7:14 RSV). Striking here is the way one kind of holiness rule is transcended by another on the implied grounds that the contagious power of holiness can be more powerful than the contagious power of unholiness. The believing spouse sanctifies both the unbelieving spouse and their children.

1.2. Power. The nature of the conflict reflected in 1 Corinthians will remain opaque to us without an understanding also of the ordering, display and practice of power in *Judaism and the Greco-Roman world. That power (*dynamis*) is an issue is clear: "For the word of the cross is folly to those who are perishing, but to us who are being saved it is the power of God . . . to those who are called, both Jews and Greeks, Christ the power of God and the wisdom of God" (1 Cor 1:18, 24 RSV). Against what interpretations of power and their attendant practices is Paul testifying here and elsewhere in this letter? This is a vital issue that has attracted significant scholarly attention (Holmberg; Meeks, 111-39; Marshall).

One interpretation of power that is relevant has to do with the pervasive way in which people in Greco-Roman society were valued according to certain socially recognized criteria of worth. These criteria included birth, social class, ethnic origins, gender, education, wealth, rank, physical or intellectual prowess, occupation, ritual status, rhetorical prowess, *patronage and personal achievements on behalf of the common good (Garnsey and Saller, 107-25). In a hierarchical society in which formal power was

distributed unevenly and restricted primarily to the aristocracy, there was a high degree of sensitivity to the social estimation of one's public worth, prestige or honor, and this sensitivity was replicated at lower levels of society. Paul's own ironic comment assumes precisely this state of affairs: "For consider your call, brethren; not many of you were wise according to worldly standards, not many were powerful, not many were of noble birth" (1 Cor 1:26 RSV). His letter shows that this church in the Roman colony of *Corinth reflected the social competitiveness and sensitivity to status that permeated Roman society, and it did so in a quite acute and complex way by virtue of the fact that it brought together into a new society people who would normally have been social rivals or even socially segregated from each other.

This helps to explain the strong tendency toward factionalism in Corinth against which Paul has to fight so strenuously (1 Cor 1:10-31). M. M. Mitchell has shown that the dominant concern that unites 1 Corinthians is the threat of disunity in the church due to factionalism and its manifestations. This means, among other things, that what look like theological quarrels may also be quarrels between rivals for power. Thus, for example, the parties whose formation is reported in 1 Corinthians 1:11-16 are likely to have been divided by patronage rivalry at least as much as by doctrine; the wisdom referred to is likely to be about the social prestige associated with *rhetorical prowess as much as about metaphysical speculation; the boasting about (what Paul regards as) immorality in the community (1 Cor 5:6) probably has to do with the high social status of the offender at least as much as with practices arising out of incipient Gnosticism of one kind or another; the conflict between the strong and the weak over eating meat probably has as much to do with differences of wealth, status and social mobility as with fears about idolatry and apostasy (1 Cor 8:1-13); and so on (Theissen).

In terms of methodology, what this means more generally is that analysis of the theological debates in 1 Corinthians will be deficient if it fails to take into account likely concomitant sociological factors, especially those to do with power. To put it another way, theology in Corinth is not a set of arcane, disembodied ideas, remote from politics and society. Rather, it is (at least in Pauline terms) reflection on the transformation of human power relations by the

inbreaking power of God revealed in the cross of Christ.

1.3. Honor and Shame. Closely related to the interpretation and exercise of power in the social world of early Christianity are the pivotal values of *honor and shame (Moxnes). Honor has been defined as "the value of a person in his or her own eyes (that is, one's claim to worth) plus that person's value in the eyes of his or her social group. Honor is a claim to worth along with the social acknowledgement of worth" (Malina 1983, 27). Generally speaking, honor takes two forms. Ascribed honor is social recognition arising from who one is by virtue of factors such as birth, wealth, class and social status. Acquired honor is social recognition on the basis of what one has done, especially one's achievements in the ongoing competition for status and reputation so characteristic of Greco-Roman society. Honor, whether ascribed or achieved, is the greatest social value in antiquity, valued more highly even than life itself. This is because a person's identity and worth arise in a social context. As C. Osiek (27) sums it up: "Without a good reputation life has no meaning."

The correlate of honor is shame (*see* Honor and Shame). This can be understood negatively as loss of honor through a refusal or withholding of social recognition. But it can also be understood positively as a proper sensitivity toward one's own honor and the honor of one's significant others, such as one's spouse, household, friends, patrons and clients. This has a gender dimension as well. In relation to the role and status of *women in a patriarchal society, shame is expressed in those patterns of deferential behavior and modesty that protect and enhance the honor of the household and the male household head (*see* Family and Household).

The importance of honor and shame in the social relations of antiquity helps to explain both what Paul says in 1 Corinthians and how he says it. For example, the competitive rivalry between factions in the church may now be understood as a quest for honor between household heads claiming the patronage of various apostolic leaders (1 Cor 1-4), something legitimate in terms of wider societal norms but in Paul's eyes contrary to the gospel of the crucified Christ that laid the foundation for transformed social values by making honorable (as a manifestation of the power of God) what was regarded normally as shameful (1 Cor 1:18-25). To

put it another way, in Paul's view, the honor acquired through rivalry and boasting has been rendered shameful by the honor ascribed by God to the crucified Christ and to those apostles and others who boast only "in the Lord" (1 Cor 1:31; cf. 3:1-23).

As a corollary of this, members of the church are to see themselves and to see each other in new ways: as members of the "body of Christ" to each of whom is given "the manifestation of the Spirit" (1 Cor 12:7) and among whom differences of race, class, status and gender matter much less in view of their common identity given to them by the most powerful patron of all. That patron is God at work in Jesus the Lord bringing a new eschatological creation into being through the *Spirit. In Paul's view, what is honorable now is not the power of fine speech but the power of preaching the gospel, not self-display through the exercise of spectacular spiritual gifts but the building up of the church through the practice of love, not the flaunting of one's newfound freedom but the paradoxical surrender of freedom for the sake of the weaker brother or sister. All this represents nothing less than a reconfiguration of honor and shame in terms of the understanding of power given by revelation in the gospel of the crucified and risen Christ.

1.4. Male and Female. An important dimension of the distribution of honor and shame has to do with the perception and organization of gender relations. In the Mediterranean world generally, social space was divided up in a number of ways, one of the most important of which was the differentiation of the public domain from the private along the lines provided by the perceived differences between male and female (Barton, 225-34). It is as if the physical bodies of men and women served as a kind of map not only of the moral ordering of the social body but also of its spatial ordering. The male represents public space and what is associated with it: leadership in politics, *philosophy, *rhetoric, litigation, business, warfare and the *arena. The female represents the more circumscribed, private space of the household. This is where *women have authority that they are to exercise on behalf of the male household head in ways intended to protect his honor. This gendered ordering of social space is given eloquent expression in the writings of the Hellenized Jew *Philo of Alexandria, a contemporary of Paul:

Marketplaces and council halls and law courts and gatherings and meetings where a large number of people are assembled and open-air life with full scope for discussion and action—all these are suitable to men both in war and peace. The women are best suited to the indoor life that never strays from the house, within which the middle door is taken by the maidens as their boundary and the outer door by those who have reached full womanhood. Organized communities are of two sorts, the greater, which we call cities, and the smaller, which we call households. Both of these have their governors; the government of the greater is assigned to men under the name of statesmanship [*politēia*], that of the less, known as household management [*oikonomia*], to women. (Philo *Spec. Leg.* 3.169-70)

In reality, the situation changed over time and was more varied from one region to another than Philo's conservative and stereotypical account suggests. There is plenty of literary and epigraphic evidence to show that women sought upward social mobility through *marriage, were active in commerce and manufacture, owned their own estates, served as patrons of local religious cults and voluntary associations, participated in syncretistic religious cults that spread from Egypt and the eastern Mediterranean and even engaged in the pursuit of philosophy (Lefkowitz and Fant; Kraemer). Nevertheless, the fact remains that the overall weight of law, custom and practice was toward distinguishing public space as predominantly male from private (domestic) space as predominantly female, with a distribution of power in a vertical direction with the male household head on top.

Against this background, a number of passages in 1 Corinthians can be seen in a new light. It is not surprising that Paul should give instruction on matters to do with male-female sexual relations (1 Cor 5-6) and rules governing Christian marriage (1 Cor 7). Given the connection in antiquity between the right ordering of the city-state (*polis*) and the right ordering of the household (*oikos*), and given Paul's determination to establish the community of Christians at Corinth as a kind of alternative *polis*, it was essential that an orderly and Christian pattern of social relations be laid down. If disorderly sexual and marital relations were a symptom of the factionalism of the church, as seems to have

been the case, then the imposition of sexual discipline and marriage rules was an obvious way to build up the unity of the church.

Second, noticeable in the marriage rules is the way Paul addresses in reciprocal fashion both men and women, as in 1 Corinthians 7:3-4: "The husband should give to his wife her conjugal rights, and likewise the wife to her husband. For the wife does not rule over her own body, but the husband does; likewise the husband does not rule over his own body, but the wife does" (RSV; see also 1 Cor 7:10, 12-14, 16, 32-34). Given the overwhelmingly hierarchical ordering of male-female relations in the society of the time, this reciprocity is striking. As O. L. Yarbrough (116) puts it: "Compared with Jewish paraenesis and with most paraenetic traditions in the Greco-Roman world, Paul's careful balancing of advice to men and women is unusual." It seems legitimate to infer that not only is Paul concerned to establish a sustainable basis for order and unity in the church's life, but also that he does so in a way that incorporates distinctively Christian values, one of which is the full recognition of women alongside men as heirs of the kingdom of God.

2. Structures.

2.1. Households. In the discussion of gender (see 1.4 above), a beginning was made on a consideration of the household (Lat *familia*; Gk *oikos/oikia*). The definition of household is complex (Garnsey and Saller, 126-47). It consisted of not only husband, wife and children but also *slaves and freedmen and others living in the house (see Family and Household). An impressive statement about the important place of the household in the larger scheme of social relations comes in Cicero's *On Duties* 1.53-54:

There are several levels of human society. Starting from that which is universal, the next is that of a common race, nation or language (which is what most of all holds men together). Further down comes membership of the same city; for citizens have many things in common—their town square, temples, covered walkways, roads, laws and constitution, law-courts and elections, customs and associations and the dealings and agreements that bind many people to many others. An even closer bond is that between relations: for it sets them apart from that limitless society of the human race into one that is

narrow and closely-defined. Since it is a natural feature of all living beings that they have the desire to propagate, the first association is that of marriage itself; the next is that with one's children; then the household unit within which everything is shared; that is the element from which a city is made, so to speak the seed-bed of the state. (Gardner and Wiedemann, 2)

The institution of the household was probably the most significant social influence on the pattern of the early Christian groups (Malherbe, 60-91; Stowers; Banks). That the churches (*ekklesiāi*) met in private houses is typified by the formulaic greeting in 1 Corinthians 16:19: "Aquila and Prisca, together with the church in their house, send you hearty greetings in the Lord" (RSV; cf. Rom 16:5; Philem 2; Col 4:15). We also know that homes as well as "synagogues were important locations for preaching activity (Acts 20:20) and that conversion to Christianity often involved whole households, following the lead of the household head (Acts 16:15, 31-34; 18:8). Paul refers to the intermediary role played by members of Chloe's household (1 Cor 1:11) and, in a revealing aside, admits to having baptized "the household of Stephanas" (1 Cor 1:16; cf. 1 Cor 16:15-16). So it is legitimate to infer that "the church in the house of . . ." was the basic cell of the Christian movement, the nucleus of which was a single, extended household (Meeks, 75).

The implications of this for understanding 1 Corinthians are wide-ranging. First, given that "the whole church" (1 Cor 14:23) was made up of a number of separate house churches, it is likely that the rivalry and division threatening the church was a rivalry between relatively wealthy household heads who hosted churches in their houses. Second, the evident conflict and confusion over the role and authority of women (cf. 1 Cor 11:2-16; 14:33-36) and slaves (cf. 1 Cor 7:21-23; 12:12-13) may have arisen at least in part because the church in the house was a public gathering in private space and new, Christian values were impinging in unpredictable ways on members' self-understanding and role expectations. Third, the social level of the church as comparable with the social level of its constituent households—neither aristocratic nor a movement of slaves, but a broad mixture of people including a small number of relatively high status and a majority of low status—becomes clearer (cf. 1 Cor 1:26). Fourth, the fact that the

meetings of the *ekklēsia* took place in a house gives us an indication of its size and internal dynamics. R. J. Banks estimates as follows: "The entertaining room in a moderately well-to-do household could hold around thirty people comfortably—perhaps half as many again in an emergency" (Banks, 85). A meeting of the "whole church" may have reached forty to forty-five people. The intensity of fellowship in such gatherings must have been strong, as also the potential for disorder: all of which, because of the household setting, was open to the critical or admiring view of outsiders (1 Cor 14:23-25).

2.2. Voluntary Associations. Alongside the household, another social pattern likely to have influenced the house churches (or at least people's perception of them) is that of the Greco-Roman voluntary association (Lat *collegium*, Judge, 40-48; Barton and Horsley; Wilken, 31-47; Kloppenborg and Wilson). Such associations took a variety of forms and were referred to in various ways depending on their purpose, location and constituency. There were trade guilds such as the guild of silversmiths at Ephesus (Acts 19:23-41) or the proposed society (*hetaeria*) of firemen at Nicomedia (Pliny *Ep.* 10.33, 34); funerary societies (*collegia tenuiorum*), which provided conviviality in life and decent burials in death; and cult groups (*thiasoi, eranoi*) for the worship of particular deities such as Isis or Bacchus.

For example, an inscription dated A.D. 136 about a burial society in the Italian city of Lanuvium records in detail the bylaws of the society showing how the society was organized and the character of its activities. Part of the bylaws reads as follows:

It was voted unanimously that whoever desires to enter this society shall pay an initiation fee of 100 *sesterces* and an amphora of good wine, and shall pay monthly dues of 5 *asses*. It was voted further that if anyone has not paid his dues for six consecutive months and the common lot of mankind befalls him, his claim to burial shall not be considered, even if he has provided for it in his will. It was voted further that upon the decease of a paid-up member of our body there will be due him from the treasury 300 *sesterces*, from which sum will be deducted a funeral fee of 50 *sesterces* to be distributed at the pyre [among those attending]; the obsequies, furthermore, will be performed on foot. . . . It was voted further that if any member desires

to make any complaint or bring up any business, he is to bring it up at a business meeting, so that we may banquet in peace and good cheer on festive days. It was voted further that any member who moves from one place to another so as to cause a disturbance shall be fined 4 *sesterces*. Any member, moreover, who speaks abusively of another or causes an uproar shall be fined 12 *sesterces*. Any member who uses any abusive or insolent language to a *quinquennalis* at a banquet shall be fined 20 *sesterces*. It was voted further that on the festive days of his term of office each *quinquennalis* is to conduct worship with incense and wine and is to perform his other functions clothed in white, and that on the birthdays of Diana and Antinous he is to provide oil for the society in the public bath before they banquet. (Lewis and Reinhold, 274-75)

Against this background, it is fair to say that in at least some respects the Christian groups will have looked familiar to outsiders. Like the Christians, members of this burial society met regularly (monthly rather than, as with the Christians, weekly), ate food and drank wine together, honored one another by elections to office, addressed the problem of causes of disturbance in the meetings and joined together in activities of worship. Such associations, like the house churches in Corinth and elsewhere (cf. Acts 2:41-45), provided a social context for people from primarily the non-élite trades and crafts end of the social scale to participate in a common life larger than the household but smaller than the city-state. The Christians were distinctive, however, in the mixed social composition of their groups, the exclusiveness of their focus on devotion to Christ crucified and risen and the seriousness of their commitment to holiness.

2.3. Law Courts. Why does Paul proscribe civil litigation between Christians in the courts of Corinth (1 Cor 6:1-11)? His concern to maintain the holiness of the church by encouraging the development of a certain autonomy from the procedures and institutions of the world has been mentioned already. But this is not the only factor. First, there were strong precedents for establishing autonomous legal and disciplinary practices. In Judaism, there were courts that operated under the aegis of the synagogue. Paul himself was the object of synagogue disciplinary

action on no fewer than five occasions (2 Cor 11:24; cf. Mt 10:17). Likewise, the sectarian community at Qumran had its own court for dealing with disputes and disciplinary procedures (Schiffman, 282-87). In the wider Greco-Roman world, there is evidence that clubs and voluntary associations also sought to keep their disciplinary problems in-house. One inscription from the Attic society of the Iobacchi, dated around A.D. 178, includes the following rules:

And if anyone come to blows, he who has been struck shall lodge a written statement with the priest or the vice-priest, and he shall without fail convene a general meeting, and the Iobacchi shall decide the question by vote under the presidency of the priest, and the penalty shall be exclusion for a period to be determined and a fine not exceeding twenty-five silver denarii. And the same punishment shall be imposed also on one who, having been struck, fails to seek redress with the priest or the arch-bacchus but has brought a charge before the public courts. (Todd, 89)

Precedents and analogies such as these make Paul's prohibition on going to the civil court more understandable by showing that it was customary in other groups and associations of the time to settle disputes intramurally.

But more can be said, for it is likely that the way the civil courts operated was for Paul a strong deterrent, given his overwhelming desire not to exacerbate the factionalism in the church. In particular, B. W. Winter has shown that civil lawsuits were used widely as an instrument of enmity between rivals for power among the social élite and that the system as a whole was open to bribery and corruption. In the situation addressed by Paul, it appears that the power struggle between the members of the élite in the church was spilling over into disputes that were being settled in the courts. The effect was disastrous: "It should be remembered that if some had already successfully prosecuted fellow Christians, then the person who won the action would have been awarded financial compensation. This would have only aggravated the problem of strife within the Christian community as the contestants would then appear in church together. If the jury took sides, then would not the members of the church be tempted to do the same? Whether one lost or won, the effect could only be harmful to relationships in the congrega-

tion" (Winter, 115).

2.4. Patrons and Clients. Relevant to understanding the operations of the courts, voluntary associations, households and much else in Greco-Roman society is the patron-client relationship (cf. Elliott 1987; Garnsey and Saller, 148-59; see Patronage). From the emperor down, patron-client relations bound together in mutual obligation the empire, provinces, city-states and their respective organs and institutions. According to J. K. Chow (30-33), the patron-client relation has the following characteristics: it is an exchange relation in which the patron provides for the client in return for the client's support; it is asymmetrical, as a consequence of the greater access of the patron to scarce resources of a material or spiritual kind; it is usually a particular and informal relation in which resources are channeled to specific groups or individuals rather than bestowed universally; it is usually suprallegal based on the subtleties of mutual understanding and custom; although it is a voluntary relation, it is binding and long-range, carrying with it a strong sense of interpersonal obligation; and it is a vertical relation that binds patron and client(-groups) together in a way that tends to exclude other patrons and discourage horizontal relations between clients. An ironic testimony from Paul's contemporary the Stoic philosopher Seneca is suggestive of the pervasiveness of patron-client relations and the obligation entailed:

Look at those whose prosperity men flock to behold; they are smothered by their blessings. To how many are riches a burden! From how many do eloquence and the daily straining to display their powers draw forth blood. . . . To how many does the throng of clients that crowd about them leave no freedom! In short, run through the list of all these men from the lowest to the highest—this man desires an advocate, this one answers the call, that one is on trial, that one defends him, that one gives sentence; no one asserts his claim to himself, everyone is wasted for the sake of another. Ask about the men whose names are known by heart, and you will see that these are the marks that distinguish them: A cultivates B and B cultivates C; no one is his own master. (*Brev. Vit.* 2.4, in Chow, 81)

If we look at 1 Corinthians against this background, new interpretative possibilities open up.

For example, Paul's elaborate defense of his refusal of financial support may be an attempt to win back the support of wealthy patrons in the church whose patronage he has declined (1 Cor 9:3-27). Further, his anxiety about Apollos and Cephas (1 Cor 1:12; 3:3-4; 4:6-7) may be related to the same issue, for it appears that the *benefaction he declined they accepted. Even worse, Paul had adopted the humiliating course of working with his hands to support himself (1 Cor 4:12; 9:6). The effect on Paul's authority in Corinth must have been dramatic. Paul's relations with the wealthy patrons of the church (probably those who styled themselves the strong), along with their clients and household members, were jeopardized and the unity of the church put at risk. It is likely that all the other problems Paul deals with in 1 Corinthians—going to court, slaves seeking manumission, offending the weaker brother by eating idol meat, the unequal distribution of food at the Lord's Supper, the collection for *Jerusalem, and so on—were affected in one way or another by customary expectations about patrons and clients (cf. Theissen; Marshall; Chow). But this is not surprising. For Paul, the lordship of the crucified Christ and the imperative of serving Christ as his slave implied a reordering of social relations that put him at odds with the world around him.

SON OF GOD TEXT (4Q246)

The so-called *Son of God* text, 4Q246 (olim 4Qpseudo-Dan^d) has sparked interest among NT interpreters because of its reference to a figure who will be called "son of God" and "son of

the Most High." The text was discussed by J. T. Milik in a public lecture in 1972, was partially published by J. A. Fitzmyer in 1974 (391-94; see Fitzmyer 1979) and was finally published in full by E. Puech in 1992 and J. A. Fitzmyer in 1993 and 1994.

1. Contents of 4Q246
2. Interpretations of 4Q246
3. 4Q246 and the New Testament

1. Contents of 4Q246.

4Q246 comprises a single piece of leather, preserving two columns of Aramaic text, with nine lines in each column. With the exception of a few letters on the left-hand edge, the text of column 2 is completely preserved. However, several letters are missing on the right-hand side of column 1. The reconstructions of Puech (1992, 1994) and Fitzmyer (1993, 1994) propose anywhere from eleven to seventeen letters missing at the beginning of each line. Fitzmyer believes that he has fully restored the lost words and letters.

4Q246 evidently describes the interpretation that an unknown seer has given to a distraught king. The seer falls before the throne and then assures the king that despite serious dangers from foreign enemies (i.e., Assyria and Egypt), his son (according to the reconstruction and translation of Fitzmyer 1994, 167) "shall also be great upon the earth [and all peoples sh]all make [peace with him], and they shall all serve [him, (for)] he shall be called [son of] the [gr]eat [God], and by his name shall he be named. He shall be hailed (as) son of God, and they shall call him son of the Most High" (1:7—2:1). The vision then goes on to describe the frightening battles and carnage that lie ahead (2:1-3), "until there arises the people of God, and everyone rests from the sword. (Then) his kingdom (shall be) an everlasting kingdom, and all his ways (shall be) in truth. He shall jud[ge] the land with truth, and everyone shall make peace. The sword will cease from the land, and the provinces shall pay him homage. The great God is himself his might; he shall make war for him. Peoples he shall put in his power, and all of them he shall cast before him. His dominion (shall be) an everlasting dominion, and none of the abysses of [the earth shall prevail against it]" (2:4—3:1).

2. Interpretations of 4Q246.

4Q246 confronts interpreters with a series of questions. The text does not make clear the

identity of the king to whom the seer discloses the meaning of the dream or vision, nor does the text identify the king's son beyond the amazing epithets "son of God" and "son of the Most High" (1:9; 2:1). In a public address at Harvard University in 1972 and in a later publication, Milik (1992, 383-84) proposed that the "son of God" figure alludes to Alexander Balas, the last of the *Seleucid kings of Syria (cf. 1:6, which Milik translates "Syria," instead of the expected "Assyria"). The Greek and Latin inscriptions on coins issued by Alexander, such as *deo patre natus* ("born of divine parentage"), cohere with the epithets "son of God" and "son of the Most High." Alexander's brutal and blasphemous reign will end when the "people of God arises" (2:4). This interpretation is problematic in its identification of Assyria as Syria and in imagining a confederation between the rival powers Syria and Egypt.

Similarly, E. M. Cook has argued that 4Q246 reflects the Seleucid period, especially the Jewish struggle against Antiochus IV Epiphanes. The "son of God" is none other than a "prince of nations" (1:5), which is a significantly different reading from those of J. J. Collins, Fitzmyer and others. This prince will provoke various wars "until the people of God shall arise and all will have rest from the sword" (2:4). Line 5 should then be taken as "their kingdom," that is, the kingdom of the "people of God," not the kingdom of the evil prince who spuriously claims to be "son of God" (line 1). Cook's interpretation is based on a sequential understanding of the events described in the text, which follows a pattern and imagery typical of an older Akkadian prophetic tradition. Puech (1992, 127-31, 1994b, 556) and others see in the "son of god" figure a reference to Antiochus.

Collins (1997) responds to this interpretation, arguing that the text is closer in genre and theme to the book of Daniel (esp. 3:33; 4:31; 7:14, 27) and that the Akkadian parallels to which Cook appeals are too remote and imprecise to be relevant. Collins further observes the linguistic and thematic parallels between 4Q246 and the Aramaic paraphrasing seen in *Targum Isaiah* 10:20—11:16, as well as 1QM 1 (see War Scroll). Finally, he believes the events described in 4Q246 are not sequential but cyclical (see also J. Zimmermann, 182-84). 4Q246 2:4-7a describe the coming war and tribulation, followed by assurance of the coming son who will be great,

make peace and be hailed as "son of God" (1:7b—2:1ab). The scenario is then repeated: The enemies of the people of God will appear as "comets," who will rule the earth for some years, trampling peoples and provinces (2:1c-3). This they will do "until the people of God arises" and peace is achieved (2:4-9).

D. Flusser believes that the "son of God" is an antichrist figure, who like the personage described in 2 Thessalonians 2:1-12 ("the man of lawlessness . . . who opposes and exalts himself against every so-called god or object of worship, so that he takes his seat in the temple of God, proclaiming himself to be God"), as well as in other texts such as **Ascension of Isaiah* 4:2-16 ("a lawless king," to whom the people will offer sacrifice), *Oracle of Hystaspes* (a king from Syria who will "call himself God and will order himself to be worshiped as the Son of God") and **Testament of Moses* 8 (a "man who rules with great power"), will pass himself off as a false messiah and persecute the people of God. Flusser's interpretation, however, is vulnerable, for it rests on a doubtful translation in 1:8 ("they will worship" instead of "they will serve") and on antichrist traditions found in Christian texts, which may not represent pre-Christian, Jewish ideas.

F. García Martínez thinks the figure is Michael the archangel, who in other texts is known as *Melchizedek, the Prince of Light. His principal support for this interpretation is found in 1QM 17:5-8, where Michael is expected to appear during the great eschatological battle and defeat the prince of the dominion of darkness. But in what sense a king can be promised an *angel for a son is not clear. M. Hengel (45) thinks the "son" is a collective for the people of God as a whole, as is the "one like a son of man" in Daniel 7:13. However, because the seer is addressing an individual (i.e., the worried king), interpreting the prophecy of the "son" as in reference to a single individual should be preferred.

Fitzmyer (1993, 1994, 1995) thinks this figure is a future Jewish king who will restore the Davidic kingship but who is not the Messiah, the future David of Jeremiah 30:9. However, the setting, involving a dream or vision that needs to be interpreted and depicts a great victory over Gentile nations, surely is suggestive of eschatology, which in turn recommends a messianic interpretation of the "son of God" figure. Would not a messianic figure, based on texts like 2 Sam-

uel 7:13-16 and Psalm 2:2, 7, be called "son of God"? Would an epithet such as this, found in an eschatological context, not call to mind the messianic hope? Other interpreters think so.

H.-W. Kuhn (109-11), Collins (1993, 1997), Zimmermann and Puech (1994a, 34), among others, understand 4Q246 in a messianic sense. They contend that hope of a coming descendant of a Jewish king who will be hailed "son of God" and "son of the Most High" and through whom the "people of God" will enjoy peace, an everlasting kingdom, the subjugation of the Gentiles and an everlasting dominion, is surely best explained in terms of messianism. According to 1QS^a 2:11-12, *Qumran expected a time "when God will have begotten the Messiah among" the community. The "first-born son" of 4Q369 may also be a messianic reference. Fitzmyer's insistence that the word *messiah* (*māšīah*) must appear in a text before it can be regarded as messianic seems unnecessarily restrictive when texts like 4Q285 are taken into account. Surely the Branch of David, the Prince of the Congregation, who will slay the leader of the Kittim (i.e., the Romans) in fulfillment of Isaiah 10:34—11:1, is the Messiah. Yet the word *messiah* does not appear. One should note that in 4Q252 5:3-4 the Branch of David is expressly identified as the "Messiah of righteousness," and in 4Q161 7-10 iii 22 the Branch of David is said to "arise at the end of days." Finally, the parallels with Luke 1:32-35 seem only to confirm this messianic interpretation.

3. 4Q246 and the New Testament.

The significance of 4Q246 for NT interpretation is seen immediately in the impressive parallels with the angelic annunciation in the Lukan infancy narrative:

These parallels strongly suggest that the epithets "son of God" and "son of the Most High" carried with them messianic overtones. If they were not understood in this way, then one must wonder why Christian tradition would have applied them to Jesus as part of its christological confession.

The language of 4Q246 also calls into question the critical opinion that epithets such as "son of God" and "son of the Most High" are relatively late and non-Jewish additions to emerging christology. Here the operative assumption is that only when Christianity encountered more directly the Greco-Roman world and

Luke	4Q246
this one will be great (1:32)	your son will be great (1:7)
son of the Most High he shall be called (1:32)	son of the Most High he shall be called (2:1)
he shall be called son of God (1:35)	he shall be called son of God (2:1)
he will rule . . . forever (1:33)	his kingdom an everlasting king- dom (2:5)

its cult of the emperor (see Ruler Cult), who was hailed as "son of God," did Christians begin applying such language to Jesus. The discovery of 4Q246, an Aramaic text dating to one generation before Jesus, in which such language was applied to an expected victorious Jewish king, in all probability the Messiah, calls into question this older critical assumption (Hengel, 45; Zimmermann, 188).

SONGS OF THE SABBATH SACRIFICE (4Q400-407, 11Q17, MASIK)

The *Songs of the Sabbath Sacrifice* is a liturgical document consisting of thirteen distinct compositions, each dated to one of the first thirteen *sabbaths of the year. Whether the cycle was specific to the first quarter of the year or was repeated for each of the other quarters of the year is debated (Newsom; Maier). The modern title is derived from the heading that introduces each of the individual composi-

tions. Since the songs invoke angelic praise and describe the sabbath worship of *angelic beings in the heavenly temple, the composition is also known as the *Angelic Liturgy*.

1. Content and Structure
2. Purpose, Date and Provenance
3. Significance for the New Testament

1. Content and Structure.

Even though all of the ten copies of *Sabbath Songs* are fragmentary, enough remains to describe the basic structure of the individual compositions as well as the overall structure of the cycle. Each song begins with a heading and date formula (e.g., "For the Instructor, Song of the sacrifice of the first sabbath on the fourth of the first month"). Following the heading comes a call to praise, introduced by the imperative "praise," followed by a direct object (an epithet for God) and a vocative (an angelic title). The initial call to praise is expanded with one or more parallel calls to praise. The body of the song is developed differently, depending on its place in the sequence. There appears to be no standard formula for concluding a song.

The song cycle as a whole has a discernible structure, consisting of three parts, songs 1—5, songs 6—8 and songs 9—13. Each part differs in style as well as content. The first five songs describe the establishment of the angelic priesthood and its duties, as well as the praise that these heavenly *priests utter. The second song makes what appears to be the only reference to the human priesthood and worshipers. These songs are written in a parallelistic style with ordinary syntax and containing a significant number of finite verbs.

Songs 6—8 differ strikingly. Characterized by repetitious formulas in which the number seven figures prominently, the sixth and eighth songs enumerate the praises and blessings uttered by the seven chief and deputy princes respectively. The central, seventh song elaborates the initial call to praise into a series of seven increasingly elaborate calls to praise addressed to each of the seven angelic councils. After these calls to praise the song then describes the heavenly temple itself bursting into praise, concluding with a description of the chariot throne of God and the praise uttered by multiple attendant chariot thrones (*merkabot*), their cherubim and wheels (*'ophannim*). The seventh song serves as an anticipation of the final group of songs (9—13),

which progressively describe the heavenly temple and its praises, culminating in an extended description of the divine chariot throne and the angelic high priests in their priestly robes. In this third section of the cycle, nominal and participial sentences are common, as are elaborate construct chains, apparently an attempt to create a numinous style.

2. Purpose, Date and Provenance.

The purpose and function of the *Sabbath Songs* are elusive. The headings of the songs ("song of the sabbath sacrifice") might suggest that they were a liturgical accompaniment to the sacrificial act (cf. 2 Chron 29:27; Sir 50:22-28; *m. Tamid* 3:8; 7:3-4) or perhaps a praise offering that substituted for the Musaf *sacrifice of the sabbath. This function, however, depends on the assumption that the cycle was repeated quarterly, an assumption difficult to square with the preserved date headings, which refer specifically to the first and third months. Moreover, certain themes (the establishment of the priesthood in the first sabbath song, the description of the chariot throne on the twelfth sabbath, immediately after Shabuot) suggest a cycle keyed to liturgical events specific to the first quarter of the year. If the cycle was not repeated quarterly, its function should be sought not in liturgical and sacrificial praxis but in the cultivation of a communal mysticism, the experience of angelic worship in the heavenly temple (see *Heavenly Ascent; Mysticism*).

Paleographical analysis of the manuscripts suggests that the songs were composed no later than 100 B.C. How much earlier is difficult to say. If they are judged to be a composition of the sectarian Qumran community, a date between 150 and 100 B.C. would be possible. If, however, they are judged to be pre-Qumran writings, adopted and copied by the sectarian community, then they may be older. The evidence for the provenance of the text is ambiguous. The heading "For the Instructor" is the same as that which is found in the sectarian liturgical text, IQSb (the *Rule of Blessings*; see *Book of Blessings*), though the expression in the *Sabbath Songs* might also be construed simply as a restrictive phrase ("for the one who is wise"). Apart from this phrase there is no technical terminology that might refer to the sect or its leaders. The solar *calendar, assumed by the *Sabbath Songs*, is common to nonsectarian texts as well as those produced by

the Qumran community. Terminology regularly used for God in the *Sabbath Songs* ('elohim) is generally avoided in specifically sectarian texts, though the angelic context of the *Sabbath Songs* makes the comparison problematic. The fact that one of the copies of the *Sabbath Songs* was found at Masada (Mas1k) might be explained either as a copy carried there by a refugee from the Qumran community after A.D. 68 or as evidence that the composition circulated among a wider range of Jewish groups than just the Qumran community. The evidence for provenance remains too ambiguous for certainty.

3. Significance for the New Testament.

Although there is no indication of direct influence on any NT writings, the *Sabbath Songs* share common traditions with the books of Revelation, Colossians and Hebrews. Similarities with Revelation 4—5 may derive in part from a common dependence on Ezekiel 1 and 10. Certain similar stylistic features of the angelic praise, however, such as the tendency to accumulate synonyms and the existence of seven-word formulas (cf. Rev 5:12 and 4Q403 frag. 1 i 1-29) suggest common traditions independent of Ezekiel. Both the *Sabbath Songs* and Revelation depict features of the heavenly temple as animate and capable of praise (cf. Rev 9:13-14 and 4Q403 frag. 1 i 41-46). If the reference to the veneration of angels in Colossians 2:18 refers to the mystical practice of joining in common worship with angels rather than a worship of angels, then the *Sabbath Songs* may be an example of the sort of practice to which Colossians alludes. Finally, the *Sabbath Songs* may be relevant to the traditions underlying the reference to the priesthood of Melchizedek in Hebrews 7:1-3. Unfortunately, the two passages in the *Sabbath Songs* which appear to refer to Melchizedek by name are broken (4Q401 frag. 1 i 11, 22), but the contexts describe a single angelic figure who is "priest in the assembly of God" and make reference to priestly ordination.

STOICISM

Stoicism was one of the major philosophical traditions in NT times (cf. Acts 17:18) and arguably the most influential. Its aim was to teach people to attain happiness by being in control of their lives, emphasizing virtue as the only good to

strive for, all other things being indifferent. Its strength lay in offering to its adherents a systematic and all-comprehensive worldview, based on a material pantheism. Students were exhorted to live in accordance with nature, which was variously identified with God, the divine principle of order, fate and providence. Despite significant differences in worldview, many early Christians were favorably impressed by the moral austerity of Stoicism.

1. History
2. Important Doctrines
3. Stoicism and Hellenistic Judaism
4. Stoicism and Early Christianity

1. History.

Stoicism was founded by Zeno of Citium (335-263 B.C.), who taught in the Stoa Poikilē ("Painted Colonnade") in Athens, from which the movement derived its name. He established the tripartite division of Stoic philosophy into logic (including theory of knowledge), physics (including metaphysics) and ethics. Zeno was succeeded as head of the Stoic school by Cleanthes of Assos (331-230 B.C.), who is best known for his religious interpretation of Stoic ideas (exemplified by his *Hymn to Zeus*) and his uncompromising ethics. The third head of the school, Chrysippus of Soli (c. 280-207 B.C.), a voluminous writer, reestablished Stoic orthodoxy and is often considered the second founder of Stoicism.

The foundation laid by these early philosophers was later adapted by so-called Middle Stoics such as Diogenes of Babylon (c. 240-152 B.C.), his student Panaetius (c. 185-109 B.C.) and the polymath Posidonius (c. 135-c. 51 B.C.) to make Stoicism more acceptable to the Roman intellectual elite and to accommodate certain *Platonic and *Aristotelian ideas. During the early empire, Stoic philosophers such as *Musonius Rufus (died before A.D. 101), *Seneca (c. 4 B.C.-A.D. 65), *Epictetus (mid-first to second century A.D.) and Marcus Aurelius (A.D. 121-180) focused almost exclusively on Stoicism as a way of life rather than a system of philosophy, although interest in the latter may still be seen in the textbook on ethics by Hierocles (early second century A.D.).

2. Important Doctrines.

2.1. Worldview and Theology. Stoic theology may be described as a monistic and materialistic pantheism, in which God permeates all of nature, from the cosmos as a whole down to the

most lowly physical object (Pohlenz, 1:108). It is monistic, because of its doctrine of a single world order encompassing all that exists, including God. God, as the active principle, or reason (*logos*), acts upon the passive principle, matter, but both principles have a bodily existence (Diogenes Laertius *Vit.* 7.134). Nothing exists outside the world and its material principles; there is no spiritual world or world of ideas, such as in Platonism—hence the materialism of Stoicism. God as ordering and creative principle is physically present in all things as a fine, fiery substance, variously called the "designing fire" (*pyr technikon*) or *pneuma* ("breath" or "spirit," a fiery form of air), which gives everything its form and internal cohesion. Since he is present in the whole universe and gives everything in it the character it has, God is in a sense identical with the universe (Diogenes Laertius *Vit.* 7.137). This God as immanent ordering principle is thus very different from a transcendent Creator, outside and distinct from the world.

Since all of nature is imbued with the universal reason (*logos*), all events form part of a goal-directed rational process and a rigorous causal nexus; nothing is left to chance (Cicero *De Div.* 1.125-26; Alexander of Aphrodisias *Fat.* 191.30—192.28). Everything is providentially arranged for the good of the world system as a whole. Such a deterministic view of the world does not allow for the existence of evil—even apparently bad events such as illness, pests or natural disasters contribute to the overall well-being of the universe (Long and Sedley, 1:332-33).

Because of its rationalistic and monistic approach, Stoic theology has a monotheistic tendency, with God being identified with Zeus, the supreme god of the Greek pantheon (see Cleanthes *Hymn to Zeus* = Stobaeus *Anth.* 1.1.12). This did not entail the rejection of polytheism, however; the various gods were seen as metaphorical expressions of the God at work throughout nature. Popular myths about the gods were accepted as unsophisticated explanations of natural events, the truth of which may be uncovered by means of the allegorical method (see Cornutus *Theol. Graec.*).

2.2. Ethics. For the Stoic, happiness consists in attaining one's goal (*telos*) as a human being, which is "to live in agreement with nature" (Diogenes Laertius *Vit.* 7.87), that is, in agreement with our own rational nature, as well as in agreement with the nature of the universe of which

SUETONIUS

The surviving writings of Suetonius are biographical. In the lives of the early Roman emperors there are references to Judaism or Judea, especially to expulsion of Jews from Rome under Tiberius and Claudius. The latter case may have involved Jewish Christians. There is also mention of the punishment of Christians under Nero.

1. Birth and Early Career of Suetonius
2. Works of Suetonius
3. Ancient Biographical Writing
4. Suetonius's Biographies

1. Birth and Early Career of Suetonius.

Gaius Suetonius Tranquillus (c. A.D. 70-c. 180) came from an equestrian family, but his place of birth is uncertain. Discovery of a fragmentary inscription at Hippo Regius in Roman Africa in 1952 has led some scholars to regard this as Suetonius's hometown. R. Syme (780) preferred Pisaurum in northeastern Italy. But consideration should also be given to Lanuvium in Latium, probably the town of Suetonius's relative Caesennius Silvanus (so Lindsay, 463). At an early stage of his career (c. A.D. 101-103) Suetonius was about to obtain a military tribunate but requested his *patron *Pliny the Younger to transfer the posting to Silvanus (Pliny *Ep.* 3.8).

According to the Hippo inscription, Suetonius's main positions were in the civilian administration of the emperor: literary adviser (*a studiis*), public librarian (*a bibliothecis*) and correspondence secretary (*ab epistulis*; see Roman Administration). The usual arrangement of honorary inscriptions suggests that the first two of-

fices were held under Trajan (A.D. 98-117) and the last under Hadrian (A.D. 117-138). The *Historia Augusta* reports that Hadrian "appointed successors to Septicius Clarus prefect of the praetorian guard and to Suetonius Tranquillus controller of correspondence (*epistularum magistro*) and to many others" on the ground of their excessive familiarity with the empress (*Historia Augusta: Hadrian* 11.3). This and further digressive material is inserted between summary references to Hadrian's visit to Britain (*Historia Augusta: Hadrian* 11.2; 12.1), implying a date of A.D. 122. But the unreliable author may have misplaced the information. An alternative view would see the most likely occasion for the Hippo inscription as being the visit of Hadrian to Africa in A.D. 128, when the emperor was presumably accompanied by his correspondence secretary. Dismissal of Suetonius might have occurred after return to Rome, from where Hadrian soon departed for Athens (Lindsay, 463-64; but cf. Baldwin).

2. Works of Suetonius.

The medieval Greek encyclopedia *Suda* attributes to *Trankullos* (i.e., Suetonius Tranquillus) numerous works of a scholarly or antiquarian nature; others are known by citation elsewhere. Some components of *On Famous Men* (*De Viris Illustribus*) survive; this was an example of collected *biography, containing short lives in the categories of *grammarians and *rhetoricians, *poets, orators, historians and *philosophers. The main surviving work, and presumably the latest, is *On the Life of the Caesars* (*De Vita Caesarum*, or *The Twelve Caesars*). This work contains twelve lives in chronological order, beginning with Julius Caesar and proceeding through the Roman emperors from Augustus to Domitian. The work is divided into eight books, one to each of the first six figures, then one to Galba, Otho, and Vitellius for A.D. 69, and one to the Flavians (Vespasian, Titus and Domitian). Even so, Julius and Augustus receive fuller treatment than do any of the others, marking the transition from republican to imperial government. The first few chapters of the first life were lost between the sixth and the ninth centuries. Hence the dedication to Septicius Clarus, reported by Johannes Lydus (*Lydus Mag.* 2.6), has also been lost. And it is unclear whether the lives were published serially or together.

3. Ancient Biographical Writing.

A. Momigliano (11) briefly defined biography as an "account of the life of a man from birth to death." Nevertheless, he was well aware that the earliest examples of Greek biographical writing do not merely present a chronological account of their subjects. In the body of his writing on Evagoras (c. 370 B.C.), Isocrates rather awkwardly combines topical and chronological treatment. A decade later Xenophon clearly divides his treatment of Agesilaus into a chronological account followed by topical presentation of his virtues. At Rome Cornelius Nepos (c. 110-24 B.C.) anticipated Suetonius in writing *On Famous Men*. These collected biographies included the categories of generals, kings, historians and probably poets and four others. Each category contained a series of foreign (mainly Greek) figures followed by an equivalent series of Romans. Contemporary with Suetonius, Plutarch wrote in Greek a series of lives, mostly treating a pair of notable Greeks and Romans and adding a comparison.

4. Suetonius's Biographies.

Suetonius fits into the general line of development of Greek and Roman biography. Each biography contains an "account of the life of a man from birth to death." There is ample assessment of the qualities of each of his subjects. The eight books present a collection of lives of men in the same social category. The element of comparison is present but does not function in the same way as it does in Nepos or Plutarch. Since the series of lives forms a continuous chronological succession, each biography bears comparison with the next. At the same time, an "imperial ideal" (Bradley) emerges, against which each subject is individually measured. The choice of Julius and the Roman emperors as subjects is distinctively new. And the arrangement of material within each life is somewhat different from that of other biographies.

Suetonius regularly uses a tripartite structure in each life: (1) family background, youth and early career until accession to the principate; (2) assessment of the subject's performance as emperor, where both moral categories and spheres of activity may be used; (3) narrative of the subject's death, with which may be associated a description of his physical appearance, his household and his personal habits and interests. The first section is predominantly chrono-

logical, the second mainly topical; and in the third the account of death may either follow (as in *Claudius*) or precede (as in *Nero*) the other personal details. Plutarch follows a similar tripartite pattern within individual lives.

There is brief mention of Jews, Judaism or Judea in ten of the twelve lives (see Stern, chap. 94). "Among the Roman writers from the Julio-Claudian period onwards who deal with Jewish topics, Suetonius is unique for the neutrality of his tone and the accuracy of his content" (Williams, 773). All passages are of interest in reflecting aspects of the position of Judaism in the first century B.C. to the first century A.D.

Early in the central section of *Tiberius*, Suetonius aims to show how this emperor's initial pretence of moderation gives way to a tendency to tyranny. One example (from A.D. 19) is the suppression of Jewish rites in Rome, the conscription of young Jewish men to the army and the expulsion of the rest of the Jewish community "and those who followed similar practices" from the city (Suetonius *Tiberius* 36). Suetonius seems closer to the facts than do other writers who deal with the same events (Tacitus *Ann.* 2.85.5; Josephus *Ant.* 18.3.5 §§81-84; Dio Cassius *Hist.* 57.18.5a).

More problematic is another reference at *Claudius* 25.4: "He expelled from Rome the Jews, who were constantly making disturbances at the instigation of Chrestus" (*Judaeos impulsore Chresto assidue tumultuantis Roma expulit*). The incident is one of a string of measures reported with equal brevity in order to illustrate Claudius's good administration of the empire (Suetonius *Claudius* 25.1-5). However, the complimentary nature of the catalog is undermined by the last sentence of the passage, which concludes the central section of this life. Dio Cassius also notes action taken by Claudius against the Jews (Dio Cassius *Hist.* 60.6.6), as does Orosius, the fifth-century A.D. Christian historian (Orosius *Histories* 7.6), and Acts 18:2. Each of these sources mentions only one such action under Claudius. And, according to Dio, "he did not expel them, but ordered them, while practicing their traditional life-style, not to meet together." Dio's report suggests that expulsion may have been considered but was not carried out. Suetonius gives no date. Dio mentions the matter within the first year of Claudius's reign (i.e., A.D. 41), along with other miscellaneous actions, some of which are customary rather than limited to that year. Orosius explicitly states: "Jose-

phus reports that in the ninth year of the same (sc. emperor/reign) the Jews were expelled from the city by Claudius." Since there is no such reference in the extant works of *Josephus, Orosius's dating does not inspire confidence.

Rather than illuminating the background of Acts, Orosius may be using the probable period reflected in Acts 18:2 in order to provide a more precise setting for his Suetonius quotation. The author of Acts makes a noticeable distinction between Claudius's order "that all the Jews should depart from Rome" and the recent arrival of Aquila and Priscilla "from Italy." Paul's hosts need not have come directly from Rome immediately upon the action of Claudius. Only Suetonius mentions the "instigator Chrestus" (*impulsore Chresto*). Orosius had no doubt that Suetonius meant *Christus*. Suetonius does spell *Christiani* with *i* (Suetonius *Nero* 16.2, the only occurrence of the term). But such *e/i* variations are not uncommon for this period (cf. *Chrestiani*, *Christus* within a few words at Tacitus *Ann.* 15.44.2-3). Since Jesus was not alive in the reign of Claudius, Suetonius may be speaking metaphorically or misunderstanding a source. His phrase at least suggests that in some way Jewish Christians were involved. If Dio is right, an expulsion of Jews from Rome did not take place under Claudius. The restriction on Jewish assembly in Rome is likely to have been imposed early in the reign of Claudius, possibly in A.D. 41. And if Suetonius is right about the "instigator," Jewish Christians were at least partly responsible for the trouble.

At *Nero* 16.2, Suetonius reports that "the Christians, a group of people belonging to a strange and harmful cult, were afflicted with punishment" (*afflicti supplicii Christiani, genus hominum superstitionis novae ac maleficae*). In the context, *novae* more likely refers to the nature ("strange") than the chronology of the movement ("new"). The term *maleficae* more probably indicates external effect ("harmful") than internal behavior ("evil-doing," "wicked"); compare *exitabilis* ("destructive," Tacitus *Ann.* 15.44.3). Emendation of "afflicted" (*afflicti*) to the weaker "affected" (*affecti*) is not justified. Suetonius is heightening the language of Tacitus (*Ann.* 15.44.2-3), while retaining his designation of the Christians as a "cult" (*superstitio*).

The central section of *Nero* is formally divided between treatment of his commendable actions (Suetonius *Nero* 9-19.2) and his faults

and crimes (Suetonius *Nero* 20-25, 26-39). Normally in each life Suetonius makes the emperor the subject of the main clause, and frequently of subordinate clauses, in each sentence (Lounsbury, 3750). In an unparalleled departure from this practice, Suetonius at *Nero* 16.2-17 "lists a number of 'police measures' and new regulations" (Warmington, 73), which are reported in the passive as occurring "under him" (*sub eo*). Suetonius knows that Nero personally did not deserve credit for most of these actions (see Wallace-Hadrill, 122-23). Punishment of the Christians is listed among these positive reforms. There is no specific indication of what was "strange" or "harmful" about the Christians. And Suetonius does not make any link between the Christians and the fire of Rome in A.D. 64. Nero is blamed for that, in the account that forms the climax of the portrayal of the emperor's cruelty (Suetonius *Nero* 38). But there is a congruence of vocabulary and authorial stance between *Nero* 16.2 and Tacitus (*Ann.* 15.44). Suetonius is probably alluding to the same incident of punishment of the Christians and to the same popular view, that Christians had a "hatred of the human race" (Tacitus *Ann.* 15.44.4).

Suetonius's references to Jews and Christians are all brief and incidental to his strong focus on the lives of the Caesars. "Suetonius does not explicitly state his views about Jews or Judaism" (Stern, 2:108). But, if his reporting is neutral in tone, it does include instances of suppression of Jews in Rome and in one case seems to reflect Jewish-Christian involvement. The characterization of Christians is more negative. And, while Suetonius is referring to the reign of Nero (presumably A.D. 64), the evaluative terms "strange" and "harmful" must also reflect Roman attitudes in the A.D. 120s.

SYMMACHUS. See SEPTUAGINT/GREEK OLD TESTAMENT.

SYNAGOGUES

The synagogue was the regular Jewish assembly for prayer and worship. Jesus is depicted as teaching and performing miracles in synagogues in *Galilee (Mt 4:23; Lk 4:15), especially in Nazareth (Mt 13:54; Mk 6:2; Lk 4:16) and in Capernaum (Mk 1:21; Lk 7:5; Jn 6:59). The synagogue in the latter city was probably built by the centurion (Lk 7:5) whose servant Jesus healed.

The synagogue continues to play an important role in the early church and is mentioned frequently in the book of Acts, occurring some nineteen times. Although Paul is depicted as visiting and preaching in synagogues routinely, he never uses the word in his epistles. The word occurs rarely in the remainder of the NT writings, appearing but once in James, in reference to Christian assembly (Jas 2:2), and twice in Reve-

lation, in reference to a "synagogue of Satan," an assembly, perhaps Jewish (they "say that they are Jews and are not, but lie"), that opposes the Christian community (Rev 2:9; 3:9).

9. Rivalry Between Church and Synagogue

1. Names and Origin.

"Synagogue" is a word derived from the Greek *synagōgē*, which meant originally an assembly such as of the Jews meeting for worship. In the Septuagint it is used, for example, in Exodus 12:3 of the whole congregation of Israel. It came to mean local gatherings of Jews and then the building where Jewish congregations met. Especially after the *destruction of the temple in Jerusalem in A.D. 70, synagogues became the centers of both religious and communal activity wherever there was a *minyan*, or quorum of ten Jewish men. The Talmud claimed that there were eighty synagogues in Jerusalem before A.D. 70. The Pilgrim of Bordeaux (4th cent. A.D.) reported but seven remaining in his day.

The Greek word *proseuchē*, literally "prayer," was also used as a synonym for synagogues in *inscriptions, *papyri, *Philo and *Josephus. Whether the occurrence of this word in Acts 16:13 designates a synagogue or a prayer meeting at Philippi is a matter of dispute. Another Greek word used in one papyrus for a Jewish place of prayer is the term *eucheion*. In one passage Josephus (*Ant.* 16.6.2 §164) quotes the term *sabbateion* to mean "synagogue." In later Hebrew tradition the synagogue was called variously *bēt ḥ'pillā*, "house of prayer," *bēt midraš*, "house of study," and *bēt ḥ'nēšet*, "house of assembly."

Though a few scholars (e.g., J. Weingreen) have stressed the preexilic roots of the synagogue, most would ascribe its rise to the postexilic period. Many would place this development in the Jewish exilic community in Mesopotamia.

The earliest possible inscriptional evidences are references to *proseuchē* in inscriptions and papyri from Ptolemaic Egypt (M. Bengel, E. Schürer), the earliest of which dates to the

reign of Ptolemy III Euergetes (246-221 B.C.). This text refers to the foundation of a *proseuchē* at Schedia, some twenty miles from Alexandria. Another text from the same reign refers to a *proseuchē* at Arsinoë-Crocodylopolis in the Fayum. The existence of a synagogue at this town is also confirmed by a land survey (P. Tebt. 86). An inscription from Ptolemy VII refers to the dedication of "the pylon," the monumental gate, of a synagogue (Griffiths, 10).

Some scholars who dispute the interpretation of references to these *proseuchai* in Egypt as synagogues maintain that the synagogue as an institution developed in Palestine in the second century b.c. with the rise of the *Pharisees (J. Gutmann).

2. Offices.

Jairus, whose daughter Jesus healed (Mk 5:22, 35, 36, 38; Lk 8:49), was the head of the synagogue (Gk *archisynagogos*). Luke 8:41 has Jairus listed as one of the *archōn tēs synagōgēs*, "leaders of the synagogue"; Matthew 9:23 refers to him simply as an *archōn*. From Luke 13:10-17 and from passages in Acts (18:1-17) we can infer that such an officer was responsible for keeping the congregation faithful to the Torah.

The relative esteem in which the "head of the synagogue" was held in Jewish society is revealed in a passage from the 'Talmud (*b. Pesah* 49b):

Our rabbis taught: Let a man always sell all he has and marry the daughter of a scholar. If he does not find the daughter of a scholar, let him marry the daughter of [one of] the great men of the generation. If he does not find the daughter of [one of] the great men of the generation, let him marry the daughter of a head of a synagogue. If he does not find the daughter of a head of a synagogue, let him marry the daughter of a charity treasurer. If he does not find the daughter of a charity treasurer, let him marry the daughter of an elementary school teacher, but let him not marry the daughter of an *'am hā'āreṣ* ["people of the land"] because they are detestable and of their daughters it is said, 'Cursed be he that lieth with any manner of beast' (Deut 27:21).

The word *archisynagogos* appears in thirty Greek and Latin inscriptions. In three cases from Smyrna and Myndos in Western Turkey and from Gortyn on Crete the term is used of women. B. Brotoen has argued that these and

other titles (*presbytera*, "elder"; *hiereia*, "priestess") were not just honorific but referred to women leaders. One inscription to an infant as an *archisynagogos* was certainly honorific.

A group of elders would direct the activities of the synagogue. The *archisynagogos* was probably chosen from among them. An almoner would collect and distribute alms. The *hazzān*, or "attendant," was the one who took care of the Scripture scrolls. Jesus gave back the Isaiah scroll to such an attendant (Gk *hypēretē*, Lk 4:20). The *hazzān* also announced the beginning and the end of the sabbath by blowing the *šōpār*, or ram's horn. In later practice the *hazzān* was paid and lodged at the synagogue as a caretaker.

3. Services and Other Activities.

We know that the later synagogue services included such features as the recitation of the *Shema* ("Hear, O Israel," Deut 6:4-9; 11:13-21; Num 15:37-41), prayer facing Jerusalem, the "Amen" response from the congregation, the reading of excerpts from the scrolls of the Torah (Acts 15:21) and of the Prophets, translation of the Scriptures into Aramaic paraphrases, a sermon and a benediction (cf. Neh 8; see Liturgy: Rabbinic).

It became customary to recite while standing the *Shemoneh Esreh*, or "Eighteen Benedictions," as a prayer. Toward the end of the first century A.D. a nineteenth benediction was added, which was actually a curse against the *minim*, or heretics, namely, the Christians.

Any male could be called upon to pray or to read the portions from the Torah or the Prophets (*hapṣārōt*). On one occasion Jesus read from the scroll of the prophet Isaiah (61:1-2) in the synagogue at Nazareth. Any competent individual could also be called upon to give the sermon (cf. Acts 13:15, 42; 14:1; 17:2).

Jesus refers to the custom of the teachers of the law and the Pharisees sitting in Moses' seat (Mt 23:2). Such a seat of honor has been found at Chorazin. Stone benches along the walls were reserved for dignitaries. The general congregation may have sat on mats or carpets.

Though synagogues in the Middle Ages had segregated galleries for *women, there is no evidence for such segregation in ancient synagogues. In the NT the presence of women in the congregation is attested inasmuch as Jesus healed a crippled woman as he was teaching in a synagogue (Lk 13:10-17).

As the major community building the synagogues were not only used for services on the *sabbath, Mondays, Thursdays and festival days, but also for various community functions. Children would be taught there by the *hazzān*. Funds could be kept in a communal treasury at the synagogue.

Offenders could be judged before the elders in the synagogues and flogged forty stripes save one by the *hazzān* (Mk 13:9; 2 Cor 11:24). Apostates could be excommunicated (Jn 9:22; 12:42; 16:2).

4. Remains of Buildings.

It is estimated that we have archaeological remains for over one hundred synagogue sites from Palestine and for about twenty from the Diaspora. There are relatively few archaeological evidences for synagogues in Palestine from either the first or the second century A.D. An inscription of Theodotus from Jerusalem, which has usually been dated prior to A.D. 70, refers to the establishment of a hostel for pilgrims and may possibly be related to the synagogue of the Freedmen (i.e., former slaves, Acts 6:9). It reads as follows:

Theodotus, son of Vettanos, the priest and *archisynagōgos*, son of a *archisynagōgos* and grandson of a *archisynagōgos*, who built the synagogue for purposes of reciting the law and studying the commandments, and the hostel, chambers and water installations to provide for the needs of itinerants from abroad, and whose father, with the elders, and Simonides, founded the synagogue.

A building (12 x 15 m) at the Herodian fortress of Masada has been identified as a first-century synagogue by Y. Yadin. It is equipped with benches and two rows of columns. The building's entrance was oriented toward Jerusalem. Yadin found an ostrakon with the inscription "priestly tithe" at the site. He argues that *Herod had originally constructed the building as a synagogue for his Jewish followers. The Herodian building was later reused by the Zealots until the fall of Masada in A.D. 73 to the Romans (see Jewish Wars with Rome). Pits in this building served as a genizah, or storage, for discarded scriptural scrolls (Deuteronomy and Ezekiel). Nearby were *miqṗā ʾōt*, or stepped pools, for ritual purification.

A *triclinium* (dining room) at Herodium was transformed into a synagogue by the Zealots.

The building measures 10.5 x 15 meters, with benches along the walls. A *miqṗā* is near the entrance. This building is similar in appearance to that at Masada. S. Guttman believes that a building at Gamla in the Golan heights, which he uncovered in 1976, is also a first-century A.D. synagogue.

But the alleged synagogue uncovered at Magdala in 1975 by V. Corbo and S. Loffreda has turned out to be part of a villa. No remains are visible from a first-century building excavated at Chorazin and identified by some scholars as a synagogue. The basalt synagogue which is visible at Chorazin is from a much later period. (In the Diaspora a building on the Aegean island of Delos has been identified as a synagogue dating from pre-Christian times.)

The most splendid synagogue remains in Palestine are those of the white limestone structure at Capernaum. On the basis of coins, the Franciscan excavators have dated this building to the fourth-fifth century A.D.; Israeli scholars still prefer to date it to the second or third century. In 1981 V. Corbo uncovered dark basalt walls underneath this synagogue, which he has identified as the remains of an earlier synagogue. He dug a trench within the nave and exposed a basalt wall for a length of 24 meters (78 ft). The walls are nearly four feet thick. The floor was a cobbled pavement made up of black basalt. Pottery associated with the floor establishes its date as the first century A.D. Corbo has identified this structure as the synagogue, built by the centurion, which Jesus attended (Lk 7:1-5) (see Strange and Shanks).

No certain synagogue remains from the second century have been identified except for those at Nabratein, though Roman Catholic excavators have claimed to have discovered a synagogue of "Jewish Christians" (third-fourth century) at the site of the Church of the Annunciation in Nazareth. They also identify several architectural fragments from the Franciscan monastery in Nazareth as derived from a synagogue (second-third century).

Most synagogue remains are from the Late Roman and Byzantine eras (A.D. 300-600), including about fifteen from Galilee and a similar number from the Golan Heights. The synagogues are of three architectural types: (1) Broad House, with the bema or platform on the southern long wall such as at Khirbet Shema; (2) the Basilica type, as at Capernaum and

Chorazin; (3) the Basilica with an apse at Beth Alpha.

5. Interior.

These later synagogues were elaborately decorated with symbols such as the lampstand (*m^cnōrā*), palm frond and citron. They were provided with a bema or platform for the reading of the Scriptures and a niche for the display of the ark or chest (*'āron*) for the biblical scrolls. In 1980 E. M. and C. Meyers discovered the fragment of such an ark niche from Nabratein. This pediment is decorated with reliefs of rampant lions and a scallop shell with a hole for the chain of a perpetual lamp.

Many of the Byzantine synagogues were lavishly decorated with mosaics, including four mosaics of the zodiac at Hammath Tiberias, Beth Alpha, Na'aran and Husifa. The mosaic at Hammath Tiberias has a central panel with Helios (sun) on his chariot and figures reflecting the four seasons at the corners.

We also have three examples of lists of the twenty-four priestly courses (*mišmārōt*), which hung in synagogues. Most synagogue inscriptions are of donors. The third-century A.D. synagogue at Dura Europos on the Euphrates River even had paintings on its walls depicting biblical narratives.

Because of the scant remains of synagogues from first-century A.D. Palestine, some scholars have argued that Luke-Acts is anachronistic when it refers to synagogue buildings. But this is to underestimate the fragmentary nature of the archaeological evidence and to disregard not only the testimony of the NT but also of Josephus (*Vit.* 277, 280), who speaks of a *proseuchē* which was a large building at Tiberias (cf. also Josephus *J.W.* 2.14.4 §285; *Ant.* 14.10.23 §258; 19.6.3 §300). Philo's report of the anti-Semitic mob's attacks on *proseuchas* in Alexandria in A.D. 38 (Philo *Leg. Gai.* 132) clearly refers to synagogue buildings. [E. M. Yamauchi]

6. The Functions of Synagogues.

The earliest epigraphal references to synagogues come from Egypt (from the third century B.C.), where they were known generally as "places of prayer." But prayer was only one function of what might also be called a "house of learning" (Sir 51:23). Philo describes synagogues as "schools of prudence, courage, temperance, justice, piety, holiness and every virtue"

(Philo *Vit. Mos.* 2.216), and he assumes that a reverent, communal reading of the Torah with exposition on the sabbath is their principal purpose (Philo *Leg. Gai.* 156). In that the latter reference is to a long-standing custom in Rome, Philo attests the common knowledge that synagogues are a well-known feature of Judaism and hardly a local peculiarity of Egypt. It is a reasonable inference that Philo's own monumental exposition of the Torah was designed to complete the process of advanced education which synagogues sometimes occasioned.

The epigraphal remains of Jews in Egypt reflect their political situation. One slab of limestone refers to the synagogue as "in honor of King Ptolemy and of Queen Berenice," which permits a dating within the reign of Ptolemy III Euergetes (246-221 B.C.; Griffiths, 4-5). Evidently, a degree of protection was claimed by such dedications (of which Griffiths gives further examples).

But to speculate from such evidence that the institution of the synagogue actually originated in Egypt is unwarranted. It has been claimed, for instance, that 1 Maccabees and 2 Maccabees contain "not a word" about the institution, so that evidence of synagogues in Palestine "is lacking before the first century BCE and perhaps even until the first CE" (Grabbe 1995, 21, 25). 1 Maccabees 3:46-54 in fact refers to a previous "place of prayer" in Mizpah, where the Israelites gathered after the desecration of the sanctuary. There they fast and do penance, read from the Torah and assemble what they can of the priestly vestments and the offerings, all the while seeking divine guidance. Mizpah, of course, is a place of sacrifice and assembly according to biblical precedent (Gen 31:44-54; Judg 20:1-3; 21:1-8; 1 Sam 7:5-16). But in 1 Maccabees it is presented as what Philo might have called a school of prudence and courage, a place where the Torah alone is guide, in terminology which corresponds well to the language of the epigraphal remains from Egypt.

What is evidenced in Egypt is an institution typical of the Judaism of the time, a gathering for accepting the guidance of the Torah with prayerful dedication. The generality of the synagogue is attested by the decree of Caesar Augustus that money for the temple tax might be stored in synagogues and that confiscation should be regarded as sacrilege (Josephus *Ant.* 16.6.2-3 §§162-66).

The range of purposes a synagogue might serve is attested by the inscription of Theodotus, which establishes that a synagogue was constructed in Jerusalem "for purposes of reciting the law and studying the commandments" as well as "to provide for the needs of itinerants from abroad" (see 4 above). The association with institutions such as the synagogues mentioned in Acts 6:9 is natural.

Unless synagogues needed to be public for some particular purpose (such as to claim political protection or to offer "hospitality") they were for the most part "located in houses with the plan and facade of private homes" (Tsafir, 79). Only from the third century in Palestine do typical patterns of construction for synagogues become widespread, and at the same time stunning artistic embellishments are widely represented. The Dura Europos synagogue in Dura, a Syrian town on the Euphrates, represents a similar development. The third-century building, the object of a famous excavation, was the result of successive adaptations of a private dwelling (Kraabel 1995, 99). The magnificent paintings of Dura represent that same later phase, as does its prominent shrine for the Torah.

Synagogues built long after the destruction of the *temple came to take on some of the aspects of the temple. *Tosefta Megilla* 4(3):22, for example, insists that entrances for synagogues open only to the east, as in the temple. In the same vein, representations of the menorah, the lulav, the shofar and the incense shovel within synagogues reflect a consciousness of their quasi-cultic function (Dar and Mintzker, 163; Gal, 166-73).

Before the synagogue was felt to replace the temple, it had complemented it. The official function of receiving taxes for its upkeep is one example. Another is its function as a gathering of elders for the purpose of administering justice. When Paul refers to beatings in synagogues (Acts 22:19, see also 2 Cor 11:24), that corresponds to the judicial power which Mishnah also attributes to communal authorities (*m. Mak.* 3:1-14). A document from the Persian period in Babylonia (dated 511 B.C.) shows the attempt of a Jewish family to control the behavior of a daughter (Bickerman, 1:349-50); the emergence of the synagogue provided an occasion for such legal instruments. Although the implements of the temple were later associated decoratively with synagogues, the ark for the scrolls of the Law is attested as early as Caesar's edict as

quoted by Josephus (*Ant.* 16.6.2 §164). The centrality of reading and interpreting the law is also conveyed in the scene of Nehemiah 8, which the rabbis of Talmud later associated with reciting the Scripture and giving its interpretation in *Aramaic (*b. Meg.* 3a; *b. Ned.* 37b; see Rabbinic Literature: Targumim).

The judicial function of the synagogue was not merely a punitive matter: Torah also provides for the support of the poor. Matthew 6:2 and *Tosefta Baba Batra* 8:4 in their differing ways agree that synagogues are places of charity (Safrai, 191-94). Within the first century, sites of synagogues are typically associated with miqvaot, or ritual baths (Reich, 289-97), and that association is probable in the case of the synagogue in Arsinoë-Crocodilophilus (from 115 B.C.; Kasher, 217). A particular affinity between the synagogue and the adjudication of *purity is therefore signaled by the archaeological evidence.

The functions of the synagogue must be appreciated before the accumulating archaeological data may be suitably assessed. It is a mistake of categories to expect Palestinian synagogues of the first century to be purpose-built structures, clearly labeled for the archaeologist. As long as the Jerusalem temple stood, synagogues were usually no more than large rooms, typically in the midst of other, smaller rooms (as in a private dwelling). Their purpose was the interpretation and application of the Torah, with the prayerful intent which the Torah presupposes. Some might criticize the ostentation of teachers and/or their prayer (see Mt 6:5; 23:6; Mk 12:39; Lk 11:45; 20:46), but the centrality of prayerful teaching is a matter of record. The diverse functions of the synagogue cannot be understood simply in terms of services of worship in churches today (so McKay), but most of what we call worship took place in that setting, no doubt with less organization (and decorum) than characterizes modern liturgies.

The synagogue at Migdal (Magdala) measures 8.16 x 7.25 meters; the one at Gamla measures 19.6 x 15.1 meters (Groh, 58-59). Both feature banked seats and columns arranged around a central area. They are designed for attentive listening. Beyond that, the use of such spaces for purposes of public meeting, the collection of alms, adjudication, higher learning, disputation, local administration and hospitality would vary from place to place, depending upon the needs, resources and aspirations of the local

community. Because local needs, resources and aspirations themselves can change before buildings can be altered, there is no reason to imagine all public functions took place in the same place in every community. The place of prayer in Philippi is said in Acts 16:13 to be beside a river. Local exigencies might demand outdoor meetings, as in the case of Judas Maccabeus at Mizpah. Only a simplistic obsession with monuments demands a marked, purpose-built structure for the claim to be made that those who revered the Torah read it regularly together and tried reverently to apply it.

7. Jesus' Relation to Synagogues.

The portrayal of Jesus' activity in the Gospels often corresponds to what may be known of synagogues within his period and place, although at times the presentation seems to reflect more the customs within Greek-speaking congregations in the Diaspora. Luke 4:16-21 is the most vivid example of both aspects of the representation of Jesus (Chilton 1979, 123-77).

As the text reads, Jesus simply stands and recites a text and claims it has been fulfilled. General amazement is the result (Lk 4:22), and the congregation is startled even before Jesus announces the fulfillment of Scripture (Lk 4:20). What is missing from the text is an indication that Jesus has here provided a targum, a translation of the passage into Aramaic, because in the Hellenistic Diaspora the Scriptures were simply read in Greek (*see* Septuagint/Greek Old Testament), rather than read and then translated. It has often been observed that the citation from Isaiah 61:1-2a, the principal source Jesus cites here, omits the reference to divine vengeance in Isaiah 61:2b. That might have occasioned mild surprise, but scarcely astonishment. After all, the choice of where a passage of reading should end was largely left open during the first century. The key to an understanding of what Jesus says is that it is not a simple reading of Isaiah 61:1-2, but a conflation of that passage with Isaiah 58:6, which speaks of forgiving, that is, releasing, those who are oppressed. In the underlying tradition which informed the passage, Jesus stood in the synagogue and gave a new rendering of the book of Isaiah in Aramaic, targeted on the issue of forgiveness. That motivated his omission to speak of divine vengeance.

His assertion of the new activity of God is, it has been proposed, most accurately represented

in the text of the Old Syriac Gospels:

The Spirit of the Lord is upon you,
because of which he anointed you to
preach to the poor,
and he has sent me to preach to the captives
forgiveness, and to the blind sight
—and I will strengthen the broken with
forgiveness—
and to preach the acceptable year of the
Lord.

The reading reflects the linkage between Jesus personally and the distinctive issue of his new "reading": the issue of forgiveness. That linkage, the claim of an offer of forgiveness "fulfilled" by Jesus, causes astonishment in the synagogue.

In what follows in the text of Luke, astonishment turns inexplicably to scandal (Lk 4:22-30). The experience of preachers of Jesus in synagogues nearer Luke's time is reflected, as can be seen in the similarity of the pattern of presentation in Acts 13:13-52 concerning Paul and Barnabas at Pisidian Antioch. The sequel has Paul stoned by Jews in Lystra (Acts 14:19), so that the comparability with the presentation of Jesus in Nazareth becomes all the more plain.

Nonetheless, Jesus' activity in synagogues, including his sympathetic relations with leaders of synagogues such as Jairus, is amply attested. The general pattern of teaching in synagogues (Mt 4:23; 9:35; 13:54; Mk 1:39; Lk 4:15; Jn 18:20) confirms the connection between Jesus and the targumic tradition (Chilton 1984). There is no evidence to support the contention that lectionaries of readings were fixed within the first century, and that complements the NT's picture of the freedom which Jesus and his followers enjoyed in choosing the texts that suited them. It is also striking that the question of healing is at issue in synagogues, in the idiom of disputes about keeping the sabbath (Mt 12:9-14; Mk 3:1-6; Lk 6:6-11; 13:10-17; 14:1-6) and about purity (Mk 1:21-28; Lk 4:31-37). Purity is also an implicit concern in approaching the supposed corpse of Jairus's daughter (Mt 9:18-19, 23-26; Mk 5:21-24, 35-43; Lk 8:40-42, 49-56). That issue is underlined within the tradition, as is shown by the inclusion of the story of the woman with a flow of blood (Mt 9:20-22; Mk 5:25-34; Lk 8:43-48). That Jairus would have lived adjacent to any meeting room now seems entirely plausible in light of archaeological data.

Indeed, the synagogue may have featured more prominently in Jesus' ministry than ap-

pears at first sight. Peter and Andrew are depicted as residing adjacent to a synagogue in Capernaum (Mk 1:29; cf. Lk 4:38), and they may have been leaders there. Also at Capernaum, an appeal is made to Jesus to be sympathetic to a centurion on the grounds that he had built a synagogue (Lk 7:5); Jesus' high esteem of the institution is obviously presupposed (see also Jn 6:59). Likewise, Jesus himself is assumed to be an acceptable teacher in his own home town (Mt 13:54; Mk 6:2; Lk 4:16). Jesus' pronouncement that the "leper" who approached him was clean (Mt 8:1-4; Mk 1:40-45; Lk 5:12-16) may originally have been set in a synagogue, and that is the most appropriate setting for his teaching concerning defilement (Mk 7:15; Mt 15:10-11; see Purity). The "house" in which Jesus is placed at the time he declared the paralytic free of both sin and disease was possibly a synagogue (Mk 2:1-12; cf. Mt 9:1-8; Lk 5:17-26); that would explain the crowd and the degree of controversy involved.

8. Paul and the Hellenistic Synagogue.

Only at a later stage in the development of the Gospels was the synagogue assumed to be a place of persecution for disciples (Mt 10:17; 23:34; Mk 13:9; Lk 12:11; 21:12). That assumption reflects hard experience, as intimated, for example, in the allusion within the source called Q to failed missions in Chorazin and Bethsaida, and even in the formerly sympathetic Capernaum (Lk 10:13-15; Mt 11:20-24; see Catchpole, 171-76).

