Preface

The first three dictionaries in this series are dedicated to the principal components of the New Testament: Jesus and the Gospels, Paul and his letters, and the later New Testament writings. These volumes survey well the contents and theological contributions of the New Testament and its principal figures, along with the various critical methods that have been developed to assist interpreters in their work. The present volume hopes to supplement these earlier works in strategic ways.

This, the fourth reference volume, takes a completely different approach. It attempts to situate the New Testament and early Christianity in its literary, historical, social and religious context. This volume is concerned with archaeology, geography, numismatics, related writings, various historical figures, political institutions, historical events, peoples and culture. It is not tied to specific writings of the New Testament, as is the case with the three previous dictionaries.

There are several related books that could be mentioned. C. K. Barrett's *The New Testament Background* (rev. ed., 1987) provides a key selection of primary texts, along with helpful annotations. C. A. Evans's *Noncanonical Writings and New Testament Interpretation* (1992) offers thumbnail descriptions of much primary literature that has bearing on the writings of the New Testament. S. E. Porter's edited volume, *Handbook to Exegesis of the New Testament* (1997), contains a variety of lengthier essays on select background-related topics as they bear on exegesis. Other works take a commentary approach. S. T. Lachs's *A Rabbinic Commentary on the New Testament* (1987) provides useful commentary, but is limited to the Synoptic Gospels and is focused primarily on rabbinic parallels. The *Hellenistic Commentary to the New Testament*, edited by M. E. Boring, K. Berger, and C. Colpe (1995), covers the whole New Testament but only offers parallels from the world of Hellenism (though broadly defined). B. J. Malina's and R. L. Rohrbaugh's *Social-Science Commentary on the Synoptic Gospels* (1992) takes a thematic approach, bringing social, economic and cultural issues to bear, but it is limited to the Synoptic Gospels and discussion is brief. The most comprehensive of these works is C. S. Keener's *The IVP Bible Background Commentary on the New Testament* (1993), which brings relevant data to bear on all of the New Testament writings, passage by passage. However, its treatment—though based on the primary literature—is aimed at a popular audience and so does not include references to the ancient sources.

In contrast to these related and important studies, the present volume limits itself to some 300 topics judged to be relevant to our understanding of the world, or "background," of the New Testament. It may be admitted that *background* is not necessarily the

best word. Some will argue that *context*, *setting*, *world* or some other word would have been better. Perhaps. But "background" will be widely and immediately understood and will have to do, for the other alternatives pose difficulties of their own. The purpose of the present volume is to clarify the world of thought and experience in the light of which the New Testament should be read and the early Christian church understood.

Readers will find discussion of most of the Dead Sea Scrolls, the Greek papyri and various inscriptions, the writings that make up the Apocrypha and pseudepigrapha, and the biblical languages. Recent archaeological finds are presented, including regional overviews. Important figures are featured—such as Caiaphas, Hillel, Shammai, Simon ben Kosibah and the Roman governors of Palestine—as well as exotic ones, such as Apollonius of Tyana, Jesus ben Ananias or Jewish holy men. Articles focus on major Jewish, Greek and Roman institutions, important cities in Israel and the Roman Empire, as well as on cults, commerce, geographical perspectives and much more. Some two hundred scholars who possess expertise in the various topics treated have contributed to this volume. Many of the contributors are well-known veterans, while others have completed their doctorates in recent years in technical fields that are breaking forth in new avenues of discovery.

The length of the respective articles has been determined on the basis of their relevance to New Testament research or the complexity and vastness of the subject. Several articles are only 500 words; most of the others range from 1,000 to 7,500 words, with some exceeding 10,000 words. All include bibliography, guiding readers to additional literature that treats aspects of the topic in greater depth. Each article attempts to bring the reader up to date, to trace briefly the scholarly discussion and then present the very latest research. Some articles discuss texts that were not available only a few years ago. In some cases, such as archaeology, the material that is discussed has come to light only in the year or so prior to publication. The editors and publisher hope that this collective labor will benefit significantly those who wish to interpret the writings of the New Testament and the early church in full context and as accurately and completely as possible.

The editors wish to express their appreciation to the many scholars who contributed articles—in some cases several articles—to this dictionary. Some contributors came to the rescue on short notice, and for this the editors are very grateful. Reference book editor Daniel G. Reid is to be thanked for guiding the work from beginning to end and for taking an enthusiastic interest in it. A debt of gratitude is also owed to the editorial and production staff of InterVarsity Press for their careful and timely labor. Finally, the editors wish to thank Ginny Evans, who served as project manager, handling the many hundreds of letters, phone calls, e-mail notes and countless other details that such a major and complicated work as this entails. Without her consistent and faithful labor, the project would not have reached completion.

How to Use This Dictionary

Abbreviations

Comprehensive tables of abbreviations for general matters as well as for scholarly, biblical and ancient literature may be found on pages xii-xxix.

Authorship of Articles

The authors of articles are indicated by their first initials and last name at the end of each article. In cases of articles that are composite in authorship, where possible the contribution of each author are found in brackets at the end of each section of an author's contribution. A full list of contributors may be found on pages xxxi-xxxiv, in alphabetical order of their last name. The contribution of each author is listed alphabetically following their identification.

Bibliographies

A bibliography will be found at the end of each article. The bibliographies include works cited in the articles and other significant related works. Bibliographical entries are listed in alphabetical order by the author's name, and where an author has more than one work cited, they are listed alphabetically by title. In some types of articles, the bibliographies are divided into labeled categories (e.g., "Texts and Editions" and "Studies").

Cross-References

This *Dictionary* has been extensively cross-referenced in order to aid readers in making the most of material appearing throughout the volume. Five types of cross-referencing will be found:

1. One-line entries appearing in alphabetical order throughout the *Dictionary* direct readers to articles where a topic is discussed:

AMULETS. *See* DEMONOLOGY.

2. An asterisk before a single word in the body of an article indicates that an article by that title appears in the *Dictionary*. For example "*Philo" directs the reader to an article entitled **PHILO**.

3. A cross-reference appearing within parentheses in the body of an article directs the reader to an article by that title. For example, (*see* Scholarship, Greek and Roman) directs the reader to an article by that title.

4. Cross-references have been appended to the end of articles, immediately preceding the bibliography, to direct readers to articles significantly related to the subject:

See also ALEXANDRIAN LIBRARY; ALEXANDRIAN SCHOLARSHIP; HELLENISTIC EGYPT.

5. Where appropriate, references are made to articles in the companion volumes, the *Dictionary of Jesus and the Gospels* (*DJG*), the *Dictionary of Paul and His Letters* (*DPL*) and the *Dictionary of the Later New Testament and Its Developments* (*DLNTD*). These references are found within the body of the text of articles. For example, a reference such as (*see DJG*, Gentiles) refers to the article on "Gentiles" in the *Dictionary of Jesus and the Gospels*, and a reference such as (*see DLNTD*, Apocalyptic, Apocalypticism §1) refers to a specific section within the article on "Apocalyptic, Apocalypticism" in the *Dictionary of the Later New Testament and Its Developments*.

Indexes

Since most of the *Dictionary* articles cover broad topics in some depth, the *Subject Index* is intended to assist readers in finding relevant information on narrower topics that might, for instance, appear in a standard Bible dictionary. For example, while there is no article entitled "Afterlife," the subject index might direct the reader to pages where the afterlife is discussed in the articles on "Eschatologies of Late Antiquity," "Resurrection" or elsewhere.

A *Scripture Index* is provided to assist readers in gaining quick access to Scripture texts referred to throughout the *Dictionary*.

An *Articles Index* found at the end of the *Dictionary* allows readers quickly to review the breadth of topics covered and select the ones most apt to serve their interests or needs. For those who wish to identify the articles written by specific contributors, they are listed with the name of the contributors in the list of contributors. A *Classified Index of Articles* groups articles according to broad topical fields, such as Languages or Dead Sea Scrolls, is available on the IVP website: www.ivpress.com.

Transliteration

Hebrew, Aramaic and Greek words have been transliterated according to a system set out on page xxx. Greek verbs generally appear in their lexical form (rather than infinitive) in order to assist those with little or no knowledge of the language in using other reference works.

4QMessianic Apocalypse	<i>Messianic Apocalypse</i> (4Q521)
4QMez ^{a-b}	<i>Mezuzah</i> (4Q149-155)
4QMMT ^{a-f}	<i>Miqsat Ma'aseh ha-Torah</i> (4Q394-399)
4QNarrative	<i>Narrative A</i> (4Q458)
4QNJ ^{a-b} ar	<i>New Jerusalem</i> texts (4Q232[?], 4Q554, 4Q555)
4QOrd ^{a-c}	<i>Ordinances and Purification Texts</i> (4Q159, 4Q513-514)
4QPEnosh	<i>Prayer of Enosh</i> (4Q369)
4QpHos	<i>Peshar on Hosna</i> (4Q166-167)
4QPhyl ^{a-d}	<i>Phylacteries</i> (4Q128-148)
4QpIsa	<i>Peshar on Isaiah</i> (4Q161-165)
4QpNah	<i>Peshar on Nahum</i> (4Q169 + 4Q458)
4QpPs ^{a-b}	<i>Peshar on Psalms</i> (4Q171, 4Q175)
4QPrNab ar	<i>Prayer of Nabonidus</i> (4Q242)
4QProto-Esther ^{a-f}	<i>Tale of Bigsawan</i> (Pseudo-Esther) (4Q550 ^{a-f})
4QpsDan ^{a-c} ar	<i>Pseudo-Danielic Writings</i> (4Q243-245)
4QpsEz ^{a-b}	<i>Pseudo-Ezekiel</i> (4Q385-388, 4Q391)
4QpsJosua ^{a-b}	<i>Psalms of Joshua</i> (4Q378-379)
4QpZeph	<i>Peshar on Zephaniah</i> (4Q170)
4QRitual of Purification	<i>Purification Text</i> (4Q512)
4QSapiential Work	<i>Secret of Existence</i> (4Q412-413, 4Q415-421)
4QShirShabb	<i>Songs of Sabbath Sacrifice</i> , or <i>Angelic Liturgy</i> (4Q400-407; also 11Q17, Mas 1 k)
4QTanh	<i>Tanhumum</i> , or <i>Consolations</i> (4Q176)
4QTest	<i>Testimonia</i> (4Q175)
4QtgJob	<i>Targum of Job</i> (4Q157)
4QtgLev	<i>Targum of Leviticus</i> (4Q156)
4QTohorotA-C	<i>Purification Texts</i> (4Q274-279, 281-284)
4QTQahat ar	<i>Testament of Qahat</i> (4Q542)
4QZodiac	Magical text (4Q)
5QNJ ar	<i>New Jerusalem text</i> (5Q15)
11QJN ar	<i>New Jerusalem text</i> (11Q18)
11QMelch	<i>Melchizedek</i> (11Q13)

11QpaleoLev	Copy of Leviticus in paleo-Hebrew script (11Q1)
11QP ^s ^a	<i>Psalm Scroll</i> (11Q5)
11QTemple ^{a-b}	<i>Temple Scroll</i> (11Q19, 11Q20)
11QgJob	<i>Targum of Job</i> (11Q10)

Targumic Material

<i>Tg. Onq.</i>	<i>Targum Onqelos</i>	<i>Tg. Neof.</i>	<i>Targum Neofiti I</i>
<i>Tg. Neb.</i>	<i>Targum of the Prophets</i>	<i>Tg. Ps.-J.</i>	<i>Targum Pseudo-Jonathan</i>
<i>Tg. Kt.</i>	<i>Targum of the Writings</i>	<i>Tg. Yer. I</i>	<i>Targum Yerušalmi I</i>
<i>Frg. Tg.</i>	<i>Fragmentary Targum</i>	<i>Tg. Yer. II</i>	<i>Targum Yerušalmi II</i>
<i>Sam. Tg.</i>	<i>Samaritan Targum</i>	<i>Yem. Tg.</i>	<i>Yemenite Targum</i>
<i>Tg. Isa</i>	<i>Targum of Isaiah</i>	<i>Tg. Esth I, II</i>	<i>First or Second Targum of Esther</i>

Order and Tractates in the Mishnah, Tosefta and Talmud

Same-named tractates in the Mishnah, Tosefta, Babylonian Talmud and Jerusalem Talmud are distinguished by *m.*, *t.*, *b.* and *y.* respectively.

'Abod. Zar.	'Aboda Zara	Ma'as Š.	Ma'aser Šeni	Qod.	Qodasim
'Abot	'Abot	Mak.	Makkot	Ras Haš.	Ras Haššanah
'Arak.	'Arakin	Makš.	Maktirin	Sanh.	Sanhedrin
B. Bat.	Baba Batra	Mag.	Megilla	Sabb.	Sabbat
B. Meš.	Baba Meši'a	Me'il.	Me'ilah	Seb.	Sebi'it
B. Qam.	Baba Qamma	Menah.	Menahot	Šebu.	Šebu'ot
Bek.	Bekhorot	Mid.	Middot	Seder	Seder
Ber.	Berakot	Miqn.	Miqna'ot	Seqal.	Seqalim
Beza	Beza (= Yam Tob)	Mo'ed	Mo'ed	Sofa	Sofa
Bik.	Likkurim	Mo'ed Qat.	Mo'ed Qatan	Sukh.	Sukkah
Dem.	Demai	Nai	Nasim	Ta'an.	Ta'anit
'Eruv.	'Eruvin	Nazir	Nazir	Tamid	Tamid
'Ed.	'Eduyyot	Ned.	Nedarim	Tem.	Temuru
Git.	Gittin	Neg.	Nega'im	Ter.	Terumat
Ḥag.	Ḥagiga	Nes.	Nesiqin	Tehar.	Teharot
Ḥal.	Ḥalla	Nid.	Niddah	Ṭ. Yom	Ṭebul Yom
Ḥor.	Ḥorayot	'Ohal.	'Ohalot	'Uq.	'Uqsin
Hul.	Hullin	'Or.	'Orlah	Yad.	Yadayim
Kelim	Kelim	Parah	Parah	Yebam.	Yebamot
Ker.	Keritot	Pe'ah	Pe'ah	Yoma	Yoma (= Kippurim)
Ketub.	Ketubbot	Pesah.	Pesahim	Zabim	Zabim
Kil.	Kil'ayim	Qinnim	Qinnim	Zebah.	Zebahim
Ma'as.	Ma'aserot	Qidd.	Qiddušin	Zera.	Zera'im

Other Rabbinic Works

'Abad.	'Abadim	Mak.	Mekilta
'Abot R. Nat.	'Abot de Rabbi Nathan	Mez.	Mezuzah
'Ag. Ber.	'Aggadat Beresit	Midr.	Midraš (cited with abbreviation for biblical book; but Midr. Qoh. = Midraš Qohelet)
ARV	(see 'Abot R. Nat.)		
Bab.	Babylonian	Pal.	Palestinian
Bar.	Baraita	peq.	pereq (chapter of Sipra)
Der. Er. Rab.	Derak Eres Rabba	Pesiq. Rab.	Pesiqta Rabbati
Der. Er. Zut.	Derak Eres Zuta	Pesiq. Rab Kah.	Pesiqta de Rab Kahana
Gem.	Gemara	Pirqe R. El.	Pirqe Rabbi Eliezer
Kalla	Kalla	Rab.	Rabbah (following abbreviation for biblical book; Gen. Rab. =
Kalln Rub.	Kalla Rabbati		
Mas. Qat	Massektot Qetannot		

Bem.	<i>Genesis Rabbah</i>	Sisit	<i>Sisit</i>
Sep. Torah	<i>Semahot</i>	Sep.	<i>Saperim</i>
Sipra	<i>Sepet Torah</i>	S. 'Olam Rab.	<i>Seder 'Olam Rabbah</i>
Sipre	<i>Sipra (on Leviticus)</i>	Tanh.	<i>Tanhuma</i>
	<i>Sipre (on Numbers, on Deuteronomy)</i>	Tep.	<i>Tepillin</i>
		Yal.	<i>Yalqut</i>

Nag Hammadi Tractates

Acts Ptt. 12 Apost.	<i>The Acts of Peter and the Twelve Apostles</i>	Melch.	<i>Melchizedek</i>

ADAM AND EVE, LITERATURE CONCERNING

Diverse literary corpora attest to the significance of Adam and Eve for both Christians and Jews during the Greco-Roman era. These corpora include the NT, early Jewish literature that contains references and allusions to Genesis 1–3 and ancient books that focus on the figure of Adam and Eve.

1. Adam and Eve in the New Testament
2. Ancient Jewish References to Adam and Eve
3. Ancient Adam Books

1. Adam and Eve in the New Testament.

Adam functions in a range of ways, from a component in straightforward genealogical lists (Lk 3:38; Jude 14) to an antitype of Christ's resurrection (1 Cor 15:45–49).

1.1. Imago Dei. According to Genesis 1:26–27 male and female were created in the image and likeness of God. The author of the letter of James refers to this image to proscribe cursing other human beings "who are made in the likeness of God" (Jas 3:9). Paul, however, tends to interpret the bearer of that image not now as Adam but as Christ, to whom believers are to be conformed (Rom 8:29; 2 Cor 4:4; cf. Phil 2:5–11; Col 1:15–20; 3:9–10; Eph 4:22–24).

1.2. Sin. The dominant association in the NT is between the primeval pair and the origin of sin. The lengthy description of human sin in Romans 1:18–32, which is peppered with allusions to Genesis 1–3, is epitomized in Romans 3:23 in a summary description of the plight of Adam—"all have sinned and fall short of the

glory of God"—and interpreted anew in the ascription to Adam of the origin of sin and spread of death in Romans 5:12–21 (cf. Rom 7:7–25). Similarly Paul contrasts Adam and Christ in 1 Corinthians 15:20–22 and their respective bodies (based upon exegesis of Gen 2:7) in 1 Corinthians 15:45–49. The author of the Pastoral Epistles attributes sin to Eve, for "Adam was not deceived, but the woman was deceived and became a transgressor" (1 Tim 2:13–14).

1.3. Transformation. Allusions to Genesis 1–3 in 2 Corinthians 3:4–4:6 suggest how integrally Paul interprets the creation narratives in an effort to describe the transforming power of Christ. He draws the parallel, for instance, between creation and conversion: "For it is the God who said, 'Let light shine out of darkness,' who has shone in our hearts to give the light of the knowledge of the glory of God in the face of Jesus Christ" (2 Cor 4:6). Indeed, many portions of the NT are characterized by contrasts, all of which may be informed by the conception of life "in Adam" over against life "in Christ." (These contrasts play upon the ability to translate the Hebrew word *ʾādām* either as "human" or "Adam.") The believer is said to be a "new creation" (Gal 6:15; 2 Cor 5:17); accordingly the old human (Adamic life) is to be supplanted by the new human (Rom 6:6), which is renewed according to the image and likeness of God (Col 3:9–10; Eph 4:22–24). This new human can also be understood corporately as a reconciliation of Jew and Gentile (Eph 2:13–18).

1.4. Eschatology. As physical corruption characterizes the present age, according to Paul, so will resurrected, eschatological existence bring in its train the obviation of sin and death and the restoration of Edenic paradise. The world, which is now subject to decay (Rom 8:19–22), will be transformed at the future appearance of Jesus (Rom 8:18; cf. Eph 1:9–10; Col 3:1–4).

1.3. Marriage. The statement of *marriage in Genesis 2:24 reappears in the NT—in the Gospels in conjunction with Genesis 1:27 as Jesus' affirmation of the inviolability of marriage (Mk 10:6-9; Mt 19:4-6), in 1 Corinthians 6:16 to prove that sexual union with a prostitute is the uniting of two into one flesh, and in Ephesians 5:31 to bolster the analogy drawn between human marriage and Christ's love for the church. Further, the creation of woman from man functions in two thorny passages, 1 Corinthians 11:2-10 and 1 Timothy 2:11-15, to suggest the priority and headship of husband over wife—though Paul's argument reflects at least a high level of ambivalence toward this assessment of marriage (e.g., 1 Cor 11:11; see DPL, Adam and Christ).

2. Ancient Jewish References to Adam and Eve. These substantial and diverse NT references to Adam, Eve and paradise comprise but a portion of ancient reflection on Genesis 1–3. During the same era, several authors representing the spectrum of Jewish thought incorporated and concomitantly transformed much from the earliest chapters of Genesis.

2.1. Wisdom Tradition. Authors of the wisdom tradition tend to shift their focus from the particular figure of Adam to elements of Genesis 1–3 that characterize human existence in general. Ben Sira (see Sirach), although referring once each to the glory of Adam (Sir 49:16) and to the wisdom the first man lacked (Sir 24:28), tends otherwise to employ aspects of the creation narratives that emphasize the mortality of humankind rather than the particular first human (Sir 15:9–18:14; 33:7-13; 40:1-11, 27). The author of the *Wisdom of Solomon refers to the "earth-born protoplast," of whom Solomon, in his shared mortality with all humans, is the descendant (Wis 7:1-6). This anonymous figure functions primarily as a type of the just person whom wisdom aids both to avoid sin (Wis 10:1-2) and to have dominion (Wis 9:1-3). God's inbreathing (Gen 2:7) is universalized as well; it is the implantation of an immortal soul into all human beings (Wis 2:23-24).

2.2. Philo Judaeus. *Philo Judaeus devotes lengthy discussions to Adam and Eve. In *De Opificio Mundi* 24-25, 64-88, 134-50 and 151-69, he interprets Genesis 1–3 seriatim but not uncreatively. He interprets, for example, Adam, Eve and the serpent according to a complex but consistent allegory of the soul. The detail that the

woman ate first leads Philo to the interpretation: "Pleasure does not venture to bring her wiles and deceptions to bear on the man, but on the woman, and by her means on him. . . . For in us mind corresponds to man, the senses to woman; and pleasure encounters and holds parley with the senses first, and through them cheats with her quackeries the sovereign mind itself" (Philo *Op. Mund.* 165). In *Legum Allegoriae* 1.31-42, 2.4, Philo addresses the *crux interpretatum* of two creation accounts (Gen 1:26-27; 2:7). He explains that the heavenly man of Genesis 1 represents both the superior mind (i.e., as an anthropological component) as well as the person who lives by reason (i.e., as an ethical category); the earthly man of Genesis 2 represents both the mortal mind, which may succumb to the flesh, and the person who has the capacity for either virtue or vice. In *Quaestiones in Genesim*, Philo responds in a similar vein—with responses both literal and allegorical—to questions raised by Genesis (cf. *Vit. Mos.* 2.59-65). In *De Virtutibus* 199-205, Philo interprets the deluge as a new creation and Noah as a second Adam.

2.3. Rewritten Bible. Attention is also paid to Adam in *rewritten versions of Genesis, such as **Jubilees* and *Liber Antiquitatum Biblicarum* (*Pseudo-Philo). The author of the book of *Jubilees* presents Adam as a virtuous ancestor of Israel, and Eden as a most holy place, perhaps the holy of holies (*Jub.* 2:1–3:32). Adam accordingly offered incense in front of Eden only after covering his nudity, not out of shame but as an act of propriety such as Exodus 28:42-43 demands of priests. By portraying Adam as a properly clad *priest, this author indicts the Jewish priests of his own day (second century B.C.) for neglecting their priestly duties in order to rush into the Greek gymnasias, where they wrestled naked (see Athletics; Education).

While *Jubilees* characterizes Adam in a positive light as a priestly patriarch, the author of *Liber Antiquitatum Biblicarum* presents Adam whom the earth gave at God's command (*Bib. Ant.* 16.2) primarily in a negative light by denying him priestly prerogatives: his transgression led to the loss of the fertility that would be assured later by the cult (*Bib. Ant.* 13.8-9) and to the loss of the precious light-giving gems of paradise, which would be restored by the light of Torah and by the priestly garments (*Bib. Ant.* 26.6). If Adam has any positive character, it is that Israel, which came from his rib, offered in-

cense (*Bib. Ant.* 32.15) and that the thorns that arose due to his transgression became the means of revelation to *Moses (*Bib. Ant.* 37.3).

2.4. *Josephus.* *Josephus recasts Genesis 1—3 (*Josephus Ant.* 1.1.1-4 §§32-51, 1.2.2-3 §§66-72) into conformity with the salient theme of his *Antiquities*: "God, as the universal Father and Lord who beholds all things, grants to such as follow him a life of bliss but involves in dire calamities those who step outside the path of virtue" (*Josephus Ant.* Pref. §20). To this end, Josephus inserts these words into God's mouth in the context of their punishment: "Nay, I had decreed for you to live a life of bliss" (*Ant.* 1.1.4 §46). Adam becomes in Josephus's version a tragic figure who once lived in a luxurious, earthly garden and who forfeited bliss (not immortality) because he sinned. His fall is from bliss to catastrophe, just as all who disobey God fall from bliss into dire calamities.

2.5. *Apocalypses.* The *apocalyptic authors of 4 Ezra (3:4-11, 20-27; 4:26-32; 6:45-59; 7:11-14, 62-74, 116-31) and 2 Baruch (4:1-7; 14:17-19; 17:1—18:2; 19:8; 23:4-5; 48:42-47; 54:13-19; 56:6-10), in the wake of the destruction of *Jerusalem, maximize the effects of Adam's sin by reckoning Adam—and Eve in 2 Baruch—as the inaugurator of the present evil age. Fourth Ezra begins, "And you laid upon him [Adam] one commandment of yours; but he transgressed it, and immediately you appointed death for him and for his descendants" (4 Ezra 3:7). According to 2 Baruch 56:6, Adam brought an ominous cloud to humanity: "For when he transgressed, untimely death came into being, mourning was mentioned, affliction was prepared, illness was created."

These apocalyptic authors are not content to explore the effect of Adam's sin on the present evil age. They also resolve to discover whether Adam's sin caused not only human suffering but also original sin, not only physical horrors but also moral depravity. The author of 4 Ezra appears to blame Adam: "O Adam, what have you done? For though it was you who sinned, the fall was not yours alone, but ours also who are your descendants. For what good is it to us, if an eternal age has been promised to us, but we have done deeds that bring death? And what good is it that an everlasting hope has been promised us, but we have miserably failed?" (4 Ezra 7:117-20). Despite this indictment, the author does not finally blame Adam for human sin. The *angel

responds instead, "This is the meaning of the contest which every person who is born on earth shall wage, that if he is defeated he shall suffer what you have said, but if he is victorious he shall receive what I have said [i.e., glory]" (4 Ezra 7:127-28). The author of 2 Baruch raises a similar question: "O Adam, what did you do to all who were born after you?" (2 Bar. 48:42). His answer, too, is that, while Adam brought physical death to the present evil age, individuals possess the ability to decide their own destiny in the age to come: "For, although Adam sinned first and has brought death upon all who were not in his own time, yet each of them who has been born from him has prepared for himself [or herself] the coming torment" (2 Bar. 54:15).

2.6. *Miscellaneous.* There are in addition many less detailed references to Adam and Eve or allusions to Genesis 1—3 in early Jewish literature. A prayer on the wedding night in Tobit 8:6 cites Genesis 2:24 (*see* Tobit). In 1 Enoch 32:6, Raphael identifies for Enoch a marvelous tree of wisdom "from which your old father and mother . . . ate and came to know wisdom; and [consequently] their eyes were opened and they realized they were naked and [so] they were expelled from the garden." Adam and Eve are included in the allegory of the animals in 1 Enoch 85:3-10, 90:37-38 (*see* Enoch, Books of). The Jewish sibyl declares that it is God "who fashioned Adam, of four letters, the first-formed man, fulfilling by his name east and west and south and north" (*Sib. Or.* 3:24-26; *see* Sibylline Oracles).

In other texts the eschatological dimension is evident. In the *Dead Sea Scrolls, reference is made to the eschatological restoration of "all the glory of Adam/humanity"—it is not clear whether human glory or Adam's glory will be restored, since *'ādām* could refer to either (1QS 4:23; 1QH 17:15; CD 3:20; cf. 4QPs37 3:1-2). According to *Testament of Levi* 18:10-11 (which may be either Jewish or Christian in origin), the messianic deliverer will "open the gates of paradise; he shall remove the sword that has threatened since Adam, and he will grant to the saints to eat of the tree of life" (*see* Testaments of the Twelve Patriarchs).

In addition to innumerable references and allusions in the corpora of *rabbinic literature and the targums, other references to Genesis 1—3 occur in texts that may postdate the period of the NT: 1 Enoch 37:1; 60:8; 69:9-11; 2 Enoch (recension J) 30:8—32:2; 41:1; (both J and A)

58:1-3; **Testament of Abraham* (recension A) 8:9; 11:1-12; (recension B) 8:1-16; **Apocalypse of Abraham* 23:1-14; *Sibylline Oracles* 1:5-64; 5:229-30, 244-45; *Testament of Isaac* 3:15; 4:31-32; 6:34; *3 Baruch* 4:8; 9:7; *History of the Rechabites* 7.7-10; 12.1-9; *Apocalypse of Sedrach* 1.21; 4.1-7.13.

3. Ancient Adam Books.

The preceding references and allusions do not exhaust the sort of attention Adam and Eve drew in antiquity. Several literary texts had their foci in these mysterious protoplasts.

3.1. Ancient Testimonies. Several of these ancient Adam books, most of which are probably no longer extant, are cited in the voluminous literature of the bibliographer J. A. Fabricius (1668-1736), the *Apostolic Constitutions* 6.16.3 (fourth century), the Byzantine *List of Sixty Books* (possibly sixth century), the Gelasian Decree (fourth to sixth centuries) and the *Chronicle of the world*, from creation to Diocletian, composed by the Byzantine author George Syncellus (eighth or ninth century).

3.2. Ancient Books. Other ancient books give important traditions that relate to Adam and Eve. Although many of these are Christian in origin or present form, they may preserve ancient, originally Jewish interpretations of Genesis 1-5. The *Discourse on Abbatôn*, the angel of death, is a homily, recorded in Coptic, that is ascribed to Timothy, archbishop of *Alexandria (c. A.D. 380). In this homily, the creation, disobedience and expulsion of Adam and Eve are considered in the context of the salvation of Jesus Christ. The Syriac *Testament of Adam* is divided into three sections: an Horarium, listing the hours of day and night; a Prophecy, given in testamentary form from Adam to Seth; and a Hierarchy, a list of the nine orders of angels and their functions. The Syriac *Cave of Treasures* is a reinterpretation of biblical events from the creation of Adam until the coming of Christ, including traditions that are found as well in the Latin version of the *Life of Adam and Eve*, such as *Satan's refusal to worship Adam. The Ethiopic *Struggle of Adam and Eve with Satan* (also in Arabic), which may be of composite origin, contains three sections: the struggle of Adam and Eve with Satan during the 223 days between their expulsion from paradise and their marriage; history from Cain and Abel to Melchizedek; and a short history of the world from the death of Shem to Jesus Christ. The first section is particu-

larly rich with traditions that are similar to the *Life of Adam and Eve*. Finally, the Coptic *Apocalypse of Adam*, from Nag Hammadi (see Gnosticism), found in a codex dating about A.D. 350 and containing earlier traditions, is presented as a revelation given to Seth by Adam in the seven hundredth year; it details, among other traditions, Adam and Eve's loss of glory and knowledge.

3.3. The Life of Adam and Eve. A few decades ago the common consensus was that this text was Jewish in origin, probably written in the first century A.D., and extant in two versions, the Latin and Greek. These points of agreement are now matters of contention (see de Jonge and Tromp). Whether it is of Jewish or Christian origin, the *Life* no doubt contains a rich and relatively early collection of traditions about Adam and Eve. The narrative appears in several versions, including Greek, Latin, Armenian, Georgian and Slavonic; although these versions have much in common, they also exhibit distinctive features that distinguish them from one another. The Greek version, moreover, exists in more than two dozen manuscripts that have correctly been subdivided into three distinct text forms.

In the first Greek text form (e.g., manuscripts DSV), which M. de Jonge and J. Tromp (34) suggest represents the earliest form of the *Life*, the story begins with Eve's realization that Cain has murdered Abel (*Adam and Eve* 1-5). In the ensuing episode, Adam becomes ill and gathers his children; Adam commissions Seth and Eve to set off to paradise to procure for him the healing oil of life (*Adam and Eve* 5-13). Upon their return and the failure to alleviate Adam's pain, Eve tells the story of their lives in the garden (where they each tended a separate portion of paradise), their successive experiences of being deceived and their being cursed (*Adam and Eve* 14-30). When she has completed this reminiscence, Adam's death draws near. He dies, and his soul ascends to paradise while his body is prepared for burial; Eve confesses her sin and then, with Seth, observes the pardoning of Adam (31-43).

The second Greek text form (manuscripts R and M) is similar, with one notable addition. At the end of Eve's testament and prior to the pardoning of Adam, Eve retells her experience of a second temptation and act of disobedience (*Adam and Eve* 29:7-13). Adam and Eve stand in separate rivers, fasting and repenting. Satan, dis-

guised as an angel, comes to the river's edge to tell Eve that God has forgiven her. She leaves the river, only to see that she has been deceived a second time. The inclusion of this story at this point in the *Life* is characteristic as well of the Slavonic version, which is part of a tradition represented by this second Greek text form.

The third Greek text form (e.g., manuscripts NIK) is characterized by an alternative, lengthier introduction to Eve's testament (*Adam and Eve* 14:3—16:3) and by a reordering of the curses following disobedience. In the other versions, Adam is cursed first, then Eve, then the serpent, while in this text form the serpent is cursed before Eve (*Adam and Eve* 24—26).

The Latin, Armenian and Georgian versions begin with an expanded version of Eve's second experience of deception by Satan rather than placing it after Eve's account of the fall, as do the second text form and the Slavonic version. In these versions, the narrative begins not with the death of Abel or Adam's sickness but with the need for physical nourishment following Adam and Eve's expulsion from paradise. Their respective acts of penitence, according to these versions, has the expressed purpose of obtaining nourishment now that they no longer live in paradise. In this context, these versions relate Satan's envy of Adam, his refusal to worship Adam and his consequent expulsion from heaven, as well as the story of the birth of Seth. The Latin version also contains a revelation in which Adam tells Seth of his journey to paradise to speak with God (*Adam and Eve* 25—29).

The *Life of Adam and Eve* is not merely a single, coherent narrative but a collection of versions that comprise a rich repository of traditions about Adam and Eve that were preserved by Christians for centuries. Although its first-century, Jewish origin is no longer an assumption of scholarship, the *Life*, which provides a sustained and detailed narrative of Adam and Eve, probably contains many traditions that circulated among Jews during the Greco-Roman era. Many of the elements that illuminate early Christian literature figure in the *Life of Adam and Eve*, such as the *imago dei* (Greek 10—12; Latin 10—17); the loss of primeval glory (Greek 21—22); the loss of dominion over the animal world (Greek 10—12); the advent of physical pain (Greek 5—14; 31); exclusion from paradise (Greek 27—29) and a detailed depiction of the primeval transgression (Greek 7—8; 16—21; 30).

ADULTERY, DIVORCE

This article covers in turn divorce, adultery and other irregular sexual unions that contemporary Christian ethicists and (in most cases) ancient Jews and Christians would have classed as deviations from the marital ideal (see Marriage).

1. Divorce
2. Adultery
3. Other Irregular Unions

1. Divorce.

Divorce was common in the Roman world (Carpino, 95-100), and under Roman law, children normally remained with their fathers (Pomeroy, 158, 169). Although the early republic probably granted divorces only under the most extreme circumstances (Plutarch *Rom.* 22.3), by the first century some writers said that only a coward would fail to divorce a troublesome wife (Plutarch *Virtue and Vice* 2, *Mor.* 100E). Probably as late as the middle republic women could still not divorce their husbands (McDonnell), but by the imperial period a Roman woman could get a divorce as easily as her husband could (Verner, 40). Either party could unilaterally terminate a marriage; because Roman law deemed private consent essential to the marriage union, it accepted lack of mutual consent in favor of continuing the marriage as sufficient grounds to dissolve it (O'Rourke, 181). Such divorces involved no stigma; dying or divorcing husbands sometimes even arranged new marriages for their ex-wives (Pomeroy, 64).

Diaspora Judaism often followed local customs, and wealthy Jewish aristocrats often followed Greek custom (Josephus *Ant.* 20.7.2 §143; 20.7.3 §§146-47). But in most of Palestinian Judaism only the husband could initiate the divorce, except under extreme circumstances in which a court would require him to terminate the marriage at his wife's demand. Since a divorced woman might bear some social stigmas in Palestinian Jewish society (Safrai, 791), women proba-

bly did not seek divorce frequently.

Palestinian Jewish husbands could divorce for virtually any reason (e.g., Josephus *Ant.* 4.8.23 §253, though this is not to imply that the average husband was looking for excuses to divorce his wife). They could divorce their wives for disobedience (Sir 25:26; Josephus *Life* 76 §426; *m. Ketub.* 7:6; *'Abot R. Nat.* 1A) or for burning the bread (*m. Git.* 9:10; *Sipre Deut.* 269.1.1). The agreement of a variety of sources on this matter suggests that the school of Shammai, which accepted only unfaithfulness as valid grounds for divorce—a standard charge in the dissolution of marriages—held the minority opinion in Palestinian Jewish culture at this point, although they were generally the dominant *Pharisaic school in Jesus' day. Further, even Shammaites accepted as legally valid those divorces enacted for reasons with which they disagreed (see Keener, 39-40). The exception clause to Jesus' divorce saying in Matthew 5:32 and 19:9 probably accepts but radicalizes the Shammaite position (Keener, 38-40; see DJG, Divorce).

Because the very term for legal divorce meant freedom to remarry, it was understood that without a valid certificate of divorce a woman was not free to remarry (e.g., Josephus *Ant.* 4.8.23 §253; *m. Git.* 2:1). The basic element of the Jewish divorce contract was the phrase "you are free," permitting the wife's remarriage (*m. Git.* 9:3; *CPJ*, 2:10-12 §144); Paul employs the same formula for believers abandoned by unbelieving spouses (1 Cor 7:15; see DPL, Marriage and Divorce, Adultery and Incest).

In the imperial period remarriage was the usual practice after divorce or widowhood (see Marriage). It was thought that in ancient times widows did not remarry (Pausanias *Descr.* 2.21.7), but this was no longer common in the empire. Failure to remarry could demonstrate exceptional commitment: dying Alcestis begs her husband not to remarry (Euripides *Alc.* 305-25); Isis vowed never to marry after Osiris's death (Diodorus Siculus *Bib. Hist.* 1.22.1). Objections to the remarriage of widowers would have been fewer in the imperial period (Gardner, 82; O'Rourke, 180; *y. Ketub.* 9:8 §4; after widowhood it remained an ideal in some circles [cf. Walcot]), though some opposed remarriage after becoming a widower because stepmothers were considered unhealthy for the children (Diodorus Siculus *Bib. Hist.* 12.14.2-3).

"Husband of one wife" (lit, "one-woman man") in 1 Timothy 3:2 does not likely address monogamy per se (see Marriage). But neither may it exclude a divorced or widowed man who has remarried, because the former wife is no longer considered his wife (fidelity to the current wife is most likely in view). A document can prohibit the husband from intercourse with another woman while his wife lives (*P. Tebt.* 104.18-19) yet recognize that she can be divorced and hence no longer count as his wife (*P. Tebt.* 104.27-30; *P. Eleph.* 1.6-7). Likewise, a one-husband wife was one so faithful that her husband lacked reason to ever divorce her (e.g., in Horsley §8, pp. 33-34; Keener, 87-95; for far more detail and fuller documentation from the ancient sources concerning divorce in general, see Keener).

2. Adultery.

Here we survey some ancient Mediterranean views concerning adultery, pagan attributions of such activity to deities, reports about punishment of adultery by human agents and reports about its punishment by divine agents.

2.1. Ancient Mediterranean Views on Adultery.

The various sources on adultery in the Roman Empire provide different portraits regarding the frequency and treatment of adultery: laws varied from one ruler to another; historians and biographers often provided deliberate models of feminine virtue; satirists recycled gossip and political propaganda (see especially Richlin). Taken together, however, these diverse sources can provide us a general picture of feelings toward adultery in the ancient Mediterranean world.

A wide range of Jewish sources strongly condemned adultery (e.g., *Sent. Syr. Men.* 45-46; *Tr. Shem* 7:15; 9:9; 10:16; *Asc. Isa.* 2:5; *Num. Rab.* 9:11) and could epitomize evil deeds especially by adultery (*Pseudo-Philo Bib. Ant.* 2.8). But while Jewish people often proved skeptical of Gentiles' fidelity to their marriages (*Wis* 14:24; *Sib. Or.* 3.594-95), most Greeks and Romans strongly condemned adultery as well (e.g., *Athenaeus Deipn.* 4.167e). The charge of adultery represented a serious insult against another man's morality (*Pseudo-Cicero Inveictive Against Sallust* 5.15-6.16; *Cornelius Nepos* 15 [Epaminondas], 5.5). Mediterranean societies viewed a wife as her husband's exclusive property in terms of her sexuality. Hence any other man's use of that property was wife stealing (*Artemi-*

dorus Oneir. 3.11; *Epictetus Disc.* 1.18.11; *Pseud.-Phoc.* 3; *Sib. Or.* 1.178; 3.38, 204; 5.480).

Adultery was shameful (e.g., *Diodorus Siculus Bib. Hist.* 12.21.2; *Seneca Dial.* 2.18.2), even for kings (Alexander 3 in *Plutarch Reg. Imp. Apophth. Mor.* 179E). A minority of philosophers regarded it as acceptable in some situations (*Diogenes Laertius Vit.* 2.99). Most philosophers, however, regarded adultery as wrong (e.g., *Epictetus Disc.* 2.4; 2.10.18; 2.18.15), though they might not seek to prevent it (*Epictetus Disc.* 1.18.12; 3.3.12) or punish those who practiced it (*Epictetus Disc.* 1.18.5-6). Dramatists complained about the shameful of wives' adultery (*Euripides Hippol.* 403-18) and warned that they must fear exposure to their husbands (*Euripides Hipp.* 415-18). The behavior also brought shame on the wronged husband (e.g., *2 Enoch* 71:6-11; cf. *Gilmore*, 4), as is the case in some Middle Eastern societies today (*DeLaney*, 40).

The jibes of satirists like *Horace (Sat.* 1.2.38, 49, 64-110; 2.7.46-47; *Ep.* 1.2.25-26; *Odes* 1.15.19-20), *Martial (Epiqr.* 2.47, 49; 6.45.4; 9.2) and *Juvenal (Sat.* 1.77-78; 2.27-29, 68; 6.183-85, 231-41) indicate that public sentiment was against such behavior. Such insults could be harsh: *Martial* charges that the wife of *Candidus* is common property of the Roman people (*Epiqr.* 3.26.6); *Zoilus* will not get caught solely because he is impotent (*Epiqr.* 6.91). *Sallust* complains that *Sempronia* viewed nothing as cheaply as sexual restraint (*Catil.* 25.3-4). Some writers would not have limited their objection against relational infidelity to heterosexual unions; one male character in a novel could complain when another male character seduces the first character's younger boyfriend (*Petronius Sat.* 79).

Nevertheless, adultery seems to have been quite common; following hyperbolic conventions of societal critique, some authors complained that it characterized most women (*Seneca Dial.* 12.16.3; *Plutarch Bride* 46, *Mor.* 144E-F) or that chastity had left the earth (*Juvenal Sat.* 4.1-20). The Greek philosopher *Bias* reportedly said that one who married a beautiful woman would have to share her (*Aulus Gellius Noe. Att.* 5.11.2). Exaggerating to underline his point, *Seneca* complains that those who do not commit adultery make themselves conspicuous, that adultery has become the favorite means of betrothal, that it is difficult to find a woman so ugly that she must settle for only two illicit partners a day, and that the only value of husbands

to most wives is to provoke the wives' illicit partners (Seneca *Ben.* 1.9.4; 3.16.3). Dio Cassius reports with favor the witty retort of a British captive mocked for alleged polyandry: we mate openly with the best men, but you Roman women sleep around in private with the worst (Dio Cassius *Hist.* 77.16.5). The evidence does not suggest that many aristocratic men were caught in the act, however (see Rawson, 33).

Women were to avoid undue contact with men other than their husbands (see Head Coverings §1); even today in some traditional Middle Eastern societies, if a man is alone with a woman for more than twenty minutes people assume they have shared intercourse (DeLaney, 41). *Josephus considered women by nature prone to unfaithfulness (*War* 2.8.2 §121), and this view was probably held more widely in the Mediterranean world (Diodorus Siculus *Bib. Hist.* 1.59.3-4), though the resistance of virtuous women to adultery was also recognized (Dionysius of Halicarnassus *Ant. Rom.* 4.66.2-4.67.1). Jewish men also were to avoid the company of women, which could lead to desire or the appearance of it (Sir 9:9; 42:12; *m. Abot* 1:5; *'Abot R. Nat.* 14 §35B; *b. Ber.* 43b, *Bar.*; *y. Sota.* 7:1 §2; *Gen. Rab.* 48:20; 63:7).

2.2. Divine Examples of Adultery. Prominent members of the Greek and Roman pantheon failed to set an example of sexual morality. Though even the gods were supposed to obey the laws about adultery, the god of lust inflamed Zeus to break them (Apuleius *Met.* 6.22). Zeus's adulteries with mortals pervade Greek and Roman mythology (Sophocles *The Searchers* frag. 212-15; Euripides *Antiope* 69-71; *Pirithous* frag. 22-24), though occasionally a mortal woman outwitted him and escaped (Apollonius of Rhodes *Arg.* 2.946-54). Hera did not cooperate willingly with his activities; she quit going to bed with Zeus for a year because of his infidelities (Homeric Hymn 3, to Pythian Apollo 343-44). After Zeus raped a nymph (Ovid *Met.* 2.434-37), Hera punished the nymph for adultery (Ovid *Met.* 2.477-88), just as she punished willing partners (Ovid *Met.* 3.261-72; Appian *Rom. Hist.* 12.15.101) and sometimes their relatives (Ovid *Met.* 4.416-530). Zeus had to hide Dionysus from Hera until his birth (Euripides *Bacch.* 94-98).

Pagan deities seduced (Ovid *Met.* 2.714-47; 3.260-61) and were prepared to rape mortals when they encountered resistance to their sexual advances (Ovid *Met.* 3.1-2; 14.765-77); some

even raped and abducted young girls (Ovid *Met.* 5.391-408) or boys (Virgil *Aen.* 1.28; Ovid *Met.* 10.155-219) and might punish a nymph who protested such injustice (Ovid *Met.* 5.409-37). (On occasion nymphs also raped boys—Apollonius of Rhodes *Arg.* 1.1226-39; Ovid *Met.* 4.368-79.) Apollo got Leucippus killed so he could sleep with Daphne (Parthenius *Amat. Nar.* 15.3); he slew one of his human mistresses for sleeping with a man (Ovid *Met.* 2.603-11). Nevertheless, many ancient thinkers regarded such portraits of divine immorality as ridiculous (Seneca *Dial.* 7.26.6; Pliny *Nat. Hist.* 2.5.17); early Christian apologists made much of such stories (Athenagoras 20-22; Theophilus *Autol.* 1.9; Pseudo-Clementines 15.1-19.3). The behavior of deities sometimes set precedent for human culture (Diodorus Siculus *Bib. Hist.* 1.27.1; Achilles Tatius *Leuc.* 1.5.5-7), so it is hardly surprising that Jewish writers sometimes connected Gentiles' worship of these deities with Gentile men's own sexual behavior (Josephus *Ag. Ap.* 2.35 §§244-46, 275; Rom 1:23-25).

2.3. Human Punishments for Adultery. Shame was a common penalty in the ancient world (e.g., Plutarch *Quaest. Graec.* 2, *Mor.* 291F), but the Romans punished adulterers with banishment or yet more severe penalties (Seneca *Ben.* 6.32.1; Quintilian *Inst. Orat.* 7.1.7; Richlin, 228); Augustus banished his own daughter for her public adultery (Seneca *Ben.* 6.32.1). In some stories, a hero might slay a married woman who made sexual advances toward him (Euripides *Sthenoboea* frag.); a landowner might also demand an adulterer's imprisonment (Achilles Tatius *Leuc.* 6.5.3-4). Moralists eagerly recounted the story of an honorable Roman matron who chose to slay herself if forced to violate her marriage covenant (Diodorus Siculus *Bib. Hist.* 10.19.3; Dionysius of Halicarnassus *Ant. Rom.* 4.66.2-4.67.1; Livy *Hist.* 1.58.1-12; Dio Cassius *Hist.* 2.11.16-19); a woman might go to great lengths to disprove the charge of adultery (Appian *Rom. Hist.* 7.9.56). Harsh punishments for female adultery are also not uncommon in traditional societies (Mbiti, 193, 275; Barnouw, 23; Firth, 119, 475-77; Nukunya, 70-71).

The deadly anger of a husband against an adulterer was by this time proverbial (Prov 5:20, 23; 6:26-35; 7:22-27; 22:14; Phaedrus *Fables* 3.10.27-28; *b. Ned.* 91b). In classical *Athens, a husband might do whatever he wished to an adulterer caught in the act, as long as he did not

use a knife (Demosthenes *Against Neaera* 66, *Or.* 59; Plutarch *Solon* 23.1; Diogenes Laertius *Vit.* 6.1.4; Xenophon *Hiero.* 3.3), and people could treat an adulterous woman as they wished short of death (Demosthenes *Neaer.* 86; *Orat.* 59). A Roman man who caught his wife and her illicit partner in the act could slay them immediately, though only if he found the adulterer in his house (Quintilian *Inst. Orat.* 7.1.7; Paulus *Opinions* 2.26). Augustus's legislation forbade the father killing the adulterer without also killing the daughter, which probably meant that in most cases neither would die; but such restrictions did not apply to the husband (Gardner, 7; O'Rourke, 181-82). Augustus made adultery a matter of civil law because he regarded the health of families as essential to that of the larger society (see Treggiari).

Nevertheless, the aggrieved husband might choose to divorce his wife (Apuleius *Met.* 9.27-28). He might accept a monetary payment in exchange for the adulterer's life (Aulus Gellius *Noc. Att.* 17.18); some reportedly practiced mutilation (Martial *Epigr.* 2.60, 83; 3.85). Jewish and Roman law alike required a husband who learned of his wife's affair to divorce her immediately (Gardner, 89; Safrai, 762); if he failed to do so, Roman law allowed him to be prosecuted for the offense of *lenocinium*—pimping (Justinian *Dig.* 48.5.1; Gardner, 131-32; Richlin, 227; Rawson, 33-34). In practice, however, a romance suggests that a man deeply in love with his wife on learning of her adultery might wish his own death (Chariton *Chaer.* 1.4.7), though in a fit of rage he might also assault his wife (Chariton *Chuer.* 1.4.11-12).

Like Romans, at least some Jews regarded tolerance of adultery as pimping (*Pseud.-Phoc.* 177). Pharisees of the Shammaite persuasion reportedly permitted divorce if the husband caught his wife in adultery, but the more liberal Hillelites allowed it if the husband merely suspected it (*p. Sota.* 1:1 §2). Although rarely implemented in this period, biblical law mandated death for adultery (Deut 22:22; Lev 10:10; *Jub.* 30:8-9; Pseudo-Philo *Bib. Ant.* 25.10; Josephus *Ag. Ap.* 2.201, 215; *Sipra Qed. pq.* 10.208.2.4; for actual punishments for adultery see Ilan 1996, 135-41), as had other ancient legal collections (e.g., Hammurabi 129).

A double standard regarding gender existed. In old Rome husbands could kill wives found in adultery without a trial, but the wife could not do

the same to her husband (Aulus Gellius *Noc. Att.* 10.23.4-5). Under the *lex Julia* the wife could not charge her husband with adultery (Justinian *Cod.* 9.1). Honorable Roman men could sleep with unmarried women provided they were not of honorable lineage, but aristocratic Roman women could sleep only with their husbands (Pomeroy, 160).

The double standard also applied to the way historians evaluated their traditions; although monogamy was the norm (see Marriage), a man's multiple sexual relations with unmarried women were seen as far less serious than a married woman's infidelities because adultery was specifically a matter of stealing the wife's affections. Thus the empress Messalina, wife of Claudius, perhaps rendered arrogant by honors early in her husband's reign (see Wood), became a notable and negative public example of adultery; by contrast, a biographer might excuse the legendary Romulus, because unlike Theseus he did not rape women (Plutarch *Comp. Thes. and Rom.* 6).

Although Zeus slept with numerous mortals (e.g., Euripides *Pirithous* frag. 22-24), he terribly destroyed a mortal who boasted that he had slept with Hera (Euripides *Pirithous* frag. 1-13). At the same time, a philosophical tradition might warn that husbands unfaithful to their wives would be tortured in the realm of the dead (Diogenes Laertius *Vit.* 8.1.21), and a moral tradition had long condemned unfaithfulness to one's wife (Isocrates *Nicoles/Cyprians* 40, *Or.* 3.85).

The double standard also existed in traditional Jewish sources (Swidler, 148-54; Wegner, 50-54), although it was sometimes qualified (*Sent. Syr. Men.* 246-47). It may be such a double standard that a biblical author addressed by juxtaposing the story of Judah and Tamar with that of Joseph and Potiphar's wife (Gen 38-39). Joseph became a familiar Jewish model for resisting adultery (e.g., *Jub.* 39:5-9).

2.4. Divine Punishments Against Adulterers. Most peoples believed in divine punishments against adulterers, often in addition to human ones. Thus those slain for adultery were consigned to Tartarus, the part of the realm of the dead that included torture (Virgil *Aen.* 6.612). Suitors courted Penelope while Odysseus remained alive because they feared neither the gods nor human wrath (Homer *Odys.* 22.39-40). As Clytemnestra slew Agamemnon through her

adultery (Euripides *El.* 479-81), so the immortals would slay her (Euripides *El.* 482-83). Many traditional societies expect divine punishment for adultery (Mbiti, 268-69).

Jewish sources promised divine punishment against adulterers (e.g., Jer 7:9-14; 23:14-15; Hos 4:2-3; Mal 3:5; *Pss. Sol.* 8:8-10; *Sib. Or.* 3.764-66; cf. *Acts Jn.* 35). Sages could warn that God would openly punish the secret adulterer (Sir 23:21). By the first century at least some Jewish writers understood the biblical ordeal of bitter waters (Num 6:12-15) as causing a slow death to the adulteress (Josephus *Ant.* 3.11.6 §273). Many came to believe that the offspring of an adulterous union would betray the evil act because the child would look like the father (*Pseudo-Phoc.* 178; *t. Sanh.* 8:6; *Pesiq. Rab Kah.* 11:6; *Lev. Rab.* 23:12; *Num. Rab.* 9:1; Probably *Wis* 4:6; see also some pagan sources: Aristotle *Pol.* 2.1.13, 1262a; Juvenal *Sat.* 6.595-601). Jewish novels could report the death of adulterers or fornicators in response to the prayers of the righteous (*T. Abr.* 10A; 12B). Paul also believed that God would avenge adultery (1 Thess 4:6).

3. Other Irregular Unions.

Many behaviors would have been distinguished from adultery throughout the Greco-Roman world yet appeared related to it in early Jewish and Christian *vice lists or would be classified by modern Jewish and Christian thinkers as adultery. The broader Greek term for immorality (*porneia*) encompassed adultery, prostitution and, for Jews, any sexual behavior deviating from the biblical norm. Premarital intercourse with a person other than one's future spouse constituted a form of adultery against one's future spouse (Deut 22:20-22; cf. Belkin, 258-59). Although these other examples are not adultery per se, they shed further light on it by providing a broader context for understanding the sexual mores of the Greco-Roman world and those of early Judaism and Christianity.

3.1. Premarital Intercourse. Jewish people often expected sexual immorality from Gentiles (*m. 'Abod. Zar.* 2:1); later teachers held that one could trust a proselyte woman's virginity only if she were converted before the age of three years and one day (*b. Yebam.* 60b). (Even later rabbis would not deny, however, that Jewish people also could be tempted in this area; e.g., *Song Rab.* 7:8 §1.) It was not uncommon for peoples to characterize their rivals as sexually immoral

(Euripides *Androm.* 595-604). But Greeks also sometimes recognized that it was difficult to keep young men from women if the latter were available (Euripides *Alc.* 1052-54), and Greek men generally did not demand the same moral standard that Jewish tradition did. Thus, for example, no one seems to have objected when the mythical Argonauts impregnated the Lemnian women and departed after enjoying their time there (Apollonius of Rhodes *Arg.* 1.842-909).

Still, Gentiles recognized some differences and limitations; aristocratic Roman men could sleep with prostitutes or take lower-class concubines, but to sleep with one of high rank invited severe punishment (O'Rourke, 182; Gardner, 124; Rawson, 34). Even in classical Athens, other sexual relations were not on the same level as those employed for producing legitimate heirs (Demosthenes *Manitheus Against Boeotus* 2.8-10).

Whereas Gentile men might pursue premarital sex in socially accepted manners, they expected women to guard their purity (e.g., Homer *Odys.* 6.287-88). Thus some young virgins, raped and unable to endure this shame, killed themselves (Diodorus Siculus *Bib. Hist.* 15.54.3; *Contest of Homer and Hesiod* 323). Stories circulated of fathers who slew daughters suspected of immorality (Ovid *Met.* 4.237-40, in which she was innocent) or might slay them to prevent their rape and hence protect their honor (Diodorus Siculus *Bib. Hist.* 12.24.3-4; Livy *Hist.* 3.44.4-3.48.9). Rape was universally condemned (e.g., *Pseudo-Phoc.* 198) and constituted a capital charge both in Roman law and the stricter Jewish interpretations (*Jub.* 30:1-6; Gardner, 118-19; cf. *Laws of Eshnunna* 26). Jewish people regarded a woman's premarital sexual activity as equivalent to prostitution (*Sipra Qed. pq.* 7.204.1.1-2).

Jews regarded sexual immorality in general as a terrible sin (CD 7.1), a work of Satan (see *Be-lial*) or fallen *angels (*1 Enoch* 8:1-2; *Asc. Isa.* 2:5) that banished God's presence (*Sipre Deut.* 258.2.3) and otherwise invited judgment, corporately (*t. Sanh.* 13:8; *y. Sanh.* 6:7 §2; *y. Ta'an.* 4:5 §13) or individually (*Num. Rab.* 13:15). With idolatry and murder, it was one of the most serious of sins (*y. Sanh.* 3:5 §2). Although it was not enforced in this period (Josephus *War* 2.8.1 §117; Matt 1:19), the penalty for sex with a person to whom one was not married was for most cases death (Deut 22:20-24; *Jub.* 20:4; 33:20; *Pseudo-Philo Bib. Ant.* 25.10; Josephus *Ag. Ap.* 2.25 §201; *Sipre Deut.* 242.1.6).

Some couples lived together before marriage until they could afford the economic transaction—a recognized union that could be formalized by a written contract (*P. Ryl.* 154.4, A.D. 66). This custom is also attested for some Jewish couples (the early second century Babatha archive; see Ilan 1993). Nevertheless, many pious Jews warned that a truly godly man would not sleep with his fiancée before the wedding (*Jos. and As.* 21:1/20:8).

Ancients often recognized that customs varied from one location to another. Arrian reports the probably fictitious tradition that Indian women were normally quite chaste but considered it honorable to have intercourse with any man in exchange for an elephant (*Ind.* 17.3). Ancients were aware of various other practices that many would have regarded as aberrant, such as intercourse with a corpse (Parthenius *L.R.* 31.2). Intercourse with animals was known but apparently rarely discussed (Apuleius *Met.* 10.19-22; Lucian *Lucius* 50-51; Artemidorus *Oneir.* 1.80; perhaps Aulus Gellius *Noc. Att.* 6.8); some Jews suspected Gentile males in general of bestiality (*Sib. Or.* 5.393; *m. 'Abod. Zar.* 2:1).

3.2. *Prostitution.* Many people considered prostitution shameful (Diodorus Siculus *Bib. Hist.* 12.21.2; Artemidorus *Oneir.* 1.78; Aulus Gellius *Noc. Att.* 9.5.8; 15.12.2-3), a disgracefully wasteful excess (Livy *Hist.* 23.18.12) or exploitation (Dio Chrysostom *Or.* 7.133), and exhorted against it (Prov 23:27; Sir 9:6; 19:2; 41:20; Cato collection of distichs 25). Thus Catiline reportedly seduced young men to follow him by securing prostitutes for their use (Sallust *Catil.* 14.6). Plutarch admonished that one could have intercourse for free at home (Plutarch *Lib. Educ.* 7, *Mor.* 5C) and that even single men should avoid prostitutes and concubines to avoid producing lowborn children (Plutarch *Lib. Educ.* 2, *Mor.* 1AB).

Nevertheless, prostitution was legal. The Roman government received substantial tax revenues from this industry (McGinn; Lewis, 145, 171-72). Some people regarded prostitution as a deterrent to adultery (*Grk. Anth.* 7.403). By contrast, Jews generally regarded prostitution as evil (*Sib. Or.* 5.388; *Ex. Rab.* 43:7; *Num. Rab.* 9:24; 20:7), a terrible abuse of nature, degrading the body (Josephus *Ant.* 4.8.9 §206); Philo regards it as a capital offense (Belkin, 256). The *Dead Sea Scrolls condemn "prostitution" (1QS 4:10; CD 4:17; 8:5), although the language could apply to

other kinds of sexual immorality or to spiritual infidelity. God would reward those who resisted prostitution for the honor of his name (*b. Menah.* 44a). Nevertheless it remains clear that prostitution existed even in Jewish Palestine (Mt 21:31-32; Goodman, 60; Gibson; Ilan 1996, 214-21).

Laws prohibited prostitutes from being married as long as they continued their practice (Propertius *Elegies* 2.7.7); a prostitute's activity was considered adultery only if she had retired and married (Gardner, 133), and a man could not be considered adulterous if he slept with a promiscuous woman who charged money for her activity (Justinian *Cod.* 9.22, if this custom is early enough). Inns in the Roman world usually doubled as brothels, so that those staying upstairs could send for a maid downstairs for a fee (Casson, 206-7, 211, 215; Pomeroy, 201). Barmaids and waitresses were typically prostitutes (Gardner, 32), but it was illegal for the free owner of the inn to engage in such practices (Justinian *Cod.* 9.29).

Some well-to-do prostitutes could command considerable prestige (Athenaeus *Deipn.* 13.596b; Aulus Gellius *Noc. Att.* 7.7.5-7; *Sipre Num.* 115.5.7). The activity of prostitutes in ancient Near Eastern temples is well documented (Deut 23:17; MacLachlan), but scholars debate the reasons for their presence in temples. (Jewish people believed that prostitution defiled their temple; 2 Macc 6:4.) Yet poverty was probably the primary motivation for most women who entered prostitution (Terence *And.* 73-79); thus when a "public prostitute" was murdered, the woman's destitute mother petitioned the state to force the murderer to provide for the mother's support, claiming she had given her daughter to a brothelkeeper to provide needed funds (BGU 1024.7 in Lewis, 146). Different prostitutes brought different wages, presumably depending on their age, attractiveness and sexual prowess (*CIL* 4.1679 in Sherck, 210-11).

More often, prostitutes were female *slaves forced to provide income to their masters by the exploitation of their bodies. Exposed female infants were often taken in and raised as slaves, normally for the sex trade; infants could be sold into prostitution (Martial *Epigr.* 9.6.7; 9.8). Captured female slaves might be used for the same purpose (Apuleius *Met.* 7.9; *'Abot R. Nat.* 8A). Those slaves found to be freeborn were freed from this life; such a dramatic reversal of appar-

ently lowborn persons being discovered to be highborn reflects a common story line (e.g., Longus *Daphn. Chl.* 4.36), particularly for Terence (*Self-Tormentor; Eunuch; Lady of Andros; Lady of Perinthus*).

Urban centers naturally provided more opportunities for prostitution. Old *Corinth was notorious for its many temple prostitutes (Strabo *Geog.* 8.6.20; Aulus Gellius *Noc. Att.* 1.8.4; Athenaeus *Deipn.* 13.573cd), even if the reports may be exaggerated (e.g., Saffrey); in classical Athens the phrase "play the Corinthian" denoted sexual promiscuity (Aristophanes *Lysis.* 91). Given its location on the isthmus and consequent regular passage of visitors, Corinth may have revived its reputation for prostitution in the Roman period (see Pausanias *Descr.* 2.4.6; 2.5.1; Martial *Epigr.* 10.70.11-12; Grant, 24; also sources in Murphy-O'Connor, 48, 105-6, 127-28). Rabbis in the southeastern Mediterranean, perhaps reflecting the Greek disdain for Egyptians or their own distrust of Hellenized Alexandrian Jewry, recognized *Alexandria as a center for prostitution (Abot R. Nat. 48 §132B).

3.3. Sexual Use of Slaves. Many considered the sexual use of slave women shameful (Aulus Gellius *Noc. Att.* 15.12.2-3), and some honorably abstained (Homer *Odys.* 1.428-33). Jewish people in particular warned against intercourse with slaves, both those of others (Sir 41:22) and one's own (*Sent. Syr. Men.* 347-53); later traditions promise severe judgment for this practice (*Num. Rab.* 10:1). In contrast to the later Islamic practice, Jewish and Christian tradition warned against the sexual exploitation of slaves (Gordon, 83).

Nevertheless, the sexual exploitation of female slaves was standard practice in the Roman world (Achilles Tatius *Leuc.* 6.20; Artemidorus *Oneir.* 1.78; Martial *Epigr.* 1.84; 3.33; Muson. Ruf. frag. 12; Babrius 10.1-5; *Pesiq. Rab Kah.* 20:6). Many of the texts that warn against it assume that it is common (m. 'Abot 2:7). Ancient Greek tradition assumed that women captured in war could be used as concubines (Sophocles *Ajax* 485-91; Arrian *Anab.* 4.19.5). Newly acquired slave women sometimes faced cruel or jealous mistresses (Apollonius of Rhodes *Arg.* 4.35-39); Greek tradition also assumed masters' right to punish cruelly female slaves guilty of promiscuity (Homer *Odys.* 22.465-73).

In the early empire, many female slaves were purchased for breeding (Gardner, 206-9). Jewish

sages assumed that slave women and freed-women were not virgins (m. *Yebam.* 6:5; t. *Hor.* 2:11; y. *Hor.* 3:5 §1). Among the Romans it was legal for slaveholders of some classes to free female slaves for the purpose of marrying them (Gaius *Inst.* 1.19); some Jewish teachers, however, objected if it were thought that the man had been unduly familiar with her before her freedom (Cohen, 149). A Roman, who did not think of intercourse the way Jewish tradition did, might free a slave mistress and provide for her marriage to another (Appian *Civ. W.* 4.4.24).

Mistresses may have occasionally used male slaves sexually (anonymous *Adulteress* in *Select Papyri* [LCL.] 3:350-61; Gen 39:7), but it was not the norm, and if this behavior were exposed, it would have brought severe retaliation from the free male arbiters of societal power. Some writers instructed landowners to give their overseers female companions to avoid these servants' intimacy with women of the house (Columella *Rust.* 1.8.5).

3.4. Concubinage. Roman law forbade holding a concubine in addition to a wife (Paulus *Opinions* 2; Gardner, 56-57); Greeks sometimes attributed the practice especially to other peoples (Athenaeus *Deipn.* 13.556b-57c). But the laws against it attest its existence, and evidence suggests that in this period concubinage was widely practiced in the Mediterranean world.

Concubinage was especially common in the military (Gaius *Inst.* 1.57; Gardner, 58, 143; O'Rourke, 182; *OGIS* 674 in Lewis, 141), since soldiers could not legally marry until the term of military service had been fulfilled, a period lasting more than twenty years. Because of the length of time, officials often forgave romances (Fabius Maximus 4, in Plutarch *Sayings of Romans, Mor.* 195EF), though it was best to avoid them (cf. Scipio the Elder 2, in Plutarch *Sayings of Romans, Mor.* 196B). Some military discharge documents from the first century favor the soldiers with the legalization of their prior unions as marriages but add the single stipulation that they should have only one apiece (*ILS* 1986/*CIL* 16.1, from A.D. 52; so also *CIL* 16.42 in A.D. 98). *Pseudo-Phocylides* 181 warns against having intercourse with the concubines—plural—of one's father.

3.5. Incest. Modern discussion of incest usually focuses on those relationships where an adult coerces a younger partner; most ancient references to incest focus on consenting adult

partners. The kind of incest involving an innocent partner did, however, occur. In one court case from the early second century a father took his daughter from her husband because the husband threatened to charge him with incest; the husband pleaded that his wife still loved him. In this case, the court ruled that she could decide herself with whom she would live (P. Oxy. 237.7.19-29).

Although exceptions exist, the vast majority of cultures in history have had various forms of the incest taboo, and most have believed that incest merited punishment. For example, old Hawaiian culture prohibited incest on pain of death, except for chiefs (Radcliffe-Brown, 50); some Native Americans believed brother-sister incest led to insanity (Kaplan and Johnson, 211); the Nuer believed it led to death if committed with the closest kin (Evens, 126); traditional Ashanti punished it with death (Fortes, 257). A few cultures, however, have regarded it negatively but without emphasizing punishment (see, e.g., Willner, 152).

Jewish people prohibited incest (Lev 18:6-18; 20:11-21; *y. Ta'an.* 4:5 §8) and believed that it invited divine judgment (Lev 20:10-23; *Jub.* 16:8-9; 33:10-14; *T. Reub.* 1:7-10; *t. Pe'ah* 1:2; *b. 'Arak.* 16a; *Gen. Rab.* 52:3). Although banishment was the penalty for incest (Paulus *Opinions* 2:26; Gardner, 127), Cicero believed that incest should be punished with death (*De Leg.* 2.9.22). Incest proved to be a serious charge (Tacitus *Ann.* 16.8), and satirists mocked those thought guilty of the crime (Juvenal *Sat.* 2.32-33; 4.8-9).

Jewish law strictly prohibited intercourse between son and mother or father's wife (Lev 18:8; 20:11; Josephus *Ant.* 3.12.1 §274; Philo *Spec. Leg.* 3.3 §19; *b. Ber.* 56b; *y. Ned.* 2:1 §4; Gr. Ezra 4:24). Paul recognized that Gentiles as well as Jews prohibited incest in the line of descent (1 Cor 5:1). Romans defined unions with former mothers-in-law or stepmothers as incestuous (Gaius *Inst.* 1.63). Various stories invoke divine punishments against those who violated the incest taboos: a drunk father's raping his daughter was an impious act that could invite mortal judgment from the gods (Plutarch *Parallel Stories* 19, *Mor.* 310B-C); stories in which daughters seek intercourse with drunk fathers (Gen 19:30-38; Ovid *Met.* 10.314-476) paint them negatively. A son thought to have slept with his father's wife during the father's lifetime might invite a curse, hence swift death (Euripides *Hipp.* 885-90); a

man living in open sin with his daughter invited judgment from a deity (Philostratus *Vit. Ap.* 1.10). When Poseidon's sons went insane and raped their mother, Poseidon punished them by burying them alive (Diodorus Siculus *Bib. Hist.* 5.55.6-7). On learning that he had been sleeping with his mother, Periander went insane (Parthenius *L.R.* 17.1-7). Arrian reports only with skepticism the account that Heracles slept with his seven-year-old daughter because he could find no one else worthy of her (Arrian *Ind.* 9.2-3).

One of the most commonly recounted Greek stories was that of Oedipus, who married his mother Iocaste (allusions appear regularly in later literature, e.g., Epictetus *Disc.* 1.24.16; Martial *Epigr.* 10.4.1; Herodian *Hist.* 4.9.3; Justin Martyr *Apol.* 1.27). In its earliest form the story does not make clear that Oedipus acted in ignorance (although his mother did; Homer *Odys.* 11.271-280), but the tragic dramatists played heavily on his ignorance. Oedipus acted in ignorance yet suffered judgment (Sophocles *Oed. Col.* 525-28; *Oed. Tyr.* 1237-79; Euripides *Phoen.* 869-71), as did the offspring of the union (Sophocles *Antig.* 863-66; *Oedipus at Colonus* 1670-72).

Despite such stories, people in power ignored the inevitable hostile gossip and had relations as they pleased. Clymenus consorted with his daughter publicly, though she hated it (Parthenius *L.R.* 13.1-4); Monobazus impregnated his sister Helena (Josephus *Ant.* 20.2.1 §18). Claudius married his niece Agrippina (Suetonius *Claudius* 39; Tacitus *Ann.* 12.5; Dio Cassius *Hist.* 61.31.6). Hostile rumormongers also attributed sibling incest to Gaius Caligula (Suetonius *Caligula* 24) and incest with his mother to Nero (Suetonius *Nero* 34).

Some customs varied geographically, just as definitions of forbidden degrees of kinship vary from one culture to another in more recent times (e.g., Farber). Unlike Jews (Lev 20:11-12; 2 Sam 16:22; 20:3; Amos 2:7; cf. the debate in *Sipre Deut.* 246.1.2), Greeks might not consider it incestuous for a son to sleep with a woman with whom his father had earlier slept (Sophocles *Trach.* 1221-29). Romans could not marry "near relatives" (Plutarch *Rom.* 108, *Mor.* 289D); but whereas he could not marry sisters or aunts, a Roman could marry his brother's daughter (BGU 5.23.70-72; Gaius *Inst.* 1.62). A Seleucid ruler was reported to have given his wife to his son, her stepson, as a wife (Appian *Rom. Hist.*

11.10.61); many thought that Persians permitted mother-son unions (Sextus Empiricus *Pyr.* 1.152; 3.205; Philo *Spec. Leg.* 3.3, §13; Tertullian *Apol.* 9.16; Tatian *Or. Graec.* 28) and that some philosophers found it unobjectionable (Diogenes Laertius *Vit.* 7.7.188; Sextus Empiricus *Pyr.* 1.160).

Brother-sister unions were more commonly known than parent-children unions. In Greek myth, Aeolus married his sons and daughters to each other (Parthenius *L.R.* 2.2; Homer *Odys.* 10.7). Athenian men could marry paternal half-sisters (Achilles Tatius *Leuc.* 1.3.1-2; Cornelius Nepos *Pref.* 4; *Generals* 5 [Cimon], 1.2), which may have also been the custom of the people Abraham addressed in Genesis 20:12 (*Gen. Rab.* 52:11).

More strikingly, Egyptian men could marry full sisters (Paus. 1.7.1; papyri in Lewis, 43-44), a custom that may have also been practiced in ancient Nubia (Adams, 260) but was offensive to Greeks (Herodotus *Hist.* 3.31). This Egyptian custom retroactively illegitimated many unions when Rome conferred citizenship on its people in 212 (see Gardner, 36). Egyptians recounted the sexual union of sibling deities Isis and Osiris (Plutarch *Isis* 12, *Mor.* 356A), and some believed this was the basis for the Egyptian custom (Diodorus Siculus *Bib. Hist.* 1.27.1).

Greeks and Romans also recognized divine sibling unions (e.g., Virgil *Aen.* 1.45-46) without drawing the same inference, but some Jews charged that such stories contributed to pagan immorality (Josephus *Ag. Ap.* 2.38 §275). Some Jewish teachers suggested that Moses' prohibition of brother-sister unions shocked the Israelites recently freed from Egypt (*Sipre Num.* 90.1.1); later rabbis argued that God permitted sibling unions only early in biblical history (y. *Sanh.* 5:1 §4) and assumed that Gentiles sometimes married their siblings (*Gen. Rab.* 18:5).

Romans rejected all marriages with siblings, and Greeks rejected all except with paternal half-siblings (Diodorus Siculus *Bib. Hist.* 10.31.1). Stories of lust for siblings appear (Parthenius *L.R.* 5.2-3; 11.1-3), but such desire was unholy (Ovid *Met.* 9.454-665) and shameful (Parthenius *L.R.* 31.1). Jews condemned all marriages with sisters, including with half-sisters (Lev 18:9, 11; 20:17; Deut 27:22; Josephus *Ant.* 7.8.1 §168).

Clan endogamy was not incestuous (Tob 6:15). Many Jews believed that Gentiles prac-

ticed incest (*Ep. Arist.* 152; *Sib. Or.* 5.390-91) but also believed that they knew better and were morally responsible (*Gen. Rab.* 18:5; Cohen, 281). Many believed that God had a lower standard of incest regulations for Gentiles (*Sipra Qed. par.* 4.206.1.2; y. *Qidd.* 1:1 §4), and some appear to have believed he had a lower standard for slaves as well (y. *Yebam.* 11:2 §8).

3.6. Homosexual Intercourse. Ancient Judaism regarded homosexual activity and bestiality as subcategories of the larger issue of sexual immorality (*Sipra Qed. pq.* 10.208.2.12). Despite an exceptional occasion like Nero's marriage to boys (which others regarded as unnatural—Martial *Epigr.* 11.6; Suetonius *Nero* 28-29; Tacitus *Ann.* 15.37) and some Jewish diatribes against Gentile immorality (*Sipra Ahare Mot par.* 8.193.1.7), homosexual love lay outside the confines of marriage and family. Greek myth portrayed deities like Zeus as being particularly adulterous with women (see 2.2 above), but also he raped the boy Ganymede, who fared better than the women (Homer *Il.* 20.232-35; Virgil *Aen.* 1.28; Ovid *Met.* 10.155-61; Achilles Tatius *Leuc.* 2.36.3-4); other deities (Ovid *Met.* 10.162-219) and supernatural creatures (Euripides *Cycl.* 583-87; Athenaeus *Deipn.* 1.23d) might also exhibit homosexual desire.

Male homosexual affection was common and appears often both in biographies (Arrian *Anab.* 4.13.3; 4.13.7; Cornelius Nepos 4 [Pausanias] 4.1; 7 [Alcibiades] 2.2-3) and in fiction (Virgil *Ed.* 2.17, 45; 8.80-84; Ovid *Met.* 3.353-55; Longus *Daphn. Chl.* 4.12, 16; Petronius *Sat.* 9, 11, 85-86, 92), sometimes even as the focus of the romance (Parthenius *L.R.* 7.1-3; 24). Various thinkers debated whether cross-gender or same-gender sexual love was superior (e.g., Plutarch *Dial. on Love* 5, *Mor.* 751E-752B; Achilles Tatius *Leuc.* 2.35.2-3; Plato *Symp.* 222C). Lesbian affection (e.g., PGM 32.1-19) was also known though less widely accepted (Ovid *Met.* 9.720-63; Martial *Epigr.* 1.90). Male prostitutes appear in the writings of Petronius (*Sat.* 8, 21, 23, 28) and Martial (*Epigr.* 3.82).

Homoerotic pleasure was associated particularly with Greeks (Athenaeus *Deipn.* 13.603ab), but it was never limited to them. Roman custom disapproved the practice (Sextus Empiricus *Pyr.* 1.152, 159; 3.199-200; Horace *Sat.* 1.4.27; Quintilian *Inst. Orat.* 2.2.14; Suetonius *Caligula* 16, 36), and some traditional Romans (Cicero *Invective Against Sallust* 6.18; Livy *Hist.* 39.42.8-12) and

some philosophers (Seneca *Ep. Lucil.* 47.7; Marcus Aurelius *Med.* 1.16) had resisted the practice. By the first century, however, it had become widespread especially among upper-class Romans who imbibed considerable Greek culture, such as Nero (Dio Cassius *Hist.* 62.13.1) or Tiberius (Suetonius *Tiberianus* 43-44), and appeared especially at parties (Petronius *Sat.* 41, 79-80). Some could view rejection by women (Propertius *Elegies* 2.4.17-18; Philostratus *Vit. Ap.* 3.38) or loss of a wife (Ovid *Met.* 10.83-85) as causes for male homosexuality.

Jewish people usually viewed homosexual behavior as a pervasively and uniquely Gentile sin (*Ep. Arist.* 152; *Sib. Or.* 3.185-86, 596-600; 5.166, 387; *y. Qidd.* 4.11 §6); they regarded homosexual behavior as meriting death (Josephus *Ant.* 3.12.1 §275; *Ag. Ap.* 2.25, §§199, 215) or punishment by God in the afterlife (2 *Enoch* 10:4). Like some other people (Diodorus Siculus *Bib. Hist.* 32.10.9; cf. Diogenes Laertius *Vit.* 6.2.65; Artemidorus *Oneir.* 1.80), some Jewish people regarded homosexual intercourse as unnatural (Josephus *Ag. Ap.* 2.38 §§273, 275; *Pseud.-Phoc.* 190-91; *T. Naph.* 3:4-5), probably in part because it could not contribute to procreation (Aristotle *Pol.* 1.1.4, 1252a).

AFFLICTION LISTS

Writings from the ancient Mediterranean world contain many lists of afflictions, hardships and tribulations. There are at least seven different types of these lists, which occur in a wide variety of Greek, Roman and Jewish authors, including astrologers, *apocalyptists, writers of *testaments, *novelists, *historians, *letter writers and

*philosophers. The following survey contains a brief discussion of the terminology used to describe such lists, an enumeration of the basic types of hardship lists and a discussion of some of their functions.

1. Terminology
2. Types of Affliction Lists
3. Functions

1. Terminology.

In modern scholarly literature these lists are known as peristasis catalogs (German *Peristasenkataloge*). *Peristasis* (plural *peristaseis*) is the Greek term for "circumstance" and can indicate either a pleasant or an unpleasant situation, though the latter is the more common (Epictetus *Diss.* 2.6.16-17). A peristasis catalog is thus a catalog of circumstances, whether positive or negative or both. The most comprehensive lists presuppose a fluctuation in life from one circumstance to another and thus mention both good (e.g., fame and good reputation) and bad (e.g., infamy and obscurity) circumstances; such a list is a catalog of vicissitudes (e.g., Phil 4:12; 2 Cor 6:8). More common are lists of adverse circumstances, commonly called catalogs of hardships (Fitzgerald 1988), tribulation lists (Hodgson) or affliction lists (e.g., 1 Cor 4:9-13).

2. Types of Affliction Lists.

Adversity is a common human experience, so it is not surprising that *peristaseis* formed one of the *topoi* or commonplaces of Greco-Roman literature. The subject could be treated generally in a lecture or treatise (e.g., Maximus of Tyre *Or.* 36; Teles frag. 6) or specifically through narratives and lists (Fitzgerald 1997). The seven most prominent types of lists are (1) catalogs of hardships that specify the ills that humans as humans suffer (Seneca *Marc.* 18.8; Epictetus *Diss.* 3.24.28-29; Dio Chrysostom *Or.* 16.3; Philo *Virt.* 5); (2) lists that delineate the hardships suffered by various nations (Cicero *Tusc.* 2.14.34; Seneca *Prov.* 4.14-15; Dio Chrysostom *Or.* 25.3); (3) catalogs of the hardships encountered by various occupations, such as those faced by the gladiator, whose oath of allegiance took the form of a hardship list (Petronius *Sat.* 117); (4) lists of the punishments, including apocalyptic tribulations, that are inflicted on both the wicked (Sir 39:29-30; *Jub.* 23:13; Seneca *Ep.* 24.3; *Ira* 3.19.1) and the righteous (Plato *Rep.* 361E-362A; Cicero *De Rep.* 3.17.27); (5) the toils and afflictions that are

the result of the passions, such as anger (Seneca *Ira* 2.36.5); (6) the vicissitudes of particular individuals, such as Philip of Macedon (Demosthenes *De Cor.* 67), Augustus (Pliny *Nat. Hist.* 7.45.147-50), and others (Chariton *Chaer.* 3.8.9; 4.4.10; 5.5.2; 6.6.4; Achilles Tatius *Leuc.* 5.18.3-6); and (7) the hardships of various human types, such as the orphan (Homer *Il.* 22.487-99) and the wanderer (Homer *Il.* 24.531-33).

Of the various types, the most important for comparison with the NT is the ideal wise man or *sophos*, whose hardships were depicted in numerous peristasis catalogs (Horace *Carm.* 3.3.1-8; *Sat.* 2.7.83-87; Seneca *Const.* 8.3; 15.1; *Ep.* 24.15, 17; 41.4-5; 59.8; 66.21; 76.18; 85.26-27; 91.7-8; *Prov.* 6.6; Dio Chrysostom *Or.* 8.15-16; 9.11-12; Epictetus *Diss.* 1.1.22-25; 1.18.21-23; 1.29.5-6; 2.1.84-85; 2.16.42-43; 2.19.24; 3.5.9; 3.6.5-7; 3.15.10-12; 3.22.45-49; 3.24.113; 4.7.13-15; Plutarch *Mor.* 1057D-E; Philo *Det. Pot. Ins.* 34). For Hellenistic philosophers, the sage was the perfect embodiment of reason and virtue (see Vice and Virtue Lists), and both of these qualities were evident in his triumph over adversity. Because discussions of the sage played a central role in both the propaganda and pedagogy of philosophy, he was a well-recognized figure in Greco-Roman culture. As is increasingly recognized by modern scholars, Paul drew on Hellenistic depictions of the *sophos* to depict himself (Malherbe), and in his peristasis catalogs he combined these Hellenistic traditions with Jewish ones about the afflicted righteous man (Kleinknecht) and suffering prophet (see *DPL*, Afflictions, Trials, Hardships). Consequently, the portrait that he gives of the suffering apostle is analogous in many respects to the philosophers' sketch of the suffering sage (Fitzgerald 1988).

3. Functions.

It was axiomatic in the ancient world that adversity is the litmus test of character. A person's attitude and actions while under duress reveal what kind of individual he or she is. "Prosperity," Isocrates says, "helps to hide the baseness even of inferior men, but adversity speedily reveals every man as he really is" (*Archidamus* 101-2, trans. LCL; see also Ovid *Tr.* 4.3.79-80). Calamity is thus virtue's opportunity (Seneca *Prov.* 4.6), for true greatness becomes conspicuous in adverse circumstances. The latter are a test, says Epictetus (*Diss.* 3.10.11), that "show the man" (*Diss.* 1.24.1; see also Proclus in *SVF* 3.49.30-34). En-

durance is the proof of virtue (Seneca *Brev. Vit.* 18.1; *Prov.* 4.12; Dio Chrysostom *Or.* 3.3), and the greater the adversity overcome, the greater the proof of an individual's integrity.

In keeping with this widespread view of adversity, philosophers used peristasis catalogs to depict and demonstrate a person's fundamental moral integrity as well as a host of virtues and noble traits, such as endurance (2 Cor 6:4), serenity in the face of hardship (2 Cor 4:8-9), austerity, courage, self-discipline, self-sufficiency (Phil 4:11-12), wisdom, rationality and acceptance of the divine will (2 Cor 12:10). As a traditional means of demonstrating the triumph of virtue in all circumstances of life and over all adversity (Rom 8:35-39), these lists were also used in conjunction with lists of virtues (2 *Enoch* 66:6; 2 Cor 6:6-7; Fitzgerald β). Consequently, they functioned to distinguish the genuine sage from those who either falsely or prematurely laid claim to wisdom (Epictetus *Diss.* 2.19.18, 24). In addition, they were used by philosophers to admonish young and immature students who arrogantly thought that they had already attained perfection. In this case, the true philosopher's hardships were set over against the exaggerated claims of the novice, to the latter's embarrassment (Epictetus *Diss.* 4.8.27-31; 1 Cor 4:6-13). Finally, peristasis catalogs were used not only to vilify opponents by compiling a list of the sufferings they inflicted but also ironically to bestow mock praise for endurance of adversity (Josephus *J.W.* 4.3.10 §§165, 171, 174; 2 Cor 11:19-20).

Paul used peristasis catalogs in 1 and 2 Corinthians in much the same manner as did the philosophers, employing them to present himself as a person of integrity, to distinguish himself from false apostles and to admonish the Corinthians for their spiritual arrogance. But whereas philosophers typically used the lists to emphasize the power of a person's mind or will, Paul used them to demonstrate the power of the divine in his life (2 Cor 4:7; see also *T. Jos.* 1:3-7; Seneca *Ep.* 41.4-5).

AHIQAR

The story of *Ahiqar* is an intriguing folk tale of a wise and skillful scribe who gave counsel to all of Assyria and who imparted wisdom to a young and naive nephew through proverbs, parables and maxims.

1. The Story and Its Versions
2. *Ahiqar* and the New Testament

1. The Story and Its Versions.

The tale enjoyed wide circulation in antiquity with respect both to time and to location. The earliest known text, coming from Elephantine in Egypt, is written in Imperial Aramaic and dates to the fifth century B.C. Later extant versions of the story, all dating from the Christian era, circulated in Syriac, Arabic, Armenian, Ethiopic and Slavonic. The Syriac and Armenian versions stand closest to the Aramaic, while the Arabic version has been thoroughly monotheized. It may have been known, at least in part, to the Greeks. The author of *Tobit, a Jew living in the Persian Empire in the late fourth century B.C., assumes a detailed knowledge of the story on the part of his readers (see Jewish History: Persian Period). The texts of Tobit found at *Qumran demonstrate that Jews in Palestine knew of at least the person of *Ahiqar* around the time of Jesus.

The language of *Ahiqar's* original composi-

tion was probably Aramaic (note, for example, the word play *hṭ* ["arrow"] and *hṭ* ["sin"] in saying 41 of the Imperial Aramaic text), though some scholars think it to be Akkadian. Since *Ahiqar* served both Sennacherib (reigned 704-681 B.C.) and Esarhaddon (reigned 681-669 B.C.), the tale was composed no earlier than the seventh century B.C. Some of the later versions erroneously invert this historical sequence, making Esarhaddon the father of Sennacherib. It is probable that the proverbs were first gathered separately and later integrated into the story, since the two sections reflect slightly different dialects of Aramaic. References to the gods and to the god Shamash indicate that the tale was of non-Jewish origin, even though in the version known to the author of Tobit (presently nonextant), *Ahiqar* was a Jew (Tob 1:21-22).

The Syriac text offers a complete story, while the Imperial Aramaic text is fragmentary. The major elements of the story are as follows: an introduction describing the greatness of *Ahiqar* and his adoption of his nephew Nadin (or Nadan); maxims used by *Ahiqar* in the education of Nadin; Nadin's treachery against *Ahiqar*; *Ahiqar's* deliverance through Nabusumiskun (Akkadian *Nabû-šum-iškun*; "Nabu has established a name," i.e., by giving a son; corrupted in one Syriac tradition to *Yabusenakh Meshkin*); the episode in which *Ahiqar* bests Pharaoh and gains great wealth for the king of Assyria; and maxims used by *Ahiqar* in his chastisement of Nadin.

The story is set in the Assyrian royal court, where *Ahiqar* was bearer of the seal of the king and counselor of all Assyria. According to Tobit, *Ahiqar* was second to Esarhaddon in authority (4Q196, frag. 2, line 8 = Tob 1:22). *Ahiqar* became a wealthy man but lacked a son, even though he had married sixty wives. *Ahiqar* prayed to God that he might have a son, and God answered by giving him his sister's young son Nadin by adoption. The king expressed his concern that he should have a successor to *Ahiqar* who might serve in his court. *Ahiqar* assured the king that his nephew Nadin was that person because he himself had instructed Nadin in all wisdom. *Ahiqar* then recounts a long series of proverbs by which he has instructed Nadin.

Despite *Ahiqar's* diligence in instructing Nadin, Nadin failed to heed the instruction. He

turned against Ahiqar and plotted his demise. He even convinced the king that Ahiqar was plotting treason and so had him condemned to death. But wise Ahiqar survived by convincing his executioner Nabusumiskun that he should spare him and keep him in hiding until the king would regret his hasty action and want Ahiqar back. Many years earlier, Ahiqar had delivered Nabusumiskun by hiding him when he was in a similar situation.

After hearing that Ahiqar had died, Pharaoh king of Egypt asked the king of Assyria to send him the wisest sage in his land to assist him in building a magnificent castle stretching from earth to heaven. In exchange, Pharaoh promised him three years' tribute from Egypt. But if he failed, the king of Assyria would have to pay Pharaoh the same amount. The king of Assyria was sad, because only Ahiqar could do such a thing, and he thought him dead. Nabusumiskun now told the king of Assyria that he had spared Ahiqar. The king of Assyria reinstated Ahiqar and sent him to Egypt. Ahiqar accomplished his task, outwitting Pharaoh, and brought back three years of tribute for the king of Assyria. While he was in Egypt, clever Ahiqar had bested Pharaoh when challenged with his riddles and seemingly unsolvable problems.

The king of Assyria restored Ahiqar fully and delivered Nadin into his hand for whatever Ahiqar wished. Ahiqar bound Nadin and then reproved him with a lengthy series of proverbs.

When Ahiqar finishes with the statement that God would judge between Nadin and him, Nadin immediately swells up and dies. The narrator concludes that whoever does good will be recompensed good, but whoever does evil will be recompensed evil.

2. Ahiqar and the New Testament.

The NT and *Ahiqar* share a number of common literary devices and motifs, although no direct influence of *Ahiqar* on the NT can be established. The most striking parallel is that of the proverbial washed sow who wallows in the mud (2 Pet 2:22; Syriac *Ahiqar* 8:18; Armenian *Ahiqar* 8:24a; Arabic *Ahiqar* 8:15). Other common motifs include the feeding of pigs as a despised task (Lk 15:15; Syriac *Ahiqar* 8:34); the wolf as the enemy of the sheep (Mt 7:15; 10:16; Lk 10:3; Acts 20:29; Arabic *Ahiqar* 2:30); unfruitful trees that should be destroyed (Lk 13:6-9; Syriac *Ahiqar*

8:35; Armenian *Ahiqar* 8:25; Arabic *Ahiqar* 8:30); untrustworthy stewards who abuse subordinates and revel in drunkenness (Mt 24:48-51; Lk 12:45-46; Syriac *Ahiqar* 4:15); and getting rid of an ineffective or offensive bodily part like a hand or an eye (Mt 5:29-30; Mk 9:43, 47; Syriac *Ahiqar* 8:20).

ALCHEMY. See MARIA THE JEWISH ALCHEMIST.

ALEXANDER THE GREAT

The conquest of the Achaemenid (Persian) empire by Alexander III of Macedon in the late fourth century B.C. marked the beginning of a new era. Important in itself, his conquest was especially significant in light of its ongoing legacy of Greek rule, culture and language in the eastern Mediterranean area. The figure of Alexander himself would likewise provide the impetus for the development and implementation of ruler worship in both the Hellenistic successor kingdoms and in the later Roman principate.

1. The Man
2. Alexander's Achievements
3. Alexander and the Jews

I. The Man.

1.1 Early Life and Education. Alexander, born in July 356 B.C., was one of several sons of the monarch of *Macedon, Philip II, by his first wife Olympias, a princess of neighboring Epirus. Tutors in *philosophy, science and culture by the Greek philosopher *Aristotle, among others, and trained in the martial arts in his father's army, Alexander was able to glean for himself the best that the Greek world had to offer. During his youth, his father carried out a campaign of Greek unification and military expansion, playing the largest role in the establishment of the Corinthian League, of which he became the head. Alexander was heavily involved in his father's military campaigning and served as his regent in 340 B.C. During his days at court in Pella, Alexander was able to interact with the finest Greeks and Macedonians alive at the time, from poets and philosophers to actors and engineers, all of whose skills he would eventually put to use for his own formidable causes.

1.2 Succession to the Throne of Macedon. Philip II's assassination in 336 B.C. took place a year after he had put Olympias aside for the younger Macedonian princess, Cleopatra. As a result, both Alexander's contemporaries and later scholars have been very interested in the role that Alexander and his mother may have played in Philip's death. Whatever his involvement or lack thereof, Alexander managed to gain the support of some of Philip's more important generals and secured the succession as king of Macedon for himself. The right of succession of Philip's status as leader (*hēgemōn*) of the Corinthian League had also been granted to his off-

spring, but Alexander was not able to step so neatly into his father's shoes, for Philip's assassination had left Alexander in a precarious political position. The fragile alliance of Greek city-states that Philip had held together with an iron grip threatened to disintegrate, with the orators and politicians of Athens being by far the most critical of Alexander and the non-Athenian leadership of the coalition. Alexander, however, managed to overcome this opposition, and with the vicious exemplary subjugation and destruction of rebellious Thebes (for which Alexander would later be vilified by Athenian poets and statesmen) he was able to hold together his father's alliance.

2. Alexander's Achievements.

2.1 The Conquest. Alexander's conquest of the Achaemenid Empire by the age of twenty-four was an accomplishment without parallel in the ancient world. He took his father's political mantle upon himself completely and in 334 B.C. set out to wrest control from the Persians of the various areas in *Asia Minor inhabited by Greek-speaking peoples. The famous battles of the Granicus and the Issus (at which the Persian king, Darius II, personally led the Persian troops) set the tone for many spectacular victories over the next several years. These initial victories were decisive harbingers of many to follow, as Alexander first established control over Asia Minor and then began a systematic siege of each Persian-controlled or -sympathetic port along the eastern coast of the Mediterranean, through Phoenicia, Palestine and Egypt. Because he lacked any real navy (and did not trust the loyalty of the small navy supplied by the Corinthian League), after he defeated the Persian land forces at the battle of Issus, his primary objective was to cut the Persian navy off from its land bases. His handling of resistant cities was thorough and savage, killing and/or enslaving the entire population of such cities as Tyre and Gaza. Militarily, Alexander's use of his core Macedonian troops, but especially his Thracian auxiliaries, together with troops from the Corinthian League and other mercenaries, was inspired.

It is, however, this latter coastal conquest that makes Alexander's overall purpose difficult to discern. His military purpose in this coastal conquest can be seen as a defensive one, for the naval power of the Persians would have been an ongoing problem for the newly freed Greek cit-

ies along the coast of Asia Minor, as well as within Greece and Macedon. However, it may be that this coastal conquest shows that Alexander was thinking of a much wider conquest from the beginning. On this reading of the evidence, rather than a defensive action, the coastal conquest was his way of decisively protecting his weak rear flank while he went on to conquer the rest of the empire. His rejection of a suit for peace from Darius after the battle of Issus suggests that his objective was always more than simply freeing the Greek cities of Asia Minor. In any case, at the moment he completed this initial conquest and turned his eyes eastward again, his desire for further conquest became evident.

Alexander's campaigning drew to a close in the Indus River region, where his men, tired of conquest and weary of foreign climes, convinced him to stop and return. It was in Babylon, soon after the cessation of his campaigning, that he died. The circumstances of his death are unclear, and hence conspiracy theories abound, but it is probable that he died of natural causes related to heavy drinking, old wounds and possibly malaria, contracted during his campaigning in India.

2.2. Characteristics of Alexander's Conquests and Rule. It is difficult to tell whether the mythological language (following in the tracks of Heracles and Dionysus, who were both thought to have traveled to India) and the rhetoric of scientific quest (for the great Ocean Sea, thought to lie east of India) that surrounded Alexander's eastward conquest were blinds to allow him to continue his conquests with impunity or were the driving forces behind his desire for further campaigning. It seems that beneath the surface of Alexander's military and diplomatic genius was a man driven by devotion to the myths of the Greeks and an overwhelming curiosity for new places and peoples.

One of the most consistent factors throughout Alexander's career was this devotion to myth. At an early age, his tutor Lysimachus gave him the nickname Achilles—the hero of Homer's *Iliad*—and his mother could supposedly trace ancestry to the Homeric figures of both Achilles and Helen of Troy. Likewise, Heracles was seen as the ancestor of the Macedonian kings, and Perseus also found a place within Alexander's lineage. In addition, after her divorce from Philip, Alexander's mother seems to have spread a story that Alexander's

paternity was actually divine. Olympias was notorious for her lavish devotion to religion and cult, and it may be that the special relationship Alexander had with his mother was the source of his own religio-mythical devotion. In light of these various emotional and familial ties to the Greek myths and their heroes, some of the stranger things about Alexander's various activities fit (for example, his naked processional around the tomb of Achilles upon arrival in Asia Minor at Troy in 334 B.C., his journey to the famous Oracle at Siwah after his conquest of Egypt in 332 B.C., his identification of himself as the son of Zeus-Ammon [which would have fit well with his mother's claims] and the extent of his eastward conquest [where, at its eastward-most limit, he found Nyssa, the mythic sanctuary of Dionysus, Fox, 340-41]).

There is good evidence to suggest that as his campaigns in Persia and India wore on, Alexander's Macedonian soldiers began to feel that he was becoming a tyrant, that they found his rejection of his own father in favor of Zeus-Ammon unacceptable, that he was taking on far too many oriental characteristics, practices and retainers and that his conquests were going too far and too long. Alexander did occupy a difficult position once he had finally conquered Darius II in Media in 330 B.C. He had set out on his conquest of Asia Minor under the banner of his father's motto of freedom for Greek cities but had ended up conquering not only the Persians in Asia Minor but also the Persian king, and he would go on to conquer the rest of the former Achaemenid territories.

As the new king of Persia, as well as the king of Macedon and leader of the Corinthian League, the line that Alexander was forced to tread was an exceedingly fine one. That there were problems encountered by Alexander from all of these quarters is manifest—at home, there was continued Athenian polemics and ill will toward their Macedonian overlord; in the field, at least two assassination plots were foiled; and, as he moved further eastward into the Persian homelands, the Persians were less and less happy with his presence. It is difficult, however, to make much of the charge that Alexander did become tyrannical, for the evidence does not bear it out. The loyalty of his men and their following of him beyond all previous knowledge of Greek civilization is testimony that he remained, until the end, the popular leader that he always

had been. The evidence for his orientaling tendencies and divine self-image is at best inconclusive (on the latter, see Plutarch *Isis and Osiris* 360D). Given his early death, it is impossible to tell how he would have reigned—as a Macedonian conqueror, as the rightful successor by conquest of the Persian throne or perhaps as both.

2.3. The Spread of Hellenism. Alexander's conquests were significant not only in light of their legacy of Macedonian and Greek political, economic and military domination over much of the Near East but also because of the impact of Greek culture and language on the various peoples under Macedonian/Greek domination. This bipartite influence, coupled with the openness on the part of the Greeks to incorporating Eastern religions, ideas and wisdom into their beliefs, is often called *Hellenism. This phenomenon of Hellenism was to be Alexander's greatest legacy to the world of the NT. On a purely practical level, the widespread use of the Greek language provided a common means of communication; and the unifying force of Greek culture, together with the willingness on the part of the Greeks to amalgamate native religious cults and beliefs with their own, allowed for much cross-fertilization and the spread of both Greek and non-Greek ideas in a way that was not previously possible.

Alexander's direct involvement in the spread of Hellenism is debatable. He established Greek cities (many of which were named Alexandria) throughout his newly conquered territories, peopled them with veterans and loyal retainers and in effect set up both garrisons and Hellenistic centers throughout the former Achaemenid Empire, from Egypt to India. However, the common characterization of Alexander as a missionary of Greek culture is overstated. Alexander's spreading of Greek language and culture was tightly tied to his program of conquest—much as the Romans would later follow a strict policy of Romanization of their territories before incorporation into the empire as provinces, so too Alexander used language and culture to his own ends. The end effect was a saturation of Greek culture at various levels of native societies, and, for the study of the NT, the extent and character of this saturation for both the Jewish and non-Jewish peoples affected by the early Christian movement is an item of much discussion and debate.

3. Alexander and the Jews.

Because Alexander's campaigns took him through the region of Palestine, there is quite a bit of discussion regarding his involvement with Jews and Jewish culture. There are several stories about Alexander recorded in rabbinic literature (*b. Tamid* 31b-32b; *Tg. Ps.-J.* 2:5, 8c; *Gen. Rab.* 61:7), but the most significant Jewish tradition about Alexander is found in *Antiquities* 11.8.1-7 §§304-47, where Josephus records a story that has Alexander thoroughly embroiled in Jewish-Samaritan politics and credits him both with the foundation of the Samaritan sanctuary on Mt. Gerizim and with the reception of a vision telling of his eventual defeat of the Persian king, after which he sacrificed to the God of the Jews in *Jerusalem and granted them extensive rights. This story is repeated in a somewhat different version in *b. Yoma* 69a but is at best improbable in either form. It probably does reflect, however, the beginning of an ascendancy of the Jews over the Samaritans as the result of Alexander's extreme displeasure with the Samaritans after they rebelled while he was in Egypt. At any rate, when compared with a passage such as Daniel 11:2-4, it seems that the Jews were treated somewhat ambivalently by Alexander. This would change over the next two centuries as Alexander's successors (the **Diadochi*) waged the five Syrian wars and implemented a series of differing policies toward the Jews—some positive, some negative. At this initial stage, though, it seems that Alexander's conquests leveled the political playing field for the Jews to a certain extent, in that previously strong neighbors (Samaritans, Phoenicians) were humbled, and at least their first new overlord rulers (Alexander for a short time, and then, after a brief period of Seleucid control, Ptolemy I) were well-disposed toward them.

For the Jews and the early Christians, Alexander's significance after his death was also important—his body, embalmed in Babylon and intended for burial in the northern Seleucid kingdom, was transported in a large funeral chariot that amounted to a moving temple, complete with road builders to smooth the way. Ptolemy I hijacked the funeral caravan, however, taking the body to *Alexandria, where it was housed in a permanent temple, and Alexander was worshiped as either a demigod or a god until the third century A.D. The influence and effects of this cult on Alexandrian Jews and

Christians is not to be underestimated and would have resonated well with such a passage as Isaiah 40:3 (Porter and Pearson). Beyond this, Alexander left the Greco-Roman world as a whole with a personal legacy of mystery and romance. Many Hellenistic and Roman rulers would later try to cash in on this mystique—not least, for the Jews, the young son of the Roman governor of Idumea, *Herod, and their first Roman conqueror, *Pompey.

ALEXANDRIA

During the NT period Alexandria was one of the chief cities of the Roman Empire. A center of shipping and trade, culture and scholarship, and the home of a large Jewish community, it was eventually to become an important center of Christianity.

1. Location
2. History
3. Topography
4. Jewish Community
5. Christian Community

1. Location.

The city of Alexandria is situated on a narrow ridge of limestone between the Mediterranean coast of Egypt to the north and Lake Mareotis to the south, with the Nile Delta to the east. It was built on the site of an earlier Egyptian town

called Rhakotis and was named after *Alexander the Great, who authorized its foundation in 331 B.C. but was never to see the city.

The physical site had numerous natural advantages. It was sheltered from the open Mediterranean and the prevailing northerly winds by a narrow strip of rock called Pharos running parallel to the coast, 15 kilometers offshore. The center of this island was joined to the mainland by a causeway (*Heptastadion*), thus marking out two deep, protected sea harbors, one on either side of the causeway. A canal led from the western harbor (*Eunostos*) to the freshwater Lake Mareotis. This lake provided an inland harbor for the city together with access by means of a network of canals as far as the great artery of the Nile itself and ultimately to the Red Sea (Dio Chrysostom *Disc.* 32.36).

2. History.

The new city quickly rose to prominence and remained influential both economically and culturally for more than a millennium, under three successive powers: Ptolemaic, Roman and Byzantine.

Following the death of Alexander in 323 B.C., Egypt was ruled by a succession of Ptolemaic kings (see Hellenistic Egypt). Under their jurisdiction, Alexandria replaced Memphis as the capital city and principal administrative center of the new kingdom. Nonetheless, no doubt because of its *Hellenistic foundation, the city remained distinct from Egypt proper and had partial autonomy over its own affairs. In outlook it inclined more toward Greece and the Mediterranean than toward Egypt.

During the Ptolemaic period, Alexandria enjoyed considerable prosperity. The city capitalized on the advantages provided by its location and developed a significant commercial reputation, especially in the manufacturing industries of papyrus, glass and linen. From early days it attracted a cosmopolitan population.

Rome annexed Egypt in 30 B.C. Under the emperor Augustus (see Roman Emperors), the Alexandrians experienced the humiliation of having their senate abolished (it was not restored until A.D. 200); the Ptolemaic army was disbanded, and Egypt was occupied by Roman forces. Nonetheless, Alexandria continued to enjoy considerable privilege under Roman rule; it became the administrative capital of the Roman province of Egypt (see Roman Administra-

tion), the cultural center of the eastern empire and the second city in the empire (with a population possibly in excess of 500,000 by the mid-first century A.D.).

3. Topography.

Our principal source of description regarding the topography of Alexandria is provided by the first-century writer Strabo (*Strabo Geog.* 17.1.6-10; see *Historians and Geographers, Hellenistic*). The site was rectangular in shape running parallel to the Mediterranean coastline. Deinokrates of Rhodes is widely cited as the architect of the new city. He adopted a gridded street plan in which the main colonnaded east-west street (39 m wide and 5.5 km long) was called the Canopus Street. This was intersected by a major north-south street (1.5 km long) called the Soma Street. Cleomenes of Naukratis was charged with finding funds for the construction of the city and was appointed its first governor.

The city was divided into ethnic regions. The Egyptian district, in the southwest of the city, corresponded to and was named after the original village Rhakotis. This was the poorest district. Ptolemy III Euergetes (246-221 B.C.) rebuilt the Serapaeum, or Temple of Serapis, in this Egyptian quarter and incorporated within it the daughter library of the great library. Under the Romans, the Serapaeum became one of the great centers of pagan worship in Egypt.

The Greek quarter was called the Brucheion and included the extensive royal palace. Strabo suggests that the palace occupied between a third and a quarter of the city's area (*Strabo Geog.* 17.1.8). Within this district there were many official buildings, including the Soma (the mausoleum of Alexander's body) and the museum.

Philo (*Flacc.* 55) lists five districts named after the first five letters of the Greek alphabet. He suggests that the Jews were concentrated in two of these districts. It is clear from Josephus (*J.W.* 2.18.8 §495) that district Delta (in the northeast) was one of these.

The famous 120-meter-high lighthouse, one of the seven wonders of the ancient world, was built on the eastern end of the island of Pharos in the time of the early Ptolemies and survived until it was destroyed by an earthquake in the thirteenth century. This is the earliest known lighthouse and became known as Pharos. It consisted of three stories: the first was square, the second octagonal, the third cylindrical, at the top

of which was a statue to Zeus Soter. A fire burned inside the lighthouse, and its light was reflected through a mirror mechanism such that it could be seen over a considerable distance (Josephus *J.W.* 4.10.5 §613 suggests more than 50 km).

The lighthouse served a number of uses. It provided a landmark to draw attention to Alexandria near the flat alluvial plain of the Nile Delta; it warned sailors of the series of limestone reefs offshore; and, as one of a series of watch-towers along the coast, it was a vantage point from which to gain early warning of attack. In recent years archaeologists have discovered what are considered to be remains of this wonder of the ancient world.

4. Jewish Community.

The city of Alexandria had a cosmopolitan population, including Egyptians, Greeks and Jews, albeit thoroughly Hellenized with Greek as the official administrative language (see *Hellenistic Judaism*). Although there was a general policy of mutual tolerance, this mix of nationalities and cultures inevitably brought periodic tensions. Many Jews sought to balance being pro-Greek and yet maintaining loyalty to their Jewish heritage.

Large numbers of Palestinian Jews emigrated to Alexandria from its earliest times. Josephus (*J.W.* 2.18.7 §487; *Ag. Ap.* 2.4 §§35, 37) records that Alexander himself encouraged Jews to settle in the new city "on terms of equality with the Greeks." They were encouraged to stay there by the Ptolemies and were accorded considerable freedom. (There is early Ptolemaic archaeological and epigraphic evidence of Jews in the city.) This freedom continued under the early days of the *Roman Empire, but then conditions for the Jews deteriorated until the community was virtually annihilated in the early second century A.D.

The Jews organized into their own civic group known as a *politeuma* (*Ep. Arist.* 310) and were encouraged to maintain their cultural and religious customs. There was a significant Jewish synagogue situated along the main thoroughfare, the Canopus Street (recorded in the Talmud, *t. Sukk.* 4:6).

By the first century A.D. the population of Jews in the city may well have been considerable, and this community came to be one of the most influential in the Jewish Diaspora. *Philo, himself an Alexandrian Jew, reports that at this time the number of Jews within Egypt as a whole

may have been as much as a million (Philo *Flacc.* 43). Delia and Sly argue that a third of the Alexandrian population may have been Jewish (on the basis of two out of the five Alexandrian districts being predominantly Jewish [Philo *Flacc.* 55]) and therefore possibly amounting to as many as 180,000 Jews.

Periodically, considerable antagonism arose between the Greek and Jewish communities. During the imperial rule of Gaius, an Egyptian prefect called Flaccus was put in an insecure position when the Jewish king Agrippa visited the city in A.D. 38. The situation resulted in nothing less than riot and much violence against the Jews. Flaccus's reaction was to remove many of the privileges that the Jews had been accorded, and they were treated as foreigners and aliens (Philo *Flacc.* 54). The situation improved somewhat under the emperor Claudius, until tension resurfaced again in 66, when another riot was put down directly by the force of the Roman army (see Roman Military) under Philo's apostate nephew, Tiberius Julius Alexander. Josephus records significant casualties (Josephus *J.W.* 2.18.7-8 §§487-98). In A.D. 115-117, there was a still greater Jewish uprising in Alexandria and the surrounding region (Eusebius *Hist. Eccl.* 4.2) that led to an exodus of Jews. This marked the end of significant Jewish influence in Egypt.

5. Christian Community.

Primary sources report nothing explicit regarding the origins of Christianity in Alexandria. The NT includes a number of references to Alexandria, but none suggests a successful mission there. There is reference to an Alexandrian Jew who was converted to Christianity and traveled widely (Acts 18:24-25; 1 Cor 1:12; 3:4-6, 22; 16:12; one variant reading of Acts 18:25 records that Apollos "had been instructed in the word in his home country"); some from Egypt were present at Peter's speech at Pentecost (Acts 2:10); and some from Alexandria are recorded as disputing with Stephen (Acts 6:5). Eusebius, the church historian, records a tradition that Mark the Evangelist brought Christianity to Alexandria in about A.D. 40 and that he was later martyred there (Eusebius *Hist. Eccl.* 2.16), but it is unclear whether this tradition is reliable. By the second century, however, Christianity had become more established in Alexandria with the founding of a catechetical school. By the third century, the city had become a significant center

of the Christian church (see *DLNTD*, Alexandria, Alexandrian Christianity).

ALEXANDRIAN LIBRARY

The great library of Alexandria contributed significantly to Alexandria's reputation of being paramount among cities. In a climate of intense rivalry, the Ptolemies of Egypt, the Seleucids of Syria and the Attalids of Pergamum all endeavored to establish world-class libraries. The Alexandrian library became the largest and most

famous in antiquity (see Literacy and Book Culture).

1. Foundation
2. Holdings
3. Location and Destruction

1. Foundation.

Early references to the foundation of the library are lacking, and no archaeological remains survive. The consensus is that Demetrius of Phaleron, a scholar exiled from his native Athens, was the force behind the establishment of a research institute, the museum, and library under the patronage of Ptolemy I Soter (c. 295 B.C.). The library then greatly expanded under the aegis of Ptolemy II Philadelphus and his successors. Ptolemy III Euergetes built the Serapaeum as a branch or daughter library in order to accommodate the developing collection. The combined library and museum were influential in attracting great scholars to the city. In the Roman period, both the library and the museum became public institutions of the Roman province.

2. Holdings.

The overarching goal behind the establishment of the library was to collect all books in the world. In order to enhance the holdings, manuscripts were acquired by both honest and dishonest means. It is said that Ptolemy III Euergetes confiscated manuscripts from passengers who sailed into Alexandria, had them copied, and kept the originals but returned the copies.

Primary sources provide various estimates as to the number of scrolls the library possessed—ranging from 400,000 to 700,000 in the first century B.C. Antony is then said to have presented the library with 200,000 parchment volumes from the Pergamum library. Callimachus (d. 235 B.C.) compiled a selected classification of the library's holdings, a catalog that amounted to some 120 scrolls entitled "Catalogs of the authors eminent in various disciplines." The catalog was arranged according to subject, within which particularly distinguished authors were listed alphabetically together with brief biographical detail and a critique of their work.

3. Location and Destruction.

Considerable debate surrounds both the location of the library and what became of it. The extant Ptolemaic sources never describe both

the museum and the library together. Did the term *library*, then, denote a separate building or merely a collection of scrolls (perhaps housed in the museum)?

The traditional view has been that the library was a distinct building situated near the museum. Plutarch (*Caes.* 49) reports that the "great library" (*megalēn bibliothēkēn*) was destroyed in a fire that spread from the port during the Alexandrian war of Julius Caesar (48-47 B.C.). From this it is assumed that the library building was located near the port and, together with its contents, was destroyed by the fire.

Alternative primary sources propound no such destruction. Strabo in his topographical study of the city (*Strabo Geog.* 17.8) does not explicitly refer to a distinct building described as the library. Suetonius (*Claudius* 42.5), supported by papyrological evidence, suggests that the museum suffered no loss of scrolls during Caesar's campaign, thus implying that the library was a collection of scrolls housed within the museum and not destroyed by fire. It is assumed that another and much smaller (possibly only 40,000) collection of scrolls was destroyed in the fire.

The palace quarter of Alexandria was burned down in the third century A.D. The museum was destroyed at this stage, and it may be assumed that the library suffered also. A project was started in the 1980s to rebuild a new great library of Alexandria on the supposed ancient site of the museum.

ALEXANDRIAN SCHOLARSHIP

Throughout the Ptolemaic, Roman and Byzantine periods, Alexandria was one of the great centers of scholarship and learning and attracted the most distinguished scholars of the time. This climate of research was engendered from the city's earliest times through the direct patronage of the *Ptolemaic kings (see Hellenistic Egypt).

1. Museum
2. Literature
3. Science
4. Philosophy
5. Christian Scholarship

1. Museum.

Central to the intellectual life of the city were its museum and library. The museum was a residential research institute. It was partially modeled on the *Aristotelian Lyceum and the Academy of *Plato and was dedicated to the Muses, who were believed to inspire mortals with artistic gifts. Unlike its Greek predecessors, however, it was principally a research, rather than a teaching, institute. Under the Ptolemies, scholars came to the museum by royal invitation and were offered stipends, free accommodation and meals, together with immunity from some taxation. The museum and the extensive resources of its associated library stimulated a significant intellectual climate.

Alexandrian scholarship embraced a number of different spheres of learning, including literary criticism, scientific endeavor and philosophical reflection. It can be argued that in this city a truly scientific approach to scholarly research was first developed, and the abiding reputation of Alexandrian scholarship is one of method and detail.

2. Literature.

The library fostered an extensive project of collating, editing, commenting on and, where necessary, translating into Greek large portions of literature. Some of the earlier endeavors included the production of definitive critical editions of many of the classical Greek literary texts, including Homer's *Odyssey* and *Iliad*. Textual-critical work like this was overseen by successive librarians in the library, and a scientific approach to producing "best editions" of significant Greek literary works was developed. In the light of this textual work, it was also possible to

make considerable advances in lexicography. Aristophanes of Byzantium, one of the librarians under the reign of Ptolemy IV Philopator, established a method of categorizing words according to their meaning in a given period.

The overall flavor of this literary scholarship was patently Greek. Notwithstanding this there were also endeavors to incorporate literature and scholarship of other cultures. The *Epistle of *Aristeas* recounts how Ptolemy II Philadelphus sent for seventy scholars from Jerusalem to Alexandria in order to translate the Pentateuch into Greek for the library. Much of the account is considered fictional, but the importance of Alexandria in this project is certain (see Septuagint/Greek Old Testament). Similarly, Manetho, an Egyptian priest, is credited with having written three volumes on the history and religion of Egypt—although they were written in Greek.

Notwithstanding this scientific approach to literary criticism, Alexandria also was home to much creative literature in its own right. The city became especially well-known for its influence in poetry from the third to first centuries B.C.

3. Science.

Different branches of scholarship blossomed during different periods in Alexandria's history. Under the Ptolemies study of the scientific disciplines advanced considerably, most notably in the fields of mathematics, mechanics, physics, geography and medicine.

The third century B.C. was a particularly prolific period for scientific research. Euclid was a significant Alexandrian figure in the field of geometry and produced definitive works on the subject, including his *Elementa Mathematica*, which was presented to Ptolemy I Soter. Archimedes is here renowned for his invention of the helical screw. Eratosthenes, a true polymath, spanned both literary and geographical studies but is most well-known for his experiment in measuring the circumference of the earth (deducing that the world was indeed round by comparing the shadows cast by the sun at midday on the summer solstice in two different locations). In medical research, the Alexandrians enjoyed a significant heritage from their forebears in the Pharaonic era. Herophilus instigated a new investigation into the anatomy of the human body. By studying the human nervous system, he drew the conclusion that the brain, and not the heart, was the seat of intelligence. The well-known

medical scholar Galen, from the second century A.D., built on this Alexandrian tradition.

4. Philosophy.

After the Ptolemaic period, both literary and scientific pursuits grew comparatively less prominent in Alexandria. There was, however, increased interest during the early Roman and Christian periods in the study of *philosophy, although it should be noted that Alexandrian philosophy never matched that in *Athens. The character of Alexandria as a center for the cross-fertilization of ideas inevitably led to a strongly syncretistic approach to philosophy. It was here that Platonic thought in particular had a profound influence on both Jewish and Christian theology. *Philo, Origen and Plotinus are the most significant philosophical figures in Alexandria in Jewish, Christian and secular thought respectively during this Roman period.

The intellectual climate of Alexandria greatly influenced the Jewish community of the city (see Hellenistic Judaism). The philosopher and aristocratic Alexandrian, Philo, bridged between Jewish and Greek aspects of thought. As a thoroughly Hellenized Jew, he applied Platonic and Stoic philosophy to his interpretation of the OT and sought to demonstrate that the ancient Jewish traditions could be acceptable also to his Greek contemporaries. He appears to have been significantly dependent on the Alexandrian translation of the Bible called the *Septuagint, and he identified the Hebrew personification of Wisdom with the Greek notion of the *Logos*. This philosophical background also contributed to Philo's extensive use of allegory in his interpretation of the Bible. Partly as a result of this Philonic influence, Jewish scholarship continued to be prominent in the city long after most Jews had fled the city in the early second century A.D.

Plotinus (third century A.D.), together with his student Porphyry, were widely recognized philosophers of Greek thought. They were heavily dependent on the earlier traditions of *Plato, and they drew together disparate religious and philosophical perspectives. Much of this syncretistic approach to scholarship influenced also the study of Christian theology in Alexandria.

5. Christian Scholarship.

As Alexandria had witnessed the decline of the Jewish community in the city, during the second

century A.D. it also saw the emergence of a developing Christian scholarship. This academic approach to Christian thought was enhanced by the long-standing scholarly reputation of the city.

In time Alexandria became one of the four principal Christian centers in the Roman Empire, including one of the centers of theological dispute in the ecclesiastical creedal formulations. Within Christian circles, the city became famous for its Christian school (*Didaskaleon*), which may have been founded as early as the first century, although it did not develop a significant reputation until the late second and early third centuries. The church historian Eusebius, who describes the institution as a "school of sacred learning" and a catechetical school (Eusebius *Hist. Eocl.* 5.10.1; 6.3.3), is our principal primary source of information regarding its foundation and ongoing influence, although many scholars question the historicity of his account.

This emerging Alexandrian school has been a key element in the subsequent history of theology. It was the seedbed for what may be regarded as a typically Alexandrian scientific approach to the study of theology that is noted for the clear rapprochement between Greek philosophy and Christian culture. The link with Philo is also apparent in that the Christian school became a leading center advancing the allegorical method of interpretation of biblical texts. It would appear that the school was also a well-stocked scholarly resource, and it is argued that we may be in debt to this Christian library for many of the extant Philonic works.

The school had a distinguished list of senior figures associated with it: notably Pantaenus, Clement and Origen. All three were steeped in Hellenistic philosophy, including *Stoicism, *Platonism and *Aristotelianism. We know relatively little of Pantaenus. His most famous pupil was Clement, to whom we are indebted for his use of and dependence upon Philo. Of these three scholars, most is known of Origen, a pupil of Clement. In the best Alexandrian traditions, Origen applied a scientific approach of textual criticism to his study of the Bible. He carried out a detailed comparison of four Greek translations of the Bible with the Hebrew version. He also adopted a strongly allegorical approach to his interpretation of the Bible.

This syncretistic tendency may be significant

in the fact that *Gnosticism also flourished in Alexandria and wider Egypt during the early Christian period. The city was home to both Basilides and Valentinus, renowned gnostic teachers of the second century A.D.

ANGELS OF THE NATIONS

Early Jewish understandings of the spiritual world included the notion of particular angels in authority over the nations. This basic understanding, though variously conceived, finds its roots in the Jewish Scriptures.

1. Jewish Scriptures
2. Early Jewish and Rabbinic Literature
3. New Testament

1. Jewish Scriptures.

The particularity of God's election of *Israel was not easily reconciled with the notion that all nations of the world are accountable to the rule of Israel's God. An attempt to hold these ideas together is reflected in some passages among the Hebrew Scriptures that place Yahweh at the pinnacle of an assembly of deities called "sons of God" (see Pss 29:1; 89:7: *bny 'lym*; 82:6: *'hym, bny 'lym*; LXX Deut 32:8 and 4QDeut = 4Q44: *angeloi theou/bny 'hym*; LXX Job 2:1: *angeloi theou/bny 'hym*; LXX Dan 3:92 to MT 3:25: *angelou theou/br 'hym*). In Deuteronomy 32:8 the nations are assigned to the "sons of 'El"/"angels of God," while the privileged people of Israel come under the sole jurisdiction of Yahweh as his "portion" and "inheritance." In Psalm 82 this arrangement of the pantheon is further elaborated. The assemblage of deities is, as members of the divine council, responsible for the rule over and the dispensation of justice among the nations. The psalmist has God accuse these deities for failing to ensure that justice is properly administered, and as a result they are to be punished by death (Ps 82:7).

2. Early Jewish and Rabbinic Literature.

In the later Jewish literature, these ideas are picked up and variously developed. In one exegetical tradition, preserved in some of the *rabbinic writings, the special relationship between God and his people is illustrated by the stories about how God was chosen by Israel while the nations were merely content to associate themselves with angels. Thus according to the *mid-rashic interpretation of Song of Solomon 3:24 in relation to the Shema in Deuteronomy 6:4, the *Deuteronomy Rabbah* 2:34 likens the election of Israel to the reception of a king and his entourage into a city. While some citizens have cho-

sen the king's officials to be their *patrons, the smart one (Israel) has settled for nothing less than the king himself. The tradition is anchored within the context of the giving of the Torah at Mt. Sinai, to which God and the angels were believed to have descended.

By contrast, the medieval Hebrew *Testament of Naphtali* 8–9 applies this tradition to the situation of Abraham. Whereas “each and every nation chose an angel [seventy in number], and none of them remembered the Holy One, blessed be he . . . Abraham answered, ‘I choose and I select only the one who spoke and the world came into being, who formed me within the inside of my mother’s womb . . . him I will select and to him I will cleave, I and my seed forever.’” These angels function as advocates on behalf of the nations before God (*T. Naph.* 9:4).

Another strand of the tradition is anchored in the dispersion of the peoples after the tower of Babel. Drawing on Deuteronomy 32:8–9, *Philo of Alexandria (first century A.D.) declared that God “set boundaries of nations according to the number of the angels of God,” while “Israel became the lot of his inheritance” (*Philo Poster. C.* 89, 91–92; cf. further *Tg. Onq.* to Gen 11:8). In the much earlier *Sirach* 17:11–18 (second century B.C.; see *Sirach*), the special status of Israel as God’s “portion” is declared over against the assignment of celestial beings to rule over the Gentile peoples. Here the sovereign will of God is emphasized.

In addition to generally underlining Israel’s privileged status, all these texts presuppose a function of angels as guardians of or advocates for the Gentile nations, which is analogous to the role ascribed to many national deities in the ancient Near East. This analogy between pagan deities and angels of the nations may underlie many rabbinic passages that engage in a polemic against the worship of angels by associating this with idolatry (so esp. *Mek. Rabbi Ishmael, Ballodeš* 6 to Exod 20:4–5; *t. Hul.* 2:18; *b. Hul.* 40a; cf. *y. Ber.* 9:13a–b; *b. Sanh.* 38b; *Exod. Rab.* 32:4).

As in Deuteronomy 32:8 the documents just cited do not characterize the nations’ angelic rulers as either good or bad. In other early Jewish compositions, however, these angelic beings are absorbed into a dualistic cosmology in which (as Ps 82:7) they are held accountable for evil attributed to the impious nations. According to *Jubilees* 15:30–32 (mid-second century B.C.), Is-

rael’s election as God’s people is contrasted with the appointment over the nations of spirits or angels who “lead them astray” from following God (see also *Jub.* 48:9, 16–17). The author presupposes that these celestial rulers such as Mastema (*Jub.* 48:9, 12) are not always under God’s control, whereas the angels who remain strictly obedient to God act on behalf of Israel (cf. *Jub.* 48:13; Jude 5 may identify Christ = *kyrios* with the angel of the Lord who delivers the Israelites from Egypt).

In the Book of Dreams of *1 Enoch*, which is roughly contemporary to *Jubilees*, the nations correspond to seventy angelic “shepherds” who, in their respective eras, are given the task of carrying out divine punishment against the faithless of Israel (*1 Enoch* 89:59–90:19; see *Enoch, Books of*). However, the shepherds become disobedient when of their own accord they exceed the limits set by God on the assignment. The angelic being appointed to monitor the shepherd’s treatment of Israel seems to presuppose a tradition that aligns the people of God with an angel. Here the coordination of Israel’s position among the Gentiles with a myth about a conflict between bad and good angels surfaces in an incipient form.

The belief that religious-political conflicts mirror a struggle among angels in the sphere of heaven is attested during the second-century B.C. compositions of Daniel, the *Testament of Levi* (see *Testaments of the Twelve Patriarchs*) and the **War Scroll* preserved in Qumran Caves 1 and 4.

In Daniel 10–11 the Persian and Greek empires are each represented by an angelic prince (Dan 10:13, 20) opposed by the angel appearing to Daniel and Michael the prince (Dan 10:13, 20–21; 11:1) and “great captain, who stands guard over” the faithful (Dan 12:1). In a similar way, the *eschatological struggle between “the sons of light” and “the sons of darkness” in the *War Scroll* is described as a conflict between forces led, respectively, by Michael (probably the one designated “the prince of light”) and *Belial (1QM 13:9–13; 17:5–8; cf. 1QS 3:20–25).

A conflict among angels may be implied in *Testament of Levi* 5:3–6: the interpreting angel, who assists Levi in avenging the defilement of Dinah against the sons of Hamor, identifies himself as one “who makes intercession for the nation of Israel, that they might not be beaten.” The threat posed against Israel by the Parthians and the Medes in the Similitudes of *1 Enoch* is at-

tributed to the work of angels who have stirred the kings of these nations to unrest (*1 Enoch* 56:5-6).

The conflict between Jacob and Esau in *Jubilees* 35:17 is also portrayed in terms of a contest between angels: Jacob's guardian "is greater and mightier and more honored" than the guardian of Esau. Despite the impression that the text seems concerned with angelic guardians of individuals (e.g., *2 Bar.* 12:3; 13:1; *2 Enoch* 19:4; *Adam and Eve* 33; *1. Jos.* 6:7; Mt 18:10; Acts 12:15), Jacob and Esau ultimately function as symbols of their progeny. The representation of the faithful by an angel instead of God directly (as in texts discussed above) is to be understood against an increasing emphasis on divine transcendence during the Second Temple period. Rather than denoting distance, however, the good angels functioned to guarantee the presence of God's effective activity in the world on behalf of his people (e.g., *Tob* 3:17; 11:14-15; 12:11-22; *2 Macc* 10:29-30) while the notion of distance from God may only be presupposed with regard to the nations' angels.

3. New Testament.

Though the angels of the nations motif does not surface explicitly in the NT, several passages have arguably been influenced by the tradition.

3.1. Revelation 12:7-9. In a heavenly battle, Michael and Satan (the dragon), along with their respective armies of angels, engage in a conflict in which the latter group is defeated and thrown to the earth. There they stir up trouble for faithful Christians, eventually in the form of beasts representing Rome (Rev 12:13-13:18). The author, who dispenses with a heaven-earth correspondence between bad angels and the enemies of the faithful (both are on earth), is careful to emphasize the mythical dimension of this story in order to underscore for his readers the defeated nature of Satan's existence.

3.2. Revelation 2:1-3:22. Given that a human being can mediate God's communication to wayward angels in apocalyptic tradition (*1 Enoch* 12:1-15:7; 4Q203 frag. 8; 4Q530 2:21-23 to 3:4-11), the possibility is strengthened that the seven messages to the churches of Asia Minor take the form of a literary fiction that addresses celestial beings. In this instance, there is a one-to-one correspondence between the angels and the congregations. Though there are no exact parallels for this in early Jewish and Christian litera-

ture (cf. the similar, yet distinct, ideas in *Asc. Isa.* 3:15 and *Herm. Sim.* 5:5-6), it is likely that the author has adapted the motif of the nations' patron angels. Formally, with only few exceptions, the angels and not the churches are addressed in the messages, and, as the angelic rulers over the Gentiles in Jewish tradition, they are potentially disobedient. Variousy praised and reprimanded, they are apprised of the consequences for their faithfulness or disloyalty to Christ.

3.3. Revelation 16:12-16. The demonic powers who assemble the kings from beyond the Euphrates River may well refer to angels who are expected to rouse nations to war in the end time (cf. *1 Enoch* 56:5-6).

3.4. Acts 16:9, an angelic figure, appearing as a "man" in Paul's vision, acts as a representative of Macedonia sent by God to plead that Paul and his associates introduce the gospel there.

ANTIOCH (PISIDIA)

Antioch, commonly known as Pisidian Antioch, did not become part of the province of Pisidia until A.D. 295. It is located on the southeastern bank of the Anthios River in central Asia Minor, just northeast of Lake Limnai and modern Yalvaç (modern lake Egirdir), and was founded either by one of the early Antiochids of the *Seleucid kingdom or by Seleucus himself sometime in the late fourth or early third century B.C. Rediscovered in modern times by F. V. J. Arundell in the first half of the nineteenth century and preliminarily excavated by W. M. Ramsay in

the early twentieth century, it was more fully excavated by Ramsay and an American archaeological team from the University of Michigan in the 1920s, under the leadership of D. M. Robinson. Excavation continues under the direction of M. Tasliyan (see Mitchell and Waelkens, 19-35).

1. History of the City
2. Pisidian Antioch in the New Testament

I. History of the City.

Before the establishment of Antioch as a Greek city, it appears that both the site of Antioch and the surrounding areas were under the jurisdiction of a *hieron*, a local holy place dedicated to the Anatolian god Mên (see Strabo *Geog.* 12.3.3; 12.8.14). Ramsay (247, 292-93) is credulous of Strabo's evidence on this point. However, Strabo's grammar is in line with Ramsay's interpretation that the region was controlled by the priesthood of Mên and that the eventual site of Antioch was not necessarily the center of this priesthood—Strabo even suggests that there were several holy places dedicated to Mên in the region (cf. Mitchell and Waelkens, 37-90).

When the Seleucids founded Antioch, it was essentially as a garrison town whose purpose was both to guard against the fearsome Pisidian mountain tribe, the Homanades, and to control the major east-west trading route through the region. As such, Antioch was a strategically important site. Epigraphic (*EGI* 933, where "Magnesian of Phrygia" is an equivalent of "Antiochene") and literary (Strabo *Geog.* 12.8.14) evidence suggests that the original settlers were Greeks from Magnesia, as well as Jews, probably Babylonian (Ramsay, 247-60; cf. 2 Macc 8:20 and Goldstein, 331, for the Seleucid use of Jewish mercenaries, the likely source of Seleucid-era Jewish settlers in Asia Minor; also Josephus *Ant.* 11.8.5 §§338; 12.3.4 §§147-53).

Little is known of Hellenistic Antioch, and few archaeological remains are extant from this period. We do, however, know that, after the removal of Seleucid power from the region of *Asia Minor in 189 B.C., Antioch was declared a free city by the Romans (Strabo *Geog.* 12.8.14). We hear little about it again until the last half of the first century B.C., when, in 39 B.C., it was given by Antony to the last king of Galatia, Amyntas, who later fought on Antony's side at the battle of Actium in 31 B.C. Upon Amyntas's death in 25 B.C. (he was killed while fighting the Homa-

nades, Strabo *Geog.* 12.6.3-4), he bequeathed Antioch and the rest of his kingdom to Augustus (see Roman Emperors), a transfer of loyalties that seems very similar to that undertaken by *Herod the Great in Judea. The territory then became the Roman province of Galatia. At that point, the city was refounded as a Roman colony (*colonia*)—*Colonia Caesareia Antiocheia*—whose *citizens (*coloni*) were, as in all Roman *coloniae*, legally of equal status with the citizens and inhabitants of *Rome. As such, after 25 B.C. the city became somewhat of a miniature Rome—it was organized into *vici*, instead of the traditional Hellenistic tribes (with the *vici* perhaps reflecting the twelve *vici* of Rome itself), used an entirely Roman administrative language and structure and became progressively more Roman than its surrounding cities, which retained more of their Hellenistic character (see Roman Administration). The settlers of this new Roman *colonia* were largely veteran soldiers of the Legions V and VII (Ramsay, 294; Levick, 103-20; see Roman Military) and would have enjoyed a higher status than any of the original inhabitants (*incolae*) of the city, although these in turn would have had a higher status than their neighbors as a result of their city's new status as a *colonia*.

Roman Antioch in the mid-first century was a wonder to behold—its sculptures and architecture were on an even par with those of Rome itself (Robinson 1926a, 6), and its monuments to Augustus would have been breathtaking. Chief among these would have been the temple dedicated to Augustus in its colonnaded square, the colonnaded *Tiberia Platea* (Tiberius Street) connected to the colonnaded *Augusta Platea* by a triple-arched *Propylaea* (gate, completed in A.D. 50) in honor of Augustus's three triumphs. All of these were festooned with sculptures and *inscriptions honoring Augustus and his successors (see Robinson 1926a for discussion and plates). Even today, though ruined and stripped of its decoration, the *Augusta Platea* remains an important site (see Mitchell and Waelkens, 113-73).

2. Pisidian Antioch in the New Testament.

Such was the situation when the city was visited by Paul and Barnabas on their first missionary journey (Acts 13:13-52). Taking place sometime in the late 40s (perhaps A.D. 47), Antioch was the first real stop (except for the port of Perge in Pamphylia, where they were deserted by John

Mark) for Paul and Barnabas in Asia Minor. Their missionary activity was to continue the pattern they had initiated in their evangelization of Cyprus, beginning with the *synagogue. H. Dessau (1910; see also Mitchell 1980, 1074) suggested that Paul and Barnabas's decision to begin their activities in Asia Minor at Antioch may have been influenced by their recent convert on Cyprus, Sergius Paulus, as he was from Antioch, and his family owned large estates in the region (Mitchell 1993, 1:151; Breytenbach, 38-45). Dessau's suggestion that Paul may have changed his name to Paul from Saul as a result of taking Sergius Paulus as a patron is a distinct possibility and would figure well within the overall sociological picture of earliest Christianity (see *Associations). If this is the case, it would seem that Paul and Barnabas, in the face of Jewish resentment, were unable to establish much of a base here, although Acts 14:21 does record that they went to Antioch on the return half of their journey, "strengthening the souls of the disciples, exhorting them to remain in the faith, and that it was necessary for us to pass through much trouble for the sake of the kingdom of God."

Paul's two further trips through the area (Acts 16:1-6; 18:23) may have brought him into Antioch, although this should not be assumed, as neither passage records an explicit itinerary for Paul's journeying through the region, and it may very well be that not all of the original Pauline foundations continued to exist, even within the lifetime of Paul. We know of no explicit literary reference to Christianity in Antioch after the NT, except for the apocryphal second-century work *The Acts of Paul and Thecla*. The writer of Acts purpose(s) for not recording the Pauline itineraries in these two passages, if he knew them, may be linked to his overarching rhetorical strategy in the book of Acts, which continually leaves out details and/or focuses in on smaller incidents that, when taken as a whole, give us a selective picture of the activities of Paul. However, the existence in Antioch of an early (and very large) Byzantine Basilica of St. Paul suggests either a continuing Christian presence in the city or, at the least, a rediscovery of the Christian connection with it. The Basilica, excavated by Ramsay and Robinson in turn, is the current focus of much interest, and has recently yielded not only an early baptistry but also the promise of even more mosaic flooring

than originally discovered by Robinson (see Mitchell and Walkens, 210-17).

That Paul's speech in the synagogue of Antioch is one of the longest missionary speeches in the book of Acts is perhaps significant in light of the place it occupies at the outset of Paul's preaching activity, as well as the place it has in the narrative at the beginning of the journey that takes place just before the council of Jerusalem (Acts 15). Paul's strategy in the speech is interesting, in that he seems to play on the tension between *Diaspora Jews and their fellows in Jerusalem (Acts 13:26-29, 40-41), inviting these Asian Jews to show themselves superior to the Palestinian Jews who had rejected, condemned and killed Jesus. The incredible interest that both Jewish (presumably, it was not merely the Gentile Godfearers and their friends who found this message interesting, even if the author of Acts does leave us with that impression in Acts 13:45) and Gentile Antiochians had toward Paul and Barnabas's message makes this response impossible, however, and the Jews reject and contradict the message (Acts 13:45), while the Gentiles—or at least as many as had been destined to do so (Acts 13:48)—accept the message and become believers.

The same thing then happens in Iconium, but this time the author of Acts differentiates between believing and unbelieving Jews (Acts 14:1-2), making it even more likely that the story of Antioch is meant to function as a paradigm, which is then repeated in Iconium, Lystra and Derbe. This paradigm of unbelieving Jews causing trouble for the beset apostles is further suggested by the "strengthening" nature of the message of the apostles as they pass back through the region (Acts 14:21), all of which paints an extremely convenient picture of the Pauline mission to the Gentiles with which to begin the story of the council of Jerusalem. In essence, then, we have no way of knowing the actual success of the Antiochian church nor whether it managed to survive those first few troublesome years prior to and just after the Jerusalem council. Paul's letter to the Galatians would suggest that some, if not many, turned away from the Pauline gospel (Gal 1:6-9) or perhaps fell away altogether, although the difference between these two in Paul's eyes may have been debatable.

ANTIOCH (SYRIA)

Antioch, the capital of ancient Seleucid* Syria and later capital of the Roman province of Syria, was situated on the edge of a large and fertile plain on the south bank of the Orontes River fifteen miles from the Mediterranean coast.

1. History Before the First Century
2. Christianity in Antioch
3. Later History

1. History Before the First Century.

Antioch was founded about 300 B.C. by Seleucus I Nicator, one of *Alexander the Great's generals and the son of Antiochus. Like sixteen other cities, Antioch was named after Antiochus. Among the well-known cities by this name in the New Testament era is *Antioch of Pisidia (Acts 13:14-52). Antioch in Syria was originally built at the foot of Mt. Silpius as a convenience city between the king's home in Anatolia and his eastern possessions, but the city eventually became considerably more important. Seleucus transferred fifty-three hundred residents from *Athens and Macedonia to settle the new city. Its closest harbor, Seleucia, was twelve miles

west at the mouth of the Orontes and functioned as the gateway to the city. It always had a mixed population of Greeks, Macedonians, local Syrians, Jews and, after 64 B.C., when it fell to Pompey, many Romans.

After Antioch was annexed by Rome, it became the capital of the province of Syria and was the military headquarters of Rome in the east (see Roman Administration; Roman Military). The city was allowed to govern itself from the time Julius Caesar visited the city in 47 B.C. It even had its own calendar, called the Antiochene Era, that began on October 1, 49 B.C., the presumed date of the beginning of Julius Caesar's reign.

Under Augustus and Tiberius the city was enlarged, and according to *Josephus, this expansion was significantly aided by Herod the Great, who built a long (c. 2.5 miles) colonnaded street made of polished marble with a "cloister of the same length," that is, with thirty-two hundred columns and porticoes on each side of the street with broad walkways (Josephus *J.W.* 1.21.11 §425; *Ant.* 16.5.3 §148). The colonnade may have been installed by Tiberius, but possibly also by Herod. There were many clashes between the Jews and other citizens of Antioch, and at one point the Jews were in danger of annihilation (Josephus *J.W.* 7.3.3-4 §§16-62). After the fall of *Jerusalem in A.D. 70, Titus led a triumphal entry into Antioch and brought treasures of the *temple with him, placing them at the Daphne Gate, where most of the Jews lived, in order to humiliate them (Josephus *J.W.* 7.5.1-2 §§96-111).

By the first century A.D. the city may have been third in size in the *Roman Empire behind Rome and *Alexandria. Its strategic location on the great commercial road from Asia to the Mediterranean and its many natural resources, including wine and olive oil produced nearby, contributed to its enormous wealth and prosperity. Estimates of its population vary depending on the sources and range from two hundred thousand (Chrysostom *Pan. Ign.* 4) to three hundred thousand (Strabo *Geog.* 16.2.5) to six hundred thousand (Pliny *Nat. Hist.* 6.122). It may be that the population was just above one hundred thousand, but if the slaves were counted and also the larger geographic area that the city served, then its numbers could well have been much higher.

Antioch had a Jewish population of about

twenty-five thousand to sixty-five thousand (Josephus *J.W.* 7.3.3 §43) that enjoyed the privileges of a political state (a *politeuma*), including the right to keep the sabbath and other Jewish religious practices and exclusion from obligatory military service (Josephus *Ag. Ap.* 2.4 §39; *Ant.* 12.3.1 §119; *J.W.* 7.3.3 §43). These privileges may date to the founding of the city. According to 2 Maccabees 4:33-38, a former Jewish high priest named Onias II lived in the vicinity of Antioch, and some of the temple treasures that were stolen from Jerusalem in the days of Antiochus IV Epiphanes (175-163 B.C.) were taken there. For Jews it ranked in importance with Alexandria in Egypt and Seleucia on the Tigris.

2. Christianity in Antioch.

The book of Acts claims that here the followers of Jesus were first called Christians (Acts 11:26) and that the Christians there were the first to be helpful in caring for the needs of the church in Jerusalem during a famine (Acts 11:27-30). Nicholas, a "proselyte of Antioch," was one of seven leaders of *Hellenists in Jerusalem chosen to do ministries for the church (Acts 6:7). Most importantly, however, Acts names the church at Antioch as the church that initiated the first intentional Gentile mission through Barnabas and Paul. They had ministered in Antioch for a year (Acts 11:19-26), and the church sent Barnabas, Paul and John Mark on its first Jewish and Gentile missionary enterprise (Acts 13:1-3). Later, because of conflict between Paul and Barnabas, that work was expanded to two missionary teams (Acts 15:36-41). Although Peter is the first to have a Gentile mission, to the household of Cornelius (Acts 10), the church at Antioch gave special attention to this ministry. Paul returned here after his first and second journeys (Acts 14:26-28; 18:22) and made this community his base of operations between his journeys (Acts 15:22-36). He alone reports a first-hand activity at Antioch in which he describes a confrontation with Peter, who had come to Antioch from Jerusalem (Gal 2:11-14). The importance of Antioch in the establishment of Gentile Christianity cannot be underestimated (see *DPL*, *DLNTD*, Antioch on the Orontes).

While Antioch generally was a place where Jewish Christianity flourished, especially after the death of Paul, it is not as certain as some scholars suppose that Paul's message was largely ignored here during his lifetime. Eusebius

claims, for instance, that Ignatius, who followed the apostle Peter and Evodius as bishop of Antioch (Eusebius *Hist. Eccl.* 3.22.1; 3.36.2-3), agreed with many of Paul's views, especially regarding the judaizing in the churches that Paul also condemned (Ign. *Magn.* 8.1; 10.3; Ign. *Phld.* 6.1). Ignatius also opposed the gnosticizing heresies of his day that denied the full humanity of Jesus (Ign. *Trall.* 10.1; Ign. *Smyrn.* 2.1-4.2), but after him a number of gnostic Christians were connected with the church at Antioch: Menander, Saturninus, Cerdon, Tatian, Axionicus; (Justin Martyr *Apol.* 1 26; Irenaeus *Haer.* 1.22; Eusebius *Hist. Eccl.* 4.10-5.2; Epiphanius *Anac.* 46.1; Tertullian *Adv. Valent.* 4.3). The city itself, though supporting a Gentile mission, did not reject its Jewish heritage but rather was involved in a Jewish and Gentile Christian mission. This is not unlike Paul, whose habit of ministry included "the Jew first and also the Greek" (Rom 1:17).

While no NT writer claims any Christian literature was produced at Antioch, it is possible that the Gospel of Matthew (A.D. 75-90) and Paul's letter to the Galatians originated here. It may also be that the Gospel of Luke was composed here and, as some scholars argue, that Luke used a written Antiochene source in his production of the book of Acts. These are possibilities, but as yet they have not been demonstrated.

3. Later History.

The famous story of the Maccabean martyrs (2 Macc 7-8 and all of 4 Macc) that has been preserved mostly in Christian literature (*Passio ss. Machabaeorum*) is associated with the city of Antioch of Syria before the existence of the church in that area (Acts 11:19-26). The story emerged from Antioch in the pre-Christian era and had a powerful influence upon the fourth-century church and following. A church/martyrium was built at Antioch on what was believed was the site of their martyrdom and the location of their graves. Their story became an inspiration to Christian martyrs in the fourth century, and it has been variously celebrated in the church ever since.

While the date and provenance of *4 Maccabees are not certain (possibly written as early as A.D. 19-54 or as late as the early second century A.D. and possibly also at Antioch of Syria or even Alexandria), the tradition of the place of the martyrdom of the priest Eleazar, the mother and

her seven sons is believed by many to have taken place in Antioch of Syria, the headquarters of Antiochus IV Epiphanes, at the beginning of the Antiochus's conflicts with the Maccabean family and the Jews in Palestine. The story and philosophical treatise in 4 Maccabees draws on the story of these martyrdoms and calls for divine reason in the face of *persecution. It may originally have been an address given at the site of the martyrdoms and burial sites (4 Macc 1:10; 3:19), but that is not certain.

By the fourth century A.D., many in the Christian community seem to have commemorated this event and even built a martyrdom/church over the martyrdom and burial site in Antioch. A tradition claims that a synagogue was located there before the church, but that is uncertain (Jewish concern for ritual purity may have precluded the building of a synagogue on a burial site). Antioch may have been the first place where a Christian martyrdom was built and the death of martyrs celebrated within the church. The story associated with Antioch of Syria is mentioned in many church fathers, including Origen (*Exhort. Mart.* 23-27), Hippolytus (*Comm. Dan.* 2.21, 35), Eusebius (*Hist. Eccl.* 5.1.55), Gregory of Nazianzus (*Or.* 15.1-8), John Chrysostom (*Fourth Homily*), Ambrose (*Off.* 1.41.212; *Ep.* 40.16), and Augustine (*Serm.* 300.2). The supposed bones and relics of the martyrs were moved from Istanbul (Byzantium) in the sixth century to Milan, and finally to Cologne in 1164. Another tradition has the relics and bones moved from Antioch to the Church of San Pietro in Vincoli, Italy.

By the sixth century A.D., celebrations of the Maccabean martyrs were commonplace throughout Christendom. How they came to be included in Christian martyrologies (collections of stories about martyrs) is not clear, but 4 Maccabees came to be accepted by many Christians as a "Christian" book because these Jewish martyrs were looked upon as protomartyrs. Augustine (*Civ. D.* 18.36) claims that it was because of the extreme suffering of these martyrs that the books of the Maccabees were welcomed into the church and preserved by the church.

Antioch of Syria was an important city not only in the first century but until the beginning of the seventh century. It was long known for its rhetoricians, historians and later for its theologians. Among the latter is the famous Antiochene School that could speak of such members

as Basil the Great, John Chrysostom, Theodore of Mopsuestia and Theodoret of Cyrrhus. Evagrius Scholasticus, in the tradition of Eusebius of Caesarea, came from Antioch. It was a royal city from its beginning, and even though its population had greatly decreased to six to eight thousand residents in the late fourth century A.D., it was strategically important until its capture by the Arabs in the seventh century following a lengthy Persian occupation. In its prime, the city had many beautiful buildings, eight pagan temples and eventually several churches. Most important to the Roman Empire, however, was its strategic location for launching military campaigns in the east. The city survived the persecutions of Decius, Diocletian and Licinius and became a favored city of Constantine. By A.D. 390, Antioch had become almost completely Christian with a few pagans and a large number of Jews, mostly at Daphne, three miles away (Chrysostom *Adv. Jud.* 1.4; *PG* 48, 849). Until the Persian invasion and occupation of the area (A.D. 610-628), Antioch was the military administrative center of the eastern empire, and a large army was stationed there.

As an important religious center, the patriarchate of Antioch was second in importance in the east only to Alexandria, but because of the changes that came with the expansion of the patriarchate of Constantinople, the newly created patriarchate at Jerusalem was given jurisdiction over the Palestinian dioceses (formerly under Antioch). As a result of decisions made at the Council of Chalcedon (A.D. 451) and also because of the emergence of Nestorianism and Monophysitism at Antioch, its value as a Christian center declined significantly near the end of the fifth century.

Several other factors led to the gradual demise of the city as a center for Christian mission, including earthquakes in the sixth century (A.D. 528, 529, 551, 577) that killed 250,000 or more residents; the capture and sacking of the city in A.D. 528 by el-Mundhir the Lakhmidian, a Persian ally; a similar plundering by the Persians in A.D. 540; and a severe plague that lasted from A.D. 542 to 573. After these calamities, Antioch's one-time splendor was over, even though Justinian I (A.D. 483-565) tried to rebuild the city, renaming it Theopolis ("divine city" or "city of God"). The debris of the former destructions, however, was never fully carried away, and its former grandeur was never recaptured. The

great marble road of Herod, for instance, was covered over by basalt. The city was captured by the Crusaders in A.D. 1098, by the Mamelukes in A.D. 1268 and by the Turks in A.D. 1516. The modern city of Antakya, Turkey, home to eighty thousand people, occupies the ancient site, and only limited excavations have been undertaken at the site.

APOCALYPSE OF ABRAHAM

The *Apocalypse of Abraham* is a *pseudepigraphon written in two separate genres. The first eight

chapters offer a narrative account of the conversion of the patriarch Abraham from paganism to the worship of the one true God. This narrative is followed by an *apocalyptic vision purportedly given to Abraham that expands at great length upon the vision of the patriarch recorded in Genesis 15 and adds to it a wealth of theological, cosmological and *eschatological details.

1. Provenance, Date and Composition
2. Content

1. Provenance, Date and Composition.

Apocalypse of Abraham is generally believed to be a Jewish composition containing Christian interpolations. However, no convincing argument has yet been proposed why it could not have been written by a Christian familiar with Jewish traditions. At any rate, the nature of the Christianity that may have influenced or perhaps even created *Apocalypse of Abraham* is problematic. This was not mainstream Christianity, and it has been suggested that the Christian elements are the work of Bogomils, a heterodox medieval sect with strong dualist or even *gnostic affinities who influenced much of the apocryphal literature preserved in Slavonic.

The date of composition for *Apocalypse of Abraham* cannot be established with certainty, but the work is probably a rough contemporary of the NT. The author of *Apocalypse of Abraham* was aware of the destruction of the Jewish *temple in A.D. 70, an indication that the work cannot have been written before that time. However, *Apocalypse of Abraham* shares many features with other Jewish and Christian literature composed during the first two centuries of the present era. The contents of *Apocalypse of Abraham* do not match as well the concerns of either Judaism or Christianity at a later period. Moreover, a passage devoted to Abraham in the early-third-century *Clementine Recognitions* (1.32) is likely an allusion to *Apocalypse of Abraham*. In this passage the conversion and apocalyptic vision of Abraham are joined together exactly as in *Apocalypse of Abraham*, complete with the angelic mentor/guide and the revelation of Israel's future. The evidence suggests a date for *Apocalypse of Abraham* sometime after the fall of Jerusalem but before the end of the second century.

It has been suggested that the two separate sections of this text, the narrative and the apocalyptic, were separate compositions about Abraham that have subsequently become joined.

However, in the present text of *Apocalypse of Abraham* the two sections appear intentionally intertwined. Also, the passage from the *Recognitions*, even if it is not a direct reference to *Apocalypse of Abraham*, demonstrates at the least that the narrative account of Abraham's conversion from idolatry and his apocalyptic vision were already complementary parts of a single tradition at that time. If the narrative and apocalyptic portions of *Apocalypse of Abraham* have been fused together from separate sources, then that event likely occurred before the *Recognitions* were composed in the early third century. Since *Apocalypse of Abraham* was surely written after A.D. 70, and probably sometime in the second century, this does not leave much time for a fusion of separate narrative accounts. Economy of theory would argue for positing both narrative and apocalyptic elements in the original work.

Apocalypse of Abraham is found today only in Slavonic versions. The manuscript evidence is very late, dating between the fourteenth and seventeenth centuries. The work appears to have been translated into Slavonic from Greek, perhaps as early as 900. However, the large number of Semitisms preserved in the Slavonic text provides some evidence for a Hebrew or an Aramaic original.

2. Content.

The story of *Apocalypse of Abraham* begins with Abraham's conversion to the worship of the one God (*Apoc. Abr.* 1—8). While tending to his father's business as a carver of idols, Abraham perceives the helplessness of these human artifacts. Stone gods break; wooden gods burn; either may be sunk in the waters of a river or be smashed in a fall. Abraham realizes that rather than being gods to his father, Terah, the idols are his father's creatures. It is Terah who functions as a god in creating the idols. As Abraham ponders the helplessness of his father's idols, he hears the voice of the Mighty One coming to him from heaven and commanding him to leave his father's house. This he does just in time to avoid destruction.

The apocalyptic portion of *Apocalypse of Abraham* begins in chapter 9 with the voice of God coming to the patriarch. Abraham is overcome by this, and God sends the angel Iaoel to raise, strengthen and comfort him (*Apoc. Abr.* 10—11). Fasting for forty days, the two figures make their way to Horeb, where Abraham offers pre-

scribed sacrifices (*Apoc. Abr.* 12). Abraham is confronted by Azazel, the fallen angel who opposed God and revealed heavenly secrets to humans, but Iaoel teaches Abraham how to overcome this evil one and assures the patriarch that Azazel's former heavenly garment is now reserved for Abraham (*Apoc. Abr.* 13—14).

Abraham then ascends into the heavens (see *Heavenly Ascent*) with the angel Iaoel (*Apoc. Abr.* 15—18), where the Holy One approaches him upon the great *merhubah* (or chariot) throne (described in terms borrowed from Ezek 1). Abraham looks down and sees the seven firmaments beneath him, each with its different class of angels carrying out their duties in the administration of the cosmos (*Apoc. Abr.* 19). Abraham also sees the history of the world, both past and future, depicted upon the firmament of heaven (*Apoc. Abr.* 20). He views the creation of the universe, Eden and Adam and Eve. He sees the Fall, the history of nations, the destruction of the Jerusalem temple, the checkered future of his own posterity and, finally, the end of the world with its plagues and judgments upon the wicked and the heathen (*Apoc. Abr.* 21—32).

In the midst of Abraham's panoramic vision of the world and its history, *Apocalypse of Abraham* 29 constitutes a clear Christian interpolation. Here Abraham sees Christ, who is contradictorily described as both "going out from the heathen" and "from your [Abraham's] tribe." Many heathen "will trust in him," and those of Abraham's seed who worship Christ will be delivered from oppression when the present "age of impiety" is succeeded by the coming "age of justice."

APOCALYPSE OF ZEPHANIAH

The document known as the *Apocalypse of Zephaniah* purports to record revelation received by the OT prophet Zephaniah beyond what is now found in his canonical book of the Bible. It instead expresses the views of a Hellenistic Jewish writer from approximately the time of Hillel and Jesus (roughly between 100 B.C. and A.D. 100) who associated the name of the OT prophet with his own work, perhaps in an attempt to bolster its credibility. There is some evidence of subsequent Christian influence upon the text.

Apocalypse of Zephaniah is a pseudepigraphon of the OT that has been preserved incompletely, and it is possible, as argued by Steindorff, that the material now extant represents more than a single original work. Two partial manuscripts in Coptic and a passage explicitly attributed to Zephaniah in the writings of Clement of Alexandria (Clement *Strum.* 5.11.77) allow reconstruction of perhaps one-fourth of the ancient material. The earlier of these two Coptic manuscripts dates from before A.D. 400. However, the citation in Clement must be dated to around A.D. 175, thus providing an upward limit for date of composition. Further, in order for the Christian Clement to cite *Apocalypse of Zephaniah* as a genuine document possessing some normative authority, as he seems to do, some time must be allowed for prior circulation of the work—hence an upward estimate of sometime in the first century A.D. At the other extreme, the earliest possible date of composition is provided by a reference in *Apocalypse of Zephaniah* to the story of Susanna and the wicked elders (*Apoc. Zeph.* 6:10), for the apocryphal story of Susanna would not have circulated widely in Diaspora Judaism as part of the Greek *Septuagint until the first

century B.C. (see Daniel, Esther and Jeremiah, Additions to).

It is likely that *Apocalypse of Zephaniah* was written in Egypt, and probably in *Alexandria, since it is preserved only in Coptic manuscripts and cited only by the Alexandrian Clement. Moreover, mention of a celestial boat (*Apoc. Zeph.* 8:1) and of a divine judgment that consists of weighing good and evil in a balance also indicates Egyptian influence. The original language of *Apocalypse of Zephaniah* appears to have been Greek, since there is evidence in the text that the author was unfamiliar with Hebrew or Aramaic. A later Christian document, the *Apocalypse of Paul* or *Visio Pauli*, is dependent upon *Apocalypse of Zephaniah*.

Apocalypse of Zephaniah is a textbook example of Jewish *apocalyptic literature. In the passage from Clement, the seer Zephaniah has been caught up into the fifth heaven and observes the nature and activities of the *angels there (cf. 2 Cor 12:1-4). Other elements of this cosmic journey are recorded in the Coptic fragments. There the seer is accompanied by a glorious angel who guides him from scene to scene and answers his many questions. He witnesses the torments of the wicked dead in Hades by terrible angels, and he also sees the bliss of the righteous dead. Zephaniah views the earth and his own city with its inhabitants, both good and evil, from the perspective of heaven (*Apoc. Zeph.* 2). He pleads for compassion upon the wicked who suffer in Hades (*Apoc. Zeph.* 2:8-9) and is himself confronted by "the Accuser" there, escaping with the help of his angelic companion and through his own purity (*Apoc. Zeph.* 4; 6).

As Zephaniah nears the end of his cosmic journey, he exchanges his mortal garb for an angelic garment (*Apoc. Zeph.* 8:3); he is informed that his name is recorded in the Book of the Living (*Apoc. Zeph.* 9:2); and he hears the angelic trumpets announce the judgments of God upon the earth (*Apoc. Zeph.* 9-12), although he is not allowed to witness the events of the end time (*Apoc. Zeph.* 12:4-5).

While the fragmentary nature of the extant material makes firm conclusions difficult concerning the theology and worldview of *Apocalypse of Zephaniah*, there are several intriguing elements. Human beings seem to be judged by God on two different occasions, once at death and once again at the end time, with the apparent possibility of postmortem repentance and

the extension of divine mercy before or at the final judgment (*Apoc. Zeph.* 10:10-11). To this end the patriarchs and all the saints in heaven daily offer intercessory *prayers to God on behalf of the sinners in Hades (*Apoc. Zeph.* 11:1-6).

Several passages from *Apocalypse of Zephaniah* relate directly to the NT. Perhaps the strongest connection between *Apocalypse of Zephaniah* and the NT comes at 2:2-4, where, as Zephaniah views his own city, he sees "two men walking together on one road," then "two women grinding together at a mill," and finally "two upon a bed." The similarities to Jesus' words in Luke 17:34-36 and Matthew 24:40-41 are striking and undeniable. It would appear that both *Apocalypse of Zephaniah* and Jesus are citing a cautionary proverb of the day in which death, in a seemingly arbitrary manner, snatches one of two individuals engaged in identical pursuits.

Apocalypse of Zephaniah also shows strong affinities with the NT book of Revelation. When Zephaniah first sees the angel Eremiel, he mistakes him for the Lord God and falls upon his face to worship. Eremiel stops this immediately by identifying himself as an angel (*Apoc. Zeph.* 6:14-15). This same scenario is played out twice in the book of Revelation between the seer and his angelic visitor (Rev 19:10; 22:8). Moreover the angel Eremiel here and Son of Man in Revelation are described in unmistakably similar terms as having golden girdles about their breasts and feet like bronze melted in a fire or furnace (*Apoc. Zeph.* 6:11-12; Rev 1:13-15). Also related to the NT book of Revelation are the motifs of finding one's name written—or not written—in "the book of the living" (*Apoc. Zeph.* 3:7; 9:2; cf. Rev 3:5; 13:8; 20:12; 21:27; 22:19) and of individual revelations or acts of God being preceded by blasts on angelic trumpets (*Apoc. Zeph.* 9:1; 10:1; 12:1; cf. Rev 8—11). Zephaniah is also described as seeing a lake of fire and brimstone (*Apoc. Zeph.* 6:1-2) into which the wicked dead are thrown as in judgment scenes in Revelation (*Apoc. Zeph.* 10:3-9; cf. Rev 19:20; 20:14). Perhaps it is not surprising that *Apocalypse of Zephaniah* would have affinities with the Revelation of John, since both compositions are of the same literary genre (apocalypse) and were written during the same general period of time.