Acts reflects something of the attempt after the resurrection by some unsympathetic leaders of synagogues to coordinate a denunciation of Jesus' followers with the help of the authorities of the temple (Acts 9:1-2; 22:19; 26:11; cf. 24:12). But the focus is so consistently upon Paul's reception in synagogues (together with Barnabas's, as Paul's companion), that it is a matter of supposition how other Christian leaders, such as Peter and James, were received in synagogues. Presumably their experience was as different from Paul's as their teaching was less radical, and James in fact cites the preaching of Moses in synagogues as a reason for non-Jewish believers to maintain a rudimentary purity (Acts 15:19-21). But Paul becomes the lens through which Acts views the institution of the synagogue.

Despite the radicalism of his message, Acts assumes that Paul is received into synagogues

and that he is permitted to preach (Acts 13:18-43). The repeated opportunity permits Paul to reach non-Jewish hearers in the synagogues, which provokes jealousy among "the Jews" (Acts 13:44-52). That experience in Pisidian Antioch brings Paul and Barnabas to Iconium: some Jews and Greeks believe as a result of what they hear in a synagogue, but some people "sided with the Jews" (Acts 14:1-4). The threat of stoning (by both Gentiles and Jews) drives the apostles on to Lystra, where a similar pattern of experience results in the actual stoning of Paul because the people of Lystra are incited by antagonistic Jews from Antioch and Iconium (Acts 1:5-20).

Although much of the language of Acts suggests that there was a united Jewish front against Paul (and against Jesus before the time of Paul), the fact is that the synagogue remains Paul's customary point of entry into the communities he visits. Thessalonica (Acts 17:1-9), Berea (Acts 17:10-14), Athens (17:16-17) all hear Paul first in their synagogues. The pattern of persecution from both religious and civic leaders is represented again, and the last example shows how dispute in the synagogue could spill over into the marketplace (Acts 17:18-34).

The link between the synagogue and wider, civic debate was forged particularly by those known as Godfearers, those who acknowledged the God of Israel without accepting circumcision. As a type of believer, they are represented by the centurion Cornelius in Acts, who is converted by Peter (Acts 10:1-48). Paul is portrayed as even more effective in his ministry to them (Acts 13:16, 26). A similar group is referred to with the designation of those who "worship" God (see Acts 13:43, 50; 16:14; 17:4, 17; 18:7; the RSV often renders the usage with the adjective "devout"; see Proselytism and Godfearers).

But Paul's focus in Corinth continues to be the synagogue (Acts 18:1-4), and Crispus—ruler of the synagogue—is baptized with his household (Acts 18:5-11). The synagogue is Paul's introduction to Ephesus (Acts 18:19; 19:8), and it is also the place where Apollos preaches (Acts 18:26). Even the final chapter of Acts presents Paul in the company of local leaders of the Jews in Rome, gathered to hear him out, perhaps in their synagogue (Acts 28:17-22).

Paul's own letters do not use the term *synagogue*, because their concern is not with that institution. His interest is rather the definition and

salvation of "Israel" (see Rom 9:6; 11:26; Gal 6:16), in which all who believe—Jew and Greek, slave and free, male and female (Gal 3:28)—are included (see Rom 4:1-25; Gal 3:6-7, 14, 27-29). The synagogue was therefore for Paul an occasion, not a limit, of operation. Even in his case, because the ultimate aim was to constitute Israel (however radically defined), the synagogue was a natural place to operate, no matter what the level of opposition to him (see 2 Cor 11:23-27). And in his case, as in the case of Christian leaders contemporaneous with him, it is difficult to imagine how the gospel could have been preached without the previous establishment of synagogues in the Mediterranean world and apart from their relative toleration of unconventional teachers.

9. Rivalry Between Church and Synagogue.

Although the letter of James reflects a familiarity with the term *church* (*ekklēsia*) in order to refer to communities of believers (Jas 5:14), the term *synagogue* (*synagōgē*) also appears (Jas 2:2). The usage does not represent a formal claim to replace the most prominent institution of Judaism after A.D. 70, but the willingness to use the word itself is notable. It probably means no more than an assembly in context, but an assembly for the purpose of discerning and keeping the true "royal law" (Jas 2:8) represents an implicit challenge to other congregations that claim to uphold the Torah.

James uses negative examples to insist by way of contrast that the poor should not be treated worse than the rich (Jas 2:1-7), that the whole of the law is to be understood in the commandment to love (Jas 2:8-13), that faith apart from actions is dead (Jas 2:14-26). The principal ethical interest of the letter closes with an explicit encouragement of prayer (Jas 5:13-18), underlined—as the letter is generally—with scriptural example and allusion. The letter, in other words, is setting up the church as the true synagogue, a school of wisdom and action whose curriculum is the law correctly understood.

The irony is that the rivalry between church and synagogue was greatest when Christians most consciously adhered to their Judaic roots. The Revelation of John sets up its vision as involving the divine court (Rev 1:12-16), the very throne of God (Rev 4:1-11); the terms of reference are principally drawn from Daniel and

Ezekiel. But because this vision occurs on the "Lord's day" (Rev 1:10), not during the sabbath meeting in the synagogue, any opposing institution must be a "synagogue of Satan" (Rev 2:9; 3:9). That is the inevitable alternative to the discovery of the heavenly sanctuary under the guidance of Jesus as "one like a son of man" (Rev 1:13, alluding to Dan 7:13).

These developments in the Revelation presuppose the growing antipathy of leaders of the synagogue after A.D. 70, who were increasingly influenced by the Pharisees/*rabbis. The period saw the development of the "blessing of the *minim*," a petition within the "Eighteen Benedictions" which cursed disloyal Jews such as the Christians. Perhaps an even greater occasion of rivalry between churches and synagogues was the decision that certain of the rituals of the temple could be conducted in the synagogue. Such a decision was made by R. Yohanan ben Zakkai at Yavneh, when he permitted the shofar, the ram's horn, to be blown at the feast of the new year in the synagogue as it once had been in the temple (*m. Roš Haš.* 4:1-4). For those who saw Jesus as the true access to the sanctuary, any transfer of the temple's function to the synagogue necessitated the replacement of that institution; from that time, the attempt to replace the institutions of Judaism within Christianity became programmatic. [B. Chilton]

SYRIAC BIBLE

The OT and NT in Syriac have different histories with some overlap. The translation of the OT into Syriac preceded that of the NT by at least a century or two, since the earliest Gospel text in Syriac, the Diatessaron, uses the Peshitta OT for its OT quotations rather than the Greek. The printed text of the Syriac NT is a composite, consisting of the Peshitta version for twenty-two books and probably the Philoxenian version for the other five books (2 Peter, 2 John, 3 John, Jude and Revelation). All the early versions of the Gospels (the Old Syriac, the Peshitta and the Harklean) omit the pericope concerning adultery (Jn 7:53—8:11).

1. Old Testament in Syriac
2. New Testament in Syriac

1. Old Testament in Syriac.

1.1. Old Testament Peshitta. Jews or Jewish Christians translated the OT Peshitta from the Hebrew sometime in the first two centuries A.D. at Edessa. The OT Peshitta is not monolithic: different books were translated by different translators over a period of years, as indicated by vocabulary preferences in different books (e.g., *qyāmā* versus *diyātēqē* for Hebrew *b'rīt* ["covenant"]; *'ēlātā* versus *yaqdā* *šalmā* for Hebrew *'ōlāh* ["burnt offering"]). The Torah in particular reflects *rabbinic exegesis. Some scholars believe that the group started out as adherents to a form of nonrabbinic *Judaism and were subsequently converted to Christian belief.

The Peshitta is an intelligible translation of a Hebrew text into idiomatic Syriac. It stands close to the MT and offers important exegesis of the Hebrew. The role of the *Septuagint (LXX) in its formation is disputed. Some experts believe that the original translators used the LXX as a translation help; others, that revisers used it to improve the text; still others reject the notion of direct LXX influence.

A critical edition is being produced under the auspices of the Peshitta Institute of Leiden University, which supersedes all previously printed texts. The basis of this edition is MS 7a1. Peshitta scholars are in disagreement as to whether or not certain early manuscripts (e.g., 5b1 for Genesis and Exodus and 9a1 for Kings, which stand closer to the Hebrew of the MT than does 7a1)

represent an earlier stage in the development of the Peshitta text than is represented by 7a1 or a later stage.

1.2. Philoxenian Version. R. G. Jenkins has demonstrated that, in his later literary works (i.e., those written after A.D. 500), Philoxenus quotes from a Syriac version different from the Peshitta and influenced by the Greek for certain OT books and that the Syro-lucianic text of Isaiah (= BM Add. 17106) represents that version. Whether Philoxenus himself sponsored this version and whether it covered the whole of the OT remain open questions.

1.3. Syrohexapla. Paul of Tella produced this translation of the Greek OT at *Alexandria in A.D. 616-617. He and Thomas of Harkel (see 2.5 below) may have collaborated, since their translation techniques are similar and they worked at the same time, in the same place and under the same auspices. Representing the fifth column of Origen's Hexapla, it was a scholar's version complete with annotations, including variant readings. Its Syriac style mirrors the Greek slavishly.

1.4. Revision of Jacob of Edessa. Around A.D. 705, Jacob of Edessa revised the OT Peshitta on the basis of the Greek. He apparently used both the Syrohexapla and the Lucianic Greek tradition.

2. New Testament in Syriac.

2.1. Diatessaron of Tatian. This harmony of the Gospels produced by Tatian about A.D. 170 became the Gospel of the Syriac-speaking church from the late second century until the mid-fifth century, when it was finally suppressed through the efforts of Rabbūla, the bishop of Edessa, and Theodoret, the bishop of Cyrus in upper Syria. Ephrem (d. A.D. 373) wrote a commentary on it, which has only recently come to light in the original Syriac. Scholars are divided over whether the Diatessaron was originally composed in Greek or Syriac. One scholar has advanced the view that Tatian composed it in two languages from the beginning. The Diatessaron primarily follows the sequence of events recorded in Matthew. Tatian did meticulous work, eliminating repetitious parallels and smoothing out apparent divergences and contradictions. Besides the four Greek Gospels, Tatian apparently used a West Aramaic Gospel, as evidenced by the use of West Aramaic vocabulary (i.e., non-Syriac; e.g., *xy'* ["to save" (in a religious sense)], as in Christian Palestinian

Aramaic versus OT Peshitta *prq*), preserved by both the Old Syriac and Peshitta. Further, Tatian apparently adopted the principle of using the OT Peshitta for OT quotations, rather than the Greek. The Diatessaron came to be called 'ewangeliyōn da-m'hal'tē' ("the Gospel of the mixed") in Syriac literature, in contrast to 'ewangeliyōn da-m'par'sē' ("the Gospel of the separated [Evangelists]"; i.e., the four individual Gospels).

2.2. Old Syriac Gospels. Sometime in the third century, a Syriac scholar with a mediocre knowledge of Greek made an attempt to render the Greek Gospels into Syriac. He preserved much of the Diatessaron and followed it in using the OT Peshitta for OT quotations. It is represented by two manuscripts, the Curetonian and the Sinaitic.

2.3. New Testament Peshitta. Probably in the fourth century, another, more successful, attempt at rendering the Greek Gospels into Syriac was made. The translator used the four Greek Gospels and a revised text of the Diatessaron. He too followed Tatian in using the OT Peshitta for his OT quotations. The Peshitta Gospels have no direct relationship to the Old Syriac Gospels but were made independent of them. The NT Peshitta lacks 2 Peter, 2 John, 3 John, Jude and Revelation. Early manuscripts omit Luke 22:17-18.

2.4. Philoxenian Version. Philoxenus, the Monophysite bishop of Mabbug from A.D. 485 until his exile in A.D. 519, commissioned this revision of the whole of the NT for dogmatic theological reasons. The chorepiscopus Polycarp carried out the work of translation, which he completed in A.D. 508. Unfortunately for us, none of this translation has survived in itself, although J. Gwynn believed that the book of Revelation contained in the Crawford manuscript of the John Rylands Library represents this version. The later works of Philoxenus, particularly his commentaries on the Gospels, apparently preserve citations. It is widely thought that the printed texts of 2 Peter, 2 John, 3 John, Jude and Revelation found in Syriac Bibles derive from this version.

2.5. Harklean Version. In A.D. 616, Thomas of Harkel produced a revision of the Philoxenian version of the NT at the Enaton ("the ninth ward") of Alexandria in the monastery of the Antonians. He produced a scientific work, with annotations marked with asterisks and obeli, and marginal notes containing both variants

and other items. It may have been made as a gesture of reconciliation with the Monophysite church of Egypt. It was a philologically motivated translation that attempted to mirror the Greek. The invocation of the Lord's Prayer, "Our Father who art in heaven" (*pater hēmōn ho en tois ouranois*), in Matthew 6:9 serves as a typical example of mirror translation. The Harklean version renders it as 'b' dyln haw dōšmy'. By contrast the Peshitta and Old Syriac render 'bwn dōšmy'. The Harklean uses the independent possessive pronoun *dyln* to mirror the Greek *hēmōn* and the demonstrative pronominal *prop haw* to represent the Greek relative pronoun *ho*. These features of translation are also found in the Syrohexapla of the OT. Some printed editions of the Syriac NT contain the Harklean version of the book of Revelation.

SYRIAC NEW TESTAMENT. See **NEW TESTAMENT VERSIONS, ANCIENT.**

T

TACITUS

Publius(?) Cornelius Tacitus was born into an equestrian family about A.D. 56, probably in Cisalpine Gaul. He was in *Rome by A.D. 75 and married Agricola's daughter in A.D. 77. By following the sequence of Roman public office he gained senatorial status; he was governor of the senatorial province of Asia in A.D. 112-113. He died sometime after he had finished writing the *Annals* (c. A.D. 120/121).

1. Works of Tacitus
2. References to Judaism or Judea
3. Reference to Christians

1. Works of Tacitus.

Early in A.D. 98 Tacitus published the *Agricola*, primarily a biography of his father-in-law but with elements of ethnography and historical monograph. Later in A.D. 98 he published the *Germania*, an ethnographic treatise describing the tribes north of the Rhine and the Danube. The authenticity of the *Dialogue on Orators* from about A.D. 101 or 102 is now widely accepted. The three speakers debate the causes of the contemporary decline in oratory at a dramatic date of A.D. 75.

From Pliny the Younger (Pliny *Ep.* 6.16, 20) it is clear that at the time of writing Tacitus had been collecting material for a historical work that included 79, presumably the lost later books of the *Histories*. This work, covering A.D. 69 to 96, was completed by about A.D. 110. It probably contained eighteen books. Only books 1-4 and 5.1-26 survive, treating A.D. 69 and part of 70.

Although at *Histories* 1.1 Tacitus forecasts a future work dealing with the reigns of Nerva (A.D. 96-98) and Trajan (A.D. 98-117), in the *Annals* he goes back to fill in the years A.D. 14 to 68. There survive only books 1-4, part of 5, 6, the second half of 11, 12-15 and the first half of 16. The narrative thus breaks off in A.D. 66 and fails

to reach the starting point of the *Histories*. The arrangement of the material is annalistic, and for each year there are sections on domestic and provincial affairs.

2. References to Judaism or Judea.

There are references to Jews, Judaism or Judea in the *Histories* and the *Annals*; M. Stern (chap. 92) presents twenty-two passages. The most extensive is the ethnographic digression at the beginning of *Histories* 5, when Titus is about to conduct the final siege of Jerusalem in A.D. 70. After the digression Tacitus changes scene to Germany, and the *Histories* break off before he describes the fall of *Jerusalem, which occurred only three weeks later.

Tacitus uses digressions to provide variety and dramatic relief, to display his learning and especially to mark an important stage in his narrative (Sage, 890-91). Along with most ancient historians he also "saw personality and the individual as crucial motive forces in history" (Sage, 901). However, the portrayal of character may also be applied to racial or national groups, as with the Jewish people in *Histories* 5. Moreover, besides introductory character sketches there are also obituaries (Sage, 902). And in the *Histories* there are obituaries not only for important individuals but also for corporate entities: the city of Cremona (Tacitus *Hist.* 3.84) and the Capitol at Rome (Tacitus *Hist.* 3.71-72). The digression on the Jewish people is introduced with a reference to the death of the city of Jerusalem (Tacitus *Hist.* 5.2.1).

After a summary of the military situation in Judea (Tacitus *Hist.* 5.1), Tacitus begins his digression on the Jewish people (Tacitus *Hist.* 5.2-10) by presenting various theories of their origin (Tacitus *Hist.* 5.2-3) and an account of Jewish practices and beliefs (Tacitus *Hist.* 5.4-5). The digression is completed by a geographical survey

of Judea (Tacitus *Hist.* 5.6.1—8.1) and a historical survey of the Jewish people (Tacitus *Hist.* 5.8.2—10.2). There follows an introduction to the siege of Jerusalem (Tacitus *Hist.* 5.11-13). This begins with a summary of military activity (Tacitus *Hist.* 5.11.1-2), then deals with topography (Tacitus *Hist.* 5.11.3—12.2), manpower (Tacitus *Hist.* 5.12.2-4), portents (Tacitus *Hist.* 5.13.1-2) and the circumstances of the people under siege (Tacitus *Hist.* 5.13.3), and concludes with a retrospective and prospective summary (Tacitus *Hist.* 5.13.4).

In the *Histories* Tacitus cites specific sources only twice (Tacitus *Hist.* 3.28; 3.51.2). Within *Histories* 5.1-13 he alludes to unspecified sources for each of the six theories of Jewish origins (Tacitus *Hist.* 5.2-3), for Jewish customs (Tacitus *Hist.* 5.4.3-4; 5.5.5), for Judean geography (Tacitus *Hist.* 5.6.4; 5.7.1) and for the number of those besieged in Jerusalem (Tacitus *Hist.* 5.13.3). The phrases that Tacitus uses indicate his degree of commitment to a particular theory or piece of information. And in one instance he offers his own assessment (Tacitus *Hist.* 5.7.2). Modern discussion of Tacitus's sources is speculative and inconclusive. *Pliny the Elder is one of the two named sources at *Histories* 3.28. His *Natural History* may be a source for the geographical section (Tacitus *Hist.* 5.6.1—5.8.1), and his lost general history may have supplied material for Tacitus's account of the Jewish war. Because of differences of detail and of overall attitude, *Josephus has not been regarded in recent times as a likely source for Tacitus; they may, however, have shared common sources (see Hospers-Jansen, *passim*; Stern, 2:1-5, 31-63; Chilver and Townend, 19-20; Sage, 893-97).

Tacitus's portrayal shows the extent of the knowledge and the attitude of a major Roman historian concerning the history and culture of the Jewish people. His discussion is systematic and well organized. Where alternative views are reported, we do not expect them all to be right. And, although many points are inaccurate or wrong, others are correct. Unlike *Josephus, Tacitus was not obliged simultaneously to defend the Jewish people and the Flavian emperors who had conquered them.

3. Reference to Christians.

The only reference to Christians in Tacitus is at *Annals* 15.44. The immediate context is the fire of Rome in A.D. 64 (Tacitus *Ann.* 15.38-45). This

section serves Tacitus's wider aim of showing "how the degeneracy of the *princeps* was disastrous for Rome" (Morford, 1614; Tacitus *Ann.* 15.38.1). Despite Nero's positive measures for dealing with the fire, deliberate plans for rebuilding were suspected and the rumor persisted that Nero was responsible for the fire (Tacitus *Ann.* 15.40, 44.2). He therefore transferred the blame to the Christians (Tacitus *Ann.* 15.44.2-5). Tacitus himself does not assign responsibility for the fire to the Christians. It seems that Tacitus wishes to use the fire to present a negative impression of Nero, while he carefully avoids directly blaming Nero (see Tacitus *Ann.* 15.38.1; 38.7—39.1; 39.3; 40.2; 44.2). Despite the innuendo against Nero, Tacitus's own view must be that the fire began by chance in Nero's absence. Other writers before and after Tacitus frankly blame Nero: Pliny *Natural History* 17.1.5; [Seneca] *Octavia* 831-33; Suetonius *Nero* 38; Dio Cassius *Epitome* 62.16-18.

The "Christians" were so called by the general public (cf. Acts 11:26) and were unpopular with them because of their alleged "shameful actions" (*flagitia*) (Tacitus *Ann.* 15.44.2). The better manuscript reading is *Chrestianos*. But it is likely that this simply means "Christians," not followers of a Jewish rebel called Chrestus (cf. Suetonius *Claudius* 25.4), nor is there any allusion to the Greek adjective *chrēstos* ("good"). There is an immediate digression (Tacitus *Ann.* 15.44.3) on the "founder" (*auctor*) of the "movement" (*nomen*, lit. "name"), punished by Pilate under Tiberius. Judea is noted as the place of origin of the movement before its spread to Rome. Value judgments on the movement are emphatic in accordance with the style of Tacitus. It is a "destructive cult" (*exitiabilis superstitio*) and an "evil" (*malum*), and it is associated with "everything shocking and shameful" that flows into Rome.

Returning to the narrative (Tacitus *Ann.* 15.44.4), Tacitus reports that "those who confessed were apprehended, then, on their information, a huge multitude were joined with them not so much on the charge of arson as for hatred of the human race." What they "confessed" was that they were Christians, since Tacitus does not believe that they committed arson. With regard to the "huge multitude," the better manuscript reading is "joined with" (*coniuncti*), not "convicted" (*convicti*). The allegation of "hatred of the human race" (*odio humani generis*), previ-

ously made against Jews (including Tacitus *Hist.* 5.5.1), Tacitus now applies to Christians. He thereby indicates that Christians could plausibly be charged with arson, not on the basis of the facts but due to a prejudiced view of their general attitude. The "elaborate punishments" of the Christians in the gardens of Nero are briefly described. In conclusion, "however guilty and deserving of unprecedented and exemplary punishment they may have been, there arose a feeling of compassion for them, on the ground that they were being annihilated not in the interests of the people but to satisfy the savagery of one man" (Tacitus *Ann.* 15.44.5). Tacitus's unexpected reference to the guilt and deserved punishment of Christians is often explained on the basis that he is representing the view of those who were convinced by Nero's allegations. Alternatively, in Tacitus's view they may indeed be guilty of hatred of the human race; cf. Pliny *Epistles* 10.96.3.

If Pliny the Elder is a source for the facts of the case (Koestermann, 256), Tacitus may have drawn a number of terms from the discussion of the Christians of Bithynia Pontus in Pliny the Younger *Epistles* 10.96 (including Christ, Christians, name, punishment, cult, confess, charge). Thus Tacitus is aware of the circumstances of the origin of the Christian movement; he does not regard the Christians as responsible for the fire of Rome; and he acknowledges the public feeling of compassion for them. But he shares the general prejudice against them.

TALE OF BAGASRAW (PSEUDO-ESTHER) (4Q550^{a-f})

The *Tale of Bagasraw* is an Aramaic literary work extant in five or, less likely, six fragmentary copies unearthed in Qumran Cave 4. (4Q550^f, formerly known as 4QAramaic N, belongs to another work, according to García Martínez.) The scholar responsible for the *editio princeps*, J. T. Milik, has argued that the *Tale of Bagasraw* served as a source for the book of Esther. Of all the books of the Hebrew Bible, Esther alone makes no appearance among the *Qumran caches—but if one of its sources does appear, then Esther's absence becomes less absolute and, for some scholars, less puzzling. Nevertheless, while acknowledging the possibility of an indirect relationship between Esther and the *Tale of Bagasraw*, scholarly consensus has stopped short of endorsing Milik's position.

1. Possible Plot of the Tale
2. Connections with Esther

1. Possible Plot of the Tale.

The *Tale of Bagasraw* has survived in such a fragmentary condition that the work's plot line is a matter of conjecture. Not only are the extant fragments broken and unconnected, such that their order is uncertain and what happens first, second and third open to debate; but also many of

ond and third open to debate; but also many of the readings and even meanings of the Aramaic words are equally debatable. E. M. Cook has offered a cautious and plausible plot summary.

As with Esther, the events in the *Tale of Bagasraw* take place in the Persian court, and as with Esther the monarch at court is Xerxes. The hero is a Jew named Bagasraw (all the characters have Persian names). Bagasraw is the son of Patireza, who had been attached to the royal garmentmakers attending Xerxes' father, Darius I. In some way he was able to benefit Darius, for which reason he and his deed were inscribed in the Persian royal records. Upon becoming king and learning of the episode, Xerxes decides to bestow his favor upon Bagasraw as Patireza's son. A third character, Bagoshi, a member of the king's retinue, is friendly to Bagasraw and warns him of opposition from royal advisers jealous of the king's favor. With Bagoshi's help, Bagasraw overcomes this antagonism and receives all that the king has planned to give him. At the end, Xerxes commands those of his own time and all future generations to honor Bagasraw and his God, the Most High.

2. Connections with Esther.

In a general sense the connections of the *Tale of Bagasraw* with Esther are patent, for both belong to a genre of Jewish wisdom writings of the Second Temple period known as courtier tales. In these stories one or more Jews succeeds in the court of a foreign king, rises to prominence because of innate qualities of wisdom or character, only to suffer a fall or mortal threat through unjust persecution, and finally is vindicated. Not only Esther but also the stories of the book of Daniel (Dan 1–6) belong to this genre. Milik and others, however, have argued for a much more direct connection between the *Tale of Bagasraw* and Esther. They maintain that the author of Esther knew and used the *Tale of Bagasraw* as a source for the biblical book. The main arguments that Milik and his supporters have offered are the following.

(1) The king has the royal records read to him, as in Esther 6:1 (4Q550^a). This is a generic if striking correspondence.

(2) One of the main characters, Patireza, bears, according to Milik, the patronymic Jair (4Q550^b 3). According to Esther 2:5 and the *Septuagint addition A verse 1, Mordecai's father was also called Jair. Milik argues therefore

that Patireza is the same person as Mordecai, Mordecai being his Hebrew name and Patireza his Persian name. (It was common for Jews in foreign settings to have both a Hebrew and a native name, as did Daniel, for example—Belteshazzar in Dan 5:12.) But Milik's argument is weak, since Mordecai is not a Hebrew name. It is Babylonian; Mordecai derives from Marduk, head of the Babylonian pantheon. Moreover, the suggestion that Patireza's father was named Jair is speculative, since only the first letter of the name can be read. Many other Hebrew names (e.g., Josiah, Joseph, Joshua) or even Persian names might be suggested in place of the Jair that Milik restores.

(3) As Mordecai is rewarded by the king in Esther 6, so also Bagasraw is rewarded in 4Q550^b. Again, this is only a generic correspondence, natural to the tale of the Jewish courtier at the foreign court.

(4) In 4Q550^c Milik reads the name Hama (Aramaic *ḥ^amā*'), whom he identifies as Haman in the story of Esther. Since the word in the *Tale of Bagasraw* begins with a *het*, whereas the name of Haman begins with the Hebrew letter *heh* (the first being a rougher, guttural "h" sound), Milik argues that the book of Esther must have been translated into Hebrew from Greek. When the Hama of the *Tale of Bagasraw* had his name transliterated into Greek, the quality of the original consonant was lost, there being no equivalent in the Greek alphabet. Thus Milik postulates the following dubious process: first, the book of Esther was written in Aramaic, using the *Tale of Bagasraw* as a source, and the name of Hama; then Esther was translated into Greek, and the name of Hama lost its initial guttural consonant; finally, Greek Esther was rendered into Hebrew, and the name Haman was the transformed remnant of the original name. Only in this way can Milik account for the sound changes. But his whole theory is moot if, as Cook has plausibly suggested, the supposed name Hama is instead the common Aramaic verb for "to see." Where Milik and supporters render 4Q550^c 2 as "Patireza your father, from Hama [Aramaic *min ḥ^amā*'] who arose concerning the service" (White Crawford), Cook has rendered the line, "Patireza your father. Who has seen [Aramaic *man ḥ^amā*] that he stood over the business . . . ?" So this particular connection of the *Tale of Bagasraw* with Esther is likely to become a mere curiosity of scholarship.

(5) In 4Q550^d i 2-3, Milik and others read the phrase "a man of Judah from the leadership of Benjamin." Mordecai is likewise said in Esther 2:5-6 to be a Benjaminite of Judah. But this is yet another problematic interpretation of the *Tale of Bagasraw*. For instead of Milik's reading and restoration of the Aramaic as *g'bar y'hūdāy min dabār hinyāmsin*, one might equally well read and restore *g'bar y'hūdāy min rab' bānē m[alkū]*, "a Jewish man from among the king's courtiers"—thus eliminating all mention of the tribe of Benjamin. Furthermore, Milik's proposal results in a lexical difficulty with the word *dabār*. The meaning Milik needs here, "leadership," is unattested in Palestinian Aramaic, being known only from Syriac; S. White Crawford's rendering "one of the leaders" (White Crawford, 32) is grammatically impossible.

(6) White Crawford, who supports the thrust of Milik's theory, has argued for another connection between the *Tale of Bagasraw* and Esther at 4Q550^d i 4. She remarks of the Qumran text's phrase "What may I do for you (Aramaic *l'kā*)?" as follows: "[T]he 'you' is a female . . . so we have a dialogue between a female and a male. . . . There are no other scenes, to my knowledge, in biblical or Second Temple literature set at a court in which a powerful male, a king, asks his female companion what he may do for her, except the Esther story!" (White Crawford, 33). This would indeed be a remarkable parallel—if it existed. Unfortunately, White Crawford has based her assessment upon a pronominal form that is ambiguous in Qumran Aramaic. The form that follows her "you," Aramaic *aniā*, is always a masculine form (female would be *anti*) and resolves the ambiguity of *l'kā*. Two men are talking here; there are no women.

(7) Finally, at 4Q550^d i 5, Milik reads/restores the name Esther. Not even White Crawford accepts this questionable interpretation of a broken context in which only the first letter of the suggested name is preserved. The proposed "s," the second letter, is a mere trace of ink that could be virtually any letter at all. We do not know from the context that a name is even in view. As White Crawford remarks, "[U]nfortunately, Esther disappears from our text" (White Crawford, 33).

In sum, the case proposed by Milik and others for a direct use of the *Tale of Bagasraw* by the author of Esther is in every instance based on problematic readings, restorations or grammati-

cal interpretation. All that remains after an examination of the arguments is the impression of a generic relationship, and that much might be said for Esther and the stories of Daniel.

TAXATION, GRECO-ROMAN

Taxation in the *Roman Empire often developed from the countries and kingdoms that had been incorporated. For example, on Sicily the corn tax was based on the tribute system established by King Hiero of Syracuse. Due to Rome's expansion, Roman *citizens in Italy had not had to make a direct contribution to the finances of the state since 167 B.C. However, the provinces were expected to make a contribution to Rome through taxation, and this included those individuals who had received Roman citizenship.

1. Direct Taxation
2. The Census
3. Indirect Taxation
4. *Publicani* and Collection

1. Direct Taxation.

Rome assessed taxes in two main forms, first on the size of the land under cultivation (*tributum soli*), second on a poll tax (*tributum capitis*). Standardizing taxation systems became possible by taking an official census.

The *tributum soli* in effect taxed the produce of the land. There is some evidence that the *tributum soli* might have included all the equipment used to cultivate the land and processing the produce. In the Greek east, cities appointed magistrates, often known as the *dekaprotai*, to be responsible for the collection of this tax. This group of ten may have originated as a committee that had been delegated the responsibility of deciding how to pay this sum. At Lykosura in the province of Achaia, the money raised by people attending the *mysteries of the local cult went toward paying the tax (SIG³ 800). In the province of Syria, the *tributum capitis* was calculated at 1 percent.

There are some instances in which rich individuals became the *benefactors of their city or even their province by paying a lump sum for taxation. F. Millar gives the example of a priest of the province of *Macedonia paying for the whole province. At Tenos, an individual left a lump sum as a bequest so that its interest benefited his fellow citizens (IG XII. v. 946).

2. The Census.

The provincial census was instituted by the emperor Augustus. In part this was to provide accurate information for the imposition of direct taxation, specifically the *tributum soli* and the *tributum capitis*. The evidence suggests that Gaul and perhaps Spain may have had a census in 27 B.C. (Dio Chrysostom *Or.* 43.22.5). Other Augustan censuses are recorded for the provinces of Lusitania and Syria. This may have included details of Roman citizens living in the provinces. The limited evidence suggests that a common pattern was that as provinces were incorporated, a census took place: this seems to have been the case for Judea, Cappadocia and Dacia. A census in the province of Syria during the *governorship of Quirinius in A.D. 6 is attested in the funerary epitaph of Quintus Aemilius Secundus (CIL III 6687). This may be linked to the "first enrollment" (*apographē prōtē*) mentioned by Luke (Lk 2:2). The *census* (Gk *kēnsas*) as the basis for taxation in Judea is referred to in the Gospels (Mt 22:17; Mk 12:14).

The edict for a census of A.D. 104 issued by

Gaius Vibius Maximus, prefect of Egypt, is contained in a surviving papyrus (P. Lond 904 col. 2). People were instructed to return to their homes, and those unable to do so, perhaps through other responsibilities, were to register with an officer. Ulpian, writing in the early third century, gives further details about the arrangements for the census (see the section preserved in *Digest* 50.15.4). Each estate being assessed had to be defined by how much land was in cultivation, the numbers of olives and vines, the size of pasture and woodland. Individual details of *slaves also had to be registered.

The responsibility for the census may have been with individual cities. For example, a detailed inscription from Messene in the province of Achaia dates to the period A.D. 35 to 44 (IG V.1,1432). It seems that the *polis* was expected to pay a tax of one hundred thousand *denarii*, and the means of raising it was by imposing a tax of 8 *obols* for every *mina* of value. Aristocles, the secretary to the members of the council, who devised the calculation, was even awarded an honorific statue.

3. Indirect Taxation.

Apart from direct taxation, there were various indirect taxes, known in the imperial period as *vectigalia*. These included a tax on the movement of goods (*portoria*) that was imposed at ports or crossing points between frontiers. Rates, based on the value of the goods, could vary enormously from 25 percent on the eastern frontier (benefiting from the luxury trade with the East) to as low as 2.5 percent for Asia. Although the attempt by Nero to abolish *vectigalia* in A.D. 58 was abandoned, new legislation concerning the *portoria* was prepared, and a detailed *inscription of this period has come to light at *Ephesus (Meijr and von Nijf, no. 109). This text includes details of which ports in the province could be used for import or export. Certain exemptions from the tax were made. These included material being carried on behalf of "the people of Rome," anything carried for religious purposes and items taken for personal use on the journey.

Other indirect taxes included a sales tax, which was halved from 1 percent by Tiberius. Augustus introduced a sales tax for slaves that attracted 4 percent. When slaves received their manumission, they paid a 5 percent tax—established in the republican period—on the sum

they paid to their former owner for the price of their freedom. This tax was initially collected by *publicani*, though from the reign of Claudius there is evidence to suggest that it was the responsibility of the imperial procurators. A tax on inheritance (*vicesima hereditatum*) was introduced by Augustus in A.D. 6 at a rate of 5 percent. This was introduced to pay for veterans leaving the army. Like the tax on slaves, it was initially collected by *publicani*.

4. *Publicani* and Collection.

Under the republic Rome had collected both direct and indirect taxes through *publicani*. These individuals were private contractors who undertook the service for profit. Standard forms of contract were issued by the censors as a *lex censoria*. After the republic the nature of the *publicani* changed when they were no longer engaged in supplying the army or assisting with public buildings. Ulpian, writing in the early third century, noted that *publicani* were "those who enjoy the use of what belongs to the people—hence their name—whether they pay a *vectigal* to the people or gather in *tributum* . . . and all who lease anything from the *fiscus* are rightly called *publicani*." For example, two *publicani* in the province of Africa made a dedication to Augustan Venus (*AE* 1923, no. 22). They refer to the fact that they were responsible for "the four public taxes of Africa," presumably the *portoria*, the selling and freeing of slaves and inheritance.

During the republic some of the groups or companies of *publicani* had been quite large and thus had the power to ignore the control of the provincial governor and other Roman officials. Under the principate the oversight of the *publicani* was the role of the provincial procurator.

Income, designated in the East as *phoros*, might also be derived from land owned by the emperor or state; this income might be collected by *publicani*, as suggested from an inscription from Ephesus dating to A.D. 6/7 that refers to money *ex pecunia phorica* (*AE* 1968, 483). However, in the NT the term *phoros* (Lk 20:22; 23:2; Rom 13:6-7) might be interchangeable with *kēnsos*.

Publicani do not seem to have been popular individuals. They had various powers that could be open to abuse such as the impounding of goods that were suspected of not having been declared for taxation (*Dig. Just.* 39.4.7.1, 14, 16) and for confiscation of flocks using public pas-

ture (*Dig. Just.* 47.8.2.20). Under Nero provincial governors were required to investigate complaints against *publicani* (Tacitus *Ann.* 51.1). In the Gospels *publicani* (Gk *telōnai*) are frequently associated with "sinners" (e.g., Lk 5:30; 7:34; 15:1; 18:11).

It appears that during the principate, and perhaps even under the late republic, cities were usually responsible for the collection of *tributum*. Under Julius Caesar, in 47 B.C., the cities of Asia rather than *publicani* became responsible for tax collection; their overall tax burden was cut at the same time (Appian *Civ. W.* 5.4; Dio Chrysostom *Or.* 42.6; Plutarch *Cases* 48; Mitchell). The same may also have been true for Judea, though at the time a client state (Josephus *Ant.* 14.10.5 §201), and other provinces in the East. In 31 B.C. Strabo (*Geog.* 10.5.3) records that his ship collected an ambassador from the island of Gyarus in the Aegean who was going to ask Augustus that the island's *phoros* be reduced from 150 *drachmae* to 100 *drachmae*. A similar reference to *phoros* exacted on a city comes in the anecdote about how in return for Apelles's painting of Aphrodite Anadyomene, which had been dedicated in the Asclepeion, the people of Kos were given a reduction of 100 talents in their taxation (Strabo *Geog.* 14.2.19).

TAXATION, JEWISH

Jews in the time of Jesus were subject to a com-

plex system of religious and secular taxation, the extent and burden of which is difficult to determine. The Gospels reveal the scorn directed toward those who participated especially in the Roman customs system because they were presumed to be dishonest.

1. Roman Taxation in Judea and Galilee
2. Tax Collector
3. Temple Tax

1. Roman Taxation in Judea and Galilee.

When Rome annexed Judea in 63 B.C., the high priest Hyrcanus (*see* Hasmonaean) was given responsibility to pay tribute to Rome. Julius reduced the tribute in 47 B.C. from an uncertain amount (perhaps 98 percent of the harvest as under the Seleucids) to 12.5 percent of the harvest, and he remitted taxes in the sabbatical year (Josephus *Ant.* 14.10.6 §202). Herod was required initially to pay tribute for Idumea and Samaria, but this was remitted in 30 B.C., leaving him to raise his own revenues after the Roman fashion and presumably on a Roman scale (although he did occasionally reduce taxes during crises: Josephus *Ant.* 15.10.4 §365; 16.2.4 §64). After Herod's death Rome allowed Antipas to raise tribute for Rome in *Galilee and Perea, while Judea (after the deposition of Archelaus in A.D. 6) came under direct Roman control in the form of procurators, who probably made the *Sanhedrin responsible for the collection of Roman dues (Josephus *J.W.* 2.17.1 §405).

According to the larger of Josephus's two estimates, the total revenue of Herod's territories distributed after his death was 800 talents (Josephus *J.W.* 2.6.2-3 §§92-97; in *Ant.* 17.11.4 §§318-20 it is 600 talents), which is the equivalent of 4.8 million drachmae or day wages per annum. Population estimates vary, but if we estimate 250,000 working males, we can calculate that the average man worked about three weeks per year for the state. For those who lived close to the edge of poverty—and the majority of scholars think that there were many who did—this amount would be felt as a heavy burden.

1.1. Kinds of Taxes. There were three principal kinds of duties: the land tax, or *tributum soli*; the head tax, or *tributum capitis*; and the customs system. These must be distinguished in terms of liability and quantity.

1.1.1. Land Tax. The bulk of the tribute due to Rome was collected in the form of a tax on the produce of the land. This exempted those

who did not own land, although tenant farmers certainly paid indirectly in the form of rent. Owners of small plots may also have been exempt. Itinerant laborers and others, such as fishermen, were by definition exempt, but there may have been other taxes that served to distribute liability to the nonagricultural sector. Residents of Jerusalem, for example, were subject to a house tax and a city sales tax (Josephus *Ant.* 18.4.3 §90; 19.6.3 §299). The amount (usually payable in grain) required for the land tax was probably fixed by landlords or other authorities based on estimates of a percentage of the likely yield: probably about one-tenth. Since these amounts were determined in advance, the obligation for revenues lost due to bad crops or individual bankruptcy had to be absorbed by distribution within the tax district.

So little information is available concerning crop yield, population, rents and taxes that it may never be possible to calculate the burden on the average farmer. General statements in the ancient sources are not conclusive. Josephus complains about Herod's high revenues, but he specifies the charge by reference to direct appropriation of the property of nobles (Josephus *Ant.* 17.12.2 §307). In another place Josephus describes pre-war Galilee as thriving (Josephus *J.W.* 3.3.2-4 §§42-50). He makes no reference to economic causes for the war, unless this is to be deduced from his accounts of the increase in banditry (presumably due to bankruptcy) in the decade before the war. Tacitus records a request (probably granted) for reduction of taxes in A.D. 17 (Tacitus *Ann.* 2.42), but he describes the region as peaceful during the reign of Tiberius (Tacitus *Hist.* 5.9). Neither the amount nor the impact of the land tax, therefore, can be determined with precision from the extant sources. It is likely, however, that most of those in the agricultural sector lived close enough to minimal subsistence to feel almost any amount of tribute as a threatened or real burden.

1.1.2. Head Tax. Another significant portion of tribute due to Rome was collected by means of the head tax. This tax involved a periodic census (Lk 2:1-5; Acts 5:37). The amount was probably one denarius, or one day's wage, per annum (Mt 22:19-21). Liability is more difficult to assess. That males aged fourteen to sixty-five paid the tax seems consistent with Gospel accounts, but this does not preclude the possibility that men were assessed for their wives. It is also

possible that, as in other parts of the empire, those who paid the land tax were exempted from the head tax.

1.1.3. Customs System. The Romans appropriated a long-standing system of tolls and duties collected at ports and at tax offices near city gates (Mk 2:11). Rates varied from 2 to 5 percent of value, but goods were subject to multiple taxation on long journeys. Rates and commissions were regulated by law, and from the time of Nero these were posted for inspection. But the complexity of the system and the assessor's power to determine value allowed for injustice. Still, given the prevalence of a village-based subsistence economy, liability was limited to those few who engaged in commercial travel through towns and cities. In these locations of large-scale exchange, tax collectors gathered—and were esteemed—like flies.

1.2. Tax Collection. The direct taxes (the land tax and the head tax) were collected by councils of Jewish leaders and their representatives on an annual basis. The indirect taxes of the customs system were "farmed": the highest bidder paid in advance to collect taxes from a district. These were Jews, not "publicans" (a technical term for members of tax-collection organizations abolished by Julius Caesar in 30 B.C.). In this tax-farming system Rome received its money in advance, and the tax farmer made his living from commissions on tolls and customs. These were the "tax collectors" (*telōnai*) of the Gospels. A "chief tax collector," such as Zacchaeus (Lk 19:1-10), was a tax farmer who supervised other collectors.

2. Tax Collector.

It is evident in the Gospels that the title itself is a term of abuse (Mt 5:46; 18:17) or a foil to the hypocrites (Lk 3:12; 7:29; 8:10-14). Elsewhere it is joined in vituperative apposition to "prostitutes" (Mt 21:31-32), and most commonly, "sinners" (e.g., Mk 2:15; Lk 15:1). This attitude was universal: the rabbis grouped tax collectors with "robbers" (*m. B. Qam.* 10:2), and Roman writers joined them with brothel-keepers (Dio Chrysostom, *Disc.* 14.14). The reasons for this scorn vary according to time, place and tax type.

2.1. Tax Farmers and Dishonesty. Some distinction was made between those who collected direct taxes and the tax farmers. The latter were constantly visible and clearly made a living from

commissions. To stop people on the road and demand a portion of their goods certainly appeared to be institutionalized robbery, and the only apparent beneficiary was the tax farmer himself. Although the commission system was regulated, the power of the assessor to determine the value of some goods encouraged dishonesty. The instructions of John the Baptist to tax collectors (Lk 3:12-13) and the restitution pledge of Zacchaeus (Lk 19:8) are consistent with this tendency toward fraud.

Indeed, the practice of selling the office built into the system a disregard for the taxpayer: the highest bid translated into the most inflated assessments and the highest commissions. The fact that the tax farmer advanced the money meant that he had excessive wealth to begin with, and in an agrarian subsistence economy, usury was the most common source of such portable wealth. On this assumption, the rabbis regarded as unclean (*see* Purity) any house entered by a tax farmer (*m. Tehar.* 7:6). A corollary to all of this is the practical observation that an occupation that depends for success on suspicion, intrusion, harassment and force tends not to attract the most pleasant personalities. These factors combine to suggest that one did not need to be victimized to share the general view of the tax farmer as an embodiment of dishonesty.

2.2. Tax Collectors and Rome. While tax farmers were scorned primarily for their dishonesty, collectors of direct taxes were despised for their collusion with Rome. This hatred was particularly intense in Judea, which was under direct Roman control. A visiting Galilean with a reputation for association with tax collectors (Lk 7:34; 19:1-10) might well have been suspected of disloyalty, in some minds even for paying the head tax (Mk 12:13-17). It is significant that the question posed to Jesus pertains to the lawfulness, not the amount, of the tax. Its evil was not in its quantity but in its quality: to a fiercely independent people who did not understand or acknowledge military and economic security afforded by the Roman presence, taxation was a painful symbol of conquest. Jewish labor enriched a distant idolater and his local military representatives. Jesus' answer is not intended to give sanction to Roman taxation but to expose the hypocrisy of the *Pharisees, who ask the question only to force him to choose between popularity with the people and liability to secular law.

3. Temple Tax.

The half-shekel *temple tax was derived from the one-third shekel temple tax of Nehemiah 10:32-33 and was raised to a half-shekel possibly under the influence of the half-shekel atonement price of Exodus 30:11-16 (cf. 2 Chron 24:6). The fund was used for temple maintenance and *sacrifices.

3.1. Liability for the Temple Tax. Jewish males over the age of twenty (excepting *priests: *m. Seqal.* 1:3-4), including those in the Diaspora, were subject to the temple tax. The half-shekel was the approximate equivalent of one day's wage, and it was assessed annually. None of the ancient sources, however, state that all Jews paid, and even the inference (e.g., from Josephus *Ant.* 14.7.2 §110 or *m. Seqal.* 1:4) may represent ideology rather than history. The Essenes, for example, interpreted Exodus 30:11-16 to require only one half-shekel per lifetime (4Q159 2:6-7).

After the war, Vespasian used the temple tax as a pretense for what amounted to a war indemnity, the *didrachmon*. Liability for this tax was expanded to women, children and slaves. The tax was now compulsory, and the proceeds went to the temple of Jupiter in Rome (Josephus *J.W.* 7.6.6 §218). The fact that the Jews had used their own temple fund for the war (Josephus *J.W.* 6.6.2 §395) contributed to this connection and perhaps to a limitation (at least initially) of the tax to Pharisees throughout the empire (possibly implied in Dio Cassius *Hist.* 65.7.2). Such a situation would have exacerbated tensions between the Pharisees and other Jewish groups, including Christians.

3.2. Jesus and the Temple Tax. Matthew 17:24-27 uses the term *didrachma*. This may be an anachronistic reference to the temple tax, an attempt to speak to an issue in Matthew's community, or both. The passage does not imply that all Jews paid the tax, only that Jesus chose to do so. Indeed, the statement of Jesus that "the sons [of the king] are free" stresses voluntarism. If the passage is intended to speak to Matthew's community, it is understandable that questions of solidarity with the Jews would arise before the war, and more poignantly after the war if Pharisees were the focus of the *didrachmon*. It is less likely but also possible that by "sons of the king," Jesus is referring only to himself (and therefore only to exemption from the temple tax). But to the extent that the passage has implications for

practice, it represents a conciliatory position motivated by love for the Jews.

TEMPLE, JEWISH

The temple in Jerusalem was of central importance within early Judaism. The primitive communities of Christians reflected in the NT are examples of Judaic movements, and they developed distinctive policies toward the cult and the temple. Those policies clearly reflect the theological processes which brought about the emergence of early Christianity as separable from Judaism at the close of the NT period.

1. Temple Origins and Structures.

Before Solomon built the temple at Jerusalem, the tribes of Israel had worshiped in a number of sanctuaries, most prominently Shiloh. Shiloh was destroyed around 1050 B.C., evidently by the Philistines as a result of the battle recorded in 1 Samuel 4, when they also took from Israel the ark of the covenant. Eventually, however, the ark returned to rest in Jerusalem, and Solomon (or perhaps better David, his father—note the difference in emphasis between 1 Kings 5:17-19; 8:15-21 and 1 Chron 22:8-10; 28:3) determined to build a temple in which it might be housed. A description of the Solomonic temple appears in 1 Kings 6—7 and again, with a few variations, in the summarizing 2 Chronicles 3—4.

The description in Kings is very difficult to interpret for a number of reasons. First, the account utilizes a large number of technical terms not known elsewhere in Hebrew, some of which were distorted during scribal transmission. Second, the editor of Kings either did not have or chose to omit many details which, from an architectural perspective, are absolutely essential for any reconstruction—for example, the layout of various structures and the thickness of walls. And archaeology is no help with this matter, as virtually nothing has survived from the First Temple. Thus scholars attempting to visualize Solomon's work make do with the texts as best

they can and have recourse where applicable to comparisons with other Semitic sanctuaries, especially those of Syro-Phoenicia. Not surprisingly, reconstructions differ markedly from one another, and the following discussion attempts merely to highlight those points on which there is a measure of agreement.

The Solomonic temple was a long, narrow structure oriented toward the east. It was divided into three parts: an outer vestibule (*'ûlâm*), a large interior for worship (*hêkâl*) and a rear compartment known in Hebrew as *d'bir* or *qōdeš q'dāšim*, "the holy of holies." Excluding the walls, whose thickness is not given, the whole was 70 cubits long and 20 cubits wide. The interior paneling consisted of cedar imported from Lebanon. In front of the vestibule stood two bronze pillars, approximately 27 feet high; their function is uncertain, but apparently they did not support the lintel of the vestibule. Some scholars liken them to the traditional stelae (*massēbôt*) which are well known from Canaanite and Phoenician sanctuaries. The temple stood within a courtyard or inner court; later, by the mid-seventh century at the latest, there were two courts (2 Kings 21:5; Jer 36:10).

The furnishings of the temple included at first the ark of the covenant, which however was lost very early in the history of the First Temple. This stood in the *d'bir*, surmounted by the cherubim. Outside the rear compartment, in the *hêkâl*, stood the golden altar of incense, the table of shewbread and ten candlesticks. Outside the temple building was the altar of bronze upon which the *sacrifices took place. To the southeast of the temple stood the "Sea" of bronze, which contained water used by the *priests for their ablutions. On either side of the temple entrance were located ten bronze basins, five to each side. Here the priests would cleanse the sacrificial victims. All of these basic cultic elements, with certain modifications, were later to be found in the Herodian temple.

It was essentially the temple of Solomon that Nebuchadnezzar destroyed in 587 B.C. when Jerusalem fell to the Babylonians. With the return from exile beginning in 538 B.C., the temple was rebuilt; apparently it was structurally very similar to the earlier version, though lacking that temple's rich adornment. Completed in 515 B.C., it is known as the temple of Zerubbabel, the governor of the period. Over the centuries that followed, this temple was damaged or, perhaps,

even destroyed on various occasions; of the details little is known. In the period 200-150 B.C. we know that it suffered substantial damage at least twice. Still, it was rebuilt, and when Herod (see Herodian Dynasty) came to build the structure whose beauty was proverbial throughout the Roman world, practically speaking it was the temple of Zerubbabel that he tore down and replaced.

For the reconstruction of Herod's temple, we are somewhat better informed than is the case with the earlier temples. Detailed descriptions have come down in tractate *Middot* of the Mishnah and in the two major works of *Josephus, the *Jewish War* and the *Antiquities*. Tradition assigns the mishnaic tractate to Rabbi Eliezer ben Jacob, who was a young boy at the time of the First Revolt. Although his description (if it really is his) is perhaps idealizing at points, it is still useful for the task of reconstruction. Josephus's descriptions do not always agree with each other or with that of the Mishnah, but by and large these disagreements do not affect major elements of the temple structures.

Herod's work began in 20/19 B.C. and except for matters of detail and added adornment was completed within a decade. Those additional matters, however, occupied the Jews for almost all of the years between c. 10 B.C. and the outbreak of the revolt in A.D. 66, in part by design: such labor provided jobs for many who would otherwise have been unemployed.

Herod was a man of grand ambitions, and his reconstruction of the temple of the Jews reflected that aggrandizing character. He essentially doubled the foundation, or Temple Mount, that had existed from Solomon's day. To do so he lengthened the eastern wall at both ends and added new walls on the other three sides. In the process, he found it necessary to reshape the topography of Jerusalem. The middle, or Tyropoean, Valley, bordering the temple on the west, he filled in. He did the same to a small valley lying to the north of the old mount and to the upper slope of the Kidron Valley to the south. According to the Ritmeyers's recent study of the archaeological remains, the Temple Mount retaining wall measured 1,590 feet on the west, 1,035 feet on the north, 1,536 feet on the east and 912 feet on the south; it thus approximated a rhomboid equivalent in area to thirty-five football fields.

If a Jewish man and woman at the time of

Jesus were to enter the temple complex from the south, they would emerge from a large plaza to ascend a broad stairway. Off to their right they would see a ritual bathhouse (it was forbidden to enter the precincts without such immersion) and the council house where the *Sanhedrin sat in session. Straight ahead would be the Double Gate and further to the right the Triple Gate. Entering through the Double Gate, they would pass directly beneath the royal stoa that surmounted the wall of the outer court. In the outer court, or Court of the Gentiles, they would now be standing in the place where the blind and lame came to Jesus (Mt 21:14), where the children greeted him (Mt 21:15) and where he drove out the merchants (Mt 21:12; cf. Mk 11:15; Lk 19:45; Jn 2:14). Surrounding this court were the pillared halls where Jesus and later the disciples taught (Mk 14:49, etc.).

Their eyes would now light upon the temple structure, rising high above them and separated by yet another stairway, a barricade and the walls of the inner courts. Entering from the outside, the first inner court would be the Court of the Women (*ezrat hannašim*), where all Jews including women could advance, but which was off limits to Gentiles on pain of death. Here Anna prayed (Lk 2:37), Jesus watched the widow offer the last of her money (Mk 12:44 and par.) and, probably, the encounter with the adulterous woman has its setting (Jn 8:2-3).

The man alone could continue to advance toward the sanctuary itself, entering the Court of the Israelites. This court was open to all ritually pure Jewish men, but none others. The sacrificial altar stood here. This inner court is the narrative setting for the *Pharisee praying (Lk 18:11), for the disciples praying (Lk 24:53) and, of course, for Jesus standing before the altar (Mk 11:11). No one but priests could continue on to enter the temple building itself.

If the man were to look beyond the temple to the northwest corner of the complex, he could see the fortress called Antonia. This fortress connected to the temple's outer court by means of a stairway, so that Roman soldiers could very quickly cross if needed. They did just that, for example, at the time of the riot associated with the apostle Paul's last visit to Jerusalem (Acts 21:31-32).

Josephus relates that the entire façade of the temple was covered with gold plates. When the sun rose, the reflection was nearly blinding. On

a clear day the brilliance of the temple was visible from a considerable distance outside Jerusalem. And this brilliance was not due to gold alone; the upper parts of the temple were pure white, probably marble. Once a year the priests applied whitewash to this upper section. At the very top gold spikes lined the roof. Approaching the temple, twelve steps led up to the entrance of the vestibule (*'ulām*). The inner walls of this vestibule, like the facade, were gilded. Carved oak beams comprised the lintel of the portal. The vestibule rose to the full height of the inner portions of the temple but exceeded these in width by twenty-six feet on each side. This space formed two rooms wherein were housed sacrificial implements.

At the entrance to the sanctuary (*hekal*) hung a veil woven in Babylon, embroidered in four colors: scarlet, light brown, blue and purple. According to Josephus the veil symbolized "a panorama of the heavens, excluding the signs of the zodiac" (Josephus *J.W.* 5.5.4 §§212-14). In front of the veil was a golden lamp given by Queen Helena of Adiabene, a convert to Judaism. Two tables also stood at the entrance before the veil, one of marble and the other of gold. At the weekly changing of the priestly courses, the marble table received the new shewbread introduced into the temple, while the golden one held the old bread. Standing outside the temple and looking into the entrance, one could see into the vestibule as far as the veil and the tables holding the shewbread, but it was impossible to see further into the sanctuary.

The sanctuary and the holy of holies comprised one long room, 103 feet long, 35 feet wide and 69 feet high, and demarcated by curtains. These curtains were beautifully embroidered with lions and eagles. Entirely overlaid with gold panels, the interior of the sanctuary housed the lampstand, the shewbread table (distinct from the two tables already described that stood outside the entrance), and the altar of incense. All were made of gold. The seven branches of the lampstand symbolized the seven planets, while the twelve loaves of the shewbread, which had originally stood for the twelve tribes of Israel, had been reinterpreted so that they now represented the signs of the zodiac as well.

Only the high priest could enter the holy of holies, and that only on the Day of Atonement. In the Second Temple period the interior was devoid of all furnishings save for a small rock

upon which the high priest made his annual offerings of incense and sprinkled the blood of atonement. The artisans who maintained the temple did "enter" the inner sanctum, but only in a way that was interpreted as not entering. Lowered from the roof in cages that were closed on the sides, they were unable to see their surroundings. Thus they worked blind and, technically, did not enter the room since they did not come through the entrance and saw and touched nothing.

A great deal of the intellectual and spiritual life of the city took place in the courtyards of the temple, the outermost of which, as indicated, was extremely capacious. There scholars wrote, read and instructed their students, and there political debate occurred. Surrounded by the splendors of the temple, it was only natural to feel a sort of numinous awe. That, however, was not the only or, perhaps, the most important emotion to which the temple built by Herod gave rise. [M. O. Wise]

2. Operation of the Second Temple.

The temple was the place of God's dwelling, where his "glory" (or, as was said during the rabbinic period, his "Presence" [*s'kinā*]) abides. That understanding has been well established in research; the architecture of the temple in Jerusalem attests it. But the picture of the temple as a divine "house" is only helpful when it is borne in mind that the house was not only for God but for his people and his goods: the entire household was involved in sacrificial activity. *Sacrifice involved all Israel, and even those beyond the territorial limits of Israel.

Deuteronomy identifies Jerusalem as the single "place" (*hammāqōm*) where God is to be worshiped (Deut 12:5-14). Sacrifices to the Lord elsewhere are specifically prohibited (Deut 12:13, 14), and the complete destruction of the "places" of all other gods is prescribed (Deut 12:2, 3). Provisions are made for the long journeys which centralization sometimes demanded: sacrifices of the tithe may be converted into money, which is then used to purchase food and drink to eat before the Lord (Deut 14:22-27). Contrary to the prescriptions of Leviticus, the slaughter and consumption of animals outside of Jerusalem, explicitly as nonsacrificial, is permitted, provided the blood is poured out and the beast concerned is not owed as a sacrifice (Deut 12:15-28).

The strict limitation of sacrifice to Jerusalem creates the imperative of the pilgrimage. Being in the "place" is naturally an occasion for joy (Deut 12:7, 12, 18). Sacrifice in Jerusalem is the celebration and at the same time a guarantee of prosperity. Disobedience, within the Deuteronomistic scheme, can only result in Israel's destruction, its scattering in the manner of the Assyrian conquest (Deut 4:25-31). But keeping the commandments ensures that the Lord will give possession of the land to his people, thrust out their enemies, and provide physical and agricultural prosperity and freedom from disease (Deut 6:17-19; 7:1-16). The dynamic heart of the promise is that Israel is holy, a people for the possession of God (Deut 7:6): the central fact that God has acquired Israel is the sole cause of their redemption from Egypt and their future prosperity in just those aspects in which Egypt had been afflicted (Deut 7:7-16). Sacrificial "rejoicing" is a way both to celebrate and to secure that blessing of God which is Israel's prosperity.

The terms of reference established by sacrifice as an act of "rejoicing" in the single, sacred "place" from which God gives Israel prosperity are precisely observed in the calendar in Deuteronomy 16. The three *feasts of Passover, Weeks and Sukkoth are carefully specified, and each—even Passover, originally a domestic meal (see Ex 12)—is made the occasion of pilgrimage. The feasts of pilgrimage are occasions on which both the map and the *calendar of Israel are routinely redrawn. Three times a year, Israel is back in the desert, redeemed from Egypt, new in their freedom, living in booths. The land which has so desperately been sought and acquired disappears from view, in order to be received again as the gift of God to his own people, complete with the prosperity and health he alone can bestow. Variety in the understanding of the worship which God requires in the single temple is evident within the Hebrew Bible itself. But the Deuteronomistic prescriptions give a good indication of the prevailing rationale of cultic practice, as it was based upon the Mosaic covenant. Pluralization in definitions of Judaism was more radical by the first century (see Judaism).

The Sadducees probably owe their name to Zadok (the priest of David's and Solomon's time), but their loyalty to the settlement in the temple, in which the Romans effectively chose high priests, made them appear to many to be upholders of privilege. Josephus describes at-

tempts by prophetic pretenders, and later Zealots, to disentangle the operation of the temple from collaboration with Rome (see Josephus *J.W.* 2.13.3-6 §§254-65; 7.11.1-2 §§437-46; and, on the Zealots, Josephus *J.W.* 2.20.3 §§564-65; 4.4.1 §§224-25). Even among the priesthood, nationalism was a natural outgrowth of a desire for the cultic integrity of the temple (see Josephus *J.W.* 2.20.3-4 §§562-68).

The *apocalyptic perspective within early Judaism also resulted in critical attitudes toward the temple. The book of Daniel (Dan 7—12) anticipates by visionary means an eschatological triumph, of which the principal agent is the archangel Michael (Dan 12:1-4); the temple's renewal is part of the scenario (Dan 12:11-12). Several of the documents found near *Qumran represent an apocalyptic point of view and envisage that the sect of covenanters will direct the operation of the temple in the final days (see IQM, IQS, CD). More recently discovered materials (**Temple Scroll*, **New Jerusalem*, **Miqsat Ma'asey ha-Torah*) attest a directly practical interest in the conduct of sacrifice in Jerusalem. Josephus reports that one of the priestly nationalists involved as a general with him in the war against Rome was John the Essene (Josephus *J.W.* 2.20.4 §567; 3.2.1 §11; 3.2.2 §19), and he relates the repute of the *Essenes for courage under Roman torture (Josephus *J.W.* 2.8.10 §§152-53). Indeed, the correspondence between Josephus's extensive description of the Essenes (Josephus *J.W.* 2.8.2-13 §§119-61) and the evidence which continues to emerge from Qumran is such as to make recent attempts to drive a wedge between the two seem even more apologetic than Josephus himself was.

The Pharisees, in their attempt to influence what the high priests did in the temple, rather than to replace those institutions definitively, appear more conservative than the Essenes and nationalistic priestly families. Josephus reports that the Pharisees made known their displeasure at Alexander Jannaeus by inciting a crowd to pelt him with lemons (at hand for a festal procession) at the time he should have been offering sacrifice. His response to the claim that he was unfit to hold office was to have some six thousand people killed (Josephus *Ant.* 13.13.5 §§372-73). Josephus also relates, from a later period, the teaching of the rabbis (probably Pharisees) who were implicated in dismantling the eagle Herod had erected over a gate of the tem-

ple (Josephus *J.W.* 1.33.2-4 §648-55; *Ant.* 17.6.2-4 §§149-67). That gesture was less subversive of the established authority in the cult than what earlier Pharisees had done, but Herod correctly understood that it was a deliberate challenge to his authority, and he responded with summary executions.

Paradoxically, the willingness of the Pharisees to consider the *Hasmoneans and Herodians in their priestly function, in distinction from the Essenes, involved them not only in symbolic disputes but in vocal and bloody confrontations. Alexander Jannaeus is reported to have executed by crucifixion eight hundred opponents, either Pharisees or those with whom the Pharisees sympathized, and to have slaughtered their families; but his wife came to an accommodation with the Pharisees which guaranteed them considerable influence (Josephus *J.W.* 1.4.6—1.5.3 §96-114). [B. Chilton]

3. Attitudes Toward the Temple.

Attitudes toward the temple at Jerusalem varied considerably from time to time and from group to group within intertestamental Judaism. In many respects the theology of the temple within this period continued along the lines already developed in the First Temple period. Thus the temple was considered to be the very dwelling place of God, in a way shared by no other place on earth. Even the prophets who had grave reservations about the cultic practices going on in their own time believed that the temple was nevertheless God's dwelling among humankind. Ezekiel, for example, who says that he saw the glory of God depart the temple because of defiling practices (Ezek 8—10), also says that God will return to live forever in a new temple (Ezek 43:1-12).

The temple was considered a sign of Israel's election from among the peoples of the earth. It stood on a site chosen by theophany (2 Sam 24:16) long before its construction; Zion was the mountain of God (Ps 68:17) and was even identified with the original location of the garden of Eden (cf. Ezek 34). Even the destruction of 587 B.C. did not disprove Israel's election; rather, God would return and once more make Jerusalem his choice (Zech 1:17). The peoples of the earth would one day stream to Jerusalem to worship, and Israel would stand at the head of the nations (cf. Is 2:1-4).

These ideas and other positive assessments

of the temple continued to be believed and elaborated in the intertestamental period. But another strain of thought, also having its roots in the OT, is noticeably more prominent now: the tradition of hostility toward the temple. This tradition particularly characterizes apocalyptic thought, and—as is becoming more and more recognized—apocalyptic was the popular religion of Second Temple Judaism. This tradition of hostility toward the temple is worthy of extended consideration, since it sheds light on the Gospel tradition.

The apocalyptic tradition of aversion toward the temple at Jerusalem takes a great deal of its inspiration from the book of Ezekiel. Ezekiel 40—48 constitutes the prophet's famous vision of a new temple, a new Jerusalem and a new theocratic state. He is given a vision of a temple in heaven, whence it will be manifest in the end of days. Then the heavenly temple will descend on Zion, and God will once more take up permanent residence there. Different streams of Judaism understood this vision in different ways. As noted above, Zechariah, for example, believed that the promise was fulfilled in the temple rebuilt in his own day. But for some groups the temple of Zerubbabel was not the one promised.

This rejection of the Second Temple probably had its basis in several related perceptions. First was the fact that the temple rebuilt under Haggai and Zechariah was singularly unimpressive compared with the Solomonic version it attempted to re-create. Surely the God of all the earth would not be content to reside in such a pathetic edifice, which dimmed in comparison not only with Solomon's structure, but much the more so when compared with visions of the heavenly temple (cf. *1 Enoch* 90:28-29). Even a foremost proponent of this temple, Haggai, had to recognize this problem. He did his best to blunt the criticisms of those unimpressed with the temple of Zerubbabel (Hag 2:9; cf. Zech 14:8-11), but he was unable to silence all the critics.

A second significant reason for the rejection of the Second Temple by certain elements of the Jewish people centered on cultic practices. Already in the latter portions of Isaiah and in Ezekiel one can recognize hints of such disputes. These disagreements concerned the proper structures and procedures for the sacrificial cultus, and even the proper times for *festivals and assemblies. Note, for example, the

words of Isaiah 66:3, "He who kills an ox is like one who slays a man; he who sacrifices a lamb is like one who breaks a dog's neck; he who offers a grain offering is like one who offers swine's blood . . . they have chosen their own ways, and their soul delights in their abominations" (NASB, modified). This passage is hyperbolic, of course; no one was really offering dogs or pigs. But in the author's view the priests of the temple in Jerusalem were not practicing the proper methods, and the result was the same: an illegitimate cultus. The disagreements could hardly have been more fundamental.

It would appear that during the fourth and third centuries B.C.—a period for which we have virtually no written evidence—these disagreements were to some extent resolved. Some sort of *modus vivendi* did emerge. But the problems did not simply go away. Those whose ideas were defeated naturally felt disenfranchised, and it is probably among such groups that apocalyptic ideas found their most fertile soil. In the view of these disenfranchised elements the groups regnant in the temple practiced the wrong Halakah; consequently, both the priesthood and the temple were defiled.

Again and again in the apocalyptic literature these notions recur. Thus in *1 Enoch* 88—90 (c. 150 B.C.) the writer portrays the temple of Zerubbabel as ritually impure; he says the priests tried to offer bread on the altar "but all the bread on it was polluted and impure" (*1 Enoch* 89:72-73). The *Apocalypse of Weeks* (now found in portions of *1 Enoch* 91 and 93; c. 200 B.C. or earlier) claims that every generation since the exile has been apostate because no one was able to discern the true cultus or "things of heaven" (*1 Enoch* 93:9). The *Testament of Levi* (first century B.C./first century A.D.) calls the priests of the former temple impure. In the last days, however, when a new priest would arise, "The heavens shall be opened, and from the glorious temple sanctification shall come upon him" (*T. Levi* 17:10). Along with many others, the author of *Jubilees* (c. 170 B.C.) despairs that the only remedy is the replacement of the sullied present structure by the eschatological version (*Jub.* 23:21).

But perhaps the strongest reason for the rejection of the present temple stemmed from a belief that it was not built to the specifications that God had provided. This belief in turn derived from a straightforward reading of the biblical accounts. The temple of Solomon, after all,

was built to specifications given to him by his father David. Where had David gotten those plans? The account in Kings does not specify. This was a bothersome problem for some Second Temple Jews. The Chronicler had already offered his solution in 1 Chronicles 28:19, saying that David gave Solomon, "Everything [the whole plan detailed in 1 Chron 28:11-18] in a book from the hand of God." Thus the Chronicler believed that David must have received his temple plans from God himself and could not have relied on human artifice for so important a structure. But many Jews did not agree with the Chronicler's solution. It must be recalled that the portion of Hebrew Scripture called the Writings, among which Chronicles is numbered, was not everywhere accorded the authority given the Torah and the Prophets.

Instead, apocalyptic visionaries found another scriptural portion where God had revealed the divine plan for an earthly temple. This portion was the description of the building of the tabernacle contained in the latter chapters of the book of Exodus. Prima facie, it was inconceivable that God would have instructed Moses about every matter of the law while neglecting to describe the perfect temple. Warrant for the view that Moses had indeed seen the plan for the temple—or even the heavenly temple itself—was found in verses such as Exodus 25:9: "According to all that I am showing you, the plan of the dwelling place and the plan of all its implements, thus shall you do." For such intertestamental exegetes, the equation of "dwelling place" (*miškān*; conventionally translated "tabernacle") with the temple was self-evident. Indeed, Exodus 25:8 explicitly connected the plans which Moses was seeing with the "temple" (*miqdās*). Accordingly, any proper temple would have to be constructed not along the lines of the Davidic/Solomonic model, but according to the plans which God had delivered once for all to his preeminent prophet, Moses. It further followed that the Davidic/Solomonic temple, the temple of Zerubbabel and the Herodian temple were all illegitimate. For the proponents of such views (which continued even after the destruction of A.D. 70; cf. *2 Bar.* 4:2-6), the proper temple had yet to be built. The present, improper one was unacceptable to God and, accordingly, to all true worshipers.

Of course those who held that the temple should be built according to the plans God had

shown Moses faced a certain difficulty: what had happened to those plans? They were not recorded in the OT. The answer that Second Temple authors devised to handle that problem was twofold: First, they said, the plans had been kept hidden until the end and were to be known only to the elect; and second, some details would require additional revelation. In accordance with such an approach several writings from the intertestamental period make claims for new temple visions.

The Qumranic text (see Dead Sea Scrolls) known as the **New Jerusalem* (5Q15) is one such writing. An angel appears to the anonymous seer (perhaps Ezekiel?) and takes him on a tour of the city and temple of the last days. The *New Jerusalem* takes up where Ezekiel 40–48 leaves off, providing exact dimensions for buildings associated with the sacrificial cultus. It also describes the city of that new temple, making interesting modifications on the ideas found in Ezekiel. Evidently the prophet's vision was not felt to be the last word.

The **Temple Scroll* (11QTemple), another text from Qumran, goes somewhat further. This text implicitly claims to be a new revelation to a Mosiac figure who, like that prophet, speaks with God face to face. Many details of the temple buildings appear in this text, often in the language of the tabernacle description from Exodus. That was only to be expected, since the allusions to Moses' vision of the heavenly temple occur in those portions of Exodus dealing with the tabernacle. Neither the *New Jerusalem* nor the *Temple Scroll* describe a temple precisely like that of Solomon; some of the details are decidedly different. Presumably the authors of these and similar texts must have regarded the actual temple in Jerusalem as a sort of imposter.

Still, despite all their rhetoric and even with these fundamental reasons for rejecting the Second Temple structures, one must be cautious about concluding that any groups among the Jews boycotted the temple altogether. Claims that the so-called Qumran community, for example, had deserted the temple and that its members considered themselves a new, spiritual temple, are problematic. These claims mainly depend on certain passages in the **Manual of Discipline* (the view that 4QFlor, with its reference to a *miqdas 'adam*, means a spiritual rather than physical temple must be rejected).

The difficulties with this particular conclu-

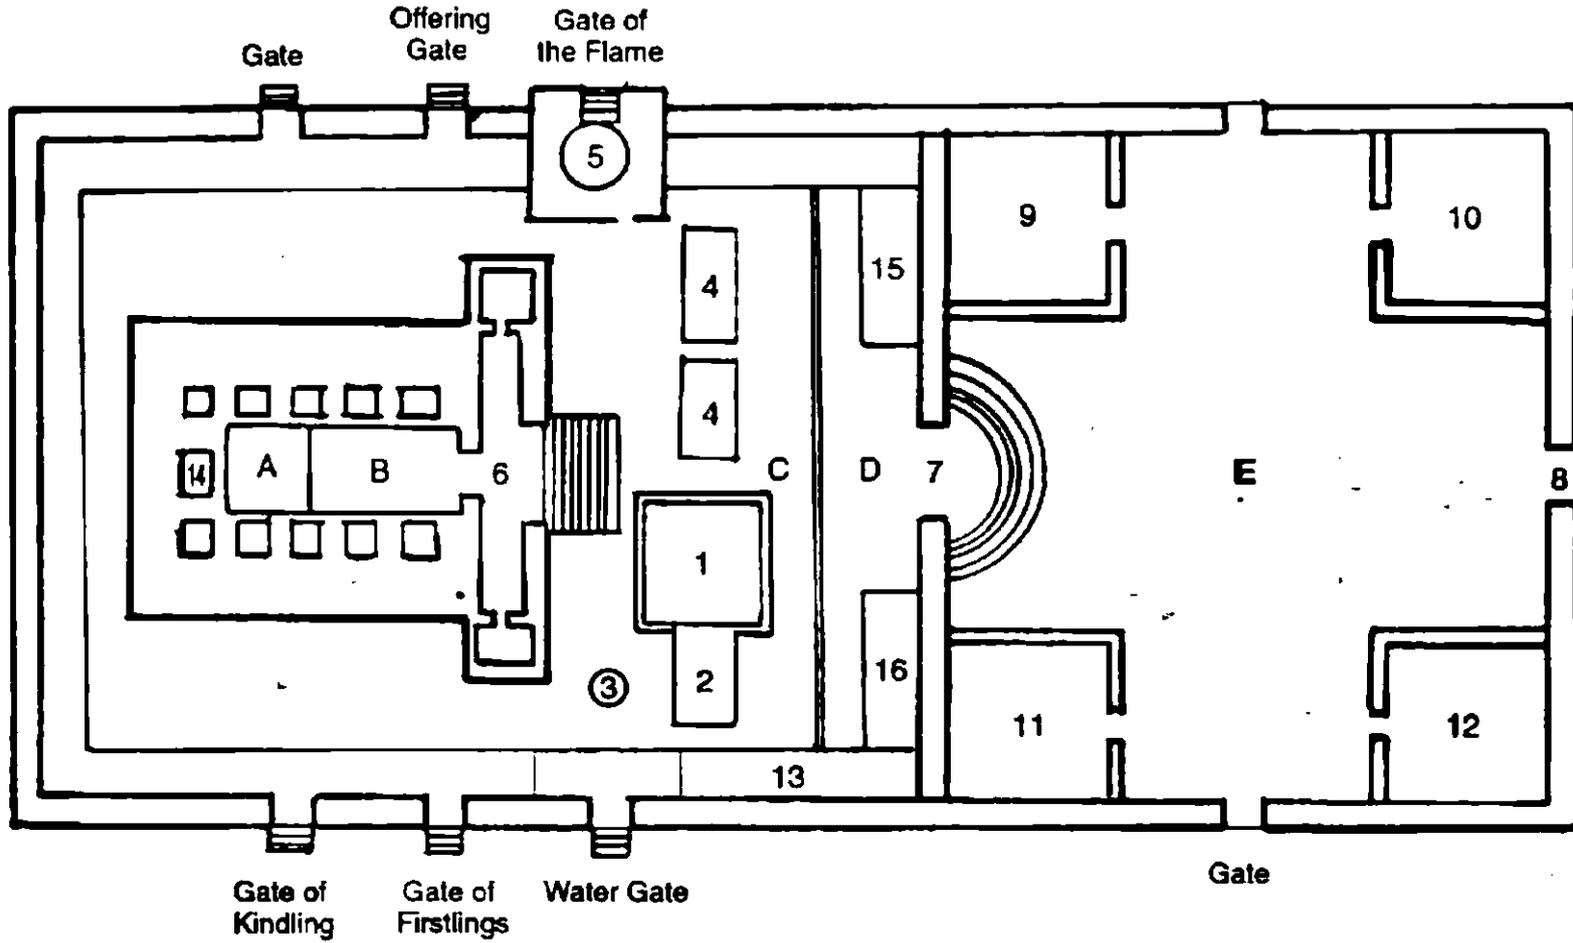

sion properly require a separate exposition, but perhaps several points should be made. First, we really do not know how the authors of the *Manual of Discipline* regarded that work; some of the imagery which it uses, such as the mustering of "Israel" by hundreds and by thousands, suggests that the text describes an idealized future. If so, then the passages which many understand as rejecting the sacrificial cultus (esp. col. 9) should not automatically be taken as evidence that the group avoided the temple in the present age. Second, the *Manual of Discipline* stands in some sort of relation with the **Damascus Document* (CD), although scholars do not agree on precisely how to define that relationship. The *Damascus Covenant* certainly envisions a circumscribed participation in the temple cultus (col. 6). This fact has to be borne in mind before reaching any conclusions about the *Manual of Discipline*, especially since the latter work does not explicitly declare the temple obsolete. Third, at least one unpublished copy of the *Manual* (from Cave 4) contains a passage describing the comings and goings of the priestly courses. Such a description may imply that the authors recognized the temple's fundamental importance and could not simply reject it. Fourth, a point related to this last—the *Manual* apparently existed in various recensions. If so, it is arbitrary to decide that the Cave 1 manuscript (the only one fully published) was necessarily the one being followed at any one time—if indeed any of the versions were "followed" or were intended as anything more than idealizing literature.

Even though the present cultus be flawed, sacrifices and festivals were divinely ordained after all. Might one really entirely cease to observe them? A more prudent approach is to suggest that such groups limited their involvement with the temple to the bare necessities, while working to change the situation and to force the acceptance of their own viewpoints. [M. O. Wise]

4. The Attitude of Jesus Toward the Temple.

The expulsion of traders in animals is the single point of consensus in the canonical Gospels concerning what Jesus did during his occupation of the temple. Indeed, it is the only specific point mentioned in Luke (Lk 19:45-48), which presents the sparsest account (cf. Mt 21:12-16; Mk 11:15-18; Jn 2:14-22). The expulsion of the traders is what is agreed in the Gospels (cf. *Gos. Thom.* 64) to have been the point of Jesus' ac-

tion; the action was immediately directed at neither the Romans nor the high priests and had nothing whatever to do with destroying the fabric of the edifice itself. Once it is appreciated that Jesus' maneuver in the temple was in the nature of a claim upon territory in order to eject those performing an activity of which he evidently disapproved, it is more straightforward to characterize it as an "occupation" rather than a "demonstration"; the traditional "cleansing" is obviously an apologetic designation. But the target of his activity makes good sense within the context of what we know of the activities of certain pharisaic or early rabbinic teachers.

Hillel insisted that owners should lay their hands on their offerings prior to giving them over to priests for slaughter. Another rabbi was so struck by the recitude of Hillel's position, he had some three-thousand animals brought to the temple and gave them to those who were willing to lay hands on them in advance of sacrifice (*b. Beša* 20a, b). The tradition concerning Hillel envisages the opposite movement from what is represented in the tradition concerning Jesus: animals are introduced rather than their traders expelled. But the purpose of the action by Hillel's supporter is to enforce a certain understanding of correct offering. Hillel's rule requires the participation of the offerer by virtue of his ownership of what is offered. Jesus' occupation may be understood—along lines similar to those involved in the provision of animals to support Hillel's position—as an attempt to insist that the offerer's actual ownership of what is offered is a vital aspect of sacrifice. Jesus wanted Israel to offer of its own, not to purchase sacrifices in the temple.

From a period slightly later than that of Jesus, Mishnah (*Ker.* 1:7) relates a story concerning Rabban Simeon b. Gamaliel, who crafted his teaching in order to bring down the price of offerings in the temple, which he considered to be exorbitant. Hillel, Simeon and Jesus are all portrayed as interested in how animals are offered to the extent that they intervene in the court of the temple in order to influence the ordinary course of worship. Jesus can best be understood within the context of a particular dispute in which the Pharisees took part, a controversy over where action was to occur. In that the dispute was intimately involved with the issue of how animals were to be procured, it manifests a focus upon purity which is akin to that attributed

to Hillel and Simeon.

The Gospels describe the southern side of the outer court as the place where Jesus expelled the traders. The exterior court was well suited for trade, since it was surrounded by porticos on the inside, following Herod's architectural preferences. But the assumption of rabbinic literature and Josephus is that the market for the sale of sacrificial beasts was not normally located in the temple at all, but in a place called Hanuth (meaning "market" in Aramaic) on the Mount of Olives, across the Kidron Valley. V. Eppstein has argued that rabbinic literature attests the innovation to which Jesus objected. It is recorded that, some forty years before the destruction of the temple, the principal council of Jerusalem was removed from the place in the temple called the Chamber of Hewn Stone to Hanuth (cf. *Abod. Zar.* 8b; *Sabb.* 15a; *Sanh.* 41a). Eppstein argues that Caiaphas both expelled the *Sanhedrin and introduced the traders into the temple.

Caiaphas enjoyed a good relationship with Pilate, under whom he served for ten years and on whose departure he was removed (Josephus *Ant.* 18.4.3 §90-95). Given that he enjoyed the support of the Romans and that he was involved in disputes concerning the location of the council, the allegation of the Gospels that trade was permitted in the temple during his tenure seems plausible.

From the point of view of Pharisaism generally, trade in the southern side of the outer court would have been anathema. Purses were not permitted in the temple according to the Pharisees' teaching (*m. Ber.* 9:5). Sufficient money might be brought to put directly into the large containers for alms (cf. *m. Šeqal.* 6:1, 5; 7:1), to purchase seals redeemable for libations (cf. *m. Šeqal.* 5:4), and/or to exchange against Tyrian coinage in order to pay the annual half-shekel (cf. *m. Šeqal.* 1:3; 2:1), but the introduction of trade for animals into the temple rendered the ideal of not bringing into the temple more than would be consumed there impracticable. (References in Mt 21:12 and Mk 11:15 to people selling and buying animals within the court may even imply that serial transactions were involved.) Moreover, the installation of traders in the porticos would also have involved the removal of those teachers, pharisaic and otherwise, who taught and observed in the temple itself (cf. *m. Sanh.* 11:2; *b. Pesah.* 26a).

From the point of view of the smooth conduct of sacrifice, of course, the innovation was sensible. One could know at the moment of purchase that one's sacrifice was acceptable and not run the risk of harm befalling the animal on its way to be slaughtered. It is therefore unnecessary to impute malicious motives to Caiaphas in order to understand what was going on, although it may be assumed that additional profit for the temple was also involved. But when we look at the installation of the traders from the point of view of Hillelite Pharisaism, for example, Jesus' objection becomes understandable. Hillel had taught that one's sacrifice had to be shown to be one's own, by the imposition of hands; part of the necessary preparation was not just of people to the south and beasts to the north, but the connection between the two by appropriation. Caiaphas's innovation was sensible on the understanding that sacrifice was simply a matter of offering pure, unblemished animals. But it failed in pharisaic terms and in the terms of Jesus, not only in its introduction of the necessity for commerce into the temple, but in its breach of the link between worshiper and offering in the sacrificial action. [B. Chilton]

5. The Temple in the Gospels.

In addition to the various Gospel portions which take the temple structures for their narrative setting (some of which have been noted in the temple description above), the temple plays a critical role in three particular pericopes. These are (1) the cleansing of the temple (Mk 11:15-17; Mt 21:12-13; Lk 19:45-46; Jn 2:14-17); (2) the saying attributed to Jesus concerning the destruction and rebuilding of the temple (Mk 14:57-58; 15:29-30; Mt 26:61; 27:40; Jn 2:18-22; cf. Acts 6:14; *see* Destruction of Jerusalem); and (3) the prophecy of the temple's destruction contained in the Little Apocalypse and related texts (Mk 13:2-3; Mt 24:1; Lk 21:5-6; cf. Mk 13:14; Mt 24:15; Lk 21:20). All of these passages have in common a negative attitude toward the temple. In order to gain a balanced perspective, before examining them it is important to take notice of positive attitudes toward the temple contained in the Gospels.

These positive attitudes continue one line of temple theology alluded to above. Prominently, the Gospels view the temple as the special place of God's presence (Mt 12:4; Lk 6:4). This dogma underlies the saying about swearing by the tem-

ple (Mt 23:31; cf. Mt 23:16, with a similar rationale). Jesus is depicted as saying that the temple should be a house of prayer, not of thieves—a strong affirmation of the sanctity connected with God's presence. Matthew also portrays Jesus as paying the temple tax (*see* Taxation, Jewish), if only out of tolerance rather than conviction (Mt 17:24-27).

The three negative pericopes are all problematic, and their interpretation is often a function of a particular scholar's model for understanding the historical Jesus. Furthermore, all three are currently at the vortex of Gospel scholarship. The following discussion is therefore intended as representative and suggestive rather than exhaustive.

Jesus' cleansing of the temple was an extremely dramatic, if not apocalyptic, act. At its heart is the attitude that the present cultus is corrupt—on that all agree. But is this merely the response of a prophet who acts from the righteous anger of an Isaiah or a Jeremiah in the face of improper worship, or is it more—a messianic claim? Although the cleansing plays no part in the narratives of the trial of Jesus, some (most recently and notably E. P. Sanders) have claimed that the act was that of a revolutionary and was perceived as such by the temple authorities and the Romans. Sanders can find no other reason for Jesus' arrest, trial and crucifixion. In the context of what we know about apocalyptic thinking it is undeniable that contemporaries might well have believed that Jesus was seeking to inaugurate the eschaton by his actions. In apocalyptic writings renewal of the temple is often a messianic act or is at least connected with the rise of the Messiah. And even if it were not so intended, one suspects that Jesus' act was sufficiently militant to arouse zealot feelings and thus discomfit the Romans (*see* Revolutionary Movements).

The saying about the destruction and rebuilding of the temple is, if anything, even more problematic. It is convenient to consider the so-called Little Apocalypse prediction of the temple's destruction at the same time, as the two appear to be interrelated in the Gospel traditions. According to the latter (Mk 13:1-4 and par.) Jesus predicted the destruction of A.D. 70 many years before it happened. This prediction is strikingly reminiscent of the charge made against Jesus in the trial before the Sanhedrin. There witnesses declare that they have heard

Jesus say that he will destroy the temple "made with hands" and raise upon another in three days, "made without hands." As usually understood, Mark seems to say that this charge was false and did not stand because the witnesses contradicted each other. They were, in other words, false witnesses. But it should be noted that Mark does not necessarily mean that the charge was substantively false—he says only that the witnesses disagreed in their accounts of Jesus' declaration in some unspecified manner (*houtōs*). Then in Mark 15:29 bystanders taunt Jesus with the same charge as he hangs on the cross. Were these people aware of the proceedings before the court, wanting only to repeat the false charges? Or did they perhaps believe (whether from the earlier testimony or for other reasons) that Jesus had in fact made some such statement?

The Markan account apparently wants the reader to conclude that Jesus never said that he would destroy the temple. In and of itself that conclusion would not be problematic. But on comparison with John 2:19-22 a tension arises. John places the saying in the context of the cleansing of the temple rather than in his account of Jesus' trial. The Jews ask Jesus what warrant he has for his actions, and he replies, "Destroy this temple, and in three days I will raise it up." The Johannine interpretation then follows, "But he spoke of his body." John seems to admit that Jesus did say something about destroying the temple, either advocating it or predicting it. John then seeks to deflect or at least avoid the straightforward interpretation of this tradition. If he did not have a tradition according to which Jesus said something about the temple being destroyed, his allegorical interpretation could not have arisen.

John therefore attributes a crucial saying to Jesus while Mark, as often understood, may deny that Jesus said it. Scholars have wrestled with this (apparent) contradiction without producing a consensus. If one finds some truth in a zealot model for understanding Jesus, it is felicitous to see here a messianic declaration in which Jesus clears the way for the temple of the eschaton. Such a declaration would be in keeping with the negative attitudes toward the temple, and would look forward to a new temple and, presumably, a new Jerusalem. Even if one rejects this alternative, it seems clear that the Gospel narrators, writing many years after Jesus spoke these

words, found them somewhat embarrassing and in need of explanation. Perhaps that is understandable in the face of the First Revolt and the desire to distance nascent Christianity from the parent Judaism. In any event, the place of the temple traditions within the Gospels will continue to merit study. [M. O. Wise]

6. The Cultic Piety of the Circle of Peter.

One of the principal reasons that make it plain that Jesus himself was loyal to the temple, even as he attempted to insist upon a distinctive view of the purity God requires within it, is that the movement which continued in his name after the crucifixion was largely centered in the temple. The picture provided in Acts is clear and consistent: under the leadership of Peter and a group of twelve, the followers of Jesus lived commonly, broke bread together regularly in their homes, and participated in the cult in the manner of devoted, nonpriestly Israelites (see Acts 1:12-26; 2:46; 3:1-26; 4:1-37).

Within Jesus' practice, meals had been occasions on which eating together had been taken as a pledge of the festivity of the kingdom of God (see Mt 8:11, 12; Lk 13:28, 29). Near the end of his life, Jesus had approved the communal wine and bread as more acceptable to God than regular sacrifice. With the words, "this is my blood" and "this is my flesh," Jesus insisted that God approved a meal in his fellowship more than the conduct of worship in the temple, where sacrificial arrangements had become too commercial (Mt 26:26, 28; Mk 14:22, 24; Lk 22:19-20; 1 Cor 11:24-25; Justin *Apol.* 166.9).

The Petrine circle literally domesticated such meals, holding them at home and yet deliberately taking part in the worship of the temple. At the same time, Peter's group accommodated the meal of fellowship to the general, ancient and widespread practice of blessing what was consumed at meals (see *m. Ber.* 6:5-8 and *b. Ber.* 41b-45a), beginning with bread (see *b. Ber.* 46a).

Acts also places Peter in Samaria (Acts 8:14-25), Lydda (Acts 9:32-35), Joppa (Acts 9:36-43) and Caesarea (Acts 10:1-48; 12:19). Paul refers, as if as a matter of course, to Peter's presence personally in *Antioch (see Gal 2:11-14), and by the time of 1 Peter he is pictured as writing from Rome with Silvanus (see 1 Pet 5:12-13) to churches in the northeast of Asia Minor (1 Pet 1:1, 2). If, then, Jerusalem was a center for Peter in the way it was not for Jesus, it was cer-

tainly not a limit of his operations. Rather, the temple appears to have featured as the hub of a much wider network of contacts which linked Jews from abroad and even Gentiles (see Acts 10:1-48; 11:1-18, 15:1-11 with Gal 2:1-14) in common recognition of a new, eschatological fellowship defined by the teaching of Jesus. The Petrine circle took part in worship within the temple, embracing it in a way Jesus had not, and yet at the same time viewed Jesus as the source of a teaching which envisaged the participation in worship of those far outside Jerusalem. Peter's activity, centered on but not limited to Jerusalem, was motivated by the eschatological promise of Zion's place at the heart of the worshipping nations.

7. The Cultic Piety of the Circle of James.

Hegesippus—as cited by Eusebius (*Hist. Eccl.* 2.23.1-18)—characterizes James, Jesus' brother, as the person to whom immediate control of the church in Jerusalem passed. James practiced a careful and idiosyncratic purity in the interests of worship in the temple. He abstained from wine and animal flesh, did not cut his hair or beard, and forsook oil and bathing. If the report of Hegesippus is to be taken at face value, those special practices gave him access even to the sanctuary. Josephus reports he was killed in the temple c. A.D. 62 at the instigation of the high priest Ananus during the interregnum between the Roman governors Festus and Albinus (Josephus *Ant.* 20.9.1 §§197-203).

In addition to the sort of close association with the temple which could and did result in conflict with the authorities there, the circle of James is expressly claimed in Acts to have exerted authority as far away as Antioch, by means of emissaries who spoke Greek (Acts 15:13-35). The particulars of the dispute (with both Pauline and Petrine understandings of purity) will not detain us here, but it is of immediate import that James alone determines the outcome of apostolic policy. James in Acts agrees that Gentiles who turn to God are not to be encumbered with needless regulations (Acts 15:19), and yet he insists they be instructed by letter to abstain "from the pollutions of idols, and from fornication, and from what is strangled, and from blood" (Acts 15:20).

The grounds given for the Jacobean policy are that the law of Moses is commonly acknowledged (Acts 15:21); the implication is that to dis-

regard such elemental considerations of purity as James specifies would be to dishonor Moses. Judas Barsabbas and Silas are then dispatched with Paul and Barnabas to deliver the letter in Antioch along with their personal testimony (Acts 15:22-29) and are said particularly to continue their instruction as prophets (Acts 15:32, 33). They refer to the regulations of purity as necessities (Acts 15:28), and no amount of Lukan gloss can conceal that what they insist upon is a serious challenge of Paul's position (compare 1 Cor 8, which is ignorant of the so-called decree).

James's devotion to the temple is also reflected in Acts 21. When Paul arrives in Jerusalem, James and the presbyters with him express concern at the rumor that Paul is telling Jews who live among the Gentiles not to circumcise their sons. Their advice is for Paul to demonstrate his piety by purifying himself, paying the expenses of four men under a vow, and entering the temple with them (Acts 21:17-26). The result is a disastrous misunderstanding. Paul is accused of introducing "Greeks" into the temple, a riot ensues, and Paul himself is arrested (Acts 21:27-36). James is not mentioned again in Acts, but Hegesippus's notice would suggest his devotion to the temple did not wane.

Within the Gospels certain passages reflect the exceptional devotion of James's circle to the temple. The best example is Mark 7:6-13 (and, with an inverted structure, Mt 15:3-9); although the topic of the chapter overall is purity, the issue addressed in the passage itself is the sanctity of the temple (Mk 7:6-13). The issue is spelled out in terms of a dispute concerning *qōrbān*, the Aramaic term for a cultic gift (Mk 7:11).

The dispute reflects Jesus' own stance, that what is owed to one's parents cannot be sheltered by declaring it dedicated to the temple. The crucial point of such a gambit of sheltering is that one might continue to use the property after its dedication, while what was given to a person would be transferred forthwith. The basic complaint about the practice, especially as stated in the simple epigram of Mark 7:11-12, derives from Jesus. The complaint is characteristic of him; quite aside from his occupation of the temple, he criticized commercial arrangements there (see Mt 17:24-27; Mk 12:41-44; Lk 21:1-4).

The dominical epigram has here been enveloped in a much more elaborate argument. Mark 7:6-13 is a syllogism, developed by means of scriptural terms of reference. Isaiah's complaint

(Is 29:13) frames the entire argument: the people claim to honor God, but their hearts are as far from him as their vain worship, rooted in human commandments (Mk 7:6b-7). That statement is related in Mark 7:10-12 to the tradition of *qôrbân*, taken as an invalidation of the Mosaic prescription to honor parents. The simple and unavoidable conclusion is that the tradition violates the command of God (Mk 7:8-9, 13).

The argument as it stands insists upon the integrity of the temple and the strict regulation of conduct there; it attacks opponents for too little concern for the temple, not too much. At the same time, the passage presents Jesus as maintaining a literal loyalty to the Scriptures (in their *Septuagintal form) which the Pharisees did not. Those aspects of the presentation of Jesus' saying are arguably typical of the circle of James. [B. Chilton]

8. Temple Theology in Paul.

8.1. Terminology. Paul used two different Greek words to speak of temple: *naos* and *hieron*. In terms of the Jerusalem temple, *naos* refers to the building, the place of God's dwelling, and *hieron* refers to the entire area, or precincts, including the sanctuary (Michel, 880-90). Generally speaking, *naos* was used to designate the inner courts of the temple known as the holy place and the holy of holies, whereas *hieron* designated the outer court and the temple proper.

In Paul's letters the word *naos* appears six times (1 Cor 3:16-17; 6:19; 2 Cor 6:16; Eph 2:21; 2 Thess 2:4) and *hieron* once (1 Cor 9:13). In these verses Paul maintains the distinction of definition noted above. In 1 Corinthians 9:13 Paul, addressing the issue of whether "those who proclaim the gospel should get their living by the gospel," uses the analogy of the actual physical temple. He uses the word *hieron* to indicate the place where the priests offered up animal sacrifices on the altar (1 Cor 9:13), which was situated in the outer court (see Ex 27-29, 40). When Paul refers to the abominable act of the "man of lawlessness," who usurps God's place in the temple, he uses the word *naos*—the word that designates the place of the deity's presence (1 Thess 2:4).

In all the other Pauline passages, *naos* is used metaphorically—to depict a human habitation for the divine Spirit. In one instance the sanctuary image is used to describe the individual believer's body (1 Cor 6:19); in every other

instance the sanctuary depicts Christ's body, the church (1 Cor 3:16-17; 2 Cor 6:16; Eph 2:21).

8.2. Temple and the People of God.

8.2.1. 1 and 2 Corinthians. In arguing for sexual purity Paul asks the Corinthians, "Do you not know that your body is a temple [sanctuary] of the *Holy Spirit within you, which you have from God, and that you are not your own?" (1 Cor 6:19 NRSV). It is possible that some of the Corinthian believers still frequented the pagan temples and had intercourse with the temple prostitutes; in so doing, Paul argued, they became one body with a prostitute (1 Cor 6:16). But Christ has redeemed them so that they might become united to him, for "anyone united to the Lord becomes one spirit [with him]" (1 Cor 6:17). Each person who has been spiritually united to the Lord is his holy dwelling place; his or her body belongs to the Lord and must not be given to or joined with a prostitute. Those sanctified by the Lord are now his holy temple (as contrasted with a pagan temple), where he dwells by means of the Holy Spirit.

1 Corinthians 6:19 is the only Pauline passage that describes the individual believer as God's temple. Mistakenly, it is sometimes thought that 1 Corinthians 3:16-17 also speaks of the individual. According to the Greek text, it is unquestionably clear that Paul in 1 Corinthians 3:16-17 is not speaking about the individual but the local church in Corinth when he says, *ouk oidate hoti naos theou este kai to pneuma tou theou oikei en hymin* ("do you [plural] not know that you [plural] are God's temple and that the Spirit of God dwells in you [plural]?"). In the same vein, Paul in 2 Corinthians 6:16-7:1 speaks of believers corporately as "the temple of the living God" and applies to them Ezekiel's rendition of the old covenant's promise of the divine presence in Israel's midst (Ezek 37:27). Because they are inhabited by the holy God, they must live in holiness.

When the Corinthians heard Paul's analogy in 1 Corinthians of the church as God's sanctuary, they would have understood the image from their knowledge of pagan temples. But Paul probably had in mind the one temple in Jerusalem. The Gentiles had many gods with many temples in many cities; the Jews had one God with one temple in one place that he had chosen (cf. Deut 12). In the history of Israel this had helped to preserve the unity and identity of the people of God. The Corinthians needed spiri-

tual unity, for they were fragmented due to their individual preferences (see 1 Cor 1:10-13). In the context of the letter Paul emphasizes the need for the Corinthians to see that God was producing one spiritual habitation in Corinth. God had given them many workers (such as Paul and Apollos) to lay the foundation (*themelios*; cf. Ps 118:22; Is 28:16; Eph 2:20-22) for this sanctuary (1 Cor 3:9-15); it was their responsibility to build (*oikodomeō*) with the right materials and not destroy the building with their divisiveness.

Finally, E. E. Ellis has suggested that when Paul writes in 2 Corinthians 5 of the destruction of the earthly "tent" (*skēnē*) and its replacement by a "building [*oikodomē*] from God . . . a house [*oikos*] not made with hands, eternal in heaven," he is speaking not of individual bodies but of the corporate "body" of Christ conceived as a new temple. In so doing Paul reflects the tradition of Jesus that he would destroy "this temple" and build one "not made by hands" (Mk 14:58; cf. Jn 2:19) and the early Christian tradition that God does not live in houses built by hands (Acts 7:48-49) but was now rebuilding David's "fallen tent" (Acts 15:16-18; cf. Amos 9:11-12; see Ellis).

8.2.2. Ephesians. In Ephesians 2:14-15 Christ is said to have destroyed the "dividing wall of hostility," referring to his abolishing the enmity between Jews and Gentiles and making them into one "new humanity." Commentators frequently identify the "wall" with the barrier in the temple dividing the Court of the Gentiles from the Court of Women. This barrier, beyond which no Gentile was to venture on pain of death, has been figuratively torn down in Christ.

The Ephesian passage goes on to speak of the local churches as living, organic entities which are all (corporately speaking) growing "into a holy sanctuary [*naon hagion*] in the Lord" (Eph 2:21). This interpretation depends on the textual variant, *pasa oikodomē* (supported by \aleph^* B D 33 1739* and the text printed in NA²⁶), which could be rendered as "every building" (i.e., every local church). The other reading, *pasa hē oikodomē* (found in \aleph^1 A C P 1739^c), translated as "all the building" (referring to the universal church), is a scribal correction. Paul pictures each local church as providing God with a spiritual habitation in that locality (Eph 2:22) and as growing together with all the other churches into one holy, universal sanctuary for the Lord's indwelling. The several words derived from *oikos* in Ephesians 2:19-22 (*paroikoi*, *oikeioi*, *epoiko-*

domethentēs, *oikodomē*, *synoikodomeisthē*, *katoiketērion*) suggest that the "building" metaphor was closely associated with that of "temple" (cf. 1 Tim 3:15; note 2 Sam 7 where "house" is used alternately of David's home and dynasty, and the house David proposes to build for Yahweh; cf. Is 66:1; Jer 12:7; Hos 9:8, 15; Zech 9:8; IQS 5:6; 8:5, 9; CD 3:19).

8.3. Temple and Christology. Finally, Paul seems to apply one aspect of temple imagery to Christ. In Colossians 1:19 Paul speaks of Christ as the one "in whom all the fullness was pleased to dwell," and in Colossians 2:9 he writes "in him all the fullness of deity dwells bodily." The language of God being "pleased to dwell" is used in Psalm 68:16 (LXX 67:16; cf. Deut 12:5) of Zion, the mountain where God would reside forever, and it is later appropriated to speak of divine Wisdom taking up residence in Zion (Sir 24:9-12). In the OT the glory of God which is said to "fill" the whole earth (Ps 72:19; Jer 23:24; Is 6:3) comes to "fill" his temple (Ezek 43:5). So the "fullness" of God being "pleased to dwell" in Christ suggests an application of the temple metaphor to the incarnation. [P. W. Comfort]

9. Early Christian Assimilation of the Temple's Function.

Jesus' conception at the end of his ministry was that his meals, his wine and bread, were more acceptable to God as "blood" and "flesh" than were sacrifices in the temple. In the circles of Peter and of James, as well as in other communities of primitive Christianity, a cultic understanding of the meal was preserved (and developed further). That practice led naturally to the claim that a church at worship took the place of the temple.

The theme is evident in Pauline and deuteropauline passages such as 1 Corinthians 3:16-17; 6:19; 2 Corinthians 6:14-7:1; Ephesians 2:19-22 (see 8 above). Comparable claims in the Dead Sea Scrolls (see, for example IQS 9:5-6) demonstrate that the assimilation of cultic functions by a community need not imply that the temple is no longer the place of divinely mandated worship. The Essenes envisaged their place in the temple, as did James, Peter and Paul.

The assimilation of the functions of the temple, however, could develop into the expectation of its eschatological replacement. The Revelation of John represents that development clearly. The confident statement in the vision of the New

Jerusalem in Revelation 21:22, "I saw no temple" in the city, probably reflects the awareness that the edifice had been destroyed as a result of the Roman siege of Jerusalem. But the theology of the passage is its real contribution, "for its temple is the Lord God the almighty and the Lamb." Here a major theme of the Revelation, that Jesus as the Lamb of God is the object of heavenly worship (see Rev 5 and Jn 1:29), finds its climax. In time to come, Jesus is to assume all the value of the temple itself.

The theme of the eschatological replacement of the temple is also voiced in the Gospels. The most obvious case is the interpreted compendium of Jesus sayings in Mark 13 (with Mt 24—25; Lk 21:5-36), a complex of material developing an apocalyptic scenario in which the most important elements are the destruction of the temple and Jesus' coming as the triumphant Son of Man of Daniel 7.

A less obvious instance of the theme of the eschatological replacement of the temple is the way in which Jesus' occupation of the temple is presented in Mark 11:15 and Matthew 21:12, but not in Luke 19:45. Instead of simply objecting on the ground of purity to trading in the temple, Jesus is made to attack those who were changing money for the annual tax of the half-shekel. The fact of the matter is that, every year, money changing for that purpose went on publicly throughout Israel. The process commenced a full month before Passover, with a proclamation concerning the tax (*m. Seqal.* 1:1), and exchanges were set up in the provinces ten days before they were set up in the temple (*m. Seqal.* 1:3). Moreover, according to Josephus the tax was not even limited to those resident in the land of Israel (Josephus *J.W.* 7.6.6 §218; *Ant.* 18.9.1 §312), so that the procedure itself would not have been stopped by the sort of interruption the Gospels describe.

For reasons which have already been discussed, Jesus' occupation of the temple for the purpose of expelling vendors should be acknowledged as fully historical. The additional aspect of expelling the money changers provided warrant at a later stage for the refusal of churches to participate in the collection of the half-shekel (both in Jerusalem and abroad). John's picture (Jn 2:13-17), in which the smaller coins involved in the sale of animals were scattered, is historically plausible, but also shows (in Jn 2:17-22) how the tradition developed toward

the symbol of eschatological replacement which Matthew and Mark present in narrative terms with the expulsion of the money changers.

10. Theology of Definitive Replacement of the Temple.

The Epistle to the Hebrews spells out how Jesus' replacement of the temple is not simply eschatological but already accomplished and definitive. Chapter 9 of Hebrews begins with the "first" covenant's regulations for sacrifice, involving the temple in Jerusalem. Specific mention is made of the menorah, the table and presented bread in the holy place, with the holy of holies empty but for the gold censer and the ark of the covenant (Heb 9:2-5). The reference to the censer as being in the holy of holies fixes the point in time of which the author speaks: it can only be the Day of Atonement, when the high priest made his single visit to that sanctum, censer in hand (Lev 16).

That precise moment is only specified in order to be fixed, frozen forever. For Hebrews, what was a fleeting movement in the case of the high priest was an eternal truth in the case of Jesus. The movement of ordinary priests, in and out of the holy place, the "first tabernacle" (Heb 9:6), while the high priest could only enter "the second tabernacle," the holy of holies (Heb 9:7), once a year, was designed by the Spirit of God as a parable: the way into the holy of holies could not be revealed while the first temple, the first tabernacle and its service, continued (Heb 9:8-10). That way could only be opened, after the temple was destroyed, by Christ, who became high priest and passed through "the greater and more perfect tabernacle" of his body (Heb 9:11) by the power of his own blood (Heb 9:12) so that he could find eternal redemption in the sanctuary.

Signal motifs within the Gospels are developed in the Hebrews passage. The identification of Jesus' death and the destruction of the temple, which the Gospels achieve in narrative terms, is assumed to be complete. (It is not even clear what exactly the author made of the interim between the two events.) Moreover, the passage takes it for granted that Jesus' body was a kind of "tabernacle," an instrument of sacrifice (Heb 9:11), apparently because the Gospels speak of his offering his body and his blood in the words of institution. (And John, of course, actually has Jesus refer to "the temple of his

body," Jn 2:21.) "Body" and "blood" here are Jesus' self-immolating means to his purpose as high priest. The temple in Jerusalem has in Hebrews been replaced by a purely ideological construct. The true high priest has entered once for all (Heb 9:12) within the innermost recess of sanctity, so that no further sacrificial action is necessary or appropriate.

From the perspective of Hebrews there is only a short step to that of the *Epistle of Barnabas* (c. A.D. 130), where it is held that "the spiritual temple," God's word dwelling in the believer, takes the place of the temple of Jerusalem (*Barn.* 16.6-10). The physical temple was always a mistaken attempt to worship God; it was destined for destruction (*Barn.* 16.1-5). A proper, allegorical reading of such rites as the Day of Atonement (*Barn.* 7.3-11) and the red heifer (*Barn.* 8.1-7) testifies to the reality of Christ at the heart of Israel's Scripture; he is the truth behind the veil of the temple. TEMPLE INSCRIPTION. See INSCRIPTIONS AND PAPYRI: GRECO-ROMAN.

TEMPLE SCROLL (11QTEMPLE)

The *Temple Scroll* is the longest of the *Dead Sea Scrolls; in the name of *Moses, it mandates many extrabiblical laws and the construction of a huge *temple unlike any that ever stood in Jerusalem. Since 1960 the scroll has been known to exist; in that year portions of it were first surreptitiously examined. Only in June 1967, however, was the scroll acquired for study and publication. As a consequence of the Six Day War, the Old City of Jerusalem came at that time into Israeli hands. Knowing of the scroll's whereabouts, the Israeli general and archaeologist Y. Yadin gathered a troop of soldiers and paid a visit to Kando, the Palestinian antiquities dealer in whose hands the scroll resided. Yadin found the scroll stuffed under a bed, wrapped in a shoe box and rapidly deteriorating. He immediately confiscated it. Kando was later compensated by the Israeli government in the amount of \$100,000, substantially less than he might have received through sale on the open market.

Yadin always gave the ultimate provenance of the scroll as Qumran Cave 11, and scholars have accepted that idea as entirely plausible; but why Yadin thought that designation correct he never explained. Perhaps he knew more than he felt free to say. Scholars have officially designated Yadin's copy of the scroll, by far the best preserved, as 11Q19 (11QTemple^a). Subsequently, a second, fragmentary copy of the scroll was identified, this one unquestionably from Cave 11, 11Q20 (11QTemple^b). A third copy from that cave has also tentatively been identified, but the remains are so exiguous that certain identification is im-

possible (11Q21 or 11QTemple^c). Most recently, a fourth copy of the *Temple Scroll* has emerged from Cave 4 (4Q524).

Some scholars believe that yet another fragmentary scroll from Cave 4, designated 4Q365a, represents a fifth exemplar of the *Temple Scroll*. The matter is uncertain because the fragments in question were produced by the same scribe who was responsible for a copy of a different composition, known as *Pentateuchal Paraphrase* (4Q365). The problematic fragments may therefore belong to 4Q365 itself, portions of which were then recast by the author of the *Temple Scroll* for his own purposes. In that scenario, *Pentateuchal Paraphrase* becomes a source for the *Temple Scroll*. Thus scholars have identified at least four and perhaps five copies of the work.

1. Contents and General Features of the *Temple Scroll*
2. Issues of Interpretation
3. Importance of the *Temple Scroll*

1. Contents and General Features of the *Temple Scroll*.

The *Temple Scroll* is the longest of the Dead Sea Scrolls, longer even than the famous **Isaiah Scroll* from Cave 1: comprising 66 columns, it measures more than 28 feet when it is unrolled. It lacks columns 67 on; how much longer the scroll once was, none can say, but slight portions of the lost material have survived in 4Q524. All extant copies of the work begin with a general exhortation derived from Exodus 34, Deuteronomy 7 and perhaps Deuteronomy 12, but some material is missing from the beginning. Indeed, all the early columns of the writing are badly broken or missing in every copy, but as it stands the initial exhortation did not exceed one or one and one-half columns in length. There follows a lengthy program for the construction of a central temple complex surrounded by three square courtyards. In 11Q19 this description occupies virtually all of columns 3-46, apart from a break in columns 13-29 for the insertion of a *festival calendar. Beginning in column 45—thus overlapping the building instructions—are a series of *purity laws, derived by *midrashic techniques from portions of Numbers and Leviticus. In columns 51-66, the redactor of the *Temple Scroll* presents a form of the laws of Deuteronomy 12-26, with some interesting additions and omissions, the pattern of which is a key to the scroll's purpose. The preserved portions end in the middle

of a discussion on improper *marriage.

A striking aspect of the *Temple Scroll* is that its author or redactor has eliminated the name of Moses where it should appear in his biblical excerpts. This omission has the effect of rendering the biblical portions direct communication between the scroll's author and God. The work is thus one form or another of *pseudepigraphy. The author may be claiming to have found a long-lost writing from the hands of Moses—the patriarch's notes, as it were, which he later used to write the Bible—containing things that Moses chose not to reveal to the generality of his readership. Or, the author may have been even more audacious. He could be suggesting that Moses' prophetic mantle has fallen to him. Thus he becomes the "prophet like Moses" (Deut 18:15) whom certain elements of society in the late Second Temple period expected as a herald of the eschaton.

2. Issues of Interpretation.

Research on the *Temple Scroll* has focused on four basic and interrelated questions: who composed the scroll and for what purpose; how and when was it done? The answers have naturally been various. Beginning with the scroll's original editor, Yadin, most students of the text have connected it with a community thought to have inhabited the site of Khirbet *Qumran. Because of that presumed connection, they have defined the text as sectarian. Still, a sizeable minority of scholarship argues that the *Temple Scroll* is not sectarian.

Yadin presented three arguments for the sectarian origin of the scroll. First, he pointed to the laws it contains and parallels with these laws in other sectarian writings, notably the **Damascus Document*. Second, he isolated special sectarian terminology; and third, he highlighted various sorts of parallels between the *Temple Scroll* and other Dead Sea texts, including **Jubilees*.

L. Schiffman, an early opponent of the sectarian view, countered Yadin's linguistic argument with one of his own: "the basic terms and expressions of Qumran literature," he argued, "are completely absent" (Schiffman, 149). He further stressed that the underlying principles by which the *Temple Scroll* derived its laws from the Bible were different from those operative in other Qumran legal literature (see *Legal Texts at Qumran*). H. Stegemann likewise opposed the notion that a putative Qumran community composed the work. For him, they merely treasured

it as an outside writing whose views were attractive. The work's laws, he noted, are "unqumranisch," unlike those of previously identified sectarian writings. Moreover, the feasts mandated by the scroll lack analogies in other Dead Sea texts, Stegemann argued; and the scroll contains no hint of a polemic against the *Hasmonean merging of high-priestly and royal functions. B. Levine was a third scholar who grouped the *Temple Scroll* with texts such as *Jubilees*, **1 Enoch* and the **Psalms Scroll* from Cave 11—texts that the Qumran sect preserved, he said, but did not write.

More recent work on the *Temple Scroll* has emphasized the work's composite character. If these views are correct, then arguments about the connection of the text to other sectarian writings from Qumran must focus on the portions of the *Temple Scroll* that can be shown, if possible, to have connections with the final redactor. Then the question becomes whether or not the redactor was a sectarian. This research tends to favor the idea that one or more members of the sectarian movement reworked earlier, nonsectarian sources to produce the *Temple Scroll*. Thus, on the matter of provenance, the situation appears to be one of both/and: the work binds together earlier, nonsectarian sources using as its glue a sectarian redaction.

As to the reasons for producing the *Temple Scroll*, Yadin argued that it was intended as a tool in the context of contemporary legal polemics. The text was thus a sort of crib sheet to aid halakic study. Stegemann agreed that the Qumran sectarians read the scroll primarily to learn how to harmonize divergent Halakoth. A few other scholars have followed suit. But more recently the question of the scroll's purpose has focused on the definition of its relationship to the Bible, Deuteronomy in particular. Redaction criticism shows that the *Temple Scroll* purposefully includes or excludes all of the laws from the Deuteronomic law (Deut 12–26). These are the laws that Deuteronomy says are to apply when the children of Israel begin to live in the land. It seems that the redactor of the *Temple Scroll* intended his work, like Deuteronomy 12–26, as a collection of laws for life in the land. And while some scholars have argued that the work is merely a reprise and supplement to the book of Deuteronomy, the fact that the redactor purposely left out some of Deuteronomy's laws argues that he intended to re-

place the biblical book altogether.

The notion that the *Temple Scroll* was prepared as a collection of laws for life in the promised land fits well with the ideology of the **Damascus Document* in particular. According to that work, the sectarians were presently in exile, just as Israel had been during the forty years of wandering in the desert. The typologically minded sectarians of the *Damascus Document* believed, however, that at the end of "the forty years" they would come to power. This event would mark their taking of the land just as surely as Joshua's conquest had marked the biblical precedent. Given this typological connection, it is attractive to think that the group believed that the *Temple Scroll* would take effect when the exile was over. Its laws would now be the laws one must follow, and its temple would now be built and stand in Jerusalem. The old laws of Moses, given in Deuteronomy, would largely continue in force, but some of the particulars would cease to be relevant. Those still to be in force were gathered in the *Temple Scroll*. New laws were added as well. These added laws are the place where sectarian connections exist, for the additions restate or supplement legal ideas known from multiple sectarian writings. If this line of analysis is correct, then the *Temple Scroll* was fashioned as a law for the eschaton, the latter conceived in a mundane fashion à la the prophets. The eschatological significance of the *Temple Scroll* was first argued by B. Z. Wacholder.

Suggested dates for the *Temple Scroll* have varied enormously. Stegemann has proposed the earliest option. He sees the arrival of Ezra in Jerusalem with a Persian-backed official law as the catalyst to gather together traditional materials now outlawed. Thus the work would date to the fifth or fourth century B.C. Most scholars prefer a date somewhere in the range of 150 to 60 B.C., and this assignment is most likely. It should be noted, however, that the text itself contains little, if anything, that can be dated: neither the language nor its contents lend themselves to such analysis. Moreover, if the *Temple Scroll* is a composite work, as seems likely, its constituent parts might reflect various *Sitze im Leben* and the final redaction quite another. Some scholars hold that the *Temple Scroll* was composed by the Teacher of Righteousness; if so, then its date is obviously connected to his period of activity. That connection points to the favored period noted above, 150 to 60 B.C., but the

dating then depends on elements external to the text itself.

3. Importance of the *Temple Scroll*.

In addition to its importance for the understanding of many phenomena of the Dead Sea Scrolls and their readers and writers, the *Temple Scroll* is crucial to issues involved with the study of pseudepigraphy among Jews and early Christians in the period 200 B.C. to A.D. 135. Further, the work is an invaluable source for understanding Jewish legal or halakic developments during those years. Together with other Dead Sea Scrolls such as **Miqṣat Ma'asey ha-Torah* (4QMMT) and the *Toharot* texts (see Purification Texts), the *Temple Scroll* represents another approach (or perhaps other approaches) to many of the legal questions considered in **rabbinic literature*. Comparison of these materials is already opening up new perspectives on life and ideas of how to live in the Palestine from which emerged both Christianity and rabbinic Judaism.

TEMPLE SERVICE. See SACRIFICE AND TEMPLE SERVICE.

TEMPLES, GRECO-ROMAN

Greek and Roman temples were largely similar, not only in form but also in function. As the monumental part of the larger sanctuary, their chief function was to house the cult statue of the deity; they did not usually serve as places for collective worship. Temples also had a variety of ancillary functions: they served as storehouses for votive offerings, banks, places of refuge and, notably, as exempla of political propaganda.

1. Greek Temples
2. Roman Temples

1. Greek Temples.

The Greek temple (*hieron*, *hedos*) was the residence of the deity. It was commonly the dominant feature of the larger *temenos*, the sacred precinct dedicated to a divinity. The Greek word *naos* can also denote "temple," but more often it refers to the inner room of the temple housing the image of the deity. The earliest Greek temples began to appear in the eighth century B.C., as corporate productions of the newly emergent city states (*poleis*). Originally rather simple wooden or mudbrick structures, by the sixth century they had evolved into elaborate stone, often marble, edifices. The main lineaments of the Greek temple, though not without notable variations in size and structure, remained relatively constant for centuries. Its main component was a rectangular room, the *cella*, which housed the cult image at one end. The entrance was at the other (usually eastern) end, where the walls of the *cella* extended to form a columned porch at one end or at both ends. Sometimes a smaller room, the *adyton*, was situated behind the *cella*. Most temples also featured columns surround-

ing the *cella*, the external colonnade, usually with six columns at each end and thirteen on either side. Larger temples included interior columns both as decoration and as a support for the roof beams and tiles. The roof was gently gabled, allowing for sculpted pediments in the more elaborate temples. Sculptured panels called metopes and sculptured friezes might also appear above the colonnade.

Urban temples would commonly be situated in the heart of a *polis*, either on the acropolis or near the *agora* ("marketplace"), though occasionally temples were located outside the city walls (see Cities, Greco-Roman). Some city-states also oversaw temples in the rural hinterland, either as "extrarban" or in a few cases "pan-Hellenic" sanctuaries (Marinatos and Hägg, 229-30). The former was under the direct political control of the *polis*. The latter was also overseen by a city, Olympia by Elis, for instance, but it preserved an air of neutrality. Here, even in wartime, pan-Hellenic festivals such as the Olympics would be held in the god's sanctuary for participants from all over Greece.

The chief function of the temple was to provide a monumental residence for the deity, who was present in the form of the anthropomorphic cult image. With the notable exception of the *mysteries, worshipers did not meet in the temple for the observance of collective rites, but within the temple precincts. The most important rite, the sacrifice, would be performed on the altar (*bēmos*) situated in front of the temple. The image of the god would preside from inside the *cella*, and participants in the sacrifice would eat outside in the *temenos* area, which sometimes included kitchen and dining facilities.

Worshipers were not, however, categorically excluded from the house of the god. Groups of devotees could enter periodically to cleanse the cult image or, as in the Great Panathenaea at Athens, to adorn it with a new garment. Individuals who were ritually pure were usually (with various exceptions) allowed to enter the *cella* to do homage to the deity, to offer up prayers or even to sightsee (Herodas 4.39-95; cf. Corbett).

The temple and occasionally other buildings ("treasuries") within the *temenos* served as repositories for thank offerings dedicated by individuals, groups or the state. These could include, among other things, statuary, votive images, bronze cauldrons, weapons of vanquished enemies and gold and silver plate. Because temples

were theoretically inviolable, they also commonly served as banks for individuals and the state, imparting sacrosanct status to the items housed within them. This same status could be extended to individuals, and refugees were able to obtain limited asylum within the temple or its *temenos*.

A further function of the temple was political and propagandistic. In the case of the main urban sanctuaries, the *polis* would adopt a deity as its patron (i.e., Athens and Athena), who would provide protection for the city-state. The size and location of the temple would, therefore, be an indication not only of the deity's importance to the *polis* but also a barometer of the wealth and power of the city-state. In the case of Athens, for instance, the magnificence of the Parthenon with its chryselephantine statue of Athena, situated as it was upon the city's acropolis, was a direct advertisement to the magnificence, technical ability and power of Periclean Athens (Plutarch *Per.* 12-13). Within the agonistic context of the Greek city-states, a temple provided a highly visible means of competing with rival states. Extramural temples exercised a similar function. When they were not neutral pan-Hellenic centers such as Olympia or Delphi, they could serve as a monument to the power of the sponsoring city and a rallying point for the rural populace.

In spite of the decline of the *polis* in the Hellenistic period, Greek temple complexes continued to flourish. Hellenistic kings and the monied classes continued to provide for the maintenance of older sites as well as for the establishment of new temples and festivals. Nor did the situation appreciably change with the triumph of Rome, as can be seen, for instance, from the reference in Acts (Acts 19:23-41) to the unabated vitality of the Artemision, the temple (*hieron*) of Artemis in Ephesus. For the silversmith Demetrius, the temple's greatness was axiomatic; an assumption to which his occupation likewise testifies. The "silver shrines [*naous argyrous*] of Artemis" (Acts 19:24) that he fashioned were not (*pace* Koester, 130 #40) "statues of Artemis standing in a simple, small naiskos," but miniature shrines of the temple or part of the temple (Irebilco, 336-38). His trade, therefore, enabled devotees to take away with them a representation of one of the wonders of the ancient world.

2. Roman Temples.

Properly speaking, the word *templum* designates

a tract of land set aside for religious purposes. Eventually, however, it came to be used loosely (as it will be here) for the building (*aedes*) housing the image of the deity. The tract of dedicated land bounded by an enclosure was the *area*. The altar (*ara*) was usually situated in front of the *aedes*, and there the sacrifices would take place. Temples tended to have a western orientation and commanded a clear view of the horizon so that the augurs could take the auspices with an unobstructed view (Varro *Ling.* 7.8).

The earliest Roman temples were modeled on Etruscan prototypes (Pliny *Nat. Hist.* 35.154). By the second century B.C., however, they had become a blend of Greek and Etruscan influences (for a detailed classification, see Vitruvius *De Arch.* 3-4). Like urban Greek temples, they tended to be situated at prominent points throughout the city.

Roman temples had a variety of functions. They too housed the image of the deity and served as repositories for a broad spectrum of votive offerings and valuables (the temple of Saturnus in Rome, for example, acting as state treasury). They served as archives and even as libraries. Roman temples were also highly valued as places of assembly. The Roman senate and other official bodies conducted their meetings in temples, and legal hearings were held there. Roman religious associations (*collegia*) would commonly make use of temples as a place for assembling and dining.

Roman temples also had political and propagandistic function. In classical Greece, temple dedication was the prerogative of the state, but in Rome it was open to private individuals subject to the senate's approval. Triumphant generals would often dedicate new temples to commemorate their victories and glorify themselves (cf. Orlin). In the principate, the founding or restoration of temples was particularly associated with the emperor (see Roman Emperors). Augustus's establishment of the temple of Mars Ultor, "the Avenger," for instance, helped to celebrate him both as the avenger and the rightful successor to Julius Caesar. He was further able to proclaim his piety by restoring eighty-two temples in disrepair (Augustus *Res Gest.* 20, 21). Naturally, his largesse had the salutary function of making Rome a showcase of imperial power.

Temples to the genius of the emperor and to Roma had an additional function throughout the empire (see Ruler Cult). They were able to

promote loyalty and obedience among its scattered subjects. In the same way that extraurban temples in Greece could serve as a focal point for local support, temples in the provinces promoted allegiance to Rome. One of the clearest instances of this is *Herod the Great's assiduous construction of a number of temples as part of his building program. *Josephus relates of Herod that "one can mention no suitable spot within his realm, which he left destitute of some mark of homage to Caesar. And then, after filling his own territory with temples, he let the memorials of his esteem overflow into the province and erected in numerous cities monuments to Caesar" (Josephus *J.W.* 1.21.4 §407; cf. 1.21.3 §404; *Ant.* 15.9.5 §328; 15.10.3 §363). In Rome as in Greece, therefore, temples had far more than a purely sacral importance.

TESTAMENT OF ABRAHAM

The *Testament of Abraham*, as its name implies, is a pseudonymous writing in which Abraham's authority is claimed for a work that originated in

the first or second century A.D. Study of this text is complicated by the fact that it exists in two recensions, a longer recension (A), attested by several Greek manuscripts and a Rumanian translation, and a short recension (B), also attested by several Greek manuscripts and a Rumanian translation, together with Coptic, Arabic and Ethiopic versions. It seems that the work was originally written in much the form represented by A and then rewritten in the two principal recensions together with the not-always-precise translations.

The work is charming, and its content, for its ancient readers, was no doubt instructive in its *eschatological teaching. A testament in the context of ancient Jewish literature is the death-bed declaration of a famous person. The *Testament of Abraham* offers a variation on this theme, for Abraham never makes his dying declaration. As the plot unfolds, it becomes clear that the author's interest is in the problem of human death, specifically in the universalism of eschatology.

The unfolding plot is not without comical elements. Its underlying basis is the narrative assertion that the day of Abraham's death has arrived. God sends Michael to break the news to Abraham, telling the patriarch to make his plans for departure by preparing his testament. Abraham initially refuses to listen to Michael but agrees when God offers him a ride through the sky in his chariot so that he can view the universe. One of the things that Abraham sees as he rides is certain sinners committing flagrant transgressions. Abraham righteously calls down divine punishment on these unfortunate people. God then summons the patriarch into his presence so that he can see the judgment process at firsthand and learn the discipline of mercy. Abraham intercedes for a soul whose merits and transgressions are equally balanced, and on that basis decides he must intercede for the souls he had condemned. These are brought back to life for that reason. Abraham is then escorted back to earth by Michael and again told to make his testament. Again he refuses. God finally sends Death to Abraham, who removes his soul by a cunning ruse.

It cannot be denied that here we find a theology of good works such as was caricatured by a whole tradition of Protestant scholarship on *Judaism. This idea is held in common with *2 *Enoch* and *3 *Baruch*. However, it is fair to say that the *Testament of Abraham* does not offer a developed

or exclusivist theology of works and that what it says must be seen within a more generalized perspective. This is one in which good works are enjoined on all people, not just on Jews. Thus there is no reference in the work to the Torah or the covenant as such. The text portrays Judaism as an ethical religion in which both judgment and mercy are prominent themes.

We must also consider what has been called the work's "cosmopolitan humanity" and E. P. Sanders "the lowest-common-denominator universalism of soteriology." This works from the lack of distinction between Jew and Gentile and observes that the only specific reference to Israel is in *Testament of Abraham* 13:6 (A). The result is that every human being is held to be judged by the same standard. There is a surprising lack of any reference to the merits of the patriarchs in a text where, if anywhere, this would have been appropriate.

On the heels of this universalism, the author at least in recension A outlines what appears to be a straightforward theology of judgment. This is that if unrepented or unpunished sins outnumber merits, the soul receives a punishment. If the converse is true, the soul enters life. In the event of a hung jury, it is possible that Abraham's intercessory prayer is intended to serve as a typical instance of what prayer can achieve.

The *Testament of Abraham* is probably an idiosyncratic representative of Egyptian Judaism in the early common era. It lacks the emphasis on conversion found in **Joseph and Aseneth* and also **Philo's* insistence on the concept of **Israel*. For all that, it offers a comprehensible theodicy that draws attention to the need for ethical action and prescribes an appropriate remedy when things go wrong.

TESTAMENT OF JOB

Among the lesser known books that existed in the time of Jesus and Paul, the **pseudepigraphic Testament of Job* embellishes the biblical story of Job in such a way as to denounce idolatry and commend the virtue of patience or endurance (*hypomonē*). Following the style of classic Jewish testaments of the period, such as the **Testaments of the Twelve Patriarchs* and the **Testament of Abraham*, the work opens with a deathbed scene in which Job distributes both property and wisdom. But the book's predictable end, telling of Job's death and **ascent* to heaven, comes only after regaling the reader with Job's magnanimous charities, his bravery in destroying an idol's temple, his consequent illness and phylactery-enabled recovery, his encounters with Satan (*see* Belial) in disguise and his steadfast piety in the face of an unsupportive spouse. In a text about the length of Paul's letter to the Romans, the biblical story of Job undergoes a **midrashic* retelling, at times humorous and at points poetic.

The *Testament of Job* embodies a variety of interests: traditional Jewish moral exhortation, Jewish monotheistic iconoclasm, **Hellenistic magic* (Kee), a Greek psychopomp, early *merkabah* **mysticism*, an interest in female **prophetic* employment of **angelic* dialects. The *Testament of Job* thus provides a remarkable monument to the mingled strands of variegated Hellenistic Jewish spirituality. Though some Christian editing is possible, scholarly consensus views the book as an essentially or solely Jewish text datable somewhere in the first century before or after Christ.

1. Content and Structure
2. Origin and Purpose
3. Texts and Translations
4. Relation to the Septuagint
5. Backgrounds
6. New Testament Connections
7. State of Research

1. Content and Structure.

As it stands, the *Testament of Job* is framed by a brief prologue (1) presenting the deathbed scene, and an epilogue (*T. Job* 51—53) recounting the

death and burial of Job. The unity of the work is questioned by the shift from first person over the bulk of the work (*T. Job* 1—45) to third person in the remaining part of the book (*T. Job* 46—53).

The main section of the book falls into a discernible structure based on Job's dealings first with an angel (*T. Job* 2—5), who warns of catastrophe yet honor if Job destroys a nearby idol shrine. Then Satan (*T. Job* 6—27) assaults Job by coming in disguise as a beggar, one like the many who were repeated beneficiaries of Job's philanthropy. Despite the losses in health, family and wealth, Job endures—accepting Satan's surrender with a line that well summarizes the moral point of the text: "Well then, my children, you also must be patient in everything that happens to you. For patience [*hypomonē*] is better than anything" (*T. Job* 27:7). Next, the three kings (upgraded from the canonical friends) and Elihu (*T. Job* 28—45) visit Job at the dump to comfort him, but only after spending three days spreading perfume to render tolerable the stench of his illness. Finally, when Job's three daughters (*T. Job* 46—50) protest the absence of any distributed inheritance for them, Job replies he has saved the best for them. Job then calls for the quasi-magical, triple-stranded cord or sash (*phylaktērion*) by which he had been cured and by which they are enabled to praise God in the language of the angels, the archons and the cherubim (*T. Job* 48—50). In the epilogue (*T. Job* 51—53) are recorded the preservation of the daughters' hymns by Nereus, brother of Job, along with the death and burial of Job.

2. Origin and Purpose.

While a few authorities (Mai; James; Spittler) have viewed the *Testament of Job* as originated or later edited by Christians, the weight of opinion views the text as a Jewish document. The abundant reference to hymns in the *Testament of Job* led some scholars (Kohler; Philonenko) to conclude a provenance with the *Therapeutae, a Jewish sectarian group in Egypt described by *Philo in *Vita Contemplativa*, a group that practiced spontaneous composition of hymns. Within Jewish circles, the document may have functioned as encouragement to those facing martyrdom (Jacobs) or as Jewish monotheistic missionary propaganda (Rahnenführer).

3. Texts and Translations.

Other than its description as an apocryphon in

the sixth-century Gelasian Decree, the *Testament of Job* went unnoticed in antiquity. Reference to Job's worm-ridden illness in Tertullian (*De Pat.* 14.5), the *Visio Pauli* and the *'Abot de Rabbi Nathan* may have shared a common origin with the similar story in the *Testament of Job*. Though only narrowly known in the early nineteenth century, the text has come to find a secure place among collections of pseudepigrapha and in exegetical discussions (Garrett) only in the last third of the twentieth century.

The oldest known source for the *Testament of Job* appears in an incomplete and as yet unpublished fifth-century Coptic papyrus (P. Köln 9221). One complete and three partial manuscripts, dating from about the tenth century, survive in Old Church Slavonic. Four Greek manuscripts from the eleventh to the sixteenth centuries reflect three text traditions, one clearly secondary. Development of a critical text awaits publication of the Coptic text. Until then, the standard edition of the Greek text is that published by S. P. Brock in 1967.

Translations in French and Serbo-Croatian (partial) appeared in the second half of the nineteenth century. In the last third of the twentieth century, the *Testament of Job* has appeared in Dutch, English, French, German, Modern Hebrew and Spanish. Additional translations are said to be under preparation in Danish, Modern Greek and Japanese. A convenient source for an English translation appears in the first volume of J. H. Charlesworth's collection of *Old Testament Pseudepigrapha* (Spittler).

4. Relation to the Septuagint.

Though some scholars propose a Semitic origin for the *Testament of Job* (Riessler; Philonenko), no manuscript evidence survives and scholarly consensus now favors a Greek origin. Exact relationships to the *Septuagint are unclear: yet Job 1—2, 29—31, and 42 LXX provide ideas and phrases for the author of the *Testament of Job*. The Septuagintal expansion of the speech of Job's wife (Job 2:9a-c) beyond the Masoretic Text gains even further, though consistent, development in the *Testament of Job*'s considerable narrative elaboration. The *Testament of Job* shows far greater kinship with the Septuagint than with the Hebrew text, most clearly apparent in their common vocabulary. Yet the layered development of the Septuagint cautions definitive theories of dependence one direction or the other.

5. Backgrounds.

Its very form as a testament and use of a prominent biblical figure as the subject tilt the *Testament of Job* toward a Jewish environment. Yet its peculiarities also betray Hellenistic influences.

5.1. Jewish Background. Since Job's fame is remembered both in the OT and the NT (Ezek 14:14, 20; Jas 5:11; interestingly, not in Heb 11, a roll call of the enduring faithful), it comes as no surprise that he gets a testament in his name. The anti-idolatry activism of Job in the *Testament of Job*, no trait of the canonical figure, fits the well-known monotheistic apologetic of Second Temple Judaism. So do the prominent role of Satan, reference to a phylactery (though this could be an extended use of the term *charm*), the ban of foreign *marriages and especially the prominent interests in fitting burial—which are expressed for Job's children, his wife and himself. *Angels, even cherubim and archons, reflect Jewish interests as well.

5.2. Hellenistic Backgrounds. The description of a psychopomp, a descended chariot commissioned to carry off the soul of Job while his body is buried, marks a curious intrusion of non-Jewish imagery into this predominantly Jewish document. That Job's recovery was brought about by a phylactery that also had the power to endow his daughters with a capacity to shift interests heavenward and, using the language of the angels, to praise God and create hymns suggests Hellenistic *magical interests. Focus on the chariot of the psychopomp parallels esoteric Jewish speculation commonly called *merkabah* mysticism (*mrkb* is Hebrew for "chariot"), which represents not the heart of Palestinian Judaism but its more remote margins. Job's triumph over Satan gets told in the familiar imagery of Greek *athletics, used by another Jew of known Hellenistic influence (*T. Job* 27:2-5; 1 Cor 9:24-27).

6. New Testament Connections.

The single place in the NT where Job is mentioned recalls his endurance: "You have heard of the patience [*hypomonē*] of Job" (Jas 5:11). Paul's reference to Satan as an "angel of light" (2 Cor 11:14) can be compared with the master of disguise mentioned in the *Testament of Job* without suggestion of direct influence. Similarly the glossolalic use by Job's daughters of the language of the angels brings to mind Paul's reference to the "tongues of angels" (1 Cor 13:1),

making it at least less likely that his reference was a linguistic creation *ex nihilo* while not requiring direct dependence.

7. State of Research.

Apart from the scant earliest modern approaches to the *Testament of Job* in the mid-nineteenth century, three periods of modern investigation into this curious and fascinating text can be identified. A fifteen-year period from 1897 to 1911 resulted in the first published texts (James; Kohler), along with the first English translation (Kohler) and the earliest extensive investigation (Spitta). Little advance occurred between the two world wars, though translations into German (Riessler, 1928) and into Modern Hebrew (Kahana, 1936-37) did appear.

With the publication of Brock's text in 1967, but anticipated by M. Philonenko's links of Qumran with the Therapeutae in 1958, a new generation of study began. The three decades from around 1960 to 1990 saw the publication of two editions of the text (Brock; Kraft), three doctoral dissertations on the *Testament of Job* (Rahnenführer; Nicholls; Spittler) and the preparation of the fresh translations into Dutch, English, French, German, Modern Hebrew and Spanish.

The final period, the decade from the late 1980s onward, mined the rich resources for women's studies. The *Testament of Job* names both Job's first and second wives, uses six separate words for female slaves, celebrates Job's care for widows and lauds the daughters for an inheritance superior to the material legacy of their brothers. At least one scholar suggests possible feminine authorship of the *Testament of Job* (Lefkowitz). Still others tap this text for its portrayal of feminine prophecy (Chesnutt, van der Horst; see Women).

The *Testament of Job* thus provides readers of the NT with one example of the popular Jewish literature of the first-century environment. Its role must have been not unlike that of the many thousands of Christian novels that today compete with the canonical texts for the attention of the spiritually minded.

R. P. Spittler

TESTAMENT OF MOSES

The *Testament of Moses* was written by an unknown Jew and received its present shape in the first decades of the common era. Purporting to represent the last words of *Moses to Joshua, the book encourages Jews to remain loyal to *Torah no matter what deprivation may result. The author provides support for such dedication by emphasizing God's providence, which assures *Israel an exalted future, and God's covenant and oath, which assure Israel's survival and the righteous Jew's vindication. While the work appears not to have left significant marks on the NT texts themselves, it provides important testimony to a strand of first-century Jewish reflection on the covenant, the role of Moses, God's providence and *eschatology.

1. Textual Transmission and Contents
2. Date and Setting
3. Genre and Purpose
4. Theology
5. Influence and Importance

1. Textual Transmission and Contents.

The *Testament of Moses* is known only from a single sixth-century Latin manuscript discovered in a library in Milan in 1861 by A. M. Ceriani. This manuscript was a palimpsest—the parchment on which *Testament of Moses* was written had been scraped and reused for another book. The ending is completely lost (perhaps as much as one-third to one-half the original document), and the condition of the text is poor in many places (Priest). There are numerous gaps in the manuscript, and many words are illegible, as would be expected in a palimpsest, so that scholars must reconstruct the text at a number of places. The textual situation is complicated by the fact that the Latin is a translation of a Greek version, which is itself a translation from the original Semitic version (probably Hebrew, but possibly Aramaic). Scholars have contended that the translators or copyists were frequently defi-

cient in their treatment of the language they were translating. This again opens the door for translators to make many proposed emendations based on reconstructions of the underlying Greek or Hebrew (Aramaic) versions.

Ancient lists of books (e.g., Nicephorus *Stichometry*) bear witness to both an *Assumption of Moses* and a *Testament of Moses*. The two may have been joined together during the first century A.D. (Charles). Gelasius quotes *Testament of Moses* 1:14 (Gelasius *Hist. Eccl.* 2.17, 17) as part of the *Assumption* and goes on to refer to the dispute between Michael and the devil over Moses' body as also being from the *Assumption* (Charles; J. J. Collins 1984). He appears thus to have known a work that combined the *Testament* with a now entirely lost pseudepigraphon about the *Assumption*. Ceriani, following such early church usage, thought he had discovered the *Assumption of Moses*, and many scholars will refer to the *Testament* by this name. It is more probable, however, that this is an erroneous designation. The extant *Testament* expects a natural death for Moses (*T. Mos.* 1:15; 3:3; 10:12, 14), not an assumption like Enoch's or Elijah's. The *Assumption* has been lost to posterity save for brief references to its contents in, for example, Jude 9 and Gelasius.

The book opens with Moses summoning Joshua to receive his commission as Moses' successor, encouraging him to continue faithfully in the commandments, announcing God's plan from creation and giving instructions concerning the preservation of the text (*T. Mos.* 1:1-18). There follows, in the form of *ex eventu* *prophecy, the story of the conquest of Canaan, the rule of the judges, the rise of the divided monarchy, the apostasy of Israel and Judah and the exile to Babylon (*T. Mos.* 2:1-3:3). In the land of their exile, the twelve tribes repent, call upon God to remember the "covenant and oath" that God made with their ancestors and confess the accuracy of Moses' predictions (*T. Mos.* 3:4-14). An intercessor, probably Daniel, prays effectively on *Israel's behalf, and God restores them to their inheritance through the pity of the Gentile king Cyrus (*T. Mos.* 4:1-9). The restoration is followed by a second period of apostasy, which includes the Hellenizing high *priests of 175-164 B.C., the *Hasmonean house of priest-kings and the rise of *Herod the Great, all of whom are remembered unfavorably (*T. Mos.* 5:1-6:9). The most recent event remembered in this *ex*

eventu prophecy is Varus's quelling of a mild rebellion in 4 B.C. The contemporary generation is ruled by godless, pleasure-seeking hypocrites (*T. Mos.* 7:1-10), whose iniquity invites the advent of the eschatological woes and final persecutions of Israel (*T. Mos.* 8:1-5). A righteous man, Taxo, and his sons fast and withdraw to a cave, resolving to die rather than transgress the Torah and assured that God will avenge the death of the innocent righteous (*T. Mos.* 9:1-7). Their show of loyalty immediately precedes divine vengeance upon the enemies of Israel and exaltation of the chosen race amid cosmic chaos (*T. Mos.* 10:1-10). The text then returns to the narrative frame, with the commissioning of Joshua and Joshua's lament at Moses' impending death (*T. Mos.* 10:11-11:19). Moses' final words assure Joshua of God's foresight and invulnerable plan for Israel, grounded upon God's covenant and oath, and assert the basic principle of Deuteronomy—those who obey Torah will flourish, but those who disobey will deprive themselves of the promised exaltation (*T. Mos.* 12:1-13). The manuscript breaks off abruptly.

2. Date and Setting.

Dates after the fall of *Jerusalem in A.D. 70 have been proposed on the basis, for example, of the references to Jerusalem as a "colony," reflecting the situation after A.D. 135, when Jerusalem was refounded as a Roman colony. Such terminology, however, need only pertain to the date of the Latin translation, which uses the updated title to translate the Greek "city." Most scholars favor a date during the Hellenization crisis of 175-164 B.C. or during the period soon after Herod's death (A.D. 7-30). Some have suggested that the work was composed during the earlier period but revised and updated for use in Herodian times.

J. Licht and G. W. E. Nickelsburg have championed the hypothesis that the *Testament* was originally written during the Hellenization crisis. These scholars point out the connections between the description of the persecution and the resolve of Taxo in chapters 8 and 9 with the events described in 1 Maccabees 1-2 and 2 Maccabees 5-7. Taxo and his sons are said to resemble closely the deaths of the Hasidim in the caves (1 Macc 2:29-38), the exhortation of Mattathias to his five sons (1 Macc 2:49-50) and the martyrdom of Eleazar and the seven broth-

ers with their mother (2 Macc 6, 7). The vividness of these chapters suggests to them that the author was an eyewitness of the period. According to this dating, chapters 6 and possibly 7 are later interpolations meant to bring the work up to date in the Herodian period (virtually all scholars agree that the book received its present shape during A.D. 7-30). The purpose of the work, in the situation of 167-164 B.C., was to encourage a persecuted Israel that God has assured its survival and that God will soon act to avenge the deaths of the faithful and exalt Israel over its enemies (Nickelsburg).

Not all scholars are satisfied with this theory. First, that Taxo and his sons resemble so many episodes at once, and yet none of them in their particulars, suggests that the episode is derivative from the books of the Maccabees and not prior to them (J. J. Collins 1973a). Second, Nickelsburg's objection that the author could not have written in the first century A.D. and passed over the Hellenization crisis is undermined by the fact that *2 Baruch* (written in A.D. 95) does pass over these same events (J. J. Collins 1973a). These scholars argue that the work is completely understandable as originating from the Herodian period (J. J. Collins 1973a; Brandenburger; Laperrousaz).

R. H. Charles narrowed down the date of composition or at least the final redaction to A.D. 7-30 on the strength of the following observations: the Jerusalem *temple is still standing (*T. Mos.* 1:17); Herod the Great has already died (*T. Mos.* 4:6); the author knows of Varus's destruction of part of the temple (*T. Mos.* 6:8-9; cf. Josephus *J.W.* 2.3.2-3 §§47-50; 2.5.1-3 §§66-79); the author writes before Herod's heirs reign longer than Herod's thirty-four-year reign (*T. Mos.* 6:7), hence before A.D. 30. Charles sought to solve the problem of chapters 8 and 9 (which he also took to refer to the Antiochan persecution of 167-164 B.C.) by rearranging the chapters to restore chronological order. Licht has demonstrated that this is an unacceptable proposal—the eschatological vindication in chapter 10 must follow directly on the worst persecution and the readiness of Taxo and his sons to die rather than transgress the Torah. The chapters may be allowed to stand in their present order as soon as one recognizes that motifs from the Antiochan persecution are being combined with other motifs of persecution to portray the coming eschatologi-

cal oppression of Israel by the "eschatological tyrant" (J. J. Collins 1973a; Reese; Laperrousaz; cf. Mk 13 and Rev 13, which also describe an end-time oppressor with images formerly attached to Antiochus IV by Daniel).

Perhaps the best approach, in the absence of certainty, is to consider that *Testament of Moses* may have had an earlier recension that served a particular purpose during the Hellenization crisis but that its present form took shape during the Herodian period in which significant elements of the earlier document were recast and significant additions made, allowing the text to speak to a new situation in which the primary concern is no longer enduring persecution but resisting corruption from within and returning to pure covenant loyalty (Priest; J. J. Collins 1973b).

Most scholars place the work's composition in Palestine, but there is much debate concerning what circles in Palestine might have produced this text. Attempts to identify a particular group have proven to be a study in the limits of scholarly certainty about the period. Charles rightly excluded Zealot circles, given the text's promotion primarily of a model of nonviolent resistance (Taxo and his sons). This point is telling against a Hasidean provenance, since they too were disposed to express their loyalty through violent resistance (their death in the caves was due not to a policy of nonviolence but to their obedience to the prohibition of warfare on the *sabbath). The figure of Taxo is antithetical to the Zealot hero Mattathias, the instigator of the Maccabean revolt (see *Revolutionary Movements*), in every way (J. J. Collins 1973a): both urge death on behalf of the Torah, but the means are diametrically opposed. Charles also rightly rejected a *Sadducean origin. The negative view of the Second Temple and the efficacy of its *sacrificial system points decisively away from a Sadducean origin, as do the descriptions of the ruling, priestly class as polluted and rapacious (*Psalms of Solomon* provides numerous parallels to the accusations found in *Testament of Moses*; Charles).

Charles lights on a *Pharisaic origin, mainly by the process of elimination of the other three sects known from *Josephus. Nothing in the document is anti-Pharisaic (vs. Laperrousaz, who sees Pharisees as the aim of the remarks in chapter 7 on the basis of *Essene and Synoptic criticisms of the Pharisees), but this may not be

sufficient to warrant claiming a "Pharisaic Quietist" as the author of the work.

After the discovery of the *Dead Sea Scrolls, E.-M. Laperrousaz has reopened the argument for an Essene provenance for *Testament of Moses*. Charles's earlier objections to an Essene provenance (a supposed lack of Essene interest in the temple, in a sacrificial system and in nationalism—Charles) have indeed been rendered untenable by this discovery, which show the intense interest of *Qumran Essenes in all three. Laperrousaz sees Taxo as a type of the withdrawal into the desert for the pure keeping of Torah that characterized Qumran. He further notes the sectarian mentality of Taxo, who is aware that his ancestors are blameless with regard to Torah in the midst of an Israel that has been overcome by transgressions (*T. Mos.* 9:4)—a righteousness that gives this sectarian group its particular strength (in God's sight). The high view of determinism among Essenes described by Josephus, and the confession in the *Hymn Scroll* that justification comes by God's mercy and favor rather than by the personal righteousness of the individual, also agree with the views of the *Testament*.