S. E. Robinson

APOCALYPTIC LITERATURE

Apocalyptic literature first emerges in Judaism in the centuries immediately before the rise of Christianity. It is represented in the OT only in the book of Daniel. It was extremely important for the thought-world in which Christianity originated, and it has continued to fascinate Christians (and some Jews) for two millennia.

1. Terminology
2. Historical Apocalypses
3. The Apocalyptic Worldview
4. Apocalypses from the Late First Century
5. The Otherworldly Journeys
6. Conclusion

1. Terminology.

I.1. Ancient Usage. Apocalyptic literature takes its name from the last book of the NT, the book of Revelation, or the Apocalypse of John, which is usually dated to the last decade of the first century A.D. In that book John reports a series of supernatural revelations, mostly in the form of visions. These concern impending upheavals that culminate in the end of this world and a new creation. The word *apocalypse* (Gk *apokalypsis*) means "revelation." From the second century A.D. it is used with increasing frequency in the titles of books, as a virtual *genre label (Smith). So, for example, the Cologne Mani Co-

dex says that each of the forefathers showed his own *apokalypsis* to the elect and goes on to mention apocalypses of Adam, Sethel, Enosh, Shem and Enoch. Whether all of these alleged apocalypses existed as books is uncertain. They are primarily concerned with ascents to heaven (see Heavenly Ascent), and this is true of many of the texts that are called apocalypses in the ancient manuscripts.

1.2. Modern Usage. Modern discussions of apocalyptic literature, however, have been primarily concerned with the antecedents of Revelation rather than with what came after it. The publication of the Ethiopic *Book of Enoch* (*1 Enoch*; see Enoch, Books of) early in the nineteenth century led to the realization that there was a whole genre of literature similar to Revelation in ancient Judaism, even though in antiquity it lacked a clear genre label. The writings in question included the biblical book of Daniel and the apocryphal 2 Esdras (also known as 4 Ezra; see Esdras, Books of). The rediscovery of several other *pseudepigraphic writings in the course of the nineteenth century filled out the corpus. These included 2 *Enoch*, 2 *Baruch*, 3 *Baruch* (see Baruch, Books of) and the **Apocalypse of Abraham*.

In the 1970s a systematic analysis of apocalyptic and related literature was undertaken under the auspices of the Society of Biblical Literature. This project surveyed Jewish and Christian writings that could plausibly be dated before A.D. 250, and it also took account of Gnostic, Greco-Roman and Persian writings. The analysis yielded the following definition of the genre:

An apocalypse is a genre of revelatory literature with a narrative framework, in which a revelation is mediated by an otherworldly being to a human recipient, disclosing a transcendent reality which is both temporal, insofar as it envisages eschatological salvation, and spatial, insofar as it involves another, supernatural world. (J. J. Collins 1979, 9)

Within the spectrum of material covered by this fairly broad definition two types of apocalypses were distinguished, the historical and the mystical. The historical type, familiar from the biblical book of Daniel, gives an overview of a large sweep of history, often divided into periods. This overview is presented in the guise of a prediction, much of which is prophesied after the fact but which invariably concludes with a real

prediction of the end of history and a final judgment. This kind of apocalypticism is often called millenarianism, from the expectation of a millennium, or thousand-year reign, in the book of Revelation. The mystical type of apocalypse describes the ascent of the visionary through the heavens. In some apocalypses of the Christian era the heavens are numbered. Eventually the idea of seven heavens became standard. Some scholars view these two types of apocalypses as two distinct genres, but several writings mix elements of both types. Both attach great importance to the heavenly world and anticipate the judgment not only of nations on earth but also of the individual dead.

2. Historical Apocalypses.

The historical type of apocalypse has roots both in biblical and in Zoroastrian traditions.

2.1. Persian Apocalypticism. The relationship between Persian apocalypticism and its Jewish counterpart is notoriously problematic. The main Persian apocalyptic texts are preserved in Pahlavi writings from the ninth century A.D. Scholars are divided as to how far older traditions can be reconstructed from this literature. N. Cohn has argued that Zoroaster, whom he dates to the second millennium B.C., should be credited with first developing the linear view of history that is characteristic of apocalypticism. Other scholars, however, argue that Persian apocalypticism is a late development.

The most fully developed Persian apocalyptic writing, the *Bahman Yasht*, is a Pahlavi writing, which is quite late in its present form. It is a commentary on a lost work of the Avesta, however, and some of the material it preserves may be quite old. In the first chapter Zoroaster has a vision of a tree with four branches, one of gold, one of silver, one of steel and one of mixed iron. Ahura Mazda (the high god of Zoroastrianism) explains the vision, saying that the four branches were four kingdoms of which the last is ruled by the "divs who have disheveled hair." Many scholars have taken this as a reference to the Greeks. Their kingdom is supposed to come when the tenth century, or millennium, of Zoroaster is at an end. If the reference is to the Greeks, this would suggest that the vision dates to the early *Hellenistic period and that the well-known motif of four kingdoms may have been of Persian origin. The similarity between this vision and Daniel 2 is striking, although it is

not possible to show that one author depended directly on the other.

The periodization of history, however, is more broadly typical of Persian thought than it is of Jewish. The Zoroastrian view of history also included upheavals and disturbances at the end of an era and looked forward to the resurrection of the dead. Only the *Bahman Yasht*, however, combines the typically apocalyptic form of revelation (a vision interpreted by a god) with the periodization of history and *eschatology. Like many of the Pahlavi writings, the *Bahman Yasht* is a compendium of materials, although it bears closer resemblance to the historical apocalypses than does any other Persian work. Because of the difficulty of dating the Persian materials, their role in the development of apocalypticism is likely to remain controversial.

2.2. Biblical Prophecy. There is obvious continuity between the Jewish and Christian apocalypses and the Hebrew prophets, in their concern with history and expectation of divine intervention and judgment. In antiquity both Daniel and John of Patmos were often regarded as prophets. It is possible to trace the evolution of some literary forms from prophecy to apocalypticism. For example, the role of the interpreting *angel, the supernatural mediator, appears first in Zechariah, in the late sixth century B.C. P. Hanson has argued that "the dawn of apocalyptic" should be located in the prophetic texts of the early postexilic period, especially in Isaiah 56—66, which speak already of "a new heaven and a new earth." The new earth envisioned in Isaiah 65—66, however, may be understood as differing from the world as we know it only in degree, with life on earth still subject to mortality, although people live longer and have fewer problems. The apocalypses of the Hellenistic period, in contrast, anticipate life with the angels in heaven. While there is continuity between postexilic prophecy and apocalypticism, the novelty of the later literature should not be underestimated.

2.3. Enoch and Daniel. In the Jewish context, the books of Enoch and Daniel mark the emergence of a new kind of literature, usually dated by modern scholarship to the early second century B.C. (*1 Enoch* is a collection of at least five distinct books; see Enoch, Books of). Daniel uses the literary form of the vision, which can be seen as a development of prophetic visions, especially those of Zechariah. The revelations of

Enoch purport to relate what he had seen on his heavenly journey. Under a second-century dating, both Enoch and Daniel are of course pseudonyms. Enoch is a biblical figure from before the flood, but none of the writings attributed to him can be older than the third century B.C. Daniel is the hero of miraculous stories set in the Babylonian exile (Dan 1—6), but his visions focus without exception on the persecution of the Jews by Antiochus IV Epiphanes in the second century B.C. Pseudonymity was a widespread device in the literature of the Hellenistic period and was not peculiar to the apocalyptic genre. Within Judaism we also have a wisdom book attributed to Solomon, although it is well informed in Greek philosophy, and *Psalms of Solomon*, a work that reflects events in the Roman period. Greek authors similarly produced new works in the name of Plato, Heraclitus or the sibyl. While the psychology of pseudonymity remains obscure to us, we should not dismiss it as a form of deception, and it should not detract from the moral seriousness of the works in question (see Pseudonymity and Pseudepigraphy).

Both Enoch and Daniel are credited with lengthy revelations of the course of history, much of which were clearly written after the fact. To a degree, this device was a byproduct of pseudonymity. If Enoch supposedly lived before the flood, he had to "predict" the course of history before he could get to the events of the actual author's time. But the device of prophecy after the fact also conveyed a sense that history was predetermined, since it could be predicted so long in advance.

3. The Apocalyptic Worldview.

3.1. The Heavenly World. The main novelty of Enoch and Daniel, however, was not a matter of literary form but of worldview. Angels and demonic forces (see Belial, Beliar, Devil, Satan) figure in this literature to a far greater degree than is the case in the older biblical books. In Daniel 10, human conflicts on earth are reflections of the struggles between the patron *angels of the nations. The success of the Jewish people depends on the victory of the archangel Michael. In *1 Enoch*, the defilement of the earth is due to the sin of the fallen angels. Enoch adds a cosmological dimension to the revelation by claiming to have seen the ends of the earth, the abodes of the dead and the place prepared for the coming judgment. The theme of judgment

looms large in these writings. In Daniel it is imminent; this is the only ancient apocalypse that attempts to calculate the number of days until the end. Some of the Enochic writings also suggest that the last period of history has been reached. The judgment will ensure the victory of the righteous. In these books the righteous are not coterminous with the Jewish people but are conceived rather as a remnant within it. Daniel speaks of a kingdom that will be given to the people of the holy ones, and the Enochic writings also expect some reversal of social roles on earth.

The real focus of these books, however, is on salvation after death. Daniel is the first book in the Hebrew Bible to speak unambiguously of *resurrection. But the resurrected do not return to life on earth. The martyrs, at least, are elevated to shine like the stars (Dan 12:2). The meaning of this analogy is made clear by a parallel in *1 Enoch*: "you will shine like the lights of heaven and will be seen, and the gates of heaven will be opened to you. . . . Be hopeful and do not abandon your hope, for you will have great joy like the angels of heaven . . . for you shall be associates of the host of heaven" (*1 Enoch* 104:2, 4, 6). The expectation of life with the angels after death entailed a radical shift in the worldview of ancient Judaism. In most of the Hebrew Bible, human life and its rewards were conceived in strictly earthly terms. The hope was to see one's children and one's children's children and to enjoy the fertility of the land. If the goal of life was fellowship with the angels, however, different values might follow, and a more otherworldly kind of spirituality became possible (see *Afterlife*).

3.2. The Dead Sea Scrolls. This new apocalyptic worldview could be expressed in other literary genres besides the apocalypse. The Dead Sea sect, whose writings were found near *Qumran, preserved multiple copies of the apocalypses of Daniel and Enoch but produced few if any new apocalypses of their own (see *Dead Sea Scrolls*). Yet the worldview of the sect is apocalyptic. In the **Rule of the Community*, the human condition is explained by the fact that God created two spirits, one of Light and one of Darkness, and humanity is divided between them. (This idea was adapted from Zoroastrian dualism.) These forces contend with each other throughout the periods of history, but God has appointed an end to wickedness. The War Rule

(see *War Scroll*) describes the final war between the two forces, each of which operates at both the angelic and the human levels. The archangel Michael leads the Sons of Light while *Belial is the leader of the Sons of Darkness. The scrolls say little about the kind of society that will follow this war, although they speak frequently of both a royal and a priestly *messiah. More important was the prospect of eternal life for the righteous and eternal damnation for their enemies.

The most distinctive feature of the eschatology of Qumran, however, was the idea that the community could attain in the present the fellowship with the angels that was promised to the righteous after death in Daniel and Enoch. For that reason, the scrolls seldom speak of resurrection. The essential transition to eternal life was made within the community itself. All of this was guaranteed by revelation. The mode of revelation, however, was not the vision such as we find in the apocalypses but the inspired exegesis of Scripture, practiced by the Teacher of Righteousness and his successors.

3.3. The New Testament. The NT contains only one apocalypse, the book of Revelation, but here again we may speak of an apocalyptic worldview that is much more widespread. According to the Synoptic Gospels, Jesus predicted imminent upheavals that would be followed by the coming of the Son of Man on the clouds of heaven (Mk 13 and par.). Scholars dispute whether or how far such predictions should be attributed to Jesus himself or were composed by his followers after his death. It seems reasonable to suppose that the teachings of the early church must have been continuous with the teachings of Jesus. He must have provided some basis for the apocalyptic teachings of his followers. The message that the kingdom of God was at hand lent itself readily to an apocalyptic interpretation. Paul explains the resurrection in an apocalyptic context. Christ is the firstfruits of the general resurrection, and if there is no general resurrection of the dead, then Christ has not been raised (1 Cor 15). Paul believed that the time was short and that not all of his generation would die. Those who were left alive would be caught up to meet the Lord in the air. This expectation of an imminent end of history and final judgment gave early Christianity much of its urgency.

4. Apocalypses from the Late First Century.

4.1. *The Book of Revelation.* Written toward the end of the first century, the Apocalypse draws heavily on the imagery of Ezekiel and Daniel. The persecution of Christians is due to the fact that Satan has been cast down from heaven, and his time is short. The *Roman Empire is likened to the beasts that came up out of the sea (Dan 7), and Rome is compared with a great harlot. The book concludes with a vision of Christ coming as a warrior from heaven. This is followed by a thousand-year reign on earth for the martyrs who had lost their lives and finally by the general resurrection and new creation. The book of Revelation was controversial for a long time in early Christianity, and its canonicity was disputed. Eventually it was accepted as part of Scripture (see Canonical Formation of the New Testament), and it continues to have profound influence.

4.2. *Later Jewish Apocalypses.* The last great Jewish apocalypses of the historical type were produced in the aftermath of the destruction of *Jerusalem. Representing a theological tradition quite different from that of *Enoch* are *4 Ezra* and *2 Baruch*. They attach less importance to the heavenly world and more to the observance of the law. Some scholars have suggested that they were composed in the circles of the *Pharisees, but this is far from certain. These apocalypses are essentially reflections on the problem of theodicy, or the justice of God, who allowed Babylon (Rome) to prosper while Jerusalem was destroyed. They respond to this problem in different ways; *2 Baruch* reassures the reader that the real Jerusalem is still intact in heaven. For both authors, however, the ultimate vindication of divine justice is expected in a future judgment.

5. The Otherworldly Journeys.

5.1. *A Widespread Phenomenon.* The ascent of visionaries to heaven and descent to the netherworld is attested in many cultures and is often associated with shamanism (Culianu). Homer reports the descent of Odysseus to Hades. There is an Assyrian report of a dream of a prince named Kumarbi in which he descends to the netherworld (Kvanvig). There is an elaborate Persian story of an ascent, the *Book of Arda Viraf*, from the early medieval period, but the tradition may be old. There are older Persian accounts of the ascent of the soul after death. In Greco-

Roman literature, Plato's Myth of Er, in book 10 of the *Republic*, describes the experience of a man who died on the battlefield and later revived. This story was enormously influential. Other noteworthy examples of otherworldly journeys include the descent of Aeneas to the netherworld in *Aeneid* book 6 and *Cicero's *Dream of Scipio*. (For an inventory of Greco-Roman texts see Attridge.)

5.2. *Jewish Ascent Literature.* In the Jewish context, the prototypical ascent was that of Enoch. According to the Bible, Enoch walked with *elohim* (Gen 5:22, 24), which may mean either angels or God. In the apocalypses, this was interpreted to mean that he was returned to earth to reveal what he had seen before being taken up permanently. The Book of the Watchers (*1 Enoch* 1–36) describes his ascent to the divine throne, followed by a tour in which he is shown the garden of Eden and the abodes of the dead. All the books of Enoch presuppose this ascent, including the Similitudes of Enoch, which is heavily indebted to the book of Daniel for the imagery of the Son of Man.

The most elaborate ascent texts from ancient Judaism are found in *2 Enoch* and *3 Baruch*. Significantly, these books are ascribed to the Egyptian Diaspora. The date of *2 Enoch* is uncertain; *3 Baruch* is clearly a meditation on the destruction of the temple. Neither of these books pays much attention to history or the kind of public eschatology found in the historical apocalypses. Instead they describe the ascent of the visionary through a numbered series of heavens, and *2 Enoch* has seven heavens. Baruch's ascent seems to be aborted after five heavens, and scholars dispute whether this was the original form of the text. This kind of apocalypse is developed in later Judaism in the form of *Hekhalot* *mysticism (Gruenwald). The *hehal* was the temple or palace of God; the name implies that the mystic ascends through several heavenly temples. The **Songs of Sabbath Sacrifice* (4Q400-407) from Qumran, which do not describe an ascent but describe the heavenly liturgy, may already presuppose a form of *Hekhalot* mysticism. One of the more important later examples is *Sefer Hekhalot*, also known as *3 Enoch*.

5.3. *Christian Ascent Literature.* The ascent of the visionary became the most popular form of apocalypse in early Christianity after the first century (A. Y. Collins 1979). Among the most important early apocalypses of this type are the

Apocalypse of Peter and *Apocalypse of Paul*. There are also some examples of the genre in the Coptic Gnostic library from Nag Hammadi (see Gnosticism). Perhaps the greatest literary influence of this genre was achieved in the Middle Ages: Dante's *Inferno*.

6. Conclusion.

*Rabbinic Judaism generally turned away from apocalypticism, but the tradition never died out, and it reappears periodically down to modern times (Collins, McGinn and Stein). Many of the church fathers also viewed it with distrust, but again the tradition persisted. It erupted forcefully in the Middle Ages, notably in the preaching of Joachim of Fiore, and there have been numerous apocalyptic and millenarian movements in modern times, many of them in North America (see especially Boyer on the Millerites). Apocalypticism has also been an important component in Islam.

Apocalyptic visions are products infused by the imagination rather than rational discourse. They derive some of their force from the use of traditional images, many of which can be traced back for millennia. They explicitly rely on revelation and admit of verification only when they predict specific events at specific times. When they do, they are almost invariably proven wrong. The attempt of the Millerites in the nineteenth century to predict the end of the world is probably the most famous example of a case when prophecy failed, but there have been numerous such cases throughout history. Yet the appeal of apocalypticism to many people is not diminished. Ultimately this appeal does not depend on any specific prediction but on the conviction that this world is not the end and on the hope for a higher form of life beyond death. These convictions lie at the core of Christianity and also of some forms of Judaism and Islam.

J. J. Collins

APOCALYPTICISM

The term *apocalypticism* is a transliterated form of the Greek term *apokalypsis*, which means "disclosure," "revelation." The author of the NT Apocalypse, or Revelation of John, was the first Jewish or Christian author to use the term *apokalypsis* in describing the content of his book, which is essentially a narrative of a series of revelatory visions that disclose the events surrounding the imminent end of the present age: "[This is] the revelation [*apokalypsis*] of John, which God gave to him, to show to his servants what must soon take place" (Rev 1:1). Following Revelation 1:1, the term *apocalypse* has been used since the early nineteenth century, when it

was popularized by the German NT scholar F. Luecke (1791-1854), as a generic term to describe documents with a content and structure similar to the Revelation of John.

1. Defining Apocalypticism
2. The Origins of Apocalypticism
3. Characteristics of Apocalypticism
4. Jesus and Apocalypticism
5. Paul and Apocalypticism
6. Later New Testament Writings and Apocalypticism

1. Defining Apocalypticism.

The term *apocalypticism* is a modern designation widely used to refer to a worldview which characterized segments of early Judaism from c. 200 B.C. to A.D. 200, and which centered on the expectation of God's imminent intervention into human history in a decisive manner to save his people and punish their enemies by destroying the existing fallen cosmic order and by restoring or recreating the cosmos in its original pristine perfection. Knowledge of cosmic secrets (one of the contributions of the wisdom tradition to apocalypticism) and the imminent eschatological plans of God were revealed to apocalyptists through dreams and visions, and the apocalypses they wrote were primarily narratives of the visions they had received and which were explained to them by an interpreting angel. All extant Jewish apocalypses are believed to be *pseudonymous, that is, written under the names of prominent ancient Israelite or Jewish figures such as Adam, Enoch, Moses, Daniel, Ezra and Baruch. Only the earliest Christian apocalypses, the Revelation of John and the *Shepherd of Hermas*, were written under the names of the actual authors. The most likely reason for the phenomenon of apocalyptic pseudonymity is that it was a strategy to provide credentials and thereby assure the acceptance of these revelatory writings at a point in Israelite history when the reputation of prophets had sunk to an extremely low point. *Apocalypticism* is therefore a term used to describe the particular type of eschatological expectation characteristic of early Jewish and early Christian apocalypses. The Jewish religious compositions which are generally regarded as apocalypses include Daniel 7—12 (the only OT apocalypse), the five documents which comprise *1 Enoch* (1—36, the Book of Watchers; 37—71, the Similitudes of Enoch; 72—82, the Book of Heavenly Luminar-

ies; 89—90, the Animal Apocalypse; 92—104, the Epistle of Enoch), *2 Enoch*, *4 Ezra*, *2 Baruch*, *3 Baruch* and the *Apocalypse of Abraham*. Early Christian apocalypses include the Revelation of John (the only NT apocalypse) and the *Shepherd of Hermas* (see Apocalyptic Literature).

There are four aspects of apocalypticism that need to be distinguished:

(1) *Apocalyptic eschatology*, a type of eschatology that is found in apocalypses or is similar to the eschatology of apocalypses, characterized by the tendency to view reality from the perspective of divine sovereignty (e.g., the eschatologies of the *Qumran community, Jesus and Paul)

(2) *Apocalypticism or millennialism*, a form of collective behavior based on those beliefs (e.g., the movement led by John the Baptist, and the revolts of Theudas reported in Acts 5:36 and Josephus *Ant.* 20.5.1 §§97-98, and the unnamed Egyptian reported in Acts 21:38; Josephus *Ant.* 20.8.6 §§169-72; *J W* 2.13.5 §§261-63; see Revolutionary Movements)

(3) *Apocalypse*, a type of literature in which those beliefs occur in their most basic and complete form, and which centers on the revelation of cosmic lore and the end of the age

(4) *Apocalyptic imagery*, the various constituent themes and motifs of apocalyptic eschatology used in various ways in early Jewish and early Christian literature

The focus in this article will be on Jewish apocalyptic eschatology and the ways in which Jesus and NT authors adapted some of the basic themes and structures of apocalyptic eschatology into their own theological thought.

2. The Origins of Apocalypticism.

A number of proposals have been made regarding the origins of apocalypticism, and these proposals have often reflected the positive or negative attitude which scholars have had toward the phenomenon of apocalypticism. Following the lead of F. Luecke in the mid-nineteenth century, many scholars have viewed apocalypticism favorably as a development of OT prophecy, perhaps as a result of the disillusionment of the postexilic period, which included subjection to foreign nations and tension within the Jewish community. Other scholars who discerned a sharp break between OT prophecy and later apocalypticism proposed that many of the basic features of apocalypticism originated in ancient Iran and had penetrated

Jewish thought during the Hellenistic period (c. 400-200 B.C.) or more generally from the syncretistic tendencies during the Hellenistic period when there was a blending of religious ideas from both West and East.

2.1. The Setting of Apocalypticism. The fact that most apocalypses are pseudonymous has made it difficult to reconstruct the social situations within which they were written and to which they responded. There is nevertheless wide agreement that Jewish apocalypses were written or revised during times of social or political crisis, though such crises may run the spectrum from real to perceived. Focusing his attention on the period 400-200 B.C., Ploeger discerned a split in the postexilic Jewish community into two sharp divisions, the theocratic party (the ruling priestly aristocrats), which interpreted prophetic eschatology in terms of the Jewish state, and the eschatological party (forerunners of the apocalyptists), which awaited the fulfillment of the eschatological predictions of the prophets. More recently, P. D. Hanson has argued that apocalypticism is a natural development of Israelite prophecy originating in the intramural struggle between visionary prophets and hierocratic (Zadokite) priests which took place from the sixth through the fourth centuries B.C.

2.2. Eschatology and Apocalypticism. A distinction has generally been made between *eschatology and apocalypticism. *Eschatology* is a term which began to be used in the nineteenth century as a label for that aspect of systematic theology which dealt with topics relating to the future of the individual (death, resurrection, judgment, eternal life, heaven and hell) and topics relating to corporate or national eschatology, that is, the future of the Christian church or the Jewish people (e.g., the coming of the Messiah, the great tribulation, resurrection, judgment, the Second Coming of Christ, the temporary messianic kingdom, the re-creation of the universe). A distinction has often been made between prophetic eschatology and apocalyptic eschatology, which serves the useful function of emphasizing the continuities as well as the changes in Israelite-Jewish eschatological expectation. Following this model, prophetic eschatology was an optimistic perspective which anticipated that God would eventually restore the originally idyllic and pristine conditions by acting through historical processes. The Israelite prophet proclaimed

God's plans for Israel to both king and people in terms of actual historical and political events and processes. Prophecy sees the future as arising out of the present, while apocalyptic eschatology regards the future as breaking into the present; the former is essentially optimistic, while the latter is pessimistic.

2.3. Prophecy and Apocalypticism. The problem of the relationship between prophecy and apocalypticism is one aspect of the problem of the degree of continuity or discontinuity thought to exist between Jewish apocalypticism and earlier Israelite religious and political traditions. It is important to recognize that prophecy and apocalypticism exhibit both elements of continuity and discontinuity. The sharp contrasts often thought to exist between prophecy and apocalypticism are somewhat mitigated by the recognition that prophecy itself underwent many changes and that there are numerous striking similarities between late prophecy and early apocalyptic (Hanson). Late prophetic books which exhibit tendencies that were later to emerge more fully developed in Jewish apocalyptic literature include the visions of Zechariah 1-6 (with the presence of an angelic interpreter), Isaiah 24-27, 56-66, Joel and Zechariah 9-14.

2.4. Wisdom and Apocalypticism. Many scholars have argued that there was a fundamental break between prophecy and apocalypticism. G. von Rad, for example, rejected the view that the primary roots of apocalypticism were to be found in Israelite prophecy. Von Rad described apocalypticism as consisting in a clear-cut dualism, radical transcendence, esotericism and gnosticism, and proposed that apocalypticism arose out of the wisdom literature of the OT. Themes common to wisdom and apocalyptic literature, and which suggest the connection between the two types of literature, include the following: (1) both sages and apocalyptists are referred to as "the wise," and preserved their teaching in written form often emphasizing their special "knowledge" and its antiquity; (2) both exhibit individualistic and universalistic tendencies; (3) both are concerned with the mysteries of nature from a celestial perspective; and (4) both reflect a deterministic view of history.

The proposal that Israelite wisdom, not Israelite prophecy, was the mother of Jewish apocalypticism has found little scholarly support in the form in which it was proposed by von Rad.

Yet there are undeniably links between wisdom and apocalyptic (Wis 7:27; Sir 24:33), both of which are *scribal* phenomena. The wisdom tradition in Israel was certainly one of the many influences upon the development of Jewish apocalypticism. Nevertheless it is important to distinguish between two types of wisdom: *proverbial wisdom* and *mantic wisdom*. The latter type is related to the role of the "wise" in interpreting dreams as reflected in the biblical traditions concerning Joseph and Daniel, both of whom were able to explain the meaning of ambiguous revelatory dreams through divine wisdom (Gen 40:8; 41:25, 39; Dan 2:19-23, 30, 45; 5:11-12). The figure of the *angelus interpres* ("interpreting angel") occurs frequently in Jewish apocalypses where he plays the analogous role of a supernatural revealer who is able to reveal the deeper significance of the dreams and visions experienced by the apocalypticist (Dan 7-12; Zech 1-6; 4 Ezra).

2.5. Pharisaism and Apocalypticism. The monumental three-volume work on Judaism by G. F. Moore was based on the assumption that "normative" Judaism of the first few centuries of the Christian era, "the age of the Tannaim," did not include Jewish apocalypticism. Similarly, A. Schweitzer sharply distinguished the teaching of the apocalypticists (and therefore Jesus) from the teaching of the rabbis. However, the pharisaic emphases on the resurrection, the age to come and the *Messiah make it difficult to distinguish sharply the religious and political concerns of apocalypticists from the *Pharisees, even though Pharisees appear to have become disenchanted with many aspects of apocalypticism in the aftermath of the disastrous first revolt against Rome (A.D. 66-73). W. D. Davies has argued that there are several links between apocalypticism and Pharisaism: (1) both share a similar piety and attitude toward the Torah; (2) both share similar views on such eschatological topics as the travail of the messianic era, the gathering of exiles, the days of the Messiah, the New Jerusalem, the judgment and Gehenna; (3) both have populist and scholastic tendencies.

3. Characteristics of Apocalypticism.

3.1. Major Aspects of Apocalypticism. There are a number of features of apocalyptic eschatology upon which there is some scholarly agreement:

(1) the temporal dualism of the two ages

(2) the radical discontinuity between this age and the next coupled with pessimism regarding the existing order and otherworldly hope directed toward the future order

(3) the division of history into segments (four, seven, twelve) reflecting a predetermined plan of history

(4) the expectation of the imminent arrival of the reign of God as an act of God and spelling the doom of existing earthly conditions

(5) a cosmic perspective in which the primary location of an individual is no longer within a collective entity such as Israel or the people of God, and the impending crisis is not local but cosmic in scope

(6) the cataclysmic intervention of God will result in salvation for the righteous, conceived as the regaining of Edenic conditions

(7) the introduction of angels and demons to explain historical and eschatological events

(8) the introduction of a new mediator with royal functions

These characteristics are not exhaustive, but they serve the useful purpose of focusing on some of the distinctive features of the apocalyptic worldview.

3.2. The Apocalyptic Scenarios. Since narratives that describe the events attending the close of the present era and the inauguration of the future era are essentially a type of folklore, there are many divergent descriptions of expected future events with little consistency between them. In producing a synthesis of the great variety of apocalyptic scenarios found in apocalyptic literature, therefore, the emphasis must be on the more typical features found in such descriptions. Apocalypticism or apocalyptic eschatology centers on the belief that the present world order, which is both evil and oppressive, is under the temporary control of Satan and his human accomplices. This present evil world order will shortly be destroyed by God and replaced with a new and perfect order corresponding to Eden. During the present evil age, the people of God are an oppressed minority who fervently await the intervention of God or his specially chosen agent, the Messiah. The transition between the old and the new ages, the end of the old age and the beginning of the new, will be introduced by a final series of battles fought by the people of God against the human allies of Satan. The outcome is never in question, however, for the enemies of God are predestined to be defeated and

destroyed. The inauguration of the new age will begin with the arrival of God or his accredited agent to judge the wicked and reward the righteous and will be concluded by the re-creation or transformation of the universe.

3.3. Limited Dualism. One of the basic features of apocalypticism is the conviction that the cosmos is divided under two opposing supernatural forces, God and Satan, who represent the moral qualities of good and evil (cosmological dualism). However, the Jewish conviction that God is absolutely sovereign implies that he is the originator of evil and that the resultant dualism of good and evil is neither eternal nor absolute (like the dualism of ancient Iranian religion), but limited. This essentially limited cosmological dualism was understood in various different but related types of dualistic thought in early Jewish apocalypticism: (1) *Temporal or eschatological dualism* makes a sharp distinction between the present age and the age to come. (2) *Ethical dualism* is based on a moral distinction between good and evil and sees humanity divided into two groups, the righteous and the wicked, in a way that corresponds to good and evil supernatural powers. (3) *Psychological or microcosmic dualism* is the internalization of the two-age schema that sees the forces of good and evil struggling for supremacy within each individual.

3.3.1. Temporal or Eschatological Dualism. The belief in two successive ages, or worlds, developed only gradually in Judaism. The earliest occurrence of the rabbinic phrase "the world to come" is found in *1 Enoch* 71:15 (c. 200 B.C.). The doctrine of two ages is fully developed by c. A.D. 90, for according to *4 Ezra* 7:50, "The Most High has not made one Age but two" (see *4 Ezra* 8:1). The day of judgment is considered the dividing point between the two ages (*4 Ezra* 7:113): the "day of judgment will be the end of this age and beginning of the immortal age to come."

3.3.2. Ethical Dualism. *Daniel* 12:10 distinguishes between the "wicked" and the "wise"; **Jubilees* distinguishes between Israelites who are "the righteous nation" (*Jub.* 24:29), "a righteous generation" (*Jub.* 25:3) and the Gentiles who are sinners (*Jub.* 23:24; 24:28); the Qumran **War Scroll* similarly distinguishes between the people of God and the Kitim (*1QM* 1:6; 18:2-3); and the *Testament of Asher* contrasts "good and single-faced people" (*T. Asher* 4:1) with "people of two faces" (*T. Asher* 3:1).

3.3.3. Psychological or Microcosmic Dualism. In

this type of dualism the antithetical supernatural cosmic powers, conceived of in the moral categories of good and evil, have an analogous correspondence to the struggle between good and evil experienced by individuals. In some strands of Jewish apocalyptic thought, notably the Qumran community and the circles which produced the **Testaments of the Twelve Patriarchs*, it was believed that God created two spirits, the spirit of truth and the spirit of error (i.e., the evil spirit called **Belial*, *1QS* 1:18-24; *T. Jud.* 20:1-5; see *Jn* 14:17; 15:26; 16:13; *1 Jn* 4:6), and humans may live in accordance with one or the other; the Prince of Lights controls the lives of the children of righteousness, while the Angel of Darkness has dominion over the children of falsehood (*1QS* 3:17-4:1; 4:2-11; *1QM* 13:9-12). However, even the sins of the children of righteousness are ultimately caused by the spirit of error, for both spirits strive for supremacy within the heart of the individual (*1QS* 4:23-26; *T. Asher* 1:3-5). The dominion of the spirit of error is temporally limited, however, for God will ultimately destroy it (*1QS* 4:18-19). The doctrine that the spirit of truth and the spirit of error strive for supremacy in the heart of each person is similar to the rabbinic doctrine of the good and evil impulses.

3.4. Messianic Expectation. **Messianism* was not an invariable feature of all the various eschatological schemes that made up Jewish apocalypticism. During the Second Temple period there were at least two main types of Jewish messianism, restorative and utopian messianism. Restorative messianism anticipated the restoration of the Davidic monarchy and centered on an expectation of the improvement and perfection of the present world through natural development (*Pss. Sol.* 17) and modeled on an idealized-historical period; the memory of the past is projected into the future. Utopian messianism anticipated a future era which would surpass everything previously known. Jewish messianism tended to focus, not on the restoration of a dynasty, but on a single messianic king sent by God to restore the fortunes of Israel. However, as a theocratic symbol, the Messiah is dispensable, since a Messiah is not invariably part of all Jewish eschatological expectation. No such figure, for example, plays a role in the eschatological scenarios of *Joel*, *Isaiah* 24-27, *Daniel*, *Sirach*, *Jubilees*, the *Testament of Moses*, *Tobit*, *1* and *2 Maccabees*, *Wisdom*, *1 Enoch* 1-36

(the Book of Watchers), 90—104 (the Epistle of Enoch), *2 Enoch*.

3.5. The Temporary Messianic Kingdom. There is little consistency in Jewish apocalyptic regarding the arrival of the kingdom of God. It was conceptualized by some as the arrival of an eternal kingdom, but by others as a temporary messianic kingdom which would be succeeded by an eternal kingdom (see 1 Cor 15:24). The conception of a temporary messianic kingdom which would function as a transition between the present evil age and the age to come, between monarchy and theocracy, solved the problem of how the transition from the Messiah to the eternal reign of God (where such a conception is present) might be conceived. In Jewish apocalyptic thought generally, the kingdom of God is more centrally important than the figure of a Messiah. A messianic interregnum, therefore, functions as an anticipation of the perfect and eternal theocratic state which will exist when primordial conditions are reinstated forever. This interim kingdom was expected to be transitional since it is depicted as combining some of the characteristics of this age with those of the age to come. In Christian apocalypticism this anticipation of a temporary messianic kingdom is clearly reflected in Revelation 20:4-6, and according to some scholars is also reflected in 1 Corinthians 15:20-28. The expectation of a future temporary messianic kingdom is found in only three early Jewish apocalypses, the Apocalypse of Weeks, or *1 Enoch* 91:12-17, 93:1-10; (written between 175 and 167 B.C.), 4 Ezra 7:26-44; 12:31-34 (written c. A.D. 90), and *2 Baruch* 29:3—30:1; 40:1-4; 72:2—74:3 (written c. A.D. 110). Though some have claimed that the conception of a temporary messianic kingdom is found in *2 Enoch* 32:2—33:1 and *Jubilees* 1:27-29; 23:26-31, the evidence is not compelling.

3.5.1. Apocalypse of Weeks. In *1 Enoch* 91:12-17 and 93:1-10, an earlier apocalypse inserted into the Epistle of Enoch (*1 Enoch* 91—104), history is divided into ten weeks (i.e., ten ages), with a non-messianic temporary kingdom appearing in the eighth week and an eternal kingdom arriving in the tenth week (*1 Enoch* 91:12-17).

3.5.2. Fourth Ezra. According to 4 Ezra 7:26-30, the Messiah will appear in the last days and live with the righteous for four hundred years. The Messiah, together with all other people on earth, will then die and the world will return to seven days of primeval silence. After this the resurrec-

tion will occur (4 Ezra 7:32), and the Most High will take his place on the seat of judgment and will execute judgment on all nations (4 Ezra 7:36-43). In 4 Ezra 12:31-34, on the other hand, the Davidic Messiah will sit on the seat of judgment and, after reproving the ungodly and the wicked, will destroy them (4 Ezra 12:32). This judgment exercised by the Messiah is preliminary to the final judgment which will be exercised by God after the arrival of the end (4 Ezra 12:34). Nowhere in 4 Ezra, however, does the Messiah play a role in the eternal theocratic kingdom which is inaugurated with the resurrection.

3.5.3. Second Baruch. After twelve periods of tribulation (*2 Bar.* 27:1-5), the messianic kingdom is depicted as a period of phenomenal abundance inaugurated by the appearance of the Messiah (*2 Bar.* 29:3) and concluded by his return to glory (*2 Bar.* 30:1). The elect who lived during the messianic kingdom will then be joined by the resurrected righteous, but the souls of the wicked will fear judgment (*2 Bar.* 30:1-5). The author assumes rather than clearly states the fact that those who lived during the messianic kingdom will experience a transformation into a resurrection mode of existence like the resurrected righteous. In *2 Bar.* 39—40 the predicted fall of the fourth kingdom (Rome) will be followed by the revelation of the Messiah (*2 Bar.* 39:7), who will destroy the armies of the final wicked ruler, who will be brought bound to Zion, where he will be judged and executed by the Messiah (*2 Bar.* 40:1-2). The kingdom of the Messiah will last "forever," that is, until the world of corruption has ended, which means that this kingdom is temporary but of unspecified duration. Finally, in *2 Baruch* 72:2—74:3, the warrior Messiah will summon all nations together, sparing some and executing others (*2 Bar.* 72:2-6). Following this period of judgment will be an era in which Edenic conditions will be restored to the earth (*2 Bar.* 73:1-7). As in 4 Ezra, the Messiah plays no role in the eternal kingdom which is inaugurated after he is taken up into heaven.

3.6. The Eschatological Antagonist. In Jewish apocalyptic literature there are two traditions of a wicked eschatological figure who functions as an agent of Satan, or Beliar, in leading astray, opposing and persecuting the people of God; both traditions represent historicizations of the ancient combat myth (see Belial). One tradition focuses on a godless tyrannical ruler who will

arise in the last generation to become the primary adversary of God or the Messiah. This satanic agent was expected to lead the forces of evil in the final battle between the forces of evil and the people of God (1QM 18:1; 1QS 4:18-18; *T. Dan* 5:10-11; *T. Mas.* 8).

The historicization of the combat myth is already found in the OT where the chaos monsters Rahab and Leviathan are sometimes used to symbolize foreign oppressors like Egypt (Ps 74:14; 87:4; Is 30:7; Ezek 29:3; 32:2-4). Several OT traditions provided the basis for the later apocalyptic conception of the eschatological antagonist, including the figure of Gog, the ruler of Magog in the Gog and Magog oracle in Ezekiel 38-39 (see Rev 20:8; *3 Enoch* 45:5), the references to a vague "enemy from the north" found in several OT prophecies (Ezek 38:6, 15; 39:2; Jer 1:13-15; 3:18; 4:6; 6:1, 22), and the depicting of Antiochus IV Epiphanes, the "little horn" in Daniel 7-8 as the oppressor of the people of God. The career of the Greco-Syrian king Antiochus IV Epiphanes (175-164 B.C.), whose actions against the Jewish people are described in 1 Maccabees 1:20-61 and 2 Maccabees 5:11-6:11, is presented as a mythologized apocalyptic figure in Daniel 11:36-39, claiming to be God or to be equal with God (Dan 11:36-37; *Sib. Or.* 5:33-34; *Asc. Isa.* 4:6; *2 Enoch* [Rec.] 29:4).

Later the characteristics of the eschatological adversary were augmented and embellished by traditions about the *Roman emperors Caligula and Nero, both of whom had divine pretensions which their Roman contemporaries considered tacky and which outraged the Jews. The other tradition concerns the false prophet who performs signs and wonders to legitimate his false teaching (cf. Deut 13:2-6). Occasionally Satan and the eschatological antagonist are identified as the same person, as in *Sibylline Oracles* 3:63-74 and *Ascension of Isaiah* 7:1-7, where Nero (= the eschatological antagonist) is regarded as Beliar (= Satan) incarnate.

3.7. The Re-creation or Transformation of the Cosmos. In Isaiah 65:17 and 66:22 the creation of a new heavens and a new earth is predicted. The theme of the re-creation or renewal of creation was taken up into apocalyptic literature as the final eschatological act. Essentially the expectation of a new creation or a renewed creation is a particular application of the two-age schema in which the first creation is identified with the present evil age (or world) and the new or re-

newed creation is identified with the age (or world) to come. While there are many references to the new creation in Jewish apocalyptic literature, it is not always clear whether the present order of creation is reduced to chaos before the act of re-creation (*1 Enoch* 72:1; 91:16; *Sib. Or.* 5:212; *Jub.* 1:29; 4:26; *Bib. Ant.* 3:10; *Apoc. Elijah* 5:38; 2 Pet 3:13; Rev 21:1, 5; see 2 Cor 5:17; Gal 6:15), or whether the renewal or transformation of the existing world is in view (*1 Enoch* 45:4-5; *2 Bar.* 32:6; 44:12; 49:3; 57:2; *Bib. Ant.* 32:17; 4 Ezra 7:30-31, 75; see Rom 8:21). In many of these passages the pattern for the new or transformed creation is based on the Edenic conditions thought to have existed on the earth before the fall of Adam and Eve. [D. E. Aune]

4. Jesus and Apocalypticism.

During the nineteenth century biblical scholars attempted to defend Jesus against the charge that he was an apocalyptic dreamer who wrongly predicted an early and cataclysmic end to the existing world order. Some defended Jesus by claiming that Jesus did not intend to predict literal future events for the world, but was speaking spiritually. The apocalyptic predictions, it was argued, all had been spiritually fulfilled.

Others defended Jesus by charging the early church and the Gospel writers with error. One view is that chapters like Mark 13 did not derive from anything Jesus really said. Rather an early Jewish apocalypse was taken up by the Gospel writers and erroneously credited to Jesus. This "little apocalypse" theory, first advanced by T. Colani, has been defended by an array of scholars ever since.

Many nineteenth-century scholars portrayed Jesus as a gentle teacher who taught the nearness of God. Unfortunately, they lamented, Jesus has been misrepresented in the Gospels as a fanatical preacher of coming judgment.

At the turn of the century J. Weiss and A. Schweitzer overturned that consensus by reconstructing a historical Jesus who was thoroughly apocalyptic in outlook, indeed more so than those who had preserved the traditions about him. Under this new reckoning, Jesus believed that the expected divine intervention which would inaugurate the new age would occur at some time during his ministry. His expectations were disappointed more than once, and he finally went to his death imagining that by so

doing he would surely spur God to act. The early church was left with the challenge of giving Jesus a more respectable image, covering up his errors and presenting his teaching in a way which served the needs of a community that knew the end (and the kingdom of God) had not come as predicted, but that still believed it would come soon.

This view in its various forms, generally known as "consistent eschatology," has been influential during the twentieth century. Some, like R. Bultmann, have been unconcerned with defending Jesus' apocalyptic perspective or even attempting to reconstruct a portrait of the historical Jesus. Bultmann's famous program of demythologizing the NT did not attempt to strip Jesus of his mythological trappings (as did many nineteenth-century interpreters) but to reinterpret those mythical elements in terms of their existential meaning. Understood from this perspective, the mythology inherent in Jesus' apocalyptic teaching was a means of addressing men and women with the need to be open to God's future—a future near at hand for each individual. Others scholars, such as R. H. Hiers, do not find it troubling to think of Jesus as someone who had mistaken expectations and made inaccurate predictions.

Not all twentieth-century interpreters have been persuaded that Jesus was an apocalyptic preacher who predicted an imminent end to the world. C. H. Dodd and others have insisted on a realized eschatology, maintaining that Jesus fulfilled OT prophetic hopes and preached a kingdom that was inaugurated in his own ministry. Those passages which suggested a future fulfillment were either intended to be interpreted in this light or were the creation of the early church.

Both consistent and realized eschatology seem problematic. Many conservative scholars such as G. E. Ladd, E. E. Ellis and I. H. Marshall have adopted a compromise position first defended by W. G. Kümmel. The kingdom is paradoxically "present" and "still to come." Jesus' mission was to inaugurate the kingdom, but he taught that it would be consummated at a future coming.

The Gospel writers faithfully preserve this paradoxical position. They use apocalyptic imagery to report and interpret events in Jesus' earthly life (e.g., Mt 27:51-53; 28:2-4), and they also use apocalyptic imagery to refer to events

predicted for the future (God's final act of judgment and salvation at the coming of the Son of Man; cf. Mt 25:31-46; Mk 13:24-27).

This already/not yet approach may be open to the charge that it is very convenient (unfalsifiable and therefore indefensible, some would say), but unless some such paradoxical interpretation is adopted, neither Jesus' view nor any of the Gospel writers' views can be understood adequately. [T. J. Geckler]

5. Paul and Apocalypticism.

5.1. Sources and Problems. Critical scholarship regards the seven generally acknowledged Pauline letters as providing a firm basis for analyzing Pauline theology. These letters include Romans, 1 and 2 Corinthians, Galatians, Philippians, 1 Thessalonians and Philemon. Letters whose authenticity remains in some doubt (2 Thessalonians; Colossians) or whose Pauline authorship is generally rejected (Ephesians; 1 and 2 Timothy; Titus) are used only to supplement data found in the basic corpus of seven letters. The book of Acts is another important source for our knowledge of Paul's life, but this work too must be used only as a supplement to the core of genuine letters.

One of the major problems in the study of Paul's life and thought is that of determining the extent to which it is appropriate to label Pauline thought as "apocalyptic." There is widespread agreement that Paul was influenced by apocalyptic eschatology, but the extent to which he modified apocalypticism in light of his faith in Christ remains a central problem. Baumgarten holds that Paul demythologizes apocalyptic traditions by consistently applying them to the present life of the community.

Another problem centers on the issue of the origin of Paul's apocalyptic thought. Baumgarten (43-53) has suggested that apocalyptic traditions came to Paul through the Hellenists at *Antioch.

5.2. The Center or Structure of Pauline Thought. The complexity of Paul's theological thought is exacerbated by the fact that the primary evidence for his views is found in occasional letters written in a variety of specific contexts for the purpose of addressing particular problems and issues; they are historically contingent pastoral communications. Further, the basic seven-letter corpus can hardly be regarded as a representative sample of Pauline thought. Despite the diffi-

culties, many attempts have been made to understand the coherence of Paul's thought and on that basis to identify the core or center of his thought. Some scholars have doubted whether Paul himself thought in terms of such a "core" or whether the evidence from seven occasional letters is adequate for such a task. Some of the more important suggestions for identifying the central message of Paul's thought include: (1) the gospel, (2) christology, (3) the death and resurrection of Jesus, (4) the theme "in Christ" (participatory categories), (5) ecclesiology, (6) justification by faith (the traditional Lutheran view) and (7) anthropology (F. C. Baur; R. Bultmann). It is evident, however, that many of these topics are closely related to others, so that the choice of a core for Pauline thought becomes a matter of nuance. It is clear, for example, that Paul's polemical doctrine of justification by faith is an aspect of his christology and that the topics of anthropology and ecclesiology are two ways of looking at individual Christians who at the same time hold membership in the people of God.

Other scholars have proposed that it is more important to identify the structure of Paul's thought. Two of the most important proposals include: (1) salvation history, that is, God, who is the central actor in history, has had an ultimate salvific goal for humanity from the beginning, which originally centered on Israel and ultimately on all who believe in Christ, a structure particularly evident in Romans 9—11; and (2) apocalyptic eschatology. However, salvation history and apocalyptic eschatology must not be considered antithetical, since the latter is simply a more specific and particular version of the former. Further, it is a matter of continuing debate whether these suggestions constitute the horizon or kernel of Paul's thought.

5.3. Paul as a Visionary and Mystic. The authors of apocalypses, though they usually concealed their true identities behind pseudonyms, received divine revelations through visions and for that reason they structured the apocalypses they wrote as narratives of the visions they had actually received or pretended to receive. There was a close relationship between Jewish *merkabah* mysticism (based on Ezek 1; see Heavenly Ascent) and apocalypticism (Gruenwald), though out-of-body visions were more common in the former and bodily ascensions to heaven more common in the latter. While there is no

evidence that Paul himself wrote an apocalypse, he claims to have been the recipient of revelatory visions or ecstatic experiences (Gal 1:11-17; 1 Cor 9:1; 15:8; see Acts 9:1-9; 16:9; 18:9-10; 22:6-11, 17-21; 26:12-18; 27:23-24). In Galatians 1:12 he speaks of his Damascus Road experience as an *apokalypsis* ("revelation") from Jesus Christ, and in 2 Corinthians 12:1 he speaks of "visions and revelations [*apokalypseis*] of the Lord," which are presumably descriptions of his own experience. It is likely that Paul is the man of whom he speaks, who experienced a journey to the third heaven, where he heard unspeakable things (2 Cor 12:1-10).

5.4. Apocalyptic Scenarios. There are four relatively extensive apocalyptic scenarios in the Pauline letters, three of which center on the Parousia of Jesus (1 Thess 4:13-18; 2 Thess 1:5-12; 1 Cor 15:51-57), and the so-called "Pauline apocalypse," which centers on the coming of the eschatological antagonist (2 Thess 2:1-12). There are also a number of shorter scenarios which appear to be formulaic in character and therefore of pre-Pauline or extra-Pauline origin (1 Thess 1:9-10; 3:13; 5:23).

5.5. Limited Dualism. The Pauline view of the sovereignty of God (Rom 9—11) makes it apparent that he shares the basic dualistic convictions of Jewish apocalypticism during the late Second Temple period.

5.5.1. Temporal or Eschatological Dualism. In continuity with the temporal dualistic thought of Jewish apocalypticism, Paul also contrasted the present evil age with the coming age of salvation (Gal 1:4; Rom 8:18; 1 Cor 1:26; see Eph 5:16) and believed that he was living at the end of the ages (1 Cor 10:11). Yet Paul considerably modified the sharp distinction usually made in apocalyptic thought between these two ages. Paul understood the death and resurrection of Jesus in the past as cosmic eschatological events that separated "this age" (Rom 12:2; 1 Cor 1:20; 2:6), or "this present evil age" (Gal 1:4), from "the age to come." This present age is dominated by rulers, demonic powers who are doomed to pass away (1 Cor 2:6-7).

Paul's belief in the resurrection of Jesus the Messiah convinced him that eschatological events had begun to take place within history and that the resurrection of Jesus was part of the traditional Jewish expectation of the resurrection of the righteous (1 Cor 15:20-23). For Paul the present is a temporary period between the

death and resurrection of Christ and his return in glory in which those who believe in the gospel share in the salvific benefits of the age to come (Gal 1:4; 2 Cor 5:17). This temporary period is characterized by the eschatological gift of the Spirit of God, who is experienced as present within the Christian community in general as well as within particular believers who are members of the Christian community (Rom 8:9-11; 1 Cor 6:19; 12:4-11; 1 Thess 4:8). While Paul did not explicitly use the phrase "the age to come" in 2 Corinthians 5:17 and Galatians 6:15, he uses the phrase "new creation," a phrase with apocalyptic associations (Is 65:17; 66:22; Rev 21:1). Though the final consummation still lay in the future, for Christians the new age was present because the Messiah had come.

The basic salvation-history framework of Paul's thought incorporates within it the apocalyptic notion of the two successive ages. This is evident in Romans 5:12-21, where Paul schematizes history in terms of the two realms of Adam and Christ, which are both made part of present experience. Paul therefore made an "already"/"not yet" distinction indicated by his use of the indicative and imperative in passages such as Galatians 5:25: "If we live [indicative] in the Spirit, let us also walk [imperative] in the Spirit." While the flesh has been crucified with Christ (Gal 2:20; 3:24; 6:14; Rom 6:2, 6-7, 22; 8:13), the desires of the flesh still pose temptations for Christians (Gal 5:16-18; Rom 6:12-14; 8:5-8). The daily obedience of the Christian provides the continual and necessary authentication of the original act of believing in Christ until the future redemption of creation and the freedom of the children of God becomes a reality (Rom 8:19-20).

5.5.2. Spatial Dualism. Ancient Israelite cosmology conceived of a cosmos in three levels: heaven, earth and Sheol. This same conception of the universe was transmitted to early Judaism, though the emphasis on the transcendence of God which characterized late Second Temple Judaism presupposed a sharper distinction between the heavenly world and the earthly world. This spatial dualism (heaven as the dwelling place of God and his angels; earth as the dwelling place of humanity) coincided with temporal or eschatological dualism in the sense that the kingdom of God, or the age to come, was a heavenly reality which would eventually displace the earthly reality of the present evil age. For Paul,

"the things that are seen are transient, but the things that are not seen are eternal" (2 Cor 4:18; see Phil 3:20; 2 Cor 5:1-5). There are therefore three cosmic realms: heaven, earth and the region below the earth (Phil 2:10), though the normal focus is on the two primary cosmic realms: heaven and earth (1 Cor 8:5; 15:47-50; see Col 1:16, 20; Eph 1:10; 3:15). Heaven is where God and his angels dwell (Rom 1:18; 10:6; Gal 1:8; see Eph 6:9) and is the place where Christ is now seated at the right hand of God, a tradition based on the pre-Pauline Christian interpretation of Psalm 110:1 (Rom 8:34; Col 3:1). Heaven is the place from which Jesus will return in the near future as both savior and judge (1 Thess 1:10; 4:16; Phil 3:20; see 2 Thess 1:7).

5.5.3. Ethical Dualism. For Paul the two antithetical cosmic powers were God and Satan, who respectively represent the moral qualities of good and evil. God is the ultimate source of love (Rom 5:5; 8:39; 2 Cor 13:14). It is God who has expressed love toward humanity by sending his Son to die an atoning death for them (Rom 5:8). The influence of the Spirit of God, that is, God's active presence in the world, is reflected in such ethical virtues as love, patience, kindness and self-control (Gal 5:22-23). There is an essential similarity between the lists in 1QS 4:2-6, 9-11, in which the virtues encouraged by the spirit of truth are contrasted with the vices promoted by the spirit of error, and the lists in Galatians 5:16-24, where vices are the products of the flesh, while virtues are the products of the Spirit. Satan is frequently mentioned as the supernatural opponent of God and Christians and as the source of evil in the world (Rom 16:20; 1 Cor 7:5; 2 Cor 2:11; 11:14; 12:7; 1 Thess 2:18).

5.5.4. Psychological or Microcosmic Dualism. Assuming that the structure of Paul's theology is in part the product of his adaptation of Jewish apocalypticism as the framework for understanding the significance of the death and resurrection of Jesus the Messiah, that same apocalyptic framework had a profound effect on the way in which he understood the effects of salvation on individual Christians. The basic structure of Jewish apocalypticism consisted of a temporal or eschatological dualism consisting of two ages, the present era (a period of oppression by the wicked), which will be succeeded by a blissful future era. While Jewish apocalypticism had a largely future-orientation, Paul's recognition of the fact that Jesus was the Messiah who

was a figure of the past as well as the present and future, led him to introduce some significant modifications. The most significant modification is the softening of the distinction between this age and the age to come with his emphasis on the hidden presence of the age to come within the present age.

Paul exhibits a tendency to conceptualize human nature and existence as a microcosmic version of a Christianized form of apocalyptic eschatology. In other words, the apocalyptic structure of history was considered paradigmatic for understanding human nature. In effect the Christian person is situated at the center of history in the sense that in him or her the opposing powers which dominate the cosmos are engaged in a struggle. Just as Paul's Christian form of apocalyptic thought is characterized by a historical or eschatological dualism consisting in the juxtaposition of the old and new ages, so his view of human nature reflected a similarly homologous dualistic structure. This is evident in 2 Corinthians 5:17 (NRSV): "So if anyone is in Christ, there is a new creation: everything old has passed away; see, everything has become new!" Here Paul uses the basic apocalyptic expectation of the renewal of creation (i.e., the inauguration of the age to come) following the destruction of the present evil age as a paradigm for the transformation experienced by the individual Christian who has moved from unbelief to belief. Thus the apocalyptic expectation of an impending cosmic change from the present evil age to the future age of salvation has become paradigmatic for the transformation of the individual believer.

Since this apocalyptic transformation affects only those "in Christ," the external world and its inhabitants remain under the sway of the old age. The new age is thus concealed in the old age. The phrase "new creation" refers to the renewal or re-creation of heaven and earth following the destruction of the old cosmos (Is 65:17; 66:22; 1 Enoch 91:16; 72:1; 2 Bar. 32:6; 44:12; 49:3; 57:2; *Bib. Ant.* 3:10; 2 Pet 3:11-13; Rev 21:1). Bultmann's existentialist understanding of Pauline anthropological terms (i.e., the human person as a free agent responsible for his or her own decisions), and E. Käsemann's apocalyptic or cosmological understanding of Paul's anthropology (i.e., the human person is a victim of supernatural cosmic forces) are not mutually exclusive categories. Paul also conceives of the

struggle within each Christian as the conflict between the Spirit and the flesh, as in Galatians 5:16: "Walk in the Spirit and you will not fulfill the desires of the flesh."

5.6. Jesus the Messiah. One of the major obstacles impeding Jewish belief in Jesus as the Messiah of Jewish expectation was the fact of the crucifixion (1 Cor 1:18-25; Gal 5:11; see Heb 12:2). One of the unsolved problems in the investigation of early Christianity is the reason why early Christians recognized the messianic status of Jesus despite the fact that he fulfilled none of the central functions which the Jewish people expected of the figure of the Davidic Messiah, including his role as an eschatological high priest, a paradigmatic benevolent and all-powerful king, a judge and destroyer of the wicked, a deliverer of the people of God (*Pss. Sol.* 17; 4 Ezra 12; 2 Bar. 40).

In the seven undisputed letters of Paul the term *Christos*, meaning "Anointed One," "Christ" or "Messiah," occurs 266 times, usually as a proper name for Jesus (e.g., "Jesus Christ"), often with some residual titular quality (evident in the name "Christ Jesus"), and occasionally as a name for a specific Messiah, Jesus (Rom 9:5), but never as a general term for an eschatological deliverer within Judaism. In the seven core Pauline letters *Christos* is never used as a predicate (e.g., "Jesus is the Christ"), *Christos* is never given a definite article following the name "Jesus" (e.g., "Jesus the Christ"), and *Christos* is never accompanied by a noun in the genitive (e.g., "the Christ of God"). It is safe to conclude that the messianic status of Jesus was not a matter of dispute or concern to Paul. Paul assumes but does not argue that Jesus is the Messiah.

5.7. The Parousia and Judgment. The later OT prophets frequently referred to the day of the Lord as the occasion when God would judge the world (Amos 5:18-20; Zeph 1:14-16; Joel 2:2). In Jewish apocalyptic literature the inauguration of the eschaton occurs with the coming of God or of an accredited agent of God, the Messiah, to bring both salvation and judgment. While Paul can speak of "the day of the Lord" (1 Thess 5:2) and God's role as eschatological judge (Rom 3:6), the center of his eschatological hope has shifted from God to Christ, so that he can speak both of the impending day of the Lord (1 Thess 5:2) but claim that on that day God will judge the secrets of humans by Christ Jesus (Rom 2:16; see 2 Tim 4:1). The Parousia is referred to by Paul

both as "the revelation [*apokalypsis*] of our Lord Jesus Christ" (1 Cor 1:6) and (on the analogy of the OT expression "the day of the Lord") as "the day of Jesus Christ" (1 Cor 1:8; Phil 1:6; 3:12-21; Rom 14:7-12, 17-18; 2 Cor 5:10; 1 Thess 4:13-18; 1 Cor 15:20-28, 50-58).

5.8. The Resurrection. For Paul the resurrection of Jesus was not an isolated miraculous event but rather the first stage of the general resurrection of the righteous dead (1 Cor 15:20-23). As an eschatological event, Paul expects that the resurrection of the righteous will occur when Christ returns (Phil 3:20; 1 Thess 4:13-18; 1 Cor 15:51-53). Those who are raised from the dead will be transformed into a new mode of existence (1 Cor 15:51-53; Phil 3:20-21). A similar expectation occurs in Jewish apocalyptic literature (Dan 12:3; 1 Enoch 39:4-5; 62:15; 2 Enoch 65:10; 2 Bar. 49:3). But the resurrection of Jesus, which guarantees the resurrection of believers, is not simply a past event with future consequences. Nor is the death of Jesus simply a historical fact. For Christians, baptism represents a real identification with Christ in both his death and resurrection, signaling death to the old life and resurrection to the new (Rom 6:1-14; 8:10-11; see Col 3:1-3; Eph 2:1-10).

5.9. The Eschatological Antagonist. The Christian doctrine of the incarnation of Christ made it all but inevitable that a satanic counterpart to Christ would be incorporated into early Christian apocalyptic expectation. In the Synoptic apocalypse the appearance of false messiahs and false prophets at the end of the age is predicted (Mk 13:21-22; Mt 24:23-24). This figure is called the antichrist in Johannine literature (1 Jn 2:18, 22; 4:3; 2 Jn 7). In Revelation the two major antichrist traditions, the godless, tyrannical ruler and the false, seductive prophet, are kept separate. The evil ruler is called the Beast from the Sea (Rev 13:1-10; 16:13; 19:20), while the false prophet is called the Beast from the Land, or the False Prophet (Rev 13:11-18; 16:13; 19:20). There is a single extended discussion of the coming of the eschatological antagonist in the Pauline letters (2 Thess 2:1-12), though strangely there are no allusions to this figure elsewhere in the Pauline letters. There Paul combines into a single figure the two major eschatological antagonist traditions, that of the godless, tyrannical ruler and that of the false, seductive prophet. This person is called both the "man of lawlessness" and the "son of perdition"

(2 Thess 2:3; see Dan 11:36-37; Sib. Or. 5:33-34; Asc. Isa. 4:6; 2 Enoch [Rec. J] 29:4), who will install himself in the temple of God, proclaim himself to be God (2 Thess 2:4) and perform miracles to legitimate his claims (2 Thess 2:9; see Mk 13:22; Mt 24:24; Rev 13:13-14). This eschatological antagonist has not yet appeared because someone or something is restraining him or it (2 Thess 2:7), though there is no agreement regarding whether this restraining force is Satan, the Roman Empire, the Roman emperor or perhaps some supernatural force. This eschatological antagonist will be slain by the Lord Jesus when he returns in judgment (2 Thess 2:8).

5.10. The Problem of a Temporary Messianic Kingdom. The relevance of 1 Corinthians 15:20-28 to the early Jewish and early Christian view of a temporary intermediate messianic kingdom is disputed, though the general view is that there is no clean and convincing evidence that Paul, like the author of Revelation (Rev 20:1-6), expected a messianic interregnum.

A. Schweitzer summarized Paul's apocalyptic beliefs in this way: (1) the sudden and unexpected return of Jesus (1 Thess 5:1-4); (2) the resurrection of deceased believers and the transformation of living believers, all of whom meet the returning Jesus in mid-air (1 Thess 4:16-17); (3) the messianic judgment presided over either by Christ (2 Cor 5:10) or God (Rom 14:10); (4) the inauguration of the messianic kingdom (not described by Paul, but hinted at in 1 Cor 15:25; Gal 4:26); (5) the transformation of all nature from mortality to immortality during the messianic kingdom (Rom 8:19-22) and the struggle with angelic powers (Rom 16:20) until death itself is conquered (1 Cor 15:23-28); (6) the conclusion of the messianic kingdom (Paul does not mention its duration); (7) the general resurrection at the conclusion of the messianic kingdom (1 Cor 6:3); (8) the judgment upon all humanity and defeated angels. According to Schweitzer, Paul introduced two resurrections although Jewish eschatology before him knew only a single resurrection, either at the beginning or the end of the messianic kingdom. This modification was motivated by Paul's belief in the death and resurrection of Jesus the Messiah. The first resurrection enables believers who have died as well as living Christians to participate in the messianic kingdom, all enjoying a resurrection mode of existence.

Schweitzer's reconstruction of Pauline escha-

tology is subject to several criticisms. (1) There is no evidence in 1 Thessalonians 4:13-18 or 1 Corinthians 15:20-28 that Paul expected an intermediate messianic kingdom (Wilcke). (2) There is no evidence to indicate that Paul expected a general resurrection of both the righteous and the wicked dead.

There are a number of reasons for thinking that it is more probable that 1 Corinthians 15:20-28 indicates that the Parousia will shortly be followed by the resurrection and judgment, which together will usher in the final consummation of history (Davies 1970, 295-97): (1) For Paul the kingdom of God is an unending kingdom (1 Thess 2:12; Gal 5:21; 1 Cor 6:9-10; 15:50; see 2 Thess 1:4-5; Col 4:11). (2) The only text which mentions the "kingdom of Christ" (Col 1:12-13) understands it as a present fact. (3) Paul connects the Parousia with the judgment of the world (1 Cor 1:7-8; 2 Cor 1:14; Phil 1:6, 10; 2:16). It is probable that Paul has essentially historicized the apocalyptic conception of a temporary messianic kingdom in terms of a temporary period between the crucifixion and resurrection of Jesus and his Parousia. [D. E. Aune]

6. Later New Testament Writings and Apocalypticism.

In later NT writings the expectation of the Parousia is enriched by anticipations of a renewed heaven and earth, including a renewed Jerusalem. 2 Peter 3:10-14 speaks of cosmic transformation, wherein the "the day of the Lord will come like a thief, and then the heavens will pass away with a loud noise, and the elements will be dissolved with fire, and the earth and the works that are upon it will be burned up" (2 Pet 3:10 RSV). Hebrews 12:18-24 and 13:14 speak of a new Jerusalem, a theme envisioned in several scrolls from Qumran (e.g., 1Q32, 2Q24, 4Q554-555, 5Q15, 11Q18; see New Jerusalem Texts) and ultimately inspired by the visions of Ezekiel. This theme is treated in the NT in the greatest detail in Revelation 21-22. According to the seer: "Then I saw a new heaven and a new earth; for the first heaven and the first earth had passed away, and the sea was no more. And I saw the holy city, new Jerusalem, coming down out of heaven from God, prepared as a bride adorned for her husband; and I heard a loud voice from the throne saying, 'Behold, the dwelling of God is with men. He will dwell with them, and they shall be his people,

and God himself will be with them; he will wipe away every tear from their eyes, and death shall be no more, neither shall there be mourning nor crying nor pain any more, for the former things have passed away'" (Rev 21:1-4 RSV). The description of this new Jerusalem, which emphasizes the number twelve, blends together Jewish apocalyptic with Christian emphasis on Jesus, God's "lamb," whose return is eagerly awaited. [C. A. Evans]

APOCRYPHA AND PSEUDEPIGRAPHA

The term *Apocrypha* is applied by Protestant Christians to the books included in the OT by the Roman Catholic, Coptic and Eastern Orthodox churches but which are not found in the Jewish or Protestant canon. The term *Pseudepigrapha* refers to a much larger body of texts, most of which share the literary device of being written under the pseudonym of a great or an ancient figure in Israel's heritage (Roman Catholic and Orthodox writers usually refer to this body as Apocrypha). These collections preserve important voices that witness to the thought, piety and conversations within the Judaism of the Second Temple period and that provide essential background for the theology, cosmology, ethics, history and culture of the authors of the NT and shapers of the early church, many of whom knew, valued and drew upon the traditions preserved in these texts.

1. Definitions of Terms
2. Contents and Leading Ideas
3. Significance

1. Definitions of Terms.

1.1. Apocrypha. The word *apocrypha* (Gk "hidden things") was originally an honorable title for books containing a special, esoteric wisdom that was "too sacred or profound to be disclosed

to any save the initiated" (Charles). Some scholars locate the origin of this term in 4 Ezra 14:44-47 (= 2 Esdr 14:44-47; see Esdras, Books of), which speaks of "hidden books" containing divine wisdom for the "wise among the people" and which are distinct from the canonical collection that contains divine wisdom for the unworthy and the wise alike (Rowley; Fritsch). In the wake of controversies in the early church and again in the aftermath of the Reformation, the term took on negative connotations, signifying books that were withheld on account of their "secondary or questionable" value (Charles) and that were potentially "false, spurious, or heretical" (Charles; Rowley).

The term is now used in Protestant circles to designate thirteen to eighteen texts included as part of the OT that include historical works (1 and 2 *Maccabees, 1 *Esdras), tales (*Tobit, *Judith, 3 Maccabees, an expanded Esther, additional tales about Daniel), wisdom literature (*Wisdom of Solomon, Wisdom of Ben *Sira), pseudepigraphical prophetic literature (*Baruch, Letter of Jeremiah), liturgical texts (*Prayer of Manasseh, Psalm 151, Prayer of Azariah and the Song of the Three Young Men; see Daniel, Esther and Jeremiah, Additions to), an *apocalypse (2 Esdras) and a philosophical encomium (4 Maccabees). These books are found, with the exceptions of 4 Ezra and Prayer of Manasseh, in numerous manuscripts of the *Septuagint and were clearly prized by the early church and read as Scripture. Recent discoveries at Qumran show that such works were not only preserved among Christian circles—Ben Sira, Tobit and Letter of Jeremiah were all found among the *Dead Sea Scrolls, together with numerous pseudepigrapha (*1 Enoch* [see Enoch, Books of], **Jubilees* and other pseudepigraphic works not previously known; Stone).

The lack of consensus concerning what books belong in the Apocrypha bears witness to the variety in OT canon among Christian churches. All of these books are considered by some Christian communions as canonical. J. H. Charlesworth calls for a uniform and exclusive delineation of Apocrypha, following the lists of the majority of LXX manuscripts rather than the Vulgate. He would exclude 3 and 4 Maccabees, Prayer of Manasseh and 2 Esdras (2 Esdras 3-14 = 4 Ezra) from the Apocrypha and include them among the Pseudepigrapha. The more recent study Bibles (Meeks; Metzger and Murphy)

opt for a more inclusive collection of Apocrypha (all eighteen). In LXX manuscripts 3 and 4 Maccabees have in their favor a strong presence, commanding great respect in the Greek Orthodox church. C. A. Evans rightly notes that the line between Apocrypha and Pseudepigrapha is not clearly drawn and is blurred even further as one considers the relationship between *Jude* and *1 Enoch* and **Assumption of Moses* (Evans 22 Russell 1993). We may never arrive at the consensus for which Charlesworth calls.

The books contained in the Apocrypha have had a spotted history of reception in the church, and not all eighteen (or thirteen) have fared equally well in that history (see Fritsch for a fuller discussion). Paul clearly knew and used Wisdom of Solomon, and echoes of Ben Sira appear in the sayings of Jesus. The apostolic fathers (Polycarp, Clement, Pseudo-Barnabas) quote from or allude to Wisdom of Solomon, Tobit and Ben Sira as authoritative writings, and numerous allusions to other Apocrypha appear as well. Some leading figures in the church, like Jerome and Origen, recognized the difference between the collection of OT Scriptures used by the church and the Hebrew canon, and Jerome especially calls for a practical distinction to be made between the "canonical" texts and "ecclesiastical" texts, which are useful and edifying but not of the same order. Other figures, such as Clement of Alexandria and Augustine, embrace the larger collection as of uniform inspiration and value.

Only the Protestant Reformation forced a decision. Martin Luther decisively separated the books or parts of books (e.g., the Additions to Esther and Daniel) that were not included in the Hebrew canon from his OT as "books which cannot be reckoned with the canonical books and yet are useful and good for reading" (quoted by Rowley). The rest of the Protestant Reformers followed his practice. The apocryphal books continued to be printed and recommended as edifying material, but they were not to be used as a basis for doctrine or ethics apart from the canonical books. The Roman Catholic church responded at the Council of Trent (1546) by declaring these books (excluding 1 and 2 Esdras, Prayer of Manasseh and 3 and 4 Maccabees) to be fully canonical.

The opinion of many Protestants concerning the Apocrypha has fallen considerably from Luther's estimation. Emphasis on "Scripture alone" and the "sufficiency of Scripture," fueled

by centuries of tension between Catholic and Protestant churches, has rendered the Apocrypha more suspected than respected, and lack of acquaintance with the texts among most Protestants has reinforced this aversion. Nevertheless, the collection of texts included in the Apocrypha merits careful attention not only on the basis of its testimony to the currents and developments within Judaism during the intertestamental period but also on the basis of the influence these texts exercised on the church during its formative centuries.

1.2. Pseudepigrapha. The term *pseudepigrapha* (Gk, "things bearing a false ascription") highlights primarily a literary characteristic of many writings from the Hellenistic and Greco-Roman periods, that is, writing under the assumed name of a great figure from the distant past. The term does not in itself distinguish the body of texts to which it refers from canonical writings, as numerous scholars have maintained that pseudepigrapha are present within the canon (e.g., Daniel, Song of Songs, Deutero-Isaiah, numerous psalms). Study of the larger phenomenon of pseudepigraphy among Jewish and Greco-Roman writings of the period might, however, help students assess the implications of canonical pseudepigraphy (Evans; see Pseudonymity and Pseudepigraphy).

This term, like "apocrypha," has acquired negative connotations. Charlesworth's survey of several dictionary articles shows that in common parlance the term denotes "spurious works" that are "not considered canonical or inspired." These dictionaries, Charlesworth correctly avers, perpetuate a misleading equation of pseudepigraphy with illegitimacy. Moreover, he rightly asks for clarification concerning the question of canonicity and inspiration. A number of these books are cited as authentic and authoritative texts. We must beware, then, of attaching modern value judgments on an ancient literary practice.

The term is used by scholars to refer to the "rest of the 'outside books'" (Rowley) or to "literature similar to the Apocrypha which is not in the Apocrypha" (Stone 1984). The turn of the twentieth century witnessed the publication of two important collections of pseudepigrapha (Kautzsch and Charles), although these were "reductional" collections of only a dozen or so texts (Charlesworth). Charlesworth and his team sought a broader delineation of this body of lit-

erature, including sixty-three texts that matched the general description proposed for the corpus. These texts (1) were almost exclusively Jewish or Christian; (2) were often attributed to ideal figures in Israel's past; (3) customarily claimed to contain God's word or message; (4) built on narratives or ideas in the OT; (5) were written between 200 B.C. and A.D. 200 (or, if they were written later, appeared to preserve substantially earlier traditions). Charlesworth asserts that these criteria are meant to describe a collection, not present hard-and-fast criteria for what constitute Pseudepigrapha.

Major bodies of texts are not grouped among the Pseudepigrapha (see Writing and Literature: Jewish). *Philo and *Josephus have left voluminous materials, but, as the authorial attestation is not pseudepigraphic, their works stand outside of this category. The *Dead Sea Scrolls contain many pseudepigraphic texts, but, since the "channel of transmission" (Stone) is so well defined, these are treated as a separate corpus. Finally, there are the targums (see Rabbinic Literature: Targumim) and other rewritings of biblical texts (see Rewritten Bible) that share much in common with books like *Jubilees* but are not included in the Pseudepigrapha.

The phenomenon of pseudepigraphy is complex. R. H. Charles sought the origin of the practice in the rise of a monolithic Jewish orthodoxy based on a closed canon of Law and Prophets, which would not permit authors to claim inspiration in their own name. The image of a normative Judaism before A.D. 70 has largely been refuted. Perhaps more useful is S. Cohen's suggestion that Jews in the Second Temple period perceived themselves as living in a postclassical age: this awareness led authors to connect their work with some figure from the classical (preexilic or exilic) period. In the case of apocalypses, the phenomenon may be even more complex, with authors identifying, in some ecstatic experience, with the figure of the past and giving new voice to the ancient worthy. The choice of pseudonym may indicate a conscious attempt to link one's own work with the "received tradition of teaching" related to that name (Stone). Evans echoes this view with approval, extending it into the period after the apostolic age, during which authority was mediated only through the classical figures of the church's first generation and pseudepigraphy again became a common phenomenon.

Scholars have noted the limitations of both terms. First, *apocrypha* and *pseudepigrapha* are not equal terms. One derives from canonical debates and usage; the other from a peculiar literary characteristic. *Apocrypha* is an especially problematic term for the historical study of these documents, since decisions about canon are much later than the period in which the texts were produced and often come only centuries after a document has been in use and exercising an important influence (cf. Charlesworth; Nickelsburg). By using *pseudepigrapha* to refer to a body of texts outside the Protestant canon and the Apocrypha, we obscure the pseudepigraphic nature of many texts within these bodies of literature (Nickelsburg; Russell). C. T. Fritsch adds rightly that some pseudepigrapha are anonymous rather than pseudonymous (e.g., 3 and 4 Macc), and that, even where the label is correct, it "unduly emphasizes a feature of minor importance."

Problems with both terms lead many scholars to treat Jewish literature not by these often value-laden or anachronistic categories but by genre, geographic derivation or period (Newsome, Nickelsburg, Schürer, Kraft and Nickelsburg, Stone). Apocrypha and Pseudepigrapha appear side by side under the categories of wisdom literature, historical writings, liturgical pieces, and the like. Fritsch and Russell advocate using the term *apocrypha* to cover all Protestant noncanonical texts, following the usage of the modern synagogue ("exterior books"), although this suggestion, too, betrays a certain canonical bias.

Despite these difficulties, there is some value in retaining the terms (Charlesworth). The consideration of the Apocrypha as a collection bears witness to the early church's selection of certain Jewish writings that, although they did not belong to the Hebrew canon, were nevertheless held to be of special value and inspiration and exercised an important influence on the church from its inception. As long as one recognizes that these categories could remain somewhat fluid (witnessed by Jude's use of *1 Enoch* and *As. Mos.* and the inclusion of 3 and 4 Macc in many LXX codices), the terms remain valuable as a prioritizing of the vast wealth of Jewish literature that has come down to us.

2. Contents and Leading Ideas.

Although there is significant overlap between

the two collections, this article will survey them separately for the sake of clarity and definition.

2.1. Apocrypha. The two historical books, 1 and 2 Maccabees, provide essential information about a series of events that shaped Jewish consciousness during the later Second Temple period. The forced *hellenization program of the high *priests Jason and Menelaus (175-164 B.C.), the rise of the *Hasmonean family as the saviors of Israel and the combining of the high priesthood and kingship under that one dynasty had long-lasting ramifications for the period. The ethos of the later Zealot movement (*see* Revolutionary Movements), the notion of a military messiah (*see* Messianism) and the aversion toward lowering the boundaries between Jew and Gentile (e.g., Jewish resistance to Paul's mission) all have strong roots in this period. It was also during this period that the major sects within Judaism took shape—frequently in reaction against (e.g., Qumran *Essenes, *Pharisees) or in support of (*Saducees) the Hasmonean administration of the *temple. Second Maccabees also provides an important early witness to the belief in the *resurrection of the righteous and to a growing angelology.

The Wisdom of Ben *Sira, written in *Jerusalem in about 180 B.C., supports commitment to Torah as the only path to honor and as the way of true wisdom. It contains instruction on a wide array of topics, but its teachings on *prayer, forgiveness, almsgiving and the right use of wealth have left an indelible impression on later Jewish ethical instructions and on the early church. *Wisdom of Solomon, a product of Egyptian Judaism from the turn of the era, also promotes the Jewish way of life, emphasizing the eternal importance of God's verdict on one's life, the rewards and nature of wisdom and the actions of God on behalf of God's people, Israel. The author takes the personification of Wisdom to its highest level, and this became very influential for the early church's reflection on the divinity and preexistence of Jesus. Wisdom of Solomon helps Jews remain dedicated to Torah also through a demonstration of the folly of Gentile religion, much of which is paralleled in Paul's attacks on Gentile depravity and on idolatry. Here we might mention also the Letter of Jeremiah, which reinforces Jews' conviction that idols are nothing and that Gentiles are alienated from true religion (*see* Daniel, Esther and Jeremiah, Additions to).

Although it is not properly a wisdom book, 4 *Maccabees also promotes adherence to Judaism, assuring Jewish readers through a philosophical demonstration that strict obedience to Torah trains one in all the cardinal virtues so highly prized and regarded by the Greco-Roman culture (*see* Vice and Virtue Lists). Indeed, Jews trained by Torah surpass all others in the exercise of virtue, as the courage and endurance of the martyrs of the hellenization crisis (the subjects of the author's praise) show (*see* Hellenism). Particularly those commandments that separate Jews from people of other races—those laws that frequently occasion the contempt of non-Jews—are shown to lead to virtue and honor.

The Apocrypha also contains numerous edifying tales that provide useful windows into the *piety of the period. Hebrew Esther was expanded to bring direct references to God and expressions of piety (prayer, dietary *purity) into the story (*see* Daniel, Esther and Jeremiah, Additions to). *Tobit, a story from the Diaspora and perhaps the oldest book in the Apocrypha, tells a tale of God's providence, the activity of angels and *demons, the efficacy of prayer, and exorcism. The story promotes almsgiving and acts of charity within the Jewish community, as well as the value of kinship and endogamy (*see* Family and Household). *Judith, possibly a Palestinian work from the Maccabean period, tells of a heroine who used her charm to trap and kill a Gentile oppressor. The story affirms the importance of prayer, dietary purity, the virtue of chastity and God's care for God's people in times of adversity.