There is among scholars, however, a growing awareness of the complexity of Judaism in the first century and of the possibility that we do not have a complete catalog of every sect active during that period (Priest). Moreover, Nickelsburg adds that it is not sufficient to explore "compatibility" in general between a text and what is known of a sect—we must look for the presence in the text of those distinctive emphases of the sect. It may be best not to insist that this document is either Pharisaic or Essene but rather to note what it shares in common with these sects and where it differs from or is silent about special emphases of either. We can say for certain that it arises from sectarian circles (the model of Taxo; the rejection of the institution of the Second Temple, at least under its current administration). The author looks back upon recent history quite unfavorably (the Hellenizing high priests, the Hasmonean house and Herod are all part of a period of apostasy and transgression). The circle that produced and preserved the text positions itself against militant nationalism (J. J. Collins 1978a) and advocates a return to strict observance of Torah, even withdrawal from society if such is needed to keep the law "blamelessly."

3. Genre and Purpose.

The *Testament of Moses* combines features of three distinct genres. First, it appears to be an expansion of a biblical narrative similar to **Jubilees* and the **Temple Scroll*. The book opens with a direct claim to present the words of Moses to his successor Joshua contained in Deuteronomy (*T. Mos.* 1:5), and D. J. Harrington has shown at length how *Testament* rewrites Deuteronomy 31–34. The book also shares some features in common with *apocalypses: *ex eventu* prophecy leading up to eschatological predictions; instructions to seal the book until the end time; a narrative framework for disclosure of revelation. This last aspect, however, leads us to the third genre, the testament (Kolenkow; Nickelsburg).

The testament narrates the deathbed instructions of an Israelite worthy, frequently involving some retrospect on the figure's life (which provides an example for virtuous conduct), direct exhortations and often revelations about the course of future events (or even the layout of the heavens, as in *T. Levi*). As such, this genre can frequently be expected to combine aspects of the expansion of biblical narrative (see *Rewritten Bible*) and the apocalypse. The revelation given to a great person on the deathbed carried special weight—its finality gave it an air of completeness and perfection (Kolenkow).

This particular *Testament* would have different purposes and effects in its two recensions, if the earlier one can be reconstructed with accuracy (see 1 above). In its first-century setting, the work would have, in the first instance, provided its readers with assurance. The emphases on God's covenant and oath and on God's eternal design and determination of history would remind the hearers that their collective destiny was guaranteed and that God would indeed bring to pass the full blessings of the covenant that God's prophets had promised. It would also evoke a response of covenant loyalty, even readiness to die for the sake of Torah (Laperrousaz). The opening words to Joshua also exhort the reader: "Be strong and of good courage to do with all your strength all that has been commanded, so that you may be blameless before God" (*T. Mos.* 1:10). The end-time hero, Taxo, also provides a model of praiseworthy behavior that would rouse emulation. Taxo underscores the text's call to repent and return to a single-minded commitment to Torah (Reese; Kolenkow). The way to overcome the corrupt

rulers is through passive resistance, which came to characterize Jewish resistance from 4 B.C. to A.D. 48, after the failure of multiple attempts at violent uprising (Rhoads). Finally, the *Testament* may encourage intercession on behalf of Israel (Kolenkow): first Moses, then Daniel, then possibly Taxo stand in the gap, calling upon God to remember the covenant and oath. Their prayers are, the readers are assured, effective, and the prayers of those who model their lives after such loyal children of the covenant may be equally effective.

4. Theology.

While the theology of *Testament of Moses* has been called, largely, unoriginal (Laperrousaz), the work nevertheless bears witness to some important strains of thought in first-century Judaism that may provide useful background and counterpoint to NT developments.

4.1. God, Creation and Covenant. God is the God of all nations (*T. Mos.* 10:3) but remains specially the God of Israel (*T. Mos.* 3:9; 4:8). God created the world on behalf of the righteous (cf. 4 Ezra 6:55, 59; 2 Bar 14:18) but did not reveal God's plan to the Gentiles so that they might act against God, remain in folly and convict themselves. The readers of *Testament of Moses* are privy to this divine counsel, but the Gentiles, who have no access to Moses' departing revelation, remain dangerously unenlightened (*T. Mos.* 1:18; Kolenkow). The book thus establishes a strong ideology of Israel against the Gentile nations at the outset (*T. Mos.* 1:12-13; cf. 12:4-5). The Gentiles act in darkness and ignorance—their domination now may be endured and resisted in the sure knowledge that they are storing up for themselves wrath for the day of God's visitation.

God has given to Israel a covenant and ratified it with an oath, committing God's own honor to fulfill the promises (*T. Mos.* 1:9; 3:9; 11:17; 12:13). This emphasis on God's initiative and God's determination of Israel's destiny leaves no room for a doctrine of salvation by merit (*T. Mos.* 12:7-8). The necessity of keeping Torah in order to enjoy the promised blessings does not detract from the awareness of God's gift and favor. The author dwells on God's care and fidelity toward God's covenant people in the exodus and exilic generations in order to promote the hope for God's final vindication of the present generation (Reese).

4.2. Moses. While the depiction of Moses may not be as extravagant here as in other documents from the period (Tiede), it nevertheless shows some significant developments of the presentation of Moses in the Pentateuch. Rather than fit Moses into nonbiblical paradigms of the great person, as in *Philo and Artapanus (Tiede), *Testament of Moses* develops Moses' role as "mediator," intercessor and prophet.

Moses' role as mediator (*mesites*) was ordained from the foundation of the world (1:14; 3:12). This was not a term used of Moses in the *Septuagint, but it came to be applied to him in the first century (Gal 3:19; Philo *Vit. Mos.* 3:19; cf. the depiction of Jesus as the better mediator in Heb 8:6; 9:15; 12:21; see Patronage). Moses acted on behalf of Israel to obtain the covenant and to maintain that covenant relationship through intercession for the people when they broke faith with God (*T. Mos.* 11:11, 14, 17). The author may understand Moses' intercessory role extending beyond his death (*T. Mos.* 12:6; Charles; Tiede). Second Maccabees 15:12-16 depicts the ongoing intercession of Jeremiah on behalf of Israel, so the possibility of viewing Moses in this way is not without parallel. If this is correct, *Testament of Moses* attests to a belief that is especially relevant for study of Hebrews, which contrasts the mediation of Jesus and Moses (among others). Finally, *Testament of Moses* lays great stress on Moses' prophetic role. Deuteronomy 31:3-6, 16-22, 29 opens the door to this view of Moses, which becomes popular in the first century (cf. 4 Ezra 14:3-6; 2 Bar 59:4-11; 84:2-5). Moses' esteem during this period is captured well by Joshua: he is the "master of the word, faithful in all things, the divine prophet for the whole earth, the perfect teacher in the world" (*T. Mos.* 11:16).

4.3. Providence and Human Responsibility. *Testament of Moses* combines apocalyptic determinism with the covenant theology of Deuteronomy. The former asserts God's foresight, even determination, of future events, while the latter calls people to choose the path of loyalty to the covenant and preserves a more dynamic picture of cause and effect, reward and punishment, within the relationship between God and Israel. The author refuses to sacrifice one for the other and so sustains the paradox of providence and free will. The Deuteronomistic theology of history (obedience to Torah results in enjoyment of God's favor and blessings; disobe-

dience brings punishment; *T. Mos.* 12:10-11) still provides the "guiding thread of history" (Laperrousaz). This contingent view of history is nestled, however, within God's foreordained design, expressed in the promise and oath that assure Israel's final exaltation (*T. Mos.* 3:11-12; 12:4-5). The potential inconsistency between these two affirmations is not as important to the author as the dual purpose of motivating faithful perseverance in the covenant relationship and assuring the righteous of their future, secure in God's design.

This lack of consistency has especially come to the fore in scholarly discussions of the role of Taxo and his seven sons. Licht has argued forcefully that the innocent deaths of Taxo and his sons on behalf of Torah are calculated to provoke divine vengeance for the blood of God's righteous ones and thus hasten eschatological deliverance. This would enact the promises of Deuteronomy 30:1-8 and 32:35-36, 41-49. Others, however, have difficulty harmonizing this view with the determinism of the document (Priest; Rowley). This is a tension that, as J. Priest himself noted, runs throughout this and many other books of the period. An author can affirm that God's time for intervention has been set long ago; the same author may wish to encourage the audience to respond faithfully with a view to ushering in the end, participating in its coming by their faithfulness, as it were.

Taxo may best be seen as a model for the hearers' emulation (Laperrousaz; Kolenkow). The author weaves into the eschatological scheme the heroic resolve of the individual, giving significance to the choices of the individual in the midst of apocalyptic determinism. This moves *Testament of Moses* beyond mere determinism, as it invites the audience to consider their role and responsibility toward God's covenant. Repentance (*T. Mos.* 3:10), intercession (*T. Mos.* 4:1-5), obedience to God (*T. Mos.* 1:10-11; 12:10-11) and nonviolent resistance (*T. Mos.* 9:1-7) remain the responsibility of the individual, whose resolve is nevertheless strengthened by the assurance that God has set a day in which God will vindicate and exalt the righteous.

4.4. Eschatology. While an original version of *Testament of Moses* may have depicted the persecution under Antiochus IV in chapters 8 and 9, the final form of this text uses images reminiscent of that period to portray an unprecedented period of wrath and punishment that will pre-

cede the final deliverance by God. The end-time oppression is aimed at erasing covenant loyalty, forcing Jews to blaspheme and participate in idolatry. This is the setting for Taxo's resolution—to retain their ancestral strength by not transgressing the Torah. If remaining in civilized areas meant pressure to transgress, the loyal Jew must choose to depart for the desert places even if death should be the result. C. J. Lattey sees in Taxo an early paradigm for a suffering messiah, but this is based on more speculation than most scholars can support. Taxo is rather the model for decisive action in the last days, the "model Jew, the symbol, with his sons, of the unblemished nucleus of Israel" (Licht), whose obedience to God signals that the "day of repentance" (*T. Mos.* 1:18), the day of God's visitation (cf. Mk 1:14-15), has arrived.

The vision of deliverance includes both the action of a consecrated angel (or messenger; *T. Mos.* 10:1-2) and the direct action of God (*T. Mos.* 10:3-10). This suggests to some scholars that two different sources have been utilized (Charles), but the actions of God and God's messenger are closely linked elsewhere in Jewish tradition (cf. Ex 3:2-6; Mal 3:1-2). The angelology of this work is rather subdued (Laperrousaz), mentioning only this angel and the devil, as opposed to the myriads in *1 Enoch* (see Enoch, Books of), Daniel or *Jubilees*. The book attests to an eschatology without a messiah, military or otherwise, which sets it apart from many other strains of thought in early Judaism (Laperrousaz).

G. Reese rightly notes that *Testament of Moses* presents an eschatological reading of Deuteronomy 32—33. God's promise to avenge the blood of his loyal servants and God's theophany on Mt. Sinai are now transposed to the end-time deliverance, accompanied by cosmic disturbances (the natural order of the sun, moon, stars, mountains and sea is unsettled). At the end, God vindicates God's honor against the idolaters and their false, rival gods. The Gentiles are debased before Israel's eyes, as Israel is exalted to the stars. It is not clear whether this is a wholly supramundane eschatology (Laperrousaz; Rowley) that relinquishes nationalistic, this-worldly hopes or just an extravagant metaphor (Priest). It remains a strictly collective dispensation of reward and punishment (Laperrousaz).

5. Influence and Importance.

5.1. Echoes in the New Testament and Other

Early Christian Literature. Jude is famous for its awareness of extrabiblical literature, but while it knows *1 Enoch* and the lost *Assumption of Moses* (Jude 9), Charles's assertion that Jude knew *Testament of Moses* appears to be unfounded. Rather, the two texts share similar language for the portrayal of enemies that is part of a broader cultural tradition of censuring rivals. The similarity between 2 Peter 2:19 and *Testament of Moses* 7:4, 8 represents more a cultural echo (the image of feasting in the daytime as a way of highlighting the depravity of one's rivals) than literary dependence (Laperrousaz).

Laperrousaz finds Acts 7:36 to be close enough to *Testament of Moses* 3:11 to signal acquaintance with *Testament of Moses* by the author of Acts. Both texts summarize the exodus experience as Moses' activity "in Egypt, at the Red Sea and in the desert for forty years." All of these elements could be derived from the Pentateuch (cf. earlier summaries in Neh 9:9-21; Pss 106:7-14; 136:10-16), but no other documents summarize the whole experience in precisely this way, suggesting that Acts knew of this terse formulation of the events. The Synoptic Apocalypse (e.g., Mt 24:19-21) also bears some striking similarities with *Testament of Moses*. Both describe the end-time oppression of God's people as unlike anything experienced previously since creation (Mt 24:21; *T. Mos.* 8:1); both also speak of cosmic disturbances (sun, moon, stars) accompanying the Day of the Lord. The first image could have been independently derived from Daniel 12:1; the second might also have been independently derived from OT descriptions of the "Day of the Lord" (cf. Is 13:10, 13; Joel 2:10, 31; 3:15-16; Mic 1:3-4), but here again the two texts show the tendency toward a common, formulaic summary of these texts, suggesting either the Synoptics' awareness of *Testament of Moses* or mutual dependence on a common tradition of the day of the Lord extracted from prophetic texts.

5.2. Echoes in Other Jewish Literature. *Testament of Moses* 3:10-13 appears to have left its mark on 2 *Baruch* 84:2-5 (Charles), but other cases of direct influence have not been observed. This suggests that while apocalyptic circles may have been aware of *Testament of Moses*, it did not have anything approaching broad influence within Judaism.

5.3. Importance for New Testament Study. Despite the lack of important examples of direct dependence, *Testament of Moses* remains a useful

witness to Jewish backgrounds for NT study. The portrayal of Moses as prophet, mediator and (perpetual?) intercessor is an important background for the study of Moses in Galatians and especially Hebrews. The idea of a day of repentance that precedes God's end-time action and exaltation of Israel may highlight the eschatological dimension of Jesus' call for repentance (cf. Mk 1:14-15) and his subversion of the picture of Israel's exaltation so dear to the author of *Testament of Moses*. D. M. Rhoads suggests that *Testament of Moses* opens another window into a Judaism in search of less violent forms of resistance and witness to God's kingdom (the period from 4 B.C. to A.D. 48), which provides a setting for Jesus' own message of nonviolent resistance.

Of more general interest is the book's witness to the ongoing tension between Jew and Gentile, the importance of maintaining the Jew-Gentile boundary for many Jews and the characterization of Gentiles in Jewish literature that facilitated the preservation of such boundaries. The text also bears witness to the multiple tensions that existed within the first-century Jewish community. The critique of Herodian rule, of the Jerusalem priesthood and of the adequacy of the temple in this document has significant echoes in other sects within Judaism (e.g., the Essenes), not the least of which was the early Christian movement.

TESTAMENT OF QAHAT (4Q542)

A single Aramaic manuscript found in Qumran Cave 4 preserves part of a narration by Qahat to his sons. Although the speaker is not explicitly

named, he is clearly identified by reference to "Levi my father" (4Q542 frag. 1 ii 11) and "my son Amram" (4Q542 frag. 1 ii 9). The work belongs to the genre of *pseudepigraphical last words (testaments) of the patriarchs to their sons (see Testaments of the Twelve Patriarchs). At least one sheet is lost from the beginning. One large fragment preserves most of one column and part of the following. It contains a blessing by Qahat on his sons "may he [God] shine his light upon you and may he make you know his great name so that you will know him" (4Q542 frag. 1 i 1-4); an admonition, warning against losing the ancestral heritage through intermarriage and assimilation (4Q542 frag. 1 i 4-7) and to hold fast to the instruction handed down by the patriarchs (4Q542 frag. 1 i 7-ii 1); instruction to his sons about the future and their role in the judgment of sinners (4Q542 frag. 1 ii 1-8); instruction specifically to Amram and his descendants about ancestral writings transmitted to Levi, thence to Qahat and now to Amram (4Q542 frag. 1 ii 9-13).

This work is above all concerned with the *priestly lineage. An adaptation of the priestly blessing is pronounced specifically on Qahat's descendants; the "great name" of God is probably the Tetragrammaton, which the high priest had to utter on the Day of Atonement. The prohibition for priests to marry foreign wives is not found in the pentateuchal restrictions on priestly marriage (cf. Lev 21:7), but this injunction echoes the Aramaic *Testament of Levi* (Bodleian Genizah fragment col. b 16-17; *T. Levi* 9:9-10; cf. 4QMMT B 75-77 [see *Miqsat Ma'asey ha-Torah*]). Part of the heritage passed down through Qahat to his sons is the priesthood. The tradition that books of patriarchal wisdom were preserved by Levi's descendants is also found in the Aramaic *Testament of Levi* 88 (Cambridge Genizah fragment col. e 17-18 and 23) and **Jubilees* (45:15; Milik argued that Testament of Qahat was the source) and reflects the priestly role of preserving and teaching the Torah (Lev 10:11; Deut 17:18). Qahat reveals that his descendants will judge the wicked, but it is not clear whether this is as the righteous in the *eschatological judgment (*1 Enoch* 91 [see *Enoch, Books of*]; cf. Dan 7; Mt 19:28; Rev 20:4) or whether it assumes the joining of royal and priestly functions as might be suggested by the application of the blessing of Judah from Genesis 49:10 to Qahat in Aramaic *Testament of Levi* 66-67 (Cambridge Genizah fragment col. c 5-7; Puech,

52, 54; see Greenfield and Stone, 219, 223-24).

In the Bible, Qahat was not a priest. He was the most important of the heads of the families descended from Levi, whose clan was responsible for transporting—but was forbidden to touch—the most holy implements of the tabernacle (Num 3—4). The priesthood was instituted beginning with his grandson Aaron (Ex 28—29; Lev 8—9). The tendency to extend the priestly lineage back to Levi is clearly expressed in the Aramaic *Testament of Levi*; Levi himself is ordained priest and clothed in the priestly vestments (Aramaic *T. Levi* 13—20 = Bodleian Genizah frag. col. b-c; cf. *Jub.* 32:1-3) and announces that Qahat is also chosen as priest (Cambridge Genizah fragment col. 5-7). As attested also in *Testament of Qahat*, Levi is instructed in the obligations of the priesthood by Abraham and Isaac, and in turn he instructs his son Qahat. It is likely that the *Testament of Levi*, the *Testament of Qahat* and the **Visions of Amram* formed an ancient cycle of Aramaic testamentary works exalting the three priestly patriarchs. In fact, Milik has suggested that these three are the writings referred to in *Apostolic Constitutions* 6:16 as "apocryphal books of the three patriarchs"—the patriarchs of the priestly tribe.

On the basis of paleography, the manuscript dates around 100 B.C. and apparent use by *Jubilees* points to composition in the first half of the second century B.C. The assumed threat to the priesthood of foreign domination and assimilation suggests that it was written as a response to the interference by foreign rulers in the appointment of high priests, beginning when Antiochus IV Epiphanes ended Zadokite succession by deposing Onias III and appointing his brother Jason (174-171 B.C.; see Hasmonaens). The early date points to a pre-Qumran origin (see Qumran).

TESTAMENTS OF THE TWELVE PATRIARCHS

The model for these reports of the final words and passing on of the heritage of the twelve sons of Jacob to their heirs is provided by Genesis 49 and Deuteronomy 31—32 where, respectively, Jacob and *Moses give advice and assign responsibility to their successors. In these testaments of Jacob's sons there are predictions of what is to happen in the future, including pronouncements of blessings and curses on the sons and their posterity. The recurrent features are a recall of aspects of the life of each patriarch: confession of misdeeds; exhortations to avoid sin and to exemplify virtues; instructions for burial; call for special honors to Levi and Judah, the priestly and royal leaders of the people; and predictions of the future of the covenant people, which will involve their sin, exile among the nations and ultimate restoration. Occasionally there are Christian interpolations (*T. Sim.* 6:7; 7:1-2; *T. Levi* 2:11; 4:4; 14:2; *T. Zeb.* 9:8) in the Jewish texts. There are also some cases of correspondence between

the present text of the *Testaments* and fragments from the *Dead Sea Scrolls, as well as with some later Aramaic covenant texts, but the *Testaments of the Twelve Patriarchs* as a whole was written in Greek. This is evident from the use of technical Greek terms, such as measuring distances in *stadia* (*T. Zeb.* 7:4).

1. Origins of the Testaments
2. The Structure and Features of the Testaments

1. Origins of the Testaments.

Although there is some kinship evident with Hebrew and Aramaic fragments of documents that have survived, the *Testaments* are clearly dependent on the *Septuagint for references to Scripture. This indicates that they were written after 250 B.C., when the LXX was completed. The emphasis throughout on the dual messianic roles of king and *priest—highlighting the descendants of Judah and Levi—fits well with the Maccabean period of Jewish history (167-63 B.C.), when the royal and priestly lines were linked (see Hasmoneans). Not surprisingly, therefore, the longest two of these testaments are those attributed to Levi and Judah. Levi is the progenitor of the priests, and it is through a descendant of Judah that God will reign eternally (*T. Reub.* 6:11-12). The assurance of the future triumph of God's purpose in the world and for his people is a major feature in these writings. There are several references in the testaments to the book of *Enoch the Righteous: *Testament of Dan* 5:6, *Testament of Judah* 18:1, *Testament of Simeon* 5:4, *Testament of Naphtali* 4 and *Testament of Joseph* 9:1. Not all these quotations are in the currently known writings attributed to Enoch.

The *Testaments* are written in fluent Greek, and the ethical concepts included are frequently stated in terms employed by *Stoic philosophy, such as the recurrent emphasis on natural law and references to reason and conscience (*T. Jud.* 20:2; *T. Reub.* 4:11). Greek words are used for which there is no Semitic equivalent, as in the designation of a burial place for Aseneth in Egypt "by the hippodrome" (*T. Jos.* 20:3). Ethical standards are likewise expressed in distinctively Greek terms that derive chiefly from the Stoic tradition. Thus, throughout the *Testaments* the law of Moses is a central feature and is to be the object of devotion (*T. Levi* 13:1-9), yet its moral requirements are perceived to be articulated through Stoic terminology and compatible with

the concept of the universal law of nature.

The influence of Jewish *apocalyptic perceptions concerning evil pervades this work. The power of evil in the world is understood to be the effect of the work of *Beliar, the prince of the demons, and the final triumph of justice will come only when he and his evil spirits have been overcome by the power of God. Then the people of God will return from their dispersion throughout the world, but there will also be Gentiles who will share in the rule of God. The righteous will be raised from the dead to enjoy new life in the new *Jerusalem. The primary example of true virtue throughout the *Testaments* is Joseph.

2. The Structure and Features of the Testaments.

The typical structure of each of the *Testaments of the Twelve Patriarchs* is as follows: (1) an introduction, setting the scene; (2) a narrative of the life of the patriarch, lacking only in the *Testament of Asher*; (3) ethical exhortation; (4) prediction of the future; (5) second exhortations; and (6) the patriarch's death and burial. The content and features of each of the *Testaments* may be characterized as follows:

2.1. Testament of Reuben. The recurrent theme in this work is the avoidance of sexual promiscuity. Reuben is the major candidate for a negative image on this issue, since—as he confesses—his gross sin was to have had intercourse with Bilhah, his father's concubine (*Gen* 35:32). He urges that his offspring follow the example of Joseph, who rejected ongoing invitations from an Egyptian woman to have sex with her. Preoccupation with sex, which pervades society according to Reuben, is described by him as the "plague of Beliar" (*T. Reub.* 6:3). Instead, one should heed the injunctions of Levi, who knows the law and fosters obedience to it.

In this testament both human nature and its potential for virtue and vice are depicted in terminology that derives from the Hellenistic philosophical traditions. There are seven senses, or spirits, by which all human deeds take place, as well as seven spirits of error (*T. Reub.* 2-3): the spirit of life, by which humans are created as composite beings; the spirit of seeing, which leads to desire; hearing, which makes possible human instruction; smelling, which is linked with breathing; speech, which brings knowledge; taste, which involves food and brings strength; procreation and intercourse,

which foster fondness for pleasure and are the chief cause of sin among youth. In addition, the spirit of sleep creates ecstasy of nature, as well as an image of death. Mingled with these are the spirits of error: promiscuity, insatiability, strife (in the liver and gall), flattery and trickery, arrogance, lying and injustice. The appeal is to love truth, and it will preserve those who seek it, who will gain understanding of the law.

Those who devote themselves to learning the law may gain moral integrity and will be guided by the conscience (*T. Reub.* 4:1-4), which is a fundamental Stoic concept: the knowledge of the law that pervades and orders nature is perceived through the conscience and thus is shared by all who truly and diligently seek it.

This testament is severely critical of women, for the treacherous schemes they promote (*T. Reub.* 5:1) and for their enticement of men into sexual relations (*T. Reub.* 6:1). Special honor and deference are to be offered to Levi, as the chief of the priests (*T. Reub.* 6:8). He is here seen as the one who best knows the law and offers instruction in it and who will continue to offer *sacrifices in the *temple "until the consummation of the times" (*T. Reub.* 6:8-13).

2.2. Testament of Simeon. This testament highlights Simeon's anger and jealousy toward Joseph, who is the model of virtue. The tension arose according to Genesis 42:18-25 when the sons of Jacob went to Egypt to obtain grain during a drought in the land of Israel. Joseph came to the aid of his brothers but insisted on holding Simeon as a hostage. He confesses his earlier hatred of Joseph, which he says was caused by the Prince of Error's having blinded his mind (*T. Sim.* 2:7).

Now he praises Joseph and warns against yielding to the spirit of envy (*T. Sim.* 3:4; 6:2), which makes the soul sad, foments wrath and conflict and murder and causes mental distraction. Simeon characterizes sexual promiscuity as "the mother of all wicked deeds" (*T. Sim.* 5:3), but Joseph was able to resist that temptation.

Instead of submission to these wicked forces, Simeon calls for one to live "in the integrity of [one's] heart," which will manifest itself in love for one's "brothers" and result in God's pouring out on the faithful "grace, glory and blessing" (*T. Sim.* 4:5). Obedience to Levi and Judah are called for (*T. Sim.* 7:1), because God will appear on the earth and will overcome the evil spirits (*T. Sim.* 6:6). What are most certainly Christian

interpolations in this connection describe God's self-manifestation "as a man" in a human "body" who will "eat with human beings" and save them (*T. Sim.* 6:7).

2.3. Testament of Levi. Levi is taken by an angel up to the third heaven, where God is. There bloodless sacrifices are offered to deal with the sins of ignorance committed by the righteous (*T. Levi* 3:5-6). By contrast, the worship of God carried out in Shechem by the *Samaritans in their temple on Mt. Gerizim is denounced (*T. Levi* 5:3-7:4). The description of the investiture of Levi as priest (*T. Levi* 8) is followed by predictions of the establishment of three sacred offices: priest, king and prophet. From Levi's posterity will be priests, judges and scribes to interpret the law (*T. Levi* 8:17).

At Bethel Levi received detailed instructions about the role of the priest. He foresees, however, impiety and secularization of the priests, which may reflect disillusionment of pious Jews with the Maccabean rulers because of their greed and ruthless power (*T. Levi* 14-17). The designation of seventy weeks for the outworking of the divine plan of renewal reflects the chronology of the divine purpose as sketched in Daniel 9. The prediction of the killing through a priestly plot of one who will renew the law may be a Christian addition. There will be mounting corruption and defilement among the priests, until God sends the *eschatological priest to replace the present degenerate holders of that office (*T. Levi* 17). Ultimately there will come a new messianic priest to interpret the law (*T. Levi* 18), who is identified as the "Star out of Jacob" (Num 24:17), as he is in the **Rule of the Community* from *Qumran (1QS 7:18-20). He will be the instrument of universal divine blessing and of disclosure of the divine glory. Beliar, the leader of the evil powers, will be bound by him, as in Isaiah 24:22-23 (cf. the defeat of Beelzebub and Satan in the Gospel tradition [Mk 3:27; Lk 11:14-22]). The evil spirits will be trampled upon, and people must choose between obeying the law of the Lord and participating in the works of Beliar (*T. Levi* 19). The result of the work of the ultimate priest will be the renewal and purification of the whole creation (*T. Levi* 18).

2.4. Testament of Judah. Judah is designated as king by his father, Jacob, as a consequence of his complete obedience to his parents and his honoring of them (*T. Jud.* 1:6). He is noted for his control of wild animals (*T. Jud.* 2:1-7), but es-

pecially for his physical prowess and his effectiveness in warfare, when he defeats the Canaanites and other surrounding nations. In contrast to the self-indulgence depicted in *Testament of Judah* 10—14, there are calls for temperance, prudence, avoidance of love of money (*T. Jud.* 15—19) and for reliance on the conscience and the spirit of truth (*T. Jud.* 20). Judah's kingdom will be established by God (*T. Jud.* 22) through the Star from Jacob, who will pour out the spirit of grace. The patriarchs will be raised from the dead; there will be one people and one language (*T. Jud.* 25). Now the people must obey the whole of the law (*T. Jud.* 26).

2.5. Testament of Issachar. Issachar has been a model of rectitude of the heart and has lived in full obedience to the law (*T. Iss.* 3—4). God will reward such obedience with fertility and safety (*T. Iss.* 5—6), and Beliar will flee. The people should seek unity of purpose in obedience to the Lord, in recognition of the leadership of Judah and Levi, which will lead to the defeat of their enemies and their establishment in the land.

2.6. Testament of Zebulun. Zebulun describes his having tried to dissuade his brothers from killing Joseph (*T. Zeb.* 1—2), though this is not mentioned in Genesis 37, nor are the details of his maltreatment as here described (*T. Zeb.* 1—2). His acts of compassion and obedience to the Lord resulted in length of life and freedom from illness (*T. Zeb.* 5). He was the first to make a boat to sail on the sea and was able to provide fish for many (*T. Zeb.* 6). He urges others to follow his example of acts of compassion (*T. Zeb.* 7—8) and to achieve unity of purpose: "obey one head" (*T. Zeb.* 9:4). The Lord will come among them, but many will perform wicked works and will be rejected (*T. Zeb.* 9:9). Zebulun will rise again to serve as leader of those who remain obedient to the law of the Lord (*T. Zeb.* 10).

2.7. Testament of Dan. Here is offered what might be called a psychological analysis of human behavior, in which anger—though it is senseless—precludes perceiving the truth (*T. Dan* 4:1). Love the Lord and speak truth to the neighbor; otherwise Satan becomes your prince. Salvation will come through Levi and Judah (*T. Dan* 5), which will result in peace for the righteous in the new Jerusalem, where the name of God will permeate the lives of the people as they live in conformity to the law of God (*T. Dan* 6).

2.8. Testament of Naphtali. The order of na-

ture in the creation of humans is described as evident in sex, senses, the body and its organs—all of which affect intelligence and attitudes (*T. Naph.* 3). This order is not to be altered by disobeying the law of God. The people's disobedience was foretold by Enoch, however, but unity will be established by God through the leadership of Levi and Judah for those who fully obey the law and benefit from the love of God and who therefore will be glorified among the Gentiles (*T. Naph.* 5—8).

2.9. Testament of Gad. As the result of a dispute that arose while they were together tending the flock of sheep, Gad developed anger and hatred against his brother Joseph. This led to his brothers' selling Joseph into slavery and plotting to kill him (*T. Gad* 1—2). Hatred fosters every manner of evil and leads to disobedience to the law of God. It works through Satan to bring death, in contrast to the spirit of love, which works through God's law to effect human salvation (*T. Gad* 3). Righteousness overcomes hatred, and repentance overcomes disobedience and darkness, bringing vision, knowledge and the powers of deliberation. Evident here is the impact of the abstract terminology and structuring of ethics and theory of knowledge in the Hellenistic philosophical tradition. The spirit of hatred is operated by Satan through human frailty and leads to death, while the spirit of love works through forbearance to effect deeds, words and inward thoughts that renew humankind (*T. Gad* 6—7).

2.10. Testament of Asher. The concept of Two Ways that are open for human thought and action (*T. Asher* 1:3-7) is anticipated in the choices that are set before Israel in the Pentateuch by Moses ("life and prosperity or death and adversity," Deut 30:15) and by Joshua (serving "the Lord" or "the gods of the ancestors," Josh 24:15). In Jeremiah 21:8 the people are offered "the way of life and the way of death" between which they must choose. These options are echoed in Sirach 15:11-17: "Before each person are life and death, and whichever one chooses will be given" (see Sirach). In this testament, some submit to Beliar, and all their deeds are evil (*T. Asher* 1:8-9). Many human actions are mixed, with some features good or well-intended and others evil. Being "two-faced" is to be avoided (*T. Asher* 3), although polarities pervade human life (*T. Asher* 5). Instead, truth is to be pursued with singlemindedness (*T. Asher* 6).

The sins of those who fail to achieve this goal will lead to ruin of the temple and dispersion of the covenant people, until the Most High visits the earth in order to renew it and his people (*T. Asher* 7).

2.11. Testament of Joseph. This work begins with an expansion of the account in Genesis 37 of his brothers' plot to be rid of him (*T. Jos.* 1) and praises God for his deliverance from this and subsequent threats to his life, as well as from the attempts of the Egyptian woman to engage him sexually (*T. Jos.* 3—9; Gen 39), which he was able to resist by virtue of his quality of self-control. Historically self-control is a central item in Stoic ethics, but here it is central in the true worship of God (*T. Jos.* 6:7) and is the basic resource by which Joseph is able to resist her ongoing efforts to force him to have sex with her. He declares that God will dwell with those who "pursue self-control and purity with patience and prayer with fasting in humility of heart" and will guard them from evil, exalt and glorify them (*T. Jos.* 10:1-3). True fear of God is displayed by those who obey the law and therefore share the love of God (*T. Jos.* 11:1).

Details are included of the plot of another Egyptian woman who claimed she wanted to free him from slavery but who wanted him for sexual relations (*T. Jos.* 12—16). The moral qualities of which Joseph boasts are a blend of "the Lord's commands" (*T. Jos.* 18:1) and Stoic virtues, such as "patient endurance," "harmony," "goodness" (*T. Jos.* 17:2-3) and "humility" (*T. Jos.* 18:3). *Testament of Joseph* 19:1-11 is found only in an Armenian text and contains more apocalyptic features than elsewhere in the *Testaments*. Verses 8-12 also appear in what is clearly a Christian interpolation, with a direct reference to "the Lamb of God who will take away the sin of the world" (cf. Jn 1:29). The animals in both versions of these added passages probably represent various rulers and leaders, as do the "ten horns" of Daniel 7:5. Unlike the biblical stories of Joseph, he is here represented as a king, whose time-bound rule is contrasted with the everlasting kingdom (*T. Jos.* 19:12). The instructions to transport Joseph's body, as well as that of Aseneth, back to Hebron in the land of Israel are to be confirmed by the presence of the Lord of light with them, while Beliar, the power of darkness, will remain with the Egyptians (*T. Jos.* 20). Mention of the hippodrome (*T. Jos.* 20:3) confirms that this

work originated in the Hellenistic period.

2.12. Testament of Benjamin. Benjamin's special link with Joseph—both were born of Rachel, who had difficulty bearing children (Gen 30:24; 35:18)—leads him to encourage his own children to emulate the piety of Joseph. This will guard them against the wiles and actions of Beliar, from whom they are "sheltered by the fear of God" (*T. Benj.* 3:4). A Christian interpolation at 3:8 repeats the promise of the Lamb of God whose "blood of the covenant" will bring salvation for the Gentiles and for Israel, while effecting the destruction of Beliar (*T. Benj.* 3:8). The virtues that are enjoined in abstract terms—integrity, goodness, love, compassion, respect for good works, piety—reflect Stoic perspective and terminology rather than the specific injunctions of the law of Moses.

As in *Testament of Asher* 4, the mind of the good person is free of duplicity and has "one disposition, uncontaminated and pure, toward all men" (*T. Benj.* 6:5). Thus one can escape the wiles of Beliar, whose evils and the appropriate punishments for performing them come in patterns of seven, as did the punishment of Lamech (Gen 4:24). Beliar produces seven evils in the life of those who submit to him: moral corruption, destruction, oppression, captivity, want, turmoil, desolation. One whose mind is pure is able to be free of the corruptions of the earth, while the promiscuous will find no place in the kingdom of the Lord. God will provide the faithful a place in his new temple, which will exceed the glory of the historic temple (*T. Benj.* 9). Gathered there will be the twelve tribes and people from all the nations until God sends among him the eschatological prophet, as promised in Deuteronomy 18:15. A Christian interpolation describes how that prophet will be "raised up on wood," how the curtain of the temple will be torn and the Spirit of God will be poured out on all the nations (*T. Benj.* 9). Meanwhile, Benjamin exhorts his children to keep the law, awaiting the time when God will offer salvation to all the nations through the Chosen One who will bring new knowledge of God to all nations (*T. Benj.* 10—11).

TESTIMONIA (4Q175)

4QTestimonia is rare among the scrolls to have been found in the eleven caves at or near *Qumran in that it is virtually complete. It consists of one side of parchment approximately 23 cm high and 14 cm wide. There are twenty-nine lines of writing, though the last word of the twenty-ninth line drops on to a thirtieth line in the bottom left-hand corner of the text. Although the absence of stitching at either edge shows that the single column of 4QTestimonia was never part of a scroll, neither is there any writing on the reverse as can be found, for example, with the single sheets of the phylacteries from Qumran.

It has long been taken for granted that the scribe who copied 4QTestimonia was the same as the one who copied 1QS, the first cave copy of the *Rule of the Community; such an association, which is likely, would seem to date the penning of 4QTestimonia to the beginning of the first century B.C., give or take a decade or two.

Both 4QTestimonia and 1QS share the custom of representing the divine name with four dots. The association with 1QS has been implicitly important for the modern interpretation of 4QTestimonia because of the three *eschatological figures who feature in 1QS 9:11, "a prophet and the messiahs of Aaron and Israel." None of the individual texts cited in 4QTestimonia is sectarian, but the intent of the collection as a whole and the manner of its presentation would seem to be so.

1. Content and Structure
2. Historical Reference
3. 4QTestimonia and the New Testament

1. Content and Structure.

4QTestimonia contains four paragraphs, each of which seems to contain a quotation introduced by a brief formula. The paragraphs are clearly marked in the manuscript with hook-shaped marginal marks. According to their content, the first three form one section in which those favored by God are described; the fourth makes a section by itself in which those cursed by God are described. It may not be a coincidence that the four quotations appear in canonical order: Exodus, Numbers, Deuteronomy, Joshua.

The first quotation is of a text like that in the Samaritan Pentateuch for Exodus 20:21; on the basis of the Masoretic Text it seems to be a combination of Deuteronomy 5:28-29 and 18:18-19, but it is preferable to identify the text as from Exodus. The so-called Samaritan text type is known in other manuscripts found at Qumran, such as 4QpaleoExod^m. This does not mean that the quotation reflects *Samaritan theology, though it is clear that the Samaritan Pentateuch emphasizes the prophetic role of *Moses.

The second quotation is from Numbers 24:15-17 and is commonly perceived to have been included because of its description of the scepter understood as a reference to the princely *Messiah (cf. CD 7:19-21; 4Q266 frag. 3 iii 19-22; 4Q269 frag. 5 2-4). However, Numbers 24:15-17 seems to refer to three figures, a "man" whose "eye is penetrating," apparently Balaam, a "star" who "shall come out of Jacob," and the "scepter" from *Israel who will crush "the heads of Moab and destroy all the children of Seth." In common with much contemporary early Jewish eschatology, the princely Messiah is God's agent in the destruction of those who oppose him, but

the presence of the two other figures in this text may have prompted the organizer of this small collection to provide two other texts, one of which would clarify the referent of "man," the other of which would further explain the "star." Since "man" is mentioned first, Numbers 24:15-17 was preceded by a description of the prophet who would also be associated with the law. The Numbers quotation was then followed by an extract from Deuteronomy 33:8-11, identifying the "star" with the eschatological *priest. According to CD 7:18 the star is the Interpreter of the Law.

The third quotation makes explicit the prominence of Levi and the priesthood as interpreters of the law and cultic functionaries. This prominence over the scepter and this priestly preeminence is reinforced in Aaron or his house usually being mentioned before Israel, as in 1QS 9:11. Since Moses was Aaron's brother and himself of priestly family, all three of the first set of quotations in 4QTestimonia implicitly or explicitly give prominence to the priesthood. The priestly emphasis is enhanced in the way that the image of the star is matched by the way in which Levi will cause precepts and the law to shine. This play on words is continued in the juxtaposition of blessing and curse, which is also a priestly concern: as in 1QS 2:3 there is a priestly blessing for "enlightening" followed in 1QS 2:5 by the cursing of "all the men of the lot of Belial," so in 4QTestimonia the third quotation has a prayer for the blessing of Levi (Deut 33:11), which is followed by the curse of the man who rebuilds the city, the man of *Belial.

The fourth quotation is matched precisely in 4QApocryphon of Joshua^b (4Q379 frag. 22 ii 7-15). It is a revised and expanded form of Joshua 6:26b. There is some debate about the direction of dependence. Most scholars assume that, just as for Exodus, Numbers and Deuteronomy, 4QTestimonia is quoting from the *Apocryphon of Joshua, which as a rewritten form of Joshua (see *Rewritten Bible*) could then be considered to have attained some form of authority for the community, as had the book of *Jubilees (whose periodization of history the *Apocryphon* follows). A minority view suggests that the *Apocryphon of Joshua* is citing a tradition such as that which is now found also in 4QTestimonia; this is being done to make the narrative of Joshua refer directly to contemporary events and thus to show how the community's experiences are continuous with those of biblical Israel.

This fourth quotation in 4QTestimonia contains an introductory phrase that is also found in the *Apocryphon of Joshua*, a citation of the curse of Joshua 6:26 and a prophetic expansion in which the curse is applied first to "the man of Belial" and then to one or more other people. Unfortunately the precise number of people cursed cannot be ascertained because both 4QTestimonia and 4QApocryphon of Joshua^b (4Q379) are damaged at this point. The key phrase is "the two of them being vessels of violence." Since this phrase reflects the description of Simeon and Levi in Genesis 49:5, it is more likely that the text alludes to an accursed man of Belial and his two sons rather than simply to the accursed man and one other. Because the first three quotations in 4QTestimonia refer to three positive eschatological figures, it is also likely that the fourth quotation refers to a matching wicked triumvirate.

Whereas the Masoretic Text for Joshua 6:26b refers to Jericho, neither the *Septuagint nor the version in 4QTestimonia/4QApocryphon of Joshua^b speaks of Jericho. Perhaps the place name was added as a gloss in the proto-Masoretic text; whatever the case, 4QTestimonia explicitly refers the whole curse to illicit activity in *Jerusalem.

2. Historical Reference.

There has been ongoing debate concerning how the various figures alluded to in the text, especially the wicked threesome, should be identified (see Eshel for the various proposals). Of recent interpreters W. H. Brownlee has proposed that the accursed man and his two sons are to be identified with John Hyrcanus (ruled 134-104 B.C.) and his two sons Aristobulus (104-103 B.C.) and Alexander Jannaeus (103-76 B.C.), H. Burgmann has argued again for the long-standing proposal that the accursed man is Simon Maccabeus (high priest 142-135 B.C.), and H. Eshel, arguing on the basis of archaeological information from the palace at Jericho, has supported an earlier proposal that John Hyrcanus is the accursed man and his sons Aristobulus and Antigonus the two weapons of violence. Perhaps in despair J. C. Lübke has argued that the whole document should be read eschatologically and that scholars should refrain from making historical identifications.

3. 4QTestimonia and the New Testament.

Some of the same passages as appear in

4QTestimonia feature also in the NT writings: Deuteronomy 18:15 is quoted explicitly in Acts 3:22 and 7:37; Numbers 24:17 may lie behind Matthew 2:2 and Revelation 22:16. However, there is no need to suppose that any of the NT authors relied on 4QTestimonia or a document like it for their material. The more literary parallels that emerge between the Qumran literary corpus and the NT, the more it is possible to see all kinds of minor variations between the two bodies of writing. The parallels do not suggest literary dependence so much as that the Qumran and NT authors breathed the same air of eschatological expectation and searched a limited number of suitable biblical passages to justify their messianic views. Thus, while this might undermine the exclusivity of one aspect of the NT writings, it shows us that the NT authors reflect part of their contemporary Jewish culture and that their message would have been readily understandable by many of their first readers and hearers.

The presence of a chain (*catena*) of quotations has been heralded as proof for the widely held theory that some early Christian preachers may have carried with them not whole biblical books but small scrolls on which they would have had ready access to relevant scriptural passages (testimonies; see Fitzmyer) for their own purposes. The presence of chains of quotations (*catenae*) in the NT (Rom 3:10-18; Heb 1:5-13) could show that this was a well-known literary practice in the first century A.D.

The patterned use of blessings and curses is a feature of several NT texts. Blessings and curses are found together in the Sermon on the Plain in Luke (Lk 6:20-26); blessings and woes form an *inclusio* in the Gospel of Matthew at the start (Mt 5:3-12) and finish (Mt 23:13-36) of Jesus' teaching. In Paul's letter to the Galatians there is thematic interplay between curse (Gal 1:8-9; 3:10-14) and blessing (Gal 3:8, 14). The juxtaposition of blessings and curses makes it plain to the reader who is included and who is excluded from the community. Thus in 4QTestimonia the reader is supposed to read the unfulfilled promise, prophecy and blessing as delimiting who will be especially favored in the last days, whereas the curses are for the enemies of the community.

TESTING AND TRIAL IN SECULAR GREEK THOUGHT

In secular Greek thought, from as early as Homer and through the NT period, the phenomenon denoted in the *Septuagint, the *pseudepigrapha and the NT and related literature by the terms *peirazein* ("to try," "to make trial of," "to put to the test," and allegedly "to tempt," "to entice" [cf. *BAGD*, *peirazō*; see *DJG*, Temptation of Jesus, §1]) and *peirasmos* ("a hard trial/ordeal," "a test" or "a testing" and perhaps "a temptation/enticement" [*BAGD*, *peirasmos*; see *DJG*, Temptation of Jesus, §1]), namely, that of probing, proving or of being put to the test for good or ill, is referred to with some frequency (Gibson, 13-15, 18). In biblical literature God, along with human beings and impersonal objects, is frequently noted as being subjected through human agency to this phenomenon (see Ex 17:7; Num 14:22; Deut 6:16; 9:22; 33:8; Pss 78:40-43; 95:8-9; Is 7:12; Wis 1:2; Jdt 8:12; Acts 5:9; 15:10; 1 Cor 10:9; Heb 3:7-9; cf., e.g., 1 Sam 17:39; Eccles 2:1; Gen 22:1-9; Deut 8:2; 1 Kings 10:1).

In Greek literature we find that while it is also spoken of with reference to impersonal objects (cf. Dioscorides *Mat. Med. Praef.* 5.12, where *peirasmos* denotes his "trial" of the efficacy of a certain drug and the Scholion on Aristophanes *Plutus* 575, where *peirazō* denotes a young bird's first "trying out" of its wings; cf. also *Anacr.* 28.12; 33.24; Apollonius of Rhodes *Arg.* 2.46; *Grk. Anth.* 9.263; 11.348; 12.213; Dionysius of Halicarnassus *Ant. Rom.* 10.12.6; 12.213; 13.4.3.2;

Herodian *Schem. Hom.* 114.2; Lucian *Podagr.* 149; 165; 279), what is denoted by *peirasmos* and *peirazō* is hardly ever conceived as something to which, through humans, divinity is subject. (Instances of this topos appear only in Herodotus *Hist.* 8.86 gamma and Aeschylus *Ag.* 1663, and there the word employed to signify such "testing" is *peiraō*; see also Apollonius of Rhodes *Arg.* 3.10, where the goddess Athena is presented as being "put to the test" by the goddess Hera, queen of Olympus.) Rather, "probing," "proving" or "being put to the test" is an event primarily aimed at or happening almost exclusively to mortals.

1. The Nature and Content of the Experience
2. Significance for New Testament Study

1. The Nature and Content of the Experience.

Evidence for what this phenomenon was perceived to involve regarding human beings is to be found in certain of the works of Homer, Arrian, *Josephus, *Plutarch, Menander, Lucilius, Galen, the anonymous commentators on *Aristotle's *Art of Rhetoric* and *Nicomachean Ethics* and the scholiasts on Homer, Euripides, Apollonius of Rhodes, Aristophanes and many other classical authors, as well as in the work of Pseudo-Apollodorus, Pseudo-Callisthenes, Diodorus Siculus, Polybius, Strabo and in that of the anonymous authors of the *Vitae Aesopi*, the papyri PSI 927.25, P. British Museum 2208.7 (*Peirazomene*), P. Oxy. 2891, and the *Cyranides*, among others.

Listed in these works as the *peirazomenoi* (the "tested ones") are such notable figures as Odysseus (Homer *Odys.* 9.105-306; 23.1-116, 153-240), the Spartan king Kleomenes III (Plutarch *Cleom.* 7.3), certain travelers (*Cyr.* 1.21.30, Kazimakis), soldiers (Strabo *Geog.* 16.4.24), as well as various criminals (Menander *Frag.* 42.319), thralls (Homer *Odys.* 16.225-320), farmsteaders (*Vita Aesopi* 64.2), ambassadors to Philip of *Macedon from Darius (*Historia Alexandri Magni* 1.23.13 Recension beta, cf. 1.23.16; 1.26.78 Recension gamma) and such persons as judges (Josephus *J.W.* 4.5.4 §340), "the man of many friends" (Plutarch *Mor.* 230A, cf. Anonymi, *In Aristotellis Artem Rhetoricum* 98.29; sch *Hecuba* 1226.1), a Heliodorus of uncertain origin (Lucilius *Grk. Anth.* 11.189), "evil people" (Galen *Ant. Lib. ii* 14.2.6), Stoics (Anonymi *In Ethica Nichomachea Commentaria* 454.10), the Aetolians (Polybius *Hist.* 21.4.7), the children of the inhabitants of Ceylon (Diodorus Siculus *Bib. Hist.* 2.58.5), the slave/

philosopher Epictetus (Arrian *Epict. Diss.* 1.9.27), the Trojan king Laomedon (Ps.-Apollodorus *Bib.* 2.5.9), and Lycaon, the king of Arcadia, and his sons (Ps.-Apollodorus *Bib.* 3.98.2).

The testimony of these texts regarding the nature and content of the phenomenon denoted by *peirasmos* and *peirazein* can be summed up in six points.

First, the phenomenon was always thought of as something rooted in and arising out of an objective encounter between an individual or a group of people and a wholly external reality. These include difficult circumstances or hardships, such as the dangers of *travel (*Cyr.* 1.21.30) and the "attacks" of scurvy and lameness in the legs (Strabo *Geog.* 16.4.24) or epilepsy (PSI 927.25) or the machinations both of other persons (e.g., Arrian *Epict. Diss.* 1.9.27; Diodorus Siculus *Bib. Hist.* 2.58.5) and of divine beings (Ps.-Apollodorus *Bib.* 2.5.9; 3.98.2; Menander *Frag.* 42.319). In other words, one's experience of "probing," "proving" and/or "being put to the test" was never thought of as originating subjectively, nor was it ever viewed in terms of its being an inner psychological event, that is, the rise of a desire or thought from within a person that must be expunged, resisted or overcome. Rather, it was always something known to be imposed from the outside.

Second, the phenomenon has both a passive and an active element. While the experience denoted by *peirasmos* and *peirazein* is presented as a situation that one could suddenly find oneself in or subjected to against one's will, it was also envisaged as something that one could deliberately undertake and perpetrate against another. Thus we find instances not only of mortals "being tried" or being "put to the proof," sometimes only through happenstance, but also of men (but notably never women) and gods moving intentionally and actively to subject someone to probing and testing.

Third, in these latter instances, the purpose for intentionally subjecting anyone to testing is always to establish definitively in the mind of the tester something specific about the tested party that either is previously unknown or is known but is still in need of having its certainty augmented. Furthermore, testing is perpetrated in order to answer only two sets of questions about who or what the tested party is. As is illustrated in *Odyssey* 9.105-306, the issue testing resolves is whether or not a person is cunning,

brave (*eidota*) and deserving of a hero's fame; in the *Cyranides*, Strabo's *Geography* 16.4.24, Arrian's *Epicteti Dissertationes* 1.9.27, Anonymi *In Ethica Nichomachea Commentaria* 454.10 and Di-odoros Siculus's *Bibliotheca Historica* 2.58.5, it is whether a person is able, as he has committed himself to do or his heritage constrains him, to bear up under tribulation. In Plutarch's *Moralia* 23a, Anonymi *Artem Rhetoricum* 98.29 and scholion *Hecuba* 1226.1, it is whether in times of misfortune (*atychia*) or tribulation (*tais thlipsei*) the tested one is a true friend; the question dealt with and answered by means of testing concerns the nature of a person's character and the extent of his integrity. As is noted in Menander *Fragments* 42.319 and Pseudo-Apollodorus's *Bibliotheca* 2.5.9; 3.98.2, testing resolves whether a man possesses *sebia* ("piety") and honors God (*Theon sebou*); at issue is the depth of one's piety.

Fourth, the motive force behind anyone ever engaging in the testing of another seems to be limited to skepticism or distrust on the part of the agent of the experience regarding how the party to be tested thinks or acts, what his character is like, whether he is trustworthy or possesses the virtues that he, given who or what he is, should have. See, for example, Arrian's story of the testing by *Musonius Rufus of *Epictetus in *Discourses* 1.9.27. Rufus puts the professed *Stoic, who was then a *slave, to the test by lying about tortures that Epictetus's master purportedly had in store for him, because Rufus doubted that Epictetus was wont to bear punishment with equanimity (cf. Ps.-Apollodorus *Bib.* 3.98.2). Another motive is a desire to bring about the tested party's demise: see Plutarch's story of the testing of the Spartan king Kleomenes III, who suspects that the testing arises because an enemy wishes to snare him into giving away a secret that would result in the king's overthrow and death (Plutarch *Cleom.* 7.3; cf. Ps.-Apollodorus *Bib.* 2.5.9).

Fifth, the experience of being put to the test is viewed as having a fundamental pattern. It consists in finding oneself in or being brought into a forced position, that is to say, one in which avoidance of displaying the virtue one is probed for is impossible and compliance with the exigencies of the probing is absolutely necessary if one is not to be shown wanting in the test. Consider, for example, Homer's story of Odysseus's experience of being tested when confronted by Polyphemus, the Cyclops (Homer *Odys.* 9.105-289), about the whereabouts of the

ship that brought Odysseus and his men to Polyphemus's island. As Homer has his hero recognize (Homer *Odys.* 9:281, *hōs fato peirazōn*, "thus he put me to the proof"), Odysseus has no choice but to show himself, as the situation demands, truly to be the man of many devices if he is to remain the one whom even the gods proclaim as the hero who never ceases "struggling for his own life and the homecoming of his companions" (cf. Homer *Odys.* 1.5).

Finally, and perhaps most significantly, nowhere do we find men's experience of being tested, probed or put to the proof and their common experience of enticement or solicitation to evil (indicated in the literature by such words as *thelgein* [cf. Homer *Odys.* 12:39ff., *epagōgon* [cf. Xenophon *Mem.* 2.5.5; Plato *Phileb.* 44C], and *goēteuma* [Plato *Phileb.* 44C]) thought of as, or assumed to be, concurrent or even the same phenomenon (on this, with further instances from the literature, see Moule, 65-75, esp. 69). When a person is subjected to testing it is always and only to see whether he will act in a particular way or whether the character he bears is well established but never to get that person to act in a particular way, especially one that is morally wrong. This is the case even in instances where hostility and the desire to see the demise of the tested person motivates the subjecting the person to testing. For it is assumed there that the person tested is already morally corrupt, not susceptible to or ripe for corruption. Indeed, it is the knowledge that if the one to be tested could be shown for what he already is, his destruction could be assured, that makes testing appropriate here.

Accordingly, in the secular Greek world, the phenomenon denoted by the terms *peirasmos* and *peirazein* was thought of as an activity designed to or having the effect of revealing something of what a person is made of. And when it is applied to men by other men or by divine beings, this phenomenon is the means by which the moral, not the intellectual or physical, condition of a man is ascertained. It seems never to have been thought of in any way other than a test of character or faithfulness.

2. Significance for New Testament Study.

The import of these observations is threefold. First, they clarify the sense in which *peirasmos* is employed at Luke 22:28; Acts 20:19; and 2 Peter 2:9 (Sinaiticus 69 al sy^h). Against many, H. Seesemann (29 n. 35) has argued that in these in-

stances, which speak of the *peirasmoi* endured respectively by Jesus, Paul and "those who have attained faith . . . [and are] established in the truth," the term means something more akin to danger than a test or a proving. This, he notes, is not only because "danger" "seems natural for *peirasmoi* in the pl[ural]" but because "we have other examples" of *peirasmoi* being used with this limited meaning.

The examples that Seesemann adduces to support this claim are *Cyranides* 1.21.30, where *peirasmos* is used of the "trials" which along with the "hazards" (*kindydoi*) of travel on land and sea serve to determine a traveler's mettle (*byetai de apo pasēs anaghas chalepēs kai peristaseōs, thalasiōn kindynōn kai peirasmoni en tē gē kai thalassē, kai apo daimonōn kai pasēs nosou*) and *Syntipas* (Jernstedt and Nikitin, line 24 p. 40), a Byzantine "Arabian Nights," where *peirasmos* is used for the afflictions of life that reveal whether or not a person possesses great inner fortitude (*kai hypo peirasmoni tou kosμου stenochōroumenoi heuriskousi boōtheian kai kouphismon di' euergesiōn autou*). Accordingly, instead of indicating that in Luke 22:28; Acts 20:19; and 2 Peter 2:9 (Sinaiticus* 69 al sy^h) *peirasmos* means something other than "a trial" or "a proving," the witness of usage of the term in secular Greek confirms that it must mean this.

Second, this evidence raises the question of whether Gentile readers or hearers of NT writings would have understood the use of *peirasmos* and *peirazein* in such texts as Matthew 4:1 (par. Lk 4:2; Mk 1:12); Luke 4:13; Matthew 6:13 (par. Lk 11:4); Galatians 6:1; 1 Thessalonians 3:5; James 1:13 and 1 Timothy 6:9 in terms of the notion of enticement to sin, even if, as many NT lexicons and exegetical studies of these texts claim, that this is the idea intended to be conveyed there. In the light of our observations, it seems more likely that these readers or hearers would have taken the terms as signifying only tests of faithfulness or integrity.

Third, insofar as secular Greek usage had any influence on delimiting the semantic range within which Hellenized Jewish or early Christian usage of *peirasmos* and *peirazein* took its bearings, the observations outlined above indicate that there is strong reason to doubt that in those NT texts where *peirasmos* and *peirazein* are usually construed in terms of enticement to sin, this notion ever played any part. Tendencies for lexicographers and exegetes to see that it does

may therefore be the result not of a sober analysis of the linguistic data but of eisegesis and circular reasoning.

TEXTUAL CRITICISM

Textual criticism is the discipline that attempts to establish an authoritative text for a given author's work. Textual criticism involves the informed comparison of all of the known copies of a given text in order to ascertain the earliest recoverable and, if possible, the original form of the text and to trace the history of its development. Textual criticism is often thought of only in terms of NT textual criticism, but it applies to any and all of the documents from the ancient world. Textual criticism focuses usually upon literary authors, such as the classical writers (e.g., Homer, *Plato, *Aristotle, the dramatists) and the later authors such as *Philo, *Josephus and the various historians (e.g., Dio Cassius, Polybius), where there is a history of textual transmission and the original documents are no longer extant. However, there is also a need for sound principles of textual criticism to be applied to nonliterary texts, such as papyri and inscriptions (see Inscriptions and Papyri).

1. The Materials of Textual Criticism
2. The Methods of Textual Criticism
3. Conclusion

1. The Materials of Textual Criticism.

Textual criticism of the NT is both blessed and cursed by a wealth of materials available for study. Depending on how they are counted, there are nearly fifty-five hundred manuscripts of various sizes and shapes with various portions of the NT on them, as well as hundreds of copies of various ancient versions or translations,

and quotations of the NT in the early church fathers. NT manuscripts range from the complete or nearly complete major codices, such as Codex Sinaiticus or Codex Vaticanus, to the fragmentary recently published P. Vindob. G 42417 (P¹¹⁶), the most recently discovered and published NT papyrus manuscript with a few verses of Hebrews on it (Heb 2:9-11; 3:3-6). The original NT manuscripts were probably written on papyrus, the paper of the ancient Mediterranean world, but these are no longer extant. Instead we have copies of copies made over the course of over fourteen hundred years, as scribes copied these by hand and passed them down to others. Approximately 116 of these manuscripts are on papyrus (the number is still growing as more papyri are published), with the rest being on parchment or paper. The result of this process of copying and textual transmission is that numerous changes of various types have been introduced into these documents. Some of the changes were made intentionally to correct or improve a manuscript (or so a scribe thought), while others were unintentionally introduced through carelessness or a slip of the pen. As a result, there are no two NT manuscripts that are identical in all aspects.

Currently the earliest complete or nearly complete manuscripts of the NT date to the fourth century (Codex Sinaiticus [Σ 01] and Codex Vaticanus [B 03]), within four hundred years of their composition. However, there are substantial or nearly complete manuscripts of individual books of the NT, such as several of Paul's letters (excluding the beginning of Romans, 2 Thessalonians, Philemon or the Pastorals) and Hebrews, in Chester Beatty II (P. Chester Beatty II and Univ. of Michigan Inv. 6298 [P⁴⁶]). Of course, there are many fragments that are even earlier (such as P. RyL Greek 457 [P⁵²], a fragment of John dated to c. 125). In other words, there is a wealth of relatively early manuscript evidence for much of the NT.

Textual criticism of most classical and other ancient authors, however, is in a very different situation. F. F. Bruce (16-17) summarizes the situation for a number of ancient authors. For example, for Caesar's *Gallic Wars* there are numerous manuscripts, but the oldest is around nine hundred years later than the date of composition (58-50 B.C.). Thucydides' history is known from eight manuscripts, as well as a number of papyrus fragments, but the earliest of the

manuscripts is dated to about A.D. 900, around thirteen hundred years after the date of composition, although some papyri are from the Greco-Roman era. The same is generally true of Herodotus's history. This says nothing of the authors whose works have survived only in part, such as Livy (only 35 of his 142 books of Roman history are extant) and Tacitus (only 4.5 of the 14 books of his *Historiae* survive, although with a better ratio for his *Annals*, with 10 books surviving in full and 2 in part out of 16; all of his minor works are dependent on one manuscript from the tenth century). These examples are indicative of the state of textual criticism for classical and related authors (see West, 9-10).

Textual criticism for nonliterary texts is made more difficult by the fact that for such documents as documentary papyri, there may be only the single manuscript. In many instances, this can make decipherment and establishment of the text very difficult. Sometimes the situation is aided by the fact that many documentary papyri follow particular formulas, and these formulas can be used in reconstructing the fragmentary text. The same can be true for inscriptions and other types of texts, such as official letters. In some of these instances, the document may have been issued in multiple forms in different places for comparison (e.g., Augustus's *Res Gestae*). However, although the formulaic elements may be able to be reconstructed so that one has a sense of the shape of the document, the exact wording often cannot be known because of the specific nature of the given document.

2. The Methods of Textual Criticism.

As a result, one can imagine that on the basis of the different types of documents textual criticism can be performed in many different ways.

2.1. Stemmatic Approach. Classical textual criticism often follows what has been called a stemmatic or genealogical approach, developed in its classic form by P. Maas and recently refined by M. L. West (cf. Reynolds and Wilson, 186-213). This method involves reconstructing a family tree or stemma of surviving manuscripts, working back through the textual variants until one is able to establish an archetype (extant or nonextant) and through this to determine which is the best manuscript upon which to base the edition. The ability to do this is colored by a number of factors, such as the contamination of manuscripts. In some cases it might be possible to ac-

count for all of the variants in a stemma (called a closed recension), but in many instances this will not be possible (an open recension). Dealing with an open recension is more complex and may well result in an incomplete stemma and reliance upon other forms of tabulation of variants.

From what has been said above, one can understand both how this method is possible and why it is a desirable method in the textual criticism of classical or related texts. The limited number of manuscripts, especially those of substantial size, makes this a more manageable task and one that can thereby account for the origin and development of the variant readings. This form of textual criticism was used in NT textual criticism in the nineteenth century, before many of the earlier manuscripts were discovered or available for use, and is still used by some NT textual critics (see Colwell, 63-83). The more open the recension is, the more difficulty there is for the stemmatic method. Perhaps the inevitable criticism from some NT scholars regarding this method is that it relies on a historically based documentary method but one that cannot easily move further back in the tradition than the known documents, that is, to the nonextant autograph, so much sought in much NT textual criticism (see Holmes, 347-48, in Ehrman and Holmes). Therefore, a number of NT scholars use forms of the so-called eclectic method noted below. Nevertheless, for classical authors, as well as in instances where the textual evidence is limited (such as papyri and inscriptions), classical methods of textual criticism still have much to commend them.

2.2. Majority Text. The vast majority of manuscripts of the NT follow the Byzantine textual tradition. Two Byzantine manuscripts dating to the twelfth century, compared with a couple of others (as well as supplementing this with retranslation from Latin for a few verses), were the ones Erasmus used in preparing his edition of the Greek NT (1516). This popular edition, subsequently called the *Textus Receptus*, or "received text," by a printer, remained the NT text in use and the basis for most translations until late in the nineteenth century (see Porter, "Modern English Translations"). Some scholars still insist on using the *Textus Receptus*, but most who would still find merit in the Byzantine text type recognize that the *Textus Receptus* is merely one possible form of that text (see Sturz),

and others have attempted to promote the majority text (for general discussion see Wallace, 297-320, in Ehrman and Holmes). Most scholars have rejected the majority text as a basis for textual criticism, since it often substitutes a counting of manuscripts for an examination of other factors, such as date, transmission and relationships. B. M. Metzger (esp. 291-92) has claimed that more than 90 percent of the extant manuscripts have a Byzantine character (Epp argues for 80 percent) but that most of these were written within the restricted confines of the Byzantine Empire and that this approach neglects the major developments in early textual transmission, including major disruptions.

2.3. Eclectic Methods. On the basis of the large numbers of manuscripts involved and the presence of widespread contamination within the manuscript tradition, the vast majority of NT textual critics practice what is called eclectic textual criticism, often developing methods elucidated by B. F. Westcott and F. J. A. Hort. The idea is that rather than confining oneself to a reconstructed stemma or relying on the reading found in the largest number of manuscripts, it is assumed that any given manuscript may or may not preserve a correct reading. Thus a process is needed to draw from all of the available resources to reconstruct what is thought to be the earliest reading and hence closest to the original text. These resources include external evidence (the manuscripts themselves, as well as sources such as the early church fathers and versions) and internal evidence (the tendencies of the scribes). On the basis of how these two factors are weighed, there are two forms of eclectic method in use: thoroughgoing eclecticism and reasoned eclecticism.

2.3.1. Thoroughgoing Eclecticism. Thoroughgoing or rigorous eclecticism is usually identified with G. D. Kilpatrick and his student J. K. Elliott (Elliott, 321-35, in Ehrman and Holmes). This form of eclectic criticism relies most heavily upon internal evidence in making text-critical decisions and does not give much weight to the external evidence, except as the manuscripts provide a collection of the possible readings to be sifted and evaluated to arrive at the correct reading. This method thus relies upon the weight of probabilities regarding scribal tendencies as a means of assessing readings. Several criticisms of this method involve the heavy reliance upon probabilities in scribal tendencies,

even though the kinds of sophisticated stylistic studies of the NT that could aid in such a procedure are still relatively rudimentary and have been mostly applied to questions of authorship. Another criticism is that this method neglects the history of the textual tradition and its transmission. The result is that in some instances a relatively late variant might be accepted because it seems to fit the internal evidence, even though it may not be attested in earlier sources.

2.3.2. Reasoned Eclecticism. The vast majority of NT textual critics today practice what is called reasoned eclecticism (see Holmes, 336-60, in Ehrman and Holmes; Aland and Aland; Metzger; Epp; Epp and Fee). Reasoned eclecticism tries to strike a balance between external and internal evidence, such that the characteristics of a given variant in the light of scribal tendencies are evaluated in relation to the manuscript evidence. External evidence includes consideration of the relative dates of the manuscripts (e.g., most of the manuscripts that date from before the sixth century were unknown or unused before the late nineteenth century), their distribution geographically (readings with widespread distribution are considered better than those located in one place), the genealogical relationships that may exist between the manuscripts, and the relative quality of the manuscripts (e.g., papyri are generally thought to be of better quality than parchments, although this view must be qualified).

Internal evidence is concerned with transcriptional probabilities related to the habits and practices of scribes. The tendencies of scribes can be broken down into unintentional and intentional scribal changes. The unintentional ones include instances where letters were confused, words were divided improperly (since all of the early manuscripts were written in continuously written capital letters), the order of letter or words was switched, words were substituted, words were omitted or repeated (this often occurred in conjunction with losing one's place in a manuscript), spelling was faulty or harmonization took place unconsciously. The intentional scribal changes may well have been made with honest motives, since they often involved improving grammar and style, harmonizing Synoptic parallels, clarifying obscure points, conflating readings, adding appropriate material (such as a fuller name of Jesus) and theological changes (see Epp, 60-61).

The intentional scribal factors remain not as widely studied as the others in textual criticism, due to the more global considerations, such as style, involved. On the basis of these scribal tendencies, a number of canons or rules of textual criticism have been developed to aid in adjudicating the results of scribal analysis. On the basis of the scribal tendencies noted, these canons usually opt for the shorter, more difficult or least well harmonized reading (Epp, 62-63). The final consideration often used in this type of textual criticism is what has been called Bengel's Rule, by which is meant that in the final analysis the best reading is the one that can account for all of the other variants.

3. Conclusion.

Reasoned eclecticism has come to dominate NT textual criticism, apart from a few scholars who hold on to the majority text and a few others who utilize thoroughgoing eclecticism. The result has been so much confidence that some textual critics believe that even though we do not have any of the autographs, we have arrived at what is tantamount to the original text (see Clarke, who evaluates the ratings in the United Bible Societies' Greek New Testament and their implications). This is, however, a problematic conclusion, since it has no hope of being proved or disproved without discovering the autographs. This overconfidence also neglects the widespread disagreement regarding methods in textual criticism and the subjective nature of many of the criteria.

Two further points are to be made. The first is that this overconfidence has led some scholars to seriously question whether the original text is something that can be found through the methods currently available and whether it might not be better, in line with much classical textual criticism, to argue for the earliest establishable text. The second point follows from this. In light of this situation, it might be wise to consider not relying so heavily on an eclectic text, which is the product of modern scholarly reflection and industry, but using instead single manuscripts that date from the ancient world. For the NT this might be an edition of one of the major codices for a given book of the NT. There is much to be said for selecting and utilizing a single ancient text, since such an ancient text, despite its errors, represents a text that was used, in the case of the NT, in an ancient church

context, even if it has readings that were not original.

THANKSGIVING HYMNS (IQH)

Thanksgiving Hymns (Hodayot) is the title given to a collection of more than thirty psalmic-type compositions. Eight copies, all of them incomplete, were preserved in the caves at *Qumran. Modeled on the biblical psalms, particularly the psalms of thanksgiving, these poems are considered among the core religious writings of the *Essenes and attest that devotional religious poetry still continued to be composed in the Second Temple period.

1. The Manuscript Evidence
2. Form and Content
3. Authorship and Unity of the Collection
4. Purpose and Use of the *Hodayot*
5. The Significance for the New Testament

I. The Manuscript Evidence.

Fifty years after the discovery of the first copies of this work, even basic questions such as where certain psalms begin and end—and hence the exact number of compositions—and the precise readings of many badly damaged sections are far from resolved.

The largest and most complete scroll containing these *Thanksgiving Hymns* (IQH^a) was found by the bedouin in Cave 1 at Qumran and purchased by E. Sukenik of Hebrew University in November 1947. When the scroll came to him, there were three separate damaged sheets plus more than seventy detached fragments (in recent years more than twenty more very small fragments have been identified as belonging to this scroll). Two scribes had written the manuscript; one scribe copied up until column 11, line 22 (as Sukenik arranged and numbered the columns), and another scribe took over in the middle of the line and completed the scroll; thus it is possible to determine whether even a small fragment comes from the first part or the latter part of the scroll, on the basis of the handwriting. Sukenik organized the material into eighteen columns and sixty-six unplaced small fragments and in 1954-55 published a complete *editio princeps* with plates and transcription. Since many of the psalms begin with the formula *’ōdēhā* ("I give you thanks"), Sukenik called the manuscript the *Thanksgiving Scroll* (the "Scroll of the *Hodayot*").

Among the debris of Cave 1 archaeologists found two more small fragments (1Q35) that were very similar to Sukenik's manuscript in both the handwriting and the content. These were published in 1955 by J. T. Milik, who suggested that they may have originally been part of Sukenik's manuscript. However it was soon recognized that there was overlapping text, and hence this must be a second copy of the *Thanksgiving* psalms or at least a copy of part of this collection. This scroll is now designated 1QH^b.

Six more copies of this work were identified from Cave 4 on the basis of overlapping text (4Q427-432). Five were written on animal skins and one on papyrus. These manuscripts were part of the allotment of J. Strugnell and were published by E. Schuller in 1999 in *Discoveries in the Judaean Desert*, volume XXIX. The new information that they supply is only beginning to be incorporated in our overall understanding of the *Hodayot*. All are very fragmentary, and much of the text must be restored from the more complete Cave 1 copy. Some sections or individual words, however, are preserved only in the Cave 4 copies, and these can serve to fill in some of the lacunae in the 1QH^a scroll.

The most interesting scroll is 4QH^a (4Q427), which includes a large fragment (frag. 7) that preserves a major segment of a psalm of which only a few scattered words had survived in 1QH^a. There are portions of another psalm (frag. 8 i and ii) that does not appear at all in the preserved section of 1QH^a, and the order of psalms was totally different in this copy than in 1QH^a. Another manuscript, 4QH^c (4Q430), also seems to have a different order of psalms than either 1QH^a or 4QH^b. 4QH^c (4Q429) was a small scroll with only twelve lines and very narrow columns, so that, even when complete, it would not have contained the whole collection that was found in 1QH^a. The papyrus scroll, 4QH^f (4Q432) probably also only contained a portion of the psalms. This variation in the copies suggests that there were distinct subcollections of psalms (there is also evidence to this effect in the different systems of orthography in various parts of 1QH^a). These collections were combined in a specific way in 1QH^a and also in 4QH^b, which has the same order and content. But in other copies various subunits were copied separately or in a different order.

In recent years two scholars working independently, H. Stegemann and E. Puech, have re-

constructed the original order of the 1QH^a scroll on the basis of the shapes and patterns of the damaged pieces (see Puech 1988). This reconstruction has important implications for understanding this work. For instance, the reconstruction establishes that the scroll originally contained seven sheets with four columns in each for a total of twenty-eight columns, with forty-one or forty-two lines to a column. The first three columns and the last two columns are almost entirely missing. In Sukenik's arrangement, the category of psalms that are called Hymns of the Teacher (see below) came at the beginning of the scroll, followed by the Hymns of the Community; in the reconstructed scroll, the Hymns of the Teacher come in the middle (cols. 9-17), with Hymns of the Community at the beginning (cols. 1-8) and at the end (cols. 18-28) of the scroll.

A complete reconstruction of 1QH^a has not yet been published. In citing references in this article, the reconstructed column and line numbers will be used and the former column and line numbers of Sukenik will be put in brackets since earlier translations and references follow this system. Recent English translations usually follow the reconstructed order but with some differences in line numbers.

2. Form and Content.

These poetic compositions are modeled to some extent on the biblical psalms, especially of the type "individual psalms of thanksgiving." Nevertheless, when the collection as a whole is studied, there is evidence of considerable diversity in both form and content rather than a strict imitation of a biblical model.

The psalms are a direct address to God in the second person. There is a first person singular speaker but, as in the biblical psalms, the "I" may be corporate, that is, the voice of the community. In a few places the speaker is the plural "we." Unlike the biblical psalms of thanksgiving, where the psalm can begin in quite different ways, these all start with a set introductory formula, either "I thank you, O Lord," or "Blessed are you, Lord." It is not clear that there is any real distinction between the two introductions, and in one case (1QH^a 13:22 [5:20]) the first is erased and the second written in above the line. The psalmist then states his reason for offering praise by recounting what God has done for him: "because you have placed my soul in the

bundle of the living" (1QH^a 10:22 [2:20]); "because you have redeemed my soul from the pit" (1QH^a 11:20 [3:19]); "for you have illumined my face by your covenant" (1QH^a 12:6 [4:5]); "because you have dealt wondrously with dust and mightily with a creature of clay" (1QH^a 19:6 [11:3]).

Other reasons frequently cited for giving thanks is that God has granted the psalmist knowledge of marvelous mysteries (e.g., 1QH^a 12:28-29 [4:27-28]) and brought him into the community (the *yahad*), giving him fellowship with the elect on earth and the angels in heaven (e.g., 1QH^a 11:23-24 [3:22-23]). The main body of the psalm can be quite varied in form and content. There might be an extended and elaborate development of a specific image or motif, for example, a tree planted in a garden (1QH^a 16:5-27 [8:4-26]); a fortified city (1QH^a 14:28-32 [6:25-29]); a woman in labor (1QH^a 11:8-14 [3:7-13]). In some psalms, there are extended descriptions of the events to come in the *eschatological future, with particular emphasis on the destruction of *Belial and all the spirits of wickedness (1QH^a 11:26-37 [3:25-36]; 25:3-16 [frag. 5:1-14]). As in biblical psalms of thanksgiving, there are very few petitions, although there are occasionally imperative verbs and requests to God (e.g., 1QH^a 19:33 [11:30]; 8:29-30 [16:11-12]). There is no standard concluding formula. In the biblical psalms of thanksgiving there was often mention in the concluding section of offering *sacrifice and fulfilling vows in the temple (e.g., Pss 107:22; 116:17-18), but this element is not found in any of these texts.

All of these psalms seem very biblical because they reuse biblical phraseology and images; hundreds of allusions but rarely direct quotations have been identified, most from the Psalms, Isaiah and Deuteronomy. Yet the biblical words and phrases are reworked and reconfigured in a style that is quite different from earlier biblical poetry. Although certain standard poetic conventions are maintained, the cola tend to be much longer, with extended list-like sections, so that at times this becomes almost an elevated prose. Precisely because the language is so conventional and biblical, one of the major interpretative issues is to judge how much these psalms should be read autobiographically, even when the claim is made that they are to be attributed to the Teacher himself. Some scholars have attempted to use these

psalms as sources of very specific information about details in the life of the Teacher; others have emphasized the biblical background of basic motifs such as enemies, persecution and exile and thus hesitate to draw any conclusions about the life situation of the author on this basis.

3. Authorship and Unity of the Collection.

Many scholars, beginning with Sukenik, have suggested that this entire collection of psalms was a unified work and was authored by the Teacher of Righteousness. Here, it was assumed, we could find his personal devotional piety, an account of how God had given him a special revelation that he is to share with the members of his community (1QH^a 12:28 [4:27]) and at least oblique references to his persecution and exile by the Wicked Priest (e.g., 1QH^a 12:10-22 [4:9-10], "they have banished me from my land like a bird from the nest"; cf. 1QpHab 11:6, and see Habakkuk Commentary). However, a series of studies by a number of scholars in the 1960s (especially Holm-Nielsen in Denmark and the German school of Morawe, Jeremias and Kuhn) proposed that the collection is not a unity and at least two basic categories of psalms need to be distinguished.

In one group of psalms, the "I" seems highly personal. The person who speaks has an exalted position and functions as a mediator of revelation to others. There are lengthy descriptions of his sufferings and betrayal, certain repeated lexical items, highly developed imagery and extensive reliance on biblical phraseology. Six to eight psalms fall into this category, though sometimes as many as twelve are included; core exemplars include 1QH^a 10:5-21 (2:3-19), 10:22-32 (2:20-30), 12:6-13:6 (4:5-5:4), 13:7-21 (5:5-19), 13:20-15:8 (5:20-7:5), 15:9-28 (7:6-25), 16:5-17:36 (8:4-9:36). Many scholars make the further argument that these psalms were composed by the Teacher of Righteousness and hence their designation The Hymns of the Teacher (*Lehrliedern*); a minority opinion recognizes that these psalms form a distinct group but argues that the "I" need not be a particular individual but could be any member of the community.

In the second category, the Hymns of the Community (*Gemeindeliedern*), the "I" seems more the corporate voice of the community. These psalms are characterized by common components, especially an explicit confession of God's salvific action and justice (e.g., "I know

that righteousness is yours," 1QH^a 19:20-21 [11:17-18]) and extended reflections about the sinful condition and misery of humankind, often expressed in the form of rhetorical questions (e.g., "What is one horn of a woman in the midst of all your awesome works? He is a construction of dust and kneaded with water; his foundation is sinful guilt, and ignominious shame, and a source of uncleanness; a spirit of perversity rules over him," 1QH^a 5:91-99 [18:14-16]). The authorship of these psalms has not been defined with any precision. It is usually assumed that they are sectarian in origin, that is, composed by members of the Essene community. There are similarities with the **Rule of the Community* and the **War Scroll* in worldview (dualistic and deterministic) and vocabulary (words like *yahad*/community, *Maskil*/Instructor, Belial). As is typical of literature identified as sectarian, the divine name (the tetragrammaton) is never used. God is designated as 'el, which is occasionally written in Paleo-Hebrew script in 1QH^a, or 'elohim ("God") or 'adonai ("Lord").

The picture is further complicated because there are some compositions that do not fit neatly into either category. One psalm (1QH^a 9:1—10:4 [1:1—2:2]) is distinctive because it contains an extended wisdom-like reflection on creation and divine determinism and concludes with an exhortation to a plural audience, "Hear, O you wise, and you who mediate on knowledge . . . O you righteous, put an end to wickedness." Another psalm, best preserved in 4Q427 frag. 7, with some smaller overlapping fragments in 4Q491 and 1QH^a 25:34—26:41, seems more liturgical in style. It contains an extended series of imperative calls to give praise, "sing, O beloved ones, rejoice . . . right forth . . . give praise, extol"; confessional statements in the first person plural, "we have known you, O God of righteousness"; and a series of summonses to "proclaim and say, Great is God/blessed is God." Toward the beginning of the psalm, the speaker describes himself in exalted language as a "beloved of the king, a companion of the holy ones" who is "with the heavenly beings" ('*elim*). A version of this passage, though a distinct recension, appears in another fragment that may be part of a copy of the *War Scroll* (4Q491 II i) or perhaps is an independent composition. This is significant because it is one of the few instances where a passage appears both in the *Hodayot* and in another scroll and suggests that the au-

thor(s) of the psalms may have drawn upon existing compositions.

On chronological grounds, it is possible that some or all of the psalms were composed by the Teacher of Righteousness; all were composed in the early stages of the community's foundation. 4QH^b is the earliest copy of these hymns, and the handwriting can be dated to c. 100 to 50 B.C.; this manuscript is especially significant since it shows that the full compilation had been drawn together in a fixed order by this time. 1QH^a and 1QH^b were copied somewhat later, c. 50 to 1 B.C., and other copies are from the last quarter of the first century B.C. or the beginning of the common era.

4. Purpose and Use of the *Hodayot*

How these psalms were used is a question that has been much debated, without any clear resolution. The length of at least a number of the compositions and the complexity of the poetry have suggested to some scholars (e.g., Nitzan) that they were more suitable for personal private meditation and/or instruction than for communal singing. There are no textual indications that they were sung on a regular basis, whether daily or for *feasts or for special liturgical services, in contrast to scrolls such as 4Q503 (*Daily Prayers*) and 4Q504 (*Words of the Luminaries*), which give clear rubrical notations. There are some rubrical-type notes, for example, in 1QH^a 20:7-14 (12:4-11) "for the *Maskil*, thanksgiving and prayer, to bow down and make supplication always"; 1QH^a 25:34 (frag. 8 10) "for the *Maskil*, a psalm," and faint traces of similar rubrics in 1QH^a 7:21 (15:8) and 5:12 (frag. 15 ia 8).

Puech has suggested that there is a fivefold division, modeled upon the five books of the Psalter, and that this is indicative of some liturgical usage. Because of the emphasis on the weak human condition and the doxological confession, elements found also in the psalm at the end of the *Rule of the Community* (1QS 10—11), it has been suggested that the Hymns of the Community may have originated in the Liturgy for Entrance into and Renewal of the Covenant (see 1QS 1:18—2:18), and perhaps secondarily came to be part of the daily "entering the Covenant of God" (1QS 10:10). There are some themes in common with the morning blessings in later rabbinic prayer (e.g., thanksgiving for knowledge; creation), but the links are general rather than specific. If there are some copies

that contained only the Hymns of the Teacher, this may suggest that these particular scrolls served a special purpose; the small format of 4QH^c might indicate a scroll written for personal use.

Given how little we know about the shape and content of the liturgical life of the Essenes, it may not be possible to resolve the question of personal versus communal use with any certainty. Perhaps a more fruitful avenue of inquiry is that explored by C. Newsom, who concentrates not on reconstructing the original *Sitz im Leben* but rather asks how these psalms functioned rhetorically in the ongoing life of the community. Whatever their origin, given that they were copied and thus presumably used (whether communally or privately) for more than a hundred years, this poetry must have been an important factor in shaping the self-identity and worldview of the community members.

5. The Significance for the New Testament.

These poems are one of most extensive collections of religious poetry of the Second Temple period. Along with the **Psalms of Solomon*, they are evidence of an ongoing and living tradition of the composition of new religious devotional poetry, modeled on traditional biblical patterns but incorporating new elements in style and content. Thus these poems provide a context for the study of the religious poetry of the NT, especially the canticles of Luke 1–2, and for NT expressions of blessings and thanksgivings; of particular note is the similar formulation of the thanksgiving in Matthew 11:25 and Luke 10:21, "I thank you, Father, Lord of heaven and earth, because you have hidden these things from the wise and intelligent and have revealed them to infants."

THEATERS

In the ancient world, theaters were among the most distinctive hallmarks of Greco-Roman society. Although they naturally had various ancillary functions, their chief purpose was to serve as the venue for the dramatic performances dedicated to Dionysus and other deities. Given these pagan religious associations, theater going was probably largely avoided by the Jews in Palestine, even if it appears to have been more gen-

erally tolerated within the *Diaspora.

Our word *theater* is derived from the Greek *theasthai*, meaning "to look at." In Greek theaters, the *theatron* ("theater") originally referred to only one part of the larger complex, namely, the area reserved for spectators. The other main parts of the theater were the *orchestra*, a flat, roughly circular area for the dancing and singing of the chorus, and the *skēnē*, a backdrop for the performers that later evolved into a discrete building. Roman theaters, by contrast, were often elaborate roofed buildings featuring an ornate *skēnē* (*scenae frons*) of two stories or more (cf. Vitruvius *De Arch.* 5.3, 6-7 and Bieber, 189, for further distinctions between Greek and Roman theaters). In terms of their situation, Greek-style theaters would commonly be located near a sanctuary, while Roman theaters were often part of an urban complex.

1. Greek Theater
2. Roman Theater
3. Theater in Palestine
4. Theater in the Diaspora

1. Greek Theater.

The main function of the theater in classical Greece was to provide a venue for drama. Dramatic productions were performed only in the religious festivals dedicated to Dionysus, the most important being the Great (or City) Dionysia of Athens. There, famously, in the fifth century B.C., dramatic competitions (*agōnes*) were staged in his honor. Dionysus was worshiped as the patron deity of drama because of his associations with *ekstasis* ("standing outside of oneself"). He dissolved the boundaries between the self and the other, enabling the actors to assume different personae, an event symbolized by their adoption of various masks and costumes. Dionysiac ritual may also underlie all three dramatic genres—tragedy, comedy and the satyr play—but this point is disputed (Aristotle *Poet.* 4.14-21). There is no need to consider these genres in detail here (cf. Pickard-Cambridge 1962 and Easterling) except to note that, *mutatis mutandis*, they proved to be extraordinarily popular, influential and enduring.

Even within the fifth century B.C., theaters had begun to appear outside of *Athens, and this whole process was accelerated through the conquests of *Alexander the Great. In the Hellenistic period, the conquering Greeks built theaters for their own use, and any city with

pretensions to culture would construct themselves a theater (Pausanias *Descr.* 10.4.1). As a consequence, theater and drama became ubiquitous throughout the ancient world. Yet if the religious associations between dramatic performance and Dionysus continued, drama gradually ceased to be his exclusive preserve and began to be performed in honor of other deities as well.

2. Roman Theater.

As with the Greek theater, the main function of the Roman theater was to provide a venue for drama. Our understanding of dramatic performance in Rome is somewhat limited by the paucity of extant literary sources, but there is little doubt that Greek models continued to be extraordinarily influential; Horace counsels aspiring playwrights to "work with Greek models by day, and work with them by night" (Horace *Art. Poet.* 268-69). In addition to comedy, tragedy and the satyr play, however, various other dramatic genres gradually assumed importance. Apart from the traditional Roman farces (*Atellanae*), mime and pantomime gained considerable vogue. The former was a burlesque revue of song and dance, slapstick and acrobatics that commonly featured female performers, nudity and obscene subject matter (Dio Chrysostom *Alex.* 32.4; Apuleius *Met.* 10.29-34). Pantomime, which emerged to great acclaim just before the common era, consisted of a solo dancer enacting various mythological scenes and characters to the accompaniment of instruments and a sung chorus (Lucian *Salt.*). Typically, any or all of these genres would figure in the theater shows (*ludi scaenici*) that made up one component of the religious festivals (*ludi*) of the Roman calendar year.

Apart from providing a venue for drama, theaters in the Hellenistic and Roman world served a variety of other functions. Theaters naturally doubled as complexes for other spectator events. Gymnastics, gladiatorial contests (see *Circuses and Games*), animal baiting and musical competitions could all be situated there instead of in the more customary amphitheaters. The theater also had obvious political functions. It served as a meeting point for a ruler and his subjects (Plutarch *Demetr.* 34.3), for city councils and dignitaries (Josephus *J.W.* 7.3.3 §47) and for public gatherings of various descriptions. As Acts (Acts 19:29, 31) demonstrates, it was a natu-

ral place for a mob to assemble, especially when, as in *Ephesus, the *theatron* was immediately proximate to the agora and could accommodate some twenty-four thousand people.

3. Theater in Palestine.

Given the *Hasmoneans' resistance to overt Hellenization, theaters did not appear in Syria-Palestine until the time of Herod the Great. He, as part of his Hellenizing agenda, constructed a theater and amphitheater (hippodrome?) in *Jerusalem and theaters in a variety of other urban centers (*Caesarea Maritima, Sidon and Damascus; cf. Josephus *Ant.* 15.8.1 §268; 15.9.6 §341; *J. W.* 1.21.11 §422). More theaters appeared gradually over the next two and half centuries, usually erected at a city's own expense and initiative. To date, some thirty theaters in Syria-Palestine have been discovered, mostly Roman in style, varying in capacity from about four hundred spectators (Sahr) to seven thousand (Philadelphia).

In spite of their capacity, these theaters were likely not much frequented by the local Jewish population. It was not simply that Herod's new structures were "foreign to Jewish custom," as Josephus relates (*Ant.* 15.8.1 §268). Given that dramatic productions were dedicated to Dionysus or other deities, they obviously smacked of idolatry (y. 'Abod. Zar. 1:7; cf. Josephus *Ant.* 19.7.4 §§332-34). Images of the gods or the emperor were prominently displayed (sometimes built into the *scaenae frons*), and *prayers and sacrifices often figured as part of the proceedings. In some cases (e.g., at Sahr), the theater was used as an adjunct to the cultic practices of a temple.

A second reason for the rejection of theater would be the obscenity associated with mime. Syria was renowned for its mime performers (Polybius *Hist.* 30.26; Diodorus Siculus *Bib. Hist.* 31.16.2), so it is not unreasonable to suppose that mime was commonly featured in the theaters of Palestine, especially when both Talmuds explicitly mention mimes or clowns and buffoons (b. 'Abod Zar. 18b; y. 'Abod Zar. 1:7). Other *rabbinic writings reinforce this impression by directly forbidding Jewish involvement in the "customs of the nations" and by condemning the theater as the "seat of the scornful" ('Abot R. Nat. 21). Obedient Jews (including Jewish women, *Ruth Rab.* 2:22) were not to attend the theater (*Pesiq. Rab. Kah.* 15:2), and a recurring contrast is developed between the vanity of the

theatergoers and the probity of those who study the Torah in the synagogue (*Ecl. Rab.* 1.7.5; 2.2.1; *Lam. Rab.* 3:5).

4. Theater in the Diaspora.

A different attitude appeared to prevail in the Diaspora, particularly in *Alexandria. As early as the second century B.C., the *Epistle of *Aristeas* (284) notably has one of the translators of the *Septuagint advise Ptolemy II to "be a spectator of entertainments which exercise restraint." More remarkable yet is the figure of Ezekiel the dramatist, our only extant Hellenistic tragedian, who was probably an Alexandrian Jew of the second century B.C. He is said to have composed "tragedies" (Eusebius *Praep. Ev.* 9.28.1), although unfortunately for us, only 269 lines remain of his one surviving play, the *Exagôgê* ("Exodus"). It recasts the Exodus story as a Greek tragedy, one that has, moreover, considerable affinities with Euripidean drama. Although both points have been disputed, in all likelihood the work was performed on stage and was intended for a Jewish and a Gentile audience. H. Jacobson (25) infers that Ezekiel wished "to elicit sympathy and respect for the Jews from his Greek audience, showing that both Greeks and Jews have similar ancestral stories of persecution, escape, and return to a homeland."

*Philo also reveals himself to be a habitué: "I have before now often seen in the theater" (Philo *Ebr.* 177; cf. *Omn. Prob. Lib.* 141), and he evidently expects his readership to be equally familiar with it (Philo *Flacc.* 38; *Leg. Gai.* 368). Rabbinic sources suggest that Jews in Egypt, like Philo, thronged to the theater (*Tanhuma Shemot* 6) even if, like Philo, they may have protested that they favored Jewish *festivals over the theater (Philo *Agric.* 35). Evidence for the rest of the *Diaspora is limited but could suggest a similar openness: an inscription (c. A.D. 200) from a theater in Miletus appears to designate a "choice block of seats in the fifth row as the "place of the Jews" (Trebilco, 159-62). While the discrepancy in attitude between the Palestinian and Diaspora Jews is marked, it may not be so pronounced as it appears. The evidence provided above indicates that the theatrical content could well have differed. A sophisticated urban center like Alexandria would have been more likely to stage classical drama than mime, while in Palestine the reverse would probably have been true.

THEOLOGIES AND SECTS, JEWISH

The beginning of understanding life in the ancient world is the realization that it worked from assumptions quite different from ours. Modern

people tend to assume that theology—abstract beliefs or ideas about God and the nature of salvation—is both a distinguishable compartment of life and a criterion for distinction of one group from others. We expect in major religious traditions an authentic theological core, over against which various sects may have defined themselves. And we incline toward the assumption that individuals are free to live apart from the established practices of religion. All of these assumptions are demonstrably invalid for the study of ancient life, including *Judaism.

1. Definition and Context
2. Varieties of Judaism by Source
3. Conclusion

1. Definition and Context.

1.1. Theologies. Life in the ancient world was much more integrated than we can imagine after the French and American revolutions, with their creation of secular states. In Greek and Roman societies, virtually all public events had what we would call a religious dimension, including invocation of the divine and animal sacrifice. Service in the priesthood was part of the normal progression through civic offices in Greece and Rome and an ineluctable birthright in Judaism. From Julius Caesar's time onward, the princeps (emperor) assumed the role of high priest in Rome, and in Judea the high priest was the powerful first man of the aristocracy after the disappearance of royalty in 586 B.C. and again in 4 B.C.

In Judean society, life was just as integrated as in the rest of the Mediterranean: the laws of the land, also of expatriate Judean communities under Roman rule, were essentially the prescriptions of the *Torah. These included civil and criminal law, fully enmeshed with what we would call religious law. The ruling aristocracy of Judea was a hereditary priesthood, even as in Rome the patrician aristocracy had old priestly associations. If students in *Athens, *Rome and *Jerusalem spent much of their time in school learning the old stories of their God(s) and national heroes (see Education: Jewish and Greco-Roman), it is difficult for us now to extract their theology. They lived in an integrated culture.

Recognizing a degree of artificiality, it is nevertheless possible to isolate those aspects of life that had to do with one's duties toward the divine. But even here we must try to use appropriate language. The heart of one's obligations

toward the deity in Mediterranean life was animal sacrifice in a public *temple. Every ancient city had its patron god as well as temples to other deities: Apollo, Athena, Artemis, Nike, Castor and Pollux, the deified emperors, and so on. Jerusalem was exceptional only in that it had but one temple, for the one God recognized by the Jews. The ancient Hebrew, Latin and Greek languages lacked exact parallels for our word *religion*, however. When the ancients spoke of these aspects of life, they tended to use words such as "piety" (Gk *eusebeia*; Lat *pietas*) or "uprightness" (Heb *š'dāqā*), which terms could also pertain to social relations in other contexts. Thus, if we venture to speak of ancient Jewish perspectives on serving God, it must be with the understanding that such attitudes could not be disentangled from the rest of life.

Moreover, much of what we associate with religion and theology fell in the province of ancient *philosophy. Philosophers typically spoke of themselves as divinely motivated; they analyzed old texts for ethical application; and they laid out more or less rigorous programs of conduct, even diet. Not surprisingly, Jews living outside of Judea—with their weekly meetings to discuss texts and ethics, lacking temples and sacrifices—looked more like members of a worldwide philosophical school than practitioners of an ethnic piety or cult (see *Diaspora*). They were labeled philosophers by some of our earliest known outside observers. *Philo and *Josephus, the most prolific Jewish authors of the first century, adopt this category with great effect. Philo uses *philosophi-* words about 228 times but never speaks of theology (*theologia*). Josephus's entire presentation of Judaism likewise is of a philosophical culture, and he uses such word roots more than three dozen times; he uses *theologia* only three times, and two of these come in quotations of someone else (Josephus *Ag. Ap.* 1.14 §78; 1.26 §237). By the first century, then, prominent Jewish writers shared fully in the common discourse that made philosophy, not theology or religion, the place for analyzing human behavior, whether toward the God(s) or toward one's fellows.

1.2. Sects. In this context, the term *sect* also poses problems. Our modern assumptions are governed largely by the common translations of Josephus and Acts, which render their Greek term *hairesis* as "sect" (Josephus *J.W.* 2.8.1, 14 §§118, 162; Acts 5:17; 24:5), and modern socio-

logical theory, which makes a sect something of an aberration, a group that has a strong sense of its boundaries and of its purity over against the body politic. A sect, in distinction from a party, is characterized by withdrawal from the public arena into a focus upon itself and its mission. It may be that some ancient Jewish groups were true sects, in that they would have nothing to do with more mainstream groups. But this article is not confined to such aberrant groups, and to call every group a sect would prejudice our assessment of them. In any event, the Greek term used by Josephus and Acts means only "philosophical school." So we ought not resort to the language of sects in advance.

Any generic English terms will be encumbered with some baggage. But let us proceed with a task formulated somewhat as follows: to describe the common Judaism of Judea and the eastern Mediterranean in about the first century A.D. and to sketch the main groups (whether parties, sects, voluntary associations or ad hoc clusters of followers) in and around that scheme.

2. Varieties of Judaism by Source.

2.1. Method. Reconstructing the various Jewish groups that existed two thousand years ago is no simple task. Although it might seem advisable to list the known groups and describe them, this is not historically helpful. In most cases (e.g., *Pharisees, *Sadducees, Baptists, *Essenes) we have no surviving primary sources—texts written by participants—but only the perspectives of others who mention these groups while advocating their own views. For many of the groups in question, we are also far from a scholarly consensus, so that a list of groups would entail mere summaries of the various positions that scholars have taken. In this situation, it is most economical to describe the particular instance of Judaism revealed by each text or text collection and then, where appropriate, that text's portrayal of the other groups in context.

2.2. Priestly Aristocracy. By far the most important corpus comprises the lengthy narratives by Flavius Josephus, a priest who was born a few years after Jesus' death and died about A.D. 100. Having led part of the Galilean *revolt against Rome (A.D. 66-74), he surrendered (A.D. 67) and was transported to Rome (A.D. 71), where he wrote three works. The *Jewish War*, in seven volumes, confronts the widespread postwar animosity toward the Judeans in Rome and

elsewhere. Against the common assertions that the Judeans were by nature hostile to humanity, such that the revolt only expressed the national character, and that their defeat represented the defeat of their peculiar God, Josephus argues the contrary: the revolt did not arise from the collective will but from a handful of would-be tyrants who have now been duly punished; and the Judean God, far from facing defeat, has used the Romans to effect his purposes by purifying the nation. The *Antiquities* and *Life*, in twenty-one volumes, respond to requests for an outline in Greek of the Judean constitution and its underlying philosophy. He includes his own life story as a case study. The *Against Apion*, in two volumes, further develops his portrayal of the constitution through pointed refutation of slanders and polemical contrast with other constitutions.

Josephus's Judaism is that of a priest and aristocrat. He translates the old biblical system into contemporary categories by claiming for the Jews a senatorial constitution. The leading men of the nation have a bloodline that goes back two thousand years, much longer than that of any other nobility in existence. From the time of *Moses and Aaron (which he puts about two thousand years before his time), the priestly college led by the high priest has formed a senate that was regularly consulted even by Joshua (Josephus *Ant.* 5.1.2 §15; 5.1.14 §43, 5.1.16 §55). Thus the proper form of the Judean constitution is an aristocracy (*aristokratia*); monarchy, in keeping with republican sentiments in Rome, is to be avoided at all costs (Josephus *Ant.* 4.7.17 §223; 6.3.3 §36; 11.4.8 §111; 14.6.4 §91). Josephus seems truly to believe that the Jews possess what the rest of the world is seeking.

The function of the priests in this system is manifold. First and foremost, under the high priest they are the guarantors of the constitution's integrity from generation to generation. The purity of their lineage is thus a critical concern (Josephus *Ag. Ap.* 1.6-7 §§28-36). They oversee the sacrificial cult at the world-famous Jerusalem temple, but that cult is restrained in contrast to every other nation's: *sacrifices are kept to a minimum and are performed in a humane way, and the liturgy is free of wild celebration (Josephus *Ag. Ap.* 2.23 §§193-98). Equally important as the central temple institution are the judicial, exegetical and philosophical functions of the priests. Their very clothing and the

temple itself symbolize the creation and the divine nature. They are the legitimate experts in, and teachers of, the national traditions, and Josephus attributes most of his own abilities—to write these histories, to represent Judaism's philosophy or to predict the future—to his priestly training (Josephus *J.W.* pref. 1 §3; 3.8.2 §352; *Ag. Ap.* 1.10 §54).

Profoundly impressed by the verifiable fulfillment of detailed predictions made by Jeremiah and Daniel, Josephus believes that God (or fate or providence) is in control of all human affairs (Josephus *Ant.* 10.11.7 §§276-81). The ancient sacred writings embody the laws of nature and encode the divine plan. In some mysterious way, human will also factors into the equation. Josephus is as vague as other philosophers about the nature of the encounter between fate and free will, but he believes that the Scriptures sort it all out (Josephus *Ant.* 16.11.8 §§395-404). He also believes in the soul's survival of death to face reward or punishment. Although he seems to cast this belief in the discourse of transmigration, he appears to envision a single rebirth after death. He assumes that God can accomplish anything but expresses skepticism about the more spectacular kinds of miracles.

Josephus does not display many of the features typically associated with *apocalypticism (see 2.4 below). In spite of his special fondness for the apocalyptic book of Daniel and his acceptance of the notion of a succession of ages under divine control, he evinces no hope for an imminent end of the age; no cosmic, anthropological or temporal dualism; no expectation of a messiah or of a decisive heavenly battle; no developed *angelology or *demonology. His philosophy of rapprochement with the world around him seems to preclude many of these themes. Yet most scholars would say that the essence of apocalypticism is the divine revelation to a human seer, and Josephus is certainly interested in special revelations of divine mysteries. He includes himself among those, in the train of his namesake Joseph(us), who are so close to the deity that they receive predictions and other disclosures.

In the course of his narratives, Josephus mentions numerous Jewish groups. In his effort to portray Judaism as a national philosophy and to isolate rebellious thinking as a deviant "fourth philosophy," he describes three traditional philosophical schools: the Pharisees, Sad-

ducees and Essenes (Josephus *J.W.* 2.118-66; *Ant.* 18.1.1-5 §§3-22). Of these, he is most interested in the Essenes. Like his, their closeness to the deity allows them to predict the future with perfect accuracy, and he finds their Greek views of the soul and *afterlife irresistible. They revere the sun as an emblem of the deity. They lead the most exemplary, disciplined philosophical life, sharing all things in common without greed or passion, and so resemble the Pythagoreans. Spread throughout the towns of Judea, these bachelors (mainly) know the secrets of cures through their special texts. The Pharisees and Sadducees Josephus dispenses with rather quickly in these passages, asserting that the former accept immortality and fate while the latter reject both. He also notes that the Pharisees have a special body of extra-Mosaic ordinances that they hold dear, whereas the Sadducees reject these, and that the Pharisees enjoy the confidence of the people whereas the Sadducees are a small, wealthy élite (Josephus *Ant.* 13.8.6 §§297-98).

This last point brings us to the bone of contention that Josephus has with the Pharisees. While describing his beloved Judean aristocracy, he repeatedly expresses an aristocrat's frustration at the fickleness of the masses and at the demagogues who inevitably arise to capitalize on this. These demagogues appeared even in Moses' time, with Korah, who was a kind of archetype (Josephus *Ant.* 4.2.2 §§14-23). They have reappeared throughout Jewish history, cynically realizing that they are able to manipulate the masses by rhetorical persuasion. In the time of the revolt, the popular leaders fell into two groups: pseudo-prophetic visionaries and armed militants. The former included men who promised the gullible masses divine deliverance; the latter included men such as Judas the Galilean, Theudas, the Egyptian prophet, Menachem, Simon bar Giora, Eleazar ben Ya'ir, and many others (see Revolutionary Movements).

From *Hasmonean times to his own, Josephus also indicts the Pharisees for their ability to persuade the masses in any direction they desire, even opposing high priests and kings (Josephus *Ant.* 13.8.5, 15.5 §§288, 401-2). The wealthy and powerful Sadducees themselves must defer to the Pharisees, he says, because of the Pharisees' popular base (Josephus *Ant.* 18.1.5 §§15, 17). All of this would be well understood by a Roman audience, which had its own history of

demagogues wearing the mantle of popular support.

The same conditions continue during Josephus's brilliant career as Galilean military commander: envious agitators, often in league with leading Pharisees, caused this priest-aristocrat considerable trouble, although his virtue and divine favor allowed him to triumph in the end.

Only a few popular leaders merit Josephus's approval, because of their unusual philosophical character. They are John the Baptist, whom he understands to have been a great teacher of morality (without mentioning any connection to Jesus; Josephus *Ant.* 18.5.2 §§116-19); Bannus, Josephus's own ascetic teacher for three years in the Judean wilderness (Josephus *Life* 2 §11); and perhaps Jesus and his brother James (Josephus *Ant.* 18.3.3 §§63-64; 20.9.1 §§200-1). The passage on Jesus that we have in our texts of Josephus has almost certainly been corrupted by Christian copyists. Although it is unlikely that Josephus endorsed Jesus as strongly as he now appears to do, his incidental warm comments about James a bit later on suggest that he at least spoke appreciatively of Jesus, though we cannot be certain.

Against the background of this priest-aristocrat's fairly full description of his perspective, from somewhere near the center of Judean society, we can now array the other main bodies of evidence for Jewish groups in the first century.

2.3. Wisdom Groups. Several important texts develop the philosophical tendency that we see in Josephus's Judaism. This tradition begins in the Bible itself (e.g., Proverbs, Ecclesiastes) and then takes shape with Ben Sira, about 190 B.C. Ben Sira (see Sirach) presents the Mosaic code as the fount of wisdom and the priests as its legitimate guardians. Nevertheless, this work seems to take a rather Sadducean and non-Josephan view of afterlife and fate. Much closer to Josephus on those issues, and also in its forthright attack on Egyptian religion, is the first-century B.C. *Wisdom of Solomon, although it goes somewhat further than Josephus in making the present life mere preparation for the afterlife. Another prominent wisdom text is *4 Maccabees, which sets out to prove a *Stoic thesis of which Josephus would approve, that the pious reason is master of the passions. Note that 4 Maccabees was traditionally thought to have been written by Josephus.

This literature reaches its apogee in Jesus'

contemporary Philo of Alexandria (c. 20 B.C.-A.D. 50). Usually considered a Middle *Platonist, Philo had thoroughly integrated his reading of the Judean sacred texts with philosophical currents of his day, though he was not an entirely consistent thinker. Philo makes much of the philosophical view of God found in the Bible. He argues that one cannot speak of God's attributes whatsoever, for he is unknowable in his real essence (*to on*). Just as one cannot look into the sun, one sees only God's works or aftereffects (Philo *Deus Imm.* 51-60; *Mut. Nom.* 7-22). Attempts to speak of God as he is are like attempts to portray God visibly, which violate the second commandment. Because of the unfathomability of the true God, one communicates with him through one or more manifestations. In Philo, these manifestations—*Logos*, *Theos* and *Kyrios*—sometimes appear to be intermediate beings, sometimes only aspects of God (Philo *Mut. Nom.* 28-30).

Philo's Platonist premise that there are two ways of knowing, the naive and the profound, the superficial and the real, matches his view that there are two sorts of human beings—those who live on the level of appearances and those who live on the level of truth—and therefore also two sorts of biblical interpretation. The materially inclined will interpret the biblical text exclusively in its plain, physical sense. But the spiritual or soul-inclined will see the deeper, allegorical meaning in the text. Although some interpreters of Philo have found parallels here to Paul's allegorization and Paul's claim that spiritual circumcision renders physical circumcision unnecessary (even destructive), Philo insists that understanding the deeper meaning does not relieve one of the obligation of physical observance (Plato *Migr. Abr.* 53).

Jewish wisdom literature does not, apparently, spring from a single group. It appears to have been especially prominent in Alexandria, a major seat of philosophical study. There, some of the *synagogues (or *proseuchai*) resembled philosophical lecture halls. But it is not clear that the participants in this Jewish philosophy had any tighter group structure than was common in the conditions of the Alexandrian Jewish community. In any case, wisdom literature found a home in many other regions, including some Judean aristocratic circles.

Philo does, however, mention two particular Jewish groups that exhibit the demarcations and

disciplines of schools in the proper sense. First, he discusses the Essenes of Judea, in much the same terms as Josephus does. In his most Stoic treatise, attempting to show that "every good man is free" regardless of physical circumstance, he presents the Essenes of "Palestinian Syria" as champions of the philosophical life, "athletes of virtue," because of their steadfast commitment to peace and simplicity (Philo *Omn. Prob. Lib.* 88 §13). Elsewhere, like Josephus, Philo singles out the Essenes as his best examples of lived Judaism (Philo *Hypoth.* 11.1-18). Perhaps even more purely philosophical are the second group described by Philo, the *Therapeutae, who know the secrets of curing the soul and who worship the One (*to on*) alone. Although this type of group is found throughout the world, also in Greece, Philo says, he presents the Therapeutae who live by the Mareotic Lake near Alexandria as an exemplary Jewish association. They meditate allegorically on the laws, prophetic oracles and psalms, and they observe a *sabbath.

Although the wisdom literature exhibits much variation in perspective, it shares a certain stance toward the world. It seeks to embrace all truth anywhere, claiming it for Judaism. What others describe as Fate or Zeus, or the philosophers' prime mover, is the unknowable God that the Judeans have always revered. What every reflective person would recognize as the most admirable life is lived by the Jewish Essenes and Therapeutae. Rather than standing over against world culture, as the Jews were often accused of doing by critical observers, these groups see Judaism as the highest expression of universal aspirations. This trend is present already in such early wisdom texts as the *Epistle of *Aristeas* and the fragments of Artapanus and *Aristobulus that have survived (third to second centuries B.C.). Their integration of Judaism into the world leaves little room for the several dualisms that characterize apocalypticism, and we find no messianic expectation in this literature.

2.4. Apocalypticism. Nevertheless, the many texts that scholars consider apocalyptic incorporate some important features of the wisdom tradition. As we have noted, the heart of apocalypticism is the revelation or disclosure (*apokalypsis*) of secrets by God or another heavenly being to a human seer. In Daniel, one of the chief apocalyptic prototypes, the seer and his circle, who understand the secrets of the

end, are called "the wise" (Dan 9:22; 11:33-35). Some scholars consider apocalyptic a development from biblical wisdom literature. Others hold that later, second-century Jewish *Gnosticism, in which the group understands secrets not about the end of time but about hidden realities and divine affairs, represents an internalization or sublimation of apocalyptic.

In addition to the central tenet that God has revealed secrets to humanity, common features of apocalyptic thinking are a radical temporal dualism, separating the present eon of misery and oppression from the imminent arrival of God's reign, the eon to come; anthropological dualism, sharply distinguishing good persons from evil; cosmic dualism, attributing evil and suffering to a hierarchy of antagonistic spirits and all good to God, the archangels and their hosts; heavy use of symbols, including grotesque descriptions of beasts and other phenomena envisioned by the seer—evoking realities beyond human language; and coming judgment, in which evil nations and wicked individuals will finally get their comeuppance. This literature is suffused with the old prophetic theme of reversals: those who prosper and laugh now, who appear to have insurmountable power, will suffer; those who suffer now will be rewarded for their *piety. We should note that to be an apocalypse in the strict sense, a text must embody the divine revelation to the seer, but a much larger body of literature is still broadly apocalyptic in outlook, even if it is not of the genre apocalypse (see *Apocalyptic Literature*).

As in the case of wisdom literature, it is not possible to trace apocalyptic thinking and literature to a single social matrix. It used to be assumed that the producers of apocalyptic were those on or beyond the margins of political power—the disenfranchised, poor and illiterate. They would have the most obvious motive to long for the new age. But more careful examination of both the literature and the social context suggests many reasons why various groups might produce such texts of hope. For example, the group's marginalization may be largely self-imposed. These texts are often highly literate, drawing liberally from *Hellenistic and Mesopotamian myths. Some authors, such as those who produced some of the *Dead Sea Scrolls, may be priests. Although we cannot decide the issue of social class, wealth and education in a simple way, we can say that apocalyptic groups

saw themselves as a righteous remnant, waiting for God to vindicate their piety against both compatriots and foreigners who had violated divine laws.

Some of the major apocalyptic texts from the period of our interest are sections of the composite work we know as *1 Enoch*, the earliest parts of which date to the third century B.C. (see *Enoch, Books of*); the **Testaments of the Twelve Patriarchs*; the **Testament of Abraham*; **Jubilees*; **Psalms of Solomon*; the **Testament of Moses*; 4 *Ezra* (see *Esdras, Books of*); and 2 *Baruch* (see *Baruch, Books of*). These texts typically include predictions of future events attributed to the famous named author, which are the real author's recollections of the past. Commonly the revelation is said to have been hidden or sealed until the end of the age, the author's real time of writing.

Texts from apocalyptically minded circles are about the only places in which one finds clear messianic expectations. But surprisingly, for those who assume that ancient Jews had a single clear messianic idea, such expectations vary considerably. Only one text clearly expresses the hope for a royal son of David (*Pss. Sol.* 17). Others look for an anointed descendant of Levi or Judah or an anointed prophet. It has become clear that there was no fixed messianic idea before the emergence of *rabbinic Judaism in subsequent centuries.

2.5. *Qumran Scrolls.* From the wide world of apocalyptic thinking, two bodies of literature merit special attention. Both of them presuppose a close-knit sponsoring group or constellation of groups. The first of these collections is the famous Dead Sea Scrolls, which began to be discovered at Khirbet Qumran near the Dead Sea in 1947. So far, parts of about eight hundred documents in Hebrew, Aramaic and Greek have been identified. These include all of the biblical texts except Esther—about two hundred manuscripts; already known wisdom and apocalyptic texts, including Sirach, parts of *1 Enoch* and the sources of the *Testaments of the Twelve Patriarchs*; and a large cache of texts not otherwise known (exception: the **Damascus Document*, partially known but not identified since the early part of the century). This last group includes biblical commentaries, regulatory documents or rules for a community, *poetry and other liturgical texts, wisdom literature and texts of apocalyptic hope—along with a few business dealings.

It seems that at least some of these docu-

ments come from a single group, even if that group evolved over time. The origin and location of the group are contested issues, but its basic features appear in the texts. Members claim a priestly core and founder (the Righteous Teacher), and they preserve the priestly prerogative for some functions. Having established themselves in conflict with a Wicked Priest (a Hasmonean high priest?), they have developed a dualistic view of the world. Two spirits vie for the allegiance of human beings, and it is the Angel of Darkness, leader of the evil forces, who causes evil in the world. The righteous, however, scrupulously observe the divine law, avoiding the "seekers after smooth things" who have "torn down the wall" of separation (CD 1:17-18; 5:20). They are convinced that the end of the age is about to occur, and so they interpret Scripture in relation to themselves as those living in the end time. When the end comes, three anointed figures will arrive—Davidic/royal, priestly and prophetic messiahs—who will lead the sons of light in the final battle to bring in God's reign. None of these texts is an apocalypse proper, but the community's world of thought is plainly apocalyptic.

Although most scholars identify the community behind the DSS with a branch of the Essenes, largely on the basis of rough parallels in details of initiation and belief, that theory fails to explain how and why Philo and Josephus would have converted the *Qumran community into their beloved world-affirming philosopher Essenes. It is not enough to suggest that either or both authors suppressed the Essenes' dualistic and apocalyptic leanings without explaining why this is probable in view of Philo's and Josephus's general tendencies and worldviews.

2.6. Texts from Jesus' Followers. The other broadly apocalyptic group comprises some of those who followed Jesus in the generation or two following his death. Space does not permit much development of this complex issue. But scholars have recently exposed the historical error of separating all Christians (a term not attested outside of Acts in the first century) from all Jews at this early stage. It appears that many of Jesus' followers were fully observant Jews who interpreted their Judaism in light of Jesus—whether as royal Messiah, anointed teacher, Lord (in what sense exactly?), prophet, or something else.

To complicate matters, we cannot assume

that such Jesus-following Jews were all Jews by birth. Paul's letters indicate that some Gentiles converted to Judaism in order to complete their following of Jesus, while some native Jews, such as Paul himself, relativized or abandoned Jewish observance because they saw life in Christ as a "new creation" (2 Cor 5:17; Gal 6:15). Attraction and conversion to non-Christian Judaism were phenomena observed by Gentile writers in the first century, especially in Rome, and it appears that for some Gentiles an initial conversion to Paul's faith served as an introduction to Jewish conversion. Finding the right labels for such people (Jewish Christians? Christian Jews? Jesus-following Jews? Jews or proselytes?) is fraught with difficulty.

The exact contours of the Jesus-following Jews' thought and practice, even the degree of their unity and disagreement, are difficult to recapture with confidence. Some may have understood Jesus as the preeminent teacher of wisdom (e.g., the NT letter of James and the *Gospel of Thomas*), whereas others may have shared Paul's preoccupation with the imminent end of the age.

Even those Christian texts that were written by Gentiles, and so cannot themselves be considered primary evidence for Jewish groups, provide important perspectives on some first-century Jewish groups, especially Jesus and his students, John the Baptist and his students, the Pharisees and the Sadducees. The self-consciously historical Luke-Acts is the most promising of these texts: the author has made a considerable effort to recover circumstances, to make important distinctions and to separate out phases of development. So a summary of Luke-Acts' perspectives on the Jewish groups is in order. Acts also mentions Judas, Theudas and the Egyptian prophet, but it does not add anything material to Josephus.

Although the author lives at a time when followers of Jesus have become distinct from Jews as a nation, he is careful enough to try to recover the situation during Jesus' lifetime. First, he gives John the Baptist considerable independence as a teacher of morality, a description that matches Josephus's account fairly well. He portrays Jesus as a prophet who had a special mission to help the sick, the sinners and the downtrodden.

The Pharisees appear in this text as three-dimensional characters (in contrast to the other

Gospels): they have broad popular support as respected teachers; they believe in the resurrection of the dead and in angels; they are preoccupied with issues of purity and legal observance and with the conventional morality that calls for keeping good company, and they have their own extrabiblical traditions; they are prosperous and self-satisfied. Jesus' tension with them is not lethal. They are scandalized by his associations but keep inviting him to their *banquets, and they respect him as a teacher; he takes every opportunity to criticize their alleged petty-mindedness and ineffectiveness, but he still regards them as fundamentally righteous, the healthy who need no physician.

The Sadducees of Luke-Acts are another story. Based in Jerusalem and associated with chief-priestly circles, they are powerful and savage in judgment. They also reject belief in resurrection and in angels. It is they, with their priestly connections and temple police, who arrest Jesus and first harass his followers.

So we have come full circle. In Josephus, we have a presentation of Judean groups from the perspective of a Jerusalem-based aristocrat who sees the priestly college led by the high priest as the only legitimate leadership. The Pharisees are respectable because of the age of their group, but they are often troublesome because of their appeal to the people. The outer circles of individual prophets and demagogues lack all credibility. In Luke we have a reconstructed perspective from the periphery, where the average people live. From that vantage point, it is the priestly center that looks dark and ominous. The Pharisees are again respected in some measure, but they are seen as ineffective. The Baptist and especially Jesus—on the edge of Josephus's horizon—are the only real hope for the common people.

2.7. Rabbinic Literature. Another body of literature appears in full form only after our period of interest, but it should be mentioned because of its great significance in scholarship on Jewish groups contemporary with the NT. By the end of the second century A.D., the *rabbinic movement was gathering considerable momentum. It produced major texts interpreting the prescriptions of the Torah for daily life and for temple observance (in a rebuilt temple?). This interpretation took the forms of commentary upon the biblical texts (*midrash halakah*, written during the late second century A.D.; see Rabbinic Litera-

ture; *Midrash*) and systematic, thematic discussions of legal observance under topical headings (*mishnah*). The Mishnah, edited by Rabbi Judah the Patriarch, would become the fundamental statement of the rabbinic movement, cited as a basis for commentary in the later Talmuds of the fifth and sixth centuries; the Mishnah was published about 200 (see Rabbinic Literature: Mishnah and Tosefta).

Scholarship on this early rabbinic literature has overturned old assumptions: that this material comprised simple compendia of traditional data and that it transparently represented Judaism of that period and earlier, in direct continuity with the outlook of the first-century Pharisees. Since the 1960s J. Neusner, in particular, has thoroughly recast the issues. He and others have now shown that the rabbinic movement was itself a coalition of groups that survived the great revolt (A.D. 66-73); in spite of the appearance of comprehensiveness, the Mishnah responds to a question or problem at the time of composition; it undertakes to make a coherent statement in response to that problem; and its Judaism was not recognized by many other Jews of the second and third centuries.

What the Mishnah's statement was, exactly, is much debated. Neusner, who has worked most extensively on these issues, has argued that it responds to the problem of living Judaism in the absence of the temple and in the wake of the failed revolts. Its elite scholarly contributors reinterpret Judaism along the lines of *Aristotelian philosophy: it is concerned to unify the particulars of life under a grand and meaningful scheme of sanctification, making all of life, not only the life of priests in the temple precincts, holy. The rabbis appear to recognize that their group is a minority and that "the people of the land," among others, do not share their vision.

However one resolves the problem of the Mishnah's aim, it is increasingly understood as a document of its own time and therefore not directly usable for establishing facts about Jewish groups of the first century. Although it mentions the Pharisees (*Perushim*) and Sadducees (*Saddukim*), for example, these groups have limited interaction on issues of purity. The text as it stands does not give us a solid basis for historical reconstruction. Once again Neusner has tried to eke out of the early rabbinic traditions a stratification of traditions about the Pharisees, labeling those that originated before A.D. 70 and

those that accreted in subsequent generations. His reconstructed pre-A.D. 70 Pharisees were a fairly small table-fellowship group concerned almost exclusively with issues of *purity. Yet this reconstruction does not sit easily with the earlier portraits of Josephus and the Gospels.

3. Conclusion.

One of the main issues debated by scholars through the last generation is the degree of unity and diversity in first-century Judaism. Reacting against an older consensus that official Judaism, dominated by the Pharisees or rabbis who had effectively supplanted a weak and functional priesthood, was more or less universal, scholars began to focus on the diversity of Jewish groups and worldviews. Now we find what we might have anticipated: both unity and diversity. There was a common kind of Judaism centered in the temple, and the priesthood remained the recognized aristocracy of the land. Some priests, such as Josephus, were passionate spokesmen for their office and tradition. Torah observance was assumed, not on exclusively religious grounds but because it was the basic law of Jewish communities.

Nevertheless, there was a wide range of worldviews, of groups and individual perspectives, within the cultural orbit that was Judaism. Nonpriestly groups, perhaps including a share of disaffected radical priests, emerged to carry the banners of purity and/or popular demands. And every generation seems to have cultivated individual charismatic teachers, prophets and messiahs. No single spectrum is adequate for mapping out these groups and their attitudes toward Scripture and tradition; foreign powers and "this present age"; class struggles and economic issues; perennial philosophical problems of monism and dualism, fate and free will and the afterlife; militarism and pacifism; angels and demons.

The reader of the NT must always bear this diversity in mind. In the first place, it requires that we eschew simplistic claims about what the Jews as a body believed or practiced. Second, we must similarly allow the evidence of diversity among the early followers of Jesus its full weight, not assume that all Christians except the willfully aberrant held certain views in common, even if they claimed roots in Judaism. The same tensions that we see in Judaism would come to mark developing Christianity to the time of Con-

stantine and beyond (fourth century): some Christians became more and more concerned with Jewish observance; some moved increasingly toward wisdom-based views of Jesus, resulting in Christian *Gnosticism of various stripes; and in succeeding generations there were teachers who reanimated apocalyptic hopes for the end of the age. This period also saw tensions between the growing Christian establishment (priesthood) and charismatic prophets and other leaders.

Given the observable diversity among Jewish groups, even the acceptance by some (such as Philo) of divine mediator figures, it has become a scholarly question whether all of early Christianity, even Paul's, should not be considered Jewish in some sense. Others argue that even the great diversity of Judaism had limits and that Paul fell outside of these.

Perhaps the most important observation to be made about ancient Jewish groups is that our knowledge is defective. We can summarize what we find in the texts and hypothesize about interrelationships, but the quality and quantity of the evidence do not normally permit overwhelmingly probable conclusions. For example, although we can identify wisdom-oriented groups and apocalyptic groups and can observe the logical differences in their orientations, we cannot be sure that the same people did not speak of apocalyptic in one context and wisdom about how to live in the next. Nor can we be sure that an individual Pharisee or Essene behaved in a manner somehow typical of the group or as an individual. Much remains beyond our grasp.

THERAPEUTAE

The mysterious Therapeutae are thought to be related in some way to the *Essenes. In fact, the derivation of the name *Essene* immediately suggests this relationship. *Pliny the Elder calls the Essenes *Esseni* (*Nat. Hist.* 5.17.4). *Josephus usually calls them *Essenoi* (e.g., *Ant.* 13.5.9 §§171-72; 13.10.6 §298), but sometimes he calls them *Essaioi* (*Ant.* 15.10.4 §371), which is the form *Philo (*Omn. Prob. Lib.* 13.91; *Vit. Cont.* 1.1) and Eusebius (*Praep. Ev.* 8.11.1) use. G. Vermes (1975b, 19-29; cf. Schürer, 559-60, 593) suggests that underlying these various Latin and Greek transliterations is the Aramaic 'āsyā' ("healer"). If so, then it is probable that the Therapeutae (Gk *therapeutai*), or "healers," were an Egyptian branch of the Essenes, which may also account

for the presence of the **Damascus Document* in Egypt. Vermes also points to Josephus's statement that the Essenes were interested in health: "They display an extraordinary interest in the writings of the ancients, singling out in particular those which make for the welfare of soul and body; with the help of these, and with a view to the treatment of diseases, they make investigations into medicinal roots and the properties of stones" (*J.W.* 2.8.6 §136). According to Philo, Essenes are *therapeutai theou* (*Omn. Prob. Lib.* 12.75; cf. *Vit. Cont.* 1.2).

There are other general parallels between the Essenes and the Therapeutae (see Schürer, 591-97). Members of both groups lived communally, apart from general society. Both groups practiced asceticism and held to strict rules of membership, including probation and discipline. Both groups were well organized and hierarchical. Both groups practiced communal worship. Members of both groups practiced celibacy. Both groups were keenly interested in the study of Scripture. Both groups practiced silence, yet both groups composed *hymns. Both groups favored the use of the right hand. There are also similarities in dress. A *calendrical parallel is seen by J. M. Baumgarten (39-41), in that both groups divided the year into seven fifty-day periods.

However, there are some important differences between the Essenes and the Therapeutae. Their respective food laws and practices were at variance. The Therapeutae did not drink wine, consuming only water, and they refused to eat meat (*Philo Vit. Cont.* 9.73-74). These strictures were not observed by the Essenes, as we see in their texts (e.g., 1QS 6:5; 1QSa 2:17-20; see Rule of the Community) and in the archaeological evidence (i.e., the presence of animal bones in the ruins of *Qumran). The Essenes ate two daily meals; the Therapeutae fasted until sunset. Moreover, regarding the Therapeutae we hear of no rules and regulations respecting the practice of sharing property, of assigning all of one's worldly goods to the community, as was the case at Qumran. The Essenes were active; the Therapeutae were contemplative.

When Philo's exaggeration of the *philosophical characteristics of the Therapeutae is taken into account, as well as the evidence of the *Dead Sea Scrolls, the differences between the Essenes and the Therapeutae may not be

very great, while it must be admitted that the similarities are numerous and striking. Recent scholarship has emphasized the importance of recognizing Philo's very selective discussion of the Therapeutae. D. M. Hay believes that Philo views their lifestyle as exemplary but may have had little sympathy for their theological views, which is why he never discusses them. If we knew more about their theology, especially their eschatology, then the apparent differences between the Essenes and Therapeutae may be further mitigated. For these reasons, several scholars have concluded that these groups were related and perhaps had a common origin (especially if the name *Essene* comes from the Aramaic meaning "healer").

However, in a recent study J. E. Taylor and P. R. Davies interpret Philo's omissions differently. They have concluded that in all probability the Therapeutae, who came from different social, religious and economic contexts, had nothing to do with the Essenes of Judea.

Finally, Eusebius's claim that the Therapeutae described by Philo were Christians, an improbable claim in itself, may nevertheless have some probative value. It is possible that the lifestyle and philosophy of the Therapeutae contributed significantly to the development of Christian monasticism in Egypt (Richardson).

THESSALONICA

Thessalonica was the second important city Paul visited in Macedonia on his second missionary journey. He left Troas in Asia Minor after receiving the Macedonian call in a vision to "come over and help us." Paul and his traveling companions then sailed to the island of Samothrace where they spent the night and then proceeded on to Neapolis, a port on the west coast of Macedonia. From here they traveled on to Philippi where they converted a few people, and then Paul and his companions traveled on past Amphipolis and Apollonia to Thessalonica, where

they founded another church.

1. Name and Location
2. Paul's Custom in Preaching
3. Diversity of Converts in Thessalonica
4. Archaeological Remains in Thessalonica

1. Name and Location.

Thessaloniki, the modern name of ancient Thessalonica, is located on the eastern coast of *Greece in the northern province of Macedonia. Built into the western slope of Mt. Khortiatis on the bay of Salonika, which is at the head of the Thermaic Gulf, Thessalonica lies in a natural amphitheater. Its upper level is crowned with a citadel and walls looking down upon the scenic harbor area. The city was founded in 316 B.C. on the site of ancient Therme by Cassander, one of the generals of *Alexander the Great, and it was named Thessalonica after Cassander's wife, the half-sister of Alexander. It became a world cultural center due to its strategic location on both the commercial sea routes and the Egnatian Way, an international highway that ran through Macedonia. When Macedonia became a province in 146 B.C., Thessalonica was made its capital. Earlier, in 168 B.C., it had been divided into four smaller districts for administrative purposes, and Thessalonica was made the capital of the second district. Amphipolis was the capital city of the first district (Acts 16:12; McKay 1991, 284), Pella of the third and Pelagonia (Herakleia Lynkestis) of the fourth.

2. Paul's Custom in Preaching.

Paul's missionary methodology involved going to cities where there were Jewish *synagogues and beginning his work among them. This is called his "custom" (Acts 17:2). His gospel was "to the Jew first and also to the Greek" (Rom 1:16). He had recently passed through Samothrace, Neapolis, Amphipolis and Apollonia without stopping to preach (Acts 16:11; 17:1). No evidence of Jewish synagogues in these cities has been found, and Paul bypassed sites that could not provide a Jewish springboard for his ministry. In Philippi he had gone on the *sabbath to the riverside, where he "supposed there was a place of prayer" (Acts 16:13, 16). In the ancient world the expression "place of prayer" frequently denoted a synagogue (Josephus *Life* §§280-93), though not necessarily a building. So when Paul and his companions left Philippi,

"they passed through Amphipolis and Apollonia and came to Thessalonica, where there was a synagogue of the Jews" (Acts 17:1).

3. Diversity of Converts in Thessalonica.

Paul first visited Thessalonica on his second missionary journey (Acts 16:12), arriving in the city in A.D. 49. His ministry in the synagogue here was brief, covering a period of only three sabbath days (Acts 17:2), which could mean three weeks or possibly five weeks, including time before and after the three sabbath days. This was a period in the history of Macedonia, the early imperial age, when the process of social leveling was most intense. Paul's converts cut across the spectrum of society. Although his converts among the Jews were few, described merely as "some" by Luke (Acts 17:4), "great many" of the Godfearing Greeks were persuaded by Paul and joined him. Luke uses the word *Godfearers* for those Gentiles who have rejected paganism and accepted the one true God worshiped by Jews (*see* Proselytism and Godfearers). Although they did not become Jewish proselytes, they often attended synagogue. In *Athens, Paul argued with the Godfearers "in the synagogues" (Acts 17:17).

Among Paul's converts in Thessalonica Luke emphasized that there were a "great many" of the "leading women" (Acts 17:4). It is difficult to tell from this verse whether these leading women were Jews or Greeks. There is evidence now that *women also functioned in leadership roles in the synagogues, even holding a position among the elders. B. Brooten investigated all the known ancient inscriptions relative to the matter and found three that named women as heads of the synagogue, in exactly the same way as men. She writes: "Women synagogue heads, like their male counterparts, were active in administration and exhortation . . . perhaps they looked after the financial affairs of the synagogue . . . perhaps they exhorted their congregations, reminding them to keep the sabbath. . . . we must assume that they had a knowledge of the Torah in order to be able to teach and exhort others in it" (Brooten, 32).

Since the publication of Brooten's book, another *inscription has been found on the island of Malta, and that inscription "provides additional testimony to the likelihood that women held the office of elder in ancient Jewish synagogues" (Kraemer, 438). Six inscriptions have

been found in which women bear the title *elder* (Brooten, 41). In Italy another six inscriptions have been discovered, these spanning the first six centuries, naming a woman as "mother of the synagogue." Brooten's study concludes that these women "had something to do with the administration of the synagogue" and that these inscriptions did not simply contain honorific titles (Brooten, 72).

Several men later connected with Paul's work became disciples of Jesus in Thessalonica, perhaps at this time. Aristarchus and Secundus were among them (Acts 20:4; 19:29). Aristarchus, who later accompanied Paul on his voyage to *Rome, is called "a Macedonian from Thessalonica" (Acts 27:2). Another of the men who responded to Paul's teaching and apparently hosted him during this time was named Jason (Acts 17:5-7). This Greek name was often taken by Jews whose Hebrew name was Joshua or Jeshua (Bruce, 224).

4. Archaeological Remains in Thessalonica.

Almost nothing from the time of the NT is still standing in Thessalonica because the ruins are covered by the second largest city in Greece, and excavation is difficult. However, in 1917 a fire destroyed a section of the city that was afterwards reused as a bus station. The station was moved in 1962, and excavations revealed a part of a second-century forum. Work has continued in the area, and as of 1998 portions of a bathhouse and a mint from the first century have been found beneath the second-century level of the pavement on either side of an *odcum*, which is only partially preserved.

Archaeology has touched Thessalonica and the book of Acts in a significant way with the discovery of a number of inscriptions in Macedonia. A portion of a first-century arch was discovered at the west end of the *Odos Egnatia* (Egnatia Street); its inscription begins with the phrase "in the time of the *Politarchs*." The inscription, which is now in the British Museum, confirms not only the existence of the term *Politarch* in Macedonia in the first century but also its use for city officials. This silences critics who claimed that Acts 17:6 was mistaken in its use of this term to designate the city officials before whom Paul's followers appeared in Thessalonica. In 1960, C. Schuler published a list of thirty-two inscriptions that contain this title, nineteen of which come from Thessalonica, three of

which are from the first century (Schuler, 90-100). Even more recently the word has been found in another inscription in the Thessalonica Museum and in two more from Berea and Amphipolis (McRay 1991, 205).

THREE TONGUES OF FIRE. See APOCRYPHON OF MOSES.

THUNDER TEXT (4Q318)

Striking testimony to the Jewish use of astrology in the NT period appears in the texts from *Qumran. Among these manuscripts are found at least four astrological works: 4Q186, a physiognomic Hebrew text inscribed in mirror writing and using a variety of scripts, including Greek; 4Q561, a second, less elaborate physiognomic work written in *Aramaic; 4QMess ar, likewise inscribed in Aramaic, which apparently predicts the birth of Noah (or perhaps that of the messiah; the point is disputed) and includes physiognomic elements; and a brontologion or "thunder text," so called because it employs thunder as an element of its scheme for divining the future. This last work has been given the official designation 4Q318 Brontologion, and it

too is written in Aramaic.

1. Cultural Background and Description
2. Interpretation and Significance

1. Cultural Background and Description.

Brontologia, or thunder texts, existed well before the rise of horoscopic astrology. A number came to be included in the vast Mesopotamian collection of cuneiform *omina* known as the *Enuma Anu Enlil*. The extant version of the *Enuma Anu Enlil* dates to the Neo-Assyrian period, but the existence of commentaries attempting to explain its already archaic language argues for a substantially earlier date of composition. Brontologia are largely descriptive; they concern wars, the weather, crops and domestic animals, disease, the rise and fall of great men (particularly kings) and general disturbances of all sorts. Their interest is in the nation as a whole, rather than in the fate of individuals. In the *Hellenistic period, they were elaborated far beyond their Mesopotamian predecessors. This elaboration was possible thanks to the rise of new mathematical approaches to the observation of the heavens. It is especially to Ptolemaic Egypt (see Hellenistic Egypt) that we owe this new, more complex class of brontologia, and it is these more elaborate thunder texts, inscribed in Greek, that afford the best parallels to 4Q318.

The first half of 4Q318 is given over to the distribution of the twelve signs of the zodiac over the days of the months. The text preserves the earliest list ever discovered of the zodiac's signs in either Hebrew or Aramaic. The underlying *calendar was a solar one, not the luni-solar calendar of rabbinic *Judaism and, presumably, the earlier *Pharisees. The week is the basic pattern for the distribution of the signs: one sign covers two days, the next another two, then another three days. A new month always begins with a new sign, and the signs of the zodiac rotate through the months such that whatever sign begins a month will also end it. Accordingly, successive months begin with successive signs of the zodiac. Yet 4Q318 begins the year with the sign of Taurus, not that of Aries, as was general throughout the Hellenistic world and in later Judaism, a point to which we shall return below.

The rationale for the thunder text's distribution of the signs of the zodiac over the days of the year emerges from a Greek parallel that explicitly states its own purpose: "the twelve signs of the zodiac for each night according to the

course of the moon." The Qumran text is thus a Jewish exemplar of that class of books, widespread in antiquity, known in Greek as *selēnodromia* and in Latin as *lunaria*. These books employed the observation of the moon as an element of their divination. The statements in 4Q318 distributing the signs of the zodiac are statements of the moon's position within those signs. The text combines the sounds of thunder and the location of the moon at any given time to derive its predictions for the future.

The second half of 4Q318 is statements about the portent of thunder in relation to the moon's position. For example: "If it thunders [on a day when the moon is] in Gemini, it signifies fear and distress caused by foreigners." Little of this second half of the work has survived, but there is mention of "destruction in the royal court" and of "the Arabs"—presumably the Nabatean neighbors of Judea—and of a time when "nations will plunder one another."

2. Interpretation and Significance.

As noted, Hellenistic practice, which continues to this day, was to begin the zodiac with the sign of Aries. This practice resulted from the observed phenomenon that in Hellenistic times the sun rose in Aries on the day of the vernal equinox (approximately March 21). That 4Q318 begins its zodiac with Taurus instead of Aries suggests that it was listing the signs not according to the astronomical realities of its own day but those of the time of creation. The science of the day was aware of the precession of the zodiac, whereby the signs of the zodiac slowly migrate through the heavens. Thus it was known that from about 4400 B.C. until 2200 B.C. the sun rose in Taurus on the day of the vernal equinox. By beginning with the sign of Taurus, our author may have been embracing one or another scheme of *apocalyptic chronology that sought to divide time into periods and to establish when the end of the age would come. In this respect it is notable that the chronological data of the Pentateuch imply that the world will last a total of four thousand years and that the exodus took place in the year 2666 counting from the creation. The remaining one-third of history would then culminate at about the time of Daniel, or rather at the end of his seventy week-years (490 years). There were other, similar schemes at the heart of many works composed during the last two centuries B.C. and first century A.D. Thus

4Q318 apparently conceals behind its laconic listing a definite theology.

As to its significance, the many parallels between 4Q318 and Ptolemaic Greek thunder texts suggest that the Qumran manuscript's basic framework derived from the Egyptian Diaspora. Although many of the phrases it employs have Akkadian antecedents, the elaboration of these phrases into a *selēnodromion* whose type is well known from Egypt bespeaks this western origin. The possibility is unsurprising considering the substantial Jewish presence in *Alexandria, which was itself the most important center for every kind of astrological research. Further, that this brontologion exemplifies what A. Bouché-Leclercq called the "absorption of meteorological divination by astrology" accords well with earlier understandings: the Jews came to astrology comparatively late, when it had already been refined well beyond its Mesopotamian forms. The date of 4Q318 can be specified no more narrowly than the range 100 B.C.-A.D. 70. Apart from the solar calendar that underlies it, nothing about the text is clearly sectarian, and just how sectarian the solar calendar was remains a question for further research.

TIBERIAS

The name *Tiberias* is mentioned three times in

the NT, all in the Gospel of John. Two of the references (Jn 6:1; 21:1) are to the Sea of Tiberias, a large freshwater lake in *Galilee in northern Israel. The other reference is to the city of Tiberias, which is located on the western shore of the sea (Jn 6:23). John tells of boatloads of people who came from the city looking for Jesus on the north side of the sea, where he had fed the multitudes by a miracle. Thus, we must rely on information in *Josephus and the *Talmud for our knowledge of its early history. After the NT period, there is an occasional reference to the city in early Christian writers such as Epiphanius and Jerome.

1. Location
2. Founding of the City
3. Jesus and Tiberias
4. Early History and Composition

1. Location.

Tiberias is situated at the center of the western side of the pear-shaped sea, between the shore and the mountains rising sharply above it. It had the advantage of being on a major road from the Mediterranean coast to Transjordan through the Bet Netofa Valley, as well as being a scenic spot located by a lake that offered recreational and commercial activity.

Although Tiberias and Hammath, to the south of it, were once a mile apart (*y. Meg.* 2:2), they were eventually incorporated into one city as they are today. This apparently occurred in the first century A.D. (*t. Erub.* 7:2, 146).

The hot springs at Hammath made the location of Tiberias even more desirable. This location prompted Josephus to write that "the tetrarch Herod, inasmuch as he had gained a high place among the friends of Tiberius, had a city built, named after him Tiberias, which he established in the best region of Galilee on Lake Gennesaritis. There is a hot spring not far from it in a village called Ammanthus" (Josephus *Ant.* 18.2.3 §36). Ammanthus probably derives from the Hebrew *hammath*, "warm [springs]." Josephus spoke of Vespasian's camp "in front of Tiberias at Ammanthus (this name may be interpreted as 'warm baths,' being derived from a spring of warm water within the city possessing curative properties" (Josephus *J.W.* 4.1.3 §11). Josephus even refers to them as the "hot baths at Tiberias" (Josephus *Life* 85 §16).

2. Founding of the City.

Tiberias was founded by Herod Antipas, son of

Herod the Great and tetrarch of Galilee. M. Avi-Yonah dates its founding between A.D. 17 and 22 on the basis of numismatic (*see* Coinage) and other evidence, and A. Spijkerman narrows it to a span of A.D. 17 to 20 (Spijkerman, 303-4). Avi-Yonah (169) thinks the year A.D. 18 is probably most likely since Tiberius's sixtieth birthday fell in this year; it was the twentieth anniversary of his holding the *tribunica potestas*, or coregency; and if Herod Antipas began the construction authorized by Tiberius immediately after his accession as emperor in A.D. 14, he easily could have completed it and founded it officially in four years.

Tiberias was built to replace a city four miles north of Nazareth named Sepphoris, which Herod the Great had conquered in 39/38 B.C. and used as his northern headquarters until his death in 4 B.C. His son Antipas rebuilt Sepphoris to function as his headquarters until Tiberias could be completed.

Antipas was compelled to populate the city with Gentiles as well as Jews because in the course of construction tombs were discovered there that made the city unclean for religious Jews (*see* Purity). Avi-Yonah concludes, "The history of Tiberias, and especially the behavior of its population during the First Revolt, shows that the majority of the inhabitants were Jews, many well-to-do, but without religious or nationalistic fervor" (Avi-Yonah, 163; *see* Jewish Wars with Rome). The presence of a large *synagogue there also supports this view (Josephus *Life* 277 §54).

3. Jesus and Tiberias.

Since there is no explicit evidence that Jesus ever visited Tiberias, J. Finegan concludes that Jesus probably was never there. He also cites the opposition to Jesus by Antipas (Lk 13:31) as reason to think Jesus would not have gone to Tiberias (Finegan, 79). However, Finegan subsequently notes that "Jesus was not driven out of his territory by any threat from Herod" and "regarded him as crafty and weak." It should be noted that Capernaum, where Jesus lived during the three years of his ministry, was only about ten miles north of Tiberias, and he was thus not inaccessible to Herod. In fact, Joanna, the wife of Herod's steward (manager of his household or possibly a governor), was one of the women who had been healed by Jesus and who subsequently provided some financial support for Jesus (Lk 8:3).

There is no mention that Jesus was ever in Sepphoris either, which is not mentioned in the NT. But R. Batey argues that the probabilities are strong that Jesus visited and perhaps even worked as a carpenter in Sepphoris. If Jesus never visited Tiberias it could possibly have been for religious reasons, because of the uncleanness of the city (*see* 2 above).

4. Early History and Composition.

There is no information as to the size or population of the town during these early years. Avi-Yonah estimated the city to have been less than 1 kilometer square by the third century and to have had less than 40,000 population (Avi-Yonah, 164-65).

Herod Antipas built a palace for himself in Tiberias, which, contrary to the law of Moses (Ex 20:4) had representations of animals on it (Josephus *Life* 65 §12). It also had a roof made partly of gold, which Josephus says was later set on fire by a man named Jesus, son of Sapphias, a ring-leader in the demolition of the city just prior to the revolt against Rome. He hoped to "obtain from it large spoils" (Josephus *Life* 66 §12). Tiberias had functioned as the capital until A.D. 61, when the Roman emperor Nero gave it to Herod Agrippa II (Josephus *Ant.* 20.8.4 §159).

Herod also built a stadium (Josephus *Ant.* 2.21.6 §618; *Life* 63 §330; *see* Arenas) that was used for public assemblies. When Tiberias opened its gates to Vespasian and sided with Rome against the Jewish revolt that broke out in A.D. 66, Vespasian put to death twelve hundred Jewish captives in this stadium who were elderly and considered "useless" (Josephus *J.W.* 3.10.10 §539).

On this occasion (September 67) Vespasian also sent "6,000 of the most robust" to Nero to work on the attempted construction of a canal through the isthmus near *Corinth. However, Nero eventually gave up on the mammoth project, which was not completed until 1883 (McRay, 314). The rest of the multitude of prisoners (30,400) at Tiberias, Vespasian sold, except those of whom he made a present to Agrippa, who also sold them into *slavery (Josephus *J.W.* 3.540-42).

Antipas built a synagogue, which was "a huge building, capable of accommodating a large crowd" (Josephus *Life* 54 §277) and in which people were gathered for political as well as religious assemblies. Here, Josephus says, the peo-

ple of Tiberias were gathered to hear accusations against him by a delegate from Rome (Josephus *Life* 54 §§277, 280). In these references the synagogue is called, as is typical of the time, the place of prayer, a designation used by Luke in Acts 16:13, 16.

Josephus built a wall around Tiberias, except on the east side by the sea, which he later found himself attacking after his defection to the Romans (Josephus *J.W.* 3.10.1 §465; 2.20.6 §573). When Josephus used Tiberias as the headquarters of his campaign in Galilee, he set up a group of seventy older men "from the nation" as a court (perhaps patterned on the Jewish Sanhedrin) to have jurisdiction over all Galilee. (Whether the word *nation* here refers to Jews or Gentiles is not clear. It is regularly used in the NT to refer to Gentiles.) He also appointed smaller groups of seven men in each city to "adjudicate on petty disputes," reminiscent of Acts 6:1-3 (Josephus *J.W.* 2.20.5 §§570-71).

Even though the representation of human forms was forbidden by Jewish law, when Caligula replaced Antipas with Herod Agrippa in A.D. 39, Agrippa began to mint *coins in Tiberias with himself and Caligula depicted on them. Tiberias continued under Agrippa's rule until his death in A.D. 44 (Acts 12:22-23), at which time it was placed under the jurisdiction of the Roman procurators rather than Herod's son Agrippa II, because of his youth (Josephus *Ant.* 19.9.2 §§360-66; see Roman Administration). This lasted until A.D. 61, at which time Nero put Tiberias under the rule of Herod Agrippa II. After this, the name of Agrippa with the title of king appears on his coins.

Under the emperor Trajan (A.D. 98-117) Tiberias became an autonomous city attached to the Provincia Judea. On coins of the period Tiberias is designated as Tiberias Claudia in honor of the emperor Claudius, perhaps in gratitude for some remembered benevolence. By A.D. 170 the official Roman name of Tiberias, appearing on coins, was Tiberias Claudia in Syria-Palestina.