Third *Maccabees may also be classified as an edifying legend that provides a saga for *Diaspora Judaism that parallels the story of 2 Maccabees. It affirms God's special care and closeness to Jews living in the Diaspora and separated from the Promised Land, and it attests to the tensions between faithful Jews, apostate Jews and the dominant Gentile culture. First *Esdras may be counted among this group, although it is more a rewriting of biblical books (2 Chron 35:1—36:23; Ezra; Neh 7:38—8:12). The only original portion of this book is a courtly tale about the wisdom of Zerubbabel (1 Esdr 3:1—5:6). Two tales featuring the hero Daniel (originally independent tales) appear in the expanded, Greek version of that book (*see* Daniel, Esther and Jeremiah, Additions to). The first, Su-

sanna, like 1 Esdras 3:1—5:6, celebrates the wisdom of a Jewish leader. The second, *Bel and the Dragon*, demonstrates the folly of idolatry in Daniel's undermining of the credibility of an image of Bel and a living serpent as gods.

A number of liturgical texts are included among the Apocrypha. Psalm 151 recalls God's choice of David and David's triumph over the Philistine giant—surely a potent image for the place of Israel among the giant Gentile kingdoms that held sway over Israel throughout this period save for the time of the Hasmonean dynasty. Jewish poets were watchful for points in the biblical story that called for a prayer or a psalm but did not record them. Two additions to Daniel and the *Prayer of Manasseh supply what the narratives lack: a prayer of repentance and call for help in the fiery furnace (Prayer of Azariah), a psalm of deliverance (Song of the Three Young Men) and another penitential prayer (Prayer of Manasseh) that affirms that no sinner is beyond God's mercy and power to forgive. Although essentially a pseudepigraphic prophetic book, *Baruch also contains much liturgical material. The opening chapters (Bar 1:1—3:8) present penitential prayers affirming God's justice in bringing upon Israel and Judah the curses of Deuteronomy but also open the door to the hope of return as God is remembered and obeyed afresh in the land of exile. There follows a wisdom psalm, identifying wisdom wholly and exclusively with the Torah of Moses in a manner reminiscent of Ben Sira (Bar 3:9—4:4). The final sections take on a more prophetic cast, introducing oracles promising the gathering of the Diaspora Jews, the judgment of the cities that oppressed the Jews and the exaltation of Zion.

Finally, the collection includes an apocalypse, 2 Esdras (or 4 Ezra). The author writes in response to the destruction of Jerusalem in A.D. 70, and even more directly in response to God's slowness in punishing Rome, the instrument of destruction. In its negation of hope for this age, its hope for reward in the age to come, its visions of the many-headed eagle and the man from the sea, this text provides an important window into Jewish apocalypticism that offers instructive parallels for NT apocalyptic material.

Throughout this corpus, one notices the prominence of the covenant theology of Deuteronomy—the conviction, rooted in the blessings and curses of Deuteronomy 28—32, that the na-

tion and the individuals who follow Torah will be rewarded, and the nation or individual who departs from Torah will be punished. During this tumultuous period, this view was frequently altered to seek that reward or punishment in the *afterlife (whether by resurrection, as in 2 Macc, or in the immortality of the soul, as in Wis), but it was never abandoned. Much of the literature is vitally concerned with God's care for God's people, what it means to live as a faithful and obedient people and how to respond to the pressures that threaten that loyalty.

2.2. Pseudepigrapha. Among the Pseudepigrapha are found samples of a wide variety of genres: apocalypses, testaments, expansions of biblical narratives, wisdom literature, philosophical literature, liturgical texts, historical works, poetry and drama all have their representatives.

Many of the Pseudepigrapha fall into the genre of apocalypse. Of these the most important and accessible may be 1 **Enoch* and 2 **Baruch*. The oldest strata of 1 *Enoch*, which is a composite work, may date from the third century B.C. This work presents a journey to the places prepared for the punishment of the wicked and reward of the righteous, an advanced angelology based on the story of the "Watchers" (cf. Gen 6:1-4; see *Angels of the Nations*) and a scheme of history placing the recipients near the time of God's breaking into the fabric of history to execute judgment. The *Similitudes* (1 *Enoch* 37—71), composed perhaps during the first century A.D., bear witness to developments of the figure of the Son of Man and thus provide relevant material for the study of that title in the Gospels. The work as a whole left its mark on Jude (which quotes 1 *Enoch* 1:9) and especially Revelation. Like 4 *Ezra*, 2 *Baruch* is an apocalyptic response to the destruction of Jerusalem. It also counsels renewed commitment to Torah as the path to God's vindication of the chastised nation, assuring readers of the nearness of God's deliverance and the certainty of the chastisement of Rome. Other apocalypses of note include 2 *Enoch*, the **Sibylline Oracles*, the *Apocryphon of Ezekiel*, the **Apocalypse of Abraham* and the **Treatise of Shem*.

Closely related to apocalypses are the texts that fall within the genre of testament. These are typically deathbed speeches by great figures of Israel's past, and they present a narrative review of the figure's life (often as a model for virtuous living), ethical exhortations and fre-

quently eschatological predictions, closing with the death and burial of the hero. The most important of these are the **Testaments of the Twelve Patriarchs*, which preserve important examples of developments in angelology, demonology, the priestly and regal functions of the Messiah and ethics. The **Testament of Job* highlights once again the folly of idolatry but also provides important material for the development of the figure of Satan (see Belial). The **Testament of Moses*, essentially an expansion of Deuteronomy 31–34, attests to the regard shown **Moses* as prophet, mediator and perpetual intercessor, thus providing useful background for NT reflections on Moses. The stance of nonviolent resistance advocated by this book stands in stark contrast to more militaristic ideologies of the period, and the idea of a day of repentance that precedes the coming of God's kingdom parallels Jesus' summons to repentance as a preparation for God's coming (cf. Mk 1:14-15).

Of the expansions of biblical narratives, the most important are **Jubilees* and *Martyrdom of Isaiah* (see Ascension of Isaiah). Dating from the late second century B.C., *Jubilees* rewrites the stories of Genesis and Exodus and is of great value for its witness to the development of a theology of Torah. The law revealed to Moses is presented as an eternal law, written on heavenly tablets and obeyed even by archangels. The patriarchal narratives are retold to emphasize their obedience to the Torah, particularly ritual and liturgical observances. The book also reinforces strong boundaries between Jew and Gentile (especially Idumeans) and locates the origin of evil in the activity of Satan and his angels rather than in Adam's weakness. The author looks forward to an imminent renewal of obedience to Torah that will result in a return to primeval longevity. *Martyrdom of Isaiah* tells of the apostasy of Manasseh and the arrest and execution of Isaiah (he was sawn in two; cf. Heb 11:37) at the instigation of a false prophet, Belkira, a demon working to lead Jerusalem astray. In its present form, the *Martyrdom* has been thoroughly Christianized, presenting Isaiah as an explicit witness to Jesus and the history of the early church (*Mart. Isa.* 3:13-31).

Within this category we might also consider the **Letter of Aristeas*, written in Greek near the end of the second century B.C. This work is not directly based on a biblical narrative or character but is more of an edifying tale in defense of

the **Septuagint*, the Greek translation of the Hebrew Scriptures, and the rational character of a life lived according to Torah. It tells of the wisdom of the Jewish scholars who translated the Torah into Greek and the compatibility of obedience to Torah with the best traditions of Greek ethical philosophy, and it upholds the reliability of the LXX. Other notable expansions of biblical narratives include **Joseph and Asenath*, **Life of Adam and Eve* and the *Liber Antiquitatum Biblicarum*, otherwise known as **Pseudo-Philo*.

Among the Pseudepigrapha are also found **liturgical texts*. The collection of the eighteen **Psalms of Solomon* reflects upon the corruption of the Hasmonean house in its final decades, the intervention of Pompey the Great (who besieged Jerusalem at the request of a claimant for the Hasmonean throne and entered the holy place of the temple) and the death of Pompey in Egypt. All these events are seen as demonstrating the principle of Deuteronomy that departure from the law brings punishment, but also that the Gentile instrument of punishment will not go free. The psalms speak of God's generous provision for all creation, promote the way of life of the righteous person, critique hypocrisy and pride, affirm the value of God's correction and depict the advent of the messianic age under the leadership of a Son of David, the Lord Messiah. Of special interest also are the Hellenistic Synagogal Prayers, which show the blending of Jewish and Christian piety in the early church and which, stripped of their Christian additions, provide a unique view into the piety of the synagogue. Among these poetical texts may also be found several additional psalms of David and the **Odes of Solomon*, a Christian collection with close affinities to the Fourth Gospel.

A number of wisdom texts, often showing the degree to which Jews could adapt and use Greek philosophy, maxims and ethics, are also included in the collection, as well as literary works (poetry and drama), which again frequently show conscious imitation of Greek forms. Finally, the collection includes fragments of historians, which probe the early history of the Jews in a manner reminiscent of **Josephus's Antiquities* (see Jewish Literature: Historians and Poets).

3. Significance.

The period between the Testaments is not a silent age. The texts contained in the Apocrypha

and Pseudepigrapha introduce the modern reader to many important and influential voices from the Hellenistic and Roman periods (see Jewish History: Greek Period; Jewish History: Roman Period). Without these texts our picture of the Judaism within which the church was born would be most incomplete. These voices demonstrate the diversity within Judaism during the Second Temple period, a view that has replaced early twentieth-century views about a "normative" (legalistic) Judaism before A.D. 70 (Charlesworth vs. Charles). It was a dynamic period of "ferment" within Judaism (Russell 1993), of wrestling with Jewish identity and covenant loyalty amid great social pressures and political upheavals.

The study of these texts leads to a deeper understanding of the Judaism and range of Jewish traditions that shape the proclamation of Jesus and the early church, and this is not the Judaism of the Hebrew Scriptures alone. The intertestamental voices highlight parts of the OT tradition that remained especially important but also attest to new developments, emphases and lines of interpretation that were not original to, but rather were assumed by, the early church. The cosmology, angelology, eschatology, christology and ethics of the early church owe much to the developments of this vibrant period. Some of these texts shed light on the ideology of those who opposed the Jesus movement or the Pauline mission. Many others were the conversation partners of founding figures within the church, and our full appreciation of the work of the latter depends on our acquaintance with the former.

APOCRYPHA OF MOSES (1Q29, 4Q374-377, 4Q408)

During the late Second Temple period many writings were composed that claimed Mosaic authorship: **Jubilees*, the **Temple Scroll*, the *Words of Moses* and several fragmentary texts. Except for *Jubilees*, all of these writings are known only from the **Dead Sea Scrolls*, though they do not appear to be compositions of the **Qumran* sectarian community. While these texts contain narrative, admonitions and prayers, they also often invoke the authority of Moses in support of halakic or other religious practices the author of the apocryphon wishes to establish.

1. Prophets and High Priests (1Q29, 4Q375, 376, 4Q408)

2. The Figure of Moses (4Q374, 377)

1. Prophets and High Priests (1Q29, 4Q375, 376, 4Q408).

Originally entitled "Three Tongues of Fire," 1Q29 was published in 1955. As the Cave 4 materials became available, overlapping text between 1Q29 and 4Q376, and the similar context and genre of 4Q375, suggested a broader work which appears to be a reworking of sections of the Pentateuch. The publication of 4Q408 (originally *Sapiential Work*) has also revealed common text with 1Q29 and 4Q376. This composition uses the Tetragrammaton when referring to God, a fact that some researchers have concluded resists the categorization of the composition as a Qumran sectarian work. However, sectarian language (e.g., "Prince of the congregation," 4Q376 frag. 1 iii 1) present in the text suggests otherwise. The oldest manuscript (4Q376) was copied in about 50 B.C.

Fragment 1 of 4Q375 rehearses the test of a prophet found in Deuteronomy 13:1-5. Following this passage, the Qumran text poses a question not found in the biblical discussion: what if the tribe to which the prophet belongs comes forth and claims, "He must not be executed, for he is a righteous man, he is a [trus]worthy prophet" (4Q375 frag. 1 i 6-7)? In answer, the prophet is taken before the anointed high priest, who conducts a ritual similar to that performed on the Day of Atonement. The text specifies that the high priest is to consult laws contained in the ark and to return to the assembly, presumably to announce his judgment.

The role of the high priest in an oracular decision is described in 1Q29 and 4Q376. The oracle is given by means of the Urim and Thummim, which, according to this text, were attached to the high priest's breastplate and referred to as "the left-hand stone" and "the right-hand stone." The shining of one or the other stone indicated the will of God. Although the text is badly damaged, one section appears to concern the authentication of a prophet, another a decision about military strategy. *Josephus (Josephus *Ant.* 3.8.9 §§214-18) gives a similar account of the oracular shining of the stones on the high priest's shoulders.

This description of the Urim and Thummim is also supported by a reading of Exodus 28:30, which is preserved in the LXX. English translations, following a contrasting exegetical tradition, read, "You shall put the Urim and the Thummim in [Heb. *'al*] the breastplate of judg-

ment." This interpretation supports the picture of sacred dice—perhaps jewels or stones—that were examined to give a positive or negative answer to the question posed by the priest. The LXX understood the Hebrew to mean that the Urim and Thummim were placed *on* (Greek *epi*) the breastplate. In addition to 1Q29 and 4Q376, this interpretation is also echoed by 4Q164 (peshet Isaiah^d) in its commentary on Isaiah 54:12a: "I shall make all your pinnacles as rubies." This refers to the twelve [priests . . .] who make the Urim and the Thummim shine in judgment [. . .]"

It is possible that these four documents, along with the *Words of Moses* (1Q22), are all copies of the same composition. All share a similar pseudo-Deuteronomistic style, with Moses speaking in the first person, and 1Q29, 4Q375 and 4Q376 share a common interest in the high priest as medium of God's will in situations of uncertainty and conflict, in particular the authentication of prophets. Part of the ultimate purpose of the composition may have been to identify the eschatological prophet. In 4Q376, the fragmentary column following the test of the prophet begins: "And if the Prince of the whole congregation is in the camp or if [. . .]." "Prince of the congregation" is an acknowledged messianic appellation in the Qumran corpus (CD 7:20, 1QSb 5:20; 4Q285 frag. 7 4). Perhaps the *Apocryphon* is more accurately an eschatological work and the recognition of the prophet is the key to recognizing the end of the age (1QS 9:10-11). If this is so, discussions of Deuteronomy 18:15-22 and 34:10 likely followed the surviving portions.

2. The Figure of Moses (4Q374, 377).

Two other fragmentary compositions refer to Moses but have a rather different style. In 4Q374 the speaker recalls the deliverance from Egypt. Moses' role is described as like "God" to the leaders of the Egyptians and "mediator" for the Israelites. The references to Moses appear to be in the third person, but it is not clear who the speaker is. Similarly in 4Q377 a speaker exhorts the Israelites to obey the commandments "spoken by Moses," through whose mouth God would speak "as though he were an angel." Both of these texts glorify the figure of Moses, but they do not appear to present direct speech by Moses, as do the texts discussed above. Their narrative settings are not clear, but if they are

recollections of Moses after his death, then they might be part of a rewritten and expanded version of the book of Joshua (*see* Apocryphon of Joshua).

APOCRYPHAL ACTS AND EPISTLES

The group of NT *apocrypha is not a fixed corpus, but the books included in it differ among scholars (*see* Apocryphal Gospels; for the apocalyptic and prophetic texts, *see* DLNTD, Apocryphal and Pseudepigraphical Writings). The texts are now readily accessible in modern editions (Elliott, Schneemelcher). The present article offers a definition of its own. The discussion will then naturally include the relationship of these books to the nascent NT. It will become evident that the apocryphal books are far from homogeneous as a group.

1. Definition
2. Motives for Writing
3. Epistles
4. Acts

1. Definition.

The large number of early Christian writings has never been satisfactorily divided into categories. Even the well-known term "apostolic fathers" is not without its problems. The label *apocryphal*, however, suggests some intended relationship to books of the NT. The presence of this relationship should decide the inclusion or exclusion of a book. The connection can ex-

press itself in the fact that a book in the category of NT apocrypha covers ground also covered in a NT document, in its ascription to an apostle or another important biblical character and/or in the imitation of one of the genres that are represented in the NT, namely, Gospel, acts, epistle and apocalypse. At the time of the origin of most apocrypha, the NT was not yet a fixed entity (*see* Canonical Formation of the New Testament).

Because texts like the epistles of Ignatius and *The Shepherd of Hermas* lack this conscious anchoring to one or more books of the NT, they are not to be included among the apocrypha. The same holds for the epistle ascribed to Barnabas, because it is a kind of tract that does not include his name and was only later ascribed to him (*see* Apostolic Fathers).

It is also disputed whether relevant texts from the library of Nag Hammadi, found in 1947 (*see* Gnosticism), should be included among the NT apocrypha (Schneemelcher does so, Elliott does not). In view of the great diversity of outlooks among the books and tracts that make up this collection, there is no compelling reason to keep them separate from other early Christian literature (*see* 3.6 and 4.8 below).

Among the NT apocrypha that fall within the genres of epistles and acts, not a single text seriously claims an origin before 125 A.D.; in this respect the situation here differs from that with the apocryphal Gospels. This means that the texts discussed below were not in existence when the NT documents were written. Rather the apocrypha reflect the reception of the books that were later canonized. As such, they can help the interpreter understand the world into which the canonical writings were launched and the way in which they were used or sometimes not used. The apocryphal acts largely reflect popular forms of Christianity and are valuable sources for students of the early church.

With the exception of the *Epistle to the Laodiceans*, the Western church never even considered the inclusion of these writings into the canon. Their textual history therefore stands apart from that of the NT, and many of them, especially the acts, have suffered badly in transmission.

2. Motives for Writing.

The texts under consideration differ so much that a general reason for their writing cannot be given. As they are nearly all anonymous or *pseudonymous, only the texts themselves can

give us a clue. Because by definition we include only pseudonymous epistles among the apocrypha, all examples of this genre involve a kind of pious fraud. Some authors of apocrypha wanted to supplement an existing text (the *Acts of Peter* and *Acts of Paul* supplement Acts of the Apostles) or to replace lost information (the *Epistle to the Laodiceans*). In other cases a doctrinal bias (*Acts of John* and *Acts of Thomas*) is clearly visible. Many later acts largely satisfy the curiosity of the believers concerning the fate of those apostles not dealt with in the canonical Acts of the Apostles.

3. Epistles.

The apocryphal epistles have little in common. In general they were written by one hand and transmitted without much later alteration. The number of apocryphal epistles is limited because at an early stage the church had its canon of epistles closed; consequently, creative activity turned to the writing of acts. Modern scholarship so far pays little attention to these epistles.

3.1. Epistles by Abgar and Christ. These two brief letters have been preserved by the historian Eusebius. Though it is old, nobody seriously believes that the correspondence is authentic. In it, King Abgar of Edessa in Syria asks Jesus to visit him in order to heal him. Jesus answers that after his departure one of his apostles will come to Abgar's country.

3.2. Third Corinthians. This alleged letter of Paul once belonged to the canon of the Armenian church. It is preceded by a letter from Corinthian elders to Paul, to which *3 Corinthians* claims to form the answer. Both brief letters exist as parts of the *Acts of Paul* (see 4.4 below) and also independently, as in one of the Bodmer papyri. Originally they were composed independently of the *Acts of Paul*. Their tendency is anti-Gnostic and forms a defense of the bodily resurrection of Christ (see Lutikhuisen in Bremner 1996).

3.3. Laodiceans. In Colossians 4:16 Paul states that he has written an epistle to the believers in Laodicea. This letter evidently disappeared very early; the present *Epistle to the Laodiceans* intends to replace it. It is a brief pastiche of Pauline phrases that has been preserved only in Latin.

3.4. Epistles of Paul and Seneca. This fictitious correspondence originated as an effort to make Christianity more acceptable to educated pagans. It consists of fourteen short letters in

Latin, the last two of which were added after the time of Jerome.

3.5. Epistle of the Apostles. This second-century document has the form of an epistle, whereas its contents form a dialogue between Jesus and his disciples that deals mainly with future events. Some scholars prefer to classify this text as a kind of gospel. Unknown until 1895, it has mainly been preserved in Coptic and Ethiopic. The tendency is anti-Gnostic.

3.6. Epistle of Peter to Philip (NHC VIII.2). This is a composite work, of which the letter forms only the brief first part. The main part contains several revelations of Christ to his apostles and a sermon by Peter. This text makes Jesus portray the *gnostic faith as the higher form of Christianity. The author makes ample but critical use of the NT Gospels and Acts. The date could be about A.D. 200.

3.7. Epistle of Titus. This relatively long letter is in bad Latin and forms a plea for ascetic life. Its unknown author often quotes the NT and the other apocrypha, which shows that the text is rather late, probably from fifth-century Spain.

4. Acts.

The five major apocryphal acts, those of Peter, Paul, Andrew, Thomas and John, have been transmitted as a corpus attributed to a certain Leucius. Modern research has established that Leucius was a fictive person, but with certain scholars he has been replaced by the no less fictitious figures of female authors. Although the books in question pay relatively much attention to *women and to renunciation of *marriage and love, the case for female authorship is weak. The major acts mentioned above have as many differences as they have things in common, so that they must be studied individually. These five differ from the other acts mentioned below because they were the earliest to be written. The value of even the earliest apocryphal acts for our knowledge of the first century, however, nearly equals zero. Generically, these writings draw close to the ancient pagan novels, which deal mainly with love and travels. Except in the *Acts of John*, a lot of attention is paid to the martyrdom of the eponymous apostle.

The production of books concerning apostles and the rewriting of earlier books of the kind continued into the Middle Ages. Sometimes a critical eye was needed to distinguish the older texts from the later versions. Nowadays

most later texts can be dated by their familiarity with contemporary developments such as doctrinal reflection, meetings of councils and the establishment of ecclesiastical offices.

4.1. Acts of John. This is the earliest of the apocryphal acts, having been written in *Asia Minor not later than 150 A.D. The beginning and several episodes have been lost. Influence of Acts of the Apostles is visible in the imitation of its unique "we" form, which occurs at irregular intervals in the *Acts of John*, without identification of the "I" and without change of narrative perspective. The text has a docetic Christology, and it has been interpolated with a gnostic piece that forms an interpretation of the suffering of Christ. This part of the text directly contradicts the words of the Fourth Gospel. The *Acts of John* was known to the authors of the following three acts.

4.2. Acts of Andrew. This is the worst preserved of the five major acts. It is disputed whether its peculiar ideology is gnostic. In any case the text rejects marriage in a straightforward manner. Its origin is probably second-century Asia Minor. At the end of the sixth century, Gregory of Tours wrote a kind of summary of this text from which he omitted all heretical elements.

4.3. Acts of Peter. This book testifies to a simple, popular form of Christianity, which is unconscious of the fact that ideologically it falls far below the level of contemporary texts. Although the anonymous author knew the Roman *regula fidei*, in places where he was influenced by the *Acts of John* he turns quasi-Gnostic. The narrative focuses on a contest in *Rome between Peter and Simon Magus (cf. Acts 8). This Simon, assumed to have been a Gnostic, is also a main character in other early Christian writings.

4.4. Acts of Paul. R. J. Bauckham has shown that this text was intended to report the events that took place after Acts 28. Large parts of the book have been lost. Important among the preserved elements are the romantic story concerning Paul and the pious virgin Thecla and *Third Corinthians* (see 3.2). The description of Paul's appearance in the Thecla episode is based on a physiognomic reading of 2 Corinthians 10–13 (see Bóllók in Bremmer). Tertullian (*De Bapt.* 17.5) refers to the *Acts of Paul* as a product of second-century Asia Minor.

4.5. Acts of Thomas. This writing is the only one of the acts to have been written in Syriac

and also the only one that has been preserved as a whole. It includes a famous hymn that has been called the most beautiful piece of early Christian literature, the Hymn of the Pearl. It has Thomas travel to India and preach the cessation of marriage and procreation. Its tendency is ascetic and probably gnostic.

4.6. Acts of Philip. A fourth- or fifth-century text, these acts were influenced by the major five mentioned above. The tendency is encratic but not heretical. Of the fifteen separate and heterogeneous acts of which it consisted, thirteen and a half have been preserved in the original Greek.

4.7. Acts of Andrew and Matthias. Although by the time of Gregory of Tours (see 4.2 above) this text was part of the *Acts of Andrew*, it is much later, probably fifth century (contra D. R. MacDonald). It lacks the philosophic and gnosticizing tendencies as well as the speeches and the theme of sexual abstinence that characterize the *Acts of Andrew*.

4.8. Acts of Peter and the Twelve Apostles (NHC VI.1). This brief Nag Hammadi text is not specifically gnostic and can be dated in the second or third century. It consists of three or four originally separate episodes, some concentrating on Peter and some on the eleven apostles (the title is not original). Part of the text has Peter narrate in the first person. Jesus is called Lithargoel. Like the other tracts from Nag Hammadi, the present Coptic text is a translation of a Greek original.

APOCRYPHAL AND PSEUDEPIGRAPHICAL SOURCES IN THE NEW TESTAMENT

This study examines the possible NT usage of the OT *apocryphal and pseudepigraphal writings. Attention will be restricted to the more significant allusions.

1. The Apocrypha and the New Testament
2. The Pseudepigrapha and the New Testament

1. The Apocrypha and the New Testament.

The term "Old Testament Apocrypha" refers to a group of thirteen works (Epistle of Jeremiah, *Tobit, *Judith, *1 Esdras, Additions to Esther, Prayer of Azariah and the Song of the Three Young Men, Susanna, Bel and the Dragon, *Baruch, *Sirach, *Wisdom of Solomon, and 1 and 2 *Maccabees; see Daniel, Esther and Jeremiah, Additions to) found in the Codex Vaticanus, Codex Sinaiticus and the Codex Alexandrinus. These writings, with the exception of 1 Esdras, are accepted by Roman Catholics as canonical, while Protestants and Jews exclude these writings as belonging to the *Biblia Hebraica*.

Although the NT writings do not quote them directly, their influence permeates the NT. The following are among the more significant connections between the *Apocrypha and the NT.

Belief in an *afterlife emerged during the intertestamental period and became a central tenet of the NT writings. The seeds of this belief occur in the Wisdom of Solomon and 2 Maccabees and developed further in the *pseudepigraphical writings of the *Psalms of Solomon and 1 Enoch (see Enoch, Books of).

Belief in *angels and *demons also began to flourish in this intertestamental period. Apocryphal writings such as Tobit, 2 Maccabees and the pseudepigraphical writings of 1 Enoch and other *apocalyptic writings show a growing reflection on the world of angels and of demons.

NT parallels and allusions to the Apocrypha are also noteworthy. Scholars adopt different assessments in this regard. Some support a literary connection, while others see them coming from the common linguistic matrix of the society.

In the Gospels and the apocryphal writings there are a few similarities between the teaching of Jesus and the book of Sirach. "Come to me, all you that are weary and are carrying heavy burdens, and I will give you rest" (Mt 11:28-30, NRSV; compare with Sir 51:23, 26, 27). A further close parallel is Jesus' parable of the rich fool who lays up treasure in his own achievements, then dies and leaves his wealth behind (cf. Lk 12:16-21 with Sir 11:18-19). Other similarities can be observed in Jesus' saying: "When you are praying, do not heap up empty phrases as the Gentiles do; for they think that they will be heard because of their many words" (Mt 6:7, NRSV; compare with Sir 7:14).

The letters of Paul show a number of allusions to the book of Wisdom (cf. Rom 1:20-22 with Wis 13:1-8 and Rom 1:26, 29 with Wis 14:24-27). The line of thought is distinctive: humanity can come to an understanding of God by reflecting upon creation. However, humanity rejected this and replaced God with the worship of idols. Further allusions to the book of Wisdom can be seen in comparing Romans 9:20-22 with Wisdom 12:12 and 12:20. Noteworthy in these texts is the thought of the impossibility of resisting God's power. (See Metzger 158-63, for a detailed comparison of these and the following texts.)

The letter to the Ephesians also shows some allusions to the book of Wisdom: Ephesians 1:17 and Wisdom 7:7 both speak about praying for a

spirit of wisdom and understanding. In Ephesians 6:13-17 and Wisdom 5:17-20 the imagery of the armor of God and the breastplate of righteousness seems to call for a common source.

Hebrews 11 appears to reflect the hymn in Sirach 44 honoring *Israel's founding fathers.

The letter of James bears a number of close allusions to the vocabulary and thought of Sirach: "You must understand this, my beloved: let everyone be quick to listen, slow to speak, slow to anger" (Jas 1:19 NRSV). "Be quick to hear, but deliberate in answering" (Sir 5:11 NRSV). James's lament on the tongue (Jas 3:1-12) also reflects a theme common in Sirach, namely, the misuse of speech and the tongue (Sir 20:5-7, 18-19; 28:13-26). The strange image of gold and silver rusting occurs also only in James 5:3 and Sirach 29:9-10.

The book of Revelation shows some similarities with Sirach: the image of God seated on the throne is one that opens Sirach (1:8) and frequently occurs in the book of Revelation (Rev 4:2, 9; 5:1, 7, 13; 6:16; 7:10, 15; 19:4; 21:5).

One cannot prove conclusively that these different NT writers used these apocryphal writings because in no instance is there an exact quotation. Nevertheless, the similarities do show a common thought and vocabulary reflective of the world of first-century Judaism.

2. The Pseudepigrapha and the New Testament.

The term *pseudepigrapha* refers to Jewish writings coming from the intertestamental period and beyond.

First Enoch was undoubtedly the most influential of these writings for the NT. The epistle of Jude 14-15 quotes *1 Enoch* 1:9 directly. Noteworthy is not simply Jude's usage of this writing but the way in which he introduces the quotation: "Enoch . . . prophesied." R. J. Bauckham (96) notes that by using this verb (*prophēteusen*) "Jude regarded the prophecies in *1 Enoch* as inspired by God, [but] it need not imply that he regarded the book as canonical Scripture."

Jude 9 contains a further quotation that scholars have identified as coming from the **Assumption of Moses*, a work that has since been lost (see the index of allusions at the end of K. Aland et al., 910). Bauckham (65-76) has recently argued that Jude 9 quotes a lost ending to the work **Testament of Moses*. While this suggestion has prompted much discussion, it has not received general support. J. H. Charlesworth has

provided an insightful discussion and rejection of this proposal: "the amount of traditions and documents written with Moses in mind, or attributed to Moses, leaves me unconvinced that Jude quoted from the lost ending of the Testament of Moses. I have learned never to discount the knowledge of Origen; and he attributed Jude's quotation to a document entitled 'the Ascension of Moses'" (Charlesworth 1987, 77).

Hebrews 11 also contains allusions to a number of pseudepigraphical writings. For example, Hebrews 11:37 speaks about those who had suffered martyrdom in that "they were sawn in two." This verb (*epristhēsan*) is found only here in the NT. It refers to the martyrdom of Isaiah as it is narrated in the **Martyrdom of Isaiah*: "Because of these visions, therefore, Beliar was angry with Isaiah, and he dwelt in the heart of Manasseh, and he sawed Isaiah in half with a wood saw" (*Mart. Isa.* 5:1, translation by M. A. Knibb, "Martyrdom and Ascension of Isaiah," in Charlesworth 1985, 2:163; see Belial). Hebrews 11:5 refers to Enoch being taken up by God. Genesis 5:24 also refers to this event, but given the importance of the traditions related to Enoch in Second Temple Judaism it is possible that this is a further allusion to *1 Enoch*.

Other possible connections to *1 Enoch* occur in many common terms and images; for example, the use of the term "Son of Man" in *1 Enoch* 37-71. The meaning and origin of this term "Son of Man" is one of the most widely discussed issues in NT scholarship, and undoubtedly its usage in *1 Enoch* helps to throw light upon its usage in the Gospels (see DJG, Son of Man).

Further, the book of Revelation speaks of the bottomless pit as the place of punishment for the fallen angels and demons (Rev 9:1). This image is also found in *1 Enoch* 18:11-16.

The *Psalms of Solomon* 17:21-35 (a writing from the middle of the first century B.C.) gives a lucid description of the understanding and role of the Messiah that illustrates the meaning and use of this term at the time of the birth of the NT.

NT allusions to these writings do not necessarily mean that the writers considered them to be inspired or canonical. They also quote from Greek sources that they did not consider canonical or sacred. For example, in 1 Corinthians 15:33 Paul quotes from the play *Thais* (218) by Menander; in Paul's sermon to the Athenians in

Acts 17:28 Luke makes use of two quotations: from *Phaenomena* (5) by Aratus and from the *Hymn to Zeus* by the *Stoic Cleanthes; and the author of Titus 1:12 quotes a saying attributed to Epimenides (*De Oraculis*) about the Cretans (see Pagan Sources in the New Testament).

The focus has been on illustrating possible parallels and allusions within the extracanonical material. However, the value of these writings for the NT also lies in providing a cultural, social and religious environment that helps to understand more fully the matrix out of which the NT emerged. While common terms might not directly indicate use of a particular source, nevertheless they demonstrate that these images and words belong to a common heritage.

APOCRYPHAL GOSPELS

Many Gospels or narrative accounts of all or part of Jesus' earthly life and teaching, including his appearances on earth between the resurrection and the ascension, were written in the early centuries of Christianity, besides the four Gospels that became canonical. Most of these non-canonical, or apocryphal, Gospels do not resemble the canonical Gospels in *genre. Some works that were entitled Gospels, such as the *Gospel of Truth*, the *Gospel of Philip*, the *Coptic Gospel of the Egyptians* and the *Gospel of Eve*, do not conform to the definition of providing narrative accounts of the life or teaching of Jesus.

Many extracanonical traditions about the life and teaching of Jesus, some of great importance for the study of the NT and its background, are not found in Gospels as such but in other early Christian literature.

1. Fragments of Unknown Gospels
2. *Gospel of Thomas*
3. *Gospel of Peter*
4. Jewish-Christian Gospels
5. *Gospel of the Egyptians*
6. *Secret Gospel of Mark*
7. Birth and Infancy Gospels
8. *Gospel of Nicodemus*
9. Postresurrection Revelations

1. Fragments of Unknown Gospels.

Most of the fragments (on papyrus or parchment) of unknown Gospels resemble the canonical Gospels in distinct ways, often by recounting an episode similar to one found in the canonical Gospels or by using the language of these Gospels. Although several of these may be versions of canonical Gospels, it is more likely that they are parts of documents that cannot be identified as belonging to any known Gospel. The following are the most important.

1.1. P. Egerton 2. This manuscript, dating from around A.D. 150, is one of the two earliest extant Christian manuscripts (along with the fragment of the Gospel of John in P.Ryl. Greek 457 [P⁵²], although some have argued that a set of fragments with the Gospels of Matthew and Luke [Paris, Bibl. Nat., Suppl. Gr. 1120 (P⁴), Oxford Magdalen Coll. Gr. 17 (P⁶⁴) and P.Barc. 1 (P⁶⁷) and a fragment of Hebrews [P.Vindob. G 42417], may date to the late first century). It contains fragments of four pericopes. The first gives the conclusion of a controversy between Jesus and the Jewish leaders, in which Jesus has been accused of breaking the law and at the conclusion of which he escapes an attempt to stone him. There is close verbal relationship with several parts of John's Gospel. The second pericope concerns the healing of a leper, the third contains a version of the question about the tribute money, and the fourth contains an otherwise unknown miracle story. The second and third resemble Synoptic material. Recently an additional four lines of this text have been published as P.Köln 255.

The relationship of this unknown Gospel to the canonical Gospels is disputed. Some scholars have argued that it is independent of all four,

shares common tradition with them or was even a source used by Mark and John. If this were accepted, the distinctively Johannine material in the first pericope would be important for the study of the sources of John's Gospel. But it seems more probable on the basis of the mix of materials that this unknown Gospel draws on tradition, either oral or written, that had been substantially influenced by the canonical Gospels.

1.2. P.Oxy. 840. This fourth- or fifth-century manuscript contains the conclusion of a discourse by Jesus, followed by a visit to the *temple in which Jesus engages in a discussion about ritual purification with a *Pharisaic chief *priest named Levi. Some scholars have defended the historicity of the account.

1.3. P.Oxy. 1081. This small fragment from the third or fourth century contains a conversation between Jesus and his disciples. The text appears to be *gnostic, and some scholars have thought that it is from the *Sophia of Jesus Christ* (see 9 below).

1.4. P.Oxy. 1224. The legible parts of this fourth-century manuscript contain parallels to three Synoptic sayings of Jesus and one otherwise unknown saying whose authenticity was defended by J. Jeremias. This fragment could be from an early Gospel independent of the Synoptics, but is too brief for any firm conclusions to be drawn.

1.5. P.Oxy. 210. This fragment from a third-century codex, often neglected in studies of the apocryphal Gospels (see Porter forthcoming), combines passages that apparently come from Matthew 1:24 and 7:17-19 (par. Lk 6:43-44), along with Philippians 2:6 and possibly Colossians 1:15. It was earlier thought that this might be a fragment from the *Gospel of the Egyptians* (see 5 below), but this is no longer held.

1.6. P.Vindob. G 2325 (Fayyum Fragment). This third-century fragment from a scroll, the first apocryphal Gospel fragment found from the sands of Egypt and published (1885), parallels Mark 14:26-30 and Matthew 26:30-34. It is too brief for its relationship to the canonical Gospels to be ascertainable. The name of Peter (written as a *nomen sacrum*) is in red ink, an unusual feature for these fragments.

1.7. P.Cair. 10735. This sixth- to seventh-century fragmentary manuscript includes passages similar to Matthew 2:13 and Luke 1:36, with Joseph being told to take Mary to Egypt and the *angel telling Mary of Elizabeth's pregnancy.

1.8. P.Berol. 11710. These two leaves of a small codex from the sixth century may originally have been an amulet. The text is based on John 1:49, with Nathanael addressing Jesus as rabbi.

1.9. P.Mert. II 51. This fragmentary manuscript from the third century has language from Luke 7 and Luke 6:45 (par. Mt 12:35).

1.10. Strasbourg Coptic Fragment. Unlike the preceding fragments, which are all in Greek, this fifth- or sixth-century fragment is in Coptic. "We, the apostles" are the speakers, but this phrase could be consistent with attribution to a particular apostle (cf. *Gos. Pet.* 14.59). The contents are a prayer of Jesus, a conversation with the disciples and a revelation of his glory to them, all in the context of bidding them farewell, most probably before the passion but possibly before the ascension. There are close contacts with both Synoptic and Johannine material, on which this unknown Gospel is probably dependent.

2. *Gospel of Thomas.*

The Coptic version of the *Gospel of Thomas* was discovered in 1945 among the Nag Hammadi codices. Since then it has received more scholarly attention than any other noncanonical Gospel, mainly because of the claim that it preserves early Gospel traditions independently of the canonical Gospels. It is more important for the study of Jesus and the canonical Gospels than any other noncanonical Gospel of which we have a complete text, although its importance might not be greater than that of some of the fragmentary Gospels noted above, such as P. Eger-ton 2. As well as the Coptic version of the whole *Gospel of Thomas*, there are three fragments in Greek, which were discovered among the Oxyrhynchus *papyri and published in 1897 and 1904 (P.Oxy. 1, 654, 655) but not recognized as fragments of the *Gospel of Thomas* until the Coptic version became known. Before then, they were often referred to as logia of Jesus. Though there are significant differences between the Greek fragments, which are from three distinct copies of the work, and the Coptic text, they are recognizably from the same work, which must therefore have existed in at least two redactions. The original language was probably Greek, though some have argued for a Semitic original.

The earliest of the Greek fragments (P.Oxy. 1) was probably written no later than A.D. 200 and

provides the only firm terminus ad quem for the writing of the Gospel. Hippolytus, writing between A.D. 222 and 235, provides the earliest reference to it by name. The Gospel has been dated as early as A.D. 50 to 70 and as late as the end of the second century. Since parallels to its more explicitly gnostic concepts and terminology date from the second century, it is probably no older than the end of the first century. The attribution of the Gospel to Didymus Judas Thomas (prologue) shows that it derives from the East Syrian Christian tradition, centered in Edessa (see *DLNTD*, Syria, Syrian Christianity). Only in this tradition, from which come also the *Book of Thomas* and the *Acts of Thomas*, was the apostle Thomas known as Judas Thomas and regarded as a kind of spiritual twin brother of Jesus. Thomas was thought, perhaps correctly, to have been in some sense responsible for the founding of the church in this area, and it is probable that the oral Gospel traditions of this church were transmitted under the name of Thomas and that the *Gospel of Thomas* drew on these oral traditions. Its points of contact with other literature from this area and especially its probable use by the *Acts of Thomas* (end of second or early third century) confirm this hypothesis.

The *Gospel of Thomas* is a collection of sayings of Jesus, numbered as 114 sayings (logia) by modern scholars. There are no narratives and only minimal narrative contexts provided for a few sayings (*Gos. Thom.* 22, 60, 100). The few narrative contexts are important for showing that *Thomas* does not, as do most of the gnostic Gospels (see 9 below), have a postresurrection setting. As a sayings collection, *Thomas* has often been compared with the hypothetical Gospel source Q and with the many ancient collections of sayings of the wise. The genre is consistent with the theology of *Thomas*, which presents Jesus as a revealer of the secret wisdom by which the elect may recognize their true spiritual identity and recover their heavenly origin. Some scholars deny that *Thomas* is properly gnostic and locate it instead in the tradition of Jewish wisdom theology or in the enkratite tradition characteristic of East Syrian Christianity. Although there are contacts with both these traditions, some of the sayings most distinctive of *Thomas* express a distinctively gnostic theology (e.g., *Gos. Thom.* 18, 29, 50, 83, 84).

The tradition of the sayings of Jesus on which *Thomas* draws was probably Jewish-Chris-

tian in origin (see especially saying 12 on James the Just) but had developed in a gnosticizing direction. Some sayings of clearly gnostic origin had entered the tradition, and the editor of *Thomas* selected from the tradition sayings that were compatible with his gnostic theology. The apostle Thomas has become the authority for an esoteric interpretation of the tradition of the sayings of Jesus (cf. *Gos. Thom.* 1, 13).

The majority of the sayings in the *Gospel of Thomas* have parallels in the Synoptic Gospels (including the triple tradition, the Q material and matter peculiar to Matthew and to Luke), but whether *Thomas* is dependent on the canonical Gospels is still debated. Arguments for dependence try to show both that *Thomas* reflects the specifically Matthean and Lukan redactions of Gospel traditions and that its differences from the Synoptics are deliberate redactional changes expressing a gnostic interpretation. Neither of these points has been conclusively established. The order of the sayings in *Thomas* almost never corresponds to that of the Synoptics, while the association of sayings by catchword connections—one of the few reasons that can be discerned for the order in *Thomas*—is characteristic of oral tradition. It has been argued on form-critical grounds that *Thomas* sometimes preserves sayings, especially parables, in a more primitive form than do the Synoptics. Finally, since a significant number of the sayings in *Thomas* that do not have parallels in the canonical Gospels are also attested in other noncanonical sources, it is impossible to argue that the canonical Gospels were the only source of Gospel traditions used by *Thomas*. It follows that even if the editor of *Thomas* knew the canonical Gospels, a parallel to them need not derive from them.

A commonly held opinion is that *Thomas* is dependent on a tradition substantially independent of the canonical Gospels, though influence from the canonical Gospels cannot be ruled out—whether during the oral transmission of the tradition or at the stage of editing or at the stage of translation into Coptic. *Thomas*, according to this view, can therefore provide useful evidence for the study of the origins and development of the traditions behind the canonical Gospels, provided that due allowance is made for its greater distance both theologically and probably chronologically from the historical Jesus, which may account for some of its Johan-

nine elements. Some scholars have argued that a few of the sayings in *Thomas* that have no parallels in the canonical Gospels (such as the parables in *Gos. Thom.* 97 and 98) are authentic sayings of Jesus (see *DLNTD*, *Thomas*, Gospel of).

3. *Gospel of Peter*.

A substantial fragment of the *Gospel of Peter*, in a manuscript of the eighth or ninth century, was discovered in 1887 in a coffin at Akhmim, Egypt (P. Cair 10759). It contains a narrative that begins at the end of the trial of Jesus, includes the crucifixion, burial and resurrection of Jesus and breaks off in the course of a story that probably described a resurrection appearance to a group of the disciples. The words "I, Simon Peter" (*Gos. Pet.* 14.60) identify the text as part of the Gospel attributed to Peter to which some writers of the early church refer. We have only two other indications of the rest of its contents. The Syriac *Didascalia* (early third century), which used the *Gospel of Peter*, refers briefly (chap. 21) to the resurrection appearance in the house of Levi that probably followed the end of the Akhmim fragment. According to Origen (*Comm. Mt.* 10.17), the *Gospel of Peter* supplied evidence that the brothers of the Lord were sons of Joseph by his first marriage. This may indicate that the Gospel began with a birth narrative. In addition to the Akhmim fragment, there is another fragmentary Greek manuscript of the *Gospel of Peter* (P. Oxy. 2949) from the late second or early third century. The textual differences between readings in this manuscript and the Akhmim text suggest that the latter cannot be relied on to preserve the text of the original Gospel very accurately. It has also been posited that P. Oxy. 4009, from the second century, is a fragment of the *Gospel of Peter*, although it does not overlap with any of the Akhmim text.

The quite probable use of the *Gospel of Peter* by Justin and very probable use of it by Melito of Sardis (see *DLNTD*, Melito of Sardis) suggest that it must date from before the middle of the second century. At the end of the second century, bishop Serapion of Antioch heard of a dispute over its use in the church of Rhossus. When he discovered it was being used to support docetic heresy and that a few passages in it were suspect from this point of view, he disallowed its use (Eusebius *Hist. Eccl.* 6.12). Recent scholarship has concluded that, on the evidence of the Akhmim fragment, the Gospel itself cannot be con-

sidered docetic, though there are phrases that Docetists could interpret in their support. This conclusion is confirmed by its probable use by Justin, Melito and the Syriac *Didascalia*, which suggests that it was quite widely read in early Christian circles.

The Gospel is distinguished, in the text we have, by its interest in the fulfillment of prophecy in the passion narrative, its strongly anti-Jewish bias that emphasizes the sole responsibility of the Jews for the death of Jesus, its heightening of the miraculous, its high christology as indicated by its use of titles for Jesus and its apologetic interest in supplying evidence for the resurrection. Distinctive features include *Herod's participation in the trial of Jesus and ordering of the crucifixion to be carried out by Jews, and the account (which has a close parallel in *Asc. Isa.* 3:16-17) of the exit from the tomb of the risen Christ, escorted by angels.

The Gospel's relationship to the canonical Gospels is disputed. There are parallels to all four canonical Gospels but remarkably few verbal parallels, perhaps not surprising considering the lateness of the manuscript being compared. There are three major positions on the *Gospel of Peter* and its relation to the canonical Gospels. The traditional view, held since soon after discovery of the Akhmim fragment, is that it is dependent on all four canonical Gospels. This position is maintained on the basis of what appear to be instances of clear usage of the canonical Gospels, including John. The resulting relative lateness of the document is confirmed by such other features as historical inaccuracies even in the part of the *Gospel of Peter* purported to be the earliest, a secondhand familiarity with Judaism that seems to be post-A.D. 70, an apologetic streak that runs throughout the text, a high christology and confessional elements as part of the account.

Some scholars have thought, however, that the *Gospel of Peter* is independent of the canonical Gospels. J. D. Crossan has argued that although sections dependent on the canonical Gospels have been secondarily added to the text, the greater part of the Akhmim text is not only independent of the canonical Gospels but a source used by all four canonical Gospels. He calls this the *Cross Gospel* and claims that it is the single extant source for the passion and resurrection narratives in the canonical Gospels. The numerous features noted above have resulted in

few apart from Crossan and a handful of others holding to such a position.

A mediating view builds on the observation that the major parallels of the *Gospel of Peter* are with special Matthean material (M) and with Markan material; close verbal parallels are largely limited to the passages parallel to Markan material, which are closer to the text of Mark itself than to Matthew's redaction of Mark; and Matthew and the *Gospel of Peter* show different connections between Markan and M passages. By this view, the *Gospel of Peter* drew primarily on Mark's Gospel and on Matthew's special source independently of Matthew's Gospel. Whereas Matthew gave priority to the Markan narrative and augmented it from his special source, the *Gospel of Peter* gave priority to the narrative of M and augmented it from Mark. M was probably the oral tradition of the church of *Antioch and its neighboring churches, which acquired written form in the *Gospel of Peter* no doubt some decades after Matthew had used it. If this view is correct, the *Gospel of Peter* would be valuable evidence for the study of Matthew's use of his sources but not of the earliest tradition.

4. Jewish-Christian Gospels.

The Gospels used by specifically Jewish-Christian groups in the early church—whether, like the *Ebionites, they were heretical in the eyes of the catholic church, or, like the Nazarenes, they were orthodox but separate from the predominantly Gentile catholic church—have unfortunately survived only in quotations by the Fathers, along with some untrustworthy evidence from the Middle Ages. The titles that the Fathers use for these Gospels and the manner in which they refer to them leave it unclear how many such Gospels there were and from which the surviving quotations are derived. Recent scholarly consensus distinguishes three, all of which seem to have resembled the Synoptic Gospels in genre.

4.1. *Gospel of the Hebrews.* The most recent investigation by A. F. J. Klijn assigns seven quotations to this Gospel. These show no sign of dependence on the canonical Gospels. One saying also appears in the *Gospel of Thomas* (2). Otherwise the traditions are distinctive to this Gospel, including the account of the risen Christ's appearance to his brother James the Just, who was highly revered in Jewish-Christian tradition. The Gospel was written in Greek before the

middle of the second century. It may have originated in Egypt, where its title would have designated it the Gospel of the Greek-speaking Jewish-Christian community and distinguished it from the *Gospel of the Egyptians* (see 5 below), used by the Gentile-Christian community in Egypt.

4.2. *Gospel of the Nazarenes.* Klijn assigns twenty-two quotations definitely to this Gospel, but many of these are passages where only a few words differ from the text of Matthew's Gospel. Others are more substantial additions to or variations from Matthew. Thus this Gospel was evidently a free translation (in *targumic style) of Matthew into *Aramaic or Syriac. The view of Jerome and others that it was the Semitic original from which our Greek Matthew was translated cannot be maintained. In Jerome's time it was used by the Nazarene community in Berea in Syria and may have originated among them in the second century.

4.3. *Gospel of the Ebionites.* Epiphanius preserves seven quotations of this Gospel, which was composed in Greek and based on all three Synoptic Gospels. With Matthew as its principal authority, it also drew on Mark and Luke in order to combine the three in a harmonized narrative. It is thus an example of the apparently rather common second-century tendency to produce harmonies of the various Gospel texts, of which Tatian's *Diatessaron* is the most famous example.

Ebionite theology is evident in the quotations. Since the Ebionites rejected the virginal conception and held an adoptionist christology, the Gospel began with the baptism of Jesus. The Ebionite prohibition on eating meat and their opposition to the temple cult are also reflected (see *DLNTD*, Ebionites).

5. *Gospel of the Egyptians.*

This Gospel appears to have been the one predominantly used by Gentile Christians in Egypt until it was superseded by the canonical Gospels in orthodox circles. Unfortunately little is known of it. The only clear information comes from Clement of Alexandria, who refers to a conversation it contained between Jesus and Salome (a woman disciple of Jesus who is prominent in apocryphal, especially gnostic, Gospel traditions). This contained sayings, also known from the *Gospel of Thomas* (22, 37; see also 2 *Clem.* 12.1-2), about the rejection of sexuality, which reflect

an encratite view of salvation as the restoration of the original condition of humanity without sexual differentiation. Whether the Gospel was not merely encratite but gnostic is unknown. The Sethian gnostic work from Nag Hammadi, which is also known as the *Gospel of the Egyptians* (CG III, 2 and IV, 2), is a different work.

6. *Secret Gospel of Mark*.

M. Smith discovered in 1958 but did not publish until 1973 a previously unknown letter of Clement of Alexandria copied into the back of a seventeenth-century edition of the letters of Ignatius of Antioch. The majority of scholars have provisionally accepted Smith's case for the authenticity of the letter, though not all rule out the possibilities that it is an ancient *pseudepigraphon, in which case its witness to the *Secret Gospel of Mark* could still be of value, or even a modern forgery.

In the letter Clement claims to know three versions of Mark's Gospel: the Gospel used publicly in the church (our canonical Mark), which Mark wrote first; the *Secret Gospel*, which Mark wrote later in *Alexandria, by adding to his earlier text certain secret traditions that are revealed only to initiates; the version used by the Carpocratian Gnostics, who made their own additions to the *Secret Gospel*. Clement gives no more than two words of the material peculiar to the Carpocratian version but quotes the two passages that the *Secret Gospel* adds to the canonical Gospel. After Mark 10:34, the *Secret Gospel* had a story set in Bethany that is clearly related to the Johannine account of the raising of Lazarus but told in Markan rather than Johannine language. Six days after Jesus raised the young man (who is anonymous in the *Secret Gospel*) from the dead, he came to Jesus at night, wearing only a linen cloth, and Jesus taught him the mystery of the kingdom of God. The reference must be to some kind of initiation, most likely involving baptism. The *Secret Gospel's* second addition to Mark occurs in 10:46: it is an oddly brief reference to Jesus' refusal to receive the young man's sister and his mother and Salome.

Smith argued that the additional material is so characteristically Markan that it must derive from the same body of tradition as canonical Mark. Some scholars have argued that canonical Mark is a later, expurgated version of the *Secret Gospel*. Others regard the material in the *Secret Gospel* as late interpolations, deliberately imita-

tive of Markan style and content. So far the evidence remains subject to differing interpretations (see *DLNTD, Mark, Secret Gospel of*).

7. Birth and Infancy Gospels.

From the second century onward, interest in the family background and early life of Jesus produced many works devoted solely to this theme. Two second-century works on this theme proved extraordinarily popular for many centuries, and all later Gospels of this kind were indebted to one or both of them.

7.1. Protevangelium of James. This tells of the miraculous birth of Mary to her childless parents Joachim and Anna, who dedicate her to the temple where she lives until entrusted to Joseph. The story from the annunciation to the massacre of the innocents (concluding with the martyrdom at that time of Zechariah the father of John the Baptist) makes free use of the narratives of both Matthew and Luke, laying special emphasis on the virginity of Mary. The birth of Jesus in a cave is miraculous, preserving Mary's virginal state. Her perpetual virginity is implied, since the brothers of Jesus are considered sons of Joseph by a previous marriage. The work is attributed to one of them, James, though he does not appear in the narrative. The main purpose of the work is clearly the glorification of the figure of Mary as a virgin, though an apologetic defense of her virginity against Jewish anti-Christian polemic may also have influenced its composition. It has been called *midrashic (according to the loose use of that term in some NT scholarship) because of its creative use of OT texts in developing the narrative. It probably originated in second-century Syria, where its ideas about the virginity of Mary can be paralleled from other texts.

7.2. Infancy Gospel of Thomas. This work consists solely of a series of stories of miracles performed by the child Jesus up to his twelfth year. For example, Jesus makes sparrows out of clay and brings them to life, a story that later found its way into the Qur'an. He heals the injured, raises the dead, curses his enemies so that they die and proves superior in knowledge to all his schoolteachers. The general effect is to manifest his superhuman nature to all who encounter him. In its original form this work must date from the second century, but from the extant texts in many versions it is difficult to establish the original text.

7.3. Later Gospels. The *Coptic History of Joseph* does for Joseph what the *Protevangelium of James* did for Mary. The *Latin Infancy Gospel of Matthew* (often called Pseudo-Matthew) transmitted much of the content of the *Protevangelium of James* and the *Infancy Gospel of Thomas*, along with further legends of its own, to the medieval West. The medieval *Latin Infancy Gospel* (British Library Arundel 404) published by M. R. James in 1927 is important for one of its sources, otherwise unknown, which may reflect second-century Greek docetic thought. Many other late birth and infancy Gospels in many languages are extant.

8. *Gospel of Nicodemus.*

This title is given to a work combining two distinct parts: the *Acts of Pilate* and the *Descensus ad Inferos* (descent to Hades). The *Acts of Pilate* is an account of the trial and crucifixion of Jesus and of an investigation by the Sanhedrin that receives evidence of the resurrection of Jesus. The work is notable for its anti-Jewish and apologetic tendencies. *Descensus ad Inferos* is the fullest account from the early church of Christ's activity in the realm of the dead between his death and his resurrection: his victory over the powers of Hades and his liberation of Adam and the righteous dead. The *Gospel of Nicodemus* in its present form is generally assigned to the fifth century but undoubtedly draws on earlier sources.

9. Postresurrection Revelations.

Those wishing to amplify the known teaching of Jesus or to trace to Jesus secret revelations handed down in esoteric tradition found the most suitable literary vehicle to be an account of Jesus teaching his disciples in the period between his resurrection and ascension. Often such accounts take the form of a dialogue, in which Jesus is questioned by his disciples about subjects left unclear by his teaching before his death. Gospels of this kind sometimes draw on traditions of the sayings of Jesus in order to interpret and develop them further, but often the contents are unrelated to Gospel traditions. Though the apocalyptic discourse of Jesus in the Synoptics (Mt 24 par.) was sometimes a model for such works, their genre is often as close to that of the *apocalypses as to other kinds of Gospels, and so several of these works are entitled apocalypses.

Though this kind of Gospel proved especially

useful to and popular among Gnostics, it did not originate with nor was it confined to Gnostics. Significant for the Gospel traditions they contain are the orthodox examples from the early second century of the *Apocalypse of Peter* and the *Epistle of the Apostles*, the latter for the way in which it seems to draw on the canonical Gospels, including John, within a continuing oral tradition. The Freer Logion (added to Mark 16:14 in one manuscript) is not a complete work but illustrates the second-century tendency to ascribe additional revelations to the risen Christ. Later non-gnostic works of this type, from the third century or later, are the *Questions of Bartholomew*, the *Syriac Testament of Our Lord* and the *Ethiopic Testament of Our Lord in Galilee*. Gnostic works of this type include the *Apocryphon of James* (CG I, 2), the *Book of Thomas* (CG II, 7), the *Sophia of Jesus Christ* (CG III, 4 and BG 8502, 3), the *Dialogue of the Savior* (CG III, 5), the *First Apocalypse of James* (CG V, 3), the *Coptic Apocalypse of Peter* (CG VII, 3), the *Gospel of Mary* (BG 8502, 1), the *Pistis Sophia* and the *Books of Jeu*.

APOCRYPHON OF JEREMIAH. See PSEUDO-PROPHETS (4Q385-388, 390-391)

APOCRYPHON OF JOSEPH (4Q371-372, 539)

Apocryphon of Joseph is the title that has been given to a Second Temple work that treats the biblical figure of Joseph, son of Jacob. The copies preserved in the *Dead Sea Scrolls have only been studied in a preliminary manner, and there are still many unresolved questions about this work.

The text is found in two fragmentary but overlapping manuscripts of the Dead Sea Scrolls, 4Q371 and 4Q372. One large fragment of 4Q372 contains a narrative about Joseph (lines 1-16) followed by a psalm spoken by Joseph (lines 16-32), and on the basis of this fragment the name was given to the document. However, there are about thirty smaller fragments in these two manuscripts, and they cover a wide variety of subjects, including mention of Zimri (Num 25:14) and the five kings of Midian (Num 31:8), Jubilee and even a weasel (perhaps as an example of an unclean animal; cf. Lev 11:29). Since the title *Apocryphon of Joseph* does not reflect the nature of the work as a whole, the

more generic title *Narrative and Psalmic Work* will be used in the official publication. To further complicate matters, there is some evidence that 4Q373 and 2Q22 may also belong to this work; these are fragments of an autobiographical psalm in which an unnamed figure (David or *Moses) praises God for his victory over a giant (Goliath or Og).

The text about Joseph in 4Q371 and 4Q372 is not a retelling of the Joseph story of Genesis 37-50; rather Joseph seems to be a designation for the northern tribes (cf. Ps 78:67; Amos 5:6; Ezek 35:15-23; Zech 10:6-10). The narrative section talks of a time of destruction and conflict and opposition to "the tent of Zion," though the text is so fragmentary that it is very difficult to know what is being described. "In all this" (4Q371 10, 14), Joseph "was cast into lands he did not know" and "into the hands of foreigners." In his distress "he called to God to save him from their hands." The psalm that Joseph speaks is a plea for deliverance and a praise of God's kindness. There may be an anti-Samaritan polemic behind this text, that is, a denial of the Samaritan claim to be the descendants of Joseph (cf. Josephus *Ant.* 9.10.14. §291) since the "true Joseph" is far off in exile, praying and relying on God for deliverance. Nothing in the text indicates that the composition was sectarian or written by the *Essenes. The manuscripts date to the latter part of the first century B.C., but the text may have been composed somewhat earlier.

One of the most interesting features of the psalm of Joseph is its opening invocation, "My father and my God." It has often been noted that God is not addressed directly as father in a prayer context in the Hebrew Bible. There are a few examples in Greek texts (3 Macc 6:3; Wis 14:3; perhaps in Sir 23:1, 4 in the Greek translation); in rabbinic *prayer the address to God as "our father" is well attested, but it is very difficult to say how early these prayers developed since our copies are only from much later. 4Q372 provides clear evidence that at least in some Jewish prayer of the first century B.C. God was addressed as "my father" ('*abi*). This passage has been of considerable interest for NT scholars in the study of those texts where Jesus and the early church address God as father ('*abba*, or "our father").

In addition to the manuscripts discussed above, there is an Aramaic manuscript, 4Q539, that has sometimes also been given the title *Apocryphon of Joseph* because two small fragments

have some similarity to material in the Greek *Testament of Joseph* (15:1—17:2) in the **Testaments of the Twelve Patriarchs*. The Aramaic work may have been a source used by the author of the Greek testament.

APOCRYPHON OF JOSHUA (4Q378-379)

Apocryphon of Joshua (4Q378-379), also known as the *Psalms of Joshua*, is an example of the literary phenomenon referred to as the *rewritten Bible. In this type of literature, popular in the late Second Temple period, the story of a biblical book was retold and embellished with narrative detail, speeches, prayers and so forth (see, e.g., **Jubilees*, **Pseudo-Philo*, **Genesis Apocryphon*). Since both of the manuscripts of the *Apocryphon of Joshua* are very fragmentary, it is not possible to say whether it covered the same narrative scope as did the canonical book of Joshua, but certain fragments from 4Q378 suggest that it may have begun somewhat differently. Those fragments preserve an account of the Israelites' mourning for *Moses after his death, an account of Joshua's accession to leadership (paralleling Josh 1) and a long speech by Joshua to the people, modeled after Moses' speech in Deuteronomy (especially Deut 1—3 and 28—31). One of the fragments contains a *prayer that refers to both Moses and Joshua in the third person. The name of the speaker is lost, however. Material from a slightly later part of the composition is preserved in 4Q379. One fragment makes reference to the crossing of the Jordan (parallel to Josh 3); another cites and expands the curse on the rebuilders of Jericho from Joshua 6:26. In both manuscripts the majority of fragments contain admonitory speeches, prayers, songs or other rhetorical forms rather than simple narration.

Apart from the rough indication of date from paleographical analysis (4Q379 is written in a Hasmonean semicursive, 4Q378 in a Herodian formal hand), only a few details suggest the time or social group in which the *Apocryphon of Joshua* was produced. 4Q379 12 calculates the date of the entry of the people into the land as occurring in a Jubilee year, a date that correlates with the information in *Jubilees* 50:4. The development of the curse against the rebuilders of Jericho into a highly polemical denunciation of this figure as a "man of Belial" (4Q379 22 ii; see Belial) is apparently a topical reference to the Hasmonean ruler John Hyrcanus. Not only did he conduct extensive building activity in Jericho, but also his sons, Antigonos and Aristobolus I, died in 103 B.C., within a year of their father's death. The expanded curse in the *Apocryphon of Joshua* was excerpted in the Qumran **Testimonia* document (4Q175), where it follows three other biblical citations that were understood to foretell the eschatological prophet, the Davidic *messiah and the priestly messiah. Since Hyrcanus claimed to combine the offices of ruler, high priest and prophet, the citation of the curse from the *Apocryphon of Joshua* apparently serves as a criticism of Hyrcanus's pretensions.

Despite its citation in the Qumran *Testimonia*, the *Apocryphon of Joshua* was probably not composed at *Qumran. Both the orthographic practices of 4Q379 and the usage of the tetragrammaton and other terms for God differ from the scribal practices at Qumran, although the younger manuscript, 4Q378, is consistent with Qumran orthography. Thus the *Apocryphon of Joshua* was most likely produced around the beginning of the first century B.C. in the same intellectual circle responsible for *Jubilees*. Like *Jubilees*, it was preserved, read and copied by the Qumran community. It is possible that other fragmentary texts from Qumran and Masada may preserve more pseudo-Joshua material, though whether these are parts of the same composition or different ones is uncertain (see *Apocryphon of Moses* [4Q374-377]).

APOLLONIUS OF TYANA

In the early third century A.D., Philostratus of Athens wrote a work entitled *The Life of Apollonius of Tyana (Vita Apollonii)*. The author's goal was to defend the legendary first-century sage from recent attacks. Some years later Hierocles wrote a work entitled *Lover of Truth*, in which he made comparison between Jesus and Apollonius, one of the more colorful of the late Pythagorean *philosophers. The early church historian Eusebius wrote a treatise against this work entitled *Against the Life of Apollonius of Tyana*.

Apollonius is said to have performed miracles and even to have been resurrected. The point that Hierocles wished to make is that the miracles of Jesus, no more numerous or significant than those performed by Apollonius, hardly justified the Christians' excessive claim that Jesus was God. Against these claims Eusebius tries to impress upon his readers the significant differences between Jesus and his contemporary Apollonius.

The teachings and activities of Apollonius of Tyana have been of interest to scholars concerned with research about Jesus. It has often been suggested, in the past especially, that early Christians and later the Evangelists embellished the Jesus tradition along the lines of Hellenistic wonderworkers such as Apollonius. M. Dibelius (70-103) and R. Bultmann (218-44) made form-critical comparisons between the miracles of Jesus and those attributed to Apollonius. On the basis of these comparisons Dibelius and Bultmann were convinced that most of the miracle stories neither derived from the historical Jesus nor originated in Palestine; rather, they originated in Hellenism. Dibelius (102) averred: "The Tale-tellers have taken over foreign traits or actions and have Christianized them." Bultmann (240-41) adds: "the Hellenistic origin of [most of] the miracle stories is overwhelmingly the more probable" and "in Mark and most of all in his miracle stories Hellenism has made a vital contribution."

Apart from the questionable dichotomy between Palestinian and Hellenistic, the value of the parallels between Jesus and Apollonius has in the estimation of some been exaggerated (e.g., Twelftree, Koskenniemi, Evans). Better parallels are seen in the *rabbinic traditions, as well as in the OT and in some of the *pseudepigrapha. The principal miracles attributed to Apollonius that have often been compared with the miracles of Jesus are the following.

(1) Healing the Lame Man (Philostratus *Vit. Ap.* 3.39). By massaging a man's hip, Apollonius cures a man from his lameness.

(2) Healing the Blind Man (Philostratus *Vit. Ap.* 3.39). Not described.

(3) Healing the Paralytic (Philostratus *Vit. Ap.* 3.39). Not described.

(4) Healing the Woman (Philostratus *Vit. Ap.* 3.39). In order to assist a woman who had had severe trouble in childbirth, Apollonius tells her husband to carry a hare into the wife's chamber as she was about to give birth, circle the bed and then release the hare. If the hare were not driven out of the chamber, then the womb itself would extrude together with the newborn.

(5) Exorcism of the Demon from the Youth (Philostratus *Vit. Ap.* 4.20). The gaze of Apollonius terrifies the demon within the possessed youth, which then obediently exits and tips over a statue as it departs to prove that it has left. The youth recovered; abandoning his effeminate garb and his hedonistic way of life, he adopted the lifestyle of the philosophers and "donned their cloak" to follow Apollonius.

(6) Raising the Dead Girl (Philostratus *Vit. Ap.* 4.45). Intercepting a funeral in progress, Apollonius touches a girl who had died the very day she was to be wed and speaks her name. She awakens fully recovered. Relatives wish to bestow on Apollonius an enormous sum of money, which he said he would give to the bride as a dowry. Apollonius does admit that he had detected a spark of life in the girl, having perceived a "vapor that went up from her face."

(7) Miraculous Transports (Philostratus *Vit. Ap.* 4.10; 8.12). Stories are told how Apollonius seemingly could be at two places at once, or leave one place and be present at another instantly (e.g., from Smyrna to Ephesus).

(8) Ascension of Apollonius (Philostratus *Vit. Ap.* 8.30). Near the time of his death, Apollonius entered a temple whose doors opened for him and then closed behind him, and a voice was

heard, "Hasten thou from earth, hasten thou to heaven, hasten."

(9) Postmortem Appearance (Philostratus *Vit. Ap.* 8.31). The spirit of Apollonius is said to have spoken to a young man who doubted the former's immortality.

At first blush many of the miracles attributed to Apollonius find parallels in the ministry of Jesus. Jesus heals the lame (Mt 11:5 par. Lk 7:22; Mt 15:30-31), blind (Mk 8:22-26; Mt 9:27-31 par. Mk 10:46-52 and Lk 18:35-43), paralyzed (Mt 9:1-8 par. Mk 2:1-12 and Lk 5:17-26; Mt 12:9-14 par. Mk 3:1-6 and Lk 6:6-11), demonized (Mk 1:21-28 par. Lk 4:31-37; Mt 17:14-20 par. Mk 9:14-29 and Lk 9:37-43) and even raises the dead (Mt 9:18-19, 23-26 par. Mk 5:21-24, 35-43 and Lk 8:40-42, 49-56; Lk 7:11-17; Jn 11). Jesus is also said to have ascended (Lk 24:51; Acts 1:9). But there are no miraculous transports from one city to another (but cf. Jn 6:21, which is probably not a miraculous transport). Jesus touches people, even makes clay of spittle, but he does not massage disabled limbs, nor does he make use of animals or fetishes.

There are many features of the miracles and wonders attributed to Apollonius that find no parallel in the stories of Jesus. We encounter elements of gimmickry and trickery on the part of Apollonius, such as removing and replacing his foot in leg irons while in prison (*Vit. Ap.* 7.38). We find other bizarre elements, such as scaring off an evil spirit by writing a threatening letter (*Vit. Ap.* 3.38) or by making tripods walk and performing other telekinetic acts (*Vit. Ap.* 3.17; cf. Eusebius *Against the Life of Apollonius of Tyana* 18). There are some interesting parallels, but Apollonius comes across as a wizard (of which he is frequently accused). Many of his sayings and actions, moreover, are ostentatious. When the circumstances require, Apollonius does not hesitate to imply that he is a god. Some of his statements, including his apology before Emperor Domitian, smack of conceit and self-importance.

There is also serious question about the credibility of the sources utilized by Philostratus. B. F. Harris has concluded that the life of Apollonius is heavily seasoned with imagination and exaggeration. E. L. Bowie agrees and has criticized scholars for too readily giving credence to the stories attributed to Apollonius of Tyana.

APOSTOLIC FATHERS

"The apostolic fathers" has been a designation for a collection of early church documents for at least three hundred years. These individual manuscripts began to appear together in later centuries, so that the collection and terminology are post-Reformation. These discourses were written late in the first century or in the second century. They were called apostolic fathers because it was presumed that the authors had direct contact with the apostles. It is likely that in 1672 J. B. Cotelier, a French patristics scholar, first conceived of these early documents as special in that the writers presumably either knew one of the twelve apostles or at least were taught by someone who knew them. Cotelier's list was the *Epistle of Barnabas*, the letters of Ignatius, Polycarp's *Letter to the Philipppians*, the *Martyrdom of Polycarp*, *1 Clement*, *2 Clement* and the *Shepherd of Hermas*. In 1875 a Parisian scholar, A. Gallandi, added the *Epistle to Diognetus*, the *Apology of Quadratus* and fragments of Papias. Later printed collections included the *Epistle to Diognetus* but not *Quadratus* or *Papias* (see *DLNTD*, Apostolic Fathers).

1. *Epistle of Barnabas*
2. *Didache*
3. Letters of Ignatius
4. Polycarp's *Letter to the Philippians*
5. *Martyrdom of Polycarp*
6. *First Clement*
7. *Second Clement*
8. *Shepherd of Hermas*
9. *Epistle to Diognetus*

1. *Epistle of Barnabas*.

The *Epistle of Barnabas* was written at the end of the NT period. Some of the early churchmen held the letter to be inspired and were disposed toward including it in the canon of the NT (see Canonical Formation of the New Testament). *Barnabas* is found in the Codex Sinaiticus, placed after OT and NT texts along with the *Shepherd of Hermas*. Clement of Alexandria cited *Barnabas* as though it were Scripture, and both Jerome and Clement declared it to be authored by the traveling companion of Paul, who in Acts was designated an apostle (Acts 14:14). Authorship by Barnabas, however, seems doubtful. It seems more likely that the name *Barnabas* was attached to the document in order to give it apostolic status. The *Epistle of Barnabas* was likely written A.D. 96-100, possibly in *Alexandria of Egypt (see Barnard).

The main contribution of the *Epistle of Barnabas* to the NT exegete is the manner in which it draws upon the OT and how its rhetoric and hermeneutic compares and contrasts with Hebrews and to a lesser extent with the writings of Paul. The document is more a discourse than a letter, much like Hebrews. The author recommends hope, righteousness according to judgment and the love of joy in an evil time. He declares that the OT prophets (by which he means from Moses on) heralded these latter times and disclosed the means of combating the malfeasance. He ends with the two-way teaching of embracing either light or darkness, life or death. Unlike Hebrews, which sustains a closely reasoned theological argument, *Barnabas* is a discursive marshaling of prophetic utterances.

Barnabas has no specific reference to contemporary Judaism. He believes that Israel failed in its response to God but that more importantly, the real message of the OT prophets anticipates the followers of Jesus. Like the writers of the NT Epistles, the author rarely refer-

ences or quotes words and deeds of Jesus. By his time, Christians, as evidenced in the production of the canonical Gospels, relished the words and works of Jesus but still cited the OT as the authentic word from God. With some frequency *Barnabas* explicates extended allegorical meaning in texts, for example, in regard to the Numbers 18 offering of a heifer (*Barn* 8.1). The sacrifice clearly points ahead to Christ's sacrificial death. Though *Barnabas* employs allegorical interpretation, the application is more practical and theological than philosophical in a Philonic sense.

2. *Didache*.

The full title of the document now designated the *Didache* was *Teaching of the Twelve Apostles*. A subheading identified it as "the teaching of the Lord through the twelve apostles to the nations." The *Didache* was highly regarded in the fourth-century church and was believed in some quarters to have been composed by or in behalf of the original twelve disciples of Jesus, a conclusion that no scholar now embraces. It is thought to have been written between 80 and 120, probably in *Antioch of Syria and most likely by a Jewish Christian. The work bears comparison with the Pauline Pastoral Epistles and indicates how some NT injunctions are later fleshed out.

In this short work the author contrasts the way of life, which entails love and keeping God's commandments, with the way of death, which is filled with lust and other undesirable traits denounced in Scripture. Thereupon follow instructions in regard to foods, baptism, fasting, prayer, sound teaching, the roles of apostles and prophets, wandering Christians, bishops and deacons, monetary assistance, assembly, correction and warnings.

These instructions are grounded first in the OT, especially in regard to violations that lead to death. The instructions for the believing community incorporate many echoes from the Gospels and some from the Epistles, though some of these may be from common sources rather than directly from the NT writings. In terms of clear dependence, more allusions may be found to the Gospel of Matthew than to the other three. References tend to be short phrases and allusions rather than direct quotations. Their applications tend to be more literal rather than metaphorical or allegorical. In this manner the

bringing in of biblical materials reflects a different hermeneutic than that of the *Epistle of Barnabas*. Almost no effort is directed toward showing how the OT was fulfilled in Christ.

3. Letters of Ignatius.

Ignatius (c. 35-107) was reputed to be the second bishop of (Syrian) Antioch. He was singled out for martyrdom and traveled from Antioch to Rome accompanied by ten soldiers. Little is known about his life otherwise. On the journey across Asia Minor Ignatius wrote seven letters, probably during the years 105-110. These letters reflect what he considered the most pressing matters for the believers as he anticipated death. He made stops in Smyrna, where he was honored by Polycarp, and Troas. The letters from Smyrna were to Tralles, Magnesia, Ephesus and Rome. From Troas letters were sent to Philadelphia, Smyrna and Polycarp.

These letters are important to the exegete in regard to comparisons and contrasts with the canonical epistles. The purview of Ignatius's letters is somewhat more narrowly conceived, but they are worth consulting in regard to epistolary style and rhetorical features. The tendencies are less metaphorical and allegorical than, for example, are the works of Clement of Alexandria. In regard to topics they are especially helpful in respect to polity. Evidences of an early mono-episcopacy may be found in the letters, though the full meaning and implications are to a degree problematic. Another topic worthy of pursuit is the creedal material embedded in the letters. These may be compared and contrasted with creedal statements in the NT and with other early creeds such as the Apostolic Creed in its various versions. Perspectives on servanthood and martyrdom are also worthy of perusal. It should also be noted that Ignatius eschews heresy but is not too specific in regard to the sorts of heresy he has in mind. The most obvious seems to be some version of Docetism. He also highlights Christian OT foundations over the Jewish, but this is not a major concern. Other topics less developed include perspectives on the baptism of Jesus, the ramifications of the cross, the Lord's Supper, unity and Onesimus.

4. Polycarp's Letter to the Philippians.

Polycarp was a respected leader (bishop or elder) of the church in Smyrna. He was martyred in Smyrna, probably on February 23, 155. He

wrote an epistle to the church in Philippi in conjunction with efforts of Irenaeus and at their request. The letter that has survived may be the conflating of two of his letters. The letter of Polycarp is of interest because of the manner in which he cites NT Epistles. In contrast with *Barnabas*, he refers little to the OT. He infrequently cites the Gospels but on occasion refers to Matthew. His use of statements from the Epistles is mostly straightforward with little metaphorical implication. He cites epistles not so much by way of shoring up his points but as a manner of amplification.

The epistle sets out a profile of righteousness. Polycarp mostly provides exterior specifics rather than theological or psychological ramifications, in contrast to Paul's theological reflection upon God, the cross and the Parousia. Polycarp also rejects a docetic christology, perhaps with Marcion in mind, but this is not certain. Comparison and contrast with the Johannine epistles will be of value. In addition, he emphasizes the unity of the church and the need to respect church leaders.

5. Martyrdom of Polycarp.

The *Martyrdom of Polycarp* was apparently written by a witness to Polycarp's martyrdom not long after it occurred, February 23, 155. The author clearly parallels the death of Polycarp with that of Jesus. The *Martyrdom* assumes an epistolary form, but aside from the introduction and conclusion it may best be described as a discourse on martyrdom. Little reference is made to Scripture, but a knowledge of the death of Christ in a Gospel or the Gospels is presupposed.

The *Martyrdom of Polycarp* is the first in a catalog of Christian martyrdoms, unless one includes Paul's reflections on death for Christ's sake or certain comments in Revelation. In order to explicate NT depictions, a foray into the martyrdom literature is of value. In the *Martyrdom of Polycarp* Christians are dissuaded from seeking out martyrdom but are not to resist it if no other avenue is available. The grounds for standing firm according to conviction is expressed in this document. Especially of concern are the previous actions of Christ and the confidence that God will give life anew to those who have witnessed unto death.

6. First Clement.

1 Clement is normally accepted as an authentic

letter from Clement of Rome to the church in Corinth sometime between 81-96. If so, it is among the earliest of the noncanonical Christian materials. The situation assumes rifts in the church at Corinth. It is interesting, however, that the causes are not addressed directly as, for example, in Paul's first letter to the Corinthians. The form is epistolary, but it incorporates elements of Greek diatribe and synagogue homiletic style. A number of references are made to the OT with occasional quotations, especially from Genesis. The biblical examples are incorporated so as to illustrate the results of jealousy and division. The references to the Gospels are largely from Matthew. Some of the letters of Paul were apparently familiar to Clement, as was the epistle of James. Little allegorical or metaphorical use is found. *1 Clement* was often alluded to by Clement of Alexandria (150-215), and he adduces evidence that various early churchmen considered it inspired and belonging in the canon.

1 Clement focuses on the fractures that appeared in the Corinthian community. The ideal church situation exhibits order or peace. The case for peace is expounded not so much from the ramifications of the cross, as in *1 Corinthians*, but through the advancement of OT examples, which by contrast display the deleterious consequences of jealousy and strife (though Clement does emphasize the humility of Christ). Repentance and obedience are the solution. Order, Clement argues, is endemic in nature, almost as in Stoic thought, and all aspects of creation demonstrate obedience. Perennial incidents of revived nature likewise establish sufficient grounds for affirming the resurrection of Christ, as does the legend of the Phoenix metaphorically.

7. *Second Clement*.

On the grounds of internal style and the absence of external evidence, *2 Clement* has been assigned to an unknown author who postdates Clement of Rome. Clement of Alexandria did not seem to know of *2 Clement*, and the early church historian Eusebius questioned its authenticity. The style is that of a tractate or an early homily rather than an epistle. Some have supposed that it is a letter addressed to the Corinthian church at a later date, and since it was stored with *1 Clement*, have presumed it to be by the same author. The document should prob-

ably be dated between 120 and 140. It includes many references to Isaiah, and its allusions to the NT are more numerous than those found in *1 Clement*. The author obviously knew the canonical Epistles as well as the Synoptic Gospels, particularly Matthew and Luke.

The author affirms the God relationship of Christ and the salvation that he alone provided. Believers therefore need to respond in service and obedience. The Christian life is one of righteousness and holiness, and the wayward are exhorted to heed the call for repentance. The author for the most part addresses general problems rather than situations explicitly located in the Corinthian church.

8. *Shepherd of Hermas*.

The *Shepherd of Hermas* is of particular value for the study of the *apocalyptic genre of biblical materials, but also for legal and parabolic materials. It reflects both similarities and differences. The setting for the document is ostensibly Rome during a time of persecution. The date is less certain, and if the work is in two parts the first (1-24) is from about 90-110, and the second (25-114) is from about 100-150. The work falls into three parts: *Visions* (1-25), *Commandments* (26-49) and *Parables* (50-113). The *Shepherd* was highly respected and sometimes regarded as canonical. Jerome and Origen argued that the author was the Hermas of Romans 16:14. In the second vision (*Herm.* 8.3) Clement is mentioned, and some scholars argue he is the author of *1 Clement*.

Since the author is reporting original visions, he makes no appeal to the Scriptures so as to authenticate his statements. Few quotations from the OT or the NT may be found, but allusions to both are present, especially the Gospels and James. The allusions are not as clear or as frequent, however, as are those to the OT in the canonical Revelation. Scriptures are employed in much the same manner as in Revelation, that is, to amplify with canonical language specific statements. The intentional metaphorical use of Scripture is minimal. The *Visions* and *parables*, however, depend on highly metaphorical or symbolic entities in regard to the church and heavenly powers. The visions in their narrativity look forward more to John Bunyan's *Pilgrim's Progress* rather than back to prior biblical materials. Key topics in the *Shepherd of Hermas* have to do with repentance, purity, the church and loy-

alty to it, the characteristics of the Spirit and christology. The author is especially interested in whether forgiveness is possible after having been baptized, arguing that it is, but only once.

9. *Epistle to Diognetus*.

The author of *Diognetus* is unknown but most likely is a non-Jewish Christian who wrote toward the end of the second century. Scholars have suggested various dates between 117 and 310. The consensus view is that the document consists of two separately circulated parts later joined. The first (1–10) is in the form of a letter. The second (11–12) is a treatise or a homily. Though the document is not a narrative history of Christianity as is Acts, a comparison of the apologetic outlook of each is rewarding.

The author speaks of Christianity as a new way of worship, neither pagan nor Jewish. Christianity is a third way. Pagans, he charges, worship objects made from stone, wood and metal, using arguments similar to those of Isaiah 44. It is not certain, however, that he is drawing on Isaiah. The Jews in contrast with the pagans have rules with respect to the sabbath and other celebrations that impede human welfare and become idolatrous. Christians live as all others in outward appearance but are pilgrims in the world, a third race. They do not expose their children (i.e., abandon infants), and they love all persons. Christians constitute the soul of the people of the world, just as the individual soul sustains the body. Christians are imprisoned in the world and thereby support the world. The last section of the epistle extols the committed life, and such believers are destined to enjoy the fruits that God has provided. Allusions to Scripture mostly borrow biblical language and ideas.

ARAMAIC LANGUAGE

Aramaic was one of the major languages of the ancient Middle East. Along with Canaanite (Phoenician, Hebrew, Moabite, Edomite) and Ugaritic, it belongs to the Northwest group of Semitic languages. Aramaic is distinguished within the Northwest Semitic languages by having an article *the* marked at the end of a noun and by the lack of a verb pattern with prefix "n" (the Niphal in Hebrew). Characteristic syntax, vocabulary and sound changes also distinguish the language at various time periods.

5. Aramaic or Hebrew Style in the Gospels?
6. The Language of Jesus' Teaching
7. The Origin and Importance of the Aramaic Targums

1. History.

Already in the ninth century B.C. we find Aramaic being used for royal inscriptions, as evidenced by the recently discovered Tel Dan inscription. For such inscriptions, the kingdom of Sam'al (Zincirli, near the present border between Turkey and Syria) switched from Phoenician in the ninth century to a local Aramaic dialect and then to a more standard Old Aramaic dialect within three generations. The Assyrian Empire started to use the Aramaic language for official documents and inscriptions by the eighth century B.C. A bilingual text from Tel Fakhariye in Akkadian and Aramaic makes this clear. The biblical account of the siege of Jerusalem in 701 B.C. (Is 36:11) gives further testimony to the widespread use of Aramaic as a diplomatic language.

Aramaic attained its most prestigious position as a world language under the Persian Empire (see *Jewish History: Persian Period*). During the period of the Persian Empire it was the preeminent international, legal and administrative language throughout the ancient Near East. Its status was upset by the conquests of *Alexander the Great (d. 323 B.C.) and the rapid spread of *Hellenism and Greek culture in the following century. Affairs of state were conducted in Greek. The power of the Greek city-state and its role in spreading Greek literature and culture

made Greek the dominant political and administrative language for much of the Near East from that time throughout the Roman and Byzantine periods, right up to the Arabic conquests in the seventh century A.D.

Along with *Greek and *Hebrew, Aramaic was one of the three languages in most common use in the land of Israel during the first century of this era. It is the language most commonly mentioned in NT scholarship as providing the Semitic background for the teaching of Jesus.

Aramaic retained considerable importance as a language for daily affairs, commerce, legal formulas and religious traditions, and its influence continued for over a millennium after Alexander's conquest. Aramaic dialects continued to be spoken and used from the East Mediterranean Sea to Central Asia to the Indian Ocean. Aramaic loanwords appear in the Qur'an and classical Arabic. Much of the postmishnaic *rabbinic literature and the literature of Eastern Christianity was written in later Aramaic dialects. Isolated pockets of modern Aramaic dialects have survived to the present. A Western Aramaic descendent is spoken in Ma'lula (50 km northeast of Damascus, Syria) and descendants of Central-Eastern dialects are still spoken in some communities in Turkey, Azerbaijan, Iran and Iraq.

2. The Names *Aramaic* and *Syrian*, or *Syriac*.

The Aramaic language developed in the area of present-day Syria, a region whose ancient name from the end of the second millennium B.C. was Aram (Aramu). Already in the ninth century its name appeared in Assyrian as *'armitu* ("language of Aram"; cf. *'ārāmīt* in Is 36:11), and that remained its standard name in the ancient Near East (cf. *'ārāmīt* in Dan 2:4; Ezra 4:7).

With the spread of Greek culture and language a new name for Aramaic developed. The Greeks used the name Syria for the old area of Aram. In Greek the name of the Aramaic language became *syriakē glōssa* ("Syrian language") and as an adverb *syristi* ("in Syrian"). For example, the *Septuagint translates *'ārāmīt* as *Syristi*. In addition, an appendix to the Septuagint of Job 42:17 mentions translating the book "from the Syrian language" (*ek tēs Syriakēs*), evidently referring to using an Aramaic translation of Job.

In the *Letter of Aristeas* (see *Aristeas*, Epistle of), paragraph 11, we read "They [Jews] are assumed to use Aramaic (*Syriakē*) [for their Scrip-

tures], but it isn't, it is a different manner of language [i.e., the Bible is Hebrew]."

In the land of Israel and among rabbis the Greek name was taken over into Hebrew as *sursi*: "Rabbi Yonatan of Bet Guvrin [late third century A.D.] said, 'there are four languages useful in the world, Greek for song, Latin for war, Sursi [Aramaic] for mourning and Hebrew for speech'" (y. *Soṭa* 7.2). Also Rabbi Shmuel bar Nahman (c. A.D. 300) said in the name of Rabbi Yochanan (third century A.D.), "Don't treat the Sursi language as insignificant. It is used in the Torah, Prophets and Writings" (y. *Soṭa* 7.2) [Gen 31:47; Jer 10:11; Dan 2:4b—7:28; Ezra 4:8—6:18; 7:12-26]. Aramaic is not specifically named in the NT. At Acts 1:19 "in their language" is used for an Aramaic name "Blood Field," *h^aqēl dāmā*'.

Many scholars think that when Hebrew is mentioned in the NT (Jn 5:2; 19:13, 17, 20; 20:16; Acts 21:40; 22:2; 26:14 [Rev 9:11; 16:16]) it refers usually to Aramaic. However, the proof for such a usage is weak and limited to proper names, where the etymology of the names is technically Aramaic (Jn 5:2; 19:13, 17). Names are a special category of language and can be adopted into a language. For example, in America Ian is a British name that means "beloved," though etymologically it is Hebrew. Similarly, calling names Hebrew that were etymologically Aramaic should not be taken to mean that "Hebrew" meant "Aramaic."

In John 20:16 *rabbouni* is correctly called Hebrew. The dialectical form *rabbūni* ("my teacher") is found in Mishnaic Hebrew at *Ta'anit* 3:8 in Codex Kaufman, the most reliable manuscript of the Mishnah. (The standard form in *Targum Onqelos* and also later Hebrew is *ribbōn*, which apparently reflects a Babylonian vocalization tradition. The older Hebrew vocalization *rabbūni* could also occur in Aramaic. It has been found in at least one vocalized genizah manuscript of the Palestinian targum tradition at Genesis 44:18).

3. Dialects of Aramaic and the New Testament.

The most important dialects for NT background span a period from the sixth century B.C. to the tenth century A.D. The earlier phases of the language in this period are Official Aramaic and Middle Aramaic. By the Late Aramaic phase (third century A.D. to tenth century), there are three distinct dialectic areas: Western Late Aramaic (Galilean, Samaritan and Christian Pales-

tinian Aramaic) Central Late Aramaic, (Syriac) and Eastern Late Aramaic (Babylonian Talmudic Aramaic and Mandaean).

Official Aramaic (700-200 B.C.) became the standard written language of the Persian Empire (sixth to fourth centuries). This is the dialect of the Biblical Aramaic (BA) texts in Ezra and Daniel, with some allowance made for spelling changes.

Middle Aramaic is a name given to the various dialects attested from 200 B.C. to A.D. 200 (Fitzmyer 1979, 57-84). During this period there appears to have been a dialect continuum from Nabatean to Judean/Qumran (QA) to Palmyran to Syriac and Hatran (Cook 1992). The Official dialect no longer dominated written Aramaic, and local dialect features more and more penetrated into the written language. The dialects from this period are only sparsely attested except for the documents found in the Dead Sea area. Late Aramaic dialects (post-A.D. 200) show more diversity and are better attested.

The *targums of *Onqelos* to the Torah and *Jonathan* to the Prophets (TO/J) raise special questions as to their dialect. Many scholars attribute the basic consonantal text of these targums to Judea from the first or second centuries A.D. while acknowledging that the tradition was revised and vocalized in Babylonia beginning with the third century. However, they may represent a written dialect whose origin is more Central than the Western Late Aramaic dialects (see Cook 1994).

Galilean Aramaic (GA) is the name often given to the Jewish Palestinian Aramaic dialect found in parts of the Jerusalem *Talmud and midrashim. These reflect the period of A.D. 300 to 600. Inscriptions in Judea show that this dialect was influential beyond Galilee.

The dialect of Palestinian Targumic Aramaic (PTrA) consists of fragments from the Cairo Genizah, Codex Neofiti and the *Fragmentary Targum*. It is close to that of Galilean Aramaic, but it appears to be a separate and slightly earlier dialect, perhaps from the second century A.D., and perhaps from Judea (see Tal 1979, 1986).

Samaritan Aramaic is roughly contemporary to Galilean Aramaic and Christian Palestinian Aramaic and has been preserved in the religious literature of the Samaritan community. It is important for tracing the development of Western Late Aramaic.

Christian Palestinian Aramaic (CPA) is mainly

preserved in church lectionaries of the Bible. This Western Late Aramaic dialect is from the sixth to the eighth centuries A.D. and represents the continuation of Judean Aramaic from the first half of the first millennium A.D.

Syriac is a major literary language whose dialectical origin was centered in Edessa. It is our most widely documented Late Aramaic dialect. It is useful for NT studies from many perspectives. Textually, it preserves ancient translations and textual traditions of the NT. Historically, it preserves the teachings, records and literature of the Aramaic-speaking churches. Along with its importance, a caveat must be sounded for the NT student: Syriac is not a Palestinian Aramaic dialect, and it does not directly preserve first-century Aramaic traditions. The Old Syriac Gospels and the Syriac Peshitta versions are translations from Greek. On the positive side, they do show how the Greek NT was interpreted in the second to the fifth centuries A.D. by bilingual speakers.

4. Written and/or Spoken Aramaic: Dialect Models for First-Century Aramaic.

The question of a distinct written dialect over against a colloquial dialect has been debated in evaluating the nature of the Aramaic material. The Palestinian targum(s), and even more so Galilean Aramaic, are distinct from the Qumran Aramaic texts. How is this difference to be explained? Two broad approaches have been taken.

One school of thought attributes the main differences between Qumran Aramaic and Palestinian Targumic Aramaic to time and somewhat to geography. The Palestinian targums are close to Galilean Aramaic but they lack some forms with final *nun* that are so prominent in Galilean Aramaic. This makes these Palestinian Targumic Aramaic forms parallel both to earlier Qumran Aramaic and later Christian Palestinian Aramaic forms. Palestinian Targumic Aramaic also uses a separated object pronoun like Christian Palestinian Aramaic. This hints at a Judean origin of the Palestinian Targum. But the difference of the Palestinian Targum from Qumran Aramaic and its closeness to Galilean Aramaic would point to a later time than Qumran Aramaic and an earlier time than Galilean Aramaic or Christian Palestinian Aramaic. The Palestinian Targum may represent a Galilean development of a second-century A.D. Judean

tradition. The Bar Kokhba disaster (A.D. 135) would be the obvious historical catalyst for the process (Tal 1986).

Another school of thought views the Palestinian targums and Talmud (grouped together) as being closer to the spoken dialects and closer to colloquial first-century Aramaic. The Aramaic of Qumran is viewed as literary and not a good example of spoken Aramaic. In this approach the documents of Qumran Aramaic are literary and Palestinian Targumic Aramaic/Galilean Aramaic are colloquial, and Palestinian Targumic Aramaic is claimed to be contemporary in origin to Qumran Aramaic.

Two lines of argument support the viewpoint that time is the more predominant factor over against the literary/colloquial explanation for the dialect distinctions.

First and foremost, all of the texts in question were written. Qumran, the Palestinian Targum and later Galilean texts are all written texts. It is especially problematic to take later religious, liturgical texts like the Palestinian Targum and pose them as pure colloquial texts.

Second, there appears to have been an Aramaic "dialect continuum" in existence in Middle Aramaic. There was not a dominating, standard literary dialect. A dialect continuum implies colloquial contact throughout the region, and this was reflected to some degree in the writing, since the dialect continuum is only observed in writing. Thus the literary nature of the Judean desert documents should not be overemphasized (see Dead Sea Scrolls). A careful comparison of Qumran Aramaic shows that it was already accepting colloquial and dialectical changes. Qumran Aramaic was no longer under a tight model of the Official Aramaic of the Persian Empire or any standardized Aramaic.

The Qumran texts are contemporary to the NT and therefore are the best examples of what written Aramaic would look like from the first century and are probably the best examples of what colloquial Aramaic would have looked like when written down.

5. Aramaic or Hebrew Style in the Gospels?

The Gospels of Matthew, Mark, Luke and John all appear to have been written in Greek, though they all show varying degrees and kinds of Semitic influence (see Semitic Influence on the New Testament). Written Greek sources that go back to Semitic sources for some or much of

their material remains probable. Is it possible to tell whether the Semitic sources would have been more probably in Hebrew or Aramaic?

First-century and Middle Aramaic narratives from Qumran show a particular style with a narrative conjunction *edayin*, "then." This shows up in unstylized Greek translation as *tote*, "then" (Buth 1990). Mark and Luke both reflect Semitic style, yet both clearly lack a narrative conjunction *tote*. This combination of evidence that is positive toward Semitic influence yet negative for Aramaic narrative would point directly to Hebrew as the more likely source for Semitic material behind Mark and Luke.

Matthew writes Greek with an Aramaic style, especially in his using *tote* ("then, next") as a narrative conjunction. Comparison with the other Gospels makes it unlikely that Matthew's style was representative of some kind of Jewish-Greek dialect. Comparison with the other Gospels also makes it unlikely that this style represents a source. The narrative conjunction "then" occurs in triple tradition, material shared only with Mark, double tradition with Luke, and Matthew's own material. Matthew's Greek is best described as a distinctive idiolect. If Matthew is working from Mark, then his Aramaizing Greek style is almost certainly his own and not reflecting a source.

At the same time, the existence of such an Aramaizing Greek style by Matthew adds to our understanding of first-century Aramaic. It reinforces the picture that our Qumran Aramaic narrative texts accurately reflect first-century Aramaic style and strengthens the claim that the Semitic sources behind Mark and Luke were Hebrew, not Aramaic.

6. The Language of Jesus' Teaching.

Especially since H. Birkeland's monograph in 1954, the question of the language in which Jesus taught has been continually debated (see Greek of the New Testament). A few scholars have argued Greek as a major teaching language, though Jesus' interaction with first-century Jewish culture and rabbinic idiom throughout the Gospels make that improbable. The majority of those who have dealt with the issue have argued for Aramaic as the primary language of teaching. Evidence of inscriptions, Aramaic words in the NT, Aramaic papyri, Aramaic in the Jerusalem Talmud and the existence of the targums (but see below) are brought forward to show that

Aramaic was probably the most common spoken language in the Galilee and thus arguably the most appropriate and probable as Jesus' language.

The Aramaic quotations in Mark 5:41, Mark 7:34 (understanding *ephphatha* not as Hebrew but as a dialectical form of Aramaic *'etpatah*) and Mark 15:34, are more enigmatic than helpful in revealing the language in which Jesus taught. (Mark 15:34 is too complex textually and synoptically to treat in this article. Matthew's phrase is better, while Mark may be hinting at a midrashic interpretation or a divine voice.) The words in Mark 5:41 and Mark 7:34 are "insipid" and do not contribute any insight into Jesus' teaching in the way that modern readers might expect from the trouble of quoting foreign material. Of all of Jesus' words, why quote these? Their purpose may have been to provide a Roman audience with a sense of mystery and awe to some healing accounts. If Mark's language switch implies that Jesus switched languages, then the words would imply that Jesus did not normally teach in Aramaic.

Another approach to the sociolinguistic problem is to investigate the language used commonly in the first century by the Jewish teachers and miracle workers. Who communicated with the people, who won their hearts and respect? What language did those teachers use? The rabbinic literature paints a fairly uniform picture up into the second century A.D. Such a picture is reinforced by the *Dead Sea Scrolls, in which Hebrew was still alive in the first century and Second Temple period. From the evidence we have, one would expect that Hebrew would most probably be used for parables (see Rabbinic Parables), *prayers, scriptural exposition, sermons and the oral "publication" of a teaching—in short, for much of the oral material in our Gospels. On balance this would argue strongly for Hebrew as Jesus' teaching language, and such a view would fit with the Hebraic color of written source material to the Gospels (see 5 above).

We must remember that the Jewish society was highly multilingual. One needs to be careful with claims of unique Aramaisms because most are also found in Mishnaic Hebrew, and vice versa. For example, Hebrew *rabbūni*, mentioned above, is often cited as only a colloquial Aramaic word. Words like *korban* (*qorbān*), *abba* (*'abbā'*) and *raka* (*rēqā*) were both Mishnaic Hebrew and Aramaic. Rabbinic idioms like "kingdom of

heaven," "bind and loose," "establish this Scripture," "debt" (for sin) and "sons of the bride-chamber" are in Hebrew in sayings from Tannaim (Jewish teachers before A.D. 200) and in both Hebrew and Aramaic in sayings from Amoraim (teachers after 200). Even in the later Talmudic age, up through the sixth century, Jewish children were expected to understand Hebrew in the Galilee, though the children sometimes had trouble doing so (Fraade 1992).

7. The Origin and Importance of the Aramaic Targums.

The Jewish community preserved various Aramaic translations of the Bible that raise many important issues for NT studies (see Rabbinic Literature: Targumim). The Aramaic translations include much material that reflects some of the interpretation current at their time of composition.

Most scholars working after the discovery of the Dead Sea Scrolls have argued or assumed that the texts of *Onqelos* and *Jonathan* started out in Judea and were taken to Babylon. Recently, E. M. Cook has made a good case for suggesting that they are not Judean but early Central/Syrian (Cook 1994).

Perhaps equally important is the question of when these targumic traditions started. *Onqelos* and *Jonathan* are missing from Qumran. (The only clear evidence of any targum at Qumran are two copies of Job, a unique work in the Hebrew Bible. There is also a piece of an Aramaic document related to Leviticus 16; see Aramaic Targums: Qumran.) This silence is quite loud in comparison to the many Aramaic texts found at Qumran and would suggest that the origins of *Onqelos* and *Jonathan* are more probably to be dated after A.D. 70 than before. But they probably arrived in Babylon before 200.

The Palestinian Targum traditions complicate this picture. They are distinct from Qumran Aramaic yet have ties to Judean Aramaic and are also close to later Galilean Aramaic. Their dialect would testify to the late second century A.D. or early third century as the most likely period of formation. Thus the time of origin of both *Onqelos/Jonathan* and the Palestinian Targum may overlap in the second century. The Palestinian Targum is likely to have been written down from A.D. 150 to 250 and *Onqelos/Jonathan* sometime between A.D. 70 and 200.

The Palestinian Targum contains consider-

ably more midrashic, interpretative material than *Onqelos/Jonathan*. The *Onqelos/Jonathan* tradition may represent a stripped-down targumic style that was more appropriate in Babylonia, where more of a need for the simple explanation of the Hebrew text was felt. The *Onqelos/Jonathan* targum chose a more Central Aramaic dialect and a more conservative translation style than the Palestinian. In contrast, the Palestinian Targum clearly uses a local Western dialect and includes much interpretive material. It provided a rabbinic spin to the reading of the Bible.

The Aramaic targums are especially important as a depository of traditional interpretations. For example the targum to the Psalms 118:22 mentions that the "stone" is *labya*, "the child." The targum reads: "the child that the builders left behind was the descendants of Jesse and qualified to be appointed to reign." This would seem to preserve an old pluralistic/collective messianic interpretation based on the Hebrew midrashic development of the wordplay *'eben*, "stone," and *ben*, "son." Of additional interest is the fact that *Midrash Tehillim* does not record this tradition for this verse. The Aramaic targum is our only source.

The biggest problem with the targumic literature for the NT is one of dating. One must carefully compare Qumran, intertestamental, rabbinic and targumic traditions before concluding whether material was or was not a part of the first-century background to the NT.

Much work remains to be done on all of the above areas of investigation. The Qumran and rabbinic texts are being published in more accessible and reliable editions. They are also becoming available electronically. A Comprehensive Aramaic Dictionary Project is integrating much of this material. The fields of Aramaic and the linguistic background to the NT are in a positive flux. The new Hebrew and Aramaic texts made available in the last half of the twentieth century are still being carefully sifted and are adding to our knowledge.

ARAMAIC TARGUMIM: QUMRAN

Only three texts of Aramaic translations of the Bible have been discovered in the Qumran vicinity. (An Aramaic translation in a Jewish cultural context is usually referred to as a targum, which is an Aramaic and Hebrew word for "translation.") Yet these three texts give us important, new data on Jewish use of the Bible in the first century. Paradoxically, the general lack of Aramaic biblical translations at Qumran may be as important for our understanding of Jewish practices as the texts that have been discovered.

1. The Texts
2. The Significance of the Qumran Targumim

1. The Texts.

Two Aramaic translations of a biblical text were discovered in 1952 in Cave 4 and were published in 1977.

4Q156 (4Q_tLev) comprises two fragments that contain eight verses, Leviticus 16:12-15, 18-21, and have been dated on paleographic grounds to the end of the second century B.C. The translation style is quite literal and close to the Masoretic Hebrew text. It does not exactly match any of the later written targums (*Onkelos, Jonathan, Neofiti, Pseudo-Jonathan*).

4Q157 (4Q_tJob), the other Aramaic translation found in Cave 4, contains Job 3:5 and 4:16—5:4. The translation style of this fragment is also literal. Neither of these two Cave 4 texts shows midrashic interpretations characteristic of much Jewish targumic material, though since they are short fragments, such a conclusion may be based on an accidental argument from silence (*see Rabbinic Literature: Midrashim; Rabbinic Literature: Targumim*).

A third Aramaic translation of a biblical text was discovered in Cave 11 in 1956. Significantly, it is also an Aramaic translation of Job. This text of Job, 11Q_tJob, was published for the first time in 1971, and the fragments cover parts of Job 17—42.

The dialect of Aramaic represented in this Qumran text is of a literary type that includes a few features that faintly hint at the East, far from Judea. The same features give it a slightly old,

formal style. A general audience would appear to be in view, for example, Jews in the Eastern *Diaspora as much as in Judea. We do not know where the translation was originally made, though we can assume that it is from outside the Qumran community. Nothing about it is distinctly Qumranian. The copy of 11QtgJob is from the mid-first century A.D., but on linguistic grounds the original translation can be dated to around 100 B.C. (It is not related textually or linguistically to the Talmudic/post-Talmudic targum to Job that is printed in rabbinic Bibles.)

Job is a unique book in the Hebrew Bible. There are many obscure words, and it is difficult to categorize the Hebrew book with any other known dialect of Hebrew. The Aramaic translation 11QtgJob aims to make the difficult Hebrew text understandable, occasionally at the expense of the poetic structure. However, the translation is still to be classified as literal and does not appear to incorporate the kind of homiletical expansions that are known from the written targum traditions of later times. The strange and difficult nature of the Hebrew text of Job may help to explain why such a book may have been singled out for translation into Aramaic at an early date.

2. The Significance of the Qumran Targumim.

These two different texts of a targum to Job, one from Cave 4 and one from Cave 11, suggest that the Qumran community did not follow a supposed *Pharisaic/rabbinic prohibition against a written Aramaic targum. The Qumran community was not alone in this regard, since a targum to Job is fairly widely attested for the first century.

The Mishnah (c. A.D. 200; see Rabbinic Literature: Mishnah) stipulates that in the synagogue an oral Aramaic translation of the biblical reading was to be provided without using any written document. This may partially explain why all of our traditional, written targums are relatively late, redacted during and after the Talmudic period. We do not know when, how or where the Mishnaic procedure developed, nor how widely or consistently it was practiced. For example, the NT (cf. Lk 4:14-30; Acts 13:15, 27; 14:11; 15:21; 22:2) is silent on the question. Z. Safrai has shown a confluence of tradition indirectly pointing to the period immediately after A.D. 135 for the establishment of the synagogue practice.

A rabbinic story about Gamaliel (the same person referred to in Acts 5:34; 22:3) mentions a

targum to Job (*t. Šabb.* 13:2; *y. Šabb.* 15c). When Gamaliel was shown a targum to Job he rejected it and gave it to some builders to insert in some temple stonework. He may have rejected this book because he did not want to see a written targum circulating.

An additional note in the *Septuagint at Job 42:17 mentions using an Aramaic copy of Job for its Greek translation. There is no correspondence, however, between our Qumran Aramaic texts and the Septuagint Greek text. In almost every case where our Qumran Aramaic text is significantly different from the Masoretic Hebrew text, our Greek Septuagint text sides with the Masoretic Hebrew text.

This coincidence of detail between naming Job in the rabbinic story, an additional note in the Greek Septuagint and finding two Aramaic copies of Job at Qumran may mean that Job was already popular in translation before the first century of this era. Perhaps Job was the first biblical book to be translated into Aramaic and published in a written form.

Finding two copies of Job in the Judean desert raises a larger question: Why are other Aramaic texts of the Bible apparently lacking at Qumran?

The lack of any significant targumic material beyond Job shows that the Qumran community used Hebrew and Hebrew texts for their access to the Bible. They were apparently comfortable with the Hebrew text, though perhaps appreciating popularized texts like 1QIsaiah^a (the long Isaiah scroll; see Isaiah Scroll).

The fragments from Leviticus (4Q156) are from the section on the Day of Atonement and may be part of a work other than a translation of the whole book of Leviticus. (Cf. *m. Yoma* 7:1 for traditions of reading on Yom ha-Kippurim.) Consequently, 4Q156 should not be cited as a confirmation that an Aramaic translation to the whole Torah existed at Qumran.

This lack of a translation of biblical texts in Aramaic comes into better focus when compared with a number of noncanonical Aramaic texts found in the vicinity of Qumran. For example, 4Q196-199 are copies of *Tobit in Aramaic. 4Q213-214 contain an Aramaic work related to Levi (see also 4Q540, 4Q541 and 1Q21). 4Q542 is an Aramaic *Testament of Qahal*, 4Q537 an Aramaic *Apocryphon of Jacob*, 4Q538 an Aramaic *Apocryphon of Judah*, 4Q539 an Aramaic **Apocryphon of Joseph* and 4Q543-548 an Aramaic work

now designated as **Visions of Amram*. 4Q201-212 are Aramaic fragments of **Enoch*; 4Q530-538 and 1Q23 relate to another Aramaic work on *Enoch*, while 4Q242-245 are Aramaic texts dealing with a pseudo-Daniel. All of these works show that the Qumran community was happy to include Aramaic books in their libraries, but their existence and proliferation at Qumran highlights the general lack of a written Aramaic translation to the Hebrew Bible. Their Bible was in Hebrew.

How widely does the Qumran situation reflect practices and attitudes throughout the Judean province? The fact that they had two copies of a targum (Job) that they did not translate themselves shows that they were in contact with wider circles of Jews. It is thus probable that the lack of Aramaic targums reflects the wider Jewish society as well, since one might assume that other targumic texts would be in their library if they were in general circulation. Thus, the Qumranian practice of direct access to biblical texts in Hebrew probably reflects the practice of the wider Jewish society around them.

ARCHAEOLOGY AND THE NEW TESTAMENT

Archaeology is a science but not an exact or exclusive discipline. It is a method of studying the past that amalgamates many disciplines, including history, geography, language, numismatics, ceramics and even medicine. The word means "a study of antiquity or ancient things." Its contribution to human society is its ability to retrieve the past, or more accurately, significant aspects of the past, which can greatly enhance our understanding of history and culture.

1. Definitions
2. Methodology of Archaeology
3. Important Discoveries Relating to the New Testament
4. Jesus and His World
5. The World of the Early Church
6. Prospects for the Future

1. Definitions.

NT archaeology is not an independent discipline but an application of archaeological methods to the study of the NT and the ancient culture that produced it. As such, it can neither prove nor disprove theological assertions contained in the NT. But it has shed significant light on its cultural history and often provides clarity to enigma, replaces inaccuracy with precision and invigorates skepticism with confidence.

As a scientific discipline, archaeology employs the most recent and highly sophisticated methods of excavation, including subsurface interface radar, photogrammetry, magnetometers, resistivity-measuring instruments, infrared photography, laser-guided and computerized transits, small computers and microfiche systems, neutron-activation analysis and petrographic analysis. All of these are used to analyze and record material that is found in excavations that are conducted according to careful procedures involving surveying, digging, record keeping, and restoring and preserving artifacts.

Some of the archaeologists who work in the area of NT studies are highly trained professionals. However, most of the scholars trained in Greek and Roman archaeology, the period with which the NT is involved, are classical archaeologists and do not deal with the biblical material. Quite often those who work in NT archaeology have been trained in other areas, such as NT, early church history, Greek or theology, and pursue archaeology as an avocation. These people are normally trained pragmatically by participation in various kinds of excavations and then transfer their interest and expertise to NT interests.

2. Methodology of Archaeology.

The usual procedure in modern excavation, whether one is working in OT, classical or NT periods, is first to determine the identity of the site to be excavated. Cities like *Athens, *Rome, *Jerusalem and Jericho have remained occupied through the centuries, and there is no question as to their identity. However, some cities, like Jerusalem and Jericho, have shifted the center of their activity in various periods of their history, and although they remain in the same basic area, the modern city may be a few hundred yards to a few miles apart from the ancient site.

Once the site has been sufficiently identified to warrant the time and expense of excavation, a survey of the area will be conducted to locate any prominent features. Next it will be plotted on a checkerboard graph. Each of the sections or areas will then be numbered for accurate record keeping.

Since an entire city can rarely be excavated, selections of squares will be made, based on potential importance, and assigned to area supervisors. A supervisor and his or her team of ten to twenty diggers will begin the process of clearing the site and then slowly removing the soil that has accumulated through the centuries. As the digging progresses the walls of the square, called balks, are carefully observed and changes in soil texture or content recorded. Balk tags are placed on the walls to identify these changes, and they are recorded in the supervisor's record book as well as drawn on graph paper and photographed.

The digging progresses in this careful, scientific way, utilizing all the methodology listed above in the process. Artifacts discovered are

carefully labeled, taken to the tech shed (the field office), washed, analyzed and stored.

When the season is ended, this material will be studied carefully, written up into a brief report for immediate publication in periodicals or on the Internet and then stored with previously dug materials for constant reference and study as the dig progresses from season to season. At the designated end of the project, the materials will be carefully analyzed once more and a final report published by the director of the excavation. Unfortunately these final reports sometimes never are published, and the benefit of the time and money spent on the project is never fully realized.

3. Important Discoveries Relating to the New Testament.

One of the greatest benefits of archaeology for the study of the NT is its contribution in situating a particular portion of the NT (person, city, event) in its historical, cultural and geographical context. This contributes to a more accurate understanding of the text for its readers, both then and now.

Archaeological excavations of the NT period are being conducted extensively in many countries of the Mediterranean world, especially in Egypt, Turkey, Greece, Italy, Jordan, Syria, Lebanon and Israel. For example, in the half century that Israel has been a nation, excavations have been conducted on its soil at an almost unbelievable pace with astonishing results. Almost thirty digs were scheduled for the 1998 season, for both OT and NT periods (see *Archaeology of the Land of Israel*).

Nearly every major site in Israel has either been partially excavated or reexcavated during these fifty years. These sites include, among others, Jerusalem, Herodium, Masada, *Qumran, Jericho, Samaria, Shechem, Megiddo, Beth Shan, Tiberias, Sepphoris, *Caesarea Maritima, *Caesarea Philippi, Capernaum, Bethsaida and Chorazin. Almost one hundred sites where digging has been at least partially done are discussed in *Excavations and Surveys in Israel* (vol. 15, 1996) published by the Israel Antiquities Authority in 1998.

4. Jesus and His World.

The NT states that Jesus was born during the reign of Herod the Great (Mt 2:1). Archaeological evidence of Herod's presence abounds in

the Holy Land. An inscription was found in 1997 at Masada, one of Herod's palace/fortresses near the Dead Sea, which reads "Herod, king of the Jews." Although Herod's name has been found on *coins from the period, this is the first time this title has been found. His palace at Masada has been thoroughly excavated, as have his palaces at Jericho and Herodium. He died in the former and was buried in the latter. Building stones containing a raised boss in the center and a smooth margin around the edges, which are unique to Herod's building programs, have been found in several sites in Israel, including Jerusalem and Hebron. An aqueduct built by Herod has been found at Caesarea Maritima, and a street belonging to his building activity was discovered in 1995 along the west side of the Temple Mount in Jerusalem.

Evidence of this king's love of Rome and things Roman has been found in Athens in two inscriptions discovered on the Acropolis between the Propylaea and the Erechtheum. Josephus wrote in his first-century history of the Jewish wars that Athens and other cities were "filled with Herod's offerings" (Josephus *J.W.* 1.21.11 §425). These inscriptions read as follows:

The people
[erect this monument to]
King Herod, Lover
of Romans, because of the benefaction
and good will
[shown] by him

The people
[erect this monument to]
King Herod, Devout
and a Lover of Caesar, because
of his virtue and benefaction

Luke says that Pontius Pilate was the governor of Judea when John the Baptist began his ministry and baptized Jesus shortly thereafter (Lk 3:1, 21). The name of Pilate was found carved on a monumental stone near the theater in Caesarea Maritima, where he resided.

In November 1990, a tomb was discovered south of Jerusalem that appears to be the burial cave of the Caiaphas family. The high priest before whom Jesus appeared just before his death was named Caiaphas (Mt 26:3, 57; Lk 3:2; Jn 11:49; 18:13, 14, 24, 28). Later both Simon Peter and John appeared before Caiaphas in Jerusa-

lem (Acts 4:6). The tomb is located in the Peace Forest, south of the Hinnom Valley.

In 1989, while the road along the east end of this Gehenna Valley was being widened, bulldozers uncovered three previously unknown burial caves which had remained undisturbed for almost fifteen hundred years. This discovery produced evidence that has provoked a reexamination of the three other long-known but little-noticed burial caves in this area, and taken together the evidence from these six caves makes the continued identification of this site as Akeldama implausible. Akeldama, the "field of blood" (Acts 1:19), was the burial site for poor people, but these burials were of wealthy people.

In these caves have been found some of the most superb Herodian tombs ever discovered. There is impressive evidence that one of them may have belonged to the high priest Annas. It is located near the recently discovered family tomb of his son-in-law and successor, Caiaphas. Both men were priests before whom Jesus appeared (Lk 3:2; Jn 18:13-14).

Beneath the floor of the presently standing remains of a Byzantine period synagogue in Capernaum, excavators have discovered the floor of a synagogue dating to the time of Jesus. The first-century synagogue was 60 feet wide by 79 feet long, essentially the same as the later one built above it. Here we have evidence of what may have been the synagogue in which Jesus preached, the one built by a Roman centurion for the Jewish nation he loved (Lk 7:1-5).

The house of Simon Peter may also have been found in Capernaum. Eighty-four feet to the south of the synagogue, an octagonal building with mosaic floors had stood in partial remains for centuries. The octagon itself is like those that Byzantine Christians built to commemorate holy places, such as the one over the birthplace of Jesus in Bethlehem.

Beneath this fifth-century building was found a fourth-century church whose hall was part of an earlier house built in the mid-first century A.D. The walls of this house, unlike those of the synagogue, were narrow and would not support a second story or a masonry roof. The roof would have been made of wooden branches covered with mud, in all probability similar to the one described in Capernaum through which a hole was "dug out" in order to let the paralytic down to Jesus (Mk 2:4). Simon Peter was praying on such a roof belonging to

the house of Simon the tanner in Joppa when visitors came from Caesarea (Acts 10:9).

The house in Capernaum was built around two interior courtyards not unlike the other houses found in Capernaum in either size or building material. Sometime in the mid-first century the large (20 x 21 ft.) room in the center of the house was plastered along with its ceiling and floors. During the mid-first century, the pottery used in the room ceased to be typical domestic types, and after that there appear only storage jars and oil lamps. Thus the room must have begun to be used for some purpose other than normal residential living at that time. From then until the fourth century it may have been used as a chapel. More than 150 fragments of inscriptions were scratched on its walls in Greek, Syriac, Hebrew, Aramaic and Latin.

All the evidence presently available suggests the possibility that this chapel was built over a first-century house that had been set apart in the middle of that century for public viewing and continued to be so in subsequent centuries. This evidence has led many scholars to share the view of James Charlesworth that "Peter's house in which Jesus lived when he moved to Capernaum from Nazareth has probably been discovered."

The discovery of the *Dead Sea Scrolls at Qumran has been called "the greatest archaeological discovery of the century" by Hershel Shanks, editor of *Biblical Archaeology Review*. More than eight hundred different manuscripts have been found at Qumran and were appropriately celebrated in a fiftieth anniversary of the first discoveries at Cave 1 in 1947.

These Dead Sea Scrolls are a cache of ancient documents, dating from the first century B.C. to the first century A.D., that were found in eleven caves near the Qumran settlement on the northwest shore of the Dead Sea in Israel. Most scholars have identified this community of Jewish monastic-type religious devotees with the Essenes, the third largest sect of Jews in ancient Israel. However this identification, initially widely accepted, is now being vigorously challenged. Evidence of a significant settlement of Essenes has recently been found on the southern edge of Mt. Zion just above the Hinnom Valley. Part of the foundation of the Essene Gate in this southern wall, some of their ritual baths and some latrines have been found by Bargil Pixner.

A few more scrolls and thousands of frag-

ments were subsequently discovered in ten other caves by both bedouin and archaeologists engaged in an intensive investigation of the area around the settlement during the mid-1950s.

The Dead Sea Scrolls have been of enormous value in the reassessment of Jewish sectarianism in the Second Temple period, which includes the time of the NT. They provide us with interesting background material for the study of the ministry of John the Baptist, who may have been associated with this group at one time. Thus far, however, there is no evidence from Qumran that bears directly on either Jesus of Nazareth or the NT. The many outlandish claims of Christianity's dependence on Qumran published by early sensationalists have been shown, upon more mature investigation of the scrolls, to be without foundation.

In 1998 what may be the foundation walls of the temple of the *Samaritans, probably alluded to in John 4:20, were found on Mt. Gerizim. It may have been patterned on the *temple in Jerusalem, where excavations have revealed more of the walls supporting the Temple Mount extensions during the time of Herod the Great, both on the west and on the east. On the west these include a Herodian street, a drain and portions of the huge stones supporting the western side of the mount. On the east it includes the "pinnacle of the temple" area (Mt 4:5).

Excavations adjacent to the southern wall of the Temple Mount have revealed steps from the time of Jesus that led up into the Double Gates by which entrance was had to the temple courts. Also uncovered were a number of *mikva'oth* (i.e., baptisteries), which were used for ritual immersion of persons like Joseph and Mary, who *purified themselves before going onto the Mount for Mary's purification after giving birth to Jesus (Lk 2:22).

Directly relating to the ministry of Jesus is the discovery of the pool of Bethesda in Jerusalem. It was here that Jesus healed the invalid described in John 5:1-5. This pool is about 100 yards inside the Stephen Gate (ancient Sheep Gate, 5:2) and about 100 yards north of the Temple Mount's northern wall.

The pool of Siloam, where Jesus restored the sight of a man who was born blind (Jn 9:1-12), has been located at the southern end of the 1749-foot-long tunnel of Hezekiah, cut through solid rock about 100 feet below ground.

The site on the east side of the Sea of Galilee, where Jesus cast the demons out of a man and into a herd of swine (Mk 5:1; Mt 8:28; Lk 8:26), has probably been identified by excavations. The history of these texts of the Gospels is problematical, with Matthew placing it in Gadara and Mark and Luke in Gerasa. The problem is in the similarity of spelling in Greek. Ancient scribes probably heard or saw one name in the process of copying a manuscript and thought they heard another.

Gerasa is modern Jerash in Jordan, located 37 miles southeast of the Sea of Galilee. Gadara is modern Umm Qeis, also in Jordan, located 5 miles southeast of the sea. Both of these are impossible to harmonize with the context of the story, which says that the pigs stampeded off a steep bank into the sea and drowned. This is not possible at either of these two sites. However, on geographical and archaeological grounds another variant reading in early manuscripts is undoubtedly the right one. This third site, Gergesa, is modern El Kursi, located in Israel on the east bank of the Sea of Galilee. In the early 1970s a Byzantine church was excavated there. It had been built over a spot considered holy because of some activity of Jesus there, just as were the Church of the Nativity in Bethlehem and the Holy Sepulchre Church in Jerusalem. Rising up on the east behind the church is a hill in which tombs have been found, just as the story describes. And on the west of the church is a steep bank, the only one on the entire eastern shore of the sea, which extended to the water's edge. Archaeologists excavated a memorial tower and chapel between the church and the cemetery that they conclude were built to mark the spot as the place of the miracle.

Archaeological excavations have shed light on some aspects of the burial of Jesus in Jerusalem. About seven hundred tombs of the Second Temple period have been found within 3 miles of Jerusalem. Careful study of these tombs has demonstrated that they are built on a similar pattern. Some of them were built with multiple chambers, and others consisted of two chambers, a burial chamber and an entrance chamber between it and the doorway. Rolling stones sealed the entrance to these tombs. Two of these stones have been found in Jerusalem in the Herod family tomb and in the tomb of Queen Helena of Adiabene. A rolling stone has also been found perfectly preserved in a tomb in

Heshbon, Jordan. These, among others, help the modern student of the NT to envision the scene in which an angel "rolled back the stone" (Mt 28:2; Mk 16:3; Lk 24:2) that sealed the entrance to the tomb of Jesus and "sat upon it." Thus, a practice of burial that is foreign to modern society is illuminated by archaeological discovery.

These types of tombs differ from the Garden Tomb at Gordon's Calvary in Jerusalem, which nearby excavations have shown to belong to the Iron Age, the time of David about a thousand years before Christ. It is now known to be part of a cemetery that reaches northward into the courtyard of the French École Biblique. All the tombs excavated there are of the Iron Age. Thus, it could not be the tomb of Jesus.

5. The World of the Early Church.

Archaeology continues to provide illuminating discoveries relevant to the rise and spread of the early church as well as the life of Jesus. Information relating to the activities of the apostle Paul, as described in Acts and his letters, is impressive in both quantity and quality.

In 1997 excavations in Caesarea revealed an inscription in a mosaic floor that has been tentatively identified as belonging to the official Roman bureau for internal security with its praetorium, where Paul appeared before Felix and Festus (Acts 24:27; see Roman Administration). The site where it was found includes a large palace, offices, a bathhouse and a courtyard.

The governmental complex is the only seat of Roman government unearthed in Israel and one of the few ever excavated in the ancient Roman world. Roman rule over Palestine was centered in Caesarea, and the praetorium complex there functioned as the seat of Roman government from the first until the middle of the third century (see Roman Governors of Palestine).

Interestingly, in 1961 three lines of an inscription were found in the theater in Caesarea that contained the name of Pontius Pilate along with the word *tiberium*. It reads "Tiberium (of the Caesareans?) . . . Pontius Pilate Prefect of Judea . . . has given . . ." The connection, if any, between these inscriptions is yet to be determined, but they clearly testify to the presence of two Roman officials' headquarters in this city, both of whom are mentioned in the NT (see Pilate Inscription).

Critics have argued that Luke was wrong in designating officials in Thessalonica before whom Paul's followers appeared as politarchs (Acts 17:6; see Roman Political System), because no such office had been found in extant literary records—an argument from silence, which is always precarious at best. Archaeology has been able to contribute significantly to this debate. In 1960 C. Schuler published a list of thirty-two inscriptions containing this term that had been identified by archaeologists. Nineteen of them come from Thessalonica, and three of them date to the first century. Two more inscriptions from nearby Berea and Amphipolis containing this title were published in the 1970s.

Further light has been shed on sites mentioned by Acts in the journeys of Paul in the city of *Corinth. Luke wrote that Paul appeared before the Roman proconsul Gallio here (Acts 18:12-17). The platform or rostrum (Gk *bēma*) on which Gallio stood was discovered in 1935 and identified by O. Bronceer in 1937. It is situated in the heart of the marketplace, close to the Bouleuterion (senate chamber). Considerable portions of this huge stone platform are still standing, and it is a major tourist attraction. It was identified by an inscription found nearby in the excavations that reads "He rivetted [i.e., covered] the Bema and paid personally the expense of making all its marble." Luke, writing in Greek, translates the term *rostra* in the Latin inscription as *bēma*.

The discovery of four fragments of an inscription carved in stone at Delphi, across the Corinthian Gulf from Corinth, which contain information about the accession of Gallio, helps us to determine the date of his tenure in office and thus provides a pinpoint for establishing Pauline chronology. The fragments were published in 1905 by E. Bourguet. An account of early publications of the inscription is given by A. Deissmann in *St. Paul: A Study in Social and Religious History*.

The fragments are from a copy of a letter sent from Claudius to the city of Delphi, either to the people of Delphi or to the successor of Gallio, and although it is fragmentary, it contains the name of Gallio, in addition to that of Claudius, with dates for his reign. It reads:

Tiberius Claudius Caesar Augustus Germanicus (Pontifex Maximus, of tribunician authority for the 12th time, imperator the 26th time, father of the country, consul for the 5th time,

honorable, greets the city of the Delphians. Having long been well disposed to the city of the Delphians. . . . I have had success. I have observed the religious ceremonies of the Pythian Apollo . . . now it is said also of the citizens . . .) as Lucius Junius Gallio, my friend, and the proconsul of Achaia wrote. . . . (on this account I accede to you still to have the first . . .).

The letter from Claudius is dated to A.D. 52 by J. Finegan in his *Handbook of Biblical Chronology*. Both Finegan and, more recently, R. Riesner date the beginning of Gallio's term of office to 51. And since Paul had arrived in Corinth eighteen months earlier than his appearance before Gallio (Acts 18:11), he would have entered Corinth in the winter of 49/50, perhaps in January of 50. This would coincide well with the "recent" arrival of Priscilla and Aquila from Claudius's expulsion in 49. This expulsion is also referred to in other ancient sources and can be dated to 49.

An important pinpoint of Pauline chronology is the date when Festus succeeded Felix as procurator of Palestine (Acts 24:27). Most chronologies have assumed a date of 59, as did F. F. Bruce in *Paul, Apostle of the Heart Set Free*. G. Ogg, in *The Chronology of the Life of Paul*, placed it at 61. However, J. Vardaman has found a coin with micrographic writing on it that affirms the date of Festus's accession as 56, which is about three to five years earlier than previous chronologies have allowed. This date has been accepted by Finegan (1981), who in his previous work (1964) had dated the accession to 57. This would mean that Paul stood before Festus (Acts 24:27) in the spring (perhaps May) of 56, and that he had arrived in Jerusalem at the end of his third journey two years earlier (Acts 24:27). Finegan has incorporated Vardaman's work into his chronology in *The Archaeology of the New Testament: The Mediterranean World of the Early Christian Apostles* (14). Vardaman's coin has been ignored, however, by R. Riesner in his recent discussion of chronology (see *Chronology, New Testament*).

Another important discovery at Corinth illuminates the visit of Paul to this city. Paul evidently converted a man named Erastus during the eighteen months he was in Corinth (Acts 18:11). There are 104 inscriptions found in Corinth that date from 44 B.C. to the early second century A.D. Of these, 101 are in Latin and only 3 in Greek. One of the paving stones excavated be-

side the city's theater contains part of an abbreviated Latin inscription that J. Kent, an excavator and epigrapher at Corinth, reads "Erastus in return for his aedileship laid (the pavement) at his own expense." The Erastus of this inscription is identified by Kent with the Erastus mentioned by Paul in a letter later written from Corinth, in which he said: "Erastus, the city treasurer, salutes you" (Rom 16:23). This identification is also accepted by B. Winter in his study of the social background of ancient cities. This is undoubtedly the same Erastus who later remained in Corinth when Paul was taken to Rome (2 Tim 4:20). He was also with Paul in Ephesus on his third journey (Acts 19:22). This man provides an interesting cross-cultural link in the Corinthian church. The name is an uncommon one in Corinth and is not otherwise found in the literature and inscriptions of the city. However, C. Hemer notes that the cognomen Erastus was not uncommon among prominent people in Ephesus. The pavement on which the name occurs was laid in approximately A.D. 50, the time when Paul arrived in Corinth.

A significant point of contact between Paul and his world has been found in the city of *Ephesus on the west coast of Turkey. It is a theater referred to in Acts 19:29-32. This theater, which would have seated twenty-four thousand people, is the most impressive structure still standing in the city. It was enlarged under Claudius about the time Paul was there. It stood adjacent to the lower commercial market near the harbor where the riot against Paul probably broke out.

Two huge statues of Artemis (called Diana by Romans) have been found in excavations of the town hall adjacent to this theater. These statues were reproduced on a miniature scale by a guild of silversmiths and placed in miniature shrines or altars (Acts 19:24) for sale to worshipers who visited her temple. This was a major source of income for these artisans, and Paul's success in converting people from idolatry was affecting their business. Opposition to Paul's teaching in Ephesus became acute when he began to affect the pocketbooks of the artisans. Demetrius, who was probably the president of the guild, gathered his fellow artisans together in the theater, where public meetings of this kind were normally held, and incited them against Paul. One can stand today on the upper levels of the theater, gaze into the adjacent marketplace and re-

create the scene rather vividly. Archaeology has helped to provide the geographical and sociological milieu for the story.

Excavations in Ephesus have also produced what appear to be the foundations of the hall of Tyrannus, in which Paul taught for two years (Acts 19:9). It was identified by an inscription. The structure is located adjacent to the marketplace and across the street from the theater.

Paul traveled the Roman roads of the Mediterranean world on his missionary journeys from city to city. The famous international highway known as the Egnatian Way ran from Apollonia and Dyrrachium on the western coast of Macedonia to Kypsela (modern Maritza) on the east coast, north of the island of Samothrace. Paul would have traveled the portion of that road between Neapolis and Thessalonica. Sections of it have been excavated that show that it was made of large rectangular stones closely fitted together. One section has been discovered running east-west along the north edge of the Roman forum in *Philippi.

When Paul arrived in *Athens he would have gazed in awe at the temple of Athena, the Parthenon, which stood majestically upon the crest of the Acropolis. Although it was badly damaged by an explosion during the Crimean War, the structure still stands as a landmark of the city and undergoes constant efforts at preservation and restoration. It was in clear view when Paul spoke of the idolatry of the Greeks on Mars Hill nearby (Acts 17). Adjacent to its east side was the Temple of Rome and Augustus, evidence of the importance of emperor worship at this time (see Roman Emperors). Portions of that temple's remains contain an inscription identifying it.

In the Roman forum below the north side of the Acropolis there still stands a marble clock tower and weathervane called the Tower of the Winds. Paul undoubtedly looked at it when he was in the forum in order to get the time of day. This forum, rather than the nearby Greek agora to the west, was the commercial marketplace of Paul's day. Luke records Paul's presence here in Acts 17:17: "So he argued in the synagogue with the Jews and the devout persons, and in the marketplace every day with those who chanced to be there."

In his letter to the church in Pergamum (Rev 2:12-13), John refers to "the place where Satan's throne is" and the place "where Satan dwells." A magnificent altar of Zeus was found here that is

112 x 118 feet in size and covered in marble. It was disassembled and taken to Berlin, where it has been reconstructed in the Pergamum Museum. Although some scholars have tried to identify it as the throne referred to by John, excavations have not been able to prove that this was what John had in mind, and since John wrote in the context of emperor worship, it is more likely that he had in mind the Temple of Augustus, which was the first provincial temple built to a Roman emperor in Asia Minor. This is an instance in which archaeology whets the appetite and delights the imagination but fails to provide the needed confirmation.

6. Prospects for the Future.

Archaeological investigation will continue to be an important element in the study of antiquity. With the rapidly expanding number of sites being excavated and the growing interest in ancient sites by both scholar and tourist, as well as the explosion in communication resources such as television, video services, computer web sites and e-mail, the almost instantaneous availability of information on recent discoveries promises to bring abundant discoveries into the offices and homes of people everywhere. Archaeological discoveries are no longer the private domain of a few scholars. The recent rescue of the Dead Sea Scrolls from the control of a few scholars and making them available to everyone both in print and on computers represents the beginning of an exciting new era in NT archaeology.

ARCHAEOLOGY OF THE LAND OF ISRAEL

Archaeology is a unique discipline in that its research goals, theoretical framework and methodology encompass several disciplines (e.g., history, anthropology, sociology, biblical studies, linguistics). Archaeology is the discipline that studies the material correlates of ancient society; more specifically, the material record as it has been patterned by human behavior. Archaeologists participate with other social scientists in an attempt to reconstruct the past by analyzing the patterns of material culture and historical landscapes and correlating the results with other disciplines.

1. Introduction
2. Settlement Pattern and Sites
3. Architecture
4. Pottery
5. Epigraphy
6. Other Material Culture
7. Summary

I. Introduction.

Archaeological research contributes to the study of NT backgrounds by defining the context in

which the texts were written. Archaeological evidence complements the historical record of political events and the geographical landscape through an analysis of settlement patterns based on archaeological excavations and surveys. The archaeological record also reveals social interaction and cultural systems that are not recorded in the textual record: for example, the relation between rural economic and social systems to urban centers, ethnicity, religious practice and, more specific to the period under discussion, the nature and extent of Hellenism in Palestine and its interaction with the local culture.

1.1. Theoretical Shifts and Emphases. Archaeology in the land of Israel was initially viewed as a subdiscipline of biblical studies utilized to verify events of the Bible. The next phase of development was an attempt by archaeologists working in the southern Levant to separate their research goals from those of the historians, who emphasized textual data. Thus there was an attempt to establish archaeology as a separate discipline from biblical studies with its own agenda and research methodologies. The emphasis became Syro-Palestinian archaeology instead of biblical archaeology. The current trend is to view textual and archaeological records as separate but complementary data sets with their own methods of analysis and interpretation. Each set is valuable to the other in the mutual endeavor to reconstruct the past. The archaeological record is dynamic and constantly being enlarged and changed as ongoing excavations and research allow for the constant reevaluation and interpretation of the past. Hence, archaeological research plays a vital role as a necessary foundation for understanding the background of the NT and reconstructing the context in which the text developed.

Archaeology in the land of Israel has adopted current theoretical and methodological trends in anthropological theory. A major shift occurred in the 1960s and 1970s as the paradigm of processual archaeology ("new archaeology") became a dominant influence. Although this introduced current scientific advances and modern excavation techniques within the methodology of archaeological practice, the main influence was the incorporation of the research questions of archaeological and anthropological theory. Currently, with the natural dialogue between texts and artifacts, Syro-Palestinian archaeology is poised to fully adopt the postpro-

cessual trends of the last decade in the larger field. An underlying paradigm in archaeology is to view history as the *longue durée*, in which the archaeological record is viewed as part of a historical continuum with a multitude of variables that pattern it. Archaeology in the land of Israel now defines ancient Palestine as a small part of a larger region instead of its own isolated entity. Patterns are viewed in the larger world systems of the Mediterranean basin and the Near East.

1.2. Hellenistic Archaeological Research. Only recently has the archaeology of the Hellenistic period in the land of Israel been explicitly defined and analyzed. Research has generally focused on issues relating to the Hebrew Bible or the NT, resulting in an emphasis on the Iron Age or Roman periods. Archaeological research is now focusing on the reconstruction of ancient social systems instead of the confirmation of NT events and places. Due to the quantity of literary material for this period, archaeological research has tended to place an emphasis on interpreting the archaeological data within the context of the textual data.

Although the *Hellenistic period is well documented in the textual record, not much archaeological data was known at the beginning of the twentieth century. At that time, the only known sites with archaeological exploration were Marṣa, 'Iraq el-Emir, Samaria and Gezer. This led many scholars to assume that Palestine was not part of the Hellenistic revival. Arav notes that the paucity of data was due to the difficulty in distinguishing this period in the archaeological record from the earlier Iron Age-Persian and the later Roman-Byzantine periods.

Another problem is that the building activity in the following Roman period destroyed most of the Hellenistic remains with deep and extensive building foundations. The archaeology of the Hellenistic period was first defined between the two world wars. As precision in dating of ceramics and coins was established, the first archaeological syntheses of the Hellenistic period were produced—C. Watzinger's 1935 survey of the Hellenistic presence in Palestine (*Denkmaeler Palaestinas*), and W. F. Albright's 1945 synthesis in *The Archaeology of Palestine*. Albright divided the period into two periods ("Lagides," later to be the Ptolemaic, and the "Seleucid"), and he made two observations about the material culture that have set the stage for the current research trends in the archaeology of Palestine

during the Hellenistic period. The first observation was that Hellenic influence greatly penetrated into Palestine. Albright demonstrated this through the city plan of Marisa, the monument of the Tobiads at 'Iraq el-Emir, and the coins and Rhodian jars found in large numbers throughout the region. The second observation was that this initial Hellenic influence later receded and there was a reemergence of local styles.

These observations have been expanded as scholars differentiate between Western and Oriental elements in the artifact record and note that the emergence of the *Hasmonean state brought about a local conservatism against the foreign elements that Hellenistic culture brought. Currently these themes are being developed within the wider context of the smaller Palestinian communities interacting with the internationalism of the age.

1.3. Archaeological Periods. Archaeological periods are based on a correlation with historical periods and changes in the material culture. The Hellenistic period is divided into two major archaeological subdivisions, which are further divided each into two subsets based on the history: the Early Hellenistic period (331-150 B.C.), which encompasses the Ptolemaic and Seleucid periods, and the Late Hellenistic period (150-69 B.C.), which correlates with the rise and expansion of the Hasmonean state.

2. Settlement Pattern and Sites.

Palestine had more Hellenized cities per square kilometer than did any other province outside of Greece (Arav). The geopolitical situation greatly affected the settlement patterns of the Holy Land. The Early Hellenistic period coincides with *Alexander the Great's conquest and the subsequent control by the Ptolemaic and Seleucid empires. Evidence of these conquests that are visible in the archaeological record are possible destruction layers at Ashkelon and Dor. The political changes are evident in the construction of new customs houses at Acco and Gaza and the minting of new coins. The settlement and economy of Palestine remained virtually the same as that of the previous Persian period (*see Jewish History: Persian Period*).

Throughout the first half of the second century B.C., the turmoil in Judea remained almost completely contained within that region. In the

second half of the century many peoples in Palestine and Phoenicia sought to consolidate their territory, revenues and political power. In the south the Nabateans expanded their dominion in the Negev and southern Transjordan, while in the north the Itureans moved into the Golan. In central Transjordan an ambitious dynast named Zeno Cotylas seized Philadelphia and its environs. Economic independence and its by-products also allowed for the establishment of new settlements. The most comprehensive archaeological evidence for a population increase during the Late Hellenistic period comes from the Upper Galilee and the adjacent Huleh Valley, areas traditionally included in the hinterland of Tyre. At this time, while most sites outside Judea and Samaria were well fortified, only the central hills show a consistent pattern of destruction (e.g., Beth-Zur, Gezer, Tirat Yehuda), evidence of the Hasmonean colonization efforts throughout Judea and Samaria. The change in settlement patterns is also documented by newly developed sites and abandoned sites (e.g., Tel Dothan). By the late second century B.C. the Itureans expanded from the interior of Lebanon into the northern Golan and Mt. Hermon, where more than one hundred sites, mostly unwalled farmsteads with animal pens, were discovered.

2.1. Northern Coast. The sites along the coast provide the best evidence for the internationalization of the Holy Land. The port cities were the first to experience this impact, and the connections between these coastal communities and the southern Phoenician cities of Tyre and Sidon illustrate the mercantile character of the area. The major sites are Dor, Acco and *Caesarea.

Dora (Dor) is located on the Carmel coast, 14 miles south of Haifa. Excavations have revealed three strata of a well-planned city, built on an orthogonal plan with several residential buildings adjacent to the city wall and a row of shops and workshops abutting the city wall. One of these workshops contained a local dye industry. Excavated public buildings include some of the largest Hellenistic temples and a large ashlar-built public building apparently connected with some sort of administrative-commercial activity in the area. The Roman forum was later built over this building. The building style was Phoenician-ashlar piers with rubble fill and was at least two stories high. Archaeological data reveal

that Dor was a pagan Greek city.

Ptolemais (Acco) is located at the northern end of Haifa Bay on a broad plain. Excavations on the mound and at several sections within the modern city have exposed several components of a Hellenistic city. Ptolemais was defended by an extensive fortification system of walls and towers. At least two strata have been excavated from the Hellenistic period and exhibit a well-designed city plan that included a building constructed in the Phoenician technique with ashlar headers and stretchers interspersed with field stones. Residential quarters contained homes with spacious courts with numerous cooking ovens. One public building was a small temple dedicated to Zeus Sotēr on behalf of King Antiochus VII Sidetes. The Hellenistic founders of Ptolemais constructed their port facilities on the open sea.

Strato's Tower (Caesarea) is another coastal city on the northwest corner of the Sharon plain. Although archaeological excavations have revealed an abundance of third- and second-century B.C. pottery, not much architecture can be dated to the Hellenistic period. Most scholars date a series of wall segments with round towers to the late second century B.C. The masonry consists of drafted kurkar (local sandstone) blocks laid alternately as headers and stretchers. The harbor of Strato's Tower is north of the city using a natural bay. A massive wall (preserved for 30 x 5 m) built along the waterline on the contour of the rocky shelf is associated with the quay. It is an ashlar structure built of irregular blocks in the headers technique (see 3.1 below). Two excavated segments of a wall provide evidence of the northern boundary of the harbor.

Various other sites along the coast have been excavated with Hellenistic remains. On the Sharon plain, Atlit, Tel Mevorakh, Apollonia (Arsuf) and Tel Zeror have produced finds. Tel Mevorakh and Tel Zeror were agricultural estates. Two forts have been excavated at Shiqmona on the Carmel cape and at Tel Michal at the southern end of the Sharon plain. At Tel Michal, a small fort dating to the Hasmonean period was built.

2.2. North: Galilee and Golan. Recent archaeological research in Galilee shows that the northern regions were thinly populated in the third century B.C. but experienced a population explosion in the second century B.C. Most of the

major excavated sites producing Hellenistic remains are in the Huleh and Beth Shean valleys.

Situated at the juncture between the Jezreel and Jordan valleys is Scythopolis (Beth-Shean). It was founded before the middle of the third century B.C. as a polis and played a major role in Hellenistic Palestine. The city expanded off the ancient tel to the crests of the nearby hills and later descended to the low-lying areas. The city center probably moved to the northern bank of the Harod Brook at Tell Istaba, where remains of Hellenistic buildings were discovered as well as pottery vessels and small objects. Most noteworthy are several hundred amphorae handles with seal impressions.

Along the southwestern end of the Sea of Galilee is Beth Yerah. This site is identified as Hellenistic Philoteria. It was defended by a thick wall built of mudbrick with basalt foundations and had outward-jutting, alternating square and round towers. Part of the town was excavated. The houses, separated by a nine-meter-wide street, were rectangular in shape with the rooms facing rubble-paved courtyards. Some were preserved up to their windows and were decorated with colorful marbles and with plaster imitations of marble, a common fashion in Hellenistic urban sites.

Excavations at Tel Anafa, located in the Huleh Valley, have revealed a rich Hellenized settlement consisting of an acropolis surrounded by an extensive lower town. The wealth of the city is evidenced by the excavation of a large stucco building (c. 38 sq m). The building plan consists of suites of rooms on four sides opening onto a central courtyard (9 x 12 m). This building has a bath complex consisting of three rooms.

At the north of the Huleh Valley at the foot of Mt. Hermon is Tel Dan and Banias. The ancient site of Dan had a high place initially built during the ninth century B.C. It was a large platform built of headers and stretchers. A bilingual Greek-Aramaic dedicatory inscription mentions "to the Gods of Dan," indicating that this high place was also used in the Hellenistic period. At the foot of Mt. Hermon is the Sanctuary of Pan at Banias. This is a natural grotto in which a temple was built. The nature of the Hellenistic sanctuary is unknown; only a few Hellenistic remains were found outside, which suggests that in this period the cult place was confined to the natural cave.

Gamala is the only Hellenistic site in the Golan that has been excavated. The site is surrounded by a thick wall with a round tower. The excavations have uncovered a public house, a ritual bathhouse, streets, a residential quarter and possibly a synagogue. The city was constructed with fine masonry and decorated with frescos and architectural ornamentation.

2.3. Philistine Coastal Plain. Most of the major Iron Age port cities were occupied in the Hellenistic period. Located at the border of the Sharon and Philistine plains is Joppa (Jaffa). Although Hellenistic remains have been exposed in three areas, the evidence is too fragmentary to give a complete picture of the city. In one area (Area A) part of a square fortress with some type of industrial area was discovered dating to the third century B.C. The fortress was constructed of brick-shaped, ashlar blocks set on their narrow end, and it had a room containing an altar built of field stones. In Area C part of a courtyard of a catacomb was discovered. A fragment containing a dedicatory inscription mentioning Ptolemy IV Philopator suggests the existence of a Hellenistic temple. In Area Y many tombs and various installations were found, as well as the corner of a large building built of ashlar masonry, thought to be the agora.

Various salvage excavations in the Yarkon basin have exposed several buildings and wine presses dating from the Ptolemaic occupation. Several structures along the line of the Yarkon River have been interpreted as the defense line of Alexander Janneus (described by *Josephus). They have also been interpreted as watchtowers. It appears that this region had several agricultural estates that reflect an extensive wine industry in the Yarkon basin.

On the southern coast is Azotus (Ashdod). Excavations have revealed a well-planned city with streets separating various buildings. The main building belongs to the city's agora. The main room of this building contained large pottery jars, similar to Rhodian wine jars. An altar constructed of two flat stones with a third laid across was found in a corner of a room, as well as two miniature stone altars, weapons and a lead plaque probably representing a deity with a fish tail. This site was destroyed at the end of the second century B.C. The sister port city was at Tel Mor on the bank of Nahal Lachish. Stratum I consisted of a large public building located at the eastern slope of the tel and a dye installation

located on the northern slope. The dye installation contained several plastered pools connected by pipes, near a cistern that contained thousands of shells and pottery vessels.

Ascalon (Ashkelon) was not as important as Gaza during the Hellenistic period. Although Ascalon had an extensive Persian and Roman occupation, few remains were found that can be accurately attributed to the Hellenistic period. It appears that during the Hellenistic period the major port moved to Gaza.

Textual data indicates that Gaza's importance far exceeded that of Ascalon during the Hellenistic era; however, not much is known of the archaeological remains of the city. Recent excavations have exposed parts of the Hellenistic city's fortifications. Further inland from Gaza at the site of Tell Hesi, residential settlements in two distinct phases from the Middle and Late Hellenistic periods have been found. Located 6 kilometers south of Gaza, on the southern bank of the Besor River, is Tell Jemmeh, where excavations have revealed that the site was primarily occupied by large mudbrick granaries. A total of ten granaries have been excavated. They were entered through two opposite doorways, from which steps descended to a high platform projecting to each side of the structure. The granaries were in use until about 150 B.C. An ostrakon bearing a South Arabic monogram suggests that this site may have been connected to the Arabic caravan traffic.

2.4. Shephelah and Negev. Some of the most extensive Hellenistic remains excavated have been in the Judean Shephelah, most notably at the site of Marisa (Mareshah). Marisa was one of the first Hellenistic sites to be excavated in Palestine, and excavations have shown it to be one of the most impressive Hellenistic settlements, with three major Hellenistic strata. Marisa became the vital city in the Shephelah during the mid-third century B.C. and the following periods. The Hellenistic city was square in plan and was surrounded by a city wall with square and rectangular towers. Public buildings include a marketplace, a caravansary and a building used as the administrative and religious center. Two types of private buildings were found: the complex house and the courtyard house (see below). These houses had remains of hearths, basins and steps leading to second stories and roofs. Finds consist of hundreds of vessels, Rhodian handles, lead figurines, limestone

tablets, coins and three Greek dedicatory inscriptions. The site is known for its extensive and rich necropolis. The burial caves contained tombs of several chambers with several elaborate friezes depicting various individuals, musicians, riders, several types of animals and inscriptions. One of the fascinating discoveries of recent excavations is an extensive underground city. Almost every house had access to subterranean complexes: units, workshops and storage rooms interconnected by tunnels. Found underground were forty columbaria used for pigeon raising, sixteen olive presses and more than one hundred cisterns.

Although the capital of the Shephelah was moved from Lachish to Marisa, a temple was built at Lachish during the Hellenistic period, possibly in the Persian period. The sanctuary is oriented on an east-west axis, the inner and innermost parts were elevated, and a limestone altar was found in the court. This temple went out of use during the second century B.C., perhaps as part of the Hasmonean resurgence.

At the site of Gezer at least two Hellenistic strata have been isolated. Stratum III is dated to the third century B.C. and Stratum II to the Hasmonean period (second half of the second century B.C.). The city wall appears to have used the previous Iron Age wall with a rebuilding of the gate. During the Hasmonean period the gate was hastily repaired, the threshold was narrowed, and semicircular bastions were added around the tower. Several fine courtyard houses were partially excavated in Fields II and VII. Also excavated, in an area northeast of the gate, was a private home consisting of a northern wing with several rooms surrounding a courtyard and a southern wing with a later addition of a miqveh. Boundary markers have been found in the fields, and a Greek political graffito was found in the vicinity of the gate, "To blazes with Simon's palace!"

In the Negev two sites have Hellenistic remains, Beersheba and Arad. Beersheba was located at a central point for trade during its long history. During the Hellenistic period the ruined Iron Age strata was leveled by a massive fill. On top of this a fortress containing a temple was built, of which only a few parts remain. Outside the fortress several large courtyards, dwellings and domestic installations served as suburbs. Excavators have found two strata dating to the Hellenistic period, the first dating to the second

century B.C. and the second to the first century B.C. A bathhouse was added in the second period. Arad is located 80 kilometers east of Beersheba on the eastern end of the Negev basin. Level IV dates to the Hellenistic period, third-second centuries B.C. A large tower was built in the center of the early Israelite tower on the acropolis. This tower was 12 x 12 meters and stood on a platform 19 x 19 meters. Around this watchtower several rooms were found, possibly the barracks.

2.5. Judea and Samaria. The only early Hellenistic settlements of any size found in the northern central hills are Samaria, Shechem and Mt. Gerizim. This region was used extensively for subsistence agriculture. Several small, stone field towers have been found through surveys of the region. These towers served the agricultural settlements and were used for temporary shelter and storage.

At Samaria the Hellenistic city occupied the acropolis and the lower city. The acropolis was defended by a wall fortified with round towers—one of the most impressive monuments of the Hellenistic period in Palestine. During the Early Hellenistic period, the old walls of the acropolis were still in use and huge round towers were added, one of which is about 20 meters in diameter. In the middle of the second century B.C. a new wall was built around the acropolis. This wall enclosed an area of 230 x 120 meters and measured 4 meters in thickness. The round towers went out of use, and square towers were built at intervals of 40 to 50 meters. The city had been deserted for half a century when it was rebuilt under Gabinius. Part of this city was excavated exposing eight insulae with five streets. Each insulae had four houses and a row of shops; the average dimensions were 28 x 12.5 meters. One house had a paved central court with columns *in antis* on Doric bases. Evidence of plaster, some painted to look like marble, was found in the homes.

Another site in the Samaritan hills is Shechem. Although the complete plan of the city is not known, four levels of occupation were defined. In Stratum IV (931-250 B.C.) the Middle Bronze Age (MB) fortifications and the MB eastern gate were reused. In Stratum III (250-190 B.C.) rebuilding of the MB fortification continued along with the rebuilding of the glacis. A wealthy quarter with houses of fine masonry and painted walls was excavated. This stratum

was destroyed, and the next level (Stratum II) dates to the Seleucid occupation. In this stratum, the city was rebuilt with only one fortification, a tower erected directly east of the East Gate. An ephemeral Stratum I phase was evidently destroyed by John Hyrcanus (134-104 B.C.). Scholars note that Shechem never took on the shape of a Hellenistic town. At Tel Dothan, 22 kilometers north of Shechem, a rural settlement was found at the top of the mound. The excavation reports are fragmentary and suggest that the few Hellenistic remains are evidence of a planned settlement.

To the west of the site of Shechem is Mt. Gerizim, consisting of two ridges. The upper ridge is Tell el-Rās. During the Hellenistic period a walled city encompassed an area of about 100 acres. The city was divided into four residential quarters and a sacred precinct on the summit. In the western quarter (Area A), excavations revealed a large tripartite structure consisting of a main building, a service building and a western building. Each of the parts contained courtyards, or plazas, paved with stone slabs and several rooms. Stairways and second-story collapse were evidence for the existence of multistory buildings. In the main building one room served as a bathroom, with a stone bathtub and a small plastered washbasin. Several other buildings were excavated in the other quarters. One building in the northern quarter (Area T) contained an oil press, while in another quarter outside the city (Area K) three houses built around a central courtyard were found. These houses were inferior in building construction and finds compared with the houses found inside the city.

Excavations in the 1960s exposed the remains of two temples on the summit. The later temple, built by Hadrian, measures 20 x 14 meters with a staircase on the slope. It stands on a podium that rises above a large stable platform 68.5 x 43 x 7 meters. This temple was erected in the second century B.C. Walls of an earlier building with a half cube of unhewn stones, thought to be the altar, were found under the Roman temple. The excavator identified this earlier building with the Samaritan temple and notes that it was probably destroyed by John Hyrcanus in 128 B.C. Other scholars date this earlier temple to the Roman period.

Much of what we know of Hellenistic Jerusalem comes from texts. Archaeological finds dat-

ing to Herodian Jerusalem (Roman period) are abundant, and it is assumed that this city destroyed most of the earlier Hellenistic remains; fortunately there is enough fragmentary evidence to allow a reconstruction of the Hellenistic city. The city was confined to the Temple Mount and the area of the City of David in the Early Hellenistic period. Occupation expanded to the Western Hill during the Hasmonean period. Sections of the Hasmonean fortifications were found at the City of David, where a fortified gate identified as the Valley Gate was rebuilt. Other Hellenistic fortifications found are Josephus's "First Wall" protecting the upper city and two sections of the city wall in the northwest corner of the Jewish Quarter. One section, discovered in the courtyard of David's Citadel, is still standing 11 meters in height with three projecting towers that form the northwest corner of the wall.

South of Jerusalem is Beth-Zur, on the boundary between Judea and Idumea in the Hebron hills. The site is identified with Khirbet et-Tubeiqah, a natural conical hill that flourished in the Hellenistic period. In the third century B.C. a citadel was built and was subsequently rebuilt throughout the period as the town apparently changed hands. Several houses, including bathing facilities and several shops, were found dating to the reign of Antiochus IV Epiphanes. Under Judas Maccabeus the Middle Bronze Age wall and the citadel were rebuilt and used. The citadel was again rebuilt under Bacchides. By 100 B.C. Beth-Zur was deserted.

In the Jericho region where Wadi Qelt enters the valley from the hills, a Hasmonean winter palace complex was excavated at Tulul Abu el-'Alayiq. The palace was built in stages, expanding from an earlier tower and an artificial mound. The palace consists of a large main building (50 x 50 m) built of mudbricks on a rubble foundation with a swimming pool complex containing two large pools, pavilion and a colonnaded garden surrounded by a spacious court with a fine plastered floor. In the northwest corner of the palace a mikveh complex was found having two pools, one with steps and a pipe connecting them.

The Judean desert contains several forts that have Herodian remains, some possibly dating to the Hasmonean period. Each one of these fortresses has architectural features or finds dating to this period. These fortresses are Alexan-

drium, Macherus, Masada, Doq, Dagon, Kypros, Threx and Tauros.

At the site of *Qumran, two phases date to the Hellenistic period. In Phase Ia the settlers used the remnants of the Israelite period, adding two new cisterns. In Phase Ib the complex consisted of a main building with a tower, a central courtyard, a large assembly hall and a potter's workshop. Just east of Qumran on the shore of the Dead Sea, a rectangular house and an inner court with surrounding rooms was excavated at 'Ein Feshkha. Part of the building served as an administrative or residential court. Further south at the oasis of En-Gedi, a military fortress was founded in about the fourth century B.C. at the ancient settlement of Tel Goren. The citadel of Stratum III consists of two parts. The western section was built on a trapezoidal plan with a rectangular tower at its western end. The eastern section was a large rectangle with a rectangular tower in the southern part. The total area of the citadel was about 350 square meters. Most of the finds date to the late Hasmonean period, although there were a few coins from the time of the Ptolemies and Seleucids and a few Early Hellenistic potsherds.

2.6. Transjordan. The settlement pattern in Transjordan was similar to the central hill country of Judea and Samaria. In the *Decapolis several cities have been excavated, and monumental Roman remains have been found. Although we know from textual records that several of these cities were established during the Hellenistic period, the archaeological record is limited. Pella, on the western slope of the Gilead across the valley from Scythopolis, produced the only architectural evidence of a Hellenistic city. A modest, rectangular house, constructed of mudbrick and covered with fine white plaster, was exposed. Most of the Hellenistic pottery dates from the second century B.C. At Abila, a limited number of pottery sherds are the only evidence of the Hellenistic city found, along with some tombs in the necropolis. Gerasa and Gadara, both well known from texts, produced only scant ceramic evidence of the Hellenistic cities.

Excavation soundings at Tell es-Sa'idiyah, located in the Jordan Valley between the Sea of Galilee and the Dead Sea, revealed a Hellenistic structure, 21.2 x 13.3 meters. The building had a spacious hall at the east end from which a corridor, flanked by three rooms on each side, leads

toward the west. Ninety-seven circular storage pits and two rectangular mudbrick-lined bins were excavated.

Although Philadelphia (Rabbath-Ammon) had continuous occupation from the Persian through the Roman periods, the Hellenistic remains are minimal. The only excavated remains of the Hellenistic city are walls of the acropolis constructed of polygonal blocks in dry construction (a technique from Greece in the first half of the fourth century B.C.) and a subterranean reservoir at the north end of the acropolis.

The site of 'Iraq el-Emir, between Jericho and Amman, consists of a small mound, two large buildings to the south (Qasr al-'Abd and the Square Building), some water channels, fortification walls and a series of natural and hewn caves in cliffs to the north. The site is identified with the Tyros fortress built by Hyrcanus the Tobiad in the early second century B.C. and is mentioned by Josephus. This identification is validated with inscriptions reading "Tobiah" carved over the entrances of two caves. The building, known as Qasr al-'Abd, was a huge building with monolithic pillars and four monumental relief panels each depicting a large feline identified as either a lion or a leopard. The original plan is uncertain because the building was used during the Byzantine period as a church. Based on the earliest ceramic dates, its original construction is dated to the early second century B.C.

3. Architecture.

3.1. City Planning and Construction Techniques. Although each region demonstrates a different picture of urban life, a careful study of city plans shows that most cities adopted a Hippodamic plan—a grid plan that divides the residential areas into symmetrical blocks separated by right-angle dissecting streets. This plan also divides parts of the town into different functions (i.e., residential, public, cultic). Examples of this Hippodamic plan can be seen at Dor, Shiqmona and Acco.

Construction techniques, especially as seen in fortifications, are of the Phoenician-Greek masonry, which uses header-stretchers (i.e., with one stone laid lengthwise and two widthwise, and fieldstone fill between them). Fortification systems include round and some square towers interspersed along the city wall. Samaria is the best example of this. These new fortification sys-

tems were in direct relation to changes in warfare, mainly the introduction of the catapult in the Hellenistic period. Catapult stones are found at several sites. Another noticeable change in construction techniques is the almost complete use of stones for foundations and the superstructure.

3.2. Temples. Two complete temple plans have been discovered (e.g., Lachish, Dor): a long temple composed of three successive areas in which the ritual was conducted mainly in the cella, or inner sanctuary; the broad type with one or more chambers in which the ritual usually took place in an enclosed court in front of the temple building.

3.3. Public Buildings. Several parts of public buildings have been excavated revealing well-planned and monumental construction. Unfortunately, very few have been exposed. It is possible that there may have been some Hellenistic public buildings reused or extensively rebuilt in the Roman period. No complete buildings have been found dating to the Early Hellenistic period. The Hasmonean palace exhibits clear architectural features. The characteristics of Hasmonean palaces include a central court surrounded by rooms. A hall with two columns *in antis* in the southern part of the court led to the triclinium and probably served as a reception hall. This basic plan is characteristic of all the palaces at Masada, as well as the twin palaces at Jericho.

3.4. Private Houses and Estates. Advances in household construction techniques in Palestine were made during the Hellenistic period. The introduction and adaptation of new architectural components, such as the arch and vault, high-quality mortar and the development and use of professional builders and architects were key turning points in private construction in Palestine.

The private house consisted of distinct units (sleeping, bathing, storage, stables, workrooms and even shops). Most dwellings had an upper story used for living and sleeping. This was either an open roof or, in several instances, a complete second-floor structure. The basic architectural unit was the open courtyard in which most of the household's activities and industries took place. It is common to find ovens, vats or storage bins in the courtyard.

A complete synthesis and analysis of private houses and estates has been produced by

Hirschfeld. He defines four basic house types from the Hellenistic to Byzantine periods. The *simple house*, the most basic and common dwelling, consists of a one-room structure with an attached open courtyard. The only example from the Hellenistic period was found at Gamala. The second type is a *complex house*, which is similar to the simple house but has been extensively modified with new additions of dwelling units built around the courtyard (e.g., Qasr e-Leja in the region of Samaria). The *courtyard house* is a well-planned dwelling consisting of a central courtyard surrounded on all four sides by the wings of the dwelling structures. This type was used exclusively by wealthy families (e.g., Samaria, Mt. Gerizim, Marisa and Beth Yerah). The fourth type, the *peristyle house*, is rare in Palestine. It originated in Italy in the second century B.C. Its main defining characteristic is a small peristyle courtyard. This type became the model for the classical Roman house of the affluent. One example dating to the Hellenistic period has been excavated at Tel Anafa.