Tiberias was paganized by the emperor Hadrian, who put down the Second Jewish Revolt in A.D. 135, but in the second and third centuries the city became an important center of Jewish rabbinical study. Evidence of their presence can be found in the Talmud. A famous rabbinical academy was founded, and tombs of the rabbis here are still venerated. The *Mishnah, though codified in Sepphoris in 200, took its fi-

nal form in Tiberias. In the fifth century A.D. the Palestinian Talmud was largely compiled in Tiberias, and in the seventh century it was the center of Masoretic work on the text of the Hebrew Bible. In the opinion of many, Tiberias became in this period "perhaps the greatest intellectual center of ancient Judaism" (Strange, 548).

In addition to excavations in 1921 and 1961 that revealed several superimposed synagogues at Tiberias, dating from the fourth to the eighth centuries, work in the 1970s in the area south of the synagogues revealed a paved road and city gate from the time of the founding of the city by Antipas. The gate consisted of two round towers, 23 feet in diameter, which projected to the south. Several courses of stone are preserved. Leading northward out of the gates the road is paved with rectangular slabs laid parallel to each other near the gate and then obliquely further north (Foerster, 1171-76).

Excavations of the city are currently underway directed by Y. Hirschfeld for the Israel Antiquities Authority (Hirschfeld 1991). Evidence of what may be an imperial villa have been found. On Mt. Berenice, above Tiberias, a Byzantine church has been found, and it is not earlier than the sixth century. It has also been shown that no palace had stood on the summit of the hill (Hirschfeld 1994b, 33).

TOBIT

Tobit is an adventure story or romance contained in the *Septuagint but not the Masoretic Text. Considered deuterocanonical by the Roman Catholic and Eastern Orthodox churches, Tobit is relegated to the *Apocrypha by Protestants. In the LXX, Tobit is placed among the historical books in the order Esdras II (Ezra-Nehemiah), Esther, *Judith and Tobit. In the Vulgate, Tobit immediately follows 1 and 2 Esdras (Ezra-Nehemiah; *see* Esdras, Books of).

1. Summary of the Book
2. Survey of Scholarship
3. Significance for the New Testament

1. Summary of the Book.

This is a fictional story about the problem of unmerited suffering. In classical literary terms, Tobit is a comedy, since it has a happy ending and treats the story with lighthearted humor. God sends an angel to deliver Tobit and Sarah from their afflictions. Even though the author informs the reader of the felicitous outcome near the beginning of the story (Tob 3:16-17), interest is sustained by melodramatic flourishes and delightful irony. The characters are arranged in a triadic pattern:

Tobit (the principal character), Tobias (Tobit's son) and Anna (Tobit's wife)

Raguel (Tobit's relative), Sarah (Raguel's daughter) and Edna (Raguel's wife)

God, Raphael (an angel sent to assist Tobit) and Asmodeus (an evil spirit who haunts Sarah)

The plot centers primarily around the trials and tribulations of pious Tobit. Ironically, this man, whose name means "goodness," suffers because of his good deeds shown to unfortunate and indigent Jews—especially those deprived of proper *burial. The author incorporates a subplot involving the harassment of beautiful Sarah, the object of lustful envy by an evil spirit. Seven grooms in succession perish on their wedding night, slain by the evil Asmodeus before they consummate their marriage to Sarah. The plights of Tobit and Sarah are mirror images of each other. We read first of Tobit's troubles leading to his petition to die because of his misery; then, of the ill-started Sarah and her prayer for deliverance by death from an intolerable situation. Interwoven into these two plots is a third:

the recovery of money deposited by Tobit from a relative in far-off Rages. The three subplots intertwine, and resolution is achieved by divine intervention in the person of an angel in disguise, Raphael, whose name means "God heals." Thus at the conclusion of this well-told story, Tobit recovers his sight, Sarah marries Tobias, and Tobias inherits both Tobit's and Raguel's wealth. In terms of the basic movements of the story, we have a joining of the two families in marriage and an exorcism of Asmodeus through the means provided by Raphael.

2. Survey of Scholarship.

2.1. Sources or Influences. A number of scholars argue that the basic plot of Tobit derives from one or more secular folktales. These have been identified as The Grateful Dead (reward for providing proper burial), The Bride of the Monster (demon-haunted woman) and The Tale of Ahiqar (*see* Ahiqar), the latter an ancient Semitic story, having a fifth-century B.C. Aramaic version, about a betrayed and ultimately vindicated courtier. Ahiqar briefly appears in our story as Tobit's nephew and benefactor (Tob 1:21-22; 14:10) but serves more as window dressing than a leading character, although final vindication is important to the plot of Tobit. Another suggestion includes an Egyptian tale called The Tractate of Khons, dealing with the exorcism of a woman. This proposal is generally linked to an Egyptian provenance for Tobit.

Many scholars draw attention to the Hebrew Bible as a major factor in the story. Some would minimize or even deny the influence of the secular folktales. The patriarchal stories of the angelic visitors (Gen 18—19), the quest for a bride (Isaac in Gen 24 and Jacob in Gen 29), the story of Joseph (Gen 37—48) and the story of Job are close at hand to provide the basic plot and substructure of Tobit. Tobit's prayer, prophesying *Israel's restoration (Tob 13:16-17), draws freely from Isaianic passages (cf. Is 54:11-14; 60:1-22). Attention has been drawn to the distinctly Deuteronomic theology of retribution underlying the basic premise of the story. Especially noteworthy are the allusions to Deuteronomy 31—32 in Tobit 12—13. In addition, two biblical prophets, Amos and Nahum, are cited (Tob 2:6 cf. Amos 8:10 and Tob 14:4 cf. Nahum 1:1; 2:8-10, 13; 3:18-19). The tales of a wise courtier in Daniel 1—6 and Esther are also germane to Tobit. Finally, there are echoes of sapiential teach-

ing as found in the book of Proverbs (see esp. Tob 4:5-19). The influence of the Hebrew Bible is paramount in Tobit.

2.2. Literary Genre. Scholars variously characterize Tobit as a *romance, adventure story, didactic tale, novella or fairy tale. Older, conservative scholarship sought to defend the historicity of the story; few would deny its fictional character today. It is more difficult, however, to identify precisely the genre. Modern scholars tend to put several modifiers in front of their designation, suggesting the slippery nature of the task. More fruitful have been studies investigating the *rhetorical features of the work, especially *intertextuality.

2.3. Purpose. This story does more than entertain the reader. Behind the characters lurks a real and disturbing problem: the people of Israel are in exile. Tobit and Sarah represent an oppressed minority within a largely hostile culture. The author inserts three passages of moral, ethical and ritual exhortation (Tob 4:3-21; 12:6-10; 14:8-11). These function paraenetically as guidelines for correct behavior. Furthermore, the leading characters, while not perfect or famous, nonetheless serve as role models. Here are ordinary people who display extraordinary faithfulness to Torah, believing that God will ultimately vindicate and restore Israel. Through the lens of this story the anonymous author offers encouragement to Diaspora Jews. "God will again have mercy" (Tob 14:5) is the fervent conviction resonating in the climax to the story. An eloquent hymn celebrates God's certain restoration of the *temple, *Jerusalem and the Jewish people. Even the Gentiles convert to the God of Israel. Seen in this light, Tobit is fundamentally a theodicy.

2.4. Composition. The author was a pious, observant Jew. Beyond that, consensus evaporates. Identification with any particular sect seems ruled out by the probable date of writing. The book expresses the sentiments of a Jew committed to Torah and temple and concerned that Jews remain loyal to both. No consensus exists on the provenance, whether in Palestine or the *Diaspora. Perhaps a slight nod may be given to the assumed setting of the story, namely, the eastern Diaspora.

Internal evidence for dating the book consists of the following: dependence upon the Hebrew prophets, no reflection of the turbulent times of Antiochus IV (175-164 B.C.) and the

Maccabean revolt (167 B.C.; see Jewish History: Greek Period) and no awareness of Herod's greatly expanded and beautified temple (work on this beginning in 20-19 B.C.). Since the canonization of the prophets is usually placed in the middle of the third century B.C., this would provide outside limits of 250 to 175 B.C. A few scholars push the date back into the fourth century B.C., but this is a minority position. A date in the first century B.C. is rendered unlikely by the external evidence from *Qumran—Aramaic and Hebrew fragments dating from the first century B.C.

3. Significance for the New Testament.

3.1. Life in Diaspora. Most Jews in the NT era lived in the Diaspora (cf. Acts 2:8-11). The story of Tobit portrays a Jew in the eastern Diaspora who, initially at least, is relatively well off economically. This seems to be in contrast to most of his Jewish kinsmen. The story assumes that most Jews did not enjoy economic power and status to any significant degree (Tob 2:1-3; cf. Lk 14:16-24). Furthermore, their civil and religious rights might be arbitrarily taken from them at any time (Tob 1:18-20). The picture that emerges is that most Jews lived in precarious circumstances.

This feature of Jewish life is a mirror image of the early Christian movement. NT literature incorporates the theme of Diaspora as a means of self-identity but transposes it into a different key; that is, Christians are aliens living in a foreign land, anticipating an eventual arrival at the heavenly Mt. Zion or Jerusalem (cf. Gal 4:26; 1 Cor 7:31b; Phil 3:20; 1 Pet 1:1; Jas 1:1; Heb 11:13-16; 12:22; 13:14). The issue of assimilation to the values and lifestyle of the surrounding pagan culture is a constant concern (cf. 2 Cor 6:14-7:1; Eph 4:17-24; Phil 2:15; Col 3:5-11; Tit 2:11, 12; 1 Pet 2:11; 4:1-5; Jas 4:4). The tenuous and precarious situation of these early Christian communities finds numerous expressions in the NT (cf. 1 Thess 1:6; 2:14; 3:1-5; 2 Thess 1:4-12; 1 Cor 16:13; 2 Cor 1:3-11; 4:8-12, 16-18; 6:4-10; 11:23-33; Phil 1:27-30; Col 4:5-6; Heb 10:32-39; 12:3-8, 12-13; Jas 1:1-4; 1 Pet 2:19-25; 3:9-17; 4:12-19; Rev 3-4; 6:9-11).

3.2. Angelology and Demonology. Tobit witnesses to a significant development in *angelology and *demonology during the intertestamental era. The archangel Raphael, masquerading as Azariah, plays a leading role in the story. The OT knows no such category of angelic be-

ing called an archangel—this is an intertestamental development generally traced by scholars to Persian influence. The NT mentions the angel Gabriel (Lk 1:19, 26 cf. Dan 8:6; 9:21-23), who, like Raphael, stands in the presence of God (cf. Tob 12:15) and the archangel Michael (Jude 9; cf. Dan 10:13, 21; 12:1). In the Enoch literature we learn of seven archangels who stand in the presence of God (cf. *1 Enoch* 9:1; 54:6; *2 Enoch* 8:1—10:1; see Enoch, Books of). That Paul accepted the tradition of archangels is implied by his passing reference to "the archangel's call" at the parousia of Christ (1 Thess 4:16). It is possible that Revelation 4:5 refers to these seven archangels as "the seven spirits of God" (cf. Rev 1:4).

Asmodeus is but one of a considerable number of demons named in intertestamental literature. The name *Asmodeus* has been connected to a Persian evil spirit called *Aesma Dneva*. The apostle Paul accepts the widespread notion of a hierarchy of angelic and demonic beings (Col 1:16; 2:15; Rom 8:38; Eph 1:21; 3:10; perhaps 1 Cor 2:8). He envisions the Christian life as a struggle against "the cosmic powers of this present darkness" (Eph 6:12; cf. 2:2; 2 Cor 4:4).

Tobit witnesses to the influence of *magic in Jewish life and culture. Raphael gives Tobias a potion that exorcises the demon Asmodeus to Egypt, a traditional haunt of magic and witchcraft. Whereas exorcism was a hallmark of Jesus' ministry and that of the apostolic church (cf. Mk 3:22 par. Mt 12:24; Lk 11:15; Mt 10:25; Jn 7:20; 8:48-52; 10:20-21; Acts 8:9-24; 13:4-12; 19:11-20), the NT warns against magic (cf. Gal 5:20 ["sorcery"]; Rev 21:8; 22:15).

3.3. Eschatology. Tobit reflects a fervent hope of national restoration (Tob 13—14), a hope widely attested in Second Temple Judaism. For many Jews, nationalism and *messianism were inseparable. Tobit, however, makes no reference to a messiah. The Gospels, by contrast, witness to a strong undercurrent of nationalistic fervor linked to a messianic figure (cf. Lk 3:15; 7:19; Jn 1:19-22; 6:15). The centerpiece of restoration in Tobit is a rebuilt Jerusalem and temple. The description of the new Jerusalem (Tob 13:15-17) echoes the language of Isaiah 54:11-12 and finds a NT counterpart in Revelation 21:9-21. In startling contrast, however, Revelation depicts the new Jerusalem as having "no temple in the city, for its temple is the Lord God Almighty and the Lamb" (Rev 21:22). Furthermore, in the

NT, believers already experience in part the new Jerusalem; there is a realized *eschatology (see Gal 4:26; Heb 12:22; cf. Col 3:1-4; Eph 2:5-6).

3.4. Faith and Piety. Tobit 12:8 epitomizes Jewish *piety: *prayer, fasting and almsgiving. Strikingly, Jesus endorses precisely these three practices as essential for kingdom citizens, provided they avoid ostentation and hypocrisy (Mt 6:1-18). Furthermore, Tobit contains expressions closely parallel to Jesus' sayings in the Sermon on the Mount, such as "laying up a good treasure for yourself (Tob 4:6b; cf. Mt 6:19, 20) and a negative form of the Golden Rule (Tob 5:15; cf. Mt 7:12). A major difference, however, lies in the question of how one enters the kingdom of heaven: Jesus taught that true obedience hinges upon a personal relationship to himself (Mt 7:21-27). Though rooted in Judaism, Jesus' teaching possesses a radically new obedience (cf. Mt 5:21-48).

3.5. Paraenesis. Moral and ethical exhortation characterizes Tobit as it does NT epistolary literature. In Paul's letters several verbal parallels may be cited (cf. Tob 4:12 and 1 Cor 6:18; Tob 4:5 and 2 Cor 7:1; Tob 4:8 and 2 Cor 8:3, 12; Tob 4:7 and Gal 2:10; Tob 4:19 and Col 4:2; Tob 4:14 and Eph 5:18; Tob 4:14 and 1 Tim 4:7, 16; Tob 4:3, 4a and 1 Tim 5:4; Tob 4:5 and Tit 2:12). The point is not to argue that Paul or any other NT writer is dependent upon Tobit but rather that Christian paraenesis reflects and is indebted to a Jewish background.

TORAH

The Pentateuch, or Torah, as it is more popularly known, has been inextricably bound to Jewish life since the destruction of the first *tem-

ple and the exile of the Jewish people at the beginning of the sixth century B.C. This is not to minimize the significance of the Torah during the period of the first temple or even prior to it during Mosaic times. From the time it was first given, it was intended to be part and parcel of the Israelite nation (Ex 13:9), directed at *Israel (Deut 33:4, 10), and from which they were to be instructed (Ex 24:12) in how to lead their lives.

1. The Use of the Torah in Jewish Life
2. Torah: Definition
3. Torah: Its Nature and Purpose
4. Torah and Jewish Philosophy
5. Torah: The Law and Christianity

1. The Use of the Torah in Jewish Life.

1.1. Torah and Sacrifice. The institution of *sacrifice from its earliest inception, although prescribed to the last detail by the Torah itself, assumed a role of paramount importance in the life of the people in their communication with God. Starting with the sanctuary in the wilderness and continuing throughout the existence of Solomon's temple in *Jerusalem, the cultus of the altar became overemphasized to the detriment of the Torah itself, to the extent that the latter became neglected and the former abused. With the destruction of Jerusalem came the end of sacrifices, and the people of Judah found themselves in exile without this means of expiation and reconciliation with God. In spite of this gap in their spiritual life, the Jews survived as a nation since they returned to the Torah as the main purpose of their existence. With the earliest emergence of the *synagogue during the Babylonian exile, the Torah assumed the central role in Jewish life, never to be relinquished again, even through Second Temple times, where it existed side by side with a reemerging sacrificial ritual but always looming greater in significance than the cultus.

1.2. Ezra and the Torah. The greatest moment for the reemergence of the Torah as the focal point in Jewish life occurred three-quarters of a century after the return to Judah during the time of Ezra. The reorganizer of the returned Jewish community from Babylonian exile made the Torah the nucleus of his reconstructive efforts (Neh 8:1-18). He persuaded the struggling Jewish settlement in Jerusalem to accept the Torah as its constitution for all time. Consequently, the Torah became so intricately linked to the Jewish people that the nation was able to survive the di-

saster of A.D. 70 and continue to remain united under the banner of Torah propagated at Yavneh and subsequently in the land of Israel, in Babylonia and in other parts of the world up to the present day.

Ezra, who was a *priest by birth and a scribe by calling, transferred the spiritual leadership of the people from the priests to the scholars who represented a nonhereditary, democratic element recruited from all classes. These scholars were the *Sopherim* (the "scribes"), and they, as well as the *rabbis who followed them, not only preserved the Torah but also gave it new life. Their activity made the Bible relevant to the needs of new generations and thus prepared it to serve as the eternal charter of humanity. These nameless scribes thus contributed in no small measure to the survival of the Jewish people. But their significance is not limited to the household of Israel. In the words of R. Gordis "the Christian world too, owes them a debt of gratitude. As founders of Rabbinic Judaism, they helped create the background from which Christianity arose, formulating many of the teachings that both religions share in common."

1.3. Torah and Synagogue. Today the Torah forms an integral part of synagogue liturgy. The practice of reading the Torah in public is quite ancient. The earliest reference to a public Torah recitation is the command to assemble the people at the end of every seven years to read the law in their hearing (Deut 31:10-13). A second mention is made during the time of Ezra, when he read the Torah to all the people (Neh 8:1-8). An early date for the introduction of regular readings is made by the rabbis (*y. Meg.* 4:1, 75a; *b. B. Qam.* 82a), who note that *Moses commanded the Israelites to read the Torah on the *sabbaths, on *festivals and on new moons, while Ezra later ordered it to be read on Mondays and Thursdays in the morning, as well as on sabbath afternoons. The custom dates back to at least the first half of the third century B.C., since the Septuagint was apparently compiled for the purpose of public reading in the synagogue.

It is, however, not unreasonable to argue that the custom reaches back as far as the sixth century B.C., when, during their Babylonian exile, the Jews conceivably assembled for *prayer. Although this prayer was not yet formulated, it could have revolved around the central part of the gathered meeting, namely, the recitation of the Torah, also not formulated as in later times.

At any rate, *Josephus (*Ag. Ap.* 2.175 §362), *Philo (*Som.* 127 §498) and the NT (Acts 15:21) refer to the public Torah readings. The Mishnah (*Meg.* 3:4-6) shows that by the end of the second century A.D. there were regular Torah readings on the above-mentioned days in addition to pre-Adar Passover sabbath readings and on fast days. The Talmud (*b. Meg.* 29b) contains the earliest reference to a fixed three-year cycle of completing the reading of the Torah in Palestine.

2. Torah: Definition.

The word *Torah* is derived from the Hebrew root *yrh*, meaning "to guide" or "to teach" in the causative conjugation of the Hiphil, as in Exodus 35:34 and Leviticus 10:11. Thus the more precise meaning of the noun would be "teaching" or "doctrine" rather than "law." The Septuagint rendered the Hebrew word *Torah* by the Greek *nomos* ("law"), the Latin later following with *lex*, with the same meaning.

In Deuteronomy 4:44, "This is the Torah that Moses set before the Israelites," the word refers exclusively to the Pentateuch in contrast to the rest of the Bible. "Torah" is also used loosely to designate the entire Hebrew Bible. The term was further extended to refer to those two branches of divine revelation—the written Torah and the oral Torah, which are traditionally viewed as having been given to Moses on Mt. Sinai (*b. Yoma* 28b). The Mishnaic tractate Ethics of the Fathers (*m. 'Abot* 1:1) opens with the statement "Moses received the Torah from Sinai." In rabbinic literature it was taught that the Torah was one of the six or seven things that God created prior to creating the world (*Gen. Rab.* 1:4; *b. Pesah.* 54a). The most prestigious sage of the post Second Temple period, Rabbi Akiba, called the Torah "the instrument by which the world was created" (*m. 'Abot* 3:14). The noun *Torah* thus designates the whole of revelation, including both commandments and statutes.

Torah constitutes a synthesis of the revealed will of God. It is the guide that assists the individual in conducting one's relationship to God himself and to one's neighbor according to the divine will. According to E. J. Gottlieb, "one of the cardinal beliefs of Judaism is the belief that the Torah, the Written Law, and also its necessary explanations, the Oral Law, were given and told to Moses by God himself, during the one

hundred and twenty days that Moses spent in heaven" (Gottlieb, 110). He goes on to reason "if there is a God, who did create the world and man in it, then he could, moreover he must, have communicated with man. This creator of man had to guide man with definite and proper directives in order to enable him to reach the desired destination. In other words, the first basic principle of belief in God carries within it, and forces us to accept also, the belief in 'Torah from heaven'. If there is a God, there must be a law from God. One could hardly be without the other" (Gottlieb, 111).

3. Torah: Its Nature and Purpose.

In various passages the Torah is referred to as "the Torah of the Lord" (Ps 19:8), in others as "the Torah of Moses" (Josh 8:31). In the NT it occurs twelve times, either as "the law of Moses" or "the law given by Moses" (see 5.2 below for exact references). It is said to be given as "an inheritance to the congregation of Jacob" (Deut 33:4). Its purpose was to make Israel "a kingdom of priests" (Ex 19:6). In the *Apocrypha, the Wisdom of Ben Sira (see Sirach) identifies it with wisdom (Sir 6:37; 24:24-25; 39:1).

One of the very few real dogmas of rabbinic theology is that the Torah is from heaven, meaning that the Torah in its entirety was revealed by God (*m. Sanh.* 10:1). The early sage Simon the Just taught that the study of the Torah was one of three things by which the world is sustained (*m. 'Abot* 1:2). Another sage, Rabbi Eleazar b. Shammua, said: "Were it not for the Torah, heaven and earth would not continue to exist" (*b. Pesah.* 68b; *b. Ned.* 32a). God himself was said to study the Torah daily (*b. 'Abod. Zar.* 3b).

Hillel summarized the Torah in one sentence: "What is hateful to you, do not do to your fellow being" (*b. Sabb.* 31a). The parallel to this saying is "Love your neighbor as yourself" (Lev 19:18). Rabbi Akiba's pupil Simon ben Azzai said that the fundamental principle is the verse in Genesis 5:1, which teaches that all human beings are descended from the same man and created by God in his image (*Sipru Qodashim* 4:12; *y. Ned.* 9:3, 41c; *Gen. Rab.* 24:7).

The message of the Torah is for all humankind. Before giving the Torah to Israel, God offered it to the other nations, but they refused it; and when he did give the Torah to Israel, he revealed it in the extraterritorial wilderness and simultaneously in all the seventy languages, so

that people of all nations would have a right to it (*Mekilta de Rabbi Ishmael* 5; *Sipre Deut.* 343; *b. Sabb.* 88b; *Exod. Rab.* 5:9; 27:9; *b. 'Abod. Zar.* 3a).

4. Torah and Jewish Philosophy.

The first-century Jewish philosopher *Philo Judaeus considered the Torah the ideal law of the philosophers and Moses the perfect lawgiver and prophet. His concept of the relationship of the Torah to nature and humanity was that "the world is in harmony with the Torah and the Torah with the world."

The medieval Jewish philosopher Saadiah Gaon expounded a rationalist theory according to which the ethical and religious-intellectual beliefs imparted by the Torah are all attainable by human reason. He believed that the Torah was divisible into commandments that, in addition to being revealed, are demanded by reason (e.g., murder, fornication, theft and lying) and commandments whose authority is revealed (e.g., sabbath and dietary laws).

The Spanish Jewish philosopher-poet of a later medieval period held that Israel was created to fulfill the Torah; there would be no Torah were there no Israel. Of the Jewish philosophers who flourished in the thirteenth and fourteenth centuries, the Ralbag (= Levi ben Gershom), taught that the purpose of the Torah is to guide humanity—the masses as well as the intellectual elite—toward human perfection, that is, the acquisition of true knowledge and thereby an immortal intellect.

Abraham Isaac Kook, the first chief rabbi of Israel, whose thought was influenced by the Kabbalah, taught that the purpose of the Torah is to reveal the living light of the universe, the suprarational spiritual, to Israel and, through Israel, to all humankind. In the words of his son, Rabbi T. Y. Kook, "The soul of Israel is the Torah. Israel itself is Torah, stemming from its source of Divine existence" (Kook, 48). According to him Torah is the inner being of the community of Israel, "which finds expression in the observance of Torah, and in its learning. Israel is Torah personified" (Kook, 48).

5. Torah: The Law and Christianity.

The range of attitudes toward the Jewish law present in early Christianity exists mainly in the Pauline corpus and the book of Acts. The key conflicts over Jewish law attested in the earliest literature concern the applicability to the Chris-

tian church of circumcision and purity laws, particularly those having to do with eating.

5.1. *The Early Church and the Law.* P. Richardson and S. Westerholm have analyzed five different theories regarding the attitudes of the early church toward Jewish law.

According to F. C. Baur, Paulinism, or Gentile Christianity, was universalizing and would not see any further need for obedience to the particularism of Mosaic law. The earliest Christian community in Jerusalem was made up of both Hebrew and *Hellenistic Jews. The Hebrews, or Jewish Christian party, led by James, Peter and John, continued to identify with the Jewish nation and culture and to observe the Jewish law. These preached to the Jews a gospel including full observance of Torah, while the Hellenists or Gentile Christian party, spearheaded by Paul, had a more universalist view of religion, preaching to the Gentiles a gospel not including the observance of Torah. Jewish law-observant Christianity spread throughout the *Roman Empire and especially to *Rome. In Galatia, members of the Jewish Christian party were at least partly successful in convincing Gentiles that they must obey the whole Jewish law. Overwhelmingly, the Jewish Christians replaced circumcision with baptism, a move toward Christian universalism. Ritual purity laws and other aspects of Torah were progressively eliminated.

The heart of A. Ritschl's study centered around the question of the understanding of humankind's reconciliation to God by the early Christian church. The initial attitude of Christianity toward the law was set by Jesus himself. He distinguished between two types of laws: those which pertain to people's highest end and are therefore permanently and universally binding; and those which exist for the sake of people and are therefore *adiaphora* (matters of indifference). At this time there were essentially two groups within Christianity. The first group recognized faith in Jesus as the only condition for full Christianity. Within this group was the Pauline tendency accepting the apostolic decree and not requiring any further observance of the Mosaic ritual law from anyone; and also the James tendency, which expected the Gentiles to observe the apostolic decree and the ethnic Jews to observe the whole law. The second group was the Jewish Christians who did not recognize any form of Christianity except that which was based on the Jewish people.

According to H. J. Schoeps, the Ebionites were zealots for the law but in their own peculiar way. They rejected several parts of the Torah, including animal sacrifice, the temple and the Israelite monarchy. They came to the position that the law was to be judged on the basis of the life and teachings of Jesus.

According to the fourth theory, that of J. Daniélou, during the whole period of Paul's mission Jewish Christians were still the majority in the church; thus most Christians were law observant. The fall of Jerusalem and the consequent blow to Jewish nationalism changed the sociological situation, and the balance of the church changed from majority Jewish to majority Gentile with total abandonment of any Jewish legal observances by the late second century A.D.

In the fifth theory, R. Brown lists four types of Jewish/Gentile Christianity that existed in early times, each with its own attitude toward the Jewish law. One held that circumcision and obedience to the whole Mosaic law were necessary for full participation in salvation brought by Jesus. Another did not require circumcision of Gentile Christians but did require the observance of some purity laws. Still another one required neither circumcision nor observance of food regulations by Gentile Christians but were not opposed to such observances by Jewish Christians. The final one did not require circumcision or observance of food regulations and broke fundamentally with all Jewish practices.

5.2. *The Law in the New Testament.* The term *law* in association with Moses (i.e., that given by Moses, hence the Torah), occurs twelve times in the NT. It occurs an additional five times as just *nomos* but implying that given by Moses. Matthew 5:17 quotes Jesus as saying, "I have not come to abolish the Law . . . but to fulfill it." John 1:17 states, "The law indeed was given through Moses." The remaining passages are Luke 2:22; 24:44; John 1:45; 7:19 (2x); 23; 8:5; Acts 15:5; 25:8; 28:23; 1 Corinthians 9:8, 9; Philippians 3:4, 5 and Hebrews 10:28.

TRAVEL AND TRADE

The Augustan objectives of an empire unhindered by chronic war and piracy, with strong ties of military and political communication and a good *coinage initiated a two-century-long period of peace—the **pax Romana* (Philo *Leg. Gui.* 47; Plutarch *Fort. Rom.* 317.B, C; see Roman Empire; Roman Emperors; Roman Military). This created the conditions for a general increase in travel and trade (Pliny *Nat. Hist.* 14.1.2). Persons moved with relative ease and confidence throughout the empire for a variety of reasons, many of which can be paralleled in the events and teachings of earliest Christianity—for official (Lk 2:1-7; 19:12; Acts 18:2-3; 23:23-24; 25:1-6, 13; 27:1—28:15) and business reasons (Acts 16:14; 21:2-3; 27:2, 6, 38; 28:11; Jas 4:13-15), for health reasons (Mk 3:7-10 [par. Mt 4:23-25; Lk 6:17-19]; Jn 4:46-47; Acts 9:38), on pilgrimage or to *festivals (Mt 2:1-12; Lk 2:22-38, 41-52; Jn 2:13; 5:1; 7:1-14; 12:1; Acts 2:1-11; 21:27), on holiday, to teach (Mk 1:39 [par. Mt 4:23; Lk 4:44]; Acts passim) or to be *educated (Acts 22:3) and for reasons unspecified (Acts 27:37). This period of relative peace and unprecedented freedom in travel and trade was part of that “fullness of time” (Gal 4:4) in which Christ came, and it was the helpful context for the realization of a worldwide witness to him through his disciples (Acts 1:8).

1. Travel over Land

2. Travel by Water

3. Travelogues and the New Testament Record

1. Travel over Land.

The speed at which one traveled in the ancient world was a function of the interplay of several factors: the time of year and weather conditions, the means of travel and the degree of urgency.

1.1. Time of Year and Conditions. Travelers in antiquity were much more at the mercy of the seasons than are today's travelers. Land travel was more difficult between November 11 and March 10 (Vegetius *Renatus Epit. Rei Milit.* 4.39) and potentially deadly where travelers might be caught traversing mountains or plateaus in winter conditions (Ramsay, 377). Travel could also be impeded or foreclosed by the wet season and spring runoff, which added October and the months of April and May as “doubtful times.” References to exact dates and open and closed times in the ancient records, however, reflect general custom for majority traffic.

Paul appears from the NT record to have traveled after the fashion of more professional travelers such as government personnel, the military and business persons. He made extensive overland journeys that included high-elevation crossings (Acts 13:14; 14:24; 16:1; 18:23). Ministry priority rather than the avoidance of inclement weather appears to have been Paul's objective in wintering with the Corinthians (1 Cor 16:5-6). Paul's reference to danger from rivers suggests attempted crossings during the spring runoff, and the notice of hunger, thirst, going without food and being cold and ill-clad (2 Cor 11:26-27) probably indicates the rigors and toils of overland journeys (*hodoiporia*) in the doubtful or closed seasons (Murphy-O'Connor, 41) rather than the insufficient rewards of manual labor.

1.2. Means of Travel and Urgency. The most common and slowest means of travel in antiquity was by foot. Archaeological and literary evidence suggests that a normal day's journey in biblical times covered between 17 and 23 miles (Beitzel, 37). The Joppa to *Caesarea trip confirms the average rate (Acts 10:23-24, 30). Virtually all the travels of Jesus and his disciples (the Gospels), Philip's progress along the Gaza Road (Acts 8:26-30) and Paul's persecutions (Acts 9:18; 22:11) and later missions (Acts; see Acts 20:13) were pedestrian enterprises. Modern estimates of the distances one might reasonably be ex-

pected to travel in a specified time ought to reflect the reality of a largely pedestrian and probably vigorous population. This plus urgency, crisis or danger might well account for unusually long distances being covered in a relatively brief period of time (see commentary discussions of Acts 23:23, 31-32).

Travel was greatly enhanced through the use of beasts of burden. The dromedary, or one-humped camel, ideally suited to hotter climates south and east of Palestine, was used for travel (Mk 10:25 par. Mt 19:24; Lk 18:25) and fighting. Its physiology allows it to go for as long as a week without water. It can carry 200 pounds plus a rider across desert and twice that much in nondesert conditions. A sustained 28 miles per day is possible; unloaded and with only its rider, distances approaching 100 miles in 13 hours are known (Cansdale, "Camel," 697).

The use of donkeys and mules was more widespread in antiquity (*NewDocs* 1:9; 2:28; Mitchell). A first-century A.D. inscription indicates the following equivalents: one mule (ox?)-driven cart = three pack mules = six donkeys. The terms of comparison relate to carrying power over a distance rather than speed, with cartloads being 625 to 950 pounds and a pack mule's load 250 pounds. Donkeys used for transport are mentioned in the NT (Mk 11:2, 4-5, 7 [par. Mt 21:2, 5; Lk 19:30, 32, 35]; Lk 13:15; 2 Pet 2:16). Luke notes wheeled transport: the Ethiopian minister's chauffeur-driven carriage (Acts 8:28-29, 38). Laden asses might make no better mileage than did a man walking, but their advantage was in a significantly increased carrying power; carts permitted a daily rate of 25 to 30 miles. The greater efficiency, however, carried a greater cost that renders unlikely Paul's resort to such conveyance.

Travel by horseback doubled or trebled the daily distances normally covered by pedestrian traffic. Horses were used chiefly by cavalrymen, hunters and dispatch riders. Daily distances of 100 to 150 miles per day could be covered, but these were exceptional and usually associated with official government business or times of crisis. Paul's hurried overnight journey under massive military escort from Jerusalem to Caesarea was on horseback (Acts 23:23-24). His route was probably that taken by Cestius Gallus and his army in October A.D. 66 (Josephus *J.W.* 2.19.1, 8-9 §§515-16, 546-55; cf. 2.12.2 §228; Hemer, 128 n. 79).

1.3. Stopping Points, Hospitality and Requisition. Great personal wealth and resources allowed a very few to travel in pomp and comfort. Imperial officials, judges, soldiers on the march, municipal magistrates and others suitably empowered could requisition the needs of land travel. This included the use of animal transport and room and board in more or less elaborate stopping stations (*mutationes, mansiones*) that local populations were required to provide and maintain. Despite regulations and compensations, the burden of requisition was often a significant flash point between agents of the Roman state and its subjects (Pliny *Ep.* 9.33; Apuleius *Met.* 9.39-40; Arrian *Epict. Diss.* 4.1.79-81; *NewDocs* 1:9; *Sel. Pap.* 2:211; *P. Lond.* 1171; Mitchell). Instances of official and unofficial requisitioning are both indicated (Mt 5:4; Mk 11:3-6 par. Mt 21:2-3; Lk 19:30-31) and implied (Acts 27:2, 6; 28:7, 10-11) in the NT.

For the ordinary traveler with no recourse to the above provisions or the next best choice of private *hospitality with family or friends, putting up at a boarding house or wayside inn (*hospitium, deversorium, caupona*) was the poor alternative. Available literary and archaeological sources attest to generally ill-kept facilities—minimal furnishings, bug-infested beds, poor food and drink, untrustworthy proprietors, shady clientele and generally loose morals (Horace *Sat.* 1.5; Petronius *Sat.* 94-97; *Acts Jn.* 60-61; Casson 1974, 176-218).

The repeated NT encouragements to *hospitality (Rom 12:13; 1 Tim 3:2; Tit 1:8; Heb 13:2; 1 Pet 4:9; 3 Jn 8) and the epistolary commendations of traveling church workers to the care and material assistance of Christian communities (Acts 18:27; Rom 16:1-2; 1 Cor 16:10-11; Col 4:10; 3 Jn 5-7) made great sense. Christian ministers were helped where hospitality was extended (Lk 9:4; 10:5-8); their ministry could be seriously impeded where it was withheld (Lk 9:5; 10:10; 3 Jn 9-10). Christian hospitality and support of churches to prisoners en route to *Rome was also a boon (Acts 27:3; 28:14; Ign. *Rom.* 5.1; Ign. *Smyrn.* 13.2). Later Christian instruction, however, called for believers carefully to discern between traveling Christian ministers and religious leeches (*Did.* 11.1-12.5).

1.4. Travel and Trade. Personal gain from business was the reason for much of the traffic of antiquity, and we have noted several NT indications of the conduct of business during the

course of travel. NT indications for Paul make it clear that, far from being the primary end of travel, trade facilitated more extensive travel and more effective witness (Acts 20:33-35; 1 Cor 9; 1 Thess 4:11; 2 Thess 3:6-10). Alone in a place, Paul worked at his trade; where ministry associates were present, Paul engaged in full-time witness (Acts 18:1-5).

It seems most probable that Paul's overland journeys were undertaken by foot. Given this, the recently popular notion of a Paul who weaves tent cloth made from goat's hair or linen, whatever its other problems, seems improbable owing to the size, weight and shape of looms in antiquity. Paul the maker or repairer of tents and other leather products, carrying his bag of tools (Hock), presents a more consistent and credible picture (see *DPL*, Tentmaking).

1.5. Travel and Letters. The purpose of the public post (*cursus publicus*), as organized and developed by Augustus, was swift official communication. Outside of influence or bribery, it was not possible to send civilian correspondence by this means. The usual resort of private persons of means was to household *slaves who served as letter carriers (*grammatophoroi, tabellarii*). In the interests of a more regular and extensive flow of communication, couriers could be pooled by households. When the distances were greater, the only recourse was to travelers who might deliver letters during the course of their own business (*P. Mich.* 8.490; *Sel. Pap.* 107, 151).

We have record of official correspondence concerning Paul that goes by military carriers (Acts 23:26-30; 25:26-27). For the rest, the NT record of Christian communication indicates in-house conveyance. The determinations of the apostolic council are sent to the Gentile believers of *Antioch, Syria and Cilicia via church delegates (Acts 15:22-23). Church couriers bring *letters to Paul (1 Cor 7:1), and he in turn sends letters by trusted believers and ministry associates (Rom 16:1-2; cf. 1 Cor 16:3; Eph 6:21-22; Phil 2:25-30; Col 4:7-9; Philem 12). Whether the book of Revelation is sent on its way by a visiting Christian courier or by some other traveler we do not know. The letter destinations (Rev 2-3), however, occur in a sequence that conforms to the clockwise route a traveler would otherwise normally be inclined to take.

The same pattern can be seen in the later church. Clement sends his letter to Corinth by the hands of a deputation of three mature believ-

ers (*1 Clem.* 63.3-4; 65.1). The Christian prisoner Ignatius sends off letters from Smyrna to the Ephesians (Ign. *Eph.* 20.1), Magnesians (Ign. *Magn.* 15.1), Trallians (Ign. *Trall.* 12.1; 13.1) and the Romans (Ign. *Rom.* 10.1, 3). From Troas, letters go out to the Philadelphians (Ign. *Phld.* 11.1), Smyrneans (Ign. *Smyrn.* 12.1) and Polycarp (Ign. *Pol.* 8.1). The couriers of these letters are probably the delegates of those churches who have come to see Ignatius (Ign. *Eph.* 2.1; Ign. *Magn.* 2.1; Ign. *Trall.* 1.1; Ign. *Rom.* 10.1). Because of a surprise sailing, Ignatius asks Polycarp to write further letters on his behalf and send them to churches on the road ahead of him (Ign. *Pol.* 8.1).

2. Travel by Water.

2.1. Sea of Galilee. Next to the Mediterranean, the most famous substantial body of water in the NT is the Sea of Galilee (= Gennesaret: Lk 5:1; = Tiberias: Jn 6:1; 21:1), which measures at its longest and widest 13 miles by 8 miles. The surrounding land produced grain crops as well as grapes, figs and vegetables, and there was a trade in these and other goods among the coastal populations and further abroad. Fish and the fishing industry, however, constituted its greater NT interest. Its seaport towns were the locales of much of Jesus' preaching, some of which was seaboard. The lake itself contained more than twenty species of fish in abundant supply, which were caught by methods little changed until recently (Nun). Small wonder that prominent among Jesus' first disciples were those connected with the fishing industry or that fishes and fishing figure in miracles and furnish illustrations for instruction and metaphors for mission.

The lake's geographic situation at the base of the Jordan Rift created atmospheric conditions resulting in sudden and frequent storms dangerous to watercraft. This fact is well illustrated in the notice of dangers the disciples experienced on the Sea of Galilee (Mt 8:24; Mk 4:37; Lk 8:23; Jn 6:18).

S. Wachsmann has described the 1986 excavation of an ancient vessel dug from the Galilean shore bed between the ancient sites of Gennesar and Magdala (Mt 15:39 = Tarichaea after the fish "preserving" industry there, Pliny *Nat. Hist.* 5.15; Josephus *Ant.* 20.8.4 §159; *J.W.* 2.13.2 §252; 3.10.1 §462). The ship's construction, artifacts found in situ and radio-carbon dating indicate a date somewhere between the

first century B.C. and the first century A.D. Measuring 26.5 feet long, 7.5 feet wide and 4.5 feet high, this ship was outfitted for both sailing and rowing. Estimates for the ship based upon a first-century A.D. Galilee mosaic, the writings of Josephus (*J.W.* 2.21.8 §§635-37; *Life* 32 §164; 33 §§168-69) and the NT (Mark 1:20) suggest a working crew of five—four rowers and a helmsman with oar-like quarter rudder—with room for additional passengers to a maximum of perhaps fifteen. This vessel would have been of the class that transported Jesus and the disciples (Mt 14:22; Mk 4:37; 6:45; 8:14; Lk 8:22; Jn 6:16, 19).

2.2. Trade, Travel and Shipwreck.

2.2.1. *The Travel Season.* As noted above (1.1) for overland traffic, Mediterranean travel was also generally subject to a seasonal ebb and flow. Ancient sources indicate a safe shipping season from May 27 to September 14; the period from March 10 to May 26 and from September 14 to November 11 were risky; November 11 to March 10 was dangerous (Vegetius *Renatus Epit. Rei. Milit.* 4.39; Pliny *Nat. Hist.* 2.47.122; Tacitus *Hist.* 4.81). The dangerous season was such because of storms and also less inclement weather that rendered accurate navigation impossible. The tendency in modern discussion to speak of shipping being forbidden by custom or law, however, must be measured against ancient urgencies and official inducements.

2.2.2. *Trade and Travel.* While Mediterranean sea traffic saw the transport of such cargoes as foodstuffs, building materials and metals, as well as various kinds of exotica, the key commodity of the Roman Empire was grain. Of the two grains most commonly known—barley and wheat—the latter was the preferred but more vulnerable and variable-yield crop (Rickman 1980b, 261). Shortages from crop failure or interruption of transport, especially to the city of Rome, had resulted in inflation and public disorder and did threaten political stability (Dio Cassius *Hist.* 55.26.2-3; Tacitus *Ann.* 2.87; 6.13; Suetonius *Augustus* 42; *Claudius* 18). The sufficient production and regular supply of grain at stable prices was, therefore, an imperial priority. Emperors gave significant personal and financial rewards to merchants and shipbuilders as inducements to continue the transport of grain even through the winter season (Suetonius *Claudius* 18-19; Tacitus *Ann.* 12.43; 13.51; cf. Dio Cassius *Hist.* 60.11). This strongly indicates a free merchant rather than official maritime fleet.

A significant proportion of Rome's grain came from the vast grain reserves of the imperial province of Egypt through the port city of *Alexandria. It is consistent with the patterns of supply and transport in antiquity that the prisoner Paul's passage to Rome is booked aboard Alexandrian grain carriers clearly risking the off season (Acts 27:9; 28:11).

The Alexandrian grain carrier *Isis*, with dimensions of 180 feet long, 45 feet wide and 43.5 feet from deck to lowest point in the hold and with an estimated grain capacity of 1,228 tons, was probably one of the largest. It had three masts and a veritable army of crew members (*Lucian Nav.* 5-6, 14). The first carrier *Josephus traveled aboard must as well have been large, having besides its cargo some 600 individuals aboard (*Life* 3 §15). Paul's ship was probably not an *Isis*-class carrier. Besides cargo, it carried 276 passengers (Acts 27:38), including a relatively small crew (Acts 27:30). It may have had a two-rather than three-mast configuration. Notice of the foresail and how it was used (Acts 27:15, 40), the dual oar-like rudders that were lashed to the hull (Acts 27:40) and the dropping of four stern anchors—implying that there were more elsewhere—(Acts 27:29-30) all compare well with what we know of such ships.

2.2.3. *Shipwreck.* The trip from Rome to Alexandria with favoring Etesian winds took between ten and twenty days; travel against those same winds more than doubled the return journey, calling for a course along the south coast of Asia Minor, then Crete, Malta and Sicily or perhaps up along the west coast of the Peloponnese before cutting across to Sicily. This corroborates the prisoner Paul's route by free merchant coastal trader and Alexandrian carriers (Acts 27).

Both ancient records (e.g., Josephus *Life* 3 §§14-16; Tacitus *Ann.* 15.18) and modern archaeology (Throckmorton, 60-61) confirm that maritime disasters were distressingly common. Paul's warning to the crew and owner of the first carrier (Acts 27:10) was the voice of experience (2 Cor 11:25). Peculiar challenges attached to carrying grain as a cargo in rough seas. If it was not sacked or binned in compartments, it could flow, creating sudden instabilities and pressures that threatened to breach the hull or capsize the boat. As a living cargo, it had to be kept both cool and dry. Wet grain swelled and could easily split the hull of a ship. The measures of Paul's

carrier crew and passengers to undergird the ship (Acts 27:17) and progressively empty it of cargo (Acts 27:18, 38) were all attempts at preserving hull integrity.

A decision concerning the location of Paul's shipwreck (whether traditional Malta [*Melite Africana*], Mljet [*Melite Illyrica*], or Kefallinia) must be based in part upon meteorological and nautical considerations. The *Eurakylon* reading at Acts 27:14 should be preferred, indicating not a squall but the fierce *gale* of the central Mediterranean winter that blows from the east northeast. The crew's fear of being driven southwest onto the African *Syrtis* (Acts 27:17) is consistent with this. That the ship was driven across the Adriatic (Acts 27:27) is not seriously problematic to the traditional interpretation, given the fluidity of the Adriatic's boundaries as noted in ancient descriptions. Mljet is too far north to count as a reasonable alternative. The Kefallinia theory gives no evidence that the island location was ever known in antiquity by the name *Milete*. Traditional Malta, therefore, continues to be the more probable shipwreck location (Musgrave, 19-32 for possible sites).

3. Travelogues and the New Testament Record.

The NT contains accounts of a singular message and in Acts how that message was carried across the empire. In the context of recent discussion, attention has focused upon several points where Luke's narrative shifts to first person plural description of Paul's travels. Do these "we" sections of Acts (16:10-17; 20:5-15; 21:1-18; 27:1-29; 28:1-16) represent (1) the author's eyewitness report; (2) the author's use of his own or someone else's literary material; or (3) a fictional creation based upon other ancient travel accounts (Porter, 546)?

Ancient travelogues, with which Acts has been compared, note routes taken, means of transport, sailing or stopover times, winds, weather and such. V. K. Robbins has argued from his analysis of many such documents that Luke's sudden resort to first person plural description reflects a literary convention typical of sea voyage accounts. His conclusion, however, has been seriously contested. A reassessment of the supposed parallels indicates that "there are first person and third person sea voyages in ancient literature, no passage is set in first person narration simply because it is a sea voyage, and there are no convincing parallels to the shifts from third person narration to first person nar-

ration in Acts" (Praeder 1987, 210). Narrowing the focus to compare Luke-Acts only with sea voyage accounts that have prefaces after the fashion of scientific writing (*Periplus of the Erythraean Sea* 20, 57; *Voyage of Hanno* 1-3) and the historical prefatory tradition (*Episodes from the Third Syrian War*; *Caesar B. Gall.* 5.11-13; *Josephus Life* 3 §§14-16) gives no comfort to the notion of an ancient literary form used to relate sea voyages or of its relevance to Acts (Porter, 554-58).

Ancient travelogues undoubtedly furnish much valuable information that continues to illuminate many aspects of Luke's account of Paul's travels and troubles. However, in the absence of more certain comparisons for genre, there may be greater promise in an exploration of the contextual connections, patterns and literary style of the "we" passages in Acts for what they might disclose (Porter, 561-73).

TREATISE OF SHEM

The *Treatise of Shem* is preserved in only one manuscript, a fifteenth-century paper Syriac manuscript in the John Rylands University Library of Manchester. A scribe called the document the *Treatise of Shem*. Extremely cautious scholars may want to avoid the study of this manuscript, since it is preserved in no other manuscript and is not mentioned in ancient lists of antilegomena or *pseudepigrapha. The careful historian knows, however, that often an ancient work is lost or preserved in only a small fragment or merely in one quotation by an early scholar.

1. Provenance

2. Original Language

3. Date

4. Theology

5. Significance

6. Character

1. Provenance.

There is no reason to doubt that the *Treatise of Shem* was composed in Egypt. The author seems to be a Jew who attributed the work to Shem, the oldest son of Noah (cf. Gen 10:21, *Jub.* 4:33; 8:12-30; *T. Sim.* 6:5; *Sir* 49:16). Passover, the major Jewish *festival that commemorates the Jewish release from bondage in Egypt, is mentioned (*Tr. Shem* 1:8; 6:12). The city *Alexandria is mentioned (*Tr. Shem.* 4:3; 6:14), the river Nile is named (*Tr. Shem.* 1-8, 12) and irrigation is noted (*Tr. Shem.* 1:4; 10:18). The crops mentioned, especially wheat, barley and peas, are typical of Egypt. The seaport founded by *Alexander the Great and bearing his name is most likely the city in which or near which this Jewish pseudepigraphon was composed, since the work is replete with references to the sea, the sea-coast, fishing and ships.

2. Original Language.

The extant Syriac seems to reflect a Semitic original. Many Semitisms seem original, and the personal names are defined according to the Semitic alphabet. A putative Greek original, one could argue, may be evident in some Greek loanwords (esp. *harmonia*, "well-ordered").

3. Date.

The document was most likely composed sometime after one of the greatest battles in history: when Octavian (Augustus; see Roman Emperors) and *Rome defeated Marc Antony and Cleopatra (and Egypt) at Actium in 31 B.C. After that date Egypt belonged to Rome, and grain was shipped from Alexandria to Ostia Antica, the ancient port of Rome.

In 34 B.C. there was a celebration in Alexandria, not in Rome as was customary; it was over Antony's defeat of the Parthians. This event appears reflected in *Treatise of Shem* 3:6-7. Also in 34 B.C. Cleopatra obtained permission to rule over Palestine; this seems preserved in *Treatise of Shem* 12:4, "And Egypt [will rule] over Palestine." Probably dating prior to 31 B.C. is the following accurate assessment: "And the king of the Romans will not remain in one place . . . a great

war and misery [will occur] on all the earth, and especially in the land of Egypt" (*Tr. Shem*. 1:5-9). The battle of Actium in 31 B.C. seems to have shaped *Treatise of Shem* 6:13-17: "And the king will strive with a king and will slay him. And Alexandria will be lost. . . . And many ships will be wrecked." The reference to "the king" seems to denote a Roman emperor, hence Octavian. According to Virgil (*Fourth Eclogue* 19-22) and other ancient sources, Octavian was honored as the one who put an end to war.

4. Theology.

The document is an astrological work. It is a calendar; that is, the author explains the quality of the year according to the astrological sign in which the year begins. One can assign to the work twelve chapters, since there are twelve signs of the zodiac. The thought proceeds counterclockwise, from Aries to Capricorn (except Pisces precedes Aquarius, probably due to a scribe's error in copying). The worst year comes at the beginning of the work with Aries, and the best year culminates with Pisces. Thus one may discern the optimism of early Jewish *apocalyptic eschatology, and there seems to be a pro-Roman bias in some verses (*Tr. Shem*. 12:9). The author reflects on the impossible having happened: Egypt with far superior armed forces was defeated by only part of the Roman army; only determinism clarified by astrology can explain such a fate. Of course, the work is full of ideas that contradict much of the theology canonized in the OT (or Tanakh); for example, rain depends on the zodiac and not God (see Amos 4:7; Zech 10:1, 1 Kings 18:1, 41-46; cf. *Jub.* 12).

5. Significance.

If the author is a contemporary of the battle of Actium, then this work is a significant reaction to a great turning point in Western culture—actually a significant nonturning point—Europe, America and the Western world are based on Roman law and customs. If Antony and Cleopatra had won the battle, then the Middle East

and Egyptian law and customs might have been the basis of Western culture. Also, the evidence for astrological thinking by Jews is now confirmed to be much earlier than the Middle Ages and clearly antedates the beginnings of Christianity. We know this now for certain, thanks to the recovery of the *Treatise of Shem* and astrological writings found among the *Dead Sea Scrolls (*Horoscope* [4Q186]; see Thunder Text [4Q318]). Hence we have literary evidence of Jewish interest in astrology, and that helps the interpretation of astrological symbols in Matthew perhaps and Revelation. Finally, the precession of the equinoxes—the beginning of the year in spring moved from Aries to Pisces—may be also reflected in this astrological work.

6. Character.

An excerpt helps one understand this composition:

When the year begins in Aquarius, everyone whose name contains a Lamadh or Pe [will] become sick or utterly ruined by marauders. And in the beginning of the year rain will increase. And the Nile will overflow its full rate. And Egypt [will rule] over Palestine. (*Tr. Shem* 12:1-4)

VICE AND VIRTUE LISTS

The recording of ethical lists in the *Hellenistic world extends formally from the Homeric era yet comes into full bloom among Socratic and post-Socratic moral *philosophers, notably the Stoa. Because of interaction between *Stoic and Christian discourse in the first century, vice and virtue lists serve a practical *rhetorical function as a conventional method of moral instruction in both. This is true even when the two life views diverge radically in terms of the means and the end of the moral life. In the hands of the writers of the NT, the ethical catalog constitutes an important part of early Christian paraenesis.

1. The Ethical Catalog in Antiquity
2. The Ethical Catalog as a Pedagogical Device in the Hellenistic World
3. The Ethical Catalog in Hellenistic Jewish Literature
4. The Ethical Catalog in the New Testament

1. The Ethical Catalog in Antiquity.

The grouping of ethical values into lists surfaces in diverse cultures of antiquity, from Iran and India to Egypt and Mediterranean cultures. To the extent that religion as practiced by ancient civilizations is characterized by the striving and performing of its adherents, the function of the ethical list can be seen as a natural extension. Enumerating behavior or dispositions to be emulated or avoided can serve a wide array of purposes—both polemical and nonpolemical, prescriptive and descriptive. Ethical lists in the Hellenistic world during the Homeric era occur in diverse literary and nonliterary contexts, as the work of Vögtle has demonstrated. Numerous *inscriptions, frequently at gravesites (*see* Burial)

and memorials, list virtues in honor of military generals, officeholders, doctors and judges. In Hesiod, one encounters lists of transgressions of the children against parents and transgressions against the gods (Hesiod *Theog.* 77-79, 240-64). Aristophanes utilizes the ethical catalog as part of a satire in a parody of the Eleusinian mysteries (Aristophanes *Batr.* 5.145). And *Seneca employs ethical catalogs to describe, with considerable flair, his disgust with the banal trivialities of the theater as well as how fellow Romans indulge in the discovery of new vices (Seneca *Brev. Vit.* 10.4).

2. The Ethical Catalog as a Pedagogical Device in the Hellenistic World.

During the Socratic era, pre-Socratic traces of paraenetic listing blossom both in the hands of academic philosophers and on a popular level among moralists of the day. Philosophical reflection on the theoretical basis for *aretē* ("virtue") moves in the direction of its concrete and practical expression. The ethical list has an epideictic function; that is, as a form of speech it is intended to instill praise or shame (*see* Honor and Shame) in the listener or reader. The ethical list, by which the ethical life is organized, accented and stereotyped, standardizes a type of attitude or behavior and thus becomes a common feature in the paraenetic tradition.

2.1. Socratic-Platonic Schematization of Virtue. Although the virtues *andreia* ("courage"), *phronēsis/sophia* ("wisdom"), *sōphrosynē* ("prudence") and *dikaiosynē* ("justice") individually play a central role in the ethical teaching of Socrates, schematization first presses to the fore in *Plato, who is the first to designate four "cardinal" *aretai*. (Formal presentation of the cardinal virtues appears initially in Plato's *Republic*, even when similar formulations of the moral ideal predate this by more than a century—for exam-

ple, in Aeschylus [*Sept. c. Theb.* 610]). Xenophon writes profusely on ethical topics—among these, order of the home, healthy relationships, the treatment of *slaves, political and military obligations—and yet is not enamored of the fourfold schema. In *Nicomachean Ethics*, *Aristotle distinguishes between ethical, political and social virtues on the one hand and intellectual virtues on the other. For the most part Aristotle resists the fourfold schema that had arisen largely out of the Pythagorean love of the number four, considered to be symbolic of life's completeness.

2.2. *Stoic Schematization of Vice and Virtue.* The prototypical use of ethical catalogs begins with Zeno (340-265 B.C.), founder of the Stoa, and is expanded under the Stoic teachers who follow. The early masters, notably Chrysippus (280-210 B.C.), tend to use "virtue" and "knowledge" (*epistēmē*) interchangeably, a practice that is significant for the Stoic understanding of ethical discourse. Stoic definitions of the cardinal virtues illustrate this conceptualization: justice is knowledge of what is due or right; temperance is knowledge of what to choose or not to choose; prudence is knowledge of what to do or not do in a given situation; and courage is knowledge of what should and should not be feared.

Stoic moral doctrine mirrors both a return to and an expansion of the tetradic schema that characterized Socratic and Platonic ethical teaching. Organization serves an important recall function in Stoic pedagogy. Proceeding from the four cardinal virtues, Stoic teaching derives multiple subsets of virtues. Chrysippus, for example, divides the *aretai* into two groups of cardinal (*prōtai*) and subordinate (*hypotetagmenai*) virtues, with a lengthy list of subordinates thereto attached. One of the most comprehensive catalogs of virtues comes from the Stoic Andronicus, who compiled the writings of his master Chrysippus and whose list contains no fewer than twenty *aretai* (SVF 3.64). All in all, the tetradic schema of organizing vice and virtue for didactic purposes occurs more frequently in earlier Stoic lists, with later teachers typically dividing cardinal traits into subsets. We encounter in Andronicus a bewildering array of variety and detail—he lists twenty-seven kinds of *epithymia* ("lust"), twenty-seven kinds of *lypē* ("sorrow"), thirteen kinds of *phobos* ("fear") and five kinds of *hēdonē* ("pleasure") (SVF 3.397, 401, 409, 414), although his list pales by comparison with that of *Philo, who

identifies 147 vices to personify the "friends" of the *philēdonos*, the hedonist (*Philo Sacr.* 32).

The ethical list, which concretizes the moral struggle of the Stoic life view, is not merely confined to philosophical discourse. It appears as well in the poets—relatively frequently in Virgil (e.g., *Aen.* 6.732) and Horace (*Ep.* 1.1.33-40), for example—and in popular literature. The more popularized form of vice and virtue lists, while sharing a common vocabulary with Stoic philosophers, loses the tighter schematization that had characterized the scholastics. Those preaching moral uplift to the masses expand the form of the ethical catalog to include new concepts, particularly additional vices. These lists are far from the convoluted philosophical constructs that were advanced by the academic philosophers. People, upon hearing and reflecting, saw themselves in these lists—whether by vice or by virtue. Practical needs of the masses encouraged the use of ethical lists in a popular format.

As a rule, Stoic ethical catalogs do not possess a rigid hierarchy of virtues so as to suggest a moral progression leading to an ethical climax. All virtues stand in close connection to each other; all constitute a natural unity. No particular order or arrangement of virtues or vices came to typify popular usage, although paronomasia is frequently achieved through the word order. Stoic ethical lists were not intended to be all-inclusive, and the presence or absence of particular features in a list reflects the values of the author (Malherbe).

To the Stoic mind, where there exists an antithesis of one virtue, the same necessarily applies to others. For example, the health of one's soul suggests the possibility of psychological sickness. Similarly, the experience of wisdom points to folly; contentment, anxiety; brotherly kindness, enmity; and so on. Just as a virtue can be standardized, so can the corresponding vice.

The *Sitz im Leben* of the dualistic schema is generally agreed to be the propaganda of the moral philosophers. Accordingly, those heeding their advice were considered wise; those casting it aside, foolish. This dualism allows easy incorporation into Hellenistic-Jewish as well as NT literature. In many respects, a conversion to Judeo-Christian faith is conceived of in terms not unlike a conversion to the wisdom of philosophy. Consequently, the ethical list has a useful role in Hellenistic Jewish and early Christian postconversion paraenesis. The consensus of

classical scholarship is that NT ethical catalogs in form and function derive from Hellenistic usage. Notwithstanding the views of D. Schroeder, who believes the NT catalogs mirror Israel's ethical dualism in the Day-of-the-Lord expectation and Deuteronomic blessings and curses, and more recently R. P. Martin, early Christian appropriation of Stoic categories in the NT is abundant, commensurate with and reflective of Stoic-Christian interaction in the first century (Zeller; Charles 1997).

An impressive array of literature provides a window into the world of ethical discourse roughly contemporary with the early Christians. By its hortatory character, molded against the backdrop of Greco-Roman culture, this served as ethical "propaganda through the living word with personal [i.e., practical] effects" (Wendland, 84). Exemplary writings that make abundant use of the ethical catalog are those of *Philo (c. 20 B.C.-A.D. 50), *Seneca (c. 4 B.C.-A.D. 65), *Epictetus (c. A.D. 50-130), *Musonius Rufus (c. A.D. 65-80), Dio Chrysostom (c. A.D. 40-120), *Plutarch (A.D. 50-120) Philostratus (late second century A.D.) and Diogenes Laertius (third century A.D.).

3. The Ethical Catalog in Hellenistic Jewish Literature.

While vice and virtue lists in the narrower sense do not appear in the OT, the tradition of ethical catalogs finds a secure place in the literature of Hellenistic *Judaism. Not infrequently these are vice catalogs that are in some way related to sins delineated in the Decalogue. Because Judaism of the intertestamental period is situated in Hellenistic culture, touch points with Stoic philosophy are frequently detected. In reading this literature one senses both polemical and non-polemical interaction between Jewish and Stoic worldviews.

3.1. Philo. A. Vögtle's description of *Philo reflects an individual who is at home in both worlds: "By the sheer number and length of virtue and vice lists, Philo seems to have achieved the measure of the Stoic popular philosophers" (107). This impression is confirmed by a survey of Philonic literature (e.g., *Philo Sacr.* 20-27; *Leg. All.* 1.19.56; 2.23.24; *Spec. Leg.* 3.63). Philo is particularly fond of the classical fourfold schema, frequently alluding to the four cardinal passions—lust, sorrow, greed and fear (e.g., *Philo Praem. Poen.* 419; *Exsecr.* 159-60). The number four is so important to him that the four head-

waters of the river flowing through Eden (Gen 2:8-14) point to four cardinal virtues (*Philo Leg. All.* 1.19.56; 2.23.24).

While Philo is anchored to the ethical teaching of the OT, he always manages to return to the Stoic emphasis on struggling against vice. From the standpoint of faith, Philo views obedience as important because it produces virtue, just as disobedience and unbelief have a downward ethical trajectory. Stoic categories and OT ethics are able to stand side by side. Philo exemplifies the extent of Stoic influence during the last two centuries B.C. and through the first century A.D. He demonstrates graphically how religious truth could be clothed in relevant literary and philosophical categories of the day, even when Philonic allegorizing may seem to have overextended itself in its attempts to reconcile Hellenistic moral philosophy and the OT.

3.2. The Wisdom of Solomon. The *Wisdom of Solomon is another relevant example of Hellenistic influence on Judaism. In this work the reader encounters the four cardinal virtues, whose tutor is said to be the wisdom of God (*Wis* 8:4, 7). Correlatively, serving false gods is the equivalent of ignorance (*agnoia*) and must be countered with the gnosis of God (*Wis* 14:22). In *Wisdom of Solomon* 14:25-26 a lengthy list of vices proceeds characterizes the life that is absent the knowledge of God; it manifests "blood and murder, theft and fraud, depravity, faithlessness, disorder, perjury, suppressing the good, ingratitude, soulful defilement, sexual confusion, marital disorder, adultery and licentiousness." Stoic influence in *Wisdom* can also be seen in the admonitions toward reflection (e.g., *Wis* 4:11; 12:10). The author is not concerned, however, to correct the sins he catalogs; rather, he is content merely to list the depths of depravity to which Gentiles have descended.

Although ethical lists appear in the writings of the *Qumran community, Qumran ethical teaching is molded primarily by the dualism of the righteous and unrighteous, light and darkness—characteristic Qumran theology—and less by Hellenistic literary-rhetorical patterns of vice and virtue (cf. however Wibbing and Kamlah). The **Rule of the Community* commends humility, patience, charity, goodness, understanding, intelligence, wisdom and a spirit of discernment (*1QS* 4:3-6) while condemning greed, wickedness and lies, haughtiness and pride, falseness and deceit, cruelty and ill temper, folly

and insolence, lustful deeds and lewdness, blindness of eye and dullness of ear, stiffness of neck and heaviness of heart (1QS 4:9-11).

4. The Ethical Catalog in the New Testament.

4.1. *The Logic and Language of Virtue and Vice.*

The use of the ethical catalog by NT writers derives from its function in Hellenistic and Jewish literature. As with Judaism, the theological motivation behind its usage is the dualism in which the righteous and unrighteous are typified. In the NT, both strands—Hellenistic form and Jewish theological assumptions—merge in the Christian paraenetic tradition (Charles 1997).

Ethical catalogs appearing in the NT take on two syntactical arrangements, as identified by A. Vögtle and S. Wibbing. They can be polysyndetic, such as the list in 1 Corinthians 6:9-10, where members are bound together rhetorically through the repetition of conjunctions in close succession ("Do not be deceived; neither fornicators nor idolators nor adulterers nor prostitutes nor sodomites nor thieves nor greedy persons nor drunkards nor revilers nor robbers will inherit the kingdom of God"); and they can be asyndetic, such as in Galatians 5:22-23a, where no connective particle is used ("But the fruit of the Spirit consists of love, joy, peace, patience, kindness, generosity, faithfulness, humility and self-control"). The lists distributed throughout the NT are fairly evenly divided between polysyndetic and asyndetic forms. D. E. Aune detects a third category, "amplified" lists, which are more discursive in form, and cites 1 Thessalonians 4:3-7 as an example.

Thirteen virtue lists appear in the NT, all but two of which are found in epistles: 2 Corinthians 6:6-8; Galatians 5:22-23; Ephesians 4:32; 5:9; Philippians 4:8; Colossians 3:12; 1 Timothy 4:12; 6:11; 2 Timothy 2:22; 3:10; James 3:17; 1 Peter 3:8; and 2 Peter 1:5-7. This listing excludes 1 Corinthians 13, which concerns the theological virtues and contains particular features of the ethical catalog. Twenty-three vice lists are found in the NT, all but two of which also occur in epistles: Matthew 15:19; Mark 7:21-22; Romans 1:29-31; 13:13; 1 Corinthians 5:10-11; 6:9-10; 2 Corinthians 6:9-10; 12:20-21; Galatians 5:19-21; Ephesians 4:31; 5:3-5; Colossians 3:5, 8; 1 Timothy 1:9-10; 2 Timothy 3:2-5; Titus 3:3; James 3:15; 1 Peter 2:1; 4:3, 15; Revelation 9:21; 21:8; 22:15 (see *DPL* and *DLNTD*, Virtues and Vices).

The Pastoral Epistles contain the densest us-

age of ethical lists in the NT, all of which suggest a social location of the audience not unlike that of 2 Peter, in which the foundations of morality are being called into question. S. C. Mott calls attention to the fact that adverb forms of three of the four Platonic cardinal virtues—prudence (*sōphrosynē*), uprightness (*dikaiosynē*) and piety (*eusebeia*) appear together in Titus 2:12 with the verb *paideuein* ("educate" or "train"). Seen thusly, the ethical end of salvation, at the least, manifests the goal of virtue posited by Hellenistic moral philosophy (see also the vocabulary of 2 Tim 3:16: *pros paideian tēn en dikaiosynē*, "training in righteousness"). N. J. McElveny identifies in the Pastorals the presence of five basic elements as part of a literary strategy: references to the law, a background of pagan idolatry, moral dualism, transfer of Hellenistic conceptions of vice and virtue to the Christian context and *eschatological punishment.

4.2. *New Testament Vice Lists.* Despite the variety found in the ethical catalogs of the NT, there appears to be an "early Christian paraenetic formula" that characterizes numerous NT vice lists. Those sharing this schema have the function of reminding the readers of what characterized their former life; thus Paul to the Corinthians: "And this is what some of you used to be" (1 Cor 6:11a; cf. Rom 13:13; Tit 3:3; 1 Pet 4:3). Furthermore, idolatry (*eidōlōlatría*) and sexual impurity (*epithymia*, *porneia*, *akatharsia* or *aselgeia*) appear together frequently in NT vice lists (e.g., 1 Cor 6:9-10; Gal 5:19-21; Eph 5:5; Col 3:5; 1 Pet 4:3; Rev 21:8; 22:15). This may well correspond to the twin stereotypes of pleasure (*hēdonē*) and lust (*epithymia*) that frequently appear in pagan lists. There is reason to believe, as B. S. Easton (4-5) suggests, that the Hellenistic Jewish literary form of denouncing Gentile practice via lists of grossly depraved deeds was adopted by the NT writers, for whom it served a useful purpose.

A regularly appearing feature in the Christian paraenetic tradition is the formula *apotithēmi* ("put off") plus a list of vices. This pattern occurs in Romans 13:13; Ephesians 4:22 (again in 4:25); Colossians 3:8 and 1 Peter 2:1.

4.3. *New Testament Virtue Lists.* Fewer conventional formulas accompany virtue lists than vice lists in the NT. This may derive from the fact that for Christian writers righteousness rather than moral goodness per se is essential. The NT's most noteworthy listing of virtues, which has not been listed as an ethical catalog per se,

is the recording of beatitudes in Matthew 5, with which none of the other NT lists share any affinity. On the whole, NT virtue lists both bear similarity to and diverge from their pagan counterparts. For example, the qualities of an elder listed in 1 Timothy 3 are reminiscent of qualities necessary of a military general; in the same vein, the lists in Philippians 4:8; Titus 1:7-8; 3:1-2 and 1 Timothy 3:2-3 diverge little from pagan usage (Easton, 11). The opposite, however, can be said of the virtue lists in Galatians 5:22-23 and 1 Timothy 6:1.

4.4. The Form and Function of New Testament Ethical Lists. Vice and virtue lists in the NT function paraenetically in different contexts. They may be used for the purpose of antithesis (e.g., Gal 5:19-23 and Jas 3:13-18), contrast (e.g., Tit 3:1-7), instruction (e.g., 2 Pet 1:5-7) or polemics (e.g., 1 Tim 1:9-10; 6:3-5; 2 Tim 3:2-5). Although these lists resist any attempts at being reduced to a single *Urkatolog* or set pattern, the rhetorical effectiveness of ethical catalogs lies in the fact that content is emphasized by means of repetition or cadence. Occasionally, though not necessarily, alliteration or assonance and inclusio enhance their descriptions. A unified structure is hard to detect, and rhetorical motivation is not always apparent, with the notable exceptions of Philippians 4:8 and 2 Peter 1:5-7. The latter, unlike other catalogs of virtue in the NT, depicts a natural progression that is rooted initially in faith and finds its climax in Christian love. The reader may assume that the progression and climax of virtues in 2 Peter 1 is mirroring a concrete situation in which there has been a fundamental ethical breakdown (Charles 1997, 44-98, 128-58). In order to address this crisis, the writer is utilizing a standard hortatory device to underscore the necessity of the moral life as proof of one's profession both to the Christian community and to the world (2 Pet 1:10; 3:11).

Given the considerable variety with which virtue catalogs appear in Jewish and early Christian literature, the repetition of particular virtues in NT and subapostolic lists may point to an additional function. The inclusion of *pistis* ("faith"), *agapē* ("love") and *hypomonē*; ("endurance") in 2 Peter 1:5; Revelation 2:19; *Barnabas* 2.2ff. and 1 *Clement* 62.2 are evidence to Vögtle that virtue catalogs may have acquired in the apostolic paraenetic tradition a catechetical function (54; see also 1 *Clem.* 64; *Herm. Man.* 8.9; *Ign. Eph.* 14.1). That Christian catechesis may have

been preserved in such a format is not implausible; a catalogical format is faintly suggested by confessions of faith such as are found in 1 Timothy 3:16 and 2 Timothy 2:11-13. Irrespective of their precise function, for the writers of the NT virtues are no artificial mechanism. Rather, they are a natural expression of one's organic union with Christ, indeed the fruit of divine grace.

VINEYARD TEXT (4Q500)

Not one complete sentence survives, yet this text from Qumran makes a significant contribution to our understanding of one of Jesus' best-known parables. Jesus' parable of the wicked vineyard tenants (Mk 12:1-12 par.) has occasioned much debate, especially with reference to the question of the parable's original setting and what bearing it may have on Jesus' self-understanding. Some critics have maintained that the antipriestly orientation of the parable (as seen esp. in v. 12) does not reflect the early Palestinian setting of Jesus but the later, allegorizing tendency of the church, perhaps even the Greek-speaking church (in view of the *Septuagint form of the concluding quotation of Ps 118:22-23 in vv. 10-11).

In separate publications B. D. Chilton and C. A. Evans (1984) argued that the interpretive framework of the *Aramaic paraphrase of Isaiah 5:1-7, which narrows the critical focus of Isaiah's Song of the Vineyard from the nation in general to that of the *temple establishment (as seen esp. in vv. 2 and 5), lies behind Jesus' creative introduction of the parable's tenant "farmers," who are understood to play the role of the ruling *priests.

Objections that the Aramaic paraphrase of Isaiah is too late to be of use in establishing the meaning of a parable of Jesus have been answered by 4Q500, which also presupposes an interpretive framework wherein the Lord's vineyard is understood particularly to be in reference to the temple establishment. The six extant lines read: "2 . . . your baca trees will blossom and . . . 3 . . . a wine vat [bu]ilt among stones . . . 4 . . . to the gate of the holy height . . . 5 . . . your planting and the streams of your glory . . . 6 . . . the branches of your delights . . . 7 your vine[yard . . .]" Line 3 points unmistakably to Isaiah 5:1-7 and enables the reconstruction of

"vineyard" in line 7. Line 4 ("holy height") coheres with the Aramaic's "high hill" (*Tg. Isa.* 5:1), while line 5 ("streams of your glory") coheres with rabbinic interpretation of Isaiah 5:1-2 (cf. *t. Sukk.* 3:15), which also explicitly identifies the "tower" and "wine vat" of Isaiah's song as "temple" and "altar" respectively (cf. *t. Me'il.* 1:16). These points of exegetical and thematic coherence between the Isaiah targum and rabbinic exegesis, on the one hand, and 4Q500, on the other, were first observed by J. M. Baumgarten and have been supported in subsequent research (esp. Brooke; cf. Evans 1999).

The sophisticated exegetical framework, which presupposes Aramaic Isaiah and which also coheres with Aramaic Psalm 118:22 ("the boy whom the builders rejected is worthy to become king and ruler"), is more easily explained as the creative and skillful work of Jesus rather than the later church, whose tendency was to make formal quotations of Scripture conform to the Septuagint. The parable of the wicked tenants in all probability reflects accurately Jesus' critical stance over against the ruling priests and at the same time provides important indirect evidence that Jesus viewed himself as the beloved son of the vineyard's lord, that is, as God's Son.