4. Pottery.

Although pottery is the basic building block for archaeology, the pottery of the Hellenistic period has not had synthetic studies and reports as has the pottery of the Bronze and Iron Ages. To date, archaeologists have broadly defined Hellenistic ceramic typology based on early and late Hellenistic assemblages and broad-based regional variations: north, central hills and the coastal region. The variations are based on social and economic factors. In general, the pottery of the region maintains local traditions with Mediterranean fine tablewares and amphorae (locally made and imported). During the Hellenistic period new groups of imported vases appeared: such wares as the "west slope," the "Megarian" and the "Terra Sigillata," as well as many new types of lamps. Undecorated everyday ware also began to appear in the region, such as heavy bowls, cooking pots and the wine amphorae from the eastern Greek islands. The pottery also reflects geographical dynamics.

Archaeologists have defined three assemblages: the northern, the central hills and the coast. It appears that coastal sites used more variety in shapes and decorations for tableware than did the other two regions. They also had two types of cooking pots in contrast to the single globular cooking pot of the north and hill

sites. During the third century B.C., Greek-derived fineware appeared in the region. Greek black-gloss wares were derived from imports as well as their local imitations. During the late Hellenistic period pottery assemblages from the northern and coastal sites started to have more vessels in common, while the assemblages from the central hills continued by comparison to be poor in both the quantity and quality. Phoenician influence and manufacture are evident, especially in the northern sites, with several semifine storage and serving vessels, most notably the red-slipped Eastern Sigillata A ware. A Late Hellenistic phase is typified by platters with thickened feet, small floral stamps around the center and small hemispherical footed cups. Several types of cooking vessels were used, including cooking pots, casseroles and baking dishes. Imported Aegean wine amphorae are also commonly found. Some assemblages reflect a regional-ethnic distinctiveness (e.g., Nabatean pottery, Phoenician semifine ware). During the early part of the third century B.C. lamps began to be made in molds. Hellenistic lamps tend to have a round body and a concave disk for the filling hole. The base is flat with an elongated nozzle and a sharp triangle or bow-shaped end.

5. Epigraphy.

Epigraphic data provide a window into the sociocultural dynamics of the Holy Land during the Hellenistic period and provide important information for chronology, trade and glyptic data. From these sources we know that the population was mixed, and the Holy Land became part of the larger international sphere and the multilingual character of the region. The nature and content of the epigraphic data provide evidence that the general population of Hellenistic Palestine was more literate than was previously thought.

5.1. Inscriptions. Several *inscriptions have been found in archaeological excavations and explorations. Evidence of the Seleucid military presence during the Early Hellenistic period is illustrated by the Hefzibah inscription. It is a copy of a series of letters sent by local officials to the Seleucid king pleading for removal of troops from their homes and placing them away from the towns. The Yanyé-Yam inscription documents a Sidonian occupation initially established under Antiochus III.

In addition to political-military data, other

public inscriptions included temple and city signs. The Zoilus inscription is a bilingual inscription in Greek and Aramaic found in the cult precinct at Tel Dan. It is a flat limestone slab with a four-line dedicatory inscription mentioning Zoilus offering a vow to the god who is in Dan. At Gezer the city limit was marked by several bilingual boundary signs/markers. To date, eleven Gezer boundary stones have been found; nine have the words "Boundary of Gezer" scratched on them in Hebrew, and all but one of these also has "of Alkios" inscribed in Greek.

The well-to-do also adorned their family tombs with decorations and inscriptions. The Mareshah tomb inscription contained a Greek inscription above the tomb of Apollophanes, son of Sesmaios, who is identified as "chief of the Sidonians at Marisa." This tomb contained some of the most extraordinary and elaborate wall decorations depicting humans and animals. Jason's Tomb was another tomb with an inscription illustrating the wealth of the Jewish aristocracy in Jerusalem. This was a family sepulcher excavated in a Jerusalem neighborhood. Carved on the interior walls were several Greek and Aramaic inscriptions, including a three-line Aramaic inscription lamenting Jason.

5.2. Coins. Several *coins contain Greek as well as Hebrew inscriptions. The use of coins expanded during the Hellenistic period. Coins from the Ptolemaics and the Seleucians were common, as well as many city coins belonging to the autonomous polis (e.g., Acco, Dor, Jaffa, Ashkelon, Gaza). Other coins found come from commercial centers such as *Alexandria in Egypt and *Antioch in Syria. During the Hasmonean era, the rulers struck their own coins. A typical hoard would consist of an assortment of the above-mentioned coins demonstrating the rapid growth in international commerce in the Holy Land. Minting of coins became a regular practice in Palestine under Alexander the Great. This continued throughout the Ptolemaic and Seleucid periods. The Hasmonean dynasty also minted its own coins. Common Hasmonean motifs are anchors, stars, palm branches, cornucopias and pomegranate flowers.

5.3. Pottery. At Khirbet el-Qôm, a small village in the Judean hills, six ostraca were found recording business transactions dating to the late fourth and early third centuries B.C. The longest, containing nine lines, was a loan and receipt in Aramaic and Greek in the sixth year

of Ptolemy II (i.e., 277 B.C.). It recorded a loan of thirty-two drachmas from an Idumean shopkeeper/moneylender named Qōs-yada to Nikeratos. A second ostrakon was found at Mareshah detailing an Edomite wedding vow between two rich Edomite families. This is the only example of a marriage contract written on a potsherd. Scholars conclude that it is probably an earlier draft or a copy. The groom, QWSRM, requests that the bride, Arsinoc, be given to him and that the couple's sons will inherit their property. The last lines provide the value of the property. Stamped ceramics provide evidence for government administration and trade, for example, the YHD stamped handles as well as the numerous imported Rhodian stamped amphora handles.

6. Other Material Culture.

6.1. Weights. The Greek standard was introduced during the Persian period and became dominant in the Hellenistic period. The Greek weights were made of lead and shaped as rectangular disks that depicted some numbers and the names of the officials or cities responsible for their accuracy.

6.2. Figurines. The Hellenistic as well as the earlier Persian period experienced an explosion of figurines due to private cult practice and the adoption of moldmade figurines. The terra cotta figurines constitute a heterogeneous group exhibiting stylistic influences from Phoenicia, Persia, Egypt, Cyprus, Rhodes and Greece. In general, figurines can be divided between earlier Eastern and later Western types. Attic-style figurines made their first appearance and became the models for local types copying the Greek technique of hollow and molded figurines.

6.3. Glass. Alexandria was apparently a leading center of glass making in the Hellenistic period, but very few of its products have been found in Palestine. Glass was a luxury item. Glass drinking bowls became fashionable during the second century B.C., and this fashion increased in the first century B.C. With the discovery of glass blowing in the second half of the first century B.C., glass became readily available and glass-making workshops have been found in the Roman period in Palestine.

7. Summary.

Archaeology has only recently matured as an in-

dependent discipline apart from the other social sciences. Archaeological research and inquiry are ongoing and continue to provide new data, allowing constant reevaluation of current historical reconstructions and interpretations. The archaeological record complements the textual record, more so during the Hellenistic and later Roman periods, which have an abundance of texts compared with earlier periods. The systematic study of the material culture of ancient Palestine contributes to an understanding of the background of the NT by broadening our knowledge of the sociopolitical and cultural landscape.

ARENAS

The arena serves as a vivid microcosm of the ancient Roman world and its values. It instantiated in a physical setting the tensions of *honor and ignominy and order and cruelty that characterized the Roman regime and society. Its pull at the popular as well as political levels and the ambivalence of moral esteem and shame associated with this institution have troubled historians of Roman society for centuries. It is apparent then as now that whatever sense one made of the phenomenon, it could not be ignored; all eyes were drawn to the arena.

1. Definition and Description
2. Arena Shows
3. The Role of the Arena in Greco-Roman Life
4. Arenas and Execution
5. Arenas and the New Testament

1. Definition and Description.

The arena (Latin for "sand") was the venue for public spectacle in the Roman world that from the time of Augustus came to develop permanent sites to replace the more temporary wooden edifices hastily thrown together in the forum. Because of the expense and time involved in the construction of permanent large-scale public buildings, this development coincided with the establishment of a permanent wealth and power base, concentrated in the household of Caesar (*Domus Caesaris*), in contrast to the system of annually elected colleges of magistrates operating during the Roman republic.

1.1. At Rome. The largest and most famous of these arenas was the Colosseum (*Amphitheatrum*

Flavianum) at Rome. It was an elliptical amphitheater built by Vespasian (A.D. 69-79) and formally inaugurated by Titus in the heart of Rome (June 80). It measured 156 x 128 x 50 meters with an arena measuring 86 x 54 meters and could hold a capacity of at least forty to fifty thousand people seated and five thousand standing. It became the architectural model for amphitheaters and the benchmark for grand-scale public buildings in general throughout the *Roman Empire and European history.

1.2. Outside of Rome. The arena or amphitheater was the most visible and practical way for a provincial city to participate in *Romanitas* (Romanness) and to communicate its loyalty to Rome. Even Herod had an amphitheater built in cities outside of Judea proper, despite the fact that earlier opposition to such *Hellenizing had sparked the *Hasmonean revolt. Estimates suggest there were as many as 272 stone amphitheaters throughout the empire, not to mention the many earthenwork amphitheaters that were common in northwest Europe. Many Greek cities had the advantage of already-existing buildings suitable for public spectacle that were transformed to function as an arena (e.g., the stadium at Ephesus). Others tried to cut corners with cheaply constructed sites and paid the consequences when they collapsed and killed thousands of people, as at Fidenae in A.D. 27 (*Tacitus Ann.* 4.63).

2. Arena Shows.

The amphitheater became the permanent building used for *venationes*, staged wild-beast hunts (see *Circuses and Games* 1.2), occasionally *nau-machiae* (naval battles made possible by a system of drains that allowed flooding of certain arenas) and *munera gladiatoria* (gladiatorial contests). The day's events usually followed the above order with wild-beast hunts in the morning, naval battles around midday and gladiatorial combats reserved for the afternoon. From at least c. A.D. 61 on the scheduled midday break was filled with the execution of criminals.

The earliest gladiatorial contests (from c. 264 B.C.), in which a few combatants engaged in single combat to the death at the funeral of a respected citizen, were private spectacles to be distinguished from the traditional public religious festivals (*ludi*) of the circus and the processional games of the triumph (see *Roman Triumph*). Unlike the *ludi*, which were state-

funded, the *munera* continued to be largely privately funded. Even those put on by the emperors were done in a quasi-private capacity in their familial role as Caesar rather than as *Princeps*.

The gladiatorial contest developed from its origins as a funeral rite put on by a private citizen to honor a dead relative into a gift that was owed by a wealthy citizen not only to his ancestors but also to the community. The Roman spirit of civic competition and valuation of military virtue (*virtus*) gave the contest increasing status as a demonstration of the wealth and social importance of the deceased and his family. In the late republic the *munera* became useful political tools in the campaign for office for those who capitalized on the popularity of the events and the efficacy of what was communicated by them (Suetonius *Julius* 39).

This prestige was later monopolized during the principate by the emperors, who put on the grandest shows, imposed limits on the number (2) per year and size (maximum 120 pairs) of *munera* put on by civic magistrates, and they came to control the supply and training of gladiators as well. After Domitian (A.D. 81-96), only emperors gave gladiatorial contests at Rome, and only those with imperial approval were put on elsewhere in the empire. They became a widespread demonstration of imperial control at the popular level.

3. The Role of the Arena in Greco-Roman Life. *Munera* were infrequent compared with other public spectacles and so punctuated Roman life with the excitement of an anticipated special event. These became the focus of culture, the place to be and to be seen (Tertullian *De Spect.* 25). There was also the added incentive of prizes, vouchers of gifts from the *editor* (the host putting on the show) catapulted into the crowd. Betting was part of the event and served as a factor of social integration as both rich and poor, noble and commoner could share in this point of contact.

3.1. Economics of the Arena. Arenas represented a vast industry largely controlled by and benefiting the emperor. In the provinces the trainers (*lanistae*) provided many of the gladiators at the expense of the *editor*, who did not want to be seen as stingy. There was also an imperial hand in the expensive provision of exotic beasts. A decree of A.D. 177 preserves a record of scaled prices (salary caps) for the different

grades of gladiator, and there was an imperial surtax of 88 percent on the whole show as well. Because top gladiators could be worth as much as twelve thousand sesterces, their value to their trainer as well as their popularity, especially if they were free citizens, often kept them alive to fight another day.

3.2. Sociological Function of the Arena. The sociological approach has contributed much to the question of the appeal and purpose of combat sports in Roman society. It has enabled scholars to look beyond the undeniable brutality of the killing in the arena to cultural aspects of the events in their context. The gladiatorial contest served as a way to keep alive the memory of the deceased by a vivid reminder of death and by the embodiment of the struggle of life and death as a combat. The arena was the place where the honor of fighting and facing death and the shame of running away and ignobly flinching at death was broadcast and even experienced vicariously by the audience. The crowds were symbolically empowered to control these forces as the decision of life or death (the *editor's*) was often influenced by the people. The glorification of abasement and the belief that one was empowered in the voluntariness of one's submission to death contributed to a widespread ethos that drew all of society into the amphitheater and members of every level of society down into the shame and glory of the arena itself.

The concentration of gladiatorial games at the end of the year also suggests that these games of death were a way of coming to terms with the annual cycles of death and rebirth in nature. The event also enacted in a controlled environment the more specific threat faced by Rome as an empire, namely, war. This might explain why the growth in popularity of the *munera* paralleled Roman military expansion.

3.3. Arena as Social Exchange. There was also a sense in which what took place in the arena was reciprocal. The *editor* was expected to give enthusiastically the gift of the contests to the community (Suetonius *Augustus* 45), but unless the community was also expected to receive the gift, there could be no social exchange. The act of the citizen in attending reinforced a fundamental social relationship in Roman society. It expressed the client's gratitude toward and acknowledgment of the great patron of the community, or in the case of the caesar himself, patron of the empire. Hence the indignation

shown toward a public figure who failed to provide *munera* was equaled by that shown toward one who refused to participate in the communal exchange of the arena shows. Overt nonparticipation was a provocative demonstration of alienness for philosophers (e.g., Stoics) and Christians alike. The seating in the amphitheater also reinforced traditional social relationships as it reflected and reinforced the class and gender structures in Roman society.

4. Arenas and Execution.

The arena was a public execution ground for criminals and enemies of the state, who were sometimes forced to kill each other. The gladiatorial contests and public executions can be seen as the symbolic subjugation of barbarism by Roman society. Alien and threatening people were conquered in the arena (on dressing Christians in animal skins before executing them, see Tacitus *Ann.* 15.44). Representations of dangerous enemies were at once figuratively integrated into and actually expelled from society by their death. These roles were extended so far as to include the staging of executions as mythological reenactments in which the deaths of the criminals played out the tortures and deaths of the mythical characters.

4.1. The Civic Nature of Execution. Capital punishment as well was made public in the arena, not merely as a deterrent but as an assurance of order to the people. Squeamishness at the sight of public punishment of criminals was a sign of moral weakness and would have signified an undue sympathy toward the disorderly elements of the Roman world or an unwillingness to exercise one's right as a citizen to participate in the maintenance of civic law. At the martyrdom of Perpetua and Felicity in Carthage (c. 203), the crowd demanded to see the bodies of the criminals "so that their eyes could participate in the killing as the sword entered their flesh" (*The Passion of Perpetua and Felicity* 21.7).

4.2. Kinds of Death. The punishments in the Roman world varied according to one's citizenship and status. Death by the sword was reserved for criminal Roman citizens, who could at least die with dignity. Some criminals were condemned to spend five years in a gladiatorial school (*Gregarii condemnati ad ludos*), the equivalent and one of the few possible sites of imprisonment besides the mines (*ad metalla*). Their entertainment worth doubled if they managed

to survive their first encounter, usually against a trained gladiator. Some, especially captured barbarians or rebel enemies, were killed en masse in the arena by the sword (*noxii ad gladium damnati*). Noncitizen criminals might be condemned *ad bestias*. They were worthy only to be thrown to the beasts, a punishment at least as base as crucifixion (*ad crucem*) or being burned at the stake (*ad flammam*) but a much more exotic and costly performance. Such execution provided the lightweight entertainment of the midday break, the prelude to the day's main events.

4.3. Christians and the Arena. That Christians were considered criminals is undisputed, but there is controversy as to the reasons why they were so perceived by the Romans. Perhaps some light is shed on the question by the fact that the public executions were punishments thought appropriate for temple robbers, parricides and arsonists. Since Christians believed in a coming judgment of fire, they may have been thought guilty of inciting to arson merely by being Christians. This may be the legal reasoning employed by Fabius Sabinus, the urban prefect during the reign of Nero, who laid the blame for Rome's burning (64) on Christians generically (Tacitus *Ann.* 15.44; Suetonius *Nero* 16). Christian martyrdom in the arena was a public event demonstrated within the context of the civic community. The act of opting out of the pagan world in some sense should have taken place right in the heart of that world, the arena. Early Christian self-identification by antagonism with the world and participation in the sufferings of Christ could have had no more literal instantiation than death in the arena.

5. Arenas and the New Testament.

The apostle Paul himself may have experienced the arena if one interprets the passage in 2 Timothy 4:17, "and I was delivered from the lion's mouth" (*kai errysthēn ek stomatos leontos*) as a description of a deliverance from an actual lion. The line "At my first answer" (*en tē prōtē mou apologia*, 2 Tim 4:16) suggests a setting not unlike that attested by other accounts of martyrdom trials in the arena. Moreover, the first part of the verse referring to one of the reasons for this ordeal, namely, "that all the nations might hear" his preaching, tends to support the theory that it was a public event with a crowd. However, he could be using the lion's mouth as symbolic of death in general, which he has escaped. Or

more specifically, he could be referring to the fact that he was spared that particular punishment (*ad bestias*). This explanation is compatible with other incidents (Acts 25:10-11) in which Paul was delivered from worse punishment on account of his citizen status and appeal to Caesar (*petitio principii*) and also concurs with early traditions that relate his initial acquittal and later execution by the sword.

Paul is at least familiar enough with the arena to employ it in his writings. He refers to fighting wild beasts (*athēriomachēsa*) as a metaphor of dealing with his enemies in Ephesus (1 Cor 15:32). In 1 Corinthians 4:9 Paul says that God has ordained death for the apostles. They are to be a spectacle for the world, angels and humanity. Here God is like an *editor* (cf. Tertullian *Ad Mart.* 3), and their deaths become *munera* (public offerings to the community; cf. Cyprian *Ep.* 10.5). In addition, the conflation of the images of soldier and gladiator in classical literature (e.g., Seneca *Prov.* 4.4) often translated into cross-fertilization of the metaphors of soldier and gladiator in the NT. For some the gladiator was the only "soldier" familiar to them. This may suggest a reexamination of NT metaphors of the soldier (e.g., Eph 6:10-17) with the arena in mind (cf. Seneca *Vit. Beat.* 15.5; Cyprian *Ep.* 58.8).

ARISTEAS, EPISTLE OF

The *Epistle* (a *diēgēsis*, "Narrative") of *Aristeas* purports to be an eyewitness account by a Gentile official at the court of Ptolemy II Philadelphus of the circumstances that led to the translation of the *Septuagint. The story of the translation, however, is peripheral, the bulk of the book being concerned with a panegyric on the Jewish people and the superiority of their religion, ethics and wisdom to those of the Gentiles.

1. The Contents of the Book
2. The Historical Background
3. The Character of the Book
4. The Reception of *Aristeas* by Later Jewish and Christian Authors
5. The Date
6. The Purpose

1. The Contents of the Book.

The book falls naturally into three main parts, with a proem and an epilogue.

In the proem (*Ep. Arist.* 1-8) Aristeas dedicates his book to his brother (*Ep. Arist.* 7, 120) Philocrates and announces its theme: the translation of the Jewish law (*Ep. Arist.* 3).

In the first major section (*Ep. Arist.* 9-34a) Demetrius of Phalerum, the librarian, reports to King Ptolemy II Philadelphus that he had already collected more than two hundred thousand books, his aim being soon to bring their number to five hundred thousand, and informs the king of the desirability to include the Jewish law, which needed to be translated (*Ep. Arist.* 9-11). Aristeas, a Gentile at court (*Ep. Arist.* 16, 40, 43), petitions the release of about one hundred thousand Jewish captives as a goodwill gesture to the Jewish high priest Eleazar, ostensibly to dispose him to provide the translators (*Ep. Arist.* 12-18). Following the report of Demetrius (*Ep. Arist.* 28-32), the king consents not only to the liberation of the captives but also to sending sumptuous gifts to Eleazar with a letter in his name (*Ep. Arist.* 19-34a).

This section (*Ep. Arist.* 34b-300) constitutes the bulk of the epistle and is concerned with the king's letter to Eleazar requesting six scholars from each tribe (*Ep. Arist.* 35-40) and Eleazar's complying reply (*Ep. Arist.* 41-46) naming the seventy-two scholars (*Ep. Arist.* 47-50). The author then indulges in a long description of the king's presents to Eleazar (*Ep. Arist.* 51-82), *Jerusalem (*Ep. Arist.* 83-120), the *temple (*Ep. Arist.* 84-91), the priestly offices and the temple sacrifices (*Ep. Arist.* 92-95), the high-priestly vestments (*Ep. Arist.* 96-99), the citadel (*Ep. Arist.* 100-104), the city and its environs (*Ep. Arist.* 105-11) and trade (*Ep. Arist.* 112-20). He continues with Eleazar's farewell to the translators (*Ep. Arist.* 121-27), a long exposé by Eleazar of the superiority of the Jewish law and criticism of Gentile idolatry and immorality (*Ep. Arist.* 128-69), Eleazar's sacrifices and the departure of the scholars (*Ep. Arist.* 172). The section ends with the honorable reception of the translators by the king (*Ep. Arist.* 173-86) and the seven-day feast that the king holds in their honor during which, asked very hard questions on politics, royal behavior, and so on, each of the scholars distinguishes himself by giving answers that amazed not only Aristeas but also the Gentile philosophers present (*Ep. Arist.* 187-300).

Having been feasted, the translators are taken to a building specially prepared, and they apply themselves to their task (*Ep. Arist.* 301). The translation is arrived at in session during which they compared their views (*Ep. Arist.* 302: "They proceeded in such a way that agreement among them was reached on every point by comparison" [lit. "confrontation"]). The work proceeded from morning to 3 o'clock in the afternoon and was completed in seventy-two days (*Ep. Arist.* 307). The translation is read to the Jews of *Alexandria, who ratify it and pronounce curses on anyone who might change anything in it (*Ep. Arist.* 308-11), after which the king hears it read and is delighted, and he charges Demetrius to take good care of it (*Ep. Arist.* 312-17). The translators are sent back to Judea with gifts (*Ep. Arist.* 318-21).

In the epilogue (*Ep. Arist.* 322) Aristeas charges Philocrates to avoid reading myths and concentrate instead only on true stories like his own.

2. The Historical Background.

Aristeas's claim that the translation of the LXX

(only the Law) took place during the reign of Ptolemy II Philadelphus (coregent with his father, Ptolemy I Soter since 285 B.C., sole king 282-246 B.C.) while Demetrius of Phalerum (350?-288/2 B.C., see Diogenes Laertius *Vit.* 5.75-83) was the librarian and the philosopher Menedemos of Eretria (339/8-265 B.C., see Diogenes Laertius *Vit.* 2.125-44) was at the Alexandrian court, is unhistorical. Demetrius, who was invited to Egypt by Ptolemy Soter in 297 B.C., was the founder of the museum and in all probability of the library but apparently never served as librarian, especially under Philadelphus (see *Alexandrian Library*). He was banished by Philadelphus at the death of his father, Soter, for having advised against his succession to the throne, and shortly thereafter he died. The first librarian was Zenodotos (see *P. Oxy.* 1241 for a list of librarians), who entered his office in 285 (-270 B.C.) being succeeded by Apollonios Rhodios (270-245 B.C.). Furthermore Menedemos, who once did visit Cyprus, is not known to have visited Alexandria. The apocryphal stories about the divine punishment of Theopompos (c. 378-300 B.C.), who during his Alexandrian visit in 305 B.C. was almost put to death by Soter for being a busybody (*polypragmōn*, which may well explain the legend), and Theodectes (c. 375-334 B.C.; *Ep. Arist.* 314-16) are otherwise unknown.

3. The Character of the Book.

The unhistorical framework is surpassed by the fantastic presentation of the main characters of the story—all Gentiles—as though they were devout converts to Judaism. Thus, not only Aristeas, a Gentile, intercedes repeatedly for the captive Jews (*Ep. Arist.* 12-19) and speaks with excessive admiration for the Jewish people and their law, but also Demetrius knows that "the law is august and of divine origin, and that God punished busybodies" (*Ep. Arist.* 313).

The fantasy of *Aristeas* runs riot with Ptolemy's behavior. Ptolemy is presented as addressing a humble request to his vassal Eleazar as to an equal at the fabulous expense of 200-300 talents of gold (*Ep. Arist.* 33, 319-20), 170 talents of silver (*Ep. Arist.* 33, 40), precious stones five times the value of the gold (*Ep. Arist.* 82), granting, moreover, the return of more than one hundred thousand Jews—almost a second exodus—at 400 talents manumission costs (*Ep. Arist.* 20, 37), and finally giving the unredeemable promise of the release of all Jews in the

world now and in the future (*Ep. Arist.* 38). It is utterly incredible that this behavior should come from one of those kings who had given orders to confiscate any books found on ships visiting Egypt, and who had borrowed from Athens the standard edition of the three great tragedians (Aeschylus, Sophocles, Euripides) in order to have them copied, giving 15 talents as guarantee for their return, but who, afterward, kept the original and sent back a copy (*Historia tou Hellenikou Ethnous*, 2:278-79; see also Galen, *In Hippokratris lib. 3 epid. comm.*, 607-8). But there is more.

Contrary to custom, according to which Ptolemy let royal ambassadors wait for thirty days before being admitted to his presence, the translators gain immediate admittance (*Ep. Arist.* 174-76). At the showing of the parchments the king, like a pious Jew, makes his devout sevenfold obeisance before the law (*Ep. Arist.* 177) and thanks God for his oracles (*Ep. Arist.* 177). Eleazar praises the king's "piety toward our God" (*Ep. Arist.* 42). At the banquet the king dismisses his own priests and requests the oldest of the translators to offer prayers (*Ep. Arist.* 184). At the reading of the completed translation the king is astonished that such wonderful writings were not mentioned by any Greek historians (*Ep. Arist.* 312), bows devoutly before them and commits them to Demetrius's safekeeping (*Ep. Arist.* 317). At the end, in typically pseudographical fashion Aristeas protests his truthfulness: "I have related the story just as it happened, keeping myself pure from all blame" (*Ep. Arist.* 297), and then distinguishes himself from "mythologists" (*Ep. Arist.* 322).

The apologetic nature of *Aristeas* is so transparent that Bentley (in 1699) called it "a clumsy cheat." It may therefore appear all the more surprising that the character of the book does not seem to have been exposed before L. Vives (in 1522), J. J. Scalinger (1609) and especially H. Hody (in 1684) (see Jellicoe, 31-32). This has its explanation not in any supposed credulity on the part of Christian Greek authors, but in the circumstance that they found in this work a convenient account that sanctioned the equation of the LXX with the Hebrew text. Thus *Aristeas* not only escaped their censure but also his account was embellished by some of them.

In spite of its unhistorical character in details, the *Epistle of Aristeas* contains a core of historical truth: the Hebrew law book was

translated sometime in the third century B.C.; the translation was executed by Alexandrian Jews; it was a group effort; and by the second century B.C. it had not yet been accorded equality with the Masoretic Text.

4. The Reception of *Aristeas* by Later Jewish and Christian Authors.

In spite of *Aristeas*'s extravagances in propagating the Jewish cause, its account of the translation of the LXX is fairly restrained, and herein lies its value. The translators arrived at the adopted text after discussion and comparison of their several proposals. This realistic procedure is later exchanged for a miraculous one. The earliest author showing knowledge of the contents of *Aristeas* is the Jewish author Aristobulus (180-145 B.C.), who argued that Greek philosophy derived from the OT, which had been translated into Greek before the translation executed under Philadelphus (Eusebius *Praep. Ev.* 13.12.1-2; cf. Gooding, *passim*).

With *Philo (*Vit. Mos.* 2.6-7) the translators have become inspired "prophets" and write "not each one different things, but the same word for word, as though each one was tutored by an invisible prompter." It is a moot question whether Philo reflects *Aristeas* or has knowledge of the story independently (the same goes for Aristobulus). *Josephus, however, is the first author to refer explicitly to *Aristeas* and reproduce a large part of it (Josephus *Ant.* 12.2 §§1-118).

The first Christian author to mention *Aristeas* is Justin Martyr, who, however, has Philadelphus address not Eleazar but King Herod (Justin Martyr *Apol.* 131). The miraculous line struck out by Philo is followed by Irenaeus. He (in *Haer.* 3.21.2, in Eusebius *Hist. Eccl.* 5.8.11-15) has Ptolemy Soter rather than Philadelphus address the Jerusalemites rather than Eleazar. Once in Alexandria, the king separated the translators to avoid any secret agreement among them but found, to his surprise, that "they all had translated the same things with the same words." A similar story is related by Clement of Alexandria (*Strom.* 1.22). Extended quotations of *Aristeas* occur in Eusebius (*Praep. Ev.* 8.2-5, 9).

5. The Date.

There is no consensus on the date of *Aristeas*. The proposed dates range between 200 B.C. and A.D. 33. The first century A.D. may be dismissed as too improbable for such a letter to be written

at a time when the LXX was well established. In general, scholars have held to 200-170 B.C. (e.g., Schürer, Orlinsky, Tramontano, Pelletier, Jellicoe, Shutt), 150-100 (e.g., Andrews, Bickermann, Kahle, Hadas, Würthwein) and the first century B.C. (e.g., Wendland, Thackeray, Riessler). The internal evidence of *Aristeas* is indecisive. If we could be certain that Aristobulus quoted *Aristeas* (Eusebius *Præp. Ev.* 13.12; cf. Fraser 1:694), then the work ought to have been written before 150 B.C. However, the use of Aristobulus by *Aristeas* cannot be ruled out, and it is not improbable that both drew from an earlier work.

The peaceful and prosperous conditions in Palestine (*Ep. Arist.* 84-171) might reflect an idyllic view of the circumstances before the Seleucid conquest of Judea (c. 198 B.C.). The citadel of Jerusalem (*Ep. Arist.* 100), which should be distinguished from the later Syrian fortress (cf., e.g., 1 Macc 1:33; 13:49-52; Josephus *Ant.* 12.4.4 §§252; *J.W.* 5.4.1 §§136-41), is probably that mentioned by Nehemiah 2:8; 7:2 (see also 2 Macc 4:12, 27; 5:5; Josephus *Ant.* 12.3.3 §§133, 138) and later rebuilt as Antonia, thus reflecting an earlier date. An earlier date is also suggested by the depiction of the high priest as a theocratic leader and of the priests as performing spontaneously their duties (*Ep. Arist.* 92-96), both of whom, somewhat later, had come under the spell of Hellenism. The knowledge by *Aristeas* of Egyptian protocol implies a Jew in high office, something that was possible under Ptolemy VI Philometor (180-145 B.C.). Jellicoe's suggestion, following Klijn's lead, that it was written to vindicate the claims of the LXX and of the Jerusalem temple over against those of the new Jewish center, Onias's temple at Leontopolis (c. 160 B.C.; cf. Josephus *Ant.* 12.7 §§387-88; 13.3.1-3 §§62-73; 13.4 §§283-87; *J.W.* 7.10.2-3 §§421-36), and its supposed rival version, would explain the bulk of the book. However, in the absence of any evidence for the existence of such a version, this view is incapable of proof. By contrast, Orlinsky has used the absence of any reference in *Aristeas* to the temple of Leontopolis to support an earlier date. At present the best option is to date *Aristeas* at about 200 or at the latest 170 B.C. (but see Fraser 1:696; 2:970-71).

6. The Purpose.

Like the date, the purpose of the book has defied solution. The ostensible reason for *Aristeas* was to describe the origin of the LXX transla-

tion, though in reality it was to promote the Jewish faith. The question is whether *Aristeas* is addressed to Gentile or to Jewish readers. At a time when the Greek language, literature and culture were making a strong impact upon the Jews, in particular Diaspora Jews, who, severed from their fatherland, from the temple and its sacrifices—the symbols and rallying point of their particularistic religion—were in danger of distancing themselves from their ancestors' faith, it was quite natural that an idyllic account of Judaism and the esteem it had enjoyed with Greek monarchs and philosophers were felt to be the needed antidote. *Aristeas* was not written for Greek readers: its simplistic narrative and historical blunders could not but alienate them and thus defeat its purpose. It was written for Jewish consumption outside Palestine, in particular Alexandria.

ARISTOBULUS

The five fragments of works by the second-century Jewish author Aristobulus are preserved in Eusebius's two works, *Historia Ecclesiastica* (7.92.16-18 = frag. 1, a citation of a citation of Aristobulus) and *Praeparatio Evangelica* (8.10 and 13.12 = frags. 2-5). Clement of Alexandria's *Stromata* (1; 5; 6) also has parallels to fragments 2-5 but in a less reliable form than in Eusebius.

1. Date
2. The Author and His Work
3. Outline of Contents

1. Date.

Although both Eusebius and Clement seem to think that Aristobulus addressed his work to Ptolemy VI Philometer (181-145 B.C.), Eusebius's quotation of Anatolius *On the Passover* in fragment 1 seems to suggest that there is an earlier date, during the reign of Ptolemy II Philadelphus (283-246 B.C.). There is also the related matter of the attribution by the writer of 2 Maccabees (see 1 and 2 Maccabees) of a letter addressed to Aristobulus and the Jews of *Alexandria from Judas Maccabeus (2 Macc 1:10, claiming to have been written shortly after the end of 164), which would place him within the reign of Ptolemy VI. Given that the letter in 2 Maccabees is most likely a forgery, it is difficult to know how to take its suggestion that Aristobulus was the teacher of the king, but, if this can be taken seriously, then it may be that Aristobulus could be dated as early as 176 to 170 B.C., when Ptolemy VI was younger and would have needed a teacher. If the evidence in 2 Maccabees is to be seen as fabrication, then a date nearer the end of Philometer's reign would seem more likely (c. 150 B.C.).

2. The Author and His Work.

Aristobulus has been called the first Jewish *philosopher (Hengel, 1:163), and his extant work would indeed support such a title. Although in

the introduction to fragment 1, Anatolius suggests that Aristobulus was one of the seventy translators of the *Septuagint, it is more likely that Aristobulus was an *Alexandrian Jew of the early to mid-second century. Fragments 2 and 3 suggest that Aristobulus was schooled in *Aristotelian philosophy (in conjunction with "that of his ancestors," frag. 2), and his extant work revolves around a desire to promote Mosaic law as a true philosophy. He thus argues for the dependence of early Greek philosophers (Pythagoras, Socrates, *Plato) on a translation of the Pentateuch earlier than the LXX (frags. 3 and 4). It seems clear that his work was done in Greek, and he displays a deep knowledge and interaction with various aspects of Greek culture and philosophy (see Hellenism).

Although A. Y. Collins (833) suggests that "it is somewhat unlikely that a Jew would have been a teacher of a Ptolemy" during the second century B.C., there is no reason to think that this is the case—Aristobulus's clear facility with a variety of Greek philosophers and schools may have made him the ideal candidate to be a teacher of the young Ptolemy, regardless of his racial or religious background. It is possible that the arguments Aristobulus made concerning the dependence of Greek philosophy on the Mosaic law were taken seriously by his contemporaries—given the Greek insecurity with regard to the relative youth of their culture in comparison with the Eastern cultures, such claims would hit a particularly weak spot for the Greeks. If this is the case, it would have been appropriate for Aristobulus to present these arguments to the king as a teacher. The relationship between the two halves of Aristobulus's dual Jewish and Greek thought world is in need of further investigation, but it is clear that he stands early in a tradition that would find its Jewish climax in *Philo of Alexandria and continue in importance for the Christian tradition through the NT (one has only to think of Apollos) and the early church.

3. Outline of Contents.

Fragment 1 is a detailed astronomical discussion of the date of the Passover. Fragment 2 is a discussion of anthropomorphisms in the Mosaic law with regard to the nature of God. Fragment 3 discusses the way in which Plato and Pythagoras were dependent on an early translation of the Pentateuch and connects the translation of

the LXX with the activities of Demetrius of Phalerus, supporting the chronology for the translation given by the *Letter of Aristeas* (see Aristeas, Epistle of). Fragment 4 combines the arguments from fragments 2 and 3, adding several quotations of pagan authors (Orpheus, Aratus—some verses of which are also known from independent sources) to prove his point that, on the one hand, Greek authors have been dependent on the Mosaic law, and on the other hand, if Greek philosophy undergirds Greek culture and is similar to Moses' philosophy, then the Mosaic law, on account of its anteriority, should be seen as superior, or at least accepted as a viable alternative. Fragment 5 follows directly on from fragment 4 in Eusebius's text and is a discussion of the *sabbath and a panegyric on wisdom as the first principle of creation (seen as preexistent) and the light of all people. Fragment 5 cites Hesiod's *Works and Days*, some unknown Homeric material and a verse attributed to Linus, a singer from Greek myth. Fragment 5 is largely taken up by an extended discussion of the number seven and its significance in creation, a theme probably drawn from Pythagoras.

ARISTOTLE, ARISTOTELIANISM

Standard reference works on the NT give short notice to Aristotle (384-322 B.C.) and Aristotelianism. For example, Helmut Koester wrote: "Aristotle himself and his philosophy cannot be discussed here. For several centuries very little effect of Aristotle's philosophy can be detected" (*Introduction to the New Testament*, 1:144). It has been widely assumed that Plato (427-347 B.C.) and Platonism had much greater influence on emerging Christendom. But with new interest in *rhetorical analysis as well as ethics and morals, along with the attendant moral lists (*Haustafeln*; see Family and Household), a reconsideration of the importance of Aristotle is of merit. The future course of Christianity was much influenced by the Aristotelian corpus beginning with Boe-

thius (c. 480-c. 524) but especially with Thomas Aquinas (c. 1225-1274). Aristotle's work—which encompassed the sciences, arts and humanities—exerted great influence on Christianity, Judaism and Islam until the 1700s.

1. Life and Works

2. Influence

1. Life and Works.

Aristotle was born in the village of Stagira on the peninsula of Macedonia, in northern Greece. His father, Nicomachus, was court physician to Amyntas, father of Philip II and grandfather of *Alexander the Great (356-323 B.C.). The medical culture of Aristotle's childhood no doubt encouraged his interest in biology and the sciences, along with an interest in intellectual rigor and logic. Upon the death of his father Aristotle was sent in 367 B.C. to the Academy of Plato (427-347) at *Athens and remained there for twenty years. With the death of Plato in 347 Aristotle left the academy, spent three years in Asia Minor and then returned to Macedonia and became tutor to Alexander the Great. When Alexander became king in 336, Aristotle again took up residence in Athens and founded the Lyceum as a rival to Plato's Academy. He lectured for twelve years, often while walking the grounds and under a portico, thereby gaining the appellation *peripatetic* (from *peripatoi*, "walks"). With the rise of anti-Macedonian sentiment at the death of Alexander, Aristotle felt forced to leave Athens. He died a year later.

The works of Aristotle include six treatises on logic, three on natural science, five on zoology, two on psychology, one on metaphysics, two on ethics, two on political science and one each on rhetoric and poetics. The discourse on metaphysics includes Aristotle's theology, in which he posits a first or unmoved mover. This unmoved mover is neither creator nor interested in the affairs of other beings but is the fountainhead of all motion. He is purely intellectual, and his highest form of activity is self-contemplation. Aristotle's approach to ethics is teleological; ends are endemic in nature but not created by deity. At stake are not so much moral absolutes but guidelines whereby humans can secure the greatest good and thereby insure their happiness, defined as an activity of the soul in accordance with virtue. Attainment of virtue in humans comes about through reasoned action, resulting in honorific habits, and just as in God,

the highest form of human activity is intellectual contemplation.

The successors of Aristotle at the Lyceum, especially his immediate academic heir, Theophrastus (c. 370-c. 285), maintained a genuine Aristotelian perspective. For a time after Theophrastus, apparently many of Aristotle's manuscripts were hidden or stored. Known for the most part in the pre-Christian era were his more popular literary essays, several of which were written in dialogues in the fashion of Plato. The dialogues have been lost, but in their time they influenced the Stoic philosopher Panaetius (180-109 B.C.) as well as Latin discourse beginning with *Cicero (106-43 B.C.).

The scientific, literary and philosophical treatises of Aristotle were little consulted in the pre-Christian and Christian century. They pose a conundrum in respect to their composition in that they are redundant and choppy, and the flow of thought is often interrupted by what appear to be insertions. Three main explanations have been offered: these treatises result from the editing of student notes; these are Aristotle's own lecture notes; and the original manuscripts were recovered in a deteriorated condition. It seems best to conclude with Wheelwright (xix-xxv) that the extant treatises represent Aristotle's own efforts to preserve his ideas as his career was winding down, and they include his own interpolations as he revised for subsequent lectures. Multiple manuscripts of the treatises were copied and later collated in the first century B.C. What we have then are the ideas of Aristotle essentially in his own manner of expression.

2. Influence.

The influence of Aristotle has been a continuing one in Greece, the Roman Empire* and the West. It was not until the fifth century A.D. that his influence on Christian theology became obvious. But with Porphyry (c. 232-c. 303) and Pseudo-Dionysius (c. 500) the influence of the elementary study of Aristotelian logic and the categories emerged. One reason for early suspicion of Aristotle was that he posited a naturalistic explanation of the cosmos, unlike Plato, who in the *Timaeus* presented God as creator through a demiurge. Aristotle departed from Plato's view that perfect forms (ideas) exist only in suprasensible reality (philosophical realism) by arguing that forms exist only in discrete entities (moderate realism). For Plato, the empirical (i.e., sensi-

ble world) was inferior reality, whereas for Aristotle it was the only reality. For that reason the Platonic vision appealed much more to the early church fathers.

Two ways in which the works of Aristotle may have influenced NT documents more than has previously been thought are in respect to moral forms and lists and rhetorical features.

2.1. Moral Lists. Aristotle's reflections regarding moral philosophy are found in the *Politics* (*peri politike*) and the *Nicomachean Ethics* (*ethos*). The *Politics* was probably written c. 338 B.C., when Aristotle was in Macedonia, and the *Nicomachean Ethics* in the later Athenian period, or about 330 B.C. In these documents Aristotle discussed "household management" (*peri oikonomias*) and indicated how these patterns also influenced the state. David Balch in *Let Wives Be Submissive* (n. 2), writes:

Aristotle gave the philosophical discussion of "household management" (*peri oikonomias*) a particular outline that does not occur elsewhere, for example, not in the Hebrew Bible, not in Plato, and not among the Stoics. He observed that a "house" includes three relationships, "master and slave, husband and wife, father and children" (Pol I 1253b 1-14; see NE V 1134b 9-18). Authority and subordination are, he argued, natural to these relationships (Pol I 1254a 22-24 and 1260a 9-14). A household provides models for the various forms of constitution in the state, and democracy occurs in households in which there is no master (NE VIII 1160b 23-1161a 10). Freedom given to women is detrimental to the state (Pol II 1269b 12-1270a 15).

While one cannot argue that the *Haustafeln* in Colossians 3:18-4:1 and Ephesians 5:21-6:4 are directly dependent upon a reading of Aristotle, the structure may ultimately be traced to an Aristotelian source.

2.2. Rhetorical Forms. The *Rhetoric* (*texnē rhetorikē*) of Aristotle was probably completed about 335 B.C., just before Aristotle returned to Athens to found the Lyceum. He had commenced lecturing on *rhetoric in Plato's Academy about 355 B.C. The five classical divisions of rhetoric, especially in the Roman period, were invention, so called by later writers; arrangement; style; delivery; and memory. Of these, Aristotle discussed three, set forth here in the order of the space to which he assigned them: invention, or in Aristotle's terminology, "proofs"

(*pisteis*); then style (*lexis*); and finally arrangement (*taxsis*). In another important observation, Aristotle declared that there are three rhetorical genres (*tria genē*) corresponding to three types of hearers: deliberative (*symbolēutikon*), forensic or juridical (*dikanikon*) and epideictic, or demonstrative (*deiktikon*).

The means of persuasion (*pisteis*) were divided in nonartistic (*atechnoi*) and artistic (*entechnoi*). The former consisted of what in the courtroom are called exhibits such as objects, contracts and witnesses. Speakers or writers invent artistic proofs; that is, they select these means by which they hope to persuade their specific audience. There are three types of artistic proofs: the speaker's character (*ēthos*), logical argument and evidence (*logos*) and emotive appeal (*pathos*). In popular speeches arguments take the form of enthymemes (*enthymēmata*). These have their power because they commence from premises accepted by the auditors. Biblical critics have employed various of Aristotle's categories and observations to analyze the documents of both the OT and NT. Aristotle did not write *The Rhetoric* for critics but for rhetorical practitioners, which means that rhetorical critics are forced to extrapolate a method of criticism from *The Rhetoric*.

In recent years rhetorical analysis of the Scriptures has come to the forefront in NT studies. Various rhetorical criticisms, both ancient and modern, have been employed, and many of these are dependent upon Aristotle. Some of the early proponents of rhetorical criticism in the 1950s and 1960s were J. Muilenburg (in OT), H.-D. Betz and G. A. Kennedy. Several international conferences have been held on the rhetorical analysis of the Scriptures: Heidelberg (1992), Pretoria (1994), London (1995), Malibu (1996) and Florence (1998). The proceedings of each of these conferences have been published by the Sheffield Press and edited by S. E. Porter and T. H. Olbricht, and the later two by S. E. Porter and D. L. Stamps.

The question remains as to whether Aristotle and his rhetoric may have influenced the writers of the NT. It is extremely doubtful that any of the writers of the NT were acquainted at first hand with *The Rhetoric*. However, it is conceivable that certain ones may have been influenced by rhetorical handbooks that drew upon Aristotle. Many features of Aristotelian rhetoric may be found in the NT, but since Aristotle was

making universal observations about discourse of the public arena, any document should exhibit these characteristics. It would be surprising if first-century persons having been immersed in Hellenistic culture were not indebted to Aristotle.

ART AND ARCHITECTURE: GRECO-ROMAN

Both art and architecture reached a state of perfection in the Greco-Roman world and give us avenues for understanding both its cultural ideals and aspects of everyday life.

1. Sculpture
2. Painting
3. Mosaics
4. Frescoes

5. Minor Art Forms

6. Architecture

1. Sculpture.

Roman sculpture was primarily Greek in inspiration, and the finest pieces are often remarkable reproductions of earlier works. The Greeks in turn had taken their direction from the Egyptians, who had created a rather wooden prototype of the human body. From the archaic to the *Hellenistic period the Greek concern was to recreate the human form in as lifelike a manner as possible. The stiff figure with clenched fists was replaced with graceful forms caught in natural poses, bared limbs displaying muscles and veins beneath the flesh. One of the crowning glories of Greek sculpture was the representation of the draped female. Especially admired was the wet look of clothing pressed against the flesh as though the subject had just emerged from bathing. Where arms or legs were exposed, muscles and veins could be seen beneath the skin in marvelous detail.

While Greek art exhibited astounding innovation and development of technique, the Roman represents imitation in its highest form, borrowing heavily from the cultures encompassed by the empire (*see* Roman Empire). This is especially true of the statuary that can still be seen in abundance in museums and at ancient ruins and archaeological excavation sites. Statues were erected for decoration and adoration on public streets, in temples, courtyards, marketplaces, baths, gardens and even butcher shops. This proliferation of statues dedicated to the gods apparently drew the ire of the apostle Paul at *Athens (Acts 17:16). Cruder statuary, produced from molds, was available cheaply for religious veneration or votive offerings, an example being the silver figurines of Artemis of *Ephesus (Acts 19:24).

The Roman genius was by no means confined to imitation, however. Brilliant creativity is manifested especially in the representation of various animals and in pieces of whimsy and caricature. There was as well a desire for realism that sometimes transcended that of the Greeks. Masterpieces, both carved and painted, were subjects of lively discussion among the literati (e.g., Philostratus *Imagines*; Achilles Tatius *Leuc. 1*); and they would have understood the statement that Christ was the "express image" of God (Heb 1:3). In many instances, several Roman

copies remain even when the original statue has been lost. Thus the magnificent works of Praxiteles and Phidias are known through presumably faithful reproductions. Some, however, are of inferior workmanship and give us disappointing and somewhat clumsy impressions of what the original must have been.

While Greek artists had usually chosen gods and mythological heroes for their subjects, the Romans, consummate politicians, saw propagandistic value in the productions of the sculptor. Once again they returned to Greece and ultimately to Egypt to create their political and religious statuary. From a workshop in *Alexandria emerged a new and utilitarian form, the head of which could be removed and replaced with the likeness of a person in power or with that of a current religious leader. As was often the case with Greco-Roman art, communication of a religious or political message led to diminished artistic value. The clean, classical lines of Greek sculpture grew more encumbered and voluminously ornate. Worship of the Roman emperors (*see* Ruler Cult) had created a need for a distinctive iconography. Thus, in the Holy Land, after the fall of *Jerusalem, there are portraits of emperors and eventually Jesus and the Buddha, all wearing the same draped garment. This mobility of portrait heads might be of particular value in a volatile situation. At one point, in the carving of a bas relief of the imperial family, the artist found it diplomatic to change the features of different individuals several times during the execution of the piece. Death, divorce, exile, disgrace and new marriages all needed to be reckoned with in the representation of the family.

Works that were originally intended as political statements might be reproduced in other contexts. A relief molded at Cyzicus on a temple pillar apparently celebrated the victory of Kings Eumenes II and Attalos II over the Gauls. The motif was transposed into a freestanding piece of group statuary at Rhodes by Apollonius and Tauriscos of Caria in *Asia Minor. Another enlarged reproduction, the Farnese Bull, is the largest piece of group statuary known from the Roman world and now towers in the Naples Museum. The emphasis is no longer upon military deliverance but upon a mystic salvation indicated by a multitude of decorative symbols understood only by those initiated into the cult of Dionysus. Since the highly popular *mystery religions were based upon secret lore, it is not al-

ways possible to ascertain the meaning or even the extent of mystic symbolism.

2. Painting.

In the Greek world, great advances were made in painting during the fifth century B.C. The flat color of earlier artists was replaced by the light-and-shadow technique of Apollodorus, who was said to "render surface naturalistically" (Pliny *Nat. Hist.* 35.60; Plutarch *De Gloria Atheniensium* 2 [Mor. 346a]). His was a mastery not only of perspective but also of shading and blending colors, a tradition continued by Zeuxis. The four primary colors of the fifth century—red, white, black and yellow—had been replaced with a full spectrum that yielded a realistic painting (Plato *Crat.* 434a-b). Sharply contrasting patches of colors could be juxtaposed in optical fusion to produce stunning effects, a "true view" from a distance (cf. Wis 15:4; Plato *Leg.* 663c). Roman painting would put more emphasis upon light than upon accuracy of form.

In classical Athens, vase painting had flourished as a consummate art. Vessels with a variety of shapes and uses were handsomely decorated, with distinct schools of potters and artists. Tens of thousands of fine pieces remain, the earliest in black on red vases and later the red on black. Geometric patterns gave way to scenes of life and legend. Vase paintings sometimes provide information about the social world and everyday life that is not available elsewhere. The themes varied according to the uses for which the pottery was intended. The linear figures developed into subjects displaying emotional depth, sometimes in the midst of high drama. One of the most affective is a representation of the Amazon Penthesilea at the moment of her death. As Achilles plunges the sword into her breast, he views her face and at that moment, struck by her beauty, too late falls in love with her. This mingling of emotion vests Greek vase painting with extraordinary power.

3. Mosaics.

Elegant private houses as well as public buildings boasted fine floors made of small pieces of colored marble. In these mosaics, the four seasons, the zodiac, agricultural and marine themes are well represented, but fertility, religious and mythological subjects are frequently a unifying component. Many fine mosaics may still be seen at excavation sites throughout the Roman world,

and especially in the museums of Antakya and Tunisia. Although most of the ancient paintings have vanished, the delicately shaded pieces of mosaic bespeak the skill of the ancient painter. A mosaic found at Pompeii (buried by a volcanic eruption in A.D. 79) re-creates a famous painting of the late fourth or early third century B.C. The original was probably the one commissioned by Cassander, *Alexander's successor as king of *Macedonia. The painting had been executed by Philoxenus of Eritrea, whose work was "surpassed by none" (Pliny *Nat. Hist.* 35.110). The scene is an intricate depiction of Alexander the Great's victory over Darius, with Alexander riding recklessly on horseback while the Persian flees in his chariot, their eyes meeting for a moment. Around them rages the battle, but the critical point is in the eye contact. Here indeed is the artist's skill in representing "characteristic expressions and emotions" (Pliny *Nat. Hist.* 35.98).

4. Frescoes.

Walls of dwellings and tombs were decorated with fine paintings while the plaster was still wet. The resulting frescoes reveal a high degree of artistry and religious imagination. This is especially true of the masterpieces recovered in situ at Pompeii and Herculaneum, some still brilliantly colored. One of the finest sets decorates the Villa of the Mysteries just outside the walls of Pompeii. It is valuable to historians of religion because of its representation of initiation into the Dionysiac mysteries. Many frescoes, however, are repetitive of others in style and subject, suggesting that collections of reproductions were available for less creative artists to copy.

Tomb paintings have sometimes proven an invaluable source of information involving Roman beliefs about the *afterlife. What the ancients dared not tell was sometimes embodied in the art within their graves. Even the *Gnostics decorated their tombs with distinctive symbols, a mute testimony to their theological perspectives. Within ancient graves, vases and small figurines were more likely to have survived intact and represent consolation messages more explicitly than do the surviving texts. Frescoes appeared early in the catacombs and afford us a glimpse of the worship and attitudes of early Christians. At first of inferior quality, these paintings advanced in artistic merit and in the ability to portray spiritual fervor and passion. The face of the

Donna Velata in the Catacomb of St. Priscilla is considered one of the most expressive pieces of early Christian art. Conventional pagan symbols reappeared with new significance as artists groped their way toward distinctive symbols and expressions of their faith.

5. Minor Art Forms.

Bas reliefs on the stone coffins known as sarcophagi are sometimes brilliantly executed and highly informative about the religious aspirations of both pagans and Christians. Commonplace emblems were frequently carved in advance, with the facial features of the deceased being added at the time of death. Other decorated objects included lamps, vases, cups, bottles, furniture, pins, jewelry, intaglios, cameos, mirrors, combs, jewel boxes and ossuary caskets (see Burial Practices, Jewish). Of necessity, these were the possessions of those who could afford the work of an artist, whether highly skilled or mediocre. Glimpses into the viewpoints of common people can be gained through graffiti and other sorts of crude sketches. One of the most interesting to Christians is that of the crucifixion of a donkey-headed man. The inscription beside it reads "Marcus worships his God."

Of some art forms, only the written description remains. This is especially true of the needle and loom work of women. The finest embroidered pieces narrated a story (Ovid *Met.* 6.5-145) and excited enormous admiration. Beside the literary descriptions in such as that of Achilles' shield in the *Iliad* and of Aeneas in the *Aeneid*, a few pieces of fine metalwork remain. Decorative helmets worn by gladiators have been recovered at Pompeii and elsewhere (see Circuses and Games).

Ordinary Romans viewed certain forms of art as magical, some as apotropaic, to be used in warding off the evil eye. Erotic elements, especially the male phallus, occur repeatedly throughout Greco-Roman art, not only as a decorative feature but also as a representation of sexual and divine power. Obscenity was valued not only for its ribald aspect but also as an appropriate means for the promotion of fertility.

6. Architecture.

Roman architecture, too, though originally based on Greek and Etruscan prototypes, developed in new directions. It was the Roman genius, however that developed the basilica, the

use of high-grade concrete and the barrel-vaulted arch. These inventions made possible the construction of enormous edifices, such as the giant amphitheater known as the Colosseum. The use of the arch enabled the construction of buildings not dependent upon the flat lintel that is used so effectively in Greek architecture to support doorways, ceilings and windows. The new technology, along with new wealth derived from the Roman conquests, made possible construction on a level previously unimagined. An abundance of slaves provided cheap manpower for the most ambitious of public works. Palaces, public baths (see Gymnasia and Baths), administrative buildings, temples, theaters, fortresses and market complexes rose not only in Rome but also in major cities throughout the empire (see Cities, Greco-Roman). Three- and four-story tenements afforded cheap public housing and commercial space as well. The structure enclosed a city block, with shops lining the street level and apartments rising above. The interior of the block, known as an island, was given over to the gardens and dwellings of the well-to-do.

The direction for temples came both from the Greeks and from the Etruscans. A typical, Etruscan-inspired temple was considered to be tripartite, with large flanks of steps and three cellas (for the three gods Minerva, Venus and Jupiter). Temples were made of mud brick covered in plaster with deep porches and colonnades only in front. Far from being a dazzling display of white marble, both Greek and Roman temples were brightly painted, sometimes in what would by modern tastes be considered garish colors. Unlike the lofty marble temples of the Greeks, which were large and surrounded by huge colonnades, early Roman temples at times assumed the shape of the primitive houses. After the conquest of Greece, more ambitious buildings arose with similar patterns. Nevertheless, the typical temple, though sometimes of awe-inspiring proportions, was not constructed to hold a large number of worshipers at the same time. The inner chamber was built to house the statue of the deity to whom the shrine was erected. There might be treasury chambers, storage rooms and lodging facilities for the cult personnel, but the pattern was not useful for Christian purposes.

At first Christians had often gathered in private homes, sometimes altered to enlarge the meeting room or to add a baptistry. Occasionally

a warehouse or public hall was pressed into service. The basilica, originally designed for the conduct of public business (government administration, courthouses, markets and promenades), became serviceable as a design for churches. The normative model was delineated by the first-century B.C. architect Vitruvius (*De Arch.* 5.1-4; 6.9-9), but the multiple needs that could be filled in Roman society led to increasing versatility of construction. The basic plan provided a front portico and a long central nave with two or more side aisles. These aisles were divided from the central hall by a series of pillars and arches. Light was admitted through openings close to the ceiling. At the far end opposite the porch was a rounded area, covered with a vaulted dome. This plan, whether simple or increasingly complex, was adopted by the emperor Constantine in the construction of three major fourth-century churches: those of St. Paul's, outside the Walls, the old St. Peter's and St. John of the Lateran. The NT writers evinced considerable interest in matters of architecture and building (1 Cor 3:9-17; 2 Cor 6:16; Eph 2:20-22; 1 Pet 2:4-8). They clearly understood the toil and expense involved in construction (Lk 14:28-30), but they envisioned temples of the spirit and pictures of eternal splendor.

ART AND ARCHITECTURE: JEWISH
Jewish art and architecture of the Second Temple period (Hellenistic to early Roman, second

century B.C. to first century A.D.) begins with the remains of the *Hasmonean sites that were later reconstructed or renewed by the Herodian architectural projects, which left a more enduring impression upon the art and architecture of the period.

Hasmonean architecture survives mostly in remains of fortifications, desert fortresses, water systems and the recently excavated Hasmonian palace at Jericho. The palace's characteristic features consist of a central court surrounded by rooms; a hall with two columns *in antis* in the southern part of the court, which led to the triclinium and probably served as a reception hall. This basic plan, inspired by Hellenistic architecture, characterizes the Hasmonian palaces at Masada, as well as the twin palaces at Jericho.

1. Architecture
2. Art

1. Architecture.

1.1. Herodian Architecture. The sources related to the construction projects undertaken during Herod's reign (37-4 B.C.) are literary and archaeological. The major literary sources are the works of *Josephus, particularly *Antiquities* 15-17 and *Jewish War* 1, 2 and 5. Josephus mentions thirty-three building projects, twenty of which were within the borders of Herod's kingdom and thirteen of which were in other countries. These Herodian architectural projects include the construction, reconstruction and extension of towns, fortifications, palaces and fortresses, as well as the *temple in *Jerusalem and the Royal Stoa—the largest single structure, the largest palace at Herodium and one of the largest harbors ever constructed in antiquity—at *Caesarea Maritima. Many of these monumental structures have survived and have been extensively excavated in the last few decades.

Most of these structures were built during Herod's reign, but renovations and reconstructions were undertaken during the first century A.D. until the destruction of Jerusalem and the Second Temple in A.D. 70. Herod built three new towns: Antipatris, Caesarea, with its magnificent harbor, and Sebaste (Samaria), with its temple of Augustus. In the newly established towns, Herod built temples, palaces, theaters, stadia, fortifications and harbors. Within the Jewish kingdom Herod carried out several projects. He built extensively in Jerusalem, particularly its temple, a

palace and town fortifications and towers, as well as many public buildings and institutions, private buildings and villas. In the Judean desert Herod constructed or renovated several splendid palace-fortresses and the winter palaces at Jericho, which combined luxurious, leisurely living with the need for security. Herod's most prominent and important of these projects was the Jerusalem temple.

1.1.1. The Temple in Jerusalem. Herod's temple in Jerusalem is the largest known temple in antiquity, one of the architectural wonders of the ancient world and a unique structure. The temple was the focal point for the Jewish nation, the center for worship and the place where political, economic and spiritual affairs of world Jewry could be discussed and determined. It was also the destination for pilgrims during the feasts (see Festivals and Holy Days), and therefore it needed to accommodate thousands of people who gathered there to celebrate. The architectural excavations carried out during the last decades (1968-1978; 1994-1997) have resulted in important data being disclosed concerning the areas of the Temple Mount gates, the areas outside the retaining walls, streets, squares and monumental passageways.

1.1.2. Herodian Palaces. King Herod concerned himself especially with building palaces that could be used for both administrative and recreational purposes. The typical features of the Herodian palaces followed the common plans of the Roman *domus* and *villa* (town and country house respectively). A Herodian palace was usually an elaborate building with several wings: the main wing, which contained a triclinium, a peristyle court and an inner garden; a bath house and dwelling rooms. The extended palace complex usually also included entertainment facilities: pools for swimming and sailing boats; elaborate gardens, such as the sunken garden at Jericho, palace III. Water installations, such as aqueducts and channels, brought water to the pools and gardens, as well as to the residential wings.

1.1.3. Fortresses. Seven fortresses in the Judean desert—Masada, Herodium, Cypros, Hyrcania, Alexandrium, Machaerus and Doq—constitute an important component of Herodian architecture. Built on mountaintops, isolated and autonomous, these structures were strongly fortified and have extensive systems for the entrapment and storage of water. These fortresses

functioned primarily as military bases for defense but also as places of refuge for political and spiritual reasons, as shelters in times of violent confrontation and upheaval. They served as administrative centers for important routes, agricultural and royal farm areas and palaces; they were also used for guarding borders. They even served as burial places for the Hasmoneans and for Herod. Elaborate palaces were constructed on their premises. Masada was the most spacious of all and had several palaces on its summit that served as leisure resorts. The fortresses sometimes extended into the lower areas of their mountains; Herodium had buildings and installations built below the mount.

The characteristic features of Herodian architecture were high-level planning of complexes with focal points and with a variety of functional purposes. The techniques of building included the use of stone and sun-dried bricks, white plastering, *opus quadratum*, *opus reticulatum* and barrel vaulting. Herod named cities, as well as public and private structures, for relatives and Roman patrons.

1.2. Funerary Architecture and Jewish Burial Practices. Two cemeteries of the Second Temple period in Jerusalem and Jericho constitute our data for funerary architecture, art and burial customs (see Burial Practices, Jewish). These cemeteries were located outside the town limits, in accordance with Jewish law (*m. B. Bat.* 2:9), and two basic tomb plans exist, the *loculi* type (*kokhim*) and the *arcosolia* type, which is chronologically later. Each serves as a family tomb but with provision for separate burial of each individual.

The *loculi* tomb consists of a square burial chamber, often with a pit dug into its floor to enable a man to stand upright, and three or four benches on each side of the tomb. From one to three arched *loculi* (*kokhim*) are hewn into the walls. The tomb is sealed by a rectangular blocking stone or by mudbricks and small stones. *Loculi* tombs sometimes consist of a monumental tomb that has a memorial or *nephesh* standing next to or above it. The origin of the plan for the rock-cut *loculi* tomb of the Second Temple period in Judea is to be sought in Egypt, particularly in Leontopolis, from as early as Hasmonean times.

The *arcosolia* type, in use at the end of the Second Temple period, is a benchlike aperture with an arched ceiling hewn into the length of the wall.

In the Jerusalem necropolis both loculi and arcosolia tombs are found; the Jericho cemetery consists of loculi tombs only. The monumental tombs of Jerusalem are characterized by a partly rock-hewn and partly built free-standing monument either above or next to the chamber and loculi tomb. The monument usually has a pyramid or tholus surmounting a cube-shaped base. A group of monumental tombs, located in the Kidron Valley (dated to the first century B.C. to first century A.D.), consists of the Tomb of Zachariah, the Bene Hezir tomb and the Absalom tomb with its adjacent Tomb of Jehoshaphat. Another tomb that belongs to this group is Jason's Tomb in the western part of modern Jerusalem. Several Jerusalem rock-hewn tombs portray ornamented facades or gables, consisting of a combination of features that characterize Jewish funerary art in Jerusalem.

Two distinctly different types of loculi tomb burials, primary and secondary, were discovered during the excavations in the Jericho cemetery. They can be classified typologically, chronologically and stratigraphically into primary burials in chestlike wooden coffins, which is the earliest type of burial in the Jericho cemetery, and secondary burials of collected bones that were either placed in individual ossuaries or piled in heaps. Bodies were prepared for secondary burial by a primary burial that allowed the flesh to decay until only the bones remained. The evidence from Jericho proves that loculi tombs were first designed and used for primary burial in coffins. The same tomb plan continued to be used in the case of ossuary burials.

Ossuaries, often decorated, were hewn from one large block of limestone, usually in the shape of a rectangular box resting on four low legs, with a flat, slightly curved or gabled lid. The inscriptions, sometimes incised on ossuaries, usually included the name of the interred and the person's family relation, place of origin, age or status.

Dates for the burial customs are still the subject of debate. Primary burials in coffins can be dated to the mid-first century B.C. to about A.D. 10, and secondary burials in ossuaries immediately followed, dating to about A.D. 10-68. L. Y. Rahmani, however, dates the practice of secondary burials in ossuaries in Jerusalem to 30/20 B.C. to A.D. 70, continuing sporadically until about A.D. 135 or the beginning of the third century.

Jewish burial practices of the late Second Temple period reveal a corresponding importance on both the individual and the family. This is reflected in the plan of the loculi tomb, which provided for individual burial of coffins or ossuaries in separate loculi while at the same time allowing a family to be buried together in the same tomb.

What is most extraordinary in the Jewish burial customs of the Second Temple period is the fact that within a comparatively short space of time burial practices, usually among the most conservative customs in a society, underwent rapid changes. Loculi tombs appear with primary coffin burials, and within a century secondary burials in ossuaries in similar loculi tombs becomes the prevalent custom, a practice that lacks parallels with any other contemporary neighboring culture. At the same time, these customs were short-lived and show little affinity to either the earlier Israelite customs or the later Jewish rituals of late antiquity, which contain only traces of these Second Temple period customs. Archaeological investigation has been unable, moreover, to uncover the causes for these ossuary burial innovations. It may be conjectured that the Jews blamed their loss of independence and their state, in A.D. 6 (*see* Jewish History: Roman Period), on their sinful behavior; the custom of secondary burial of the bones in ossuaries, after the flesh had decayed, became a way to expiate sins.

1.3. Second Temple Period Synagogues. Several public structures of the Second Temple period that have been discovered in the last decades are considered to be *synagogues: at Masada, Herodium, Gamla, a recently uncovered structure at Capernaum, under the later synagogue, and another synagogue, now lost, reported at Chorazin. The excavated structures are assumed by scholars to be synagogues because of the circumstantial evidence of similarity to each other in architectural plan and therefore in function, even though no proof has been uncovered.

Upon the evidence of the structures themselves, it should be noted that they differ from later synagogues in plan, function and decoration. First, from the architectural point of view no new conceptions in construction have been discerned, but the impression is rather one of local extemporization. Second, these structures existed only for a short time in the first century A.D. and were never built again, except for Ca-

pernaum. Third, these assembly halls lack the most important feature of the later synagogue: the Torah shrine. Finally, during the first century the temple in Jerusalem was still the center for worship and ritual for the entire Jewish community in Judea and the Diaspora. At the temple they could participate in the ceremonies and in the teaching of the Law conducted in the temple courtyards. They could also settle administrative questions in the temple courts.

The assembly structures at the fortresses of Masada, Herodium and Gamla probably served as local assembly halls during the years of the revolt against Rome, a time during which it was extremely difficult for the congregations to travel to Jerusalem in order to participate in temple worship (see Jewish Wars with Rome). At the same time as these structures were serving as small community centers, worship presumably was also being conducted in them, although no convincing proof of this supposition has been found. With the destruction of the temple, local structures began to flourish. Of necessity they replaced the national center and became local worship and community centers. In these halls reading of the Torah was emphasized, and thus the distinctive feature of the later synagogues, the Torah shrine, emerges.

2. Art.

Second Temple period Jewish art is a purely decorative art characterized by a mixture of native traditions and Hellenistic-Roman features. However, resistance to the intrusive culture was strong because of the force and vitality of the Jewish religion, which controlled the community's activities. Judaism also conceptually dominated its decorative art so that neither figurative nor symbolic representations were depicted.

The various ornamental devices and the repertoire of motifs were part of the general stream of Roman art, especially its provincial and eastern tributaries. The style of Jewish art followed the basic oriental elements of the endless patterns, *horror vacui*, by plasticity of carving and by symmetrical stylization. Decoration of buildings, palaces, houses and bath houses of the Second Temple period mainly focused on the use of wall paintings, stucco-plaster moldings, stone carving and ornamental floor pavements. Mosaics decorated the floors of Second Temple Herodian palaces and private homes of the upper-class Jerusalemites. These mosaics consisted of geo-

metric and floral designs with no symbolic or iconic patterns. The decorative elements, motifs and designs are characterized by a lack of animate motifs and symbolic emblems. This stems from the reluctance of all Jews, including the ruling families, to decorate any building or tomb with religious or iconic symbols. Consequently, it can be stated that the Jews of the Second Temple period honored the biblical injunctions by refraining from representations of humans and animals in their art.

During the Second Temple period the land of Israel was a Jewish state having a central temple in Jerusalem. The art of the period shows connections with the neighboring Greco-Roman culture. However, at the same time Jewish art withstood foreign influences by evolving strictly aniconic features; it is characterized together with the other arts of the period by highly skilled indigenous stonework and by predominant oriental elements.

Jewish art and architecture of the Second Temple period concentrate on extensive architectural projects consisting of large complexes and structures, not only in Jerusalem, where the temple itself was rebuilt, but also throughout the country in major winter and summer palace complexes, in a magnificent harbor and other architectural installations. The art includes the ornamentation and embellishment of buildings, tombs, sarcophagi and ossuaries. The strictly aniconic and nonsymbolic art characterizing the Second Temple period is the outcome of Judaism's struggle against paganism and idolatry. By the strict observance of the prohibition against animate images, the Jews retained their own identity and distinctiveness.

ASCENSION OF ISAIAH

The *Ascension of Isaiah* is an early Christian *apocalypse of considerable importance for the light that it sheds on the development of Christianity in the immediate postapostolic period. The text incorporates an angelomorphic christology and offers a rudimentary trinitarianism that illuminates such enigmatic passages as Matthew 28:19. In order to understand the value of the *Ascension of Isaiah*, we must briefly consider the textual problems that bedevil all serious study of this apocalypse.

1. Text and Date
2. Theological Considerations
3. View of Prophecy
4. Social Setting

1. Text and Date.

The text was written almost certainly in Greek, but only a fragmentary Greek text has survived. The apocalypse is found in full only in an Ethiopic translation, which was probably made in the fourth or fifth century A.D. The major but not the only critical question is whether an existing Semitic document called the *Martyrdom of Isaiah* was incorporated in the present and undeniably Christian apocalypse. This view was popular in the first half of the twentieth century,

but it was challenged by the Italian scholar M. Pesce in his own contribution to his 1983 edited collection (itself the proceedings of a 1981 conference on the *Ascension of Isaiah*). Pesce argued that the author of the apocalypse was a creative individual who worked with various strands of Jewish tradition but not with any written document as such.

So far as the date is concerned, no one would now agree with R. H. Charles that it was compiled in the late second or early third century A.D., although Charles conceded that the putative constituents were earlier. R. J. Baukham has argued for a date of about A.D. 70 to 80; J. M. Knight, during the Trajanic persecution in the second decade of the second century. The criteria used in the identification of these dates are respectively the possibility that *Ascension of Isaiah* 4:13 alludes to living eyewitnesses of Jesus himself and the question of whether the vivid description of martyrdom does not of itself suggest that *persecution was a recent feature of the author's own experience.

2. Theological Considerations.

The *Ascension of Isaiah* is an important text for discerning the origins of what has come to be called belief in the heavenly preexistence of Jesus. It incorporates a motif whereby the Beloved-One, as the heavenly Christ is often called in the apocalypse, descends to earth and appears as Jesus of Nazareth. Although it has been questioned by D. D. Hannah whether this represents a docetic christology as such, the motif does appear to come from Jewish angelology and to have parallels in a work such as *Tobit, in which the archangel Raphael appears on earth as a human person. The christology may thus be called an angelomorphic one. This is not to say that the Beloved One in the *Ascension of Isaiah* is an angel but that motifs drawn from Jewish angelology resourced the way this author chose to describe the Beloved One and his saving activity. An angelomorphic christology is a feature of some NT literature, including the Synoptic transfiguration narrative and the description of the heavenly Christ in Revelation 7:12-15.

The *Ascension of Isaiah* has an ambiguous trinitarianism in which the *Holy Spirit is specifically said to be an angel (*Asc. Isa.* 9:38-40) and in which equality between the three divine beings is expressed in terms of their reception of worship alone (*Asc. Isa.* -8:18). The *Ascension of*

Isaiah shows such rudimentary trinitarianism powerfully emergent, in company with other post-apostolic literature. This is a significant thing given the relative silence of the NT on the matter. The Spirit's function in the apocalypse is primarily the inspiration of classical and contemporary prophecy (see Prophets and Prophecy).

The first half of the *Ascension of Isaiah* contains a historical review of the kind familiar from other apocalypses (*Asc. Isa.* 3—4). In the construction of this material, it seems likely that *Ascension of Isaiah* 3:13-18 (traditions about Jesus) and 4:1-13 (material about Nero) were taken over from an existing source or sources.

3. View of Prophecy.

This leaves *Ascension of Isaiah* 3:21-31 as very probably the author's own creation. In this section, the demise of prophecy in the author's own time is lamented. While all due interpretive caution is called for, it does seem that this material discloses something of the author's understanding of his contemporary situation. He reveals himself as a person sympathetic to the prophets who regretted the fact that their ministry was passing from the church at large. Such prophecy certainly included the exegesis of the *Hebrew Bible and contemporary oracles, but the description of Isaiah's mystical ascension in *Ascension of Isaiah* 6—11 suggests that it also had a mystical or ecstatic element (see Mysticism). This again is significant for understanding the historical development of Christianity in the later first century, especially when we consider that a mystical experience was enjoyed by Paul (2 Cor 12).

4. Social Setting.

Recent research on apocalypticism has done much to expose its social setting. Although we should beware of the assumption that all apocalypses necessarily came from marginalized people, the *Ascension of Isaiah* contains evidence to indicate that its authors felt threatened on more than one front. There is implied antipathy toward contemporary Judaism (*Asc. Isa.* 3:8-10), the Roman administration in Syria (*Asc. Isa.* 4:1-13) and even the hierarchy of Christian leadership (*Asc. Isa.* 3:21-31). Part of the purpose of the apocalypse seems to have been the attempt to encourage readers by reminding them of the truth that the Beloved One had defeated *Belial when he descended from the seventh heaven to appear as Jesus, together with the promise that a

new world order was impending on the Beloved One's return to earth (*Asc. Isa.* 4:14-18). This reading of the text shows that a soteriology underlies the *Ascension of Isaiah*, as it does almost every representative of the Jewish and Christian apocalyptic tradition.

The *Ascension of Isaiah* contains a richness and diversity of material to which a short article can hardly do justice. It must be emphasized in conclusion that the *Ascension of Isaiah*, despite its relative neglect in the past, is a significant text for the study of early Christianity. It must be restored to its rightful position alongside *1 Clement*, *Barnabas* and the *Shepherd of Hermas* as postapostolic literature of the greatest importance (see *DLNTD*, Apostolic Fathers).

ASIA MINOR

Asia Minor is the westernmost peninsula of Asia, stretching over ancient Anatolia (modern Turkey) from the Aegean and the Black Sea to the Euphrates River and the Syrian desert. Clas-

sical geography gave the name *Asia* to both a continent (the whole of Anatolia) and a country (on the Aegean coast forming a Roman province). The continent had an all-embracing network of roads and a permanent military presence. The Roman government concentrated its hegemony over cities and borders, leaving whole geographic regions surrounded by its forces but otherwise largely untouched by its institutions (see Roman Administration). The interior was an outback of mountains and upland plateau where indigenous Anatolian culture endured well into the Byzantine age. There were many Greek and then Roman colonies along the coast. The main Roman provinces were Asia, Lycia and Pamphylia, Cilicia, Galatia, Pontus and Bithynia, and Cappadocia, although provincial administration shifted and changed more boundaries in Anatolia than in almost any other part of the empire.

1. Aegean and Mediterranean Coastal Areas
2. Anatolian Interior
3. Black Sea and Frontier Regions

1. Aegean and Mediterranean Coastal Areas.

1.1. Asia. The Roman consular province of Asia extended along the western coast of the Anatolian peninsula, bounded in the north by Bithynia, in the east by Galatia and in the south by Lycia. It came into Rome's possession in 133 B.C. after the death of the Hellenistic monarch Attalus III of Pergamum, who had bequeathed his kingdom to the Romans. *Provincia Asia* enjoyed commercial prosperity from agriculture and especially its many textile industries, which produced even luxury goods (e.g., the businesswoman Lydia, a "dealer in purple cloth" [Acts 16:14]). Its rich natural resources and many rivers were chief factors in the success of its economic and cultural life. The province contained three major inland districts: Mysia on the north, Lydia in the center and Caria on the south; the narrow strips of plain that stretched along the Aegean seaboard took their names from the three branches of early Greek settlers: Acolis, Ionia and Doris. The major cities were Pergamum, *Ephesus, Smyrna and Sardis.

1.1.1. Pergamum. Called the Athens of Asia, the city of Pergamum ranked among the most spectacular in the ancient world. The monumental architecture of its terraced, fan-shaped upper acropolis, a legacy of the Attalid kings who had beautified the city into a Hellenistic

cultural capital, included a royal palace, famed sacred buildings and the majestic library of Eumenes II (the library had two hundred thousand volumes when Mark Antony offered it to Cleopatra). Eumenes II (d. 158 B.C.), an Attalid king, is famous for inventing parchment (Gk *Pergamênê*; Lat *Pergamena*), when papyrus from Egypt was in short supply.

One of the temples housed the Great Altar of Zeus, a masterpiece of the Pergamene school of Greek sculpture. Another was the sanctuary of Asclepius, god of healing, which the famous rhetorician Aelius Aristides (b. A.D. 118) visited frequently to seek curative treatments. The city was the birthplace of Galen (b. A.D. 129), one of the most illustrious physicians of the ancient world. Pergamum was also the first Asian city to receive an imperial cult center for worship of the goddess Roma and of the Roman emperor, a titular honor known as Temple Warden (*Neokoros*). In response, some early Christians came to lament this city as a place "where Satan's throne is" (Rev 2:13).

1.1.2. Ephesus. Ephesus was the leading city in Asia. With a population of two hundred thousand in Roman times, it rivaled *Antioch in Syria as the third largest metropolis in the ancient Mediterranean world, behind only *Alexandria in Egypt and *Rome itself. Under the early empire, the city eclipsed Pergamum as the provincial capital, the seat of the Roman governor, and as a major commercial port. The ancient geographer Strabo writes that Ephesus "grows daily and is the largest emporium in Asia this side of the Taurus Mountains" (Strabo *Geog.* 14.1.24). Ephesus figures prominently in ancient literature, serving as the center of two ancient novels: *An Ephesian Tale of Anthia and Habrocomes*, by Xenophon of Ephesus, and *The Adventures of Leukippe and Kleitophon*, by Achilles Tatius (see Romances/Novels).

*Archaeology attests to the ancient city's grandeur and beauty; in 1995 the Austrian Archaeological Institute in Vienna celebrated its centenary year of excavations at Ephesus. The ruins include an impressive theater (with a seating capacity of twenty-four thousand), the Prytaneion (town hall), an agora (commercial market), a complex of baths and gymnasiums, a stadium (for the Artemisia, Ephesia and other regional athletic contests) and a medical school (of Rufus and Soranus, two important ancient doctors). The most prominent structure, how-

ever, is the Great Artemision, the Ionic-style temple to the Greek goddess Artemis (Roman Diana), one of the seven wonders of the ancient world. Knowledge of the Ephesian Artemis cult is critical for the interpretation of Acts 19, where crowds shout "Great is Artemis of the Ephesians!" (Acts 19:28).

There was a substantial Jewish population in the city, which gained citizenship rights and exemption from military service.

1.1.3. Smyrna. Smyrna (modern Izmir) appears in inscriptions and coins as the "Glory of Ionia," "the First of Asia in beauty and greatness" and the legendary birthplace of the Greek poet Homer. One of the three great Ionian ports (the other two being Ephesus and Miletus), it lay at the end of a long gulf that took its name from the city, about 45 miles north of Ephesus. "The division of the streets," writes Strabo, "is exceptionally good, in straight lines as far as possible; and the streets are paved with stone; and there are large quadrangular porticoes, with both lower and upper stories" (Strabo *Geog.* 14.1.37). Because of its international renown and wealth, the emperor Tiberius (A.D. 14-37) selected Smyrna as a Temple Warden of the imperial cult in Asia. Famed for its devotion to science, medicine and education, it was a major center of the *rhetorical and literary movement known as the Second Sophistic. Aelius Aristides, Smyranean and rhetorician, persuaded the emperor Marcus Aurelius to rebuild the city after earthquakes in 178 and 180.