VISIONS OF AMRAM (4Q543-548)

The *Visions of Amram* is partly preserved in five or six very fragmentary copies from Qumran Cave 4 (4Q543-548), allowing only a disjointed impression of this important composition. It receives its title from the introduction, which survives intact: "A copy of the book of the words of the visions of Amram, son of Qahat, son of Levi:

all[that] he revealed to his sons and that he commanded them on the day of [his] dea[th], at the age of 136 which is the age of his death, [in] the year 152 of the ex[i]le of [I]srael in Egypt."

1. Content and Themes

2. Date and Composition

1. Content and Themes.

Although the content can be described as *apocalyptic, overall it belongs to the genre of patriarchal testament: Amram delivers in the first person a deathbed speech and blessing to his sons, presumably *Moses and Aaron, and his daughter, Miriam. Amram describes his journey with his father Qahat to build the tombs of the patriarchs in Hebron. For forty-one years he was separated from his wife and prevented from returning to Egypt because of a war between Egypt, Canaan and Philistia, a story also mentioned in *Jubilees* 46:10. While in Hebron he received a vision, which he recounts. He saw two angelic beings, one evil and the other good. Between them they control all of humanity, and they were disputing to whom Amram would belong. Amram learned that the first of these two spirits is called Melkiresha and rules over darkness. The other rules over light and the sons of light; it is a safe assumption that this being is called Melchizedek, who is regarded as a dominant angelic personage in the **Melchizedek* text from Qumran Cave 11. If so, *Visions of Amram* is probably the earliest known witness to Melchizedek as a heavenly figure (see van der Woude) and thus relevant as potential background to the Melchizedek tradition in Hebrews 7. Since the good angel mentions that he has three names (4Q544 frag. 3), it is plausible that the opposing leaders of the supernatural world are Michael/Prince of light/Melchizedek versus *Belial/Prince of Darkness/Melkiresha (Milik; Puech).

Visions of Amram is also similar to the *Qumran *Melchizedek* text in its conception of the end of time. All people return to their spiritual source: the sons of light are destined for light and the sons of darkness to darkness and annihilation. The priestly concern of the text is well illustrated by the elevation of Aaron from his biblical role as "mouth of Moses" to "mouth of God" and the "angel of God." Along with the **Testament of Qahat*, the *Visions of Amram* seems to have been inspired by the *Testament of Levi* (see Testaments of the Twelve Patriarchs), and

J. T. Milik (103) argues that the three works formed an ancient trilogy of Aramaic testamentary writings about the fathers of the priestly lineage. He suggests that the three later circulated in Greek and/or Latin and were known among the early Christians: the three are referred to in *Apostolic Constitutions* (6:16) as "apocryphal books of the three patriarchs," and the *Visions of Amram* was cited by Origen and referred to in the *Apostolic Constitutions* and other Christian writings as a work about the judgment of Abraham.

Visions of Amram contains an important early attestation to the existence of a *midrashic solution to the chronology of the exile. Both the 400 years of Genesis 15:13 and the 430 years of Exodus 12:40 in the Masoretic Text are much too long for the period of stay in Egypt. The Samaritan Pentateuch and the *Septuagint calculate the 430 years as beginning with Abraham's sojourn in Canaan, and this general scheme is also assumed in *Jubilees*, *Testament of Levi*, *Pseudo-Philo, Galatians 3:16-17 and *Josephus. The statement at the beginning of *Visions of Amram* that Amram died aged 136 (agreeing with the Samaritan Pentateuch and the Septuagint Alexandrinus against Exodus 6:20 in the Masoretic Text, which reads 137 years) in the "year 152 of the ex[i]le of [I]srael in Egypt" must also presuppose the short exile (probably 215 years), or Moses would have been born two centuries after the death of his father.

2. Date and Composition.

The oldest copy of this work (*Visions of Amram*^b) is dated on the basis of paleography to the early *Hasmonean period (Milik), and so the work must have been produced no later than about the middle of the second century B.C. It may have been used by *Jubilees* (*Jub.* 46:6—47:9; Milik) and Jude (*Jude* 9; Puech). Although *Visions of Amram* displays the dualistic theology characteristic of the Qumran sect, both the early date and the apparent mention of Amram marrying his daughter Miriam to her uncle—niece marriage is forbidden in the **Damascus Document* (CD 4:7-11) suggest that it should be regarded as a pre-Qumran composition. There is no evidence that it was originally composed in Hebrew.

WAR SCROLL (1QM) AND RELATED TEXTS

The Qumran *War Scroll* and its related texts envision a coming battle of epic proportions and lay down the rules for preparation for this battle and for conducting the battle itself.

1. Description of the Manuscript Evidence
2. Genre
3. Contents
4. Important Issues for New Testament Background

1. Description of the Manuscript Evidence.

1.1. Cave 1. One of the most important manuscripts discovered in 1947 by the Bedouin in Qumran Cave 1 was a text that has become known as the *War Scroll* (1QM). Acquired by E. L. Sukenik of the Hebrew University and published (posthumously) in 1955, it is currently on display at the Shrine of the Book in Jerusalem. Stretching nearly nineteen columns (with a few letters of a twentieth column), and lacking only a few lines of the bottom edge and final columns, it is one of the most complete manuscripts of the nearly nine hundred to come out of the eleven caves in the cliffs at the northwest corner of the Dead Sea. It describes in some detail a war at the end of time between the "Children of Light" and the "Children of Darkness," a war whose individual battles are at times lost to the forces of evil but whose final victorious outcome is never in question.

1.2. Cave 4. Nearly five years after the first find, six additional manuscripts of the *War Scroll* (4Q491-496) were discovered among the thousands of fragments in Cave 4. Important as this second discovery was to demonstrate a link between Caves 1 and 4 and to hint at a process of development in the form of the work, the very fragmentary Cave 4 manuscripts added little of importance to the reconstruction of the Cave 1

text. However, in addition to these "copies," a significant new manuscript came to light from Cave 4 which details the events leading up to the final battle, complete with a victorious Davidic Messiah. This text, called the *War Rule* (4Q285), was first published in the popular press in the fall of 1991 and imprecisely entitled "Pierced Messiah Text," due to the mistaken impression that it contained a description of a suffering messiah. Another copy of this important manuscript also turned up in 1956 among the fragments of Cave 11, the last cave to be discovered. It may be that these two new manuscripts actually supply the missing columns at the end of the manuscript from Cave 1—the language and subject matter is virtually identical—but there is no overlapping text to make this suggestion more than conjecture.

2. Genre.

2.1. Apocalyptic. Given the general description of its contents, it is easy to understand why from the first days of examination the *War Scroll* took on the role of the Dead Sea Scroll version of the NT book of Revelation. Generically, therefore, it was often described as an example of apocalyptic literature, a type of literature which is epitomized by the book of Revelation. With a fuller understanding of the nature of apocalyptic literature there is now some doubt as to the accuracy of this description (Collins). The *War Scroll* appears to lack many of the characteristic elements that are expected in apocalyptic literature. It is wanting in heavenly interpreters and tours, which are so prominent in other examples of Jewish apocalyptic (Ezek 40:3-4; Dan 8:15-17). There are no image-rich scenes of animals, rivers, mountains and stars, which elsewhere characterize the special-effects nature of the apocalypse (Dan 8:2-14; Zech 6:1-7).

2.2. Apocalyptic Worldview. The *War Scroll* does,

however, exhibit one critical character of the apocalypse. It appears to have purposed, at least in part, to communicate a message of hope: in the face of perverse evil, the Children of Light are encouraged to persevere to the end. God was understood to be preparing to intervene and bring a permanent solution for the problem of evil. Perhaps more appropriate is the conclusion that the *War Scroll* exhibits the characteristics of an apocalyptic worldview rather than apocalyptic literature. In this, the *War Scroll* and the Dead Sea Scrolls in general prefigured the NT by understanding that (1) life on earth is influenced by supernatural beings—both good and evil, (2) God has charted the course of history in advance, and (3) there was an impending judgment to punish the wicked and reward the good (Collins).

3. Contents.

3.1. Rule. As seen in the following outline, the main purpose of the *War Scroll* was not so much to reveal what was to happen at the end of the age, as it was to inform of proper actions as the end drew near. In this, it fits more comfortably in the genre of *sevek*, or "rule book," than it does apocalyptic. This type of literature was quite prevalent among the scroll caches and is perhaps best illustrated in the important *Rule of the Community* (1QS), which was also found in Cave 1. The following outline clearly reveals that the *War Scroll* could more accurately be called the *Rule of War*.

- I. The Rule of Eschatological War (1:1—2:14)
- II. The Rule of the Battle Trumpets (2:16—3:11)
- III. The Rule of the Banners (3:13—4:17)
- IV. The Rule of the Messiah's Shield (4:18—5:2)
- V. The Rule for Operational Matters (5:3—9:18)
- VI. Battle Liturgy (9:20—16:2)
- VII. The Rule of the Seven Battles (16:3—18:8)
- VIII. Victory Liturgy (18:10—19:14)

3.2. Liturgy. Although largely a "rule," sections VI and VIII reveal another important aspect pointing to an additional purpose for the *War Scroll*. These two sections provided what was lacking in the text of Deuteronomy 20, a passage quoted at 1QM 10:3-4:

And [the priest] shall say to them, "Hear O Israel, you are going into battle today against

your enemies. Do not be fainthearted, do not fear or be alarmed, do not be in awe of them. For the LORD your God is the one who goes with you to fight for you against your enemies, to save you." (Deut 20:3-4)

The notable focus on the liturgical in the Qumran community would have made an extrapolation from the "known" to the "needed" obligatory. What were the full duties of the high priest on the day of battle? Is this all he was to say before the troops? How were the troops to respond? The answers to these questions are found in the liturgical sections of the *War Scroll* (sections VI and VIII). The two verses of Deuteronomy became a seven-column script filling the gap suggested by the biblical text.

4. Important Issues for New Testament Background.

4.1. Messiah the Prince. Aside from the rather prominent role of the high priest in the extensive liturgical portions of the scroll (1QM 15:4-5, 6; 16:13; 18:5; 19:11), the expectation of another important figure is evident. Although the introduction to this significant individual is lost in the missing lines at the bottom of column 4, his shield is the topic of discussion at the top of column 5:

and on the sh[ie]ld of the Prince of the Whole Congregation they shall write his name, the names "Israel," "Levi" and "Aaron," and the names of the twelve tribes of Israel according to their order of birth, and the names of the twelve chiefs of their tribes. (1QM 5:1-2)

His presence is also likely (although reconstructed) in the company of the high priest as they return for the victory ceremony on the day following the final battle in section VIII:

And the chi[ef] priest shall approach there [with] his [deputy, his brothers [the priests] and the Levites [with the Prince] of the battle, and all the chiefs of the battle lines and [their officers ...]. (1QM 19:12 with 4Q492 1 11)

His title according to the *War Scroll* is the Prince or Leader, a translation of the Hebrew word *nāšî'*. This term had clear messianic import among the Dead Sea Scrolls and is a reflection of Ezekiel 37:25:

They shall live on the land which I gave to my servant Jacob, where your fathers lived—they and their children, and their childrens' children, forever—and David my servant

shall be their prince [*nāšī'*] forever.

4.2. Dual Messiah. Thus it is likely that the *War Scroll* gives further evidence for a concept which is prevalent among the Dead Sea Scrolls, the expectation of a dual messiah: a priestly messiah descended from Aaron, and a royal messiah descended from David (CD 12:23-24; 14:19; 19:10-11; 1QS 9:11). This notion, likely originating in such OT passages as 1 Samuel 2:35 and Jeremiah 33:15-18 (see also Zech 4:12-14; 6:10-15) is very likely one of the issues the writer of Hebrews had in mind as he demonstrated that Jesus, although not a descendant of Aaron, was a better priest of the type of Melchizedek (Heb 7:1-17).

4.3. Role of Messiah the Prince. The *War Rule* (4Q285) gives further evidence which fills out the royal messianic role in eschatological battle. When this text first became available to scholars in 1991, a initial attempt at interpretation produced the translation: "and they will put to death the leader [*nāšī'*] of the community." This significant suggestion was accompanied with the claim that the long-sought "suffering Messiah" figure had at last been found in Jewish literature dating before the dawn of Christianity, perhaps in reflection of Isaiah 53 (Eisenman and Wise). However, the unvocalized Hebrew of the scrolls also allows an alternate translation: "and the Prince of the community will have him put to death" (4Q285 7 4). The debate arose concerning the pronunciation of a single word; whether to read *w' hēmītū* (they put [the prince] to death), or *wēh' mītō* ([the prince] put him to death). Ultimately the second option has gained wide acceptance as a result of several factors: (1) the immediate context, Isaiah 11 and the messianic conquest of evil; (2) the larger context, elsewhere in the manuscript (fragment 6) someone is brought before the Prince for judgment; (3) the whole scroll corpus, nowhere else in the scrolls do we find a suggestion of messianic suffering; and finally (4) grammar, the second reading is preferable according to the principles of Hebrew syntax.

The line which follows (7 5) the critical passage from 4Q285 has also been used to bolster the theory of a suffering messiah. Eisenman and Wise translate "with woundings," a word of the same root (*hll*) as Isaiah 53:5, "He was pierced/wounded." It is more likely, however, that the word should be translated as a reflection of Exodus 15:20 (and Judg 11:34), "with dancing," from

the root (*hūl*). The context of the victory celebration following the final battle makes the latter suggestion probable.

4.4. Eschatological Victory and Judgment. The *War Rule* thus evidences the roles of judgment and conquest which the Jewish community of the centuries before the advent of Christianity expected at the coming of the royal Messiah. The obvious confusion of the disciples as Jesus spoke of his impending death (Mt 16:21-22; Lk 9:44-45; Jn 12:16; 20:9) and his surprising statement to Nicodemus that "God did not send his Son into the world to judge" (Jn 9:17) take on a deeper significance when reconsidered in the light of the scrolls.

4.5. Dualism. The dualistic nature of Qumran thought is also evident in the *War Scroll*, given the division of humankind into the categories of "light" and "darkness." Although this appears at first glance to be a cosmic dualism, it becomes clear that the real intent is ethical, as light and darkness are best understood as metaphors for righteousness and wickedness: "[the Sons of Righteousness shall shine to all the ends of the world" (1QM 1:8). It is also clear that the dualism of the scrolls is not a radical dualism of equal and opposing forces, since God's fundamental purpose and authority are never in doubt: "[then there shall be a time of salvation for the people of God, and time of dominion for all the men of his forces, and eternal annihilation for all the forces of Belial" (1QM 1:5-6). The Dead Sea Scroll sect (Essenes) did, however, clearly understand that while God would eventually reign victorious, their present age was characterized by wickedness and was under the authority of *Belial—the Satan figure in the scrolls (see 2 Cor 6:15):

Throughout all our generations you have made your mercies wondrous for the rem[nant of the people] during the dominion of Belial. (1QM 14:8-9, see also 1QS 1:16-18, 23-24; 2:19)

This worldview evidenced in the scrolls once again presages similar dualistic elements in the NT. The Gospel of John quotes Jesus as saying:

Yet a little while longer the light is with you. Walk while you have the light, lest darkness overtakes you. For the one who walks in darkness does not know where he is going. While you have the light, believe in the light, so that you might become sons of light. (Jn 12:35-36, see also 3:19-20)

And Paul writes that "the god of this world has blinded the minds of the unbelieving" (2 Cor 4:4) but that Christ would win the ultimate victory (1 Cor 15:25). This ultimate victory was expected by the scroll writers as well as they read these lines near the end of the *War Scroll*:

You have [done w]onders upon wonders with us, but from of old there has been nothing like it, for you have known our appointed time. Today [your] power has shined forth for us, [and] you[have demonstrated] to us the power of your mercies with us for an eternal redemption, to remove the dominion of the enemy that it might be no more, the power of your strength. (1QM 18:10-11)

WISDOM LITERATURE AT QUMRAN

The transformation in our understanding of this literature is one of the most dramatic examples of the rapid developments and changing paradigms characteristic of *Qumran studies. Since the larger portion of the wisdom texts have come to the attention of the majority of researchers in the field only since 1990, the study of them is in its infancy.

A determination of the texts to include in a discussion of this subject is not self-evident. At

least two types come under consideration. The first group of texts points to compositions that resemble the wisdom literature of the Hebrew Scriptures. The postbiblical development of this tradition reflected in works such as Ben Sira must also be considered (see Sirach). A more complete picture emerges if we also examine those works that make extensive use of a wide array of Hebrew terms synonymous with and including wisdom and knowledge but that do not fit into this Hebrew literary tradition on the basis of either form or content.

1. Wisdom Texts Published Prior to 1990
2. New Wisdom Texts from Qumran
3. The Significance of This Material

1. Wisdom Texts Published Prior to 1990.

The abundance of wisdom terminology was evident to those researchers who read the first scrolls to come to light in 1947. However, on the basis of form or content there was no reason to connect these texts that contained terms such as *hokmâ* ("wisdom"), *de'â* or *da'at* ("knowledge"), *šēkel* ("insight") and *binâ* ("understanding") to the biblical wisdom traditions. These early discussions rather reflect comparisons with the evidence concerning *Gnosticism as well as hypotheses concerning the development of dualism and *apocalypticism. When J. Sanders published the *Psalms Scroll* in 1965 he noted the absence of research on the subject of wisdom at Qumran (Sanders, 69 n. 1). This was based on a perceived lack of interest in sapiential themes evident in the Qumran texts available at that time.

There are texts published prior to 1990 that reflect the direct continuation of the wisdom tradition of the Hebrew Scriptures and its successors in the Second Temple era. 1QInstruction (1Q26) and 1QMysteries (1Q27) have been identified as portions of compositions more widely attested among the Cave 4 fragments published after 1990 and hence will be discussed below. Texts such as these achieve new significance in light of the recent materials.

In 4Q184 (*Wiles of the Wicked Woman*) and 4Q185 (a sapiential work), already published in 1968, we find the primary treatment of the biblical figures of Lady Wisdom and Dame Folly at Qumran (Allegro, 82-87; Strugnell, 263-73). The wanton woman who leads the simple astray with her sexuality is found in Proverbs 2:16-19; 5:1-23; 6:23-26; 7:1-27 and 9:13-18. But the female figure described in 4Q184 has greater cosmic

significance than does the seductress of Proverbs: "foundations of darkness . . . darkness of night . . . her clothes are shadows of twilight, and her ornaments are plagues of corruption . . . depths of the pit, her lodgings are beds of darkness. . . . Amid everlasting fire is her inheritance, not among those who shine brightly" (Harrington 1996b, 31-32). This representation places Dame Folly closer to the dualistic cosmological struggle between good and evil portrayed in texts such as IQS 3—4 (see Rule of the Community) or as represented in the sectarian history of CD 3—5 (see Damascus Document) dealing with the nets of *Belial than the biblical text does. Contrast also the potential victims, described in Proverbs as the simple and unwise; in 4Q184 it is the righteous who may be led astray.

In 4Q185 Lady Wisdom finds personification similar to that in Proverbs 1—9 and Ben Sira. This composition continues the style of the wisdom instruction and paraenesis characteristic of those texts. Other features, such as the role of *angels in the adjudication of human conduct, are more compatible with viewpoints found in apocalyptic texts and other compositions from Qumran. In some instances this text moves beyond what can be found in Proverbs and Ben Sira, which would also have been compatible with viewpoints expressed in sectarian compositions found at Qumran (Tobin).

The *Psalms Scroll* (11QPsalms^a) contains wisdom material (Sanders). The Syriac Psalm 154 (11QP^a 18), partially reconstructed from the Syriac text, was dubbed by Sanders a "sapiential hymn." The theme of wisdom is introduced into this psalm in line 3 of the text: "To make known the glory of the Lord is wisdom given and for recounting his many deeds is she given to man." Wisdom elements in this psalm are connected with the purpose of exhorting the righteous to bind their souls together in the praise of God. The psalm's ultimate purpose is an exhortation to teaching. Wisdom in this case is the result of revelation, received by a group referred to as *rabbim* ("many"), *ṭōbim* ("good"), *lāmim* ("perfect"), *hasidim* ("pious") and many similar terms. This group is called to proclaim this wisdom to another group, the "senseless" and "foolish," so that they will not be drawn into the circles of a third group, the "wicked." While it was not necessarily composed by sectarian authors, the psalm would have been at home in those circles.

Hymn to the Creator (11QP^a 26:9-15) is an-

other hymn of a sapiential nature. Within it wisdom terminology is explicitly linked with the act of creation. Of interest also is the treatment of *da'at* ("knowledge") as synonymous with *hokmā*, the term more frequently equated with wisdom in biblical texts.

The prose section toward the end of 11QP^a 27:2-11 (David's Compositions) lists him as a "wise man [*hākām*] and a light like the light of the sun and literate [*sōpēr*]." The composition of 4,050 works is ascribed to him. As in some other texts reflective of the wisdom tradition at Qumran, they are said to be the result of revelation: "he spoke all these things through prophecy."

11QP^a 21:11—22:1 must also be noted. Herein is found a portion of Sirach 51:13-30, an autobiographical poem on the search for Wisdom. While both texts describe a male youth in a quest for Lady Wisdom, a figure known from Proverbs 8, Wisdom of Solomon 7, 4Q185 and elsewhere, the Hebrew text is capable of a more erotic interpretation than is the Greek. In these accounts Wisdom lets herself be found and in so doing takes over his life. Whether this is an addition to Ben Sira or part of an original Hebrew text remains a point of debate.

2. New Wisdom Texts from Qumran.

A fundamental reappraisal of our perception of wisdom in the Qumran texts is in process due to new texts that have become available to researchers since 1990. The most extensive remnants come from a work that now has been titled *Instruction, Sapiential Work A* in earlier publications. Fragments of at least seven extant copies are available: 1Q26, 4Q415-418a and 4Q423. One reconstruction proposes that the work's preface or introduction sets it within a cosmic and eschatological framework (Harrington 1996b, 40-59). This column (fragment 1) includes phrases such as "season by season," "the host of the Heavens He has established" and "[luminaries] for their portents, and signs of [their] fe[stivals]," familiar from apocalyptic and other Qumran literature. The *eschatological aspect is apparent: "From Heaven He shall pronounce judgment upon the work of wickedness, But all His faithful children will be accepted with favor by [Him. . .] And every spirit of flesh will be destroyed(?). But the sons of Heave[n] sh[all rejoice in the day when it (sc. wickedness) is ju[dged], and (when) all iniquity shall come to an end, Until the epoch of tru[th] will be per-

fect[ed] forever]" (Strugnell and Harrington, 83).

Cosmological interests are evident throughout the work. The type of knowledge that represents this author's central interest is captured in the term *raz nihyeh*, discussed below: "For the God of knowledge is the foundation of truth, and by the *raz nihyeh* He has laid out its foundation, And its deeds [He has prepared with all wisdom, and with all [c]unning has He fashioned it" (4Q417 1 i 8-9; Strugnell and Harrington, 154).

The remainder of the document concentrates on the more customary wisdom theme of advice for daily living. Included are issues such as a sensitivity to the embarrassment of another; the necessity of paying back loans or surety bonds quickly; maintaining integrity in the service of others; the avoidance of selling one's soul or self for money or possessions, even if one is in poverty; not boasting about one's poverty; not violating a trust of money or property and not using poverty as an excuse for avoiding study. There are also injunctions concerning the honor due to father and mother as well as the importance of living in harmony with one's wife (Harrington 1996b, 43-45). Such instruction is similar to that found in Ben Sira and demonstrates continuity with the biblical wisdom tradition rooted in the experiences of daily living.

The volumes of sapiential texts are now available in the Discoveries in the Judaean Desert series (vols. 20 and 34). Included in volume 20 are the texts of 4Q298-305, 411-413, 420-421 and 425-426. In volume 34 are found all of the fragments of the work now titled *Instruction*, formerly known as *Sapiential Work A*, including 4Q415, 416, 417, 418, 418a, 423 and a re-edition of 1Q26. Also included are 4Q418b and 418c, the latter perhaps a fragment of another copy of *Instruction*. The majority of the texts listed below as well as *Instruction* are available in F. Garcia Martinez or in M. O. Wise, M. G. Abegg and E. M. Cook with the Hebrew texts in B. Z. Wacholder and M. G. Abegg (see vol. 2 for the majority of these texts).

Fragments of three manuscripts of the text entitled *Mysteries* are available (1Q27, 4Q299 and 4Q300). While 4Q301 has been classified as another copy of this composition, that identification is less certain. The name is indicative of the frequency with which *raz* ("mystery") is found throughout the text and provides one tie, among others, to *Instruction*. In this composition

wisdom makes it possible for humankind to "know [the difference] between good and evil, and between falsehood and truth, and that they might understand the mysteries of transgression. . . ." (4Q300 frag. 3 2//1Q27 frag. 1 i 1-2). Regrettably humankind "did not know [the *raz nihyeh*, and the former things they did not consider. And they did not know what shall befall] them. And they did not save their lives from the *raz nihyeh*]" (4Q300 frag. 3 3-4//1Q27 frag. 1 i 3-4). A description of God's plan for the end of time and the signs of that future era follow, reflecting an interest in eschatology that is more extensive than that interest in *Instruction*. However, this divine wisdom, rooted in the order of creation, is sealed and available only to the righteous, the only portion of humankind that God permits to see and understand it. In continuity with the biblical tradition the book of *Mysteries* does consider extensive moral advice to be wisdom.

The connection between wisdom and sectarianism is more explicit in 4Q420/421 (*Ways of Righteousness*^{a, b}). The available fragments suggest a composite work in three sections, possibly reflecting different sources. The first section deals with the organization of the *yahad* and includes the exhortation, "[he shall bring all] his [wisdom and knowledge and understanding and good things [into the Community (*yahad*) of God]" (4Q421 1a i 2-3). The second section consists of a series of wisdom sayings about the righteous man, often in the form of proverbs. Herein the righteous man is exhorted to "carry the yoke of wisdom ('*ol hokmah*)" (4Q421 1 ii 9-10). The appearance of the term *hokmah* in this fragment is significant in suggesting that the author wishes the work to be understood within the tradition based on the biblical wisdom materials. The "yoke" points to the NT wisdom text, Matthew 11:29-30, as well as to the use of the term in *m. 'Abot* 3:5 and other *rabbinic texts. The *temple forms the center of the third section, with an emphasis on issues of purity. Allusions to 11QTemple (see Temple Scroll) and 4QMMT (see Miqsat Ma'asey ha-Torah) can be glimpsed in the fragments listing categories of persons prohibited from participation in various temple activities. Issues such as the "pure food" discussed in texts attributed to the *yahad* also receive mention. This text shows evidence of an intricate connection with previously published legal materials in the Qumran corpus.

Words of the Maskil to All Sons of Dawn (4Q298)

is written in what has been termed cryptic script, known only from the Qumran texts. What receives emphasis in the extant fragments is the necessity to "understand" for "those who seek truth. . . [And those who k]now, have pur[s]ued [the]se things and have turn[ed . . .]" (4Q298 1-2 i 2-3). This text is addressed to the "sons of dawn," who could well be initiates who have not yet become full members of the sect, hence "sons of light." The address is introduced as the words of the *maskil*, referred to elsewhere in Qumran texts and discussed below. Here we find strong evidence of the sectarian origins of this wisdom composition.

The *h^akāmim* ("wise men") are enjoined to discern a parable in 4Q302 (4QpapAdmonitory Parable), earlier classified as two separate compositions, 4Q302 and 302a. While the term *māsāl* is not found in these fragments, this rare appearance of a parable in postbiblical Jewish literature outside of the NT is important for the study of the history of the genre (see Rabbinic Parables). While the use of the term can refer to popular sayings or proverbs in the Hebrew Bible (1 Sam 10:12; 24:13; Ezek 12:22-23; 16:44; 18:2-3), the limited material in the fragments does not suggest a significant connection with the sapiential material already discussed. It does appear to be in the biblical tradition of parables about trees (Ezek 19:10-14; Ps 80:9-17; Dan 4:7-14, 17-18). The composition resembles an admonition based on the *rib* (lawsuit) pattern, attested in the prophetic traditions of the Hebrew Bible and also present in texts from Qumran such as CD 2:1-4:12 and 4Q381 (*Noncanonical Psalms B*) 69 and 76-77. The admonition to the addressee, "Discern this, O wise men," and the sapiential parable suggest that the text receive consideration as part of the wisdom tradition in the Qumran texts.

Connections with NT literature are apparent in 4Q525 (*Beatitudes*). Fragment 2, column 2 contains portions of five makarisms (or beatitudes) that in some ways suggest the beatitudes of Matthew 5:3-12 and Luke 6:20-23. Both 4Q525 and the NT texts represent the development of a tradition already evident in the Hebrew Bible, mostly in the wisdom literature, and also found in other postbiblical Jewish literature. In the Hebrew texts this form is characterized by the term *'ašrê [hū']* . . . (happy [is the one who] . . .). In 4Q525 wisdom is equated with Torah. The person who has attained *hokmā* "walks

in the law of the Most High," and this accomplishment is considered to be the source of blessing. In fragment 15 evidence of the dualism familiar from other Qumran literature and apocalyptic works is manifest in its references to "eternal fire," the "venom of serpents," "darkness," "flames of death" and "flaming brimstone," apparently with regard to those who "do not attain the paths of life." Mastemah receives mention in fragment 19.

4Q424 is a set of injunctions regarding relationships with various types of persons found in a form characteristic of wisdom literature. It pays particular attention to which persons should be avoided and the attendant reasons for that advice. Many of these instructions concern legal and business relationships. The word *hokmā*, characteristic of biblical wisdom, appears three times in this fragment. Issues of a moral nature are discussed. Also present in the last line of the preserved text is the term *b'ne sēdeq* ("sons of righteousness"), a designation used elsewhere in the Qumran texts to specify either the Qumran sectarians or a group within that movement. These indications point to this same body of literature that will have been viewed with particular favor by the Qumran community but that should not be considered a sectarian composition.

Only two fragments of four lines from the top corners of the same column survive from a sapiential work concerning divine providence (4Q413). The form of the preserved fragment with references to wisdom and understanding places it closer to other wisdom texts discussed in this section of this article than to liturgical or worship material. As in a number of the texts just discussed we also find allusions closer to the sectarian texts: "He increased his share in the knowledge of his truth; and as he despised every wicked individual . . . [that wicked individual] would not survive." The fragment concludes with a reference to the revelation of God.

In addition to the works already discussed and those to be found in DJD 20, a number of other compositions designated as sapiential works are very fragmentary: 4Q307-308, 4Q408, 4Q410, 4Q472-476, 4Q486-487 and 4Q498 (*Sapiential Hymn*).

3. The Significance of This Material.

The literature that has become available since 1990 provides evidence of a new wisdom tradi-

tion that is not an imitation of biblical material or an expansion of the sectarian use of wisdom vocabulary noted early in the history of the study of Qumran materials. These texts are evidence of another significant wisdom tradition in Second Temple Judaism, the study of which is only in its infancy.

This now brings us back to the sectarian literature such as the *Rule of the Community* and the *Thanksgiving Hymns* that occupied those first scholars of this library. We have a much better explanation for the preponderance of terms concerning knowledge and wisdom that are distributed freely throughout those scrolls. These compositions show evidence of being the recipients of this unique wisdom tradition. In these works, admittedly dominated by dualism and eschatology, we find an interest in creation, in the times and in the celestial bodies. In fact their dualism and eschatology are rooted in creation and the cosmos. But in these texts the speculative character of wisdom is no longer apparent. Wisdom has been placed in the service of the sect. This observation is important in the study of Christian origins.

Evidence of the central role of the *maskil* as a person entrusted with wisdom and responsibility for instruction is attested in a number of Qumran texts. In 1QS 3:13 the *maskil* is the one who "shall instruct all the sons of light and shall teach them." This line introduces 1QS 3:13—4:26, one of the crucial passages concerning the subject of dualism and wisdom. This "sage" as teacher again receives emphasis in 1QS 9:12—10:5. His knowledge is related to the Torah and to the particular practices based on the community's interpretation of it: "He shall conceal the teaching of the Law from men of falsehood but shall impart true knowledge and righteous judgment to those who have chosen the Way" (1QS 9:17-18). This figure also receives mention in wisdom texts such as *Instruction* and *Ways of Righteousness*, as well as in other sectarian texts such as 1QS, 1QSB, 1QH and CD.

This same figure is the subject of 4Q510-511 (*Songs of the Sage*^{a, b}) (Baillet, 215-62). Here the *maskil* writing in the first person is the one who "makes known [*masmya*] the splendor of his beauty, in order to frighten and terrify all the spirits of the angels of destruction" (Newsom, 381). For the sage this knowledge is the source of the authority and power necessary to gain victory within the dualistic struggle in which the

yahad ("community") is engaged. This figure is not only wise but also powerful, and his knowledge is the source of power for the entire sect.

Research on the significance of this tradition for the study of Christian origins has not yet begun. The identification of a significant wisdom tradition that gradually finds a sectarian expression is an important contribution to the subject. For example, Jesus is equated with wisdom in the Gospel of Matthew (most notably Mt 11:25-30). The Qumran texts help us to understand how the writer of this Gospel could have made such a connection and how its Jewish readers could have understood it.

WISDOM OF BEN SIRA. See SIRACH.

WISDOM OF SOLOMON

The Wisdom of Solomon, a *pseudonymous work of *Alexandrian Judaism from about the turn of the era, cultivates the dedicated pursuit of a wisdom that takes as its starting point the governance of and accountability before the God of *Israel. The author assures fellow Jews that those who have forsaken *Torah, though they profit now, have chosen the path of folly: God's judgment will reveal the *honor of the righteous and the degradation of the lawless. He further encourages Jews to persist in their distinctive way of life by recalling God's care for and presence with them throughout history, especially in the exodus, and by showing the ignorance of the Gentiles who have been duped into idolatry. *Education in Torah and the Jewish wisdom tradition, he avers, provides all that Greek culture might and far more besides. The work was much read in the early church and left its imprint on the NT and the church fathers

during the most formative centuries of Christian theology.

1. Author, Date and Setting
2. Structure and Contents
3. Genre and Purpose
4. Important Themes
5. Greco-Roman Philosophical Influence
6. Influence on the Early Church

1. Author, Date and Setting.

The author of Wisdom remains anonymous, choosing rather to speak in the voice of Solomon, Israel's wise person par excellence. The author was a pious Jew living in Alexandria, the famous center of learning and Hellenistic culture. This is supported in part by internal evidence: there is a marked hostility against the native Egyptians in the third part of the work (Wis 19:13-17; Winston); the author dwells on cultic practices peculiar to Egypt, such as the worship of animals or gods depicted with animal features. The strong reception of Wisdom among Alexandrian Christians provides external support for this provenance.

Theories of multiple authorship abounded in the eighteenth and nineteenth centuries (and early in the twentieth with Holmes). Supporters of this view noted that Wisdom 1-11 and 12-19 express different conceptions of God's dealing with the world (mediated through Wisdom vs. direct). These scholars also discovered striking differences in the use of certain terms, particles and types of compound words (Holmes). More recently, however, scholars have returned to single authorship, particularly because of the similar use of "unusual words and expressions throughout" (Reider), the echoes of the first part in the second half and the tight structural interweaving of the main parts of the discourse (see 2 below).

Early arguments for a Hebrew original have given way to a consensus that the book was written in Greek. The presence of Semitisms is no argument against this (Reider), and the use of the *Septuagint, familiarity with Greek *rhetorical devices (such as *sorites*, *accumulatio*, alliteration and assonance; see Winston), the affinity for compound words (common in Alexandrian Greek), knowledge of Greek words found only in the Greek poets (see Poetry, Hellenistic) and use of technical Greek *philosophical terminology are strong arguments for Wisdom being an original composition in Greek.

About the date of Wisdom there is wider debate. Scholars have placed it anywhere between 220 B.C. and A.D. 100, often insisting that it arose during "some period of persecution" (Newsome). The earliest date is set by Wisdom's clear use of the Greek translation of Isaiah, Job and Proverbs (Clarke; Reider; Holmes). The latest date is set by the evident use of the work by several NT authors (Holmes and Reider, vs. Gilbert and Grant, who express reservations concerning demonstrable dependence).

A date within the early Roman period, especially the principate, seems most likely. First, the description of the development of the ruler cult in Wisdom 14:16-20 best describes not the cult of the *Ptolemies, which was organized and promoted from the center, but the spontaneous, decentralized development of the imperial cult under Augustus (who was also Egypt's first remote ruler since *Alexander the Great; Winston). The use of thirty-five terms or constructions that do not appear in secular Greek before the first century A.D. further supports the argument for a Roman date (Winston). M. Gilbert detects a critique of the **pax Romana* in Wisdom 14:22: "though living in great strife due to ignorance, they call such great evils peace" (cf. Tacitus *Agric.* 30). Pseudo-Solomon's address to the "judges of the ends of the earth, . . . who rule over multitudes and boast of many nations" also fits the Roman imperial period better than its predecessors (Wis 6:1; Winston).

D. Winston revives the theory advanced by A. Farrar and A. T. S. Goodrick that the work comes specifically from the reign of Gaius, responding to the "desperate historical situation" of the Jews under Flaccus. It is not, however, necessary to posit a situation of open persecution in order to understand the "ferocious passion" with which the author narrates "the annihilation of the wicked" in Wisdom 5:16-23 as well as the particularly intense anti-Egyptian sentiments of the work. The Jews, for centuries under the cultural hegemony of *Hellenism, had been struggling to find ways to reaffirm their ancestral heritage in the face of a dominant majority that devalued that heritage. Such rhetoric as we find in Wisdom would have been a welcome reinforcement for Jewish commitment at any period, and the tone of hostility within the document may be intended more to promote a "we versus they" mentality in order to guard against assimilation.

2. Structure and Contents.

The contents of Wisdom fall into three major sections, and the skill with which the author has woven these together accounts for the difficulty scholars have in agreeing where one section ends and the next begins. Thus S. Holmes ends the first section at Wisdom 6:8, but J. D. Newsome at Wisdom 6:11 and Winston at Wisdom 6:21; Newsome ends the second section at Wisdom 9:18, but Winston at Wisdom 10:21 and Holmes at Wisdom 11:1. The first two parts are connected by an interlocking structure in Wisdom 6. Wisdom 6:1-11 returns to the themes of Wisdom 1:1-11 (an *inclusio*) with the address to the "rulers of the world" (Wis 1:1) and the assurance of God's inquiry into human ways. Wisdom 6:21, however, also looks back to Wisdom 1:1, offering a second conclusion to the section as it addresses the "monarchs over the people." Wisdom 6:12-20 introduces the theme of section two, namely, the nature, works and rewards of Wisdom. It is also difficult to discern where the third section begins. Wisdom 10:1 begins to elaborate on Wisdom 9:18, where Wisdom is credited with saving the people who received her, and thus continues the discussion of Wisdom's works; at Wisdom 11:4, Wisdom recedes into the background and God is addressed directly as the one who punishes the ungodly and delivers the righteous (a shift, however, for which the author again prepares in Wis 10:20). Any attempt to mark a definite beginning to this third section will be in some sense arbitrary, for the author effects a smooth transition from the praise of Wisdom's character and works to Wisdom's saving activity and God's saving activity. The thesis of this third section is announced in Wisdom 11:5 ("through the very things by which their enemies were punished, they themselves received benefit in their need"), and so we may for convenience mark the section's beginning here.

Wisdom opens with an invitation to the "rulers of the earth" (Wis 1:1) to pursue justice in a spirit of reverence for God. The first section contrasts vividly the fate of the "ungodly," who "made a covenant with death" by their unsound reasoning (Wis 1:16-2:1), and that of the righteous, who remain faithful to their training in the law and live with an eye to God's approval. Even though the ungodly may oppress the righteous in this life, before God's judgment seat the righteous will be exalted and the ungodly pun-

ished and put to shame. The second section presents the origin, character, deeds and rewards of Wisdom. Here the author takes on most fully the persona of Solomon, expanding on the account of Solomon's prayer for Wisdom and God's response (1 Kings 3:5-15) and on Solomon's joy and benefits from receiving Wisdom. As Wisdom's saving acts on behalf of the patriarchs are recounted, the author arrives at the recollection of the exodus and moves into the third section of his work. Within this third part are seven antitheses, contrasting God's punishment of the Egyptians with God's provision for the Israelites (Wis 11:1-14; 16:1-4; 16:5-14; 16:15-29; 17:1-18:4; 18:5-25; 19:1-9; Winston). These are intended to demonstrate the thesis found in Wisdom 11:5 (see above) and, secondarily, the thesis of Wisdom 11:16 ("one is punished by the very things by which one sins"). This demonstration includes two excurses on God's compassion (Wis 11:15-12:22) and the folly of idolatry (Wis 13-15). Part three returns to the themes of part one, especially the vivid contrast between the fate of the ungodly and of God's chosen people, and in the denunciation of "foolish" ways of thinking (from which the audience is therefore to distance itself).

3. Genre and Purpose.

Winston and J. M. Reese regard the work as a "protreptic" discourse—an exhortation to take up a particular course of action. Winston insightfully notes that the author shows that the pursuit of Wisdom is "just, lawful, expedient, honorable, pleasant, and easily practicable" (*Rhet. ad Alex.* 1421b21 on the requirements for successful exhortation; cf. Wis 6:12-14; 8:7, 10, 16, 18). Gilbert has also cogently argued that the form of Wisdom fits the form of the encomium, the speech in praise of some figure or virtue. Wisdom 1-5 briefly sums up the theme, shows the harmful results of failing to pursue the virtue being praised, criticizes those who neglect the subject of the encomium and shows the "difficult or paradoxical situations" in which such people find themselves; Wisdom 6-10 discourses on the origin, nature and deeds of the subject; Wisdom 11-19 demonstrates the benefits of pursuing this virtue through examples, and especially through *synkrisis* (the comparison with the opposite line of action). Within this section of the encomium there is room for digressions, "to fortify the resolution of the reader."

Reese, though calling it protreptic, describes its function in terms more appropriate for encomium: the author writes "to glorify traditional faith and encourage Israel's future leaders to commit themselves to God's presence in history," "arousing enthusiasm for Israel's covenant-God and for its historical mission."

The observations of all three scholars may be appreciated when one considers the relatedness of "praise and counsel" in classical rhetoric (see Aristotle *Rhet.* 1.9.35-36; Quintilian *Inst. Orat.* 3.7.28). Moreover, encomia in themselves seek to encourage adherence to specific virtues or a certain way of life by means of praise. In the case of Wisdom, Gilbert's analysis of the form is stronger, but the author enhances the general hortatory potential of the encomium with direct exhortations (frequently present in encomia: see Thucydides *Hist.* 2.43.1-4; Dio Chrysostom *Or.* 29.21; 4 Macc 18:1) to pursue wisdom and with the promises that such a way of life is easily obtained, honorable and just.

Questions of the purpose of the book are connected with the picture one forms of the audience. According to B. M. Metzger, Wisdom attempts to rekindle in apostate Jews a "genuine zeal for God and his law" (so also Winston, Reider, Clarke), provides for faithful Jews facing disappointment or persecution an "apologia that was calculated to encourage and fortify their faith and practice" (so also most scholars) and possibly addresses "thoughtful pagans" in chapters 6-9 and 13-15 on the truth of Judaism and folly of idolatry, respectively (so Clarke and Reider, who claims this "missionary" purpose for "Alexandrian-Jewish literature generally"; see *Proselytism*).

It is difficult to determine the audience envisioned by the author, but one can begin to assess the effectiveness of the work for the various proposals. The only explicit addressees in the work are Gentile rulers (Wis 1:1; 6:1, 9, 21) and God (Wis 10:20; 11:4; 15:1). It is unlikely, however, that the work would have been received kindly by either a local ruler or the emperor, given the explicit announcements of the rulers' wickedness and impending judgment. The author's delegitimation of the imperial cult would have made the work more suspect than persuasive. To the author's critique of idolatry, Metzger's "thoughtful pagans" would have said about idols the same thing Wisdom says about the bronze serpent (Wis 16:7): they certainly did

not worship stone and metal but by means of such could revere the invisible deity. Also relevant here is Metzger's correct observation that the author was writing in a "high-context" environment—the readers would have to supply missing information, particularly names and episodes from the Pentateuchal narratives for much of Wisdom 10. If the author wrote to persuade Gentiles, he wrote most ineffectively.

Much more can be said for a Jewish audience (Reese). The work might open up the possibility of a return for apostates, if there remained some doubt in their mind about their choice and if they cared to read the work. Wisdom would be most effective, however, for an audience of faithful Jews. Part one assures them, in the manner of Psalms 37, 49 and 73 (Holmes), that the apostate Jews are the ones who have departed from the truth. Even if the apostates' temporal enjoyments have increased and even if they have gained the upper hand over the loyal Jews (Reider), God's court will reveal their folly and the honor of the righteous. Parts two and three encourage loyal Jews to persist in their way of life by recalling God's special relationship with them throughout history (Winston). The polemic against idolatry assures them that their way of life is the truly enlightened one, while the Gentiles and apostates, despite their pretensions, grope in darkness. The author's use of Greek philosophical terminology enhances his claim that "Judaism need not take second place to anything in Hellenism" (Clarke). Wisdom is thus surely written to encourage continued adherence to the Jewish way of life in a setting where the enticements of Hellenization and the ability of apostates to reject their heritage as of little value weigh heavily upon the Jewish consciousness.

4. Important Themes.

4.1. Vindication of the Righteous. The author takes pains to develop the unsound reasoning of the "ungodly" (Wis 2:1-20). Holmes and J. Reider have noted the similarities here with Ecclesiastes, especially in looking at this life as the "lot" or "portion" of humans and therefore making the securing of enjoyment in this life a high priority (cf. Eccl 3:22; 5:18; 9:9). Ecclesiastes, however, does not promote neglect of God or hostility toward the righteous, as do the impious in Wisdom 2. The "ungodly" whom the author has in view are, at least in part, apostate Jews

(Reider; Winston; Clarke; Gilbert). The text supports this, as the "ungodly" are said to have gone against their training, sinned against the law and fallen away from God (Wis 2:12; 3:10). The opening motif of making a "covenant with death" (Wis 1:16) recalls Isaiah's description of the activity and lifestyle of the apostate rulers of Jerusalem, who had abandoned their ancestral ways and religion (Is 28:15). Their speech in Wisdom 2:1-9 has some Epicurean elements (the denial of judgment, afterlife and involvement of God in human affairs), but the ungodly take this in a direction that *Epicurus would never have endorsed.

Wisdom draws a picture of high tension not only between the loyal Jews and the Gentiles but also between loyal and apostate Jews. Despite the apparent success of the apostates in this life, however, and despite the insult and abuse that they might heap on their former coreligionists, Wisdom assures the audience that God will honor the righteous with the prize of immortality (Wis 2:21—3:9) while showering disgrace and punishment on those who have not kept to God's ways (Wis 3:10; 4:17-19). Beyond death, the apostates and all the Gentiles will confess their error and acknowledge the lasting honor of the loyal Jew. A firm belief in a judgment and reward beyond this life becomes in this period an essential part of sustaining commitment to the values of a minority culture, whether Judaism or Christianity.

4.2. Personification of Wisdom. The figure of Wisdom (derived from Prov 1:20-33; 8:22-31; Job 28:12-28) is developed to new heights of personification, even hypostatization. Like *Philo, Pseudo-Solomon speaks of wisdom as an emanation of God rather than a created being: "she is a breath of the power of God, and a pure emanation of the glory of the Almighty, . . . a reflection of eternal light, a spotless mirror of the working of God and an image of his goodness" (Wis 7:25-26). Wisdom is God's companion and agent in the creation and ongoing governance of the world (Wis 8:1; 9:9). While Reider goes too far to find in Wisdom a "throne partner" in Wisdom 6:14 and 9:4, she nevertheless affords the most intimate fellowship between God and human beings: she participates in God and, entering human souls, makes them friends of God (Wis 7:27-28). This Wisdom can be attained only through *prayer (Wis 7:7; 8:21—9:18), and while she is not here identified with the Torah as in

Ben Sira (see Sirach), she does teach what pleases God, and this involves keeping the commandments (Wis 6:18; 9:9).

Despite the author's interest in the special relationship between God and Israel, he defines Wisdom broadly enough to encompass also the whole realm of learning (Wis 7:17-22). That Wisdom that the one God alone can give also grants facility in all the subjects comprehended within "the curriculum in a Greek school: philosophy, physics, history, astronomy, zoology, religion, botany, medicine" (Crenshaw). Thus training in Jewish wisdom would afford one all the benefits of Greek education. This made Wisdom "the perfect bridge between the exclusive nationalist tradition of Israel and the universalist philosophical tradition which appealed so strongly to the youth of Roman Alexandria" (Winston). B. L. Mack has also shown how Pseudo-Solomon adapts the aretologies (lists of virtues) of the popular Egyptian goddess Isis to promote the figure of Wisdom. Isis was a revealer, a savior figure (cf. Apuleius *Met.* 12), and, as Ma'at, the Egyptian goddess of wisdom, an associate of the chief deity who knows all his works. The advances made by Pseudo-Solomon concerning the figure of Wisdom as mediator between God and creation proved helpful for the early church as it wrestled with the person of the Son.

4.3. Critique of Idolatry and Gentile Rulers. In its fictive address to the "monarchs of the earth," Wisdom expressed a widely held Jewish critique of Gentile rulers. The author upbraids them because, while they had received their authority from God, they failed to honor God, disregarded the law (Torah; cf. Wis 18:4) and neglected to rule rightly and serve God's purposes (Wis 6:1-8; cf. Dan 2:37; 4:16-17, 26-27; 5:20-23; 4 Macc 12:11-12). Gentile kings are indicted as dishonorable clients of the one God and are called either to repent or face the wrath of the God whom they have disregarded. Such a critique would have encouraged those loyal Jews who felt the sting of injustice and who saw the preferential treatment awarded the apostates. The Torah-observant Jews' loyalty to the one God would assure them of vindication against their enemies when God searched out iniquity.

The author presents a lengthy argument against the legitimacy of idolatrous religion (Wis 13:1-15:19), developing criticisms from tradition (e.g., Is 44:9-20) but taking the overall polemic to a new level of sophistication. The

author first reprimands those who worship natural objects such as the sun, moon and stars: while they are less blameworthy, they are still faulted for not pushing beyond fascination with created things to the adoration of the Creator (Wis 13:1-9; cf. Rom 1:19-21, 25). More reprehensible are those who worship lifeless objects—the idols that abounded in Gentile religions. The author constructs a *reductio ad absurdum* reminiscent of the Epistle of Jeremiah. A skilled woodcutter makes some fine utensil, uses some of the cast-off wood for a fire that heats his food and uses another scrap to fashion an idol. Pseudo-Solomon frames a series of paradoxes to show the folly of such religion: the idolater prays about an upcoming voyage to a thing that cannot move, about matters of life to a lifeless piece of wood (Wis 13:10-14:11; 15:7-17). The impropriety of idolatrous cult is poignantly expressed in Wisdom 14:11, which suggests that idolaters use the material of God's own creation to promote a cult that dishonors the Creator. Pseudo-Solomon also incorporates Euhemerus's explanation of the origin of the pagan gods in the divinization of deceased human beings (Wis 14:12-16).

Most insightful is Pseudo-Solomon's explanation of the origins of "ruler cult." He clearly recognized its origins in the desire on the part of the subject people to demonstrate their loyalty and gratitude to the distant ruler. The imperial cult represents their attempt to establish a language of diplomacy and a favorable relationship with the center of power, but Pseudo-Solomon goes on to suggest that the paraphernalia of the cult made the human origins of the king dangerously obscure. Winston insightfully suggests that Wisdom 7:1-1 and 9:5 combat this tendency, portraying a wise king emphasizing his own humble and mortal origins.

Idolatry is blameworthy not only for the affront it presents to the one God who made heaven and earth (Wis 14:21b) but also because it is the "beginning of fornication" and "corruption of life" (Wis 14:12). It is the "cause and the end of every evil," including murder, orgies, violation of marriage, theft, deceit, corruption, perjury, disloyalty, ingratitude and sexual perversion (Wis 14:22-31; cf. Rom 1:22-32). The association of Gentile religion with all things base assists the author's audience to remain steadfast in their commitment to true religion (Wis 15:1-6).

4.4. Universalism Versus Particularism. Despite

the fact that some find "an arrogant and undisguised particularism" in Wisdom, in which "God appears as a tribal god who is partial to the Jews and inimical to their enemies" (Reider), Pseudo-Solomon shows considerable interest in universalism. The matter is not as simple as Reider claims: "sinning Jews are freed from punishment, but God hates the sinning Canaanites and exterminates them for their sins." Pseudo-Solomon argues that God loves all that God has created and detests none of God's works (Wis 11:24-12:1). In this first excursus within part three, the author seeks an explanation of God's destruction of the Canaanites and punishment of the Egyptians beyond an appeal merely to God's election of Israel. The author of 2 Maccabees could write that God corrects Israel little by little so as to discipline and restore them but saves up punishment against the Gentiles to destroy them all at once (2 Macc 6:13-16), but Wisdom points to God's judging out the Canaanites "little by little" (Wis 12:10) in order to lead them to repentance. Only after this fails on account of the depth to which wickedness has taken root in the Gentiles does God finally destroy them.

There is a tension between universalism and particularism in Wisdom, since the Gentile nations are so steeped in evil that their very nature is perverse and incorrigible: nevertheless it is noteworthy to find this author attempting to weave this together with a view of God in keeping with ethical monotheism, in which punishment must never be "arbitrary or merely retributive" but rather "reformatory" (Holmes). Moreover, as Winston observes, Wisdom herself is *philanthropos* ("benevolent, humane; Wis 1:6; 7:23), as is God, whose mercy is an example for God's people to follow (Wis 12:19). Thus even if Gentiles should persist in disregarding the righteous and rebelling against God (Wis 8:10), the righteous are called to be imitators of God's benevolence rather than their neighbors' hostility.

5. Greco-Roman Philosophical Influence.

Pseudo-Solomon, while promoting loyalty to the Jewish worship of the one God, nevertheless supports his appeal with concepts taken over from Greek philosophy. Part of his appeal to his readers was this incipient synthesis of the best of the Greek tradition with the Jewish tradition. The pursuit of God-given Wisdom trains the devotee in the four cardinal virtues prized by *Stoics and *Platonists (Wis 8:7; cf. 4 Macc 1:16-

18; 5:22-24). Solomon's choice of Wisdom (Wis 8:2-18) mirrors Xenophon's account of the similarly noble choice of Heracles (*Mem.* 2.1; Holmes). The author thus claims that the Jewish way of life produces the same noble virtues prized by Hellenic culture.

Pseudo-Solomon holds to the Platonic view that God created the cosmos "out of formless matter" (Wis 11:17; vs. 2 Macc 7:28, where creation is explicitly *ex nihilo*). Wisdom herself takes on the roles of the Stoic *Logos*, as mediator between God and creation in all things, and the Stoic *Pneuma*, the all-pervading force that animates all things (Wis 1:7; 7:24; 8:1; Gilbert). This latter concept is employed to express human accountability before God, for all human acts and words are exposed to Wisdom's all-pervading gaze (Wis 1:7-11). The author also uses the Stoic term *pronoia* ("providence," Wis 6:7; 14:3; 17:2) to express God's oversight and care for God's creation.

The anthropology of the book also shows striking connections with Platonic thought, beginning with the doctrine of the preexistence of souls, attested here for the first time in Jewish writing (Wis 8:19-20). The soul enters a body, which is conceived of as a "burden" to the soul, an "earthly tent" that weighs down the mind (Wis 9:15). Only God's gift of the Holy Spirit can assist the human mind in the quest for spiritual truths. Pseudo-Solomon's dependence on Plato at this point comes close to direct borrowing (cf. the remarkable similarities of word choice with Plato *Phaed.* 81 C; Holmes). Reider is wrong to attribute to Pseudo-Solomon the view that the body is "essentially evil, and that therefore an evil nature attaches to the human body (1.4)," since the point of Wisdom 1:4 is not that the body is itself evil, but that Wisdom cannot dwell in a deceitful soul or a body that is enslaved to sin (i.e., the wicked person). It can, however, dwell in the noble soul and in the body that is not an instrument of unrighteousness. Finally, the author shares the Platonic idea of the immortality of the soul, stressing that one's moral character determines one's place in the afterlife. Winston points out how Jewish writers have moved closer and closer to the Platonic position (cf. 1 Enoch 102:5; 103:3-4; 104:6; Jub. 23:31; T. Asher 6:5-6; 4 Macc 7:19; 13:17; 16:23).

The author displays an allegorizing tendency, but not full-blown as in the Stoic treatment of the Homeric myths or Philo's handling

of Torah. Thus the miracle of manna in the wilderness and the dissolution of the leftover portion teaches that "one must rise before the sun to give You thanks, and must pray to You at the dawning of the light; for the hope of an ungrateful person will melt like wintry frost" (Wis 16:27-29).

6. Influence on the Early Church.

6.1. New Testament Christology. Wisdom's depiction of the persecution of the righteous person (Wis 2:12-20) may have been read very early as a prediction of Christ's passion. Matthew himself adds to the taunt of Psalm 22:8 the rationale "for he said, 'I am the Son of God'" (Mt 27:43), the claim that the ungodly seek to test in Wisdom 2:13, 18-20. Augustine (*Civ. D.* 17.20) would go on to quote this passage explicitly as a prophecy of the crucifixion. The author of Hebrews presents the Son as the "reflection of the glory of God and exact imprint of God's nature" (Heb 1:3), thus understanding Christ's relationship to God in terms very similar to those used to describe Wisdom's relationship to God (Wis 7:26; Grant). Colossians 1:15 appears also to move in this direction, speaking of Jesus as the "image of the invisible God."

6.2. Pauline Anthropology. The most pervasive influence of Wisdom surfaces in the writings of Paul, rendering R. M. Grant's judgment that "Paul, like John, knew ideas related to Wisdom but not the book itself" highly suspect.

6.2.1. Romans. Paul's statement on the depravity of humanity on account of idolatry in Romans 1:19-32 shows strong signs of Wisdom's influence (Wis 13:1-9; 14:22-27). Both move through the same progression of thought: Gentiles ought to have been able to perceive the one God through observation of creation and so are "without excuse" (Wis 13:1-9; Rom 1:19-20); Gentiles instead turned to the worship of created things (Wis 13:2, 7; Rom 1:22-23); this ignorance of God (Wis 14:22; Rom 1:21, 25) produced all manner of wickedness, including murder, theft, deceit and sexual perversion (Wis 14:22-27; Rom 1:24, 26-31); God's just sentence remains on those who practice such deeds (Wis 14:30-31; Rom 1:32).

Paul affirms God's absolute sovereignty over the human being as God's creation in terms similar to Ben Sira 33:10-13: all are as clay in the hands of the potter, "to be given whatever he decides." Romans 9:21 shares this thought, but to-

gether with a detail from Wisdom 15:7, where the potter makes "out of the same clay both the vessels that serve clean uses and those for contrary uses." Paul shares with Wisdom the view that God's judgment is not open to criticism and his will irresistible (Rom 9:19; Wis 12:12; cf. *1 Clem.* 27.5) but also stresses that God is patient, allowing opportunity for repentance (Rom 2:4; Wis 11:23; 12:19-20; cf. Acts 17:30).

6.2.2. The Corinthian Letters. Augustine implicitly noted the connection between 2 Corinthians 5:1-4 and Wisdom 9:15 when he blended the two passages together in a paraphrase. Paul views life in the body as the soul's sojourn in an "earthly tent" (2 Cor 5:1), a "burden" that makes us groan (2 Cor 5:4). Here, even though Paul weds the images with the expectation of a new dwelling (the resurrected body), the conception of the mortal body is remarkably similar to that of Wisdom 9:15. The larger context of this verse appears also to have left its mark on 1 Corinthians 2:7-12, which, together with Wisdom 9:13, 17, announces the impossibility of the earthly mind comprehending spiritual truths or the mind of God apart from receiving the Spirit from God.

6.3. Other Resonances. A number of other texts resonate with Wisdom in intriguing ways. The description of the "armor of God" in Ephesians 6:11-17 is more closely related to Wisdom 5:17-20 than to Isaiah 59:17. Both Wisdom and Ephesians speak of God's *panoplia* ("whole armor") and add references to a shield and sword beyond the helmet and breastplate. While Ephesians is clearly aware of Isaiah's description of God's armor, it also shows signs of direct awareness of Wisdom's earlier expansion of that image. Wisdom's interpretation of the trials endured by the righteous at the hands of the ungodly as God's refining of the individual for the reward of the righteous (Wis 3:5-6) appears again in 1 Peter 1:6-7. Hebrews 8:2-5 and Wisdom 9:8 move in a similar direction in their exegesis of Exodus 25:40, both stressing that the earthly temple was but a copy of the abiding tabernacle that God "prepared from the beginning." It is likely that the author of Hebrews learned this from Pseudo-Solomon (cf. his use of Wis 7:25).

Johannine echoes of Wisdom are less evident, although Wisdom's equation of knowledge of God with "complete righteousness" and "immortality" (Wis 15:3) is similar to Jesus' defini-

tion of eternal life in John 17:3. Similarly, Jesus' equation of love of him with obedience to his commandments may recall Wisdom 6:18: "love of Wisdom is the keeping of her laws." John also depicts the helplessness of the unaided, earthly mind in the face of spiritual revelation, also in the context of receiving God's Spirit (Jn 3:10-12; cf. Wis 9:14, 16-17). Finally, just as all who receive Wisdom are made "friends of God" (Wis 7:27), so all who receive the Son are made "children of God" (Jn 1:12). Such similarities suggest that John was familiar with the ideas one finds in Wisdom, though by no means necessarily directly indebted. Revelation also shares a number of concepts with Wisdom. In both, signs precede judgment (Wis 19:13; Rev 6:12-15; 8:7-9:21; 16:1-20). God seeks to stimulate repentance before visiting destruction upon the ungodly (Wis 12:2, 10, 20; Rev 14:6-7), the ungodly steadfastly refuse to repent (Wis 12:10-11; Rev 9:20-21; 16:8-11) and natural elements play a role in helping the righteous and punishing the wicked (Wis 5:17, 20-23; 16:17; Rev 8-9; 12:16; 16:1-9, 18-20). Once more the evidence does not point to direct dependence but rather to the possibility that Revelation plays out in visionary form a number of concepts already present in the Jewish wisdom traditions.

6.4. *Patristic Use.* Wisdom continued to exert a pervasive influence on the early church, seen most conspicuously in the Muratorian Canon listing of the book as acceptable for liturgical use. Wisdom's teaching that death entered the world because of envy, or more particularly the "devil's envy" (Wis 2:24), appears frequently (*I Clem.* 3.4; Augustine *Trin.* 4.12.15; *In Joh.* 12.10). Augustine made much use of Wisdom 9:15, frequently interrupting his argument to reflect on the difficulty of pursuing theological reflection because this "body, which is corrupt, weighs down the soul; and the earthly dwelling depresses the mind as it meditates on many things" (cf. Augustine *In Joh.* 21.1; 23.5; 35.9; 69.2; 96.4; 124.5; *Trin.* 4.5, 10; 8.2; 17.28; 24.44). This feeds naturally into his rather negative anthropology. This human state, in which the corrupt body weighs down the soul, also explains the impossibility of coming to faith through reason alone (cf. Rom 1:20 and Wis 13:1-5, which Augustine quotes side by side in *Trin.* 15.23). Only the gift of the Spirit, as Wisdom 9:17 goes on to read, allows the human mind to arrive at spiritual truths (Augustine *Trin.* 3.21).

Wisdom continued to have a strong impact on the church's reflection on the person of Jesus and on the doctrine of the Trinity. Ignatius weaves phrases from Wisdom 7:29-30 and 18:14-15 into his description of Christ's manifestation (*Ign. Eph.* 19; *Ign. Magn.* 8.2). Athenagoras applies Wisdom 7:25 to the Holy Spirit (Athenagoras *Leg.* 10.4), while later Alexandrian teachers apply Wisdom 7:24-8:1 to the work of the Son, the "eternal generation" of the Son by the Father and the sharing of the Father and the Son in the same essence (*homoousios*; Origen *De Princ.* 1.2.9; also *Cont. Cels.* 3.62; 5.10; 6.63; 8.14; Grant). While Origen takes this discussion in a subordinationist direction, Augustine will show that this is by no means inherent in Wisdom, for the same texts are used by him to support the complete equality of persons in the Trinity (most forcefully in *In Joh.* 21.2; 22.10; 111.2; *Trin.* 2.5.6; 2.8.14; 3.3; 4.20.27).

WOMEN IN GRECO-ROMAN WORLD AND JUDAISM

In the main, history is written by for and about men, and thus the techniques and sources available for the recovery of women's history must of necessity open themselves to new avenues of research. The literary works of male authors must be augmented by *inscriptions, private *letters, legal briefs, marriage contracts, grave markers (see *Burial*), vase and wall paintings, statuary and ancient artifacts commonly used in the home life and cults of women. Their world was quite different from the military, political and economic arenas of antiquity.

Societal norms differed broadly in the NT era, so that there were marked differences in the activities, liberties, status and occupations of ancient women. We shall consider domestic and social life, *marriage and sexuality, occupations and pastimes and religious expression, beginning with Hebrew women, moving next to *Hellenistic women of the eastern Mediterranean world and finally to those of *Rome.

1. Domestic Life
2. Marriage and Sexuality
3. Occupations and Pastimes
4. Religious Expression

I. Domestic Life.

1.1. Palestinian and Diaspora Women. Within the small Palestinian house lived the family consisting of the father, mother, children, *slaves and kinsfolk. Many activities were conducted on the flat roof above the main room and the two bedrooms. Houses of more affluent families had

an upper story, where there were additional living quarters. The children, both boys and girls, were tended by women in their infancy, though the Hebrew father was far more involved than was common in Greek society. The father assumed the responsibility for the training of sons, while girls were afforded limited opportunities for *education. They were schooled by their mothers in the household arts and in those parts of the law that dealt with *purity issues and the responsibilities of women. These lay heavy upon women, for the law threatened with death in childbirth those who transgressed its strictures.

Though women were usually bound to the duties of home and farm, a surprising degree of liberty is attested in biblical accounts of women who itinerated with Jesus (Lk 8:1-3). Among Jewish women not living in Palestine there seems to have been considerable latitude in practice. *Philo of Alexandria, an early contemporary of Jesus and the apostle Paul, decreed that unmarried women should go only to the door of the women's quarters whereas married women might proceed as far as the front door or even pass through the streets in a litter to *pray in the *synagogue at an hour when few others would be around. In other *Diaspora circumstances Jewish women appear to have moved about quite freely.

1.2. Greek Women. Greek women tended to be the most secluded, though lower-class women were obliged to leave their homes to draw water and to trade in the marketplace. While public places were spacious and full of light, the women's quarters were small, cramped and dark. At the height of the Golden Age (475-425 B.C.), an Athenian woman of citizen class was not supposed even to show her face at the window or door. By the first century of the common era, there were wide disparities in the freedoms and respect accorded women. Some communities and families still clung to older patterns. In Tarsus, for instance, women were more heavily veiled than elsewhere, though they were considered no less lustful.

The Greek woman was thought to have less virtue than a man and to be devoid of moral conscience. Since women could not be trusted to make responsible choices, they might be compelled to remain within their own homes. While certain philosophers propounded a far more enlightened view of women, restrictive customs were the norm in many households. In some,

women neither slept nor ate nor discoursed with the men. The women's quarters were said to be hotbeds of dissension and strife. Literary evidence suggests that sequestered Greek women tended to be depressed, bitter and malicious.

The choice of whether or not a child was to be reared did not belong to the mother. Regardless of her wishes, the father made the decision whether to rear the child or to have it exposed. Daughters were far more likely to be discarded than were sons. Boys were removed from their mother's tutelage at the age of seven and entered the stimulating world of men. They might be introduced to *philosophy, literature, science, politics and sports (*see* Athletics), while girls remained confined to the women's quarters. Unequal treatment began much earlier, however, and the diet of boys contained substantially more meat than was apportioned to girls.

Conversation with males outside the family was forbidden to citizen-class women, and even communication between spouses was limited. Thus the verbal exchange between the Greek woman of Syro-Phoenicia and Jesus is all the more remarkable (Mk 9:24-28).

One of the few escapes available to women was that afforded by wine, and there is evidence that drinking began early in the morning. The custom of Roman men kissing their female relatives on the mouth grew out of a desire to ensure that the women had not been tippling. It is noteworthy that temperance in drink is a prime requisite for female church officers in the NT (1 Tim 3:11; Tit 2:3).

1.3. Roman Women. A Roman woman enjoyed far greater freedom than her Greek sisters and might engage in a broader range of activities. She was accorded deep respect and enjoyed a higher position in society. The traditional Roman matron installed on the family farm was industrious, stern, frugal and chaste. Her own conduct and that of those whom she influenced was characterized by loyalty, integrity and nobility. But military, economic and political pressures drove many families off the farms and into the larger cities. Here women found themselves living in three-story tenements, bereft of the many responsibilities and duties that had previously occupied their time. Slaves were cheap and took over even the breastfeeding and rearing of the children. Women were forced to look for new ways to occupy their time and to put

meaning into their lives.

Although they might participate in many aspects of the society, Roman women were bound throughout their lives to a male protector or tutor. With some notable exceptions, a woman exchanged her tutelage from one man to another: from father to husband at marriage and to a son or guardian in the event of her husband's death. The consent of the tutor was necessary for a woman to buy or sell property, to make a will or to negotiate a divorce.

Ultimate power, known as *patria potestas*, lay in the hands of the family's father or grandfather. If we are to believe the Roman imitators of Menander, who is said to have held up a mirror to real life, wife, children and slaves would conspire together to outwit the dominant male and gain their own purposes. Against this ethos, one may better understand the biblical call for unity of purpose and direction within the family.

2. Marriage and Sexuality.

2.1. Hebrew Women. The Hebrew woman married shortly after the onset of menstruation. Betrothal was arranged by the parents and contracted in a binding agreement that could be severed only by formal *divorce. This was the major ceremonial, with the signing of contracts and exchange of gifts. The marriage was consummated several months later, when the bride was taken to the home of the bridegroom. Proof of the bride's virginity was required, and she was expected to remain chaste as a wife. The married state, rather than virginity, was prized by Jewish women, and the gift of children ardently wished. There is little evidence of unchaste behavior. Divorce was not uncommon, even among devout Jews, and the causes for its justification were a matter of lively *rabbinic debate. The school of Shammai insisted that it was possible only in cases of *adultery, while the school of Hillel maintained that there might be a myriad of reasons, such as spinning in the street, talking with a stranger, a spoiled dinner, a dog bite that did not heal or finding another woman who was more attractive. The effort to draw Jesus into the debate brought a surprising response (Mk 10:2-9).

Until the reforms of Justinian, a Jewish man might legally have more than one wife at a time, a practice that may be in view in the stipulation that an elder should be "the husband of one wife" (1 Tim 3:12). Polyandry, however, was not

possible for a woman, and adultery was punished harshly.

2.2. Greek Women. The Greek woman was often married at an even younger age than her Hebrew counterpart, partly out of fear that she might cease to be a virgin if there was a delay. A disproportionately high number of grave inscriptions attest to a very heavy death rate from childbirth complications among women who were too young. For the woman who escaped the dangers of childbearing, life expectancy was about thirty-seven years.

Marriageable citizen-class women were often in short supply due to the high maternal death rate and the practice of exposing baby girls. In some of the extant literature Greek women are classified by their sexual function: courtesans for companionship, concubines for the daily pleasure of the master of the house and wives to bear legitimate children and keep the house. Wives were neglected both socially and sexually, though Solon the Law Giver had decreed that a husband should visit his wife's couch at least three times a month.

Girls exposed as infants could be reared as slaves and were useful in supplying the need for other types of sexual partners. They were trained in singing, dancing and especially flute playing. Women with these skills were in demand at dinner parties in which the legitimate wife could not appear. Those with fine minds might be given the opportunity for social and intellectual discourse with males. These courtesans, known as *hetairae* ("companions") and famed for their brilliance and wit, were attached to every school of philosophy.

*Corinth in particular was renowned for its courtesans, some of whom grew enormously wealthy as a result of their profession. Sacred prostitutes filled the sanctuary of the patron goddess, Aphrodite, and were supposed to have a particular efficacy in their prayers. Other less religious members of the occupation plied their trade in the streets and marketplace of the thriving harbor city. Greek courtesans were much in vogue in Rome, while many a Roman prostitute adopted a Greek name in imitation of her illustrious Corinthian counterparts.

2.3. Roman Women. Roman marriages were arranged when the bride was about fourteen. She married with reluctance and sometimes had to be pulled from the arms of her mother or nurse in order to be taken to the new husband's

home. The day before she had dedicated her dolls in the temple of a goddess, and her hymen was perforated on a phallic statue of the god Priapus or Mutunus Tutunus. This last practice was bitterly condemned by the church fathers and may be part of Paul's thinking in Romans 1:26. Although a woman might free herself from the control of a tutor by producing three children, family size was limited by the use of contraceptives (especially the drug silphium), abortion and infant exposure.

Roman prostitution was frequently of a highly sordid nature. Crowded, evil-smelling brothels known as lupanara (wolf dens) housed the lower-class prostitutes while they might still earn a living. Those too old to sell their attractions faced a bitter old age and sometimes died of starvation. Higher-class courtesans could hope for a better fate, though they too might find themselves discarded at life's end. In their prime, they might draw the ardor of politicians, statesmen or poets. From writings addressed to demimondaines by the Latin elegaic poets we gain a picture of love characterized as an obsession, illness, madness or aggression.

The love affairs described by poets, both their own and those they observed around them, were not confined to the demimonde. Many were clandestine romances with married women, and clever evasion of the jealous husband was part of the game. Adultery and divorce were common in imperial Rome, and often husband and wife did not even share the same friends.

3. Occupations and Pastimes.

3.1. Jewish Women. Within doors, the typical Jewish woman ground the meal, baked the bread, cooked, cleaned and washed the clothes, as well as spinning, weaving and sewing garments for the family. Outside the house she fetched water from the village well, gathered firewood, worked in the fields, sold produce at market and drove the animals to pasture. In the community she might serve as midwife, nurse or attendant. The position of paid mourner was an important one, especially for older women. Recently discovered documents from the time of the Bar Kokhba rebellion (see Jewish Wars with Rome) reveal that Babitha, twice widowed, conducted her own business affairs and managed her own property. Non-Palestinian Jewish women of doubtful orthodoxy served as fortune-

tellers, *magic workers and purveyors of potions.

3.2. Greek Women. Far more is known about the occupations of Greek women. They were shepherdesses, grocers, wool workers, laundresses, scribes, hairdressers, sellers of olive oil, salt, honey and sesame seed. They sold garlands, perfume, dyes, shoes and textiles in the Women's Market. Within the households of the affluent they were wetnurses, governesses, nannies and ladies' maids. As entertainers they were flute girls, dancers, acrobats, jugglers, harpists and singers. Those with more leisure learned how to read, sometimes at the same time as their children. The works of female painters, poets and philosophers were remembered and cited. The ancient novel appears to have been developed to suit the tastes of literate, Greek-reading women, especially in *Asia Minor (*see* Literacy and Book Culture).

3.3. Roman Women. A primary source of income for the Roman woman was the textile industry, in which both Priscilla and Lydia were employed. Wool working was considered an indication of virtue, even for the most aristocratic women. The occupations of the Greek women were also pursued by their Roman counterparts. Some were independent entrepreneurs. In the taverns they were innkeepers, barmaids and waitresses. In the *theater they were actresses, musicians, gymnasts and even gladiators. Slave women performed manifold domestic tasks and frequently earned their freedom. The bloody combats of the *arena drew women of every class and provided free entertainment while instilling a relish for violence and incredible cruelty (*see* Circuses and Games). Upper-class women sought to relieve their boredom by turning to athletic, literary and academic pursuits, the theater and home games such as draughts and knuckle bones. They spent enormous amounts of slave service, time and money on their own adornment. Christianity was to offer women abundant spiritual, intellectual and emotional outlets for their energies and aspirations.

4. Religious Expression.

4.1. Jewish Rites. Attendance at Jewish rites was allowed women but not particularly encouraged, while men were carefully instructed from childhood in the faith of *Israel and expected to participate in the services. An official congregation was composed of at least ten men, but women could not qualify as constituting mem-

bers. Mishnaic law forbade women from carrying their infants outside the home on the *sabbath—a restriction that must have kept many women from the synagogue, though the legislation was not necessarily enforced.

Nevertheless, the Jewish woman often was accorded by her religion a place of greater *honor and integrity than was her Gentile sister. This may have been one reason for the large number of conversions to *Judaism on the part of Gentile women. It has been argued that part of the attraction was that they, unlike the men, did not have to undergo circumcision. However, women were required to maintain a kosher household and to observe the purity laws—a challenge for any woman. It may be more valid to say that women found within Judaism a greater stability and peace than they could find in the other cults available to women. There is attestation to the leadership given to Jewish congregations, with the attribution of elder, "leader of the synagogue" and "mother of the synagogue" both in Rome and in Asia Minor (*see* Thessalonica).

4.2. Greek Religion. Traditional Greek religion had frequently denied woman legitimate participation in blood sacrifices, consulting oracles, entrance to particular temples and sometimes even in offering prayers. Women often worshiped different gods from men on different days with different modes of worship in different sanctuaries. There is evidence both in Italy and in Greece that women thronged certain temples, usually bringing rather modest offerings, though inscriptions tell of construction projects funded by wealthy women. Spindle whorls dedicated to specific goddesses have been excavated in large numbers at some shrines.

Certain cults afforded women opportunities for leadership. The Fates and Furies were served only by female officiants. Even though ordinary women might not ask their advice, the gods declared their will through women sibyls at the famed oracle sites (*see* Sibylline Oracles). By the first century A.D., there was no longer a high priest of Artemis of *Ephesus but a high priestess instead. Girls of good families participated in *civic cults such as that of the weaving and presentation of new garments each year for the sacred image of Athena, initiation rites at Brauron and processions in honor of Artemis of Ephesus.

For the lower-class and slave women there

were fewer religious options. Their manner of worship was often scorned and derided by men, and there was sometimes interference with the free practice of their religion. Several cults facilitated altered states of consciousness, whether by drugs (poppy, hempseed thrown upon hot rocks, a potent brand of wild pennyroyal and mushroom), wine, ecstasy, fasting, rhythmic movements and percussion instruments. For some women, funerals and religious occasions were the only occasions on which they might leave their homes, a welcome escape for those whose daily lives left them virtually prisoners in their own homes. Dionysus, the god of wine and madness, was viewed as lord of the loud cry and liberator of women, freeing "from shuttle and from loom." Biennial Dionysiac orgies continued until at least the second century A.D.

Particular features drew repeated comment, such as the dancing upon mountains in midwinter, tearing young animals apart (*spuragmos*) and eating the flesh while it was still raw, warm and quivering (*omphagia*), and pregnancy incurred during religious celebrations. The participants were debauched, destructive of property, promiscuous, obscene and verbally abusive. One outlet for these marginalized women was raising a loud, wild cry known as the *olulugia*. The exultant shout became an indiscriminate accoutrement in the cult of several oriental gods, and the shrill vocalizing could drown out the more serious deliberations of men (cf. 1 Cor 14:34). Women were well aware that in the sway of religion they might engage in aggression that would otherwise have been impossible in a repressive society.

4.3. Roman Religion. Aristocratic Roman women supported the worship of the traditional gods of the *Roman Empire (see Religion, Greco-Roman; Religion, Personal). The Vestal Virgins, dedicated to the goddess of hearth and home, were considered responsible for maintaining the welfare of Rome and held enormous prestige and power. The wife of the consul led women in the yearly worship of the Good Goddess, patroness of marriage and family life. Women assumed positions of priesthood in the worship of the Roman *emperors. Several were known as high priestesses of Asia. Often these appointments had political implications, and they were reserved for women of influential families.

Ordinary women resorted to spells, curses and magic in their efforts to contact the divine.

During the terror of the Punic Wars, Roman women looked to new gods for protection. Increasingly they turned to the more exotic oriental cults. Repeatedly the records speak of the worship of Dionysus, Sabazios, Cybele the Mother of the Gods, Isis and even Demeter the Earth Mother as being introduced into the Greco-Roman world by women and restricted by government regulation. Such religions centered upon individual concerns and offered personal salvation rather than the prosperity of a city or nation. The new religion of Jesus Christ fitted admirably the needs and spiritual aspirations of women throughout the empire.

WORDS OF MOSES (1Q22)

The opening lines of *Words of Moses* leave no doubt that this composition is intended as a rewritten Deuteronomy text (see *Rewritten Bible*). Like Deuteronomy, it begins with an introduction that situates a farewell address by *Moses to the congregation of Israel in Moab, in the fortieth year after the departure from Egypt, on the first day of the eleventh month. Unfortunately, only thirty-two small fragments of a single manuscript survive, but on the basis of J. T. Milik's skillful reconstruction the general content of the first four columns is reasonably clear.

1. Contents

2. Distinctive Characteristics

1. Contents.

In what is preserved, there are four distinct parts. (1) God summons Moses (1:1-11a) and instructs him to convocate the people; to ascend (location lost, but presumably) Mt. Nebo accompanied by Eleazar and Joshua, as becomes apparent from 1:12; to "interpret" the *Torah to the heads of the levitical families and all the priests but to "command" it to the sons of *Israel; to call the heavens and earth as witnesses that the people will abandon God and go after foreign gods, that they will "transgress every holy [convocation], the sabbath of the covenant, [and the festivals] which I am commanding you today [to do]," and that God promises to punish them in the land with the covenantal curses until they are destroyed. (2) Moses summons Eleazar and Joshua and instructs them to speak all the words of the Torah, followed by an admonition to observe God's laws (1:11b-2:5a). (3) Moses summons the people and advises them to appoint wise leaders to interpret the Torah for them, and he sternly warns them to be careful to observe the Torah (2:5b-11a). (4) Moses declares God's decrees to the people (2:11b-?). In what survives, this consists of laws concerning the sabbatical year, the Day of Atonement and probably the Feast of Weeks (frag. 41; see *Festivals and Holy Days*). The rest of the scroll is lost. It probably contained at least regulations for the other festivals and the *sabbath, as well as other laws regarded as important to the author, and may have ended with the death of Moses.

The composition can partly be explained as a condensation of Deuteronomy and expansion

by harmonizing with other parts of Scripture, especially Leviticus and Numbers. For example, a speech by God to Moses only hinted at in Deuteronomy (1:3) is added; aspects from various discourses in Deuteronomy are combined into a single discourse by setting Moses' farewell speech to the nation (cf. Deut 1:3) on Mt. Nebo (cf. Deut 34:1) and transforming a warning against sinning (cf. Deut 4:25-28) into a prophecy (cf. Deut 31:14-22, 27); the *festival regulations draw heavily on Leviticus. But the reworking is more substantial and purposeful than this explanation would suggest. With heavy use of biblical phrasing, the author effectively creates a new work—albeit one that is regarded as faithful to Deuteronomy—according to a different plan that reflects the concerns of his own community.

2. Distinctive Characteristics.

Several distinctive characteristics can be perceived. First, there is a concern to emphasize the divinely mandated authority of community leaders, and particularly the priestly succession to the authority of Moses in teaching Torah. Moses speaks only what God tells him to. Eleazar and Joshua accompany Moses on the mountain and serve as mediators of the instruction. The levitical leaders and *priests receive a special interpretation of Torah from Moses by God's direction. Analogous idealization of the successors to Mosaic authority appears in *Josephus (*Josephus Ant.* 4.8.14 §218) and probably underlies certain authority structures in the sectarian scrolls (e.g., priest, overseer and judges, elders and council). Second, calendrical matters are made a central concern by adding violation of appointed times to the sin of idolatry (cf. Deut 4:25-28) as grounds for the foretold destruction (similarly *Jub.* 1:7-11) and by focusing immediately on regulations for the festivals in the legal section. Third, the Day of Atonement rituals are on behalf of the land as well as the people, a concern that is emphasized in the sectarian scrolls (e.g., **Rule of the Community* [1QS] 8:6, 10; 9:4-5; **Rule of the Congregation* [1QSa] 1:9). Fourth, the date of the Day of Atonement—the tenth day of the seventh month—seems to be identified as the date when the wilderness wanderings ended. The tendency to link festivals with events in the history of Israel is a characteristic trait of *Jubilees*.

Although such concerns are common to sec-

tarian literature from *Qumran, there is no direct indication of sectarian origin. 1Q22 belongs broadly within a large body of texts that more or less closely rewrite Scripture. More specifically, it should be regarded as a Moses pseudepigraphon because most of the content is presented as direct discourse from Moses (see Pseudonymity and Pseudepigraphy). J. Strugnell suggested that it may be another copy of the **Apocryphon of Moses B* from Qumran Cave 4 (4Q375, 4Q376), but the similarities (concerning the Day of Atonement ritual) are remote and probably contradictory. Other closely related Moses pseudepigrapha include Pseudo-Moses^{a*} from Qumran Cave 4 (4Q385a, 4Q387a, 4Q388a, 4Q389, 4Q390) and **Testament of Moses*. The manuscript was not dated by the editor, but the handwriting is closest to other Qumran manuscripts dated around 100 B.C.

WRITING AND LITERATURE: GRECO-ROMAN

The NT is, in fact, a collection (twenty-seven discrete documents) of Greco-Roman literary texts, although the precise categorizations of the NT texts in relationship to the larger reality of Greco-Roman literature remain an area of debate among scholars (see Aune). The NT texts are written in Hellenistic Greek, although the levels and styles of Greek vary among these texts to significant degrees.

There is little explicit self-consciousness of Greco-Roman literature among the authors of the NT texts. Acts 17:18 refers to the Epicurean and Stoic philosophical "schools." In this context, Acts' report of Paul's speech includes a citation (Acts 17:28; "some of your own poets have said") of a line from the Stoic author Aratus's poem *Phaenomena* in its proem to Zeus (line 5). This poem was the most widely read poem in the ancient world apart from the *Iliad* and the *Odyssey*. Titus 1:12 cites a Cretan prophet, usually identified with the seventh/sixth century Epimenides, whose prophetic and divine gifts were noted by Plato, Aristotle, Plutarch and Dlogenes Laertius. 1 Corinthians 15:33 contains a maxim which is probably from the epigrammatic lore of Menander, a fourth/third century author of comedies. None of these data establish as fact that any NT author read directly or regularly these or similar texts; it is possible that these citations were known from anthologies and/or from general oral tradition (see Pagan Sources in the New Testament).

In spite of the complexities of placing the NT texts in the context of Greco-Roman literature and of the limited explicit use of such literature within the NT, the literature of the Greco-Roman period is an important and crucial resource and context for the study of the NT.

1. Writing and Reading, and Literary Production and Publication
2. Types of Greco-Roman Literature
3. Accessing Greco-Roman Literature

4. Emerging Issues for New Testament Studies

1. Writing and Reading, and Literary Production and Publication.

1.1. Writing and Reading. Although the Greco-Roman world was primarily an oral/aural culture, writing and written literature were a very significant part of the social and cultural fabric of life (see Literacy and Book Culture). Even the nascent church, as evidenced by the many writings in the NT and by the substantial Christian literature of the second century A.D., participated in a meaningful way in the literary culture of the Greco-Roman world (see Gamble).

It is very difficult to determine the levels of literacy in the Greco-Roman world, but it is likely that the usual level of literacy was between 10 and 20 percent of the population, with probably local variations up to 30 percent (see Harris). Probably for every five or six men who could read and write, there was one woman who was fully literate. Of course, there must have been an indeterminate number of persons who had limited degrees of literacy.

Most literate persons probably learned to read and write in the context of the *educational systems within Greco-Roman culture (see Bonner). Some (many?) nonliterate persons would have had access to some literature through both formal readers (*Gk anagnōstēs*; Lat *lector*) as well as informal readers among family and friends. Revelation 1:3 attests to the practice of public reading of written texts in group settings (presumably, this was how most of the texts of the NT were communicated to the churches which first received them).

Certainly individuals acquired collections of scrolls and books, attested as early as the fifth century B.C. Aristotle and Strato had large personal collections (see 2 Tim 3:13 for a reference to a modest personal collection of books; Lk 1:1-4; Jn 21:25 and 2 Pet 3:15-16 probably also reflect an awareness of the collection of books). The first institutional libraries appear to be those of Hellenistic monarchs. The most famous libraries of the Greco-Roman period were those at Pergamum (about 200,000 rolls) and Alexandria (about 500,000 rolls; see Alexandrian Library). Vitruvius, the first-century writer on architecture, mentions libraries.

1.2. Literary Production and Publication. Most writing in the Greco-Roman period, at least

through the first century A.D., was done on papyrus, although the skins of sheep and goats were prepared for use in writing as well (parchment; finer skins: vellum). For literary works, papyrus sheets (or parchment pieces) were attached and made into rolls, or scrolls (see Lk 4:17 and Rev 5:1 for mention of scrolls in the NT). The standard length was probably about thirty-five feet. To some degree, the length of commercially available rolls probably determined for authors the length of individual books (see Gamble).

The development of the book, or codex (bound and written on both sides), is not completely clear; the earliest certain references appear to be in first-century A.D. authors (Martial; Quintilian). There is physical evidence for the existence of the book in the early second century A.D. (e.g., P⁵², a papyrus book fragment of the Gospel of John). Although Christians did not invent the book form, second-century Christians apparently preferred the codex earlier and to a greater proportion than the non-Christian Greco-Roman culture (see Gamble; Roberts and Skeat).

Most literary composition was done with pen and ink. There are Greco-Roman discussions of ink in Dioscorides (*Mat. Med.* 5.117), Vitruvius (*De Arch.* 7.10) and Pliny the Elder (*Nat. Hist.* 24, 27 and 28; see 2 Jn 12 and 3 Jn 13 for references to pen and ink). Authors would have written either in their own hand or used secretaries or scribes (see Rom 16:22 for the personal attestation of a scribe by name).

Authors had few protections for the integrity and security of their literary productions. There were no commercial publishers. Authors probably moved from oral presentations and/or single copies given to friends and colleagues to the use of professional scribes for the production of multiple copies of a literary work. The production of multiple copies was probably in the first instance for a circle of friends and colleagues, before broader circulation to the general literate public. Many authors were aided in the processes of publication by wealthy friends committed to the dissemination of an author's work (see Patronage). There were varying levels of scribal expertise, which would affect the quality of production. There is very little evidence that multiple copies were produced by several scribes listening together to one reader; rather, most scribes made one copy at a time by copying from an exemplar (see Gamble).

Authors experienced various difficulties in the revision, production and security or protection of their work. Two personal illustrations provide considerable insight into the complexities and difficulties of stolen and altered copies, revisions and production of multiple copies: Galen *My Own Books* (8-23) and Tertullian *Against Marcion* (1.1.1-2) (see 2 Thess 2:2 for a similar concern).

There is only scattered and incidental evidence regarding the book trade in the Greco-Roman world, but it does indicate that there were active and successful booksellers (see Gamble). There were probably book dealers as early as the fourth century B.C. in Greece, but substantial evidence for a book trade does not emerge until the first century B.C. Cicero makes one reference to a bookseller. In the first and second centuries A.D. book trade is attested by Catallus, Horace, *Seneca, Martial and *Pliny the Younger.

2. Types of Greco-Roman Literature.

Modern attempts to classify Greco-Roman literature by types or genres are fraught with difficulties and are in serious danger of anachronistic or rigid misrepresentation. Yet broad categorizations are helpful for analysis and for discussion of the NT (and second-century Christian) texts in their setting in the Greco-Roman literary culture (see Aune; Dihle).

Recognizing these difficulties and noting that the boundaries between some categories are unclear and that there are social and formal levels of what might be recognized as literature, it could be said that Greco-Roman literature is comprised of at least the following types (genres or categories) of writing: poetry, including epics; plays (especially tragedies and comedies); philosophical treatises; moral treatises; history; biography (which is closely related to history); travel and geographical narratives; rhetorical treatises; scientific treatises; novels; satire; epigrams; letters or collected correspondence (although cast in "private" form, they were meant for a broader readership); and literary criticism.

The types of Greco-Roman literature that are the most significant as context and background for interpreting the texts of the NT would involve several categories (see Hornblower and Spawforth). These would include the following [with some Greco-Roman authors from section 3.3 below indicated]: moral treatises (Philode-

mus, Cebes, *Musonius Rufus, *Epictetus, *Plutarch, Maximus of Tyre, *Seneca [see Malherbe 1986]); history (Diodorus Siculus, Polybius, Strabo, *Tacitus, Cassius Dio, Livy; *Suetonius [see M. Grant; Mellor]); *biography (Plutarch, Diogenes Laertius, Philostatus, Suetonius [see Momigliano]); *rhetorical treatises (Dio Chrysostom, Cicero, Quintilian [see Fairweather; Kennedy]); *romances, or novels (Petronius [see Hock; Reardon]); satire (Lucian, Juvenal); and letters (Cicero [see Malherbe 1988; Stowers]). Also of some value would be the study of Greco-Roman literary criticism (see Russell; Russell and Winterbottom).

Although it would not be accurate to suggest that there was a Greco-Roman religious genre, many Greco-Roman authors, including but not limited to those of philosophical and moral treatises, wrote frequently or significantly about religious questions, many of which have importance for the study of the NT and early Christianity. Of the authors noted in 3.3 below, the most important for religious (and theological) themes would be: Cebes, Epictetus, Plutarch, Aelius Aristides, Albinus, Lucian, Maximus of Tyre and Apuleius. Of course, meaningful texts in this connection would be found in a very wide range of Greco-Roman authors (see 3.1 and 3.2 below; see especially Beard; F. C. Grant; Meyer).

It would be appropriate at this point to note those Greco-Roman authors (before the third century A.D.) who explicitly mention Jesus or the early Christians. These include: Thallos (cited only in Christian sources); Tacitus (*Ann.* 15.44); Pliny the Younger (*Ep.* 10.96); Suetonius (*Claudius* 25.4); Celsus (*True Doctrine*, in numerous passages, preserved only in Origen's *Cont. Cels.*); and Lucian (*Peregr.*, throughout; *Alex.* 25, 38).

3. Accessing Greco-Roman Literature.

3.1. *Corpus Hellenisticum Novi Testamenti.* As early as 1915 a group of German scholars, including G. Heinrici, A. Deissmann, E. von Dobschütz, H. Lietzmann and H. Windisch, issued an appeal to scholars to work on producing as complete a collection as possible of Hellenistic [Greco-Roman] texts parallel to the NT in the J. Wettstein tradition (see *ZNW* 21 [1922] 146-48). In 1751-1752 J. Wettstein had produced his two-volume *Novum Testamentum Graecum* (Amsterdam), which included, in addition to the text of the NT, an extensive collection of Greek and Latin (and Jewish rabbinic) texts parallel to vari-

ous NT texts. The deaths of various scholars involved and two major European wars delayed this project for many years. Eventually the project became known as the *Corpus Hellenisticum Novi Testamenti*. Since 1961 various publications attempted to provide so-called parallels from Aelius Aristides, the *Corpus Hermeticum*, Dio Chrysostom, Hierocles, Lucian, Macrobius, Menander, Musonius Rufus, Philostratus, Plutarch and Seneca. There is also in process the *Neuer Wettstein* (see Strecker). A briefer and simpler "new Wettstein" is also available as the *Hellenistic Commentary to the New Testament* (see Boring). Such collections are inevitably selective and raise always the difficult questions of what constitutes legitimate and meaningful parallels (and counter-parallels).

3.2. Anthologies of Primary Sources: Selected Texts. Due to the vast amount of Greco-Roman literature available, one can appreciate and value the use of anthologies which provide, usually topically, selective primary source texts. Such anthologies usually include as well nonliterary texts (e.g., *inscriptions, private and documentary *papyri). Some anthologies collect texts on a topic for its own sake; some are directed to the relevance of such texts for the study of the NT. Most important are anthologies on history (see Austin; Bagnall and Derow; Lewis and Reinhold), philosophy (see Inwood and Gerson; Long and Sedley; Malherbe), culture and society (Shelton), religion (Beard; F. C. Grant; Meyer), ethics (Malherbe), family/household (Gardner and Wiedemann), miracles (Cotter), slavery (Wiedemann), women (Lefkowitz and Fant; Rowlandson) and epistolary theory (Malherbe).

3.3. Reading Major Greek and Latin Authors. It has been estimated that perhaps only 10 percent of ancient Greek literature has survived and that perhaps 33 percent of ancient Latin literature has survived (more Latin literature survived due, most likely, to the fact that medieval scribes knew Latin better than Greek). In spite of what has been lost, a considerable volume of Greek and Latin literature from the ancient world is available, much of it in English translations.

Virtually all surviving Greco-Roman literature is written by men. There were women writers in the ancient world (see Snyder), but relatively few. Most of the more than one hundred names of women writers known to us were poets (the most famous is Sappho, born in the seventh century B.C.); some of this work survives

in fragments. In the Hellenistic period there were also some women who were writing philosophers, but their work survives only in fragments.

The two most important series of texts of ancient Greek and Latin authors are the *Bibliotheca Teubneriana* (the most extensive and critical text series; over 1,200 volumes) and the Loeb Classical Library (nearly five hundred volumes with text and English translation on opposite pages). Many works are also available in other series and in numerous publications apart from series.

It is difficult to identify the most significant Greek and Latin authors for the study of the NT and its context. The most important authors prior to the Hellenistic and Greco-Roman periods certainly are Homer, *Plato and *Aristotle. These authors are important both in their own right, but also for the continuing influence they had on subsequent authors, including those of our period. Although the excerpted texts collected in the *Corpus Hellenisticum Novi Testamenti* project and in the various anthologies of primary texts are very useful, it is important and valuable to read complete works of Greek and Roman authors in their own right for the understandings and insights that can be gained only through an encounter with the full context of authors and texts (see Dihle). The accompanying table (see Table of Greek and Roman Authors) presents what could be considered the thirty-five most important authors to read for the cultural, social, historical and conceptual background and context of the NT. To this must be added the category of Greco-Roman *romances/novels (see Hock; Reardon; see *Romances/Novels, Ancient*).

3.4. Digital Texts and Related Aids. There are various digital texts and related aids that enable one to access the Greek and Latin literary works of antiquity through various forms of word searches.

The *Thesaurus Linguae Graecae* (TLG) project, begun in 1972 at the University of California, Irvine, has a database of machine readable Greek text of virtually all Greek authors from Homer through A.D. 600 and beyond. This resource has over 74 million words of text available. The TLG list of Greek authors and texts included as of 1990 is available in published form (see Berkowitz and Squitieri).

In the late 1990s Brepols Publishers and

B. G. Teubner (now owned by Saur) in collaboration with the CETEDOC computing centre at the Université Catholique de Louvain (at Louvain-la-Neuve) began to issue the *Bibliotheca Teubneriana Latina* on CD-ROM. This project will eventually include all classical Latin literature from about 800 B.C. to about A.D. 500 (and later medieval Latin literature as well).

Traditional, printed concordances to the ancient Greek and Latin literature are still valuable in many cases. Although dated, there are guides to some of these aids (see Faider; Riesenfeld and Riesenfeld).

4. Emerging Issues for New Testament Studies.

Greco-Roman literature is an important and useful aspect of the background and context of the NT and of second-century Christian literature. It cannot be established that the authors of the texts of the NT were direct or regular readers of Greco-Roman literature, although given what is known, directly and indirectly, about Paul, the author of Luke-Acts, and even the authors of Hebrews and of James, it would be historically plausible that some NT authors had a degree of familiarity with some Greco-Roman literature. Of far greater importance for students of the NT are at least three issues: (1) placing the NT texts in the context of the types of Greco-Roman literature (see *Genres of the New Testament*); (2) understanding the use of Greco-Roman literary devices and forms within the texts of the NT; and (3) illuminating and contextualizing certain NT issues, ideas, themes and topics based on information contained in Greco-Roman literature.

4.1. *New Testament Texts and the Types of Greco-Roman Literature.* There is a considerable history in NT scholarship, especially in the twentieth century, of discussion of the genres or types of literature within the NT in relationship to the literary forms of the Greco-Roman world (see Aune; Dormeyer; see *Genres of the New Testament*).

The fundamental debate over the genre of the NT Gospels is whether to understand them in the context of Greco-Roman biographical literature or whether they should be understood as unique early church kerygmatic proclamation (see Burridge; see *DJG*, Gospel [Genre]). In all probability the Gospels belong to the Greco-Roman biographical literary tradition (see Luke 1:1-4 as one example of literary self-consciousness), but they are certainly also shaped by particular data of the Jesus tradition and the

kerygmatic and didactic needs of the early church (see *Biography, Ancient*).

The discussion of the genre of Acts has been especially difficult due in large part to the perceived connection between the genre issue and that of the historical value of Acts (see Alexander, 1996; Winter and Clarke). Since Acts is a continuation of Luke and focuses to some degree on Peter and Paul, it has been seen as well as biography. The main debate, however, is whether to place Acts in the category of history or novel. It appears that the author's prologue (Luke 1:1-4) places the work within a tradition of serious writing, but it does not resolve the issue of genre (e.g., one of the "closer" parallels to Luke 1:1-4 is the prologue of Dioscorides' treatise on herbal medicines). It would probably be fair to conclude that the author and first readers of Acts perceived of the work as history, a perception supported by the content of Acts, but that Acts also reflects both Greco-Roman epic narrative and novelistic (romantic) features.

It appears to be clearly established that the many *letters of the NT (Paul's as well as those of others) reflect the Greco-Roman conventions of both private letters and also those aimed at larger and multiple audiences (see Stowers; see *DPL*, Letters, Letter Form; *DLNTD*, Letter, Letter Form). Of course, the letters, especially those of Paul, reflect distinctive concerns of the early church and what has been called a sense of apostolic (authoritative) presence (see *Epistolary Theory; Letters, Greco-Roman*).

4.2. *New Testament Use of Greco-Roman Literary Devices and Forms.* The texts of the NT use various forms and devices known in Greco-Roman literature, although in many cases these forms have been modified.

Probably the most important Greco-Roman literary devices used in the NT, primarily in the (Pauline) letters (but see Hebrews, too), are epistolary conventions (see O'Brien; Stowers) and various forms of rhetorical argumentation and arrangement (see Fairweather; Kennedy; Porter; see *DPL*, Rhetorical Criticism; *DLNTD*, Rhetoric, Rhetorical Criticism).

It is also likely that James is shaped in part, not only by scriptural and Jewish moral traditions, but also by Greco-Roman literary moral forms and traditions (see Johnson).

4.3. *New Testament Issues Within the Contexts of Greco-Roman Literature.* The old and too often acrimonious debate over the primacy of Jewish

Century	Greek Authors	Latin Authors
1st B.C.	Diodorus Siculus Polybius Philodemus	Cicero Horace Livy

2nd A.D.	Aelius Aristides Albinus Galen Lucian Marcus Aurelius Maximus of Tyre Pausanias Cassius Dio	Apuleius Gellius Juvenal Pliny the Younger
2nd - 3rd A.D.		
3rd A.D.	Diogenes Laertius Philostratus	

TABLE OF GREEK AND ROMAN AUTHORS

or Greco-Roman contexts for the NT should be considered as over. W. D. Davies has spoken of the "eclipse of dichotomies"; certainly much of Second Temple Judaism was influenced by Greco-Roman culture. Of course, the primary context for the NT is the Jewish one, but the significance and value of the Greco-Roman culture, and especially its literature, should not be discounted. It is not only the background of the NT that is at issue; there is also the matter of the context of the recipients and audience of the NT texts that must be considered.

Whether mediated through a Jewish context or not, certainly many of the ideas with which Paul, the author of Hebrews and the author of James deal have connections with concepts clearly attested in Greco-Roman literature (e.g., Paul: Phil 4:11-14 and Stoic-Cynic concepts of *autarkēs*; Hebrews: the Middle Platonic construction of cosmic reality; James: the moral aphorisms [see Johnson]).

Details cannot be pursued here; the guidance provided in sections 3.1 and 3.2 above is substantial. Nevertheless, a few categories and examples may suffice to indicate the importance

of Greco-Roman literary texts for the study of the NT.

Many major conceptual and social issues within the NT clearly depend either in background or in communication with the recipients of the texts upon ideas and material contained in Greco-Roman literature. For example, consider the following matters: the role and status of women, church and state relationships positive and negative, slavery, miracles, the social and structural organization of early churches, various moral issues, the teachings of the "opponents" of NT authors, matters of the "trinitarian structure" of deity and more, including historical and cultural data on Greco-Romans cities mentioned in Paul, Acts and Revelation.

The Corpus Hellenisticum Novi Testamenti project (see 3.1 above) and the anthologies of selected primary texts (see 3.2 above) provide abundant material from Greco-Roman literature for consideration of its parallels and counterparallels to NT texts. Two very well-known examples would be the aphorism of 1 Timothy 6:10 and the statement about the religious nature of Athenians in Acts 17:22, both of which are at-

tested in many Greco-Roman texts. Perhaps a few other, rarely cited examples, which represent only a fraction of what is available, gleaned from reading Greco-Roman authors (see 3.3 above), could illustrate the rich discoveries available within Greco-Roman literature: Cebes, *Tablet 4* (and throughout) and Matthew 7:13-14 on the two ways (broad and narrow); Musonius Rufus 13 and 1 Corinthians 7 on mutual/equal consideration in marriage; Chariton's novel *Callirhoe* 6.2 and 1 Corinthians 9:25 on athletic wreaths/crowns; Pliny the Elder, *Natural History* 13.20 and Mark 14:5 on the cost and perceived value of ointments/perfumes; and Livy 34.2.9-10 and 1 Corinthians 14:34-35 on the request that wives ask their husbands at home rather than in public.

WRITING AND LITERATURE: JEWISH

The Second Temple period witnessed the production of a great wealth of literature by Jewish authors in a wide variety of genres. Much of this literary activity relates directly to the Jewish Scriptures, whether as translations of that sacred corpus or as expansions and rewritings of the biblical story (see *Rewritten Bible*). Among the bodies of literature classified as *Apocrypha and Pseudepigrapha are historical works, *apocalypses, testaments, wisdom literature and liturgical texts. Certain individual authors, such as the historian and apologist *Josephus or the philosopher *Philo, have left to posterity a prolific output. Many other lesser-known writers have contributed also to the treasury of extant historical, poetical and philosophical texts. The discovery and publication of the *Dead Sea Scrolls have made available a substantial library of texts valued and read by a Palestinian sectarian community. Finally, *rabbinic literature, though later than the Second Temple, preserves many traditions that have roots in the first centuries B.C. and A.D.

This literature provides essential information concerning the diversity of, and the struggles and the developments within, *Judaism after the prophetic period. A careful examination of the larger corpus of Jewish literature from the second century B.C. through the first century A.D. opens up the broader conversations within Judaism that shaped the minds of the founders of the church and authors of the NT texts. These offer many insights into Jesus' teachings and ministry, Paul's controversies with other Jewish voices (Christian and non-Christian) and emerging Christian theology and ethics.

1. Biblical Expansions, Additions and Versions.

Judaism, in its various expressions, remained a religion centered around sacred texts. The need for accessible Scriptures gave rise to translations of the *Hebrew into the *Greek language, which was spoken by most Jews in the western *Diaspora. It also gave rise to the production of Aramaic versions of Scripture for use primarily in Palestine and the eastern Diaspora (see Aramaic Targums). The Scriptures also inspired the production of parabiblical texts—interpretive and imaginative rewritings and expansions of the biblical story, as well as additional tales based on characters or stories already present in the Scriptures. Versions and expansions provide a wealth of information concerning how Scripture was interpreted and understood during this period, as well as insights into how Scripture and parabiblical literature could be brought to bear on new situations requiring a "word from the Lord."

1.1. Additions, Rewriting and Expansions of Biblical Narratives. One of the most influential expansions of a biblical story is the collection of apocalypses (see 4.1 below) known as *1 Enoch* (see *Enoch, Books of*). Taking the story of the birth of the giants (Gen 6:1-4) as its starting point, the earlier strata of this work develop an explanation of the origins of evil and of evil

spirits. Both *demonic and human workers of sin, however, stand under the judgment of God, who has already prepared the places of punishment for the wicked and reward for the righteous. The period before the flood becomes a type of the author's own age, as he looks forward to God's final judgment. This book also bears witness to a highly developed angelology (see *Angels*), including the notion of angelic intercession for humanity, and a well-defined *eschatology whose images of judgment and salvation pervade later literature. It is quoted directly by Jude and has left a strong impression upon Revelation.

The book of **Jubilees*, which appears to know *1 Enoch* 6—16 and 72—82, rewrites Genesis 1 through Exodus 12 with a distinctive interest in presenting Torah as an eternal law inscribed on heavenly tablets, obeyed by the angels and the patriarchs themselves before *Moses received the law on Mt. Sinai. Thus Abraham, Isaac and Jacob observe the feasts of Tabernacles and Firstfruits and the Day of Atonement (see *Festivals and Holy Days: Jewish*). The story of Jacob and Esau is intensified to the point that Jacob kills Esau, rather than being reconciled to him, stressing the contemporary tension between Jews and Idumeans (Edomites). Like *1 Enoch*, this book locates the origin of evil in the revolt of Satan (see *Belial, Beliar, Devil, Satan*) and his angels rather than in Adam's inherent weakness (cf. Paul and 4 Ezra). *Jubilees* looks for a return to strict Torah observance, which will precipitate a return to the enjoyment of pre-flood longevity, even to the destruction of death itself.

Although they were not particularly *Essene books, copies of both *1 Enoch* and *Jubilees* were found at *Qumran alongside rewritings of Scripture that were peculiar to the Qumran sect. The **Temple Scroll*, for example, contains a rewriting and recodification of the legal material of the Pentateuch, especially Deuteronomy (see *Apocryphon of Moses [4Q374-377]; Words of Moses [1Q22]*). These frequently reflect the particular practices of the Qumran community, thus anchoring their distinctive practices in the divine revelation of Torah. Also found at Qumran but not showing distinctively Essene interests are fragments of a **Genesis Apocryphon*, which would have provided an expanded retelling of Genesis (only stories of Noah's birth and Abraham's visit to Egypt are legible).

The *Liber Antiquitatum Biblicarum* (see Pseudo-

Philo) retells the biblical story from Adam to King David. The author stresses election theology as the "gospel" of the Jewish Scriptures: *Israel is God's people, chosen before creation. God's fidelity to God's people assures them of deliverance, even in times of desperation. The book also spends considerable time on the nature of leadership, connecting the quality of Israel's leaders with the fortunes of the nation (Nickelsburg). Other noteworthy rewritings or expansions include the **Life of Adam and Eve* and *1 Esdras* (a rewriting of 2 Chron 35:1—36:23 [see *Esdras*, Books of]; Ezra; Neh 7:38—8:12).

The Second Temple period also witnessed a flourishing of additions to the Jewish Scriptures, or supplements to the biblical narrative. Hebrew *Esther* was supplemented with a number of *prayers and other additions that brought Jewish piety and divine activity into the forefront of the narrative. The story of the famous *prophet Isaiah was supplemented with an account of the **Ascension of Isaiah*, a book that became important for the early church and that was substantially edited and expanded by Christians in order to make Isaiah an even stronger witness to Jesus as the Messiah. The Joseph cycle in Genesis inspired the composition of **Joseph and Aseneth*, the story of Joseph's betrothal to the daughter of an Egyptian *priest and her conversion to the God of Israel (see Apocryphon of Joseph [4Q371-372, 539]). It was most likely during this period that the tales about Daniel (Dan 1—6) were collected, along with additional tales such as Daniel's defeat of the worship of Bel and the Dragon or his discovery of the innocence of Susanna. The book of *Baruch and the Epistle of Jeremiah supplemented the testimony of the most renowned prophet of the preexilic period, Jeremiah (see Daniel, Esther and Jeremiah, Additions to). These two figures are enabled to speak directly to the needs of Jews in Palestine and the Diaspora, affirming the way of Torah as the only true path of wisdom, assuring the readers of the hope for repentance leading to the regathering of the exiles, destruction of the Gentile oppressors and the exaltation of Zion. The Epistle of Jeremiah offers advice on how to avoid the snares of idolatry, and rather to regard idol worship as the empty vanity that it is.

The corpus of biblical expansions and supplements bears witness to the many ways in which the Jewish Scripture could inspire its readers. Scripture could speak to readers

through these imaginative retellings, these probings of difficult issues mentioned but left undeveloped in the texts (e.g., the birth of the giants), through the reflection on and narrative expansion of the virtues of the patriarchs and prophets and through the living word, which could still be channeled through such figures to new generations of faithful Jews.

1.2. Versions. The OT found in all Protestant Bibles is based on the Masoretic Text, a Hebrew text tradition with its origins in the early rabbinic period. This text, however, represents one version among many (see Old Testament Versions, Ancient). The Jewish Scriptures were available in Greek and Aramaic translations and a number of Hebrew versions (attested especially by the Qumran scrolls and the Samaritan Pentateuch) before the text was standardized by the rabbis (see Hebrew Bible). Familiarity with these different versions provides the reader with a sense of the range of possibilities for the wording of the Jewish Scriptures available to NT authors (Evans). Such research opens up the student to the streams of interpretation of Scripture already present in the first century, upon which Jesus and the authors of the NT could draw for their arguments and inspiration.

1.2.1. Greek Translations. The best known Greek version of the Jewish Scriptures is the *Septuagint (LXX). The available editions of the Septuagint represent not a single translation but a selection of available Greek translations from different periods by different hands. Every translation is an act of interpretation, but the degree of interpretative license varies greatly among the books included in the Septuagint. The Torah was translated rather closely, but some of the prophetic books amount to interpretative paraphrases of the Hebrew. The Septuagint version is not the earliest Greek translation, but it became the dominant collection by the first century A.D. and ever after in the early church. The Pentateuch may have been translated as early as 250 B.C. The **Epistle of Aristeas* preserves a story of the translation being commissioned by Ptolemy II and executed by seventy-two of the most brilliant scholars in Palestine. More likely, the translation was undertaken by *Alexandrian Jewish scholars at the request of *synagogues who needed the Scriptures in their everyday language (after Hebrew had been largely forgotten) and who needed a reliable edition of their Torah. The Prophets were translated later, as were

the texts that make up the third division of the Hebrew Bible (the Writings). The Septuagint codices, however, contain many works that were not included in the Hebrew canon, with the result that the early church received more Scriptures than did emerging rabbinic Judaism. These additional books are classified by Protestants as Apocrypha.

The importance of the Septuagint is difficult to overestimate. First, it enabled closer conversation between Greek thought and the Jewish Scriptures, presenting the latter in the language and terminology of the former. For the readers of the Greek Scriptures, the connotations of the original Hebrew were frequently replaced by the connotations of the Greek terms, although the reverse process is also attested. Second, it was the Bible of the early church. Many of the NT authors relied on the Greek version for their own study and for their edification of their converts, whether Jew or Gentile. Study of the letter to the Hebrews reveals that the author frequently follows the Septuagint version of the OT. Many of his main points rest specifically on those words or phrases in which the Septuagint differs from the Masoretic Text. Psalm 40:7-9, for example, speaks of God's rejection of animal sacrifices in favor of "digging out ears" in the psalmist for the purpose of hearing Torah and walking in obedience. The Greek text, however, speaks of God preparing a "body" for the psalmist in place of animal sacrifices. It is the Greek version that supports Hebrews' contention that the offering up of Jesus' body fulfilled the prophetic word of Scripture and instituted the new covenant of Jeremiah 31 (Heb 10:1-10). Another frequently cited example is Isaiah 7:14: in the Hebrew, a "young woman" will conceive, but the Greek translates this as a "virgin." Even Matthew, the most Jewish of the Evangelists, draws on the tradition of the Greek Scriptures as a witness to Jesus' significance.

The translation of the Torah into Greek occasioned no small tension between Palestinian Jews and Diaspora Jews. The prologue to Ben Sira (see Sirach) attests to the awareness of the impossibility of a precise translation, which meant that Diaspora Jews had to defend the divine authorization and the reliability of their Greek version. Several pre-Christian recensions exist that move the Septuagint version closer to the emerging proto-Masoretic text. Diaspora Jews, in conversations with Palestinian Jewish

dialogue partners about the differences between their versions of the Scriptures, would invent even more extravagant proofs of the divine inspiration of the Greek version. Later rabbis, giving in to the necessity of a Greek version, commissioned reissues of the Greek Bible, the most notable being the recension of Aquila, which translate the Hebrew in a more literal, wooden fashion. The synagogue moved as a whole, however, toward education in Hebrew and use of the Hebrew text, leaving the Greek to the early church.

1.2.2. Targumim. As Jews in Egypt required the Scriptures in their everyday language (Greek), so Jews in Palestine and in the East desired to hear the Scriptures in the vernacular, Aramaic (see Rabbinic Literature: Targumim). Like the translations represented in the Septuagint, these targumim (plural of targum) vary in terms of degree of paraphrase and interpretation. The use of targumim in NT studies had been contested on the ground that the earliest manuscripts date from the Middle Ages, so that the texts must postdate the NT by centuries. Discovery of fragments of Aramaic targumim at Qumran (see Aramaic Targums: Qumran) and at the Cairo Genizah (storeroom in a synagogue for sacred texts withdrawn from circulation), however, demonstrate that some did exist in the first century. These periphrastic translations may therefore contain traditions that could go back to the NT period and have been profitably used to explore Jesus' interpretation of the Jewish Scriptures (Evans; Chilton). There are four primary targumim to the Torah (*Onqelos*, *Pseudo-Jonathan*, *Neofiti* and the *Samaritan Targum*) and fragments of several others (4Q_{tg}Lev is particularly important, since it definitely dates from the first century or before); there are also single targumim for the remainder of the Jewish Scriptures, save Ezra and Daniel (Evans).

1.2.3. Masoretic Text. The Masoretic Text, as a rabbinic standardization of the Hebrew text of the Jewish Scriptures, is rightly considered a version rather than the exact original form (Evans). It may be that other versions preserve the original reading in many specific instances and that the Masoretes revised the text to bring it in line with rabbinic interpretation or to exclude sectarian (e.g., early Christian) "misreadings" of the Scripture. Text critics must balance readings from this version against those of the Greek versions and other Hebrew text traditions in their

attempt to reconstruct the original (see Hebrew Bible).

2. Historiography.

A number of texts are written within the genre of historiography, providing essential information about the historical, social and political developments of the period. These writings are never without bias or agendas, which, when analyzed, also are useful indicators of the ethos and conflicts of the period.

2.1. 1 and 2 Maccabees. Maccabees (see 1 & 2 Maccabees) tell the story of the attempts of the *Jerusalem priestly aristocracy to Hellenize Judea, the forceful repression of Judaism instigated by these apostates and supported by the Hellenistic king of Syria, Antiochus IV, and the successful rebellion against the Syrian overlords and their local lackeys by the family of Judas Maccabeus. First Maccabees goes on to chronicle the acts of Judas's brothers down to the accession to the throne and high priesthood of John Hyrcanus I, son of Simon and nephew of Judas. This book is written as a pro-Hasmonean chronicle, reminding the readership of the saving acts of this great family and of the people's willing acceptance of them as their high priests and kings in gratitude for their deliverance (see Hasmonaean). Enthusiasm for the Hasmonaean house was clearly not unanimous, as the Qumran texts, the **Testament of Moses* and the **Psalms of Solomon* show, and 1 Maccabees seeks to revive pro-Hasmonaean sentiments. Second Maccabees is less concerned with the glorification of a house of heroes and more concerned with explicating the ongoing effectiveness of the Deuteronomistic covenant, according to which apostasy leads to national disaster and repentance and obedience to national well-being. Second Maccabees also provides an important early witness to the belief in the resurrection of the righteous and to the growing tendencies to speculate about angelology.

2.2. Josephus. The most familiar historian of the period is *Josephus. Much of his *Jewish Antiquities* could be classified as a rewriting of the Bible, as Josephus's historical interest reaches back to creation itself. The parts of this work that coincide with biblical narrative, therefore, can provide much insight into the interpretation of the Jewish Scriptures for the sake of a mixed readership of Jews and Gentiles. Josephus's scope reaches past the restoration of the *tem-

ple into the life of Jews in Syria, Palestine and Egypt under *Alexander the Great and his successors, the Hasmonaean house and finally Roman and Herodian rule up to the outbreak of the first Jewish revolt (A.D. 66; see Jewish Wars with Rome). For these periods, Josephus provides an essential historical source that often preserves material not known from other documents. His *Jewish War* reviews the end of the Hasmonaean dynasty and the reign of *Herod but is focused mainly on the disintegration of Roman governance of Judea and the events and aftermath of the first Jewish revolt (see Roman Administration; Roman Governors of Palestine). This book seeks to blame the Jewish war on certain revolutionary groups rather than the Jewish population of Judea as whole and presents a suspiciously sympathetic portrait of the Roman generals Vespasian and Titus, who became Josephus's patrons after the war. Aside from such tendencies, the book presents an essential window into the tensions in Judea and its environs during the first century and thus constitutes essential reading for all students of the NT. Josephus also left an autobiography (the *Life*), in which he defends his actions, character and historical credibility against his critics.

2.3. Other Historians. Although he is mostly remembered as a philosopher, *Philo of Alexandria has left two important historical works that provide a window into the life of Alexandrian Jews. The *Embassy to Gaius* tells of an unsuccessful attempt by Philo and his fellow delegates to gain a reasonable hearing from Gaius Caligula on the matter of the civic status of Jews in Alexandria. *Against Flaccus* provides a detailed narrative of an ethnic pogrom perpetrated upon the Jews in Alexandria during the reign of Caligula (A.D. 38-41), showing the horrors that could emerge when latent hostilities are allowed to come to open expression. Fragments of other historians also exist. As in the case of the first half of Josephus's *Antiquities*, these authors appear to have sought to present the biblical narrative in the form of historiography.

3. Apologetic, Wisdom and Philosophical Texts.

3.1. Apologetics. A number of Jewish authors wrote in order to demonstrate to their fellow Jews that Judaism was an equally noble, or even a superior, way of life as that promoted by Gentile philosophers and ethicists. Some may even have written to a Gentile audience in the hope

of raising their estimation of the Torah-observant Jew. The **Epistle of Aristeus* and 4 Maccabees (see 3 & 4 Maccabees) have a definite, inner-directed apologetic thrust. Fourth Maccabees promotes Torah observance as effective training in all the cardinal virtues so highly prized and regarded by the Greco-Roman culture. The author uses as examples the martyrs of the Hellenization crisis in order to demonstrate that dedication to Torah makes for superior expressions of virtue than one can find among Gentiles. Particularly those commandments that separate Jews from people of other races—those laws that frequently occasion the contempt of non-Jews—are shown to lead to virtue and honor. *Aristeus* also explains the special laws of Torah as concealing philosophical and ethical principles that educated Greeks expressed elsewhere and may even have in view a Gentile readership as well as a Jewish audience. Josephus has left one overtly apologetic work—his *Against Apion*, which responds to charges leveled against Judaism by several Gentile critics. His *Jewish Antiquities* also show an apologetic thrust, stressing the antiquity and therefore legitimacy and venerability of the Jewish people and way of life.

3.2. Wisdom. The two main representatives of wisdom literature from this period are the Wisdom of Ben Sira (or **Sirach*, or Ecclesiasticus) and the **Wisdom of Solomon* (see Wisdom Literature at Qumran). The Wisdom of Ben Sira, written in Jerusalem in about 180 B.C., promotes Torah observance as the way of true wisdom and only means of attaining wisdom's rewards. It contains instruction on a wide array of topics, including teachings on prayer, forgiveness, almsgiving and the right use of wealth, that have left a strong impression on later Jewish ethical instructions and on the early church. Wisdom of Solomon, a product of Alexandrian Judaism from the turn of the era, also promotes the Jewish way of life. The author emphasizes the eternal importance of God's verdict on one's life, the rewards and nature of wisdom and the actions of God on behalf of God's people, Israel. The author takes the personification of Wisdom to its highest level and became very influential for the early church's reflection on the divinity and preexistence of Jesus. Wisdom of Solomon helps Jews remain dedicated to Torah also through a demonstration of the folly of Gentile religion, much of which is paralleled in Paul's

attacks on Gentile depravity and on idolatry. It assures them that education in Jewish wisdom supplies all that Greek education had to offer and much more besides.

Epistle of Aristeus also shares much in common with wisdom literature, particularly the Greek literature featuring banquets of sages in which a topic is discussed and refined. The sentences of **Pseudo-Phocylides* resemble a collection of Greek maxims, the first half of which are based on the Decalogue and Leviticus. It is interesting to find, in both of these texts, Jewish writers attributing positive evaluations of Jewish wisdom pseudonymously to Gentile authors.

3.3. Philosophy. Wisdom of Solomon and even more clearly 4 Maccabees (see 3 & 4 Maccabees) move among wisdom literature, apologetics and philosophy. The former incorporates numerous aspects of **Platonic* and **Stoic* doctrine, while the latter is cast fully as a "most philosophical" demonstration that "devout [i.e., Torah-observant] reason masters the passions," a thesis that presents a slight modification of a common philosophical topic (see Philosophy).

An early, important Jewish philosopher was **Aristobulus*, who flourished in the middle of the second century B.C. and whose work is known from five fragments. In these fragments, he claims that Plato and Pythagoras were indebted to Moses for their philosophy, presents the Jews as philosophical monotheists, defends the **sabbath* as a day of special observance by adducing passages from Homer and Hesiod and explains that the anthropomorphisms in descriptions of God and God's actions in the Jewish Scriptures are meant to be understood figuratively. He thus bears witness to numerous strands of thought that would be found in his better-known successor, Philo.

Philo of Alexandria never abandons the literal keeping of the precepts of Torah but affirms the importance of performing them with a knowledge of their spiritual meaning. His extant works provide an allegorical commentary on the Pentateuch, showing how Jewish laws teach the virtues lauded by Greek ethical philosophers and affirm basic principles such as the importance of feeding the rational contemplation of virtue rather than indulging and becoming enslaved by the lower nature. Philo also wrote topical works on such issues as providence, the eternal nature of the world and true slavery and true freedom. In all these writings, Philo shows

how far a Jew could go in incorporating Greek authors and concepts into an exposition of the Jewish Scriptures and still remain a loyal, Torah-observant Jew. His writings provide important windows into a Judaism that was open to the Hellenistic philosophical environment and into the ways in which Hellenistic philosophical concepts could be mediated to the Jewish community and early church. Philo also contains certain ideas, such as the creation of two Adams in Genesis 1—2, that are instructive backgrounds for NT discussions (cf. Paul's Adam-Christ typology; Evans). Ultimately Philo's writings were preserved not by the Jewish community but by the early church, which found his allegorical exegesis of the Jewish Scriptures invaluable for reaching past the "scandal of particularity" (the laws of ethnic Israel) into a more universal message (for a Gentile church).

4. Apocalypses and Testaments.

4.1. Apocalyptic Literature. The genre of apocalypse has been defined as "revelatory literature with a narrative framework, in which a revelation is mediated by an otherworldly being to a human recipient, disclosing a transcendent reality which is both temporal, insofar as it envisages eschatological salvation, and spatial insofar as it involves another, supernatural world" (Collins, in Kraft and Nickelsburg; see Apocalyptic Literature; Apocalypticism). Apocalypses seek to provide the larger context (both the spatial and temporal aspects) for making sense of the author's and readers' present circumstances and arriving at the appropriate response to those circumstances. The texts combine elements of many traditions—wisdom, prophetic, mythic—as well as aspects of potentially genuine visionary experiences. Two major types have been noted: the "otherworldly journey," in which revelation is imparted through a tour and description of otherwise inaccessible regions (e.g., heaven and hell), and the "historical apocalypse," in which the angelic conversation partner describes the course of history up to and including the intervention of God. A common feature of the latter is *ex eventu* *prophecy—the narration of events that are, from the actual author's perspective, past but that are, from the perspective of the ancient worthy who purportedly received the revelation (e.g., Enoch, Moses, Ezra) still future.

First Enoch contains a number of apocalypses

from a continuous tradition (see Enoch, Books of). The foundational part, chapters 6—36, presents an otherworldly journey to the places prepared for the punishment of the wicked and reward of the righteous, revealing an advanced angelology based on the story of the Watchers (cf. Gen 6:1-4). Other early strata (chapters 85—90; 91; 93) provide an *ex eventu* prophecy placing the audience near the time of God's breaking into the fabric of history to execute judgment. Daniel 7—12 preserve apocalyptic visions of the historical type, using beasts and other cryptic designations ("kings of north and south") to recount the history of the Greek and Hellenistic period, leading up to the repression of Judaism under Antiochus IV and the Hellenizing high priests in 175 to 164 B.C. The intervention of God and God's angels is expected imminently, at which time the righteous will receive the kingdom and the apostates and Gentiles will be punished. The Similitudes of Enoch (*1 Enoch* 37—71), composed perhaps during the first century A.D., bear witness to developments of the figure of the Danielic Son of Man and thus provide relevant material for the study of that title in the Gospels.

2 Baruch and *4 Ezra* (*2 Esdras* 9—14) respond to the destruction of Jerusalem in A.D. 70 and to God's slowness in punishing *Rome, the immoral agent of God's chastisement (see *Baruch*, Books of; *Esdras*, Books of). *4 Ezra* is notable for its visions of the eagle and the man from the sea, which bear striking resemblances to the visions of the first beast and the warrior Messiah in Revelation 13, 17 and 19—20. Both *2 Baruch* and *4 Ezra* counsel renewed commitment to Torah as the path to God's vindication of the chastised nation, assuring readers of the nearness of God's deliverance and the certainty of the chastisement of Rome. *Testament of Levi* shows the potential for fluidity between apocalypse and testament (see Testaments of the Twelve Patriarchs). It contains an otherworldly journey in which Levi views the seven heavens, their inhabitants (including several distinct orders of angels) and their functions. It ends with *ex eventu* prophecy and *eschatological predictions. The text was rewritten within the early church and made into a testimony of the Jewish priesthood's rejection of its Messiah. The **Sibylline Oracles* are not apocalypses in the proper sense but are a collection of prophecies akin to the *ex eventu* prophecies of the historical apoca-

lypses. Oracles 3 and 5 are Jewish and provide sharp criticisms of idolatry (all the more stunning since they are placed on the mouth of a pagan priestess), affirmations of the oneness of God and God's providential control of history and "predictions" of the course of history leading up to the establishment of a kingdom of righteousness (not always ahistorical—*Sib. Or.* 3 envisions this kingdom happening under a beneficent Ptolemaic monarch). Other apocalypses of note include 2 *Enoch*, the *Apocryphon of Ezekiel*, the **Apocalypse of Abraham* and the **Treatise of Shem*.

4.2. Testamentary Literature. The genre of testamentary recalls the farewell discourses of great figures in the Scriptures (e.g., Jacob in Genesis and Moses in Deuteronomy 32–33). It is related to wisdom literature in that it concerns the passing on of ethical instructions from a father to his children. It is closely related to apocalypses by its interest in God's ordering of history, in eschatological events and in living with these factors in view. It is distinguished by casting this material within the narrative framework of a deathbed speech that incorporates a retrospect on the life of the patriarch, often as a paradigm of virtue to be imitated. The most important of these are the **Testaments of the Twelve Patriarchs*, which preserve important examples of developments in angelology, demonology, the priestly and regal functions of the Messiah, cosmology and ethics (both commendation of **virtues* and admonitions against vices). The **Testament of Moses*, which may also be viewed as a rewriting of Deuteronomy 31–34, attests to the regard shown Moses as prophet, mediator and perpetual intercessor. The stance of nonviolent resistance advocated by this book stands in stark contrast to more militaristic ideologies of the period (developed on the model of Judas Maccabeus and his brother Simon; cf. 1 Macc 3; 14). The **Testament of Job* recasts the biblical book as a deathbed speech of Job, with significant variations from the biblical story. Notable is the explanation of Satan's motivation. Job provokes Satan by destroying a nearby center for idolatrous worship (witnessing thus to the understanding of idolatry as worship of demons and Satan, which is frequent in the literature of this period and in the NT) and is thereafter afflicted. Job is presented as an example of piety, generosity and patience.

5. Edifying Tales and Romances.

Instruction and theology were frequently cast in the form of edifying stories, three of which may be found in the Apocrypha. **Tobit* tells the story of a Diaspora Jew and his family, illustrating God's providence, the activity of angels and demons and the efficacy of prayer and exorcism. Through Tobit's instructions to his son Tobias (Tobit 13–14 read like testamentary literature), the story promotes almsgiving and acts of charity within the Jewish community, as well as the value of kinship and endogamy. **Judith*, a Palestinian work from the Maccabean period, tells of a young Jewish widow who used her charm to trap and kill a Gentile oppressor. The story affirms the importance of prayer, dietary purity and the virtue of chastity, and it illustrates God's care for God's people in times of adversity. Third Maccabees may also be classified as an edifying legend. It parallels the story of 2 Maccabees, linking the fate of Diaspora Judaism with the land of Palestine and vice versa. It affirms God's special care and closeness to Jews living in the Diaspora, separated from the promised land, and attests to the tensions among faithful Jews, apostate Jews and the dominant Gentile culture (see *Romances/Novels, Ancient*).

6. Qumran Literature.

We have already seen how rewritings of the Bible, versions, apocalypses and testaments have been found among the **Dead Sea Scrolls*, but the corpus as whole merits special treatment on account of the cumulative impact the discovery has made on knowledge of Second Temple Judaism and the backgrounds of the NT. Finding the cache of the **Qumran community* has made an immense contribution to **Essene studies*, as well as to our understanding of the Hasmonean period, especially the resistance to the Hasmonean house, about which 1 Maccabees is understandably silent. The biblical manuscripts found at Qumran have taken OT textual criticism to a new level. A number of readings have been discovered where the Qumran texts agree with the Septuagint against the Masoretic Text, thus bearing witness to a Hebrew version other than, and potentially more original than, the MT.

The Qumran community did produce two notably unique genres of text: the rule and the *pesher*. The **Rule of the Community* and the **Damascus Document* (discovered before the turn of the twentieth century but now closely linked

with Qumran) are a substantially new genre, a sort of compendium of guidelines for entering and remaining part of the community's life, which never takes root elsewhere in Judaism but becomes foundational for Christian monasticism. The *Rule* attests to a sectarian understanding of the covenant, according to which birth into Israel is meaningless and only initiation into the community brings one into God's covenant. The rule concludes with a hymn admitting the impossibility of a mere human pleasing God but celebrating God's election and justification of the sinner by God's grace—a striking witness that even the most legalistic form of Judaism was not oriented toward works righteousness. The *Rule* also organizes its ethical teaching under the "Two Ways"—the way of life of the wicked, the way of the righteous and their respective ends. This form of instruction also appears in the early church (the *Didache*, which is notably also a rule for the Christian community, and the *Epistle of Barnabas*; see *DLNTD*, *Didache*; *Barnabas*, *Epistle of*) These texts also speak of communal meals as foretastes of the eschatological banquet, at which the messiahs will preside, an emphasis found also in the celebration of the Lord's Supper in the early church.

The other distinctive genre is found in the *pesharim*, in which a few lines of the biblical text are quoted, followed by an interpretation (*peshet*) that applies the passage to the history of the Qumran community and its expectations for the future. The form is unique, but the principle (namely, that the Jewish Scriptures speak of the experience of the community) is shared by the early church. *Pesharim* have been found on parts of Habakkuk, Isaiah, Nahum, Micah, Zephaniah and Psalms 37 and 45 (see *Habakkuk Commentary* [1QpHab]).

The Qumran *War Scroll* is also a genre unto itself. Its content has much in common with apocalypses, but its form is not the same. Rather, it presents detailed instructions for the community's battle array for the eschatological war and tells of the battle and its outcome. Together with other Qumran texts, the *War* attests to the apocalypticism of the community. They held to a strict determinism and also to a radical dualism by which the "children of light" (the sect) were divided from and hostile toward the "children of darkness" (the rest of Israel and the Gentiles). This human dualism was embedded in a cosmic dualism, the war between the hosts of Michael

and those of Belial, which would finally be resolved in the eschatological war. After that battle, the messiahs of Aaron and Israel would preside over the sect, which would become the new center of Israel.

The *messianism of the sect has occasioned great interest. Although the extreme claims that the main characters of the sect's history were John and Jesus ought to be rejected, the sect still preserves some important witnesses to the diversity of messianic expectation. One text, known as 4Q521, bears witness to the expectation of the "works" that the Messiah will perform—a model that is also extremely important for some early Christian communities (cf. Mt 11:2-6; Lk 7:18-23).

7. Liturgical Texts.

Numerous *prayers, psalms and other liturgical texts have been transmitted, either independently or as part of larger works. A number of these liturgical pieces appear to have been written to provide suitable prayers or responses at crucial junctures in a narrative. The Prayer of Azariah and the Song of the Three Young Men were inserted into Daniel 3: the former is a prayer of repentance and plea for God's help at the point where the three companions of Daniel are cast into the furnace, and the latter is a psalm of thanksgiving sung by the three after their deliverance (see Daniel, Esther and Jeremiah, Additions to). Similarly, the *Prayer of Manasseh, though not inserted into the narrative, supplies what the story of King Manasseh of Judah in 2 Chronicles 33:1-13 lacks: a record of the king's penitential prayer. This beautiful psalm, placed on the lips of the chiefest of sinners, affirms that no one is beyond God's mercy and power to forgive.

The *Psalms of Solomon are a collection of eighteen prayers, psalms of lament, wisdom psalms and psalms of thanksgiving. These look back upon the corruption and tumult of the last decades of the Hasmonean dynasty, which ended with internecine rivalry and the intervention of the Roman triumvir Pompey the Great. The Psalms view Pompey's siege of Jerusalem and entry into the holy place of the temple as a severe desecration and rejoice in God's justice (evident in the assassination of Pompey some fifteen years later). These events demonstrate for the psalmist's community the principle that departure from the law brings punishment but also that the Gentile instrument of punishment

will not go free. The psalms sharply criticize a rich, exploitative priesthood, promote the way of life of the righteous, uphold God's justice, celebrate God's generosity toward all creation and affirm the value of God's corrective discipline. They also announce a messianic age under the leadership of a Son of David, the Lord Messiah, who fits the military paradigm quite well. The *Apostolic Constitutions*, a Christian document, has been found to contain numerous prayers from the *synagogue (*Hellenistic Synagogal Prayers*), which, after they have been relieved of their Christian interpolations, provide a valuable view into the piety of the early synagogue.

The Dead Sea Scrolls (see section 6 above) have brought to light many other liturgical texts: the *Hodayot* (the **Thanksgiving Scroll*), the hymn of the initiate closing the *Rule of the Community*, numerous additional psalms attributed to David, prayers, benedictions, **Songs of the Sabbath Sacrifice* and angelic liturgies all provide important windows into the worship and piety of this sect (see Liturgy: Qumran). Noteworthy is the sect's awareness of angels in the presence of the worshipping community, shared perhaps by some NT authors (cf. 1 Cor 11).

8. Rabbinic Writings.

Although the Mishnah, the compilation of rabbinic opinions that forms the basis for the later commentaries (the Talmuds), was not codified until about A.D. 200, rabbinic literature may also be considered a literary witness to the Second Temple period insofar as it does preserve traditions that go back to Hillel and Shammai, as well as numerous other scribes and sages from before the fall of Jerusalem (see Rabbinic Literature: Mishnah and Tosefta; Rabbinic Literature: Talmud). Both the Mishnah and the Tosefta, a slightly later expansion of the Mishnah, shed light on the rulership and legal procedures in Jerusalem during the period of Jesus' ministry and the second generation of the Jerusalem church. Moreover, the manner of exegesis employed by the rabbis reflects principles also known to and practiced by NT authors. Hebrews, for example, uses both the techniques of argument from the lesser to the greater (*qal wa-homer*) and argument from verbal parallel (*gezera shawa*). Familiarity with rabbinic exegesis thus helps one to see the rationales at work in the arguments of certain NT authors (see Biblical Interpretation, Jewish). The rabbis were also

known for teaching in parables and provide substantial comparative texts for the study of Jesus' parables. Finally, rabbinic literature contains many references (some rather veiled) to the ministry of Jesus: despite the negative view rabbis take of Jesus, the traditions nevertheless have been valuable as independent witnesses of his teaching and wonder-working ministry (Johnson).

Perhaps the most accessible sample of rabbinic literature is the *Pirke 'Abot*, the Sayings of the Fathers, preserved in the fourth division of the Mishnah. This collection is more akin to wisdom sayings than the rest of the Mishnah, which preserves legal opinions about the application of various commandments to the expanding situations of everyday life. It recommends itself as a valuable introduction to the ethos of those leading minds who gave to Judaism the shape it would bear for centuries to come, particularly their regard for the role of Torah—in both its light and weighty commands—as the center of their lives and the integration of piety and ethics.

ZENON PAPYRI

The Greek *papyri from Egypt preserve many documents that illuminate the life of ordinary people in the cities and towns of Egypt during the periods of Greek and Roman rule. Many of the papyri are fragmentary, in a poor state of preservation and difficult to read. And the text is often incomplete. Because of the random nature of the survival of papyri, most often individual pieces are without context. *Letters may bear the name of the sender, or his rank if he is an administrator, but frequently that is all we know about the individual, and in legal matters documents that might explain the resolution of a case presented in a petition simply have not survived. Therefore any group of documents that can be identified as belonging to, or relating to, a specific individual is of particular importance because they allow us to draw conclusions concerning the interaction of the person and his social and political milieu.

The Zenon papyri constitute a unique find and are the largest archive of documents found in Egypt. Consisting of some two thousand papyri, the archive comprises the files of Zenon, the *oikonomos* (administrator) of a vast estate given by Ptolemy II to his finance minister, Apollonios, in the third century B.C. Amongst his papers are letters, accounts, lists, receipts, memoranda and various other documents that contribute significantly to our understanding of the lifestyle and concerns of the people as well as the administrative processes that affected

their lives. Fortunately, too, Zenon often wrote drafts of his letters on the back of used papyri, such as accounts, and these can sometimes be matched with the responses to them that he received. Although the majority of these papers refer to Egypt in the third century B.C., Palestine, at that time, was under Ptolemaic rule so a considerable degree of similarity in lifestyle may be supposed. Moreover, before taking up his position as administrator of Apollonios's Egyptian estate, Zenon traveled extensively in Palestine. Because the history of Palestine during the period of *Ptolemaic rule is virtually undocumented, the Zenon papyri from Palestine are of particular significance.

Although Syria, of which Palestine was part, subsequently fell under *Seleucid rule (197 B.C.) it is probable that by the late first century B.C. life in Palestine had changed little, at least for the people in the small towns and villages. The population of Syria was quite different from that of Egypt in that the majority of Egyptians were primarily peasants who did not question the power of the state whereas the Syrian population was much more diverse, made up of Phoenicians, Jews, Arabs and Idumeans, each with their own historical background and lifestyles that were different from those of the Egyptians. Outside the cities and towns in Syria there were peasants whose simple lifestyle was similar to that of the Egyptian *fellahin*. It is likely, too, that food production and diet would have been similar in both countries.

1. Zenon in Palestine
2. Trade Between Egypt and Syria
3. Food and Diet
4. Toubias the Ammonite
5. Jews in Palestine
6. Taxes

1. Zenon in Palestine.

The earliest dated texts in the archive, begin-

ning in 259 B.C., document a journey Zenon took to Palestine on behalf of Apollonios. His journey, of almost four months' duration, took him from Stratonos Pyrgos (later Caesarea) east to *Jerusalem and Jericho and into the Ammonite territory of the sheik Toubias. He returned through the Hauran and *Galilee, reaching the coast at Ptolemais (Acre). The route of the journey can be determined, in part, from the accounts that list systematically the places in which food was purchased for the travelers. The company was made up of a number of small groups that appear in various parts of Palestine; individual members change from group to group at various times. The purpose of the journey seems to have been to establish trade with certain Palestinians, and on Zenon's return to Egypt he continued to correspond with them. Surviving in the archive are a number of letters from these associates as well as several lengthy accounts of daily rations issued to the members of the group and for the support of the large baggage train that accompanied them (see *Travel and Trade*).

2. Trade Between Egypt and Syria.

The accounts and the letters show that Zenon established trade associations between Palestine and Egypt, although, based on the surviving evidence, this trade appears somewhat one-sided, with imports from Palestine far exceeding the goods he exported from Egypt. P.Col.Zen. 2 indicates that he exported some rush mats and pickled foods. P.Cair.Zen. 1 59.012, is a document prepared for the use of the customs officials at Pelusion (the Egyptian port nearest to Syria where duties were collected on imported goods), which is a list of the cargoes of three ships belonging to Apollonios, annotated with the various customs dues and local taxes payable on each item. The goods in these consignments consisted mainly of foods, although wool, some mats and a jar of Samian earth are also listed. In addition to staples such as grain and oil, there are wines of different varieties and quality, several types of cheese, nuts, dried figs, meat (venison and goat), sea fish as well as salted and pickled fish, and honey from six different locations in Caria, Attica, Rhodes and Asia Minor, some of which must, in turn, have been imported to Syria.

3. Food and Diet.

Zenon kept detailed records of his administra-

tion of Apollonios's affairs, both during the Palestinian period and later on the estate in Egypt. Of particular interest among these records are several extensive accounts drawn up in the course of Zenon's visit to Palestine; some detail the daily distribution of food to the travelers and one, P.Lond. 7 2141, contains references to foods sent as *xenia* (gifts of friendship). Included in these foods were lobster, caviar, meat, fine wine, figs, dates and cheese; luxury foods such as these, however, were not the common fare of the ordinary people. Their simple diet can be determined by the food distribution lists (P. Lond. 7 1930, P.Cair.Zen. 1 59.004, 59.006). Each day the travelers received rations of wine, flour and fish (usually pickled or salted). Mostly these ingredients were issued to the cooks and bakers for the preparation of meals, although several persons received individual rations, particularly of wine. These meals, then, were virtually identical to the meals eaten by Jesus and his disciples as they traveled throughout Galilee (cf. Mt 15:36; Mk 6:38).

4. Toubias the Ammonite.

Several documents in the archive mention the Jewish name Toubias (Tobiah). In "the land of Toubias" members of Zenon's party were issued with flour, perhaps provided by, or purchased from Toubias (P.Lond. 7 1930. 175). He certainly provided the party with horses and donkeys that were given rations of chaff (P.Cair.Zen. 5 59.802. 2, 18), and his grooms were allocated one *chous* of wine (P.Lond. 7 1930. 49). That Toubias, a native sheikh, was a man of considerable influence, can be determined from several papyri. P.Cair.Zen. 1 59.008 is a deed of sale for a slave girl purchased by Zenon in Birta, a place in the land of Ammon. Several of the witnesses are identified as cleruchs (military settlers) serving in the troops commanded by Toubias. In all probability these cleruchs were part of a military force maintained by Ptolemy to secure the country and to protect the border. Therefore as the leader of the cleruchy, Toubias was acting as an official of the Egyptian king. Further indication of his status can be seen from two *letters he sent to Apollonios, both written on the same day. In one, he sends as gifts to Ptolemy—a known collector of strange animals—a collection of horses, dogs, white Arabian donkeys and mules. That he should send a gift to the king is not surprising, but his letter is decidedly casual.

Whereas one of his letters to Apollonios begins with the customary effusive greetings, his letter to the king (of which he encloses a copy for Apollonios) is little more than a bald statement of fact with none of the deferential language one might expect in such a letter. His only concession appears to be that he does put the king's name before his own in the opening salutation, ("To King Ptolemy from 'Toubias"), a courtesy he does not extend to Apollonios ("Toubias to Apollonios"). Of course, it is possible that this letter was merely an "invoice" to accompany the consignment and was not really intended for the king's eyes, but it is striking in its informality. In another letter (the one in which he sends the copy of his letter to the king) he informs Apollonios that he has sent him as a gift four young house slaves accompanied by a eunuch (perhaps their instructor). This is far more formal, beginning with formal words of greeting, but it too retains an air of informality. He writes to Apollonios as to an equal rather than deferring to him as the chief minister of Egypt.

Toubias, in fact, was from an aristocratic family whose position can be traced back from his time for at least 500 years. His ancestor, Toubias the Ammonite, is found in the book of Nehemiah opposing Nehemiah's political activity in Judah and his rebuilding Jerusalem. Clearly, when Nehemiah refers to Toubias as "the slave Toubias" (Neh 2:10, 19), the term is derogatory. He notes that Toubias is indeed a powerful man through marriage connections and that he is in regular correspondence with officials in Judah (Neh 6:17-18). Moreover he has an alliance with Eliashib, the high priest who, to Nehemiah's disgust, made available for Toubias's use a chamber in the temple of Jerusalem (Neh 13:4-8). It is of interest that the book of Nehemiah was written in the third century B.C., contemporaneously with, but unrelated to, the Zenon papyri. The earliest ancestor of Toubias can be found in Zechariah (Zech 6:10), written c. 520 B.C., and others are mentioned in Nehemiah's list of Jews returning from Babylon (Neh 7:62).

5. Jews in Palestine.

There are a number of references to Jews other than Toubias in the papyri from Palestine. Another influential village leader is Jeddous, who, like Toubias, is not cowed by the Egyptian officials. A local official named Alexandros received a request to recover a debt owed to Zenon. Alex-

andros, however, did not go himself, claiming he was ill, and sent Zenon's messenger, Straton, and a young man in his place. Jeddous violently drove them from the village without paying the debt. He does not appear in any other papyri, and he probably lacked the political status of Toubias, but in his letter Alexandros simply informs his superior, Oryas, of the situation without suggesting that any action should be taken against Jeddous (P.Cair.Zen. 1 59.081).

It is not always possible to determine whether or not some of the people mentioned in the texts are Jews. In the letter from Toubias to Apollonios accompanying his gift of slaves, Toubias includes descriptions of the boys as well as their names. Two are described as being circumcised, but this does not necessarily indicate that they were Jews. Their names, Audomos and Okaimos, are not specifically Semitic, and in Jeremiah 9:24-25 we learn that circumcision was practiced by a number of the peoples living in and around Palestine.

A person's name does not necessarily indicate ethnicity. In Ptolemaic Egypt parents often gave their children Greek names, and we find a very common Egyptian name, Pasis, with the epithet "the Jew" (P.Cair.Zen. 2 59.241. 2). Similarly we find a man with the Greek name Antigones also designated "the Jew" (P.Mich.Zen. 30. 5). Simon of Galilee, a worker on a camel caravan carrying grain between Palestine and Egypt, may well have been a Jew given that he is located in Palestine (P.Col.Zen. 2. 23).

6. Taxes.

There are numerous references in the Egyptian papyri of the Zenon archive which show that the Egyptians and Palestinians had much in common in their daily lives. In the NT we read of complaints about *taxes and the tax gatherers. The Zenon papyri contain references to a bewildering array of taxes and imposts. These were particularly heavy for those engaged in agriculture and included taxes on land, gardens, vineyards, the use of pastures, dikes and the maintenance of waterworks for irrigation. Add to these the taxes on animals (cattle, sheep, goats) and on their products (milk, wool, work done by animals) and a tax to pay for the payment of veterinary surgeons. In addition the sale of goods in the market was taxed as well as use of the bathhouse, brewing beer and the sale of oil. Moreover taxes had to be paid to the *temples

and for the provision of guards who protected livestock and the fields during the harvest.