Early Christians in the city experienced local, sporadic persecutions (Rev 2:8-11), although by the second century they enjoyed relative wealth and power as vigorous communities. The martyrdom narrative of an early, famous bishop, Polycarp, survives (see *Apostolic Fathers*).

1.1.4. Sardis. Inland, on the Hermus River basin, the most fertile of all Asia Minor, stood the city of Sardis (Sardeis). It held strategic position under a fortified, precipitous hill of white marble; the difficulty of capturing its acropolis became proverbial. Because the city was the western highway station on the Royal Road (described by Herodotus *Persian Wars* 5.52-54) connecting Asian coastal cities to inner Anatolia, the city was important for ancient travel. It was the old capital of the Lydian kingdom whose last king, Croesus (560-546 B.C.), entered legend for amassing local river gold dust, which Strabo reports by Roman times had "given out" (Strabo

Geog. 13.4.5). After the reign of Croesus, the city served as headquarters of the principal Persian satrapy and then as one of many royal capitals of the *Seleucid Empire. Under Roman rule it continued to be politically and commercially dominant as chief city of Lydia, Roman Asia's eastern district (not to be confused with Lycia; see 1.2.1 below).

Sardis enjoyed a prosperous economy. The textile industry there was the most important in Asia and perhaps its most ancient center. Sardian carpets, finely wrought, covered the palace floors of Persian kings, and its purple couch covers were known in *Athens as early as 400 B.C. Ancient tradition, albeit apocryphal, claimed that Sardian artisans invented the dyeing process. The city's perfumes were famous, excelled only by those produced at Ephesus. Sardis was the place for travelers to find luxury goods.

The population included a significant number of Jews; inscriptions list Jews as goldsmiths, marble sculptors, shopkeepers, dyers, mosaic workers and members of the city's council. Archaeological excavation has unearthed the synagogue of Sardis, the largest extant from antiquity. A famous early Christian bishop, Melito of Sardis (d. A.D. 190), expressed vehement hostility toward the city's Jewish people, perhaps out of envy of this highly favored synagogue and of the community's prominence.

1.2. Lycia and Pamphylia. In southwest Asia Minor, bordering the Mediterranean Sea, the Roman province of Lycia and Pamphylia was created by the emperor Claudius in A.D. 43, when he took the southern portion of Galatia and added lands once governed by the Lycian league of cities.

1.2.1. Lycia. A great mountain range dominates the landscape of Lycia. The range is an extension of the Taurus, shaped like a horseshoe ringing the center of the district. "The scene of the myth of Chimaera," writes Strabo, "is laid in the neighborhood of these mountains" (Strabo *Geog.* 14.3.5). There was a Lycian ravine called Chimera, named after the mythic monster, site of an unusual natural phenomenon: the periodic venting of highly flammable gas from a small rock-face niche, the burning jets of which ancients called the everlasting fire. This phenomenon caused wonder in antiquity as well as today.

The ancient people of Lycia drew their commerce principally from the mountainous re-

sources. The forests provided shipbuilding timber. Goats' hair was manufactured into robes. A local species of thorny shrub was prized as the source of a famous medicinal elixir. A chalk mine operated in the area. Off the coast, especially among the islands, there were valuable fisheries; the sponges from Lycia were savored as a delicacy. As a whole, however, because of the shortage of good land and the relatively limited population, the economy of Lycia never reached the level of that in the neighboring districts of Pamphylia, Pisidia and Caria.

The mountains made transportation and urban development difficult, and at times they isolated Lycia from outside influence. Indigenous Lycian culture and language (belonging to the Anatolian branch of the Indo-European linguistic family) survived into the classical era. As one might expect, most of the Greco-Roman *cities were along the coast, where the sea or the main highway that ran parallel to it facilitated travel. While these cities were small compared with the metropolises of Asia, they nonetheless had an unusual capacity for collaboration and federation.

1.2.2. Pamphylia. *Pamphylia* is Greek for "land of all tribes." Inspired by classical tradition, the name expresses the belief that the land was supposedly founded by the mixed multitude of Greeks who wandered across Asia Minor after the Trojan War. The inhabitants of one city, Aspendus, claimed kinship with the Mycenaean civilization of the Argives. While this claim is highly unlikely, local Greek dialects nonetheless exhibited affinities with Cypriot and Arcadian as well as traditional Anatolian languages.

Unlike mountainous Lycia to the west, Pamphylia was a coastal plain, along southern Anatolia. In this plain, five great cities arose: Attaleia (modern Antalya), Perge, Sillyum, Aspendus and Side. These cities clustered along a short, forty-mile stretch and formed an arc of a circle, dense with urbanization by ancient standards.

Attaleia was the newest, founded by Attalus II of Pergamum (220-138 B.C.) to focus Attalid political power in southern Asia Minor. It served as the chief port of the southern littoral. Under the Roman early empire, Augustus settled the lands with Italian legionary veterans. Perge, which Acts reports Paul visited (Acts 13:13; 14:24-25), was famous for the native cult of Pergean Artemis, a Greco-Anatolian goddess whose likeness appeared on the city's coins. It was the birth-

place of the mathematician Apollonius (fl. 200 B.C.), whose work in ancient geometry (specifically, conics) was as foundational as that of Euclid. Perge vied with its neighboring city Side for the rank of first city in Pamphylia. The competition came in part from Side's excellent harbor, an international hub of sea connections to Syria, Egypt, Cyprus and Rhodes. These and other Pamphylians, according to Strabo, shared "much of the traits of the Cilician stock of people" and did "not wholly abstain from the business of piracy" (Strabo *Geog.* 12.7.2; see also 14.3.2). Municipal magistrates routinely cooperated with Cilician pirates, allowing dockage in the harbor and subsequent selling of kidnapped captives. In this way, Side earned its place in the history of the Roman *slave trade.

1.3. Cilicia. The Greeks and Romans applied the name *Cilicia* to various southern Asia Minor regions in different periods, but by the time of the NT it came to designate a Roman province in the eastern half of the southern coast. Roman Cilicia is perhaps the best example of what the Latin word *provincia* originally meant—not a bounded geography under uniform administration but a sphere of military duties (called *imperium*) granted a Roman magistrate overseas. In this way, modern maps of the Roman Empire can mislead. The first Roman command (*imperium*) there, under the praetor Marcus Antonius (d. 87 B.C.; grandfather of the triumvir Mark Antony), was little more than an authorization to patrol the southern Anatolian coast against pirates.

Roman Cilicia was not a territorial unity, being two dissimilar countries. Tracheia ("Rugged") Cilicia in the west afforded, according to Strabo, "a poor livelihood" because of its rough, mountainous terrain and the very little level ground on its narrow coastline. The eastern country of Pedias ("Level") Cilicia "consists for the most part of plains and fertile land" (Strabo *Geog.* 14.5.1). Pedias was one of the most abundant producers of flax, vines, olives and barley in Asia Minor; its rich supply of ship timber proved valuable to local pirates.

Long before early Christians made it famous as the home of the apostle Paul (Acts 22:3) and an ancient center of Christian activity (Acts 9:30; 11:25), Cilicia had obtained its international reputation (more precisely, infamy) in classical antiquity as the home of pirates. Yet piracy in the ancient world should not be thought of in its

modern sense of individual, renegade outlaws working independently of any governmental sponsorship. As we saw in the case of ancient Side, Cilician pirates enjoyed the support of monarchs and magnates in ports all along the Anatolian coastline. The economies of many ancient cities depended on the success of piracy, and Rome was no exception. Only when pirates threatened the Egyptian corn supply to the city of Rome did the Senate finally take action, commissioning the task to Pompey the Great (67 B.C.). In only a few months, and in an uncomplicated naval exercise, Pompey ended one hundred years of infestation by Cilician pirates of the eastern Mediterranean. In the western seaboard of Greece and Asia Minor, however, piracy continued. Cilician pirate fleets of the next generation (38-36 B.C.) fought in the Roman Republican civil wars (ironically under the command of Pompey's son, Sextus Pompeius) to oppose the forces of young Octavian, the future emperor Augustus.

2. Anatolian Interior.

Barely touched by Greek, much less Roman, influence before the first century B.C., the vast interior of Anatolia was among the wildest in the ancient world. The highlands were invaded in 278 B.C. by northern European Celtic (Gallic) tribes who migrated across the Hellespont into Asia. Also known as Gauls (hence the geographic name *Galatia*), these tribes became the most dominant influence in central Anatolian society, culture and religion. This was the outback of Asia Minor and included the lands of Phrygia and Galatia.

2.1. Phrygia. Although it was not a formal province of Rome—the land was divided between the provinces of Asia and Galatia—ancient Phrygia nonetheless had its own national identity. The Phrygian language, known from inscriptions at both an early (Old Phrygian) and a later (New Phrygian) stage, continued to be spoken well into the third century A.D.; New Phrygian simply adopted the Greek alphabet. The Phrygian religion also endured and practiced cultic worship of Agdistis, the Phrygian mother goddess, her youthful consort Attis and other Anatolian deities associated with righteousness, vengeance and justice. This native religious life enjoyed a strict moral code of behavior, and it was responsive to ancient Judaism and early Christianity. Christian communi-

ties flourished there in the second and third centuries, including the controversial Montanist church with its prophecy of the heavenly Jerusalem descending on two Phrygian villages, Pepuza and Tymion. Phrygian Jews are reported in the narrative of Acts (Acts 2:10), and the excavated synagogue (dating to the reign of Nero) in the Phrygian city of Acmonia has produced the only Hebrew inscriptions found in the interior of Asia Minor outside Sardis; other Jewish inscriptions are in Greek. To the Greeks, Phrygians were barbarians; to the Romans, recalcitrant savages suitable only as slaves (Appian *Civ. W.* 2.74.308).

2.2. Galatia. The term *Galatia*, or *Gallo-Graecia*, denoted both central Asia Minor generally and the province of Rome by that name in particular (*Galatia proper*). The Roman province, formed in 25 B.C. from the former kingdom of the Galatian tetrarch Amyntas, comprised much of eastern Phrygia, Lycaonia (Acts 14:11, for the language), the Taurus Mountain region of Isauria, Pisidia (Acts 13:14) and northern Pamphylia (Acts 14:24), and within the next eighty or so years Rome added to it regions in Paphlagonia and Pontus. Knowledge of the continuous shifting of borders of an already ill-defined territory makes understandable the debate in NT scholarship over whether Paul's letter was addressed to the inhabitants in Roman Galatia proper (the so-called North Galatian theory) or the inhabitants of the southern cities of Pisidian Antioch, Iconium, Lystra and Derbe (the so-called South Galatian theory; see *DPL*, Galatians, Letter to the).

The Romans never successfully pacified the Galatians, and the province required military intervention from the outset. The emperor Augustus (63 B.C.-A.D. 14) stationed an army legion (Legio VII) in the south and veteran settlements throughout the area. The intransigent natives nonetheless maintained their Gallic character fiercely; Celtic continued to be a living language in rural districts as late as Byzantine rule.

Galatian social structure was tribal—the Tolistobogii in the west, the Tectosages around Ancyra (modern Ankara) and the Trocmi in the east (Strabo *Geog.* 12.5.1). To the Romans, the Galatians lived on the margin of civilization, plundering temples, sacking cities and inspiring fear throughout the Asian countryside. They often fought naked with rhythmic chanting.

Traditional Greco-Roman polytheism made

little headway into Galatian tribal religion, a syncretism of Celtic and Anatolian. Chieftains were notorious for Druid-style ritualized human sacrifice, a practice similar to that noted by Julius Caesar among the Celts in Gaul. In sacred groves, devotees worshiped the Great Mother goddess of Anatolia, Cybele, and her Phrygian persona Agdistis (plus Attis), along with other indigenous mountain deities. Anatolian priests (named *Galli*) were eunuchs, and their self-induced castration in drunken frenzy was "madness" to Greco-Roman sensibility (Epictetus *Disc.* 2.20.17). Interpretation of Paul's letter, particularly the apostle's censure of circumcision practices, should include consideration of the Anatolian cultic context in which the original, Galatian recipients would have heard those words.

3. Black Sea and Frontier Regions.

The northern districts of Asia Minor held importance for their Black (Euxine) Sea maritime commerce and their highways to Syria and the eastern frontiers.

3.1. Pontus and Bithynia. Bithynia became in name a Roman province in 75 B.C. through the bequest of its Hellenistic king, Nicomedes III. At that time, however, neighboring Pontus was Rome's most dangerous enemy. Its monarch, Mithridates IV, had already fought two wars against Rome and was unwilling to allow Roman control over Bithynia and its entrance to the Black Sea. The outbreak became known as the Third Mithridatic War (74-63 B.C.). Mithridates lost. The conflict made Pompey the Great master of Asia, and he subsequently redrew the map of Anatolia into a continuous line of Roman provinces around the coast. Bithynia was extended to embrace the western part of Pontus, dividing administrative control among eleven cities. Thus the province got its paired name Bithynia and Pontus.

The Bithynians were a mixture of Greek, Roman and Thracian ethnicities. The population in Pontus was oriental in outlook, the Mithridatic royal house being descended from Persian nobles. We know more about daily life in this Roman province Bithynia and Pontus than any other in the empire, because of the famous correspondence (A.D. 110) between its governor, Pliny the Younger, and the emperor Trajan. This correspondence gives rare insight not only into Roman provincial administration but also into

early Christian experience. It is the earliest external account of early Christian worship and the fullest statement of the reasons Roman magistrates found cause to imprison and execute Christians (Pliny *Ep.* 10.96).

3.2. Cappadocia. To the south of Pontus and east of Galatia lay the frontier region of Cappadocia, extending to the Euphrates River and the border of Armenia. Topographically it was rolling plateau, almost treeless in the western portions, with volcanism in the central mountain ranges. Historically it had cultural ties to Persia, which had divided it into two satrapies, Cappadocia Pontus (which the Romans later joined to Bithynia) and Greater Cappadocia (the Roman province by that name, near the Taurus Mountains). The country was isolated from both the Mediterranean world and the Mesopotamian lowlands. The economy depended on timber, the production of cereals and fruits and the operation of many mines (quartz, salt, cinnabar and silver).

Roman Cappadocia was chiefly a region of large senatorial estates and imperial properties. Different from other provinces in Asia Minor, it was administered, like Egypt, through the domains and estates, not the cities. Pasturelands made the grazing of horses popular, and since much of the land was the personal property of the Roman emperor, the emperors kept studs of racehorses there.

Jews resided in the region (Acts 2:9), as did early Christians (1 Pet 1:1). In the fourth century an important school of Christian theology took its name from the province, under Gregory of Nazianzus with the brothers Gregory of Nyssa and Basil the Great, the so-called Cappadocian church fathers. They worked, among other places, in *Caesarea, the Cappadocian capital city.

ASSOCIATIONS

During the *Hellenistic era, voluntary associations of various types began to flourish. In Greek, such organizations are typically referred to as *orgeones*, *thiastoi* or *eranistai*, while the typical Latin designation is *collegia*. Lists of known associations in the Hellenistic era amount to at least

twelve hundred (Poland), and, during the early principate, at around twenty-five hundred (Waltzing). Primarily these associations fall into three kinds, divided on account of their membership bases: "those associated with the household, those formed around a common trade (and civic locale), and those formed around the cult of a deity" (Kloppenborg, 26). Whereas previous research on associations has suggested that they existed primarily as *collegia tenuiorum* or *collegia funeraticia* (to provide their members with proper *burials), recent research has suggested that this was a secondary function of associations that may have come to the fore only during Hadrian's time, if even then (Kloppenborg, 20-23, contra Stambaugh and Balch, 125-26).

1. Associations in the Greco-Roman World
2. Associations and Second Temple Judaism
3. Associations and the New Testament

1. Associations in the Greco-Roman World.

The phenomenon of the voluntary association, whether primarily as a professional, religious or social grouping, came about in the wake of the destabilizing effects of the conquests of *Alexander the Great and the subsequent political, social and cultural changes in the wars of succession. Membership of voluntary associations was largely if not exclusively made up of the lower classes—*slaves, freedmen and the disenfranchised—for the *polis* and state (from whose membership the lower classes were excluded) provided the necessary social cohesion for the upper classes which voluntary associations were designed to replace. These associations, then, provided a way for the disenfranchised to enfranchise themselves. It may be this single reason (rather than political influence or activity on the part of associations, both of which are difficult to demonstrate) that caused both senatorial and imperial displeasure with them at various points up until the reign of Hadrian. If so, whatever their specifics, we can see in the associations a broad sociological phenomenon that worked against—or was feared to work against—the interests of the privileged few who controlled Greco-Roman society.

It seems that the most frequent activity of associations, whatever their particular stripe, was social gathering. From the tendency towards hierarchalization (more so in Roman than Hellenistic associations) and title-giving, to the frequent common meals and the responsibility

for funereal rites, the association was the Greco-Roman *polis* writ small. In this context it appears likely that the association figured as both a means of enfranchisement (as above) as well as a means of social control. Especially those associations that met within a given household would have come under the watchful eye of the patron, who would likely also have been related to members of the association in a more formal way (i.e., as master or employer). Likewise, the dearth of evidence of more than local membership in any given association suggests that broader organization and independence from localized control was not encouraged.

Membership was often limited, with vacancies opening only as members died or new family members were added. Inclusion or exclusion revolved around the promise to abide by the rules of the society (of which we have many epigraphic and a few papyrological examples; see Tod, 71-99) and the payment of the appropriate entry dues and maintenance fees, as well as any fines the member may have incurred as a result of infringement of the rules of the society.

2. Associations and Second Temple Judaism.

The role of the association in the Greco-Roman world was not limited to merely pagan associations, nor does it seem that pagan associations had exclusively pagan membership. Recent research (Richardson) has suggested that the early *synagogue can be seen as falling under the phenomenon of the *collegium*, both legally and functionally, and T. Seland (1996) has demonstrated that *Philo and other *Alexandrian Jews were involved on some basis in pagan associations. In addition, some work has suggested, on the basis of the **Rule of the Community* from *Qumran, that the Qumranites or perhaps the *Essenes as a whole were of the same legal status as a typical Hellenistic association (Bardtke; Schneider; see also Hengel, 1:244-45).

In some ways, it may be possible to see the association, at least in Hellenistic times, as a lower-class cognate to the *gymnasium, the central social, *educational and political institution of the Greek *polis*. If so, then the overlap between the association and the synagogue, which also displays features analogous to the gymnasium, becomes even clearer.

The widespread Hellenistic phenomenon of the association may have been the impetus toward the foundation of various groupings within

*Judaism as a whole in the Second Temple period. The widespread social unrest and reordering that came about as a result of the Macedonian conquest of the East led to a variety of social and political redefinitions. Whereas the city-state had been the central focus of allegiance in the Greek world, this gave way to more centralized power in the form of the Hellenistic kingdoms, which was in turn somewhat weakened by the increased mobility and intermixture of both peoples and cultures in this period. For those, like the Jews, formerly under Persian domination (see Jewish History: Persian Period), there was the added feature of a certain loss of identity—where before they had been Jews either resistant to or involved in Persian culture, this force was all but removed in the wake of the Macedonian conquest. With the amount of time that had elapsed between the exile, the various returns and the eventual removal of Achaemenid control, Jewish culture was in a state of almost total disrepair.

It should then be unsurprising that the Jewish cultural and religious redefinition in the wake of Macedonian conquest should draw many of its organizational features from the Greek world. As such, the association provided an excellent model upon which to build this newly defined Judaism and Jewish self-identity. Jews in both *Diaspora and Palestinian settings would be able to go about daily life in social structures that, while perhaps differing in content, were cognate to social structures in the world in which they lived. It may be that *Josephus's descriptions of the various *hairesis* in Second Temple Judaism (Josephus *Life* 1.1.2 §§9-12; *Ant.* 13.4.9 §§171-73; 18.1.2-6 §§11-25; *J.W.* 2.8.2-14 §§119-66; see Theologies and Sects, Jewish), rather than distorted pictures of Jewish life as a result of Josephus's concern to make Jews intelligible to his non-Jewish readers, are good representations of the various kinds of Greco-Roman Jewish religious associations. These would have fulfilled all of the roles that usual associations filled and seem to have fallen largely along socioeconomic lines, with the highest level of Jewish society probably not playing much of a role, much as with other Greco-Roman associations.

3. Associations and the New Testament.

In the wider Greco-Roman world, the association had a firm societal place, if one that on occasion

met with disapproval from the Roman government. Into this world the early church both spread and had its initial existence. The first churches probably met in people's homes (Rom 16:5; Col 4:15; Philem 2), and, as in the case of pagan associations, the homeowner would often be a patron of the association. Where the Pauline churches seem to differ somewhat is in the assumption that the patron was also intricately involved in the association itself rather than being a distant patron, as seems to have been the usual case (hence the letter to Philemon is to Philemon and the church that meets in his house but switches to the second person singular pronoun for the bulk of the letter). It would make a great deal of sense for Paul's missionary strategy if he were, in the first place, to involve himself in the local synagogue (or *collegium Judaicari*, to coin a term) and then establish his fledgling churches along lines familiar both to himself and to his new converts—the voluntary association under the patronage of one or more wealthy patrons. That Paul himself was involved in the *patronage system has long been suggested by his name change from Saul to Paul, in light of his meeting and conversion of Sergius Paulus on Cyprus (Dessau; see Antioch [Pisidia]), and it may have been that this pattern of patronage continued throughout the rest of his missionary activity (see Garnsey and Saller).

It is probable that members of the new Christian churches continued to various degrees in their previous associations—many of the troubles that churches such as those at *Corinth and *Rome had could be explained by the continued meeting of Christians with their former associations (e.g., 1 Cor 8 and Rom 14 with regard to meat offered to idols; 1 Cor 11, where the conduct of the "Lord's Supper" seems to recall the riotous feasting that typified the associations' meals; see also Eph 5:18). It is even possible that the author of Acts presents the various typical features of the early church (regular meetings, common meals, remembrance of a significant figure) in a way that would be reminiscent for his readers of the way in which they had themselves been involved in various associations, or that he gives us a picture of the way the early church was, which was like other associations of the period.

The importance of the associations for the study of the world of the NT is commensurate with the amount of material available on

them—*inscriptions, *papyri and classical authors all provide us with invaluable evidence for the reconstruction of both the membership of these associations and their role within society.

ATHENS

Athens was named for the Greek goddess Athena, whose world-renowned temple, the Parthenon, stood on top of the Acropolis in the heart of town. The Acropolis is located 4 miles east of Piraeus, the port of Athens in the southern province of Greece known as Achaia. Although the Piraeus harbor was destroyed in 86 B.C. it was restored and functioning when Paul was in Athens. Apollonius of Tyana, a contemporary of Paul, and Pausanias, an author in the second century, both seem to have entered Athens from this harbor.

1. Athens in Historical Perspective
2. Paul in Athens

1. Athens in Historical Perspective.

Athens was known as the center of classical studies in philosophy and literature in the ancient world. It typified the *Hellenistic culture that permeated the world after the time of *Alexander the Great in the fourth century B.C. Poets, philosophers, authors, sculptors and architects gave Greece its renown. Paul the apostle, a Jew from Tarsus, which also was a famous educational center, knew Greek poets and quoted them in his address to Athenian officials on Mars Hill (Acts 17:28).

However, by the time of the NT, Athens, unlike the great cities of the time such as *Antioch of Syria, *Ephesus, *Alexandria, *Rome and even *Corinth, could only be described as a provincial backwater, a small university town of about twenty-five thousand people, more concerned with ideas than commerce and living in the memories of its glorious history.

2. Paul in Athens.

Paul's visit to Athens during the reign of the emperor Claudius (A.D. 41-54) came during a brief resurgence of building activity comparable to that earlier under the reign of Augustus (27 B.C.-A.D. 14) and later under the emperor Hadrian (A.D. 117-138; see Roman Emperors).

We can only assume that Paul and his com-

panions went to the top of the Acropolis; if so, they would have climbed the marble staircase built by Claudius in A.D. 42, about seven years before their arrival. Walking through the porch at the top of the stairway, they would have stepped into an open area where forty steps in front of them they gazed upon a colossal bronze statue of Athena, sculpted in 458 B.C. by Phidias. Looking around them they saw several pagan temples. The Parthenon stood imposingly on the southern side of the Acropolis. The Erechtheion, another temple of Athena, with its Porch of Maidens, stood opposite the Parthenon on the northern side.

Less well known but more significant for Paul and his "new religion" was the temple of Rome and Augustus, only a few yards east of the Parthenon. It was built soon after 27 B.C. and is identified through a dedicatory inscription on the structure. This temple, dedicated to the goddess Roma and the emperor Augustus, emphasizes the importance of emperor worship in the NT period, reflected especially in the book of Revelation.

Everywhere he looked Paul would have seen statues to Greek and Roman deities as well as to the deified emperors Augustus and Claudius. Thirteen small altars dedicated to Augustus have been found in the lower city.

Although we must assume that Paul visited the Acropolis, it is explicitly recorded that he carried on discussions daily in the agora (Acts 17:17), a Greek word for marketplace. There were both a Greek agora and a Roman forum in Athens when Paul visited the city.

The western, Greek market lay due north of the Areopagus (Mars Hill) and contained the prominent temple of Hephaestus and the reconstructed Stoa (Colonnaded Porch) of Attalos, where poet and philosopher met to promenade and talk. The square was kept free of public and private buildings for almost five hundred years, being reserved for political purposes, but beginning with the arrival of the Romans in the reign of Augustus the entire public square had begun to be filled with buildings and monuments. There was almost no political activity in the Greek market after the death of Augustus, so Paul probably spent most of his time in the commercial Roman market to the east.

The western market had become a virtual museum by the mid-first century, when Paul strolled its walkways. It contained such a reposi-

tory of altars, statues and temples that Petronius, the Roman satirist, remarked "it was easier to find a god than a man in Athens" (Petronius *Sat.* 17).

Paul was impressed that among so many objects of pagan superstition there should be an altar dedicated to an "unknown god" (Acts 17:23). Although this altar no longer exists, Pausanias, who visited Athens between 143 and 159, saw such altars. Describing his trip from the harbor to Athens he wrote: "The Temple of Athene Skiras is also here, and one of Zeus further off, and altars of the 'Unknown gods' . . ." (Pausanias *Descr.* 1.1.4.). Apollonius of Tyana spoke of Athens as the place where there are "altars of unknown gods" (Philostratus *Vit. Ap.* 6.3). Oecumenius also wrote of altars dedicated to unknown gods (comments on Acts 17:23, in *PG* 118:238), as did Diogenes Laertius (Diogenes Laertius *Vit.* 1.110).

By contrast, the eastern sector of the agora named for Caesar and Augustus would have been alive with everyday commercial activity. Here Paul would more likely have found a hearing among the ordinary citizens of Athens. This eastern market is 360 feet square, about the same size as the Forum of Julius Caesar in Rome.

This eastern area contains one of the best preserved ancient monuments in Greece, a tall octagonal marble tower containing sculptured images of the eight winds around the top of its eight sides, and popularly called the Tower of the Winds. It was a huge water clock, sundial and weathervane, and it served as a public timepiece for the city. We can well imagine Paul checking the time of day by this clock while he carried on his teaching in this forum.

While preaching to Godfearers in this agora, Paul was arrested and taken before the Areopagus (Acts 17:17), which in the decades preceding his arrival in Athens had seemingly begun to act as a municipal senate. By the time of Paul's visit, the council of the Areopagus had become prominent among the three corporations of Athenian government. Since Paul had been speaking about "foreign divinities" (Acts 17:18), he fell under the jurisdiction of the Areopagus, which had surveillance over the introduction of foreign divinities.

The location of the meeting place of the Areopagus at this time is not certain. It met in various locations in the classical period, but Mars

Hill, on the west side of the Acropolis, was the traditional location for its meetings. Evidence from Lucian, a contemporary of Paul, seems to indicate that jury panels were assigned to hear trials from this point. While there is no certainty that the council was meeting here when Paul stood before it, neither is there any compelling reason to deny that it was. The eastern part of Mars Hill, now a barren limestone hilltop, was undoubtedly covered in marble in Paul's day.

ATHLETICS

To the ancient world athletics were synonymous with Greek culture. Greek athletic festivals commemorated Greek deities, and athletic training was an integral part of Greek education. Beginning as Pan-Hellenic phenomena, athletics eventually spread throughout the Hellenistic and Roman world. While some Jews were hostile to athletics because of their pagan associations, others, particularly in the *Diaspora, were more accepting of the advantages that athletics conferred. Given their prevalence, athletics also came to be appropriated as a metaphor for philosophical training.

1. Festivals
2. Athletics and Education
3. Judaism and Athletics
4. Metaphorical Usage

1. Festivals.

The word *athletics* is derived from *athleō* (Gk meaning "to contend for a prize"). Such contests were characteristically Greek, and they are attested early and most famously in book 23 of the *Iliad*. They appear to have originated as funerary rites for notables or as commemorative rituals for heroes that evolved into regular festivals. The

four most notable became Pan-Hellenic contests (*agōnes*): the Olympic Games, traditionally founded 776 B.C.; the Pythian Games, made Pan-Hellenic 582 B.C.; the Isthmian Games, c. 582 B.C.; and the Nemean Games, c. 573 B.C. Each of these was held periodically (i.e., at two- or four-year intervals) in honor of its presiding deity. Both the Olympic and Nemean games were held in honor of Zeus, while the Pythian Games were dedicated to Apollo and the Isthmian Games to Poseidon. These dedications attest to the intimate association between Greek athletics and religion: "sports were definitely placed under the patronage of the gods, and the victorious athlete felt that he was well-pleasing to the gods and owed his success to them. It was to religion that Greek athletics and athletic festivals owed their vitality" (Gardiner, 33).

While the contests varied from festival to festival and became more elaborate over time, the main sporting events typically included competitions in chariot racing, running, long jumping, discus and javelin throwing, boxing, wrestling and the pancratium (a form of all-in wrestling). Participants would assemble from throughout the Greek world to compete, and the victors were honored with wreaths. Victory meant fame, as the *Odes* of Pindar attest, and often valuable civic awards by the victor's hometown or city.

These periodic games formed the nucleus of the contests that spread throughout the Mediterranean world in the Hellenistic period and later, under the Roman principate. As sacred games they spawned many festivals named and modeled after them, particularly in the East. These games continued to be dedicated to deities or in some instances to divinized rulers. Even Rome, which had once been largely indifferent to Greek athletic institutions (favoring *circus spectacles instead; see Arenas), began to adopt the practices. The emperors Tiberius and Nero, for instance, both participated in the Olympic Games.

2. Athletics and Education.

In Greece, athletics were a constituent element of the educational process (*paideia*) designed to instill in youths an ideal balance between mind and body. The chief locus for this *paideia* was the *gymnasium (later, a building complex including a sports ground or palaestra), where youths would be schooled in athletics as well as in the liberal arts. The training process was cal-

culated to form the consummate Greek gentleman and prepare youths for citizenship within their *polis*. The alumni of this process, "those from the gymnasium," would often comprise a select and influential body within Greek and Hellenistic society. For these reasons, entrance into the gymnasium was much prized.

3. Judaism and Athletics.

*Alexander the Great's conquest of Palestine (332 B.C.) brought Greek athletics in its wake: "wherever Hellenism took root, gymnasiums and stadiums and all the rest of the paraphernalia appeared" (Marrou, 116). *Jerusalem was no exception. During the rule of Antiochus IV Epiphanes (175-164 B.C.), a gymnasium was constructed beneath the Temple Mount, and even the temple priests reportedly participated in the competitions (1 Macc 1:14; 2 Macc 4:9-15). Presumably because of the strong associations between athletics and pagan ritual, 2 Maccabees categorically condemns the practice, accusing the participants of failing to reverence the divine laws (2 Macc 4:17). Not surprisingly, therefore, athletics were evidently proscribed under Maccabean rule, only to reemerge under Herod the Great. He established periodic athletic contests in honor of Augustus and endowed them with lucrative prizes to attract contestants. He also built a theater in Jerusalem, an amphitheater (perhaps a hippodrome?) "in the plain" (Josephus *Ant.* 15.8.1 §268) and similar structures elsewhere. They became commonplace within Palestine, especially in the Hellenized centers (see Hellenistic Judaism).

H. A. Harris (96) has argued that, in spite of their pagan associations, athletic events were popular among the Jewish populace of Palestine. There is little support for his argument, however. *Josephus remarks that Herod's structures were "foreign to Jewish custom" (*Ant.* 15.8.1 §268), and later rabbinic writings reinforce this impression by condemning Jewish involvement with athletics (*m. 'Abod. Zar.* 1:7; *t. 'Abod. Zar.* 2:7; *Sipra 'Aharē Mot* 19:10; though cf. *m. Šabb.* 22:6). *Jubilees* (3:31) proscription of being "uncovered as the Gentiles are uncovered" may also be a rejection of the Greek custom of exercising in the nude.

If athletics were suspect in Palestine, a different situation appears to have pertained in the Diaspora. Philo was likely a frequenter of games (*Philo Omn. Prob. Lib.* 26; Harris, 51-95), while

the letter of Claudius to the Alexandrians (*CPJ* 153) implies that Jewish Alexandrians were seeking to secure citizenship for their sons by enrolling them in gymnasia. Similar examples can be adduced from throughout the Diaspora (Barclay; Trebilco, *passim*). A qualified acceptance of athletics, therefore, was likely the prevailing Jewish attitude (cf. Safrai and Stern, 447-49, against Hegermann, 162).

4. Metaphorical Usage.

Given the popularity of sports in the ancient world, athletic terminology soon came to be adopted by philosophers, especially *Cynics and *Stoics. Rejecting athletics as largely beneath notice (cf. Philo *Agric.* 118-19), they nevertheless used the notion of athletic training (*askēsis*) as a metaphor for a virtuous and disciplined mode of life. Epictetus famously describes those who live a virtuous philosophical existence as "Olympic victors" (*Disc.* 1.24.2), and Paul appropriates and employs this metaphorical use of athletic imagery in his epistles (e.g., 1 Cor 9:24-27; 4 Macc 17:11-16).

BANQUETS

In most ancient societies banquets were the favored and expected occasions for social entertainment and enjoyment. This simple truth is easily overlooked in modern Western societies that view banquets very differently. For one thing, because our societies have so many opportunities and platforms for social entertainment we too easily assume that ancients did as well. Another way in which their expectations about banquets differed greatly from those of modern societies is that, being accustomed to having plenty to eat, we have great difficulty appreciating that for most persons in antiquity the banquet was a rare opportunity to have food that was both desirable and bountiful.

In antiquity virtually all banquets and common family meals were to some degree religious. Most meals that had meat, whether at homes or dining halls or temples, were connected with sacrifice. All major religions of antiquity employed the sacrifice ritual as a basic component. Sacrifices were of two types: bloodless (bread, wine, oil, milk, flowers) and blood (animal). Space forbids an investigation into the origins and nature of sacrifice in the Greco-Roman world. Suffice it to say that even the earliest authors regarded sacrifice to have originated in the dim shadows of the beginnings of humanity. Homer regards it as ancient practice. Thus while there was an active critique of sacrifice both in *Judaism and *Hellenism before the time of Christianity, no one doubted that sacrifice was part and parcel of religious life. The same sources assume that following sacri-

fice there is normally a meal. This meal included a portion of meat from the sacrificed animal for the worshipers—the sacrifice was not just for the god's benefit.

While sacrifice and meat meals did not occur weekly or even monthly, neither were they matters of great rarity. There were a wide variety of sacrificial occasions: public religious *festivals, state festivals, private associations and familial associations. For understanding early Christianity the most important interpretive question is what was the significance of this religious association—what did it mean to the participants?

1. Banquets Described in Jewish Sources
2. Banquets Described in Greco-Roman Sources
3. Meanings Proposed for Religious Meals
4. Banquets Described in the New Testament

1. Banquets Described in Jewish Sources.

1.1. History of Meal Customs. Most often in considering Jewish dining practices the focus is upon the dietary (kosher) laws described in the Bible and extended in common practices of Second Temple Judaism (see Purity). In the present investigation, however, the kosher laws will be considered only in relationship to how they may affect banquet meals.

1.2. Opportunities for Banquets. Paul alludes in 1 Corinthians 10:18 to a Jewish fellowship of the altar that involves *sacrifice. In 1 Corinthians 9:13 he mentions that the priests eat from the sacrifices of the altar. This description of meal sacrifice is also witnessed in the QLT (Ex 24:4-11; Deut 12:4-28). Thus Paul can say that those "who eat" are "partners" or "fellowshippers" with the sacrificial altar.

Just as in Hellenism, in Judaism it was common for a banquet to follow animal sacrifice. This is not to say that all animal food was associated with *sacrifice (fish were not, for example),

but the killing of mammals for sacrifice was commonly followed by a meal except in the unusual case of a "whole offering." Even when they were not offered in sacrifice, animals slain for food were killed in the same manner as was done in sacrifice. The best-known Jewish sacrificial event, Passover, is openly and specifically connected to a communal meal that follows (*see* Festivals).

In the annual Passover observance, with its stipulated menu, there is a clear instruction that this is to be a communal meal. Thus if one does not have a family large enough to consume a lamb, the meal should be planned to share with others. In a similar way, this meal was to emphasize social acceptance, since the stranger and alien should be invited to share the meal.

Other banquet associations of Judaism were the "meal fellowship" known among the *Pharisees. Some contemporary scholars regard the Pharisees as essentially a dining fellowship, and even many who do not share this assessment of pre-Christian Phariseism acknowledge that Pharisees sought to apply the norms for eating at the *temple to the whole of life, including daily meals, thereby sanctifying all eating before God (Neusner).

1.3. Eschatological Banquet. Finally, in evaluating the Jewish banquet practice and rationale, one must consider the common use in the OT of the image of the messianic banquet. Among the *eschatological images often found in Judaism, the image of a great banquet was often employed to depict both the abundance of the hoped for future and the ultimate association of those chosen by God. Perhaps the classic picture is given in Isaiah 25:6-8 (*see* also Joel 2:24-28; *1 Enoch* 62:12-14). This imagery is continued in the NT (Mt 22:1-10 = Lk 14:16-24; Mt 8:11-12 = Lk 13:28-29), most powerfully in Revelation 19:9-17. The eschatological hopes associated with the great banquet may also be alluded to in Jesus feeding the multitudes.

2. Banquets Described in Greco-Roman Sources.

2.1. Familial Settings. In family life banquets were rare for all people except the uppermost segment of society. For the average person there were neither the financial resources nor the private space for a real banquet. This may be one reason why associations outside the home had such importance and attraction as is indicated in 1 Corinthians 8 and 10.

2.2. Religious Festivals. These were largely public events recurring on established times. Most were observed regionally, perhaps the most famous being the Panathenea in Athens. But there were also occasions based upon state events such as the emperor's birthday, or upon some military victory. These varied occasions have been described as a combination of fair, sporting event, religious occasion and banquet. M. Nilsson said that such meals took place in some sacred precinct, were dedicated to some god and were accompanied by sacrifice.

The Roman *lectisternium* festival was an annual religious and social event that stressed *friendliness and *hospitality. It resembled a city-wide open house in which people opened their homes and placed varied kinds of food for any and all passers-by to enjoy.

2.3. Voluntary Associations. There were a large variety of voluntary *associations in the Greco-Roman world. Some were based on family or clan, others on occupations or geographical place of origin. There were associations of military people, of *philosophical interests, voluntary fire departments, *athletics and perhaps even clubs organized to assure a proper *burial. As a focal point of their gatherings all these shared meals and all were, broadly speaking, religious associations. Their meetings were under the aegis of a patron deity, and there was commonly sacrifice offered.

People in the Greco-Roman world loved clubs, and all these were in some way connected with religion and featured dining together. The earliest forms seem to have been tribal, but in the Hellenistic period they were often focused upon a common interest. Many people would be a member of more than one group. It is anachronistic and artificial to divide them into secular and religious associations, for all were nominally religious—but all were also marked by festivity rather than solemnity. *Aristotle says that "some associations appear to be formed for the sake of pleasure, for example religious guilds and dining clubs which are unions for sacrifice and social intercourse" (*Aristotle Eth. Nic.* 8.9.5). It has been suggested that they might be compared with modern Freemasons.

2.4. Mystery Religions. The most intriguing meal occasions in antiquity were those associated with the *mystery religions. While directly involving only a minority of persons, the mystery religions because of their uniqueness were of

great interest in antiquity, as they are today. The prototype mystery was that of Eleusis, the shrine of Demeter and Kore about 14 miles west of *Athens. Equally prominent and more widespread was the cult of Dionysius (or Bacchus), prominent in poetry and art for its wild naturalism. Finally, the cult of Mithras, which originated in Persia, was spreading westward contemporary with Christianity and also featured mysteries to see and a banquet to be shared.

In all these mystery religions, and others that are less well-known, a meal shared by the worshipers is an important event. The great difficulty is knowing how those who shared the banquet understood what they were doing and what motivated them to share the meal. This has been the area of greatest speculation, although many have appealed to the mystery religions as a major influence on early Christian eucharistic theology without acknowledging this speculation.

A number of invitations to banquets have survived from Hellenistic Egypt. These are associated with the god Serapis, who had been thoroughly Hellenized by this time, and are issued either in his name (rarely) or to his shrine. These are all very brief and thus susceptible to a variety of interpretations. The reasons for the banquet are not usually given, but a few mention a birthday or coming-of-age party for a child. The assessment offered by the foremost authorities on these meals says that they are basically secular in meaning.

Also surviving from antiquity are *inscriptions that give regulations for the meals of various cultic associations—some clearly religious, others perhaps only nominally so. The regulations stipulate the equitable sharing of the meal and give rules for good behavior at the banquets. Thus there are fines for those who start fights or try to take the seat assigned another. One inscription forbids the bringing up of any business matter at the meal, lest it distract from the joy of the occasion.

The picture of occasions for social conviviality that these rules create is supported from references in ancient literary sources that describe these banquets. *Philo, the Alexandrian Jew, complains that the pagan religious meals are really drinking bouts and bawdy parties. This assessment is given, though lampooned, in Greek comedy. In Aristophanes' comedies (late fifth century B.C.) cult festivals are characterized by drunkenness, and men are depicted as stealing

food from the sacrifices on the table of the gods.

3. Meanings Proposed for Religious Meals.

3.1. Sacramental. Almost a century ago, at the height of the so-called *religionsgeschichtliche Schule* (history-of-religions school) with its interpretation of Christianity as derived from and dependent upon Hellenism, the common assumption was that the Christian sacrament of the Lord's Supper was modeled upon a prior sacramental meal in Greek religions (especially the mystery religions). This interpretation held that at the cultic meal following sacrifice the worshipers believed they were ingesting, either actually or symbolically, the god. Drawing upon a particular understanding of pagan mystery religions, the religious meal thus was interpreted as a medium by which one partook of the god. Very often Paul was held to be the source of this Hellenistic sacramentalism being brought into Christianity. In particular 1 Corinthians 10:16-22 often has been alleged to prove that Paul equated the Christian sacramental meal with that of paganism. On this view, the sacramental meaning of pagan meals has influenced and been adopted by Christians. But the point of comparison in 1 Corinthians 10 is not sacramentalism but that meals define group identity and mutual obligations.

In part this sacramentalist interpretation of pagan meals may well initially have been derived from medieval Christian eucharistic thought. The later development of Christian sacramental theology moved toward a mystical presence of the Lord in the Eucharist (to the doctrine of the "real presence" in medieval Catholic thought). It may well be that this Christian belief has led modern scholars to interpret those pagan meals contemporary with early Christianity through the eyes of later Christian sacramental theology.

3.2. Communal. In this interpretation the meal is regarded as shared with the deity who came as a guest to the banquet. The portion for the god was placed on a table reserved for him, and the worshipers who ate felt a sense of common fellowship with the god. The presence and participation of the god at the meal makes it sacred—the diners are his guests. This is obviously a lesser claim than the mystical-sacramental interpretation, and it has a wide currency today. Still, even this reconstruction too may be read back into Hellenistic cult banquets through a lens provided by later Christian (especially Reformation) sacra-

mental thought. The argument in the Reformation era was the "how" of the presence of the Lord, but that he is present was everywhere granted—both by Catholics and Reformers.

3.3. Social. Just as there are real but subtle differences between the first and second interpretations so also there are between the second and the third. The difference may be stated that in the communal view the meal is an occasion of conscious worship, in which the meal is sacred because the deity shares the meal with the worshipers; in the social view, while the deity was given regard and a portion allotted him, the focus is on the relationship that the meal established among the diners. The sharing of the dinner defined who was in the group and how the members of the group were to regard each other (and others not in the group).

4. Banquets Described in the New Testament.

The social and religious significance of meals, especially banquets, in antiquity sheds light on the meals described in the NT, both in Jesus' ministry and in the early church.

4.1. Jesus' Ministry. Although Jesus' ministry often includes special meals, only the Last Supper is explicitly related to a sacrifice (Passover). But in both his word and deed Jesus presumes upon and uses common ideas about dining. Banquet imagery is used to present the kingdom of God in Luke 14:15-24, and Jesus' dining companions both illustrate the nature of repentance and create a scandal among the righteous (Lk 5:27-32; cf. Lk 7:36-50). Jesus draws upon the social etiquette of the day as a means of teaching humility (Lk 14:7-14). A banquet is presented as the image of the final bliss (Lk 13:29; 14:15; Mt 8:11 and esp. 22:1-10; Rev 19:9) recalling OT expectations such as Isaiah 25:6. In both Luke 24:30-31 and John 21:9-14 it is at a shared meal that the resurrected Lord is recognized and confessed (and perhaps Luke understands the Emmaus supper to anticipate the Christian communion).

4.2. Early Church. Within the history of the early church, the shared table is a sign of the shared faith. While these meals may not qualify as banquets, it is clear that in Acts the common image of the church assembled is for a meal (Acts 2:42-47; 20:7), and if this community meal is disrupted it calls into question the reality of faith (Gal 2:11-14; cf. 1 Cor 11:17-34). This shared meal experientially embodies the church, so that the

refusal of the church to share a meal with a person is serious punishment for a sin (1 Cor 5:11).

BARKI NAFSHI (4Q434, 436, 437-439)

This group of texts gets its name from the phrase *barkî napšî 'et 'adônay* ("Bless the Lord, O my soul"), also known from Psalms 103 and 104. Whether the preponderance of these fragments are all copies of one text or fragments of the same copy is hard to establish. The six sets of fragments were originally sorted according to scribal hand and similarities in leather. The majority of them represent a collection of hymns devoted to the praise of God's goodness. The functional role of hymns in the *Qumran sect has not yet been established; that is, were they used in communal worship, as a substitute for *temple ritual or to accompany *sacrificial rites?

1. Characteristics of the Texts

2. Analysis of the Texts

1. Characteristics of the Texts.

Among the fragments originally ascribed to 4Q434 are fragments of a composition that do not share all of the hymnic features common to the remainder of this material. Designated as 4Q434a, they have been published by M. Weinfeld and are thought to constitute a blessing after a meal in the house of a mourner (Weinfeld). Since, however, they appear to be from the same piece of leather as 4Q434 1 and since the traces of the word *barkî* are evident in line 11, we may have evidence of the more complicated nature

of the original text rather than of an independent composition. The identification of this text means that the column numbers for fragment 1 of 4Q434 require readjustment (Wacholder and Abegg, 309-11; Wise, Abegg and Cook, 394-96; Cook, 14-15; but see García Martínez, 436-37, 439).

4Q439 appears to be from a different composition than do 4Q434-438. Whether that composition resembled the text of these fragments or was closer to the *Hodayot* texts (see Thanksgiving Hymns) bears further analysis (Seely, 205-6).

2. Analysis of the Texts.

4Q434 comprises the largest block of material and hence is the starting point of any analysis. It begins, "Bless the Lord, O my soul, for all his wondrous deeds forever." Then the text begins to recount what those deeds are: "For he has delivered the life of the poor" (*'ebyôn*). Others listed as the recipients of God's grace in the next few lines are the *'ānāw* ("afflicted") and the *dāl* ("needy"), the latter being listed twice. It is then the afflicted who are graced by the abundance of God's mercy, whose eyes are opened to see his ways and ears to hear his teaching. They are the ones delivered because of his *hesed* ("steadfast love") and whose feet "he has established on the way." What God has done for these people continues to be itemized in the remainder of the column.

While biblical allusions such as Jeremiah 20:13 and Psalm 22:25 are evident in these citations, so is the corresponding material in Qumran texts such as 1QH^a 13 (*olīm* 5):13 and 18. Whether these allusions are to a defined group that sees itself as oppressed is an issue for further study. While *'ebyôn* and *'ānāw* are terms familiar to us from Qumran texts (e.g., 1QH) containing evidence of sectarian identification, the *dallīm* receive almost no mention in these texts (Seely, 198-99, 211-13). Scholars have recognized the extreme difficulties involved in establishing a sectarian provenance for liturgical and hymnic texts, particularly those preserved only in fragments. The present state of research does not permit us to determine whether the *Barki Nafshi* texts were sectarian compositions or whether their content proved compatible with the worldview of this movement and were adopted by its adherents at some unknown point in its development.

4Q435 consists of only a few fragments, the largest of which overlaps with the fragments of

other *Barki Nafshi* texts.

We find in the opening line of 4Q436 frag. 1 the reference "to comfort the needy [*dallīm*] in the time of their distress," the same problem they have in 4Q434 frag. 1 i 2. This column is notable in its stated desire "to establish the hands of the fallen to become vessels of knowledge; to give knowledge to the wise, to increase learning for the upright." This employment of wisdom terminology, continued throughout this text, is integrated with themes of law and covenant. This abundant use of wisdom terminology in texts that would not be defined as wisdom texts on the basis of either form or content is also known to us from other compositions such as the **Rule of the Community* (1QS), the **Damascus Document* (CD) and the **Thanksgiving Hymns* (*Hodayot*).

In both 4Q436 and 437 God is addressed in the second person, rather than the third person as in 4Q434. This difference is also evident in Psalm 103 (third) and Psalm 104 (second). One fragment of 4Q437 parallels 4Q434 frag. 1 i. Other fragments of this text are small but can be formed into partial lines with intelligible phrases. The themes parallel those found in the previous texts. 4Q438 is very fragmentary.

It can be argued that 4Q434-438 are different portions of the same text (Seely, 206-10). This can be demonstrated on textual, thematic and terminological grounds.

BARUCH, BOOKS OF

Baruch ben Neriah was a scribe who lived during the days when Judah was under Neo-Babylonian domination. Although he was a relatively obscure character in the Bible, he became larger than life in postbiblical Jewish and Christian tradition. Not only were the few stories about him in the Bible creatively expanded, but several new books were pseudepigraphically attributed to him.

1. Baruch in the Bible
2. The Book of Baruch
3. *Second (Syriac Apocalypse of) Baruch*
4. *Third (Greek Apocalypse of) Baruch*

1. Baruch in the Bible.

Baruch ben Neriah was the prophet Jeremiah's loyal scribe, but in the postbiblical literature ascribed to him he came to be depicted as a learned sage and *apocalyptic seer. Baruch lived in Jerusalem during the tumultuous days leading up to and following the Babylonian destruction of Judah in 587/6 B.C. Baruch appears only in the book of Jeremiah and that in only four passages (Jer 32:12-16; 36; 43:1-7; 45). He was a scribe—a prominent social position in sixth-century Judah—whose service to the prophet went beyond what was traditionally expected of a scribe. Not only did Baruch assist Jeremiah by certifying land transactions and writing down his revelations, but Baruch also, at great personal and professional risk, read some of these revelations to King Jehoiakim, who summarily destroyed the material. Because of this involvement in writing Jeremiah's revelations and sermons, some scholars have suggested that Baruch was responsible for editing at least some portions of the biblical book of Jeremiah as we now have it. For some reason, however, Baruch became more than a scribe in the religious imagination of ancient Jews and Christians. There developed a wealth of extrabiblical traditions about Baruch that can now be found in the books *pseudepigraphically attributed to Baruch. The term *pseudepigrapha* designates a vast amorphous collection of extrabiblical Jewish and Christian texts that were attributed to but not written by various biblical figures.

That Baruch was regarded as a special person was suggested initially in the Greek translation of the book of Jeremiah in the *Septuagint. This Greek version of the book of Jeremiah has roughly the same contents as the Hebrew version, but several of the chapters are presented in a different order. In the Greek version of Jeremiah the penultimate chapter of the book (Jer 51 LXX) contains a divine oracle directed to Baruch (Hebrew/English Jer 45). Apparently Baruch had complained about his personal sufferings because of his service to God and to Jeremiah during the fall of Jerusalem. Although God told Baruch not to expect "great things" for himself, God did promise him that he would escape the coming tragedy. The fact that Baruch is the last person addressed by God in the Greek version of Jeremiah suggests that its editors regarded Baruch as Jeremiah's successor: God spoke to him last and assured him that he would be kept alive through the coming disasters.

2. The Book of Baruch.

The LXX contains several books that are not found in the Hebrew Bible. These books are typically designated the *Apocrypha. The LXX's reorganized version of the book of Jeremiah (see Daniel, Esther and Jeremiah, Additions to) is immediately followed by the *Book of Baruch*, one of these apocryphal books. This book is a collection of several independent texts that themselves do not explicitly mention Baruch. These independent units were brought together, and once the introduction that mentions Baruch was added, the entire book became associated with Baruch. The *Book of Baruch* was so closely associated with the Greek version of the book of Jeremiah that it was not known separately as the *Book of Baruch* until as late as the eighth century A.D. in some Christian circles. The *Book of Baruch*, therefore, was regarded as the final part of the Greek version of the book of Jeremiah in some Jewish and Christian circles for many centuries, thereby indicating that there was no universal agreement on the exact structure of the Greek version of the book of Jeremiah. Although the *Book of Baruch* was originally composed in Hebrew as early as the mid-second century B.C., it must be noted that in the ancient biblical manuscripts that have come down to us, the *Book of Baruch* was appended only to the Greek version of Jeremiah, the version that hinted that Baruch would be Jeremiah's succes-

sor. This early and intimate connection between Greek Jeremiah and the *Book of Baruch* suggests an ancient belief in Baruch as a recipient of divine revelations and leader of the people.

The *Book of Baruch* opens with Baruch residing with the Jewish exiles in Babylon (*Bar* 1:1-14). The introduction presents this *Book of Baruch* as a book that Baruch wrote and then read to a gathering of exiles who followed him as their leader. This introduction presents Baruch as a leader who, much like Ezekiel or Jeremiah, had people gather around him to hear divine revelations (cf. *Jer* 25:1-2; 26:7; *Ezek* 8:1; 33:30-32). The introduction is followed by a long prayer (*Bar* 1:15-3:8) that consists of several quotations from the prayer in Daniel 9. This prayer makes Baruch look like one of those pious people who led the exiles and who dutifully prayed for the restoration of Jerusalem.

The next section of the book (*Bar* 3:9-4:4) is a poem in praise of wisdom that recalls the depiction of wisdom in *Job* 28 and 38 and in *Proverbs* 1-9. Here wisdom is characterized as obedience to the divine commandments: a wise person is one who obeys God's commandments. Wisdom is not simply knowing ancient lore or being skilled in scribal activities, but it is living in obedience to God's commandments. This poem presents Baruch as the type of leader who models fidelity to the traditional religious and cultural teachings honored by the Jewish community. If one wishes to know how to behave while living in exile, Baruch would be a perfect example to follow.

The book closes with a poem designed to inspire the exiles to remain faithful to God in spite of their sufferings (*Bar* 4:5-5:9). Their hope is inspired by their belief that God will restore them to their land once they repent and begin obeying his commandments (*Bar* 4:21-23, 29-30, 36-37; 5:5-9). By associating this unit with Baruch, the editor of this book depicts Baruch as a leader who, again like Jeremiah (cf. *Jer* 29-31), encouraged the exiles to remain faithful to God as they awaited their return to Jerusalem. All these features portray Baruch as a great spiritual leader and indicate the community's interest in promoting obedience to God's commandments as the way to achieve wisdom while awaiting the restoration of Jerusalem.

3. *Second (Syriac Apocalypse of) Baruch.*

Another text pseudepigraphically attributed to

Baruch ben Neriah is *2 Baruch*. The text of *2 Baruch* has been preserved only in Syriac, although a few Greek fragments have also been discovered. It appears that *2 Baruch* was composed in Hebrew or Aramaic, translated into Greek and ultimately translated from Greek into Syriac. This process seems complicated, but many early Jewish extrabiblical texts were highly esteemed by Christian communities who translated these texts into their native languages. Because these communities did not read Hebrew and Aramaic, they preserved and transmitted only the translations they had made for themselves. As a result, in order to study what was originally a Jewish text composed in Hebrew, Aramaic or perhaps Greek, one must learn the languages of the Christian communities who valued and preserved these texts (e.g., Armenian, Coptic, Ethiopic, Greek, Latin, Old Church Slavonic, Syriac). Although the narrative setting of *2 Baruch* is the Babylonian destruction of the first Jerusalem temple in 587/6 B.C., the text was composed sometime after the Roman destruction of the Second Temple in A.D. 70 (see *Jewish Wars with Rome*). If, as some assume, the author of *2 Baruch* used the seven-vision structure of *4 Ezra* as a model, then this dependence would set the date of this apocalypse no earlier than the early second century A.D.

As an apocalypse, *2 Baruch* narrates a divine revelation given to a human that contains information that is beyond normal human ken: apart from the revelation granted to Baruch by God, none of the information transmitted here could have been known. An *apocalypse, then, is a form of literature in which God reveals to humans otherwise unknowable information that has either a temporal (eschatological) or spatial (otherworldly) focus. Readers of the NT are most familiar with this literary form in the book of Revelation. *Second Baruch*, therefore, presents Baruch as an apocalypticist who has had visions from God that reveal some of the secrets of the cosmos and of human history and destiny. This text, much like *4 Ezra* (i.e., *2 Esd* 3-14; see *Esther, Books of*), consists of seven visions in which Baruch and God debate over issues centering on the problem of theodicy: how can God be just if the righteous suffer and the wicked prosper? The debates in *2 Baruch*, however, lack the emotional fever pitch of those in *4 Ezra*. The overall goal of *2 Baruch* is to promote obedience to God's commandments as the way to survive in difficult

times. In many ways like some of the themes in the book of Hebrews, *2 Baruch* maintains that Jews can thrive in spite of the destruction of the temple in Jerusalem if they only remain obedient to the commandments in the Torah.

In this apocalypse Baruch is a pseudonym for the person who wrote this text. The intriguing passages of this text are those that recount the interactions between Baruch and the people. These passages suggest that Baruch was viewed as their divinely sent, inspired leader and biblical interpreter. Behind the pseudepigraphic veil of this text, it seems that these passages reflect the attitudes of a community toward their leader(s). Their leaders are those people on whom they depend to give their lives meaning and structure. In this way the text reinforces the authority of the writer of this text, who presents himself as the transmitter of Baruch's teachings and visions. The author intended that the readers view him as a divinely inspired seer like Baruch and view his teachings and especially this text as divinely inspired.

4. *Third (Greek Apocalypse of) Baruch.*

When we turn to *3 Baruch* we find that Baruch is here depicted as an apocalyptic seer who has taken a guided tour of the heavenly realms (see Heavenly Ascent in Jewish and Pagan Traditions). Although once again set in the days of the destruction of Jerusalem in 587/6 B.C., *3 Baruch* was likely written in the second or third century A.D., long after the destruction of Jerusalem by the Romans. The heavenly tour in *3 Baruch* comes in response to Baruch's turmoil over the destruction of Jerusalem. The angel Phanael led Baruch through five heavens, where he learned all manner of cosmological secrets and of God's control of history. As a result of his ascent to heaven, Baruch was comforted over the destruction of Jerusalem. His debates with God taught him that although his present circumstances seemed hopeless, nonetheless God remains in control and listens intently to the prayers of his people.

Third Baruch recounts Baruch's tour through five heavens. Many have suggested that this five-heaven scheme results from an abbreviation of an original account that had a seven-heaven schema. However, since the questions Baruch had in chapter 1 are answered in the course of the ascent to heaven as Baruch learned that God controls history and attends to human

prayers, it seems that *3 Baruch* is a complete text that has not suffered purposed or accidental abbreviation. There were many different models of the cosmos in antiquity, and *3 Baruch* may attest a five-heaven model. Or *3 Baruch* may assume the common but not universal seven-heaven model, and the fact that Baruch ascended to the fifth heaven may indicate that its author did not think it appropriate for humans to ascend into God's presence in the highest heaven.

The ascent theme became popular in Jewish literature during the Greco-Roman period. This growing prominence suggests a shift among some Jews regarding the nature and means of authority. The ascent as a means of claiming religious authority was promoted neither in the biblical materials nor in the subsequent rabbinic materials. Apart from Enoch (Gen 5:21-24) and Elijah (2 Kings 2), the biblical materials suggest that the ancient Israelites did not believe that people could ascend into the heavenly realm. In fact, Deuteronomy 30:11-14 indicates that the divine teachings—that is, everything humans need to know to live rightly—are not secreted in heaven, where one need ascend to learn them; rather they are immediately at hand in the Torah (cf. Deut 29:29). While Moses (Ex 24:1-2, 9-11), Michaiah ben Imlah (1 Kings 22), Isaiah (Is 6) and Ezekiel (Ezek 1) may have caught glimpses of the divine presence, their feet never left the earth. These are accounts of visions of the divine presence, not of journeys into the divine presence.

All this changed during the Persian and Greco-Roman eras. Both the Greeks and the Persians developed beliefs in the heavenly origin and ultimate destiny of the soul. While every soul undertook a postmortem journey, some exceptional people were granted heavenly tours while they were alive. These ascents to heaven appear in many Greek, Roman, Jewish and Christian texts. One feature that they all have in common is that while in the other realm the seer is granted insight into what awaits people after death. Such knowledge then serves as a powerful tool in persuading people to adopt a course of life that will ensure that their postmortem fate is pleasant. Moreover, these heavenly ascents grant people knowledge that enables them to face the trials and tribulations of life. It gives meaning and purpose to their lives. In *3 Baruch*, for example, Baruch learned many

things about the functioning of the cosmos, the history of humanity and the cultic activities going on in heaven, but the most important thing for him was learning that God daily attends to the prayers of the saints and that his angels are working on behalf of the saints. This belief then comforts Baruch in his agony over the sufferings of Jerusalem. The apostle Paul also claimed to have ascended into the "third heaven," where he learned divine secrets so profound that he could not repeat them to anyone (2 Cor 12:1-4). For Paul, the ascent to heaven served to legitimate his appointment by God to be an apostle of the gospel of Jesus Christ.

Baruch ben Neriah was a popular figure in the religious imaginations of ancient Jews and Christians, and many books were pseudographically attributed to him. This popularity in the use of Baruch as the pseudonymous author of several texts is due not to his presence in the Hebrew Bible alone but to the developments in how he was being depicted in the course of the Persian, Greek and Roman periods.

BEATTITUDES TEXT (4Q525)

The text of 4Q525, also known as 4QBeatitudes, offers several interesting features. For NT scholars this "Dead Sea Scroll is especially important in light of its series of makarisms, or beatitudes.

1. Description
2. Relation to Wisdom Literature

1. Description.

The *Beatitudes Text* 4Q525 is written in an elegant and refined hand (see PAM 40.611, 40.614, 40.617, 40.969, 41.412, 41.520, 41.678, 41.788, 41.866, 41.917, 41.949, 42.441, 42.511, 42.908, 43.595, 43.596, 43.600). The script looks like early Herodian (Puech has reached this conclusion; 1991, 83). The series of five beatitudes found in fragment 2, column ii, catch immediately the reader's attention. They recall the famous collections of beatitudes in Matthew 5:3-10 and Luke 6:20-23 (see DJG, Sermon on the Mount). However, unlike the NT makarisms, the *Qumran beatitudes do not tell us why the person in question is blessed (Viviano 1992, 53-54). The Qumran beatitudes remind us even more of those found in Sirach 14:20-27 and in Proverbs 3:13 and 8:32, 34, which, unlike the NT makarisms, also have "the pursuit of wisdom [hwknh]" as a theme. "Blessed is the man who attains wisdom and walks in the law of the Most High" (frag. 2 ii 3-4; cf. Viviano 1993, 76).

2. Relation to Wisdom Literature.

2.1. Style and Content. Both the style and the content of 4Q525 remind us of traditional Jewish wisdom books, in particular Proverbs and

*Sirach. Several parallels will be mentioned.

When we read the opening section of 4Q525 we immediately notice a striking resemblance to Jewish wisdom literature already known to us. In fragment 1 someone is said to have spoken "in the wisdom God gave him." The words that follow, "to know wisdom and discipline, to understand," recall the beginning of Proverbs 1 (Puech 1991, 83).

As in Proverbs and Sirach, "the pursuit of wisdom" is a main emphasis in 4Q525. "Blessed is the man who attains wisdom" (frag. 2 ii 2; cf. in particular Prov 3:13; Sir 14:20, but also Prov 4:5, 7; 8:11; 15:33; Sir 1:14; 25:10; 45:26).

The preeminence of wisdom over gold, silver and precious jewels is stressed both in 4Q525 and in Proverbs (compare 4Q525, frag. 2 iii 1-7 with Prov 3:13-15).

The contrast between sincerity and deceitfulness occurs in 4Q525 as well as in Proverbs and Sirach (cf. frag. 2 ii 1-3 with Prov 12:5, 17, 20; 14:8; Sir 1:28-29).

As in Proverbs and in Sirach, folly (*'wlh*) is contrasted with wisdom and understanding in 4Q525 (compare frag. 2 ii 2 with Prov 14:18, 29; Sir 8:15; 47:23).

The idea of a wholesome tongue versus a perverse tongue and the tendency of a person to sin with the tongue is present in Proverbs and Sirach as well as in 4Q525 (compare frag. 2 ii 1; frag. 14 ii 18-28 with Prov 10:20, 31; 12:18-19; 15:2, 4; 17:20; 18:21; 31:26; Sir 5:13; 6:5; 19:6, 16; 20:18; 22:27; 28:26; 51:2-6).

Humility (*'nwh*) is viewed as a quality that goes hand in hand with wisdom and fearing God in Proverbs, Sirach and 4Q525 (compare frag. 2 ii 6 with Prov 15:33; 18:12; 22:4; Sir 2:17).

2.2. *Qumran Elements.* It must also be observed, however, that 4Q525 contains elements that are not found in traditional Jewish wisdom literature, because it is a typical Qumran sectarian document. In fragment 14 the speaker tells "the discerning one" to listen (l. 18) and warns him not to use his tongue unwisely by complaining too soon (l. 23) or by offending someone (l. 26). Related to this is the interesting paradox we find in fragment 16: not those who lack understanding but "the discerning ones" are led astray (l. 3). In traditional Jewish wisdom literature it is always the naive or the foolish who are misguided by the wicked. They are among the ones who are told to listen and who receive a warning (see Prov 7:7-22; 8:5-6; Wis 14:11). On this point

4Q525 surely deviates from traditional Jewish wisdom literature but not from Qumran sectarian literature, as these quotes demonstrate:

And now, *listen, all you who know righteousness, and understand the works of God.* (CD 1:1)

Listen, *O wise men [hkmym], meditate upon knowledge. . . . Be of steadfast mind [. . .] Increase prudence. O righteous men [sdyqym], put away iniquity! Hold fast [to the Covenant], all you perfect of way [wkwł tmymy drk].* (1QH 9:35-36)

The paradox in the last quotation should be observed. Why would righteous people need to put away iniquity? In order to be able to answer the question we need to determine who the wise, the righteous and the perfect of way are. These three expressions may all refer to the same group of people, that is, to the people of God's lot, the Qumran community. First, CD 6:2-5 speaks of "the discerning ones [*nbwnym*] from Aaron" and "the wise [*hkmym*] from Israel" who "dug the well." The well symbolizes the Law, and the diggers are "the converts of Israel who went out of the land of Judah to sojourn in the land of Damascus." In the **Damascus Document* the name *Damascus* is used as a symbol for Qumran (Schiffman, 93-94). So "the wise" and "the discerning ones" represent the Qumran community. Second, in 1QS 2:2 it is "the men of the lot of God" who are characterized as those "who walk perfectly in all his ways [*hhwłkym tmym bkwl drkyw*]." Third, those who belong to the lot of God are described as "the sons of righteousness [*bny sdq*]" (1QS 3:20-22). "All the sons of righteousness" are led astray by "the Angel of Darkness" (1QS 3:22). This explains why "the righteous men" in 1QH 9:36 are told to "put away iniquity." It also clarifies why "the discerning men" in 4Q525, fragment 16, line 3 are led astray. They belong to the Qumran community.

The use of vocabulary in 4Q525 strongly suggests that it is a Qumran sectarian document. Several words are employed in this work that have a Qumranian flavor. They are not necessarily unique to Qumran, but they occur with lesser frequency in the OT. Moreover, several of them are key words in Qumran theology. The terms *'wlh* ("injustice," frag. 2 ii 7; frag. 4 i 10; frag. 10 i 4), *'nwh* ("humility," frag. 2 ii 6; frags. 8-9 i 4; frag. 14 ii 20; frag. 26 i 2), *sn'* ("to be humble," frag. 4 i 10), *hik tmym* ("to walk perfectly," frag. 4 i 10), *rwkhh* ("chastisement," frag. 4 i 9), *hmt tmymym* ("poison of snakes," frag. 15 i 4) and

'bny hps ("stones of desire," frag. 2 iii 8), which we find in 4Q525, all occur with more frequency in the Qumran sectarian literature than they do in the OT. Also, the particular phrase *drk(y) 'wlh* ("the way[s] of injustice," frag. 2 ii 2) and the idiomatic expression *b'nwl npsw* ("in the humility of his soul," frag. 2 ii 6) are not used in the OT, but they do occur in 4Q525 as well as in the Qumran sectarian documents.

BELIAL, BELIAR, DEVIL, SATAN

The NT concepts of Satan and his host are closely related to ideas that develop in the intertestamental period and are found in early Jewish literature. In their interpretation of OT passages, various books among the *Pseudepigrapha and *Qumran literature give different explanations to the presence of evil in the world. Some writings describe the struggle between good and evil as a cosmic-spiritual struggle and anticipate the ultimate annihilation of evil and the evil powers. In some texts, the evil powers have an *angelic leader named Semihazah, Mastema, Belial or the Prince of Darkness.

1. The Old Testament Background

2. The Wicked Kingdom and Its Angelic Leader

3. Conclusion

1. The Old Testament Background.

Some biblical passages are important for later interpreters who relate them to the evil forces in the world. Genesis 6:1-5 describe how the "sons of God" mingled with the daughters of men. This passage is often interpreted as referring to a fall among the angels. In some late texts we encounter an odd or accusing member of God's heavenly court, subordinate to the sovereign Yahweh: in 1 Kings 22 (a sixth-century text describing a ninth-century event) a spirit gets God's permission to deceive the *prophets of *Samarina. In Job 1-2, one of "God's sons," *haśśatan* ("the accuser"), gets permission from the Lord to test Job and inflict trials upon him (cf. Zech 3:1-2). As a proper name, "Satan" occurs only in 1 Chronicles 21:1. Some isolated references to figures easily interpreted as demons (see DJG, Demon, Devil, Satan) do not play a significant role in intertestamental interpretation.

Biblical texts refer to Gentile peoples antagonistic to Yaweh, his anointed and his people (Ps 2, 46, 110). Isaiah 14, Ezekiel 28 and Ezekiel 32 portray the evil king and the oppressive empire in mythological tones. Further, the prophetic tradition knows that God will judge the empires on earth. These ideas would be combined by the *apocalypticists: empires and their rulers symbolize cosmic evil forces who will be judged by God. The cosmic judgment and renewal is described by the so-called Isaianic apocalypse (Is 24-27). This textual unit uses mythological language when it proclaims that after the downfall of the oppressive city (Babylon?; Is 24:7-13; 25:1-6; 26:5-6; 27:10-11) God will swallow up death forever (Is 25:8; cf. Is 26:19-20), punish Leviathan and slay the sea dragon (Is 27:1). Powers antagonistic to God ("the heavenly host above and the kings on the earth below") will be punished and shut up (Is 24:21-23).

2. The Wicked Kingdom and Its Angelic Leader.

2.1. *In Daniel and Early Pseudepigrapha.* The idea of heavenly forces antagonistic to God becomes commonplace in Israelite tradition of the second century B.C. This motif is found in a number of pseudepigraphic writings represented in the Qumran caves (some of these were known before the discovery of the *Dead

Sea Scrolls). These writings were probably written before the emergence of the *yahad*, the community reflected in the Qumran scrolls. They were known by the *yahad* and were influential in the framing of the theology of this community.

The earliest postbiblical source that elaborates on evil angelic forces is probably the Enochic Book of Watchers (*I Enoch* 6–16; 17–36), which should be dated around 200 B.C. These chapters interpret Genesis 6:1–5: the angelic watchers cohabit with earthly women and bring *magic, sin and violence to the earth. Enoch is shown the coming judgment on the angels, who in vain ask him to intercede for them. Their leader is Semihazah, but he is not portrayed as a cosmic opponent to God or the elect. *I Enoch* 10:4 reflects a variant tradition, in which Azazel is the leading angel. The watchers are bound until the final judgment (*I Enoch* 10:11–12), while the offspring of the illegitimate union between angels and women become evil spirits who spread sin and destruction on earth (*I Enoch* 15:8–16:1). The archangels participate on God's side in the spiritual struggle.

The biblical book of Daniel may be discussed here, since Daniel 7–12 was written 167 to 164 B.C. and thus belongs to this same period. The four beasts of Daniel 7 symbolize earthly kings and kingdoms. However, these kingdoms are portrayed in a way that point to cosmic significance; behind them one can sense superhuman spiritual powers. According to Daniel 7–12, the struggle between the *Seleucids and faithful Jews reflects a cosmic spiritual battle in which angelic forces are involved. The Jews are supported by an unnamed angelic leader (Dan 10:4–11:2) and their guardian angel, "the great prince" Michael (Dan 10:13, 20; 12:1). These two are engaged in battle against the evil forces, including the angelic Prince of Persia and Prince of Greece, probably referring to the national gods of the Gentiles. Ultimately the people of God and their angelic supporters will triumph (Dan 7:13–27; 12:1–3).

To the early Maccabean period belongs the Enochic Animal Apocalypse (*I Enoch* 85–90) and probably also the Apocalypse of Weeks (*I Enoch* 91:11–17; 98:1–10). Cosmic history and the history of Israel are described in symbolic terms: the angels fall down from heaven and interfere with humanity, and they are bound by the archangels (*I Enoch* 86–88). During the history of Is-

rael, God gives the people into the power of evil shepherds (*I Enoch* 89–90). These shepherds symbolize Gentile kingdoms and the angelic powers behind them, who inflict evil upon Israel and will be annihilated together with the watchers at the judgment (see Angels of the Nations). Both apocalypses expect the ultimate judgment upon evil in the world and the fallen angels (*I Enoch* 90:18–27; 91:12–15).

In the middle of the second century B.C. 4QPseudo-Moses (4Q386–390) portrays the history of Israel in similar terms. Israel is subject to the "angels of *mastemot* [destruction]," demonic angels symbolizing the rule of the *Diadochian kings and the ungodly high priests Jason, Mene-laos and Alcimus (174–160 B.C.): "I will remove that man (i.e., *Alexander the Great) [and] abandon the land into the hands of the angels of destruction [and they will cause the people(?) to worship other god(s . . .) like abominations . . . and there will rise] three [priests] that will rule in the land . . . and they will defile the h[oly of holie]s" (4Q388 frag. 1 ii 6–9). A Gentile kingdom (that of Alexander the Great or Antiochus IV Epiphanes) is probably designated "that [evil kingdom] (*mamleket hariš'ah hali'*, 4Q387 frag. 3 ii 9).

The book of *Jubilees* was probably written in the early Maccabean period (see *Jubilees*) and perhaps belongs to circles antecedent of the *yahad*. *Jubilees*, which pretends to be angelic revelation to Moses on Mt. Sinai, is dependent on the Book of Watchers: the fallen angels are bound before the deluge, but their offspring, the evil spirits, lead the children of Noah to sin. Also the spirits are bound, but their leader Mastema (Destruction) gets God's permission for one tenth of the spirits to stay on earth under his command, so that he can execute his dominion over humankind, corrupt people and lead them astray (*Jub.* 5; 10). Prince Mastema is a figure close to Satan of the NT. He is the leader of the demonic hosts; he rules the spirits of men and women and opposes God's plans for his people.

These ideas recur in the writings of the *yahad* and *Testament of Reuben* 2–4 (it is presupposed here that the apocalyptic and dualistic passages in the *Testaments of the Twelve Patriarchs* were formed in Jewish circles between the mid-second and mid-first century B.C.). *Jubilees* contains other terms relevant to our subject. Moses prays that the "spirit of belial" should not rule over Israel (*Jub.* 1:20). In this text "spirit of belial"

probably means "spirit of nought," so "belial" is not a personal name. According to the eschatological poem in *Jubilees* 23, Israel shall enjoy a time of blessing without any "satan" (antagonist) or "destroyer" (*Jub.* 23:29; also in the Qumran scrolls "satan" is not used as a proper name, cf. 11QP5^a Plea 15-16, "Let not a satan rule over me, nor an unclean spirit. Neither let pain nor evil inclination have control over my bones"; 4Q213a [Levi^b] 1-2 17, "let not any satan have power over me"). Perhaps Mark 8:33 and the parallels should be translated "Get behind me, satan!" (i.e., in this you are an antagonist to the will of God).

Some pre-*yahad* writings preserved in the Qumran caves mention cosmic evil forces. Similar to the Book of Watchers and *Jubilees*, 1Q/4QMysteries (see Book of Mysteries) reflects a dualistic worldview and refers to cosmic antagonists of God. This work mentions "the mysteries of wickedness" (1Q27 1 i 2, 7), "the wisdom of evil cunning and the devices of nought(?)" (4Q299 frag. 3a ii 5) and "migh[ty mysteries of light and the ways of darkness]" (4Q299 frag. 5 2; cf. the first-century B.C. 1QapGen 1:2 "the wrath of the mystery of evil"; see Genesis Apocryphon). It looks forward to the time "when the begotten of unrighteousness are delivered up, and wickedness is removed from before righteousness, as darkness is removed from before light. Then, just as smoke wholly ceases and is no more, so shall wickedness cease forever, and righteousness shall be revealed as the sun (throughout) the full measure of the world. And all the adherents of the mysteries of wickedness are to be no more" (1Q27 frag. 1 i 5-7).

An eschatological passage in 4QInstruction describes the end-time judgment on the powers antagonistic to God: "In heaven he will judge the work of iniquity . . . [the] kingd[om of iniquity(?)] will tremble, the water and the depths will fear. . . . And all iniquity shall be consumed" (4Q416 frag. 1 10-13/4Q418 frag. 212 1). If it is correctly reconstructed, this passage refers to the "kingdom of iniquity," which trembles at God's judgment, as did the watchers in *1 Enoch* 13. The presectarian 4QVisions of Amram (see Visions of Amram) refers to two angelic princes in strife over the dominion of men, who are divided into the sons of light and the sons of darkness (4Q548 1). The ruler of darkness is called King of Wickedness (Melchiresha, 4Q544 frag. 2 3, this name also occurs in 4Q280 [4QBerakot^f]

1 2 "Cursed be you Melchiresha . . . may God set you trembling at the hand of the avengers!"). M. Philonenko has suggested that the name Melchiresha represents an interpretation of "Bera King of Sodom" and "Birsha King of Gomorrah" in Genesis 14:2 (*Tg. Ps.-J.* and *Gen. Rab.* read Bera as "son of evil," Birsha as "son of wickedness").

Early interpreters thus saw evil powers behind Abram's adversaries and found in the same chapter *Melchizedek—King of Righteousness—as their positive antitype. 4Q544 probably referred to Melchizedek as leader of the angelic host (in 11QMelch, written in the *yahad*, Melchizedek is the angelic leader who will overcome Belial and his spirits). *Testament of Dan* 6 testifies to the same apocalyptic tradition: "the kingdom of the enemy" belongs to Satan and his spirits and is the cause of "Israel's period of lawlessness," but finally "the enemy's kingdom will be brought to an end" (here the name *Satan* probably represents Christian editing of an earlier Jewish text). The faithful are supported by the "angel of peace," who intercedes for them, so that they might not submit to Beliar, the spirit of deceit (*T. Levi* 5; *T. Benj.* 6). The later *Birkat haminim*, the curse on the infidels in the daily prayers, is based on an earlier prayer that asked God to subdue the kingdom of evil.

2.2. *In the Writings of the Yahad.* The *yahad* was founded in the second half of the second century and was probably an elite group within a wider *Essene movement. The library of *Qumran was related to the *yahad*, although only a few dozen of its books were authored within the community. The *yahad* drew inspiration from a number of dualistic-*apocalyptic works, including the books of **1 Enoch* and **Jubilees* (the latter was considered an authoritative book by the community), when they described the cosmic realities that encountered their "community of latter-days saints." From their predecessors and literary heritage they learned about the cosmic struggle between light and darkness and the spiritual forces that oppose the sons of light.

A developed philosophical dualism is found in the Two-Spirit Treatise (1QS 3:13—4:26; see Rule of the Community), which was included in the copy of the community's manual found in Cave 1 (the treatise is not represented among the Cave 4 fragments; its theology was not nec-

essarily shared by everyone in the community). God has created two opposing spirits, the spirit of truth (the Prince of Light) and the spirit of deceit (the Angel of Darkness). As he allotted each man his portion, he ordained for him to walk with one of these spirits until the judgment, when he will make an end to all evil. There is eternal enmity between these spirits and those who follow them, between the sons of light and the sons of deceit. According to the last part of the discourse (perhaps a later explanation), every man has been allotted a portion of both spirits (the balance between them will vary from one man to another), who fight their battle in the human heart (*T. Jud.* 20 and *T. Asher* 1–6 present similar doctrines).

Other texts of the *yahad* also reflect a cosmic dualism that is experienced existentially by the sons of light. According to the **War Scroll*, there is an ongoing struggle between the heavenly powers, lead by Michael, Prince of Light, and Belial, Prince of Darkness. The community considers itself in fellowship with the angels and partakes with them in the battle and the **eschatological war*, which has its scene both in heaven and on earth. Unfaithful Israel is identified as sons of darkness and the army of Belial. However, Belial is subordinate to God, "who made Belial to corrupt, an angel of hatred" (1QM 13:11). God has ordained a day "to annihilate the sons of darkness, (when there will be) rejoicing for all the sons of light" (1QM 13:16).

According to the **Damascus Document*, the watchers of heaven fell as they did not follow the precepts of God (CD 2:18). This Qumranic work attributes the rising of Moses and Aaron to the Prince of Light and their adversaries to Belial: "For in ancient times, during the first deliverance of Israel, there arose Moses and Aaron, by the hand of the Prince of Lights; and Belial, with his cunning, raised up Jannes and his brothers" (CD 5:18-19). In the present time Israel at large is subject to the dominion of Belial (CD 4:12-19). The first part of the *Rule of the Community*, prescribes a covenant ceremony to be conducted by the community "for all the days of Belial's dominion" (1QS 1:18; 2:19)—the present age is "Belial's dominion" on earth (cf. Jn 12:31; 14:30; 16:11, "the prince of the world"). The liturgy has the sons of light pronounce curses against the sons of darkness, "the men of Belial's lot" (1QS 2:4-5).

In the writings of the *yahad* Belial is a proper

name, derived from the word *b'liya'al* ("nought") in the Bible, and later usage such as "the spirit of belial." The sons of light have their angelic partner in Michael (or, in the case of 11QMelch: Melchizedek), who will implement the judgment on Belial and the fallen angels.

2.3. Other Texts. A highly developed doctrine of Satan is found in the **Testament of Job*, written in Greek, perhaps in Egypt around the turn of the era. Humans are objects of Satan's attacks and deceiving schemes. He is designated Satan, the devil, the evil one, the antagonist. But also here, Satan derives his limited authority from God. An elaborate account of the fall of Satan occurs in *Life of Adam and Eve* (see Adam and Eve), perhaps written around the end of the first century A.D. An influential verse is Wisdom 2:24: "through the devil's envy death entered the world, and those who belong to his company experience it."

3. Conclusion.

The NT relates to widespread Jewish ideas on the evil one and the presence of evil in the world when it describes the Jesus event, the role of the end-time community and the conditions that meet both humanity in general and the disciple in particular. A particular NT emphasis is the central role of Jesus in the cosmic-spiritual struggle (Rev 12:7-9 perhaps preserves an earlier tradition, in which Michael fights and overcomes Satan).

BENEFACTOR

Life in Greco-Roman society depended greatly on the wealthy individual who provided for others, that is, a benefactor (*euergetēs*), whose gifts were called *euergetiai*. Recognition as an *euergetēs* was a great honor, even appearing among royal titles. When granting freedom or disaster relief, the benefactor was further hailed as a savior (*sōtēr*; cf. Acts 4:9; 10:38). Benefactions given for festivals and warfare in the discharge of civic (which included religious) offices were called liturgies (*leitourgiai*). Although these were mandated by law, providing more than required transformed them into *euergetiai*, and greater honor (*timē*) accrued to the giver. When civic needs arose not covered by regular offices, special subscriptions (*epidoseis*) were enacted to solicit gifts. In Latin a benefactor was called a patron (*patronus*) and a dependent, a client (*cliens*; no Greek equivalent, but "the flatterer" and "parasite" offer degraded parallels). A civic patron could be recognized officially as such by popular election (*cooptare*).

1. The Principle of Reciprocity
2. Political Structures and Benefaction
3. Jewish and New Testament Concepts of Benefaction

1. The Principle of Reciprocity.

Benefaction was one manifestation of the reciprocity that permeated ancient culture. In law this appeared as retaliation, in ethics as the return of injury to enemies and help to friends, in justice as yielding to others their due and in friendship as gift exchange. In benefaction social elites expressed their superiority, and recipients affirmed that standing, perhaps by applause, honorary decrees or public office. Such gifts were gratuitous in that they could not be repaid, serving to emphasize the greatness of the giver; yet they came with strings attached, as

an appropriate response (e.g., gratitude and honors) was expected from recipients. Such giving is not disinterested but flows from *philotimia*, ambition and public spirit. Thus largesse allowed benefactors to express their status and care for the civic body while accumulating *honor and goodwill (*eunoia*), thereby increasing their influence (i.e., authority). Thus generosity and gratitude provided the means by which civic relationships were initiated, solidified, reaffirmed and articulated.

2. Political Structures and Benefaction.

Political structures shaped the particular expression of this general pattern, yielding variety in the characteristics of benefaction. In classical *Athens, wealthy people provided liturgies, sacrifices and *banquets to the citizen body and *hospitality to visitors. The equal status of citizens, their freedom of speech and election by lot, however, made it difficult for any one person to dominate the city by dint of benefactions. In the Hellenistic kingdoms, rulers held absolute power and could make benefactions that citizens of a Greek city-state could not (e.g., tax relief, amnesties, rights of asylum, jurisdictional privileges and immunities). Such beneficent gestures became formalized into standard measures (called *philanthropia*), which sought to elicit subjects' goodwill. Hellenistic kings further spread their greatness by funding buildings in both subject and free cities, especially in Pan-Hellenic sanctuaries.

Still different dynamics existed between patron and client in the Roman republic. More formality appears in the co-opting of patrons and in the relationship between freed *slaves and former masters. Moreover, benefits were given to clients, and thus not to formal equals and not to the citizen body. Building a clientele expressed one's greatness and could help in the competition for honors. As private control of armies and the wealth amassed by conquest allowed some notables to eclipse their peers, one man, Octavian, eventually succeeded in dominating *Rome. As his burial inscription suggests, much of Augustus's clout rested on his position as universal patron. To generosity in Rome he added foreign benefactions, which helped to build the empire (see Roman Empire). Augustus did not eliminate other patrons, but he formed the center of patronage networks extending across the empire. These included family mem-

bers, client kings (e.g., Herod the Great), friends, dynastic families, imperial freedmen, displaced Italians, priests of the imperial cult and the newly rich. Such networks were vital for governing his widespread empire, particularly in view of its minimal bureaucracy (see Roman Administration). These networks grew and became interconnected by means of letters of recommendation, hospitality, protégés and gifts of freedom or citizenship. The cult of Roma and Augustus provided a way to express loyalty to Rome and gratitude for benefits received (see Civic Cults).

Though the emperor eclipsed all other benefactors, the wealthy citizens of each city remained important, opening their own purses or using their connections to open Rome's (see Roman Emperors). In fact, throughout the Roman Empire public offices, which included priesthoods, were synonymous with public philanthropy. Benefactors financed civic life, paying for entertainments, festivals, public buildings (e.g., temples, theaters, baths, gymnasia, stoas, markets) and public-works projects (e.g., city walls, aqueducts, fountains, sewers, roads, harbors). They also served as ambassadors. The honors elicited by their generosity included statues, inscriptions, crowns, favored seating, prayers, ritualized greetings and, for the truly great, heroization after death.

Benefactions could take a more personal form. Ransoming captives, financing marriages and funerals, paying for education and offering legal representation were typical. The grain dole in Rome and relief elsewhere for famines, fires and earthquakes reflect attempts to alleviate human suffering. Patrons also sponsored cultural life. Poets, artists and philosophers often turned to wealthy people (friends or otherwise) to find support for their enterprises (cf. Lk 1:3; Acts 1:1). By admitting them into their entourage, patrons enlivened their dinners, gained advisors and received honorific poems.

The outline of benefaction offered so far is idealized. Social pressure was typical in benefaction and at times was explicit. Some benefactors gave only because of compulsion and/or provided only the barest minimum; others refused to give. Expressions of gratitude, meanwhile, sought to elicit future gifts. Moreover, benefactions did not always win over the crowds. Herod, for example, failed to win the Jews' goodwill—Josephus even claims falsely that Herod built nothing for the Jews (Josephus *Ant.* 19:7.3 §329).

Luke 22:24-27 objects to the politics of lionizing the powerful as benefactors, perhaps recognizing the freedom of the wealthy and powerful to inflict indignities on their lessers and disavowing the status that wealth accrued. The transience of public honors appeared clearly when despised rulers died: their memory was condemned and their public monuments were erased (e.g., Nero and Domitian). This suggests that social networks responded to political and military power. Patronage, however, offered a friendlier face, provided a moral vocabulary and supplied legitimacy (cf. the perspective of slave owners in 1 Tim 6:2). Political theorists viewed philanthropy as basic to acceptable rule.

3. Jewish and New Testament Concepts of Benefaction.

Benefactors were part of Jewish life. Josephus was hailed as a benefactor and savior (Josephus *Life* 244 §47; 259 §50). Herod used gifts to rally popular support. Synagogues also depended on benefactors, who received the honorific title *synagogue leader* (*archisynagōgēs*). Specifically, however, almsgiving differed from Greco-Roman benefaction: not only wealthy, socially important people offered alms; individuals received alms, not the body politic; almsgiving had a religious ideology and motivation.

Ideas of benefaction are fundamental to the assumptions of NT authors. F. W. Danker has emphasized these in Luke-Acts, particularly in connection with salvation. The widow's mite and the secrecy of giving criticize euergetism (Lk 21:1-4; Mt 6:2-4). The idea that receiving a gift entails gratitude and obligation underlies Paul's ethical thinking (Rom 1:21; 12:1; 1 Cor 4:7; 6:19-20; 2 Cor 8:8-9; Gal 2:21). The role of benefactor offers important background to Romans 16:1-2: to label Phoebe a deacon not only misrepresents *diakonos* but overlooks her leadership as patroness (*prostatis*; cf. 1 Thess 5:12). Benefaction also indicates how over the early centuries the church's care of widows and orphans, the burial of the dead and the ransoming of captives helped it to win a leading role within its culture, while after Constantine the building and furnishing of churches became another public expression of Christian benefaction. The language of eschatological reward, however, supplanted that of public-spiritedness.

BETROTHAL. See MARRIAGE.

BIBLICAL INTERPRETATION, JEWISH

Interaction with the OT was a regular and pervasive component of the NT writers' attempts to explicate the gospel to the first-century audience. By a conservative count, there are roughly 300 NT passages that explicitly cite a specific OT passage and roughly 250 separate OT passages that find their way into the pages of the NT. In addition, there are in the NT a host of allusions to the OT (e.g., Revelation) not to mention the ubiquitous development of various OT themes (e.g., temple, kingship, messiah, covenant).

The mere fact of the presence of the OT in the NT is a truism. The issue that generates lively discussion, however, is the manner in which the NT authors make use of the OT. NT authors often call upon the OT in curious and unexpected ways in support of an argument or

to illustrate a particular point. Even a comparison in an English Bible between a NT author's use of an OT passage and the OT context in which that passage was originally situated shows, to say the least, that the NT authors do not always seem to reproduce the original sense of that passage. So the question arises, Why do the NT writers handle the OT the way they do? Attempts to answer this question have generated a fairly steady stream of scholarly activity in modern times. Opinions to account for this phenomenon are varied, and the discussion will continue for the foreseeable future.

One particular issue that is of central importance for understanding the manner in which the NT authors used the OT is Jewish biblical interpretation during what is commonly referred to as the Second Temple period (from the return from Babylonian captivity and the building of the second temple in 516 B.C. to its destruction in A.D. 70). Throughout this period, Judaism was engaged in an extensive, vibrant, even intense, interaction with its Scriptures. The centuries leading up to the NT period were anything but a hermeneutical dark age. Rather, this period displays a sophisticated and intricate approach to biblical interpretation. By the time the NT authors began their literary activity, there already preceded several hundred years of significant interaction with the OT, evidence of which is seen in the wealth of documents that make up the literature of the Second Temple period. It stands to reason, therefore, that a proper understanding of the NT's use of the OT must include an understanding of the Jewish hermeneutical background that not only preceded it but also was active during the time in which it was being written.

1. Diverse Data: The Variety of Second Temple Literature
2. Broad Contours of Second Temple Biblical Interpretation
3. The Nature of the New Testament's Use of the Old Testament in Its Second Temple Context

1. Diverse Data: The Variety of Second Temple Literature.

What makes the discussion of Jewish biblical interpretation so daunting is that it requires one to gain a familiarity with, if not mastery of, a broad range of literature. We have first of all the OT itself. Regardless of the diversity of opinions on

this issue, the OT was written over a considerable period of time. Some of the books were written during the Second Temple period, obvious examples being Chronicles, Ezra, Nehemiah and various psalms, with a fair number of other books, either in whole or in part, that are up for debate. It is important that the OT itself not be ignored in the discussion, since within its pages the trajectories for later Jewish interpretation are already set. Authors of exilic and postexilic biblical books were already engaged in interaction with previously written material. One need only turn to the Chronicler's distinctive, creative handling of the Deuteronomistic History (Joshua, Judges, Samuel, Kings) or Daniel's interpretation of Jeremiah's "seventy weeks" (Dan 9:1-27) to see that biblical interpretation was happening during this period. The years following the Babylonian exile were not a period of literary inactivity. Rather, from the point of view of biblical interpretation, it is when such activity got started in earnest. Whatever the state of biblical interpretation may have been at an earlier point, it began to flourish during and after the exile. This interpretive activity is already seen in those biblical books that were either written or received their final form during this period. This trajectory is carried through to the Second Temple period as a whole.

The centuries that followed the return from exile evinced a flurry of literary activity, all of which is directly relevant to the question at hand. Perhaps the most diverse collection of these works are commonly referred to as Pseudepigrapha and Apocrypha (see Apocrypha and Pseudepigrapha). OT Pseudepigrapha is the general term referring to texts written during the Second Temple period that make some claim of inspiration and authority but remain extracanonical. The Apocrypha are those works that have remained outside the traditional Jewish and Protestant canon but have received canonical recognition in other traditions, namely, Roman Catholicism and Greek Orthodoxy. Labels are a necessity, but they can also be misleading. One should not conclude that the works conveniently subsumed under these labels are in any way uniform, any more than are those contained under the rubrics Old Testament or New Testament. Each boasts a variety of genres like those found in the traditional Jewish and Protestant canons, for example, *letters, wisdom (itself a diverse genre), psalms, histori-

cal books, *apocalyptic, and others. What they have in common, however, besides their essential Second Temple date and questionable canonical status is that they all engage the OT on some level. Some of these works include extensive retellings or expansion of portions of the OT (e.g., *Jubilees and *Book of Biblical Antiquities* [see Pseudo-Philo; Rewritten Bible]), which are particularly important for forming a well-rounded understanding of early Jewish interpretation, since this genre especially is involved in sustained interaction with the OT.

In addition to their inestimable value for text-critical and related matters, the *Dead Sea Scrolls have also greatly enhanced our picture of Second Temple biblical interpretation. These scrolls contain not only copies of biblical books and a number of strictly sectarian works but also commentaries on OT books, perhaps the most famous of which is the commentary on chapters 1 and 2 of Habakkuk (see Habakkuk Commentary). Although the sectarian nature of this community would suggest caution in drawing general conclusions from its writings, no one disputes the importance of these documents for our understanding of Second Temple biblical interpretation in general and NT backgrounds in particular. The Dead Sea Scrolls have proved to be an invaluable and unprecedented source of information for biblical interpretation for about a three-hundred-year span beginning in the second century B.C., and they have redirected many currents of scholarly debate.

Another important body of literature is the works of *Philo, who lived around the turn of the first century A.D. Philo's writings clearly exhibit influences from the philosophical currents of his time, and he continues to be studied as an embodiment of the interface of Greek and Jewish cultures. But the importance of Philo's works extend beyond philosophy. Many of his works are expositions of the OT. What is of particular interest for our topic is not only his well-known allegorical handling of the OT but the fact that some of his own particular interpretations are also found in other Second Temple texts, some of which antedate his own writings. In other words, it seems that his understanding of Scripture is at times dependent, either consciously or unconsciously, upon previously existing exegetical activity. The same can be said of *Josephus. In his *Antiquities of the Jews*, Josephus recounts Israel's history, but in doing so he often reports inci-

dents that are not found in the OT itself but are found in other Second Temple sources. He, like Philo, seems to be conversant with and even reliant on interpretive traditions that preceded him.

Two other bodies of literature should not be neglected. The first of these is the translations, particularly the *targums and the *Septuagint. These translations are not simply important for the light they shed on the nature and state of the Hebrew text in Second Temple times. As translations they are also interpretations; at many points they diverge from the Masoretic Text, not because they represent a different textual tradition but because the translators are attempting to clarify some element in the text. In fact, the targums, especially those in the Palestinian tradition (e.g., *Targum Pseudo-Jonathan*), reproduce rather lengthy and seemingly superfluous interpretive traditions by incorporating them into their translations, some of which are found in other Second Temple texts, including the NT.

Finally, mention must be made of *rabbinic literature. The scope of this literature is formidable, and in the past its relevance to NT studies has been overstated. Strictly speaking, rabbinic literature is post-NT (and therefore not Second Temple), so its bearing on the question of Jewish biblical interpretation as background for the NT would seem minimal. It has been correctly emphasized that great caution and nuance must be exercised when suggesting parallels, for example, between exegetical techniques in the Talmud and in Paul. Still, it is also an overstatement to dismiss the rabbinic material as wholly irrelevant. Not only do we find a number of rabbinic interpretive techniques already anticipated in Paul's writings, for example, but in rabbinic literature we find specific interpretations that are also found, in whole or in part, in earlier literature, including the NT. This phenomenon stands to reason, since, although written after the destruction of the Second Temple, rabbinic literature did not arise out of a vacuum. Its antecedents are well at home in Second Temple Jewish literature, and hence the relevance of rabbinic literature should not be dismissed out of hand.

2. Broad Contours of Second Temple Biblical Interpretation.

The variety of Second Temple literature, only outlined above, is sufficient to demonstrate that conclusions concerning the nature of Second Temple biblical interpretation cannot be drawn

hastily. There are mountains of material, any of which is worthy of a lifetime of study. It goes without saying, then, that the full scope of Second Temple literature cannot even be adequately outlined, let alone explored, in this context. But it is within our means, even here, to get a general feel for how interpreters during this time handled Scripture. The temptation to catalog the manifold interpretive methods exhibited in the literature will be avoided. Not only are these methods too diverse to lend themselves to such an approach, but their categorization might yield the false conclusion that the phenomenon of Second Temple biblical interpretation is thus understood. Rather, Second Temple interpretive activity will be distilled into two broad categories. These categories approach the subject from two very different angles and thus give us a broader perspective from which to view the nature of Jewish biblical interpretation as a whole. Moreover, both categories are clearly present in the NT, and although the first has received its share of attention, the second does not always receive the prominence it deserves. The two categories are (1) conscious, deliberate interaction with the biblical material and (2) incorporation of previously existing interpretations. These are broad categories, especially the first, but they are sound points of departure for subsequent discussion.

2.1. Deliberate Exegesis of Old Testament Passages. It goes without saying that biblical interpreters during the Second Temple period looked upon Scripture with high reverence as a divine gift and therefore authoritative. This reverence for Scripture is reflected in their own writings. In fact, interaction with the Bible defines the essence of these works. They exist and have been perpetuated because of their close affinity with Scripture. This affinity may be seen, in the case of many, in their mimicry of biblical style or claim to authorship by some biblical figure.

The motives for which Scripture is adduced in these works is manifold. Some of the works of this period call upon scriptural passages and broad themes for particularly apologetic purposes, to defend, for example, a specific view of the cultic calendar (*Jubilees*). Similarly, others attempt to reconcile Scripture with prevailing views of their age (political, philosophical) and hence are engaged in a defense of the faith in general (**Wisdom of Solomon*, Philo, Josephus). The *Qumran material is especially known for

exhibiting an apologetic tendency. The Habakkuk commentary, for example, is a defense of the Qumran community and its leader on the basis of a creative handling of the prophetic book.

The motives for the interpreters' engagement of Scripture are diverse, and so are the methods they employed to do so. For some, their purpose was served by alluding generally to a biblical story or theme. At the other extreme, we find a precise, word-by-word, line-by-line exegesis of a passage that at times even seems to be cognizant of varying textual traditions and to exploit this phenomenon with ample dexterity (Qumran's *pesher style). On the one hand, the methods these writers employed and their reasons for doing so are worthy of systematic treatment, particularly since some of these motives and methods are found in the NT (e.g., Paul's apologetic use of the Abraham story to defend the primacy of faith over works in Rom 4; the author of Hebrews' pesher-like handling of Ps 95 in Heb 3:7—4:13). Yet a systematic and even exhaustive categorization (if such a thing is even possible) may not get at the heart of the manner in which the interpreters handled Scripture.

Despite the great variety of motives and methods evinced in this vast body of material, one principle seems to underlie the practical results of the interpretive activity of this period. These interpreters shared a general attitude: biblical interpretation meant bringing the Scriptures to bear on their present circumstances. Whether these circumstances included *persecution, self-definition amid the influence of *Hellenism, support for separatist or *revolutionary agendas or some other setting, these interpreters all sought to see themselves and their audience in light of Scripture. They were no mere academics, playing with Scripture for the sake of it. They were engaged in their work for particular purposes that had serious religious significance for them and for those to whom they were writing.

To put it another way, what constituted proper interpretation for these ancient interpreters was not determined by the same set of criteria that dominates the modern hermeneutical landscape. To interpret the Bible properly was not merely a matter of objectively getting at the meaning the biblical text may have had in some bygone era, such as that of the original author, without imposing one's own subjective

views into the text. Rather, any interpretation worthy of the name occurred only when that past message was called upon to define present circumstances. The goal, in other words, was to understand themselves in light of Scripture, and conversely to understand Scripture in such a way to bring meaning to their situation. The particular methods an interpreter may have called upon to serve this purpose are, in this respect, not the point. The methods are varied, but what they all have in common is that they are subservient to the general goal the interpreter wishes to attain, which is to have Scripture speak to his or her situation. This is what binds together, for example, the highly exegetical Habakkuk pesher from Qumran and Ben Sira's roll call of famous biblical figures (Sir 44—50). It is perhaps a great irony that the reverence for Scripture that drove these interpreters to look to the text for a sense of self-definition also often led them to handle the text in ways that at times have little, if anything, to do with the original meaning of that text. But such is the nature of early Jewish interpretation. The irony is something to be observed and respected, although by modern standards it is something that may be difficult to understand or justify.

2.2. Incorporation of Previously Existing Interpretations. There is a further irony to be observed. If we wish to understand the nature of biblical interpretation during the Second Temple period, we must look beyond the way in which these interpreters handled Scripture. Another factor, more subtle but no less important, adds an important dimension to the discussion. The nature of Jewish biblical interpretation is seen not only in how individual interpreters consciously engaged the Bible but in how they did not. In the course of their expositions of Scripture, we see embedded a number of expansions or embellishments of biblical material, unexpected twists and turns that seem to have little justification in the biblical material itself. The existence of these phenomena is interesting in and of itself, but with respect to the nature of early Jewish biblical interpretation, their real importance lies in the fact that the same or similar interpretive anomalies appear in a variety of works. On the whole, it is virtually impossible to locate the point of origin for these traditions, but the fact remains that they are found in works of differing agendas and purposes and that, in some cases, span a considerable period

of time. How is it that such a thing occurs? How is it that ancient interpreters—who lived in different places and at different times and wrote to different audiences for different reasons—could reproduce similar, apparently quirky notions about a particular OT passage?

It is best to illustrate this phenomenon with a brief example or two. According to Exodus 12:35-36, the Israelites upon leaving Egypt are said to "plunder" (*nāšal*) the Egyptians. There are a number of early interpreters, however, who put a different spin on this incident, one of them being the author of the apocryphal book the Wisdom of Solomon. The Israelites did not actually plunder the Egyptians. Rather, "She rewarded holy ones for their labors" (Wis 10:17). This interpreter understands the plunder to be a reward (*mīsthan*), a just recompense for the labors (*kophōn*) the Israelites endured for their years of slavery. They left Egypt with no mere plunder, such as brigands might take, but payment for services rendered. It is likely that the inspiration for this interpretation was apologetic: it was an attempt to justify Israel's seemingly less than sanctified behavior, particularly in the face of anti-Semitic polemics during the Second Temple period. Exodus 12:35-36 was handled in such a way as to relieve the tension between the world of the text and the world of the Jews the writer was addressing. Thus the writer's audience would maintain their connection with the past by making it speak meaningfully to their present.

But more to the point is the fact that this same interpretation of Exodus 12:35-36 is also found in a number of other works of the period: *Jubilees* 48:18; Philo (*Vit. Mos.* 1.141); Ezekiel the Tragedian's *Exagoge* 162-66. The earliest of these is likely *Jubilees* (early second century B.C.), although *Exagoge* is roughly contemporaneous. This raises the question of dependence. It is far too simplistic to argue that later authors, such as the author of Wisdom, are getting this interpretation directly and consciously from earlier sources, as if the author of Wisdom had in front of him a copy of *Jubilees* and thought to incorporate the earlier interpretation into his own. It is far more likely that all the sources mentioned above had already accepted a more or less common understanding of Exodus 12:35-36 and were reproducing it in their own works without needing to rely on any one specific previous work.

A second example will help to reinforce the point. In Wisdom 10:21, the author is commenting on the Song at the Sea (Ex 15), and he mentions a curious fact, that the "tongues of infants" were made "clear" (*trans*) in order to be able to join in the singing. The specific reasons that gave rise to this comment will not detain us here. What is important to note is not only that this particular author has infants joining in the singing after the crossing of the Red Sea, but a number of other sources do as well (*Ex. Rab.* 1.12 and 23.8; *Tg. Ps.-J.* to Exodus 15:2; *t. Sota* 11b; *Pirqe R. El.* 42; *Pesiq. Rab Kah.* 17.6; *b. Sota* 30b; *Tg. Ezek.* 16). One is immediately impressed by how far-reaching this tradition is, spanning the first several hundred years of the first millennium A.D. It is highly unlikely that even the earliest rabbinic examples of this tradition were in any way directly dependent on the Wisdom of Solomon. For one thing, the rabbinic examples are more extended comments on infants singing at the sea whereas Wisdom has but a passing allusion to this tradition. It is hard to imagine that Wisdom's brief, almost matter-of-fact reference to infants singing at the sea would have been the point of origin for the rich tradition of the rabbis. And it goes without saying that Wisdom 10:21, written before the middle of the first century A.D., would not have had access to rabbinic literature several hundred years before it was written. It is more likely that the brief allusion to infants in Wisdom 10:21 and the extended rabbinic examples are evidence of an interpretive tradition that preceded both of them. Moreover, Wisdom's terse reference to the tradition suggests that by his time this tradition of singing infants had already become widely known.

It should be stressed that these are only two examples of this phenomenon. The literature of the Second Temple period can offer countless others. The point to be made is that biblical interpretation was an active exercise in the centuries following the return from Babylon. Furthermore, it is not only the case that many of the writings of this period exhibited similar motives and methods in their engagement of Scripture but also that specific interpretations themselves have been reproduced in a variety of interpretive works, many of which have little else in common with each other. By the time the NT was written, there already preceded an extensive network of detailed and widespread in-

interpretive activity that centered around the Hebrew Scriptures. This Jewish background must come firmly to the foreground when investigating the nature of the NT's use of the OT.

3. The Nature of the New Testament's Use of the Old Testament in Its Second Temple Context.

The foregoing discussion helps provide the broad contours within which to investigate the uses of the OT by the NT authors. The manner in which the NT authors handled the OT is firmly at home in the hermeneutical world of Second Temple literature.

Like other literature of the Second Temple period, the NT is actively engaged in interpreting the OT. To isolate an example or two would almost serve to dampen one's impression of how pervasive this phenomenon is. There are, as mentioned above, hundreds of OT passages that are either explicitly cited or alluded to. The methods employed by the NT writers are by no means uniform. We have, for example, the commentary on Psalm 95 in Hebrews 3:7—4:13 that approaches in style the line-by-line *pesher* found in some of the Qumran material. Paul's use of the OT promise to Abraham and his curious understanding of "seed" to refer to one specific offspring in Galatians 3:15-29 is reminiscent of interpretive techniques found in a variety of works. In fact, at least one rabbinic text handles "seed" in a similar way (*b. Sanh.* 59b). Other examples exist where a NT author seems to change or augment an OT passage in order to appropriate that text more fully. We have, for example, Romans 11:26, which speaks of the deliverer to come *from Zion* rather than *to* (or *on behalf of*) Zion, as Isaiah 59:20 has it. Even allowing for the fact that the precise state of the Hebrew and Greek OT texts were not settled and that the NT itself witnesses to this variety, there are numerous examples in the NT where an author's citation of the OT differs from the OT not for text-critical reasons but for theological reasons. Also, Paul's use of Isaiah 59:20 in Romans 11:26 appears not to be his own creative handling of the OT but seems to reflect a Jewish messianic understanding of Isaiah 59:20, evidence of which is found in the Talmud.

A parade example of the manner in which the NT uses the OT is found in Matthew's use of Hosea 11:1 (Mt 2:15). It is clear, despite occasional attempts to argue the contrary, that Matthew was

not interested in reproducing the meaning that Hosea 11:1 might have had for the prophet or his audience. It is not the case that Matthew read Hosea and arrived at the objective conclusion that this passage is speaking of Christ. Rather, like other interpreters of his era, Matthew began with the assumption that Scripture speaks to his situation. In other words, he understood Christ to be the proper goal of interpretation. With this proper goal in mind, he set out to interpret the OT in such a way as to bring this goal to the forefront. In doing so, Matthew is reflecting what we see throughout the NT as a whole. Although the exegetical methods that are employed by individual NT writers might differ, their motive for interpretation is essentially one, to interpret the OT in light of the coming of Christ. The methods of interpretation are subservient to the goal. The NT writers' experience of the risen Christ drove them back to the pages of the OT and caused them to understand its message afresh: the OT speaks of Christ, and proper, responsible, biblical interpretation will draw this out.

In addition to how the NT authors handled the OT directly, we have also the second phenomenon addressed above. A good deal of what the NT authors say about the OT reflects not their own conscious deliberations but the deliberations of others. In the pages of the NT are found a number of interpretive traditions that did not originate with the NT authors themselves but with interpreters who preceded them, a factor that indicates that the NT authors shared with these interpreters at some level a similar understanding of that particular portion of the OT. Some examples of this phenomenon include 1 Corinthians 10:4, where Paul's matter-of-fact reference to "the rock that followed them" seems dependent on a tradition of a "moveable well" (*Bib. Ant.* 10:7; 11:15; 20:8; *t. Sukk.* 3.11; *Tg. Orq.* to Num 21:16-20). In addition, Paul (Gal 3:19), Luke (Acts 7:53) and apparently the author of Hebrews (Heb 2:2) seem to assign *angelic activity to the mediation of the law given to *Moses. Although this is not found in the OT, it is a tradition documented as far back as *Jubilees* 1:27—2:1 and Philo (*Som.* 1.141-43). A third example, 2 Timothy 3:8, explicitly refers to Jannes and Jambres, the magicians who opposed Moses in Egypt. These characters are not mentioned in the OT but are mentioned frequently in a variety of ancient sources as early as the **Damascus Document* 5:17-19. In 2 Peter 2:5

Noah is called a "preacher of righteousness," a description found only outside of the OT (e.g., Josephus *Ant.* 1.9.1-2 §§73-75; *Sib. Or.* 1.125-31, 149-51). In Jude 9 we find the extrabiblical tradition of the archangel Michael's dispute with the devil over Moses' body (*As. Mos.*), and Jude 14-15 cites a portion of a prophecy supposedly uttered by Enoch (*1 Enoch* 1:9). Stephen in Acts 7:22 makes a point of mentioning Moses' education in Egypt, which is not in the OT but is a favorite topic especially in Hellenistic sources (e.g., Philo *Vit. Mos.* 1.21-24).

Again, these are not isolated examples, and mentioning in passing just a few runs the danger of deflecting the full force of the presence of these traditions in the NT. Many complex issues surround this topic, but the evidence presents a fairly consistent picture. The NT's use of the OT is a phenomenon that cannot be treated in isolation from the hermeneutical milieu of Second Temple biblical interpretation. Despite the undeniably distinctive elements of the NT's use of the OT (e.g., the decidedly christological focus; lack of protracted, systematic commentary such as we find at Qumran; virtual absence of allegory [but see Gal 4:21-31?]), those differences can only be properly understood from the vantage point of the similarities that the NT and Second Temple literature share at their core: the Hebrew Scriptures, because they are from God, are meant to speak to them. Exegetical methods, therefore, were not objective tools, as modern Westerners sometimes think of them, but a means of realizing a grander purpose. Jewish biblical interpretation during the Second Temple period constitutes the interpretive milieu for a proper understanding of the ways in which the OT appear in the NT. A strong familiarity with the literature of the time is a vital component to advancing significant discussion on the topic.

BIBLIOMANCY

In the Hellenistic and Roman periods one can observe in various religious milieus the phe-

nomenon that books that have gained canonical status and are regarded as divinely inspired are used as lot oracles. The Greeks do so with Homer, the Romans with Virgil, and Jews and Christians with the Bible. The procedure is often simple: The holy book is opened at random, and the first passage that strikes the eye is regarded as the message of God or the gods to the petitioner.

1. Jewish and Christian Examples
2. Pagan Practices and Influence

1. Jewish and Christian Examples.

The earliest Jewish instances are the passages in 1 Maccabees 3:48 and 2 Maccabees 8:23, where before a decisive battle between the Jewish and the *Seleucid armies the Jews unroll the Torah scroll at random in the hope that the first line their eyes hit upon will instruct them about what God has in store for them or expects them to do. In *rabbinic literature this random way of consulting the oracular Scriptures usually takes the form of *cladonmancy* (i.e., the art of prognostication by means of auditive omens): biblical verses rehearsed by schoolchildren and inquired after or overheard by rabbis tip the balance in all kinds of decision-making processes (e.g., *b. Hag.* 15a-b; *b. Hul.* 95b). The underlying idea is that Holy Scripture, being the depository of God's own wisdom, contains all available knowledge, not only of the past but also of the present and the future, and that God himself guides the process of consultation.

Many instances of this practice are known from early Christian literature, the most famous of them being the conversion of Augustine to an ascetic lifestyle in the *tolle lege* scene in Milan (*Conf.* 8.12, 28-29): By random opening the epistle to the Romans, his eyes hit upon Romans 13:13-14, and this changes his life for good. Sulpicius Severus tells in his *Vita Martini* (9.5-7) that the people want Martin to become the bishop of Tours, but another bishop called Defensor is against it. When Martin is on his way to the church, the reader, whose duty it was to read the Scriptures that day, fails to appear. Then one of the bystanders lays hold of the Psalter and seizes upon the first verse that presents itself to him and that says "thou mightest destroy the enemy and the avenger [*defensor*]." It was believed that this psalm was chosen by divine ordination, so that Defensor would be confounded.

Churchly authorities, however, in the decrees of their councils and synods, often condemned bibliomantic practices as pagan.

2. Pagan Practices and Influence.

We see this practice flourishing in pagan circles where the poetry of "the divine Homer" was held in as high esteem as the Bible among Jews and Christians and was used for oracular purposes. Dio Cassius (*Hist.* 79.8.6 and 40.3) says that in Syrian Apamea there was an oracular site of Zeus Belos that delivered its oracles in the form of verses from Homer, and Pseudo-Plutarch (*On Homer* 2.218.4) remarks that several people use Homer's poems for mantic purposes "as if they are the oracles of a god." From the same period (third century A.D.) we also have a papyrus with a so-called *Homeromanteion*, consisting of a list of 148 oracular answers in the form of 216 Homeric verses in an apparently random order but preceded by three numbers (running from 1-1-1 to 6-6-6). The petitioner who consulted the oracle had to roll three dice, and the resulting numbers referred to the Homeric line on the papyrus at the start of which these three numbers were found. That line contained the answer to the question of the petitioner. Probably the oraclemonger was supposed to provide some exegesis if necessary. In Latin-speaking circles the prestige of Virgil quickly rose to the same height as that of Homer, and the *Historia Augusta* provides us with many examples of emperors consulting the *sortes Vergilianae* in order to be informed about their future (see Roman Emperors).

We can observe the same phenomenon in specially prepared copies of the Bible, in particular the Gospels, that Christians consulted to learn their fortunes. In one of the most famous biblical manuscripts, the Codex Bezae (fifth century A.D.), a later hand added at the foot of the pages containing the first ten chapters of the Gospel of Mark a list of sixty-nine short sentences, all of them preceded by the word *proshermēneia*, which are responses to oracular questions.

It is hard to say whether the Jewish practice of bibliomancy has been influenced by the Greek one—both may have arisen independently—but it seems quite sure that Christian bibliomancy came into being under the influence of both Jewish and Greco-Roman practice.

The thesis that bibliomancy was also prac-

ticed by Jesus in view of his handling the Isaiah text in Luke 4:17 is weak, since it seems far more probable that Jesus followed some kind of lectio-nary system.

BIOGRAPHY, ANCIENT

Ancient biography is an important subject for the study of the NT background because of its relationship to the *genre of the Gospels. Debate about whether the Gospels are biographies or not has gone in a full circle over the last century of critical scholarship. Modern literary theory is clear that genre is a key convention guiding both the composition and the interpretation of all communication, including written texts. Genre forms a kind of contract or agreement, often unspoken or unwritten, or even unconscious, between an author and a reader, by which the author writes according to a set of expectations and conventions and the reader agrees to read or to interpret the work using the same conventions.

Ancient literary critics were also interested in genre, with the later *grammarians attempting to describe and classify the main features of key genres such as tragedy and *history. However, these were never rigid rules, and it is best to look at examples of each genre. This is particularly

important in the case of ancient biography. The word *biographia* itself does not occur until the ninth century A.D., with works prior to that called simply "lives" (*bioi* or *vitae*). Ancient writers sometimes tried to distinguish *bioi* from other genres, such as history, as in Plutarch's introduction to his *Alexander* 1.1-3. However, this probably only reflects the fact that he cannot include all the historical material available in his shorter life of *Alexander. In fact, as Pelling's analysis of Plutarch has shown, some ancient biographies are quite historical, while others include features of *philosophy, *rhetoric, *romance, religious or political works. Therefore, we must study the works themselves for a full picture.

1. The Development of Ancient Biography
2. Classification
3. Generic Features
4. The Gospels and Ancient Biography
5. Conclusion

1. The Development of Ancient Biography.

1.1. Jewish Biography. Although there is biographical material in the OT about people like Moses, David and Elijah, it is significant that the ancient Jews never wrote any biographies, even within the later *rabbinical tradition, probably because the central focus was always on the law and its interpretation and traditions rather than on any one person (see Alexander, 40-41). Momi-gliano (35-36) points out that the nearest examples are autobiographical books like Nehemiah written in the service of the Persian king (see Jewish History: Persian Period).

1.2. Greek Biography. The origins of Greek biography also lie in the Persian period with the travel writings of Skylax of Caryanda (c. 480 B.C.) and Ion of Chios (c. 440). The first surviving works to concentrate on a person's life are encomia, laudatory speeches, such as Isocrates' *Evagoras* and Xenophon's *Agésilas* (370-360 B.C.). The other key factor came from the philosophical schools of the fourth century with works about Socrates and other philosophers. The third century was dominated by the house of Macedon, so Hellenistic accounts of Philip and Alexander the Great were composed. Meanwhile vast amounts of material were amassed for the libraries (see Alexandrian Library) at *Alexandria, leading to the production of books like Satyrus's *Lives of the Tragedians*, of which only parts of his *Euripides* survive. When Philo later

writes his *Life of Moses* (c. A.D. 25-30), it is consciously modeled on this Greek biographical tradition.

1.3. Roman Biography. Concern for the ancestors and for precedent led the Romans naturally toward biography. In the middle of the first century B.C., Varro and Cornelius Nepos wrote accounts of famous leaders and generals, philosophers and writers, while political leaders like Caesar and Cicero published their memoirs. The first century A.D. provided opportunities for propagandistic accounts of early emperors like Augustus (see *Roman Emperors*), as well as of political opponents like Cato the Younger. The period around A.D. 100 saw a flowering of biography with Tacitus's *Life of Agricola*, his father-in-law and governor of Britain from A.D. 77 to 84, Plutarch's *Parallel Lives*, comparing famous Greeks with Romans, and Suetonius's *Lives of the Caesars*, full of scandal and gossip. The second-century philosophical satirist Lucian composed lively accounts of various people. The third century saw Diogenes Laertius's compendium of *Lives of the Philosophers*, while Philostratus described the travels, teaching and miracles of *Apollonius of Tyana*. Biography then became an important tool in pagan-Christian debates around 300 with Iamblichus's *Pythagoras*, Porphyry's *Plotinus* and Eusebius's *Origen*. Political, philosophical and religious biography continued beyond the Roman Empire and into the early Middle Ages with lives of emperors, kings and saints.

2. Classification.

Attempts to classify this wide range of ancient biographies with their different subjects and approaches have produced much debate among classical scholars. F. Leo's great analysis of Greco-Roman biography attempted to distinguish two main groups: the Plutarchian, arranged chronologically for generals and politicians, and the Suetonian, more systematically ordered for literary men. Although Leo argued that the former came from the early philosophical schools and the latter from Alexandria, more recent work, particularly by A. Momigliano and J. Geiger, has shown that this distinction cannot be sustained. C. H. Talbert (1977, 93-98) proposed a fivefold classification of ancient biographies according to their social functions; however, most ancient lives had several purposes and cut across Talbert's categories.

Instead, it is better to view ancient biography as a highly flexible genre, adapting to various cultures and growing through the centuries. It seems to occur naturally among those following or interested in particular people, such as leaders, teachers or writers, and it often functions within a context of didactic or philosophical debate and conflict.

3. Generic Features.

Instead of such categorization, an alternative approach is to compare different works from different authors to illustrate the nature of the genre. R. A. Burrige has analyzed a diverse group of ancient biographies of all types ranging from the fourth century B.C. to the third century A.D. Despite such lives comprising a flexible genre, there is recognizable family resemblance in both form and content.

From the formal or structural perspective, biographies are written in continuous prose narrative, between ten thousand and twenty thousand words—the amount on a typical scroll of about thirty to thirty-five feet in length. Unlike modern biographies, Greco-Roman lives do not cover a person's whole life in chronological sequence, and they have no psychological analysis of the subject's character. As regards content, they may begin with a brief mention of the hero's ancestry, family or city, his birth and an occasional anecdote about his upbringing; usually the narrative moves rapidly on to his public debut later in life. Accounts of generals, politicians or statesmen are more chronologically ordered, recounting their great deeds and virtues, while lives of philosophers, writers or thinkers tend to be more anecdotal, arranged topically around collections of material to display their ideas and teachings. While the author may claim to provide information about his subject (and we note that no ancient lives are written by women), often his underlying aims may include apologetic (to defend the subject's memory against others' attacks), polemic (to attack his rivals) or didactic (to teach his followers about him). Many ancient biographies cover the subject's death in great detail, since here he reveals his true character, gives his definitive teaching or does his greatest deed.

Finally, detailed analysis of the verbal structure of ancient biographies reveals another generic feature. While most narratives have a wide variety of subjects, it is a peculiar characteristic

of biography that the attention stays focused on one particular person. BurrIDGE's analysis has demonstrated that it is quite common in ancient biography for a quarter or a third of the verbs to be dominated by the subject, while another 15 percent to 30 percent of the verbs can occur in sayings, speeches or quotations from the person (BurrIDGE, 261-74).

4. The Gospels and Ancient Biography.

4.1. History of the Debate. Traditionally the Gospels were viewed as biographies of Jesus. Over the course of the nineteenth century, biographies began to explain the character of great persons by considering their upbringing, formative years, schooling, psychological development and so on. During the 1920s, form critics rejected the notion that the Gospels were biographies: they have no interest in Jesus' personality or appearance, nor do they tell us anything about the rest of his life, other than his brief public ministry and an extended concentration on his death. Instead, the Gospels were seen as popular folk literature, collections of stories handed down orally over time, and as such they were unique (see Bultmann, 371-74). However, the rise of redaction criticism and the development of new literary approaches viewed the writers of the Gospels as both theologians and conscious literary artists. This reopened the question of the genre of the Gospels and their place within the context of first-century literature, with scholars like Talbert and Aune beginning to treat the Gospels as biographies (see *DJG*, Gospel [Genre]).

4.2. The Biographical Features of the Gospels. Like other ancient biographies, the Gospels are continuous prose narratives of the length of a single scroll, composed of stories, anecdotes, sayings and speeches. Their concentration on Jesus' public ministry, from his baptism to death, and on his teaching and great deeds is not very different from the content of other ancient biographies. Similarly, the amount of space given to the last week of Jesus' life, his death and the resurrection reflects the space given to the subject's death and subsequent events in works by Plutarch, Tacitus, Nepos and Philostratus. Verbal analysis demonstrates that Jesus is the subject of a quarter of the verbs in Mark's Gospel, with a further fifth spoken by him in his teaching and parables. About half of the verbs in the other Gospels either have Jesus as the subject or are

on his lips; Jesus' deeds and words are of vital importance for the Evangelists as they paint their different portraits of Jesus. Therefore marked similarities of form and content can be demonstrated between the Gospels and ancient biographies.

5. Conclusion.

Consideration of ancient biography can contribute much to New Testament study. Although the genre is diverse and flexible, it still has a clear family resemblance, which the Gospels also share. The Evangelists' move from the Jewish concentration upon the law and traditions, seen in rabbinical anecdotes, to describing the life, death and resurrection of one particular person in the form of a Greco-Roman biography is a crucial christological claim. Therefore we must study the Gospels with the same biographical concentration upon their subject to see the particular way each author portrays his understanding of Jesus. Furthermore, additional study of ancient biography will help illuminate the social functions of the Gospels within their first-century context in the early Christian communities.

BIRTH OF THE CHOSEN ONE (4Q534)

The Birth of the Chosen One is one of the names that has been given to the Aramaic document designated 4Q534 found in Cave 4 at *Qumran. The fragmentary nature of this document, along with its interesting and unusual content, has sparked much debate among scholars of the NT and Jewish *messianism. The text contains a reference to *bhyr 'lh'*, "chosen of God," which has caused many scholars to associate the text with the NT reference to Jesus in John 1:34, "I myself have seen it and have borne witness that this is God's Chosen One." However, many scholars now prefer to see this text as part of the parabiblical literature of Qumran that uses the Bible as its starting point and elaborates on a passage, expanding the text with other traditions. Rather than being viewed as a description of the birth of a messianic figure, this text can be seen as an embellished account of the birth of one of Israel's heroes of old.

1. Description and Content
2. Relationship to the New Testament

1. Description and Content.

There have been several treatments of this problematic text. J. Starcky (1964) was the first to publish its contents, and since then others have added to his insights and contested his conclusions. Starcky noticed the connection with John 1:34 and quickly labeled the text messianic. By contrast, J. A. Fitzmyer, despite the charged phrase, did not see the same messianic overtones that Starcky detected and contested this identification. Fitzmyer instead interpreted the *Birth of the Chosen One* as a reference to Noah and the miraculous nature of his birth. He proposed that the text is a further example of the fascination associated with the birth of Noah in intertestamental literature. He submits examples throughout Qumran literature to demonstrate this awe Noah inspired (*1 Enoch* 106-108; *Jub.* 4-10; *Genesis Apocryphon*; Josephus *Ant.*). He

also points to the document's shared vocabulary with *1 Enoch* 106-108 (i.e., "secrets," "books," "sin," "destruction" and "waters"), implying that this similarity may point to shared content or ideas. However, he does admit that nowhere in biblical literature or otherwise is Noah referred to as the elect of God.

The text is fragmentary, which makes a clear translation impossible. F. García Martínez's translation for the most part agrees with that of Fitzmyer and Starcky. The text consists of two columns, each between eighteen and nineteen lines in length. The second column contains many lacunae and is the more broken of the two columns.

Fitzmyer sees an unusual reference to "barley and lentils" in the description of the newborn child (4Q534 1:2). He suggests that this may refer to moles or birthmarks that would mark the child as unique. Column 1 continues to describe the childhood of the "youth" who "does not know any[thing until] the time when he shall become skilled in the three books" (4Q534 1:4, 5). The three books mentioned in line 5 do not likely refer to the three books of the OT, the *Torah*, *Nevi'im* and *Ketubim* (Starcky, Fitzmyer). Since the literature often referred to in intertestamental material is sectarian and *apocalyptic, the three books referred to in the *Birth of the Chosen One* are probably also sectarian and apocalyptic. According to the text, the youth's training in these three books will lead him to wisdom, counsel and prudence.

The phrase *bhyr 'lh'* ("the Chosen One of God") is at the center of much of the debate over the messianic nature of this document. In the Hebrew Bible the term *b'hiñi*, "my chosen one," occurs in various places. It is used of Moses (Ps 106:23), of David (Ps 89:4), of the Servant of Yahweh (Is 42:1) and in a collective sense of Israel (Is 43:20; 45:4). In addition to *Birth of the Chosen One*, this term occurs in a plural form in a Qumran Hebrew text (1QpHab; see Habakkuk Commentary), and it is applied to the Qumran community. The problem with assigning messianic meaning to this phrase in *Birth of the Chosen One* involves relating it to a similar term used in *1 Enoch* (see *Enoch*, Books of). The term is found in the Parables of Enoch, which uses the phrase "the Elect One" interchangeably with "Son of Man" and "his Anointed," clearly messianic references. However, the passages in which these phrases occur are not

among the parts of *1 Enoch* that have been found at Qumran, so the connection is tenuous (Fitzmyer).

2. Relationship to the New Testament.

The text is of great interest to students of the NT and early Christian literature for it provides an earlier example of a birth announcement and worthwhile comparison to the birth descriptions of both Jesus and John the Baptist in the Gospels. If it is viewed as an elaboration of a biblical passage dealing with Noah, then it is an interesting example of how Scripture was treated by the sect at Qumran as opposed to how it is used in the NT. If it is viewed as having messianic overtones, then it allows for a greater understanding of some of the religious concerns that would erupt during the time of the NT.

BOOK OF BLESSINGS (1QSb)

The *Book of Blessings* (1QSb [1Q28b]) is part of the corpus of sectarian literature found at *Qumran. This document is significant not only for understanding the Qumran community but also for analysis and study of early Jewish *b'rahôt* ("blessings") and other *prayer formulas used in the Bible. The study of this document is beneficial in many ways. First, because of its liturgical nature, it sheds light on the practices of the sect at Qumran (see Liturgy: Qumran). Even more than that it allows us insight into the different positions within the community and gives us more information to use in comparison to other known Jewish sects of the Second Temple period. Furthermore, the liturgical content and

*eschatological concerns in the *Book of Blessings* make for interesting comparison to similar topics seen in the NT.

1. Description

2. Content

3. Relationship to the New Testament

1. Description.

The *Book of Blessings* contains a series of blessings that were pronounced over various members of the community at Qumran. Many scholars speak of the *Book of Blessings* in conjunction with two other sectarian documents, the **Rule of the Community/Manual of Discipline* and the **Rule of the Congregation*, because all three documents were originally copied on the same leather scroll. Although these works were probably not penned by the same hand (but see Carmignac), they share common concerns and contain reference to members of the same title in the community. The first and earliest document of the three works, the *Manual of Discipline*, defines the guidelines by which the members of the community were to live. The second, the *Rule of the Congregation*, describes the community at the end of the age. The third, the *Book of Blessings*, is thought to have been prescribed for use in a ceremony during the final times of the end of the age. Paleographically the Hebrew writing can be dated to around the same time: from about 100 to 75 B.C. Because of their early date, the study of these three texts can give us insight into the life of the community at Qumran in its formative years.

2. Content.

The *Book of Blessings* contains five columns, each of which in present form are of varying length. All five columns contain broken text, but the first column is the most fragmentary. Even with the fragmentary nature of the text, three distinct introductions can be distinguished. One is directed to "those who fear God," another to the "sons of Zadok, the priests" and another to the "prince of the congregation." Each introduction begins its section by proclaiming "the words of blessing of the Instructor [the *Maskil*] to bless." The blessings that follow provide information regarding the different stations of members of the community and also some of the theological concerns of the sect.

2.1. *Theology.* The first benediction is directed to those who fear God. Those who fear

God are those "who remain held fast in his holy covenant and walk with perfection [on the paths of] his truth" but also those "he has chosen for an eternal covenant which endures forever" (1QSb 1:2-3). This benediction evidences the strong role that the doctrine of election played in the community and recalls similar passages in the NT that also show a strong adherence to the doctrine of election (Rom 8:29-30; Eph 1:4-5; 1 Pet 1:2).

The next benediction, directed to the priests, describes these members as those "God has chosen to strengthen the covenant, [forever, to dis]tribute all his judgments in the midst of his people, to instruct them in accordance with his commandment" (1QSb 3:23-24). Again, the sect's strong adherence to the doctrine of election is clear in this blessing, but also clear is a sense of division that existed in priestly circles. This benediction is directed to the Zadokite priests who keep the covenant, as contrasted to the priests who did not keep the covenant (Charlesworth and Stuckenbruck, 120). The blessing also asks God to "[r]enew the covenant of [eternal] priesthood" (1QSb 3:26), perhaps suggesting that the office of priest within the community was a station that required a covenant renewal ceremony.

The third benediction that can be distinguished is addressed to the prince of the congregation, who "will establish the kingdom of his people forever" (1QSb 5:21). This blessing asks that God would raise the prince "to an everlasting height" (1QSb 5:23). This section of the benedictions gives evidence for the oft-observed hierarchy present in the sectarian literature. It also illustrates the messianic concerns at Qumran.

2.2. Suggested Reconstructions. The content and amount of fragmented text between the introductions suggest that other groups, whose names were not preserved, received a blessing from the instructor. For this reason scholars have posited various reconstructions. J. T. Milik suggests that originally four categories were addressed, each representing a separate and distinct group within the community. In this reconstruction, one is directed to the "Faithful," one to the "High Priest," one to the "Priests" and one to the "Prince of the Congregation" (Milik). Milik's has been one of the simpler reconstructions; most are more complex. For example, J. Licht contests Milik's reconstruction, insisting instead that the benedictions show a more logi-

cal order. Licht believes that the blessings are arranged from the least to the most important members of the community. In this arrangement the blessings begin by addressing "those who fear God" and end with the "Prince of the Congregation." Yet another reconstruction, that of J. Carmignac, agrees with Licht's logical arrangement but breaks up the text so that more members of the community are addressed. Charlesworth and Stuckenbruck suggest yet another breakdown:

1:1—2:21	Blessing of the Faithful
2:22-28	Blessing of a Part (perhaps an individual) of the Sect
3:1-16	Blessing of an Officiating Priest
3:17-21	Blessing of Another Part of the Sect
3:22—4:21	Blessing of the Sons of Zadok
4:22-28	Blessing of the Zadokite High Priest
5:1-19	Blessing of an Unidentifiable Part of the Sect
5:20-29	Blessing of the Prince of the Congregation

The content and structure of the text make it clear that the missing sections include members other than the three mentioned in the introductions preserved. It seems best to assume a logical order to the blessings (following Licht; Carmignac; Charlesworth and Stuckenbruck).

2.3. Relationship to Other Material from Qumran. Already the relationship of the *Book of Blessings* to the *Manual of Discipline* and to the *Rule of the Congregation* has been established, but there is other literature to which comparison can be made. Because of its ritualistic nature, the *Book of Blessings* should also be studied with other liturgical texts such as the **Songs of the Sabbath Sacrifice* or the other **Blessings* texts (4Q280, 4Q286-290) to determine more about the religious practices of the Qumran sect.

3. Relationship to the New Testament.

The *Book of Blessings* provides interesting parallels to NT literature. The NT also contains benedictions (Heb 13:20-21; 1 Jn 2:12-14; Eph 1:17-19; 3:16-19), some of which are eschatological in scope and therefore make for fruitful comparison with those found in the *Book of Blessings*. In addition, the theology displayed within the benedictions is similar to the theological concerns with election and unity that are seen in the NT. The *Book of Blessings*, however, is unique in its particular vocabulary and in its blessing of

the members of the community according to their position. Although the NT mentions different stations within the Christian community, never is there a strict demarcation of blessings given such as the one we see in the *Book of Blessings*. Continued study of the *Book of Blessings* and other sectarian literature will add to our knowledge of the historical setting of the NT by giving us a window through which to view this formative time period (See *DPL*, Benediction, Blessing, Doxology, Thanksgiving; *DLNTD*, Blessing).

BURIAL PRACTICES, JEWISH

Rituals and beliefs of Jewish people during the first century A.D. regarding death and the dead included ceremonies for disposal of the human corpse, burial techniques, rites of mourning and theological beliefs about the dead and the afterlife. In the NT period, Jewish burial practices both preserved ancient traditions going back to the time before the kingdom of Israel and made

use of more recent developments brought on by the rising influence of Greek culture.

1. Background
2. Burial
3. Mourning
4. Theological Beliefs About the Dead and the Afterlife
5. Conclusion

1. Background.

1.1. Israelite Background. The contribution of ancient Israel to first-century Jewish burial practices is most evident in the fact that first-century Jews continued to follow the traditional Israelite practice of secondary burial, that is, the reburial of human bones after the flesh had decayed. Like their Israelite forebears, Jews in the NT period reburied bones by family groups in underground chambers. Burial practices of this sort had deep local roots in Syro-Palestine, going back as far as the Middle Bronze Age (c. 2000-1500 B.C.), when circular underground chambers were first used for the burials of many individuals, most likely members of the same clan or family group. In these tombs, bones were piled together on one side of the chamber, along with miscellaneous grave goods such as jewelry, pots, jars and juglets.

By the Late Bronze Age (c. 1500-1200 B.C.), architectural improvements such as plastered surfaces on the walls and floor were beginning to appear in these chambers, but it was during the Iron Age (especially Iron II, c. 925-586 B.C.) that these rather simple underground chambers developed into the characteristic Israelite bench tomb. A bench tomb was a square cave with waist-high benches around three of the four sides; the fourth side usually held the entrance, which typically featured a stairway leading down from a small doorway. Often the area under one of the benches was hollowed out as a repository for human bones. Corpses were laid on the benches to decompose, and when desiccation was complete, the bones were gathered into the repository underneath the bench. Over time, the repository came to hold the bones of a family's ancestors, so that the recurrent biblical idiom "to be gathered to one's fathers" (e.g., 2 Kings 22:20) vividly captures the way in which ancient Israelites practiced secondary burial.

1.2. Hellenistic Background. By the NT period, significant changes had appeared in these burial practices, changes that were largely due to

the rising influence of Greek culture (see Hellenism) after the conquest of Palestine by *Alexander the Great in 332 B.C. In particular, Jews no longer employed the characteristic Israelite bench tomb but began to carve niches into the walls of their underground tombs and to place bodies in these niches. Two kinds of niche, both of which originated in the Greek world, began to appear in Jewish tombs during the Hellenistic period (332-63 B.C.) and had become common by the first century A.D.: the *loculus*, or *koh*, a deep, narrow niche carved into the wall of the tomb, large enough to hold one body; and the *arcosolium*, a broad, arch-shaped niche carved along the wall of the tomb, creating a shelf on which a body could be laid (see Art and Architecture: Jewish).

A typical *loculus* tomb could contain as many as ten or twelve such niches, three or four in each wall, while an *arcosolium* tomb could usually hold only three niches, one along each wall (except for the entrance wall). Still later, during the Roman period (esp. the Early Roman Period, 63 B.C.-A.D. 135) Jews also began to use some types of Roman burial containers, such as stone sarcophagi (i.e., containers carved from single blocks of limestone, large enough to hold a single body) and wooden coffins (i.e., containers constructed from wood, large enough to hold a single body). Even though these Hellenistic and Roman influences had found their way into Jewish burial practices by the time of Jesus, important differences between Jews and pagans remained. Roman sarcophagi, for example, typically featured pictorial representations of humans, flora and fauna, but Jewish sarcophagi from the NT period were generally decorated only with geometric and occasionally floral patterns.

2. Burial.

2.1. Burial Rituals. Jews of the NT period buried their dead promptly, as soon as possible after death and almost always on the same day. Preparations began at the moment of death: the eyes of the deceased were closed, the corpse was washed with perfumes and ointments (Acts 9:37), its bodily orifices were stopped and strips of cloth were wound tightly around the body—binding the jaw closed, the feet together and the hands to the sides of the body (Jn 11:44). The corpse was then placed on a bier and carried in a procession to the family tomb (Lk 7:12). Eulo-

gies were spoken, and the corpse was placed inside the tomb, along with items of jewelry or other personal effects. The funeral was thus conducted without delay, and most bodies were interred by sunset on the day of death. But Jewish burial rituals did not conclude with this first, or primary, burial. A year after the death, members of the immediate family returned to the tomb for a private ceremony in which the bones were reburied after the body had decayed.

2.2. Burial Techniques. By far the most common Jewish burial technique in Palestine during the NT period was secondary burial in limestone chests known as ossuaries. An ossuary was constructed by hollowing out a single block of limestone, with the size of the ossuary being determined by the size and length of the large bones in the body (i.e., skull, femur). At primary burial, the corpse was laid in a *loculus* or in an *arcosolium*, and when decomposition was complete the bones were collected and placed in an ossuary. Inscribed with the name of the deceased, the ossuary might then be placed virtually anywhere within the tomb: in a *loculus*, in an *arcosolium*, on a shelf or on a bench along the side of the tomb or even on the floor.

The use of ossuaries was especially common in and around the city of Jerusalem during the first century A.D., so much so that L. Y. Rahmani has attempted to characterize them as a "uniquely Jerusalemite" burial technique. Since ossuaries have also been found at locations in Palestine far from Jerusalem, however (e.g., Horvat Tilla), this view is probably not correct. Ossuaries were simply the burial technique that was most popular among Jews in and around Jerusalem during the first century A.D.. Even in Jerusalem, though, ossuaries were not always used; bones have been found gathered directly into niches (without any burial container), piled in a corner of the tomb or even collected in a separate chamber of the tomb (i.e., a charnel room). In the *Diaspora, Jews did not use ossuaries but buried their dead in underground tombs, or catacombs, depositing bodies in niches, sarcophagi and coffins.

3. Mourning.

During the time between primary and secondary burial, members of a Jewish family were in a state of mourning and abstained from full participation in the normal course of ordinary life. *Rabbinic sources describe a series of mourning

rituals that unfolded in three stages. For the first seven days after a death in a Jewish family, the nearest relatives of the deceased would remain at home, grieving and receiving the condolences of extended family and friends (Jn 11:19). During this time, relatives would usually leave home only to visit the tomb (Jn 11:31). After seven days of intense grieving, there followed a thirty-day period of less acute mourning, during which the immediate family was expected not to attend festive social gatherings or to leave town. After thirty days, most aspects of normal life resumed, except in the case of a parent's death: when one's parents died, mourning for them lasted until the day of secondary burial (Mt 8:21-22).

4. Theological Beliefs About the Dead and the Afterlife.

Israelite religion handed down to Jews the belief that human corpses were impure and that even incidental or indirect contact with a corpse rendered one ritually unclean (Num 19:11-22). During the NT period, then, Jews in Palestine generally avoided unnecessary contact with the dead. Tombs were usually located well outside of towns and cities and were marked with white-wash during the Passover season to warn unwary pilgrims of their potential danger. Several NT texts evoke this Jewish avoidance of contact with the dead (e.g., Mt 23:27-28; Lk 10:31-32; 11:44). This theological belief had a social impact; unlike some cultures in which ancestors retain a significant place in the society of the living, Jewish culture gave the dead no ongoing role in society. Jewish beliefs about the afterlife were, as most human conceptions of the afterlife tend to be, rather vague and fluid, but one concept was clearly defined: resurrection of the body. As part of a general "apocalyptic worldview, many Jews during the NT period, includ-

ing Jesus and Paul, expected that the dead would be raised bodily on the last day. Secondary burial in ossuaries, a burial technique that preserved the individual identity of the deceased, may have been at least partially motivated by this belief.

5. Conclusion.

Anthropologists have found that human death rituals typically celebrate the life values of a culture (Metcalf and Huntington). Jewish burial practices during the NT period drew upon both ancient Israelite traditions and more recent Hellenistic developments in order to bury the dead in a way that celebrated distinctively Jewish cultural ideals. Secondary burial, underground tombs, mourning, corpse impurity and resurrection of the body all cohered in a set of burial practices that symbolically valorized the Jewish ideal of life in relationship with God and family.

C

CAESAREA MARITIMA

Two cities in Israel bear the name *Caesarea* in the NT. One is *Caesarea Philippi, built by Herod the Great, 25 miles north of the Sea of Galilee and later enlarged by his son Herod Philip, who then named it for himself and Augustus Caesar (see Roman Emperors). The other is Caesarea Maritima, a city of about 165 acres, which is located on the Mediterranean coast of Israel about midway between Haifa and Tel Aviv.

1. Herodian Construction
2. Political Volatility

I. Herodian Construction.

Prior to the construction of the city of Caesarea, this site had been occupied by a "town on the coast" called Strato's Tower, which *Josephus said was dilapidated. It was built by Herod the Great over a period of about twelve years (22-c. 10/9 B.C.; Josephus *Ant.* 15.9.6 §341; ten years is the time given in *Ant.* 16.5.1 §136). This town Herod "entirely rebuilt with white stone, and adorned with the most magnificent palaces, displaying here, as nowhere else, the innate grandeur of his character" (Josephus *Ant.* 1.21.5 §208).

One of these palaces has been found in recent excavations at Caesarea by E. Netzer, who has demonstrated the probability that Herod's palace was the Promontory Palace whose remains lie south of the harbor and west of the theater. According to Netzer, "the palace had become the *praetorium*, or official residence of the Roman governor" (Burrell, Gleason and Netzer 1993, 56). The buildings and pools found here were reused after Herod's time as a large bathhouse (Burrell, Gleason and Netzer 1994, 75).

Herod's engineers built the city on the format of major Roman *cities with an orthogonal,

or checkerboard, system of paved streets, sophisticated water and sewer systems, a theater, bathhouse, palaces, temples and an impressive harbor. For many years a number of different teams have excavated in Caesarea, and the results of their labors are impressive.

In addition to his palace, Herod built a harbor to provide a major link between Palestine and the Western world. Josephus described this harbor as being bigger than the impressive harbor for *Athens at Piraeus (Josephus *J.W.* 1.21.5 §410). Excavations, both on land and under the water, have confirmed this description. Palestine had only one natural harbor, at Haifa, and the one at Caesarea was the first artificial harbor constructed in the ancient world. One of the underwater excavators, R. Hohlfelder (800), has shown that this harbor, called Sebastos, consisted of four harbors joined together. The inner harbor extended well inside the modern shoreline to a series of storage vaults running north and south, above which stood the temple of Augustus and Roma, a spectacular sight to ships entering the outer harbor.

The temple area above the harbor has been under excavation since 1989 by the Caesarea Land Excavation Project, under the direction of K. Holum. That work has demonstrated that the temple was an impressive structure, centrally located and adjacent to the inner harbor area. This proximity of the religious and the commercial in the ancient world is well established and widespread.

To provide the city with water, Herod built an aqueduct from an underground spring in the mountains east of Caesarea to the coast, where it turned south and emptied in the city. The distance is 13 miles. This high-level aqueduct reached an elevation of 20 feet along the coast, and a well-preserved section of it is still standing just north of the harbor. It is built on standard

Roman arches with remains of channels on the top that held sections of clay pipes. Some of these pipes can best be seen in a preserved portion of the aqueduct on the east side of the modern Haifa-Tel Aviv highway. A second aqueduct was eventually built on the west side of this one in about A.D. 130. Sections of it still stand beside the Herodian one. An inscription on the side of the aqueduct mentions the second and tenth Roman legions, which were stationed here in the time of the emperor Hadrian (117-138). In ancient Rome, the legions did construction work as well as carrying on military campaigns (see Roman Military).

Josephus mentions a *theater built by Herod (Josephus *J.W.* 1.21.8 §415; *Ant.* 15.9.6 §341). The theater, south of the harbor, still stands partially preserved. The orchestra (floor) of the theater has been repaired or rebuilt numerous times since excavations in 1962 found thirteen floors superimposed on one another. The floors were covered with plaster, not marble, and had to be replaced frequently due to wear. Much of the theater seen today is later reconstruction and stands almost adjacent to the palace of Herod identified by Netzer. According to Josephus, Herod Agrippa I entered the theater at daybreak one day to address an admiring crowd of people. He was dressed "in a garment woven completely of silver," and the crowd was so awed that they said, "We agree that you are more than mortal in your being." Herod did not reject this religious expression, and he was immediately stricken with "pain in his heart and . . . an ache in his stomach." He died five days later (Josephus *Ant.* 19.8.2 §§349-50). This event is documented in the NT (Acts 18:20-23), which attributes his death to his being smitten by an angel of the Lord.

2. Political Volatility.

The Jews and Syrians in Caesarea were quarreling and killing each other over the issue of equal civic rights (Levey), and the situation had deteriorated to the point that Felix hired assassins to kill Jonathan, the Jewish ex-high priest who had initially urged the appointment of Felix as procurator (Josephus *Ant.* 20.8.1 §§162-63). When Paul stood before Felix, the procurator was clearly confronted with a serious problem. He had no desire to agitate the already volatile Jewish situation with which he continually wrestled, as did his successor, Festus (Acts 25:9).

Ten years later, however, these hostilities reached a climax, when in A.D. 66 the Syrians massacred about twenty thousand Jews in Caesarea and sent the remainder to the galleys. Josephus says the city was thus "completely emptied of Jews" at that time (Josephus *J.W.* 2.18.1 §457). This precipitated the war with Rome that resulted in the destruction of the Jerusalem temple in A.D. 70 (see Jewish Wars with Rome).

An inscription discovered in 1997 by Y. Porath has been tentatively identified as belonging to the official Roman bureau for internal security, where Paul appeared before Felix and Festus (Acts 24:27). The building complex where it was found is 15,000 square meters in size and includes a large palace, administrative offices, a bathhouse and a courtyard, according to Porath, who is in charge of Israel Antiquities Authority excavations there. It is located between the palace of Herod on the coast and the hippodrome to the east.

According to Porath, this governmental complex is the only seat of Roman government unearthed in Israel and one of the few ever excavated in the ancient Roman world (see Roman Administration). Further exploration is necessary for clarification of its purpose. Since Roman rule over Palestine was centered in Caesarea, the praetorium complex there functioned as the seat of Roman government from the first until the middle of the third century. A mosaic inscription on one of the floors reads "I came to this office—I shall be secure."

CAESAREA PHILIPPI

One of two cities in Israel that are named Caesarea (the other is *Caesarea Maritima), Caesarea Philippi was built by Herod the Great and enlarged by his son Philip (see Herods). Caesarea Philippi flourished during the time of Herod Agrippa II.

1. Name and Location

2. Early History

1. Name and Location.

Caesarea Philippi was a city located 25 miles north of the Sea of Galilee and east of Dan, at the easternmost of three headwaters of the Jordan River. An underground stream of cold, fresh water surfaces here at the foot of Mount Hermon and is known as the Nahal Hermon (River Hermon) and also as the Wadi Banias (*wadi*, in Arabic, means "riverbed"). The site is also called Banias today, a term derived from the long-standing Greek name *Paneas*, which was used to designate a cave in the mountain dedicated to a Greek god of nature, Pan (the *p* in *Paneas* is pronounced like a *b*). *Josephus refers to the town and district as *Paneas* and to the sanctuary of Pan as the *Paneion* (Josephus *Ant.* 15.10.3 §§360-61, 363-64; *J.W.* 1.21.3 §§404-5; see Smith, 474).

In 20 B.C. Augustus Caesar (see Roman Emperors) granted Herod the Great control of the Huleh River basin along with other portions of northern *Galilee. This included the *Paneas* sanctuary, where, Josephus says, "Herod . . . dedicated to him [Augustus] a temple of white marble near the sources of the Jordan, at a place called *Paneion*" (Josephus *J.W.* 1.21.3 §404; *Ant.* 15.10.3 §363). This temple is probably the one depicted on a coin struck by Philip in A.D. 1, which has the head of Augustus on one side and a tetrastyle (four-columned) facade of a temple on the other (see Meshorer, 76, coin #76 on plate 10; see Coinage: Jewish).

Remains of this temple have been excavated. Two parallel walls, 10.5 meters apart, were found below a cave in the cliff above the springs of fresh water. The western wall was originally lined with marble plaques and contained alternating semicircular and rectangular niches along its length. The particular kind of masonry construction used in the temple, *opus quadratum*, is found also in the sunken garden of another palace of Herod in Jericho (see Art and Architecture: Jewish).

2. Early History.

When Herod died, his son Philip was made tetrarch of the districts of Iturea and Trachonitis (Lk 3:1), which included *Paneas*. Josephus lists the site of *Paneas* along with the districts of Gaulonitis, Trachonitis and Batanea as part of the tetrarchy assigned to Philip in the will of Herod the Great (Josephus *Ant.* 17.8.1 §189).

Philip then enlarged the city and named it Caesarea (Josephus *Ant.* 18.2.1 §28; *J.W.* 2.9.1 §168) in honor of Augustus Caesar. Either Philip (Wilson and Tsafiris, 57) or others later in the first century A.D. (Kutsko, 803) added his name to that of Caesar, calling the city Caesarea Philippi.

Philip ruled from 4 B.C. until his death in A.D. 41, at which time his nephew Agrippa I inherited this territory. His reign lasted only three years, and at his death in A.D. 44 the city was placed under the control of the Roman governor of Syria for almost a decade (see Roman Administration).

In A.D. 53, Herod Agrippa II was given control of the city with the territories belonging to it and ruled it for forty years, until 93. V. Tsafiris, the director of the ongoing excavations here, has found the remains of a large and elaborate structure that he identifies as the royal palace of Agrippa II on the basis of the historical evidence recorded in Josephus (Josephus *Ant.* 1.21.3 §404-6), the numismatic evidence, the ceramic evidence and the style of the building construction.

The excavators, Tsafiris and J. Wilson, believe the palace was erected after the 66-70 Jewish revolt against Rome (see Jewish Wars with Rome) was crushed, and construction possibly was financed by the Roman emperor in gratitude for Agrippa's loyalty to Rome during the revolt. Agrippa reigned for almost a half century with such political diplomacy that he was given the title of king. During this time Agrippa kept Caesarea Philippi as his capital, enlarging it and making appropriate renovations.

The palace must have been impressive. Remains discovered on a lower level include a large basilica (an elongated rectangular building that had a central room with side aisles), fountains and pools, towers and passageways. A row of vaulted rooms were found along the eastern side of the upper level.

After the Jewish revolt was subdued, Josephus wrote that the Roman general Titus

brought his troops to the city for recuperation and "exhibited all kinds of spectacles" for them (Josephus *J.W.* 7.2.1 §23), including combat between both humans and animals and burning (see Arenas). More than twenty-five hundred Jews taken captive in the revolt were brought here and destroyed in this way (Josephus *J.W.* 7.3.1 §38).

After the death of Agrippa, Caesarea Philippi became a politically insignificant town on the fringes of the province of Syria, and his beautiful palace was converted into a public bathhouse that attracted tourists. A portion of it has been preserved.

CAESAR'S HOUSEHOLD. See ROMAN SOCIAL CLASSES.

CAIAPHAS OSSUARY

The high *priest Caiaphas, who condemned Jesus and handed him over to Pontius Pilate, prefect of Judea (see Roman Governors of Palestine), was appointed by Valerius Gratus in A.D. 18 to succeed Simeon ben Qimhit. Caiaphas was removed from office shortly after Pilate's dismissal in late 36 or early 37. The immediate cause for Pilate's removal was the governor's violent action taken against the *Samaritans who had gathered at the foot of Mt. Gerizim in hopes of finding the lost vessels of the Samaritan temple, which had been destroyed by the *Hasmoneans some 150 years earlier. Caiaphas may have been removed by Vitellius for having advised Pilate to act as he did, but that is only supposition.

The "house of Caiaphas" is apparently mentioned in rabbinic literature: "I hereby give testimony concerning . . . the house of Qaipha [*by* *qyp'*] . . . from them have been chosen high priests" (*t. Yebam.* 1:10); "Menahem, son of Maxima, the brother of Jonathan Qaipha [*qyp'*]" (*y.*

Ma'as. 52a). *Josephus makes specific reference to the high priest "Joseph Caiaphas" and "Joseph called (or nicknamed) Caiaphas" (Josephus *Ant.* 18.2.2 §35; 18.4.3 §95). The *Mishnah (*m. Parah.* 3:5) speaks of a high priest named Eliho'ēynai ben ha-Qayyaph (*hqyyp*, the Hebrew form of the Aramaic *qyp'*, though some MSS read *hqwp*, which could be vocalized *ha-Qôph* or *ha-Qûph*), who may have been the son of Joseph Caiaphas. The NT refers to the high priest simply as Caiaphas (Mt 26:3, 57; Lk 3:2; Jn 11:49; 18:13, 14, 24, 28; Acts 4:6).

The recent discovery of an ossuary, on which the name of Caiaphas may have been inscribed, has generated interest and disagreement. In November 1990 workers in Jerusalem's Peace Forest, about 1 mile south of the Old City, accidentally uncovered an ancient burial cave in which one dozen ossuaries were found. Six of these ossuaries had lain undisturbed for two millennia; the other six had been ransacked by grave robbers. Two of the untouched ossuaries bear the name *qyp'*. One of these ossuaries, which contained the skeletons of two infants, a toddler, a teenager, a young adult female and a man in his sixties (see Zias), bears the fuller names, as transcribed by R. Reich (1991, 1992): *yhusp br qp'* (on the plain end) and *yhusp br qyp'* (on the plain side). Vocalized, these may be the names Yehoseph bar Qapha' and Yehoseph bar Qayapha', which are probably variant spellings of one man's name. These names, as well as others, are crudely inscribed, perhaps with the two iron nails found in the tomb. Reich (1991, 1992), Z. Greenhut, W. R. Domeris and S. M. Long, among others, have concluded that this person in all probability should be identified with the Joseph Caiaphas mentioned by Josephus and the NT.

The ornate and well-preserved Caiaphas ossuary is housed in the Israel National Museum in Jerusalem. The skeletal remains have been interred on the Mt. of Olives. In the nearby Akeldama field and ravine, the tomb of Annas (Lk 3:2; Jn 18:13, 24; Acts 4:6; cf. Josephus *Ant.* 20.9.1 §§197-98), the high-priestly father-in-law of Caiaphas, may also have been identified (Ritmeyer and Ritmeyer; on possible identification of the family house, see Rupprecht).

W. Horbury and E. Puech disagree with the Caiaphas identification, arguing that the Qayapha' reading is difficult and improbable. Rather, they think the name is probably Qôpha', Qûpha' or even Qêpha'. The conso-

nants inscribed on the ossuary favor a two-syllable name (e.g., Qôpha'), not a three-syllable name (e.g., Qayapha'), which would be required to make the identification with the Greek Caiaphas found in Josephus and the NT. Perhaps, but Greek forms of Jewish names often expand and so add another syllable. The name Qatros or Qadros may offer a pertinent example, for this high-priestly figure, whose name appears as Qadrôs in *t. Menahot* 13:19, 21 and as Qatrôs on a stone weight in the ruins of the Burnt House in the Old City, may be the Cantheras (*Kanthêras*) mentioned in Josephus (*Ant.* 20.1.3 §16; Reich 1991). If so, we have a clear example of how a shorter Semitic form of a name transliterates into a longer form in Greek. Part of the difficulty is the relative rarity of the Qayapha' name, which results in inadequate data for comparative analysis, as well as the poor quality of the ossuary inscriptions themselves, making certain identification of the *yod* (so Reich et al.), as opposed to the *waw* (so Horbury and Puech), very difficult.

CALENDARS, JEWISH

The reckoning of time and seasons is important for any culture, and for Judaism the calendar carried the burden of correctly identifying the festivals and holy days assigned by Yahweh for Israel's observation. In Second Temple Judaism, particularly in the *Dead Sea Scrolls, we find evidence of a calendar at variance with that of the Hebrew Bible.

1. The Calendar of the Hebrew Bible
2. The Competing Calendars of Second Temple Judaism

1. The Calendar of the Hebrew Bible.

1.1. The Month. Month names in the biblical record reflect variously Canaanite (Abib: Ex 13:4; Ziv: 1 Kings 6:1; Ethanim: 1 Kings 8:2; Bul: 1 Kings 6:38) and Babylonian nomenclature (Nisan: Neh 2:1; Sivan: Esther 8:9; Elul: Neh 6:15; Chislev: Neh 1:1; Tebet: Esther 2:16; Shebat: Zech 1:7; Adar: Ezra 6:15), but most reflect frequently a system that used ordinals (first month, Ex 12:2; second month, Gen. 7:11; and so forth). The fact that every ordinal between first and twelfth is used, but none higher, indicates clearly that there were but twelve months in the year (see 1 Kings 4:7-19). It has been held that Genesis 7:24 and 8:3 (150 days is given as the periods that the flood prevailed and then decreased) indicate a 30-day month, but this fact is never indicated explicitly and must remain doubtful. The Babylonian calendar that was in use by the time of the exile (6th century B.C.) has twelve months, alternating between 29 and 30 days.

1.2. The Year. Neither is there any explicit reference to the length of the year in the biblical record. Even the evidence concerning when the year began is conflicting. The classic rabbinic solution is that there were four New Years: the first of Nisan for kings and feasts; the first of Elul for the tithe of cattle, the first of Tishri for the years of (foreign) kings, the years of Release, Jubilee years, for the planting (of trees), and for vegetables; and the first of Shebat for (fruit) trees (*m. Ros Haš.* 1:1). By the exile, the increased frequency in the use of Babylonian month names suggests that the year was reckoned at 354 days and began in the spring (Nisan). The evidence from the papyri from Elephantine (5th century B.C.) and Wadi ed-Daliyeh Papyri (4th century B.C.) corroborate.

2. The Competing Calendars of Second Temple Judaism.

That there were competing calendar reckonings among the Jews of late antiquity became clear in the nineteenth century when the books of **Jubilees* and **1 Enoch* became available to Western scholars. Both of these works revealed a "solar" calendar of 364 days comprised of four quarters of 91 days, which stood in clear opposition to the 354-day Babylonian model of normative Judaism. The Dead Sea Scrolls have revealed the same 364-day calendar detailed in *Jubilees* and *1 Enoch*. It has also become evident from the polemical nature of the scroll discussions (1QpHab 11:2-8; 1QS 1:11-15) that the calendar was an element of contention leading to the separation of the Qumran sect from the *Judaism of the Second Temple period.

2.1. The Cycles of the Qumran Calendar. The 364-day calendar is best understood by its characteristic cyclical patterns, which range from the 7-day week to the 294-year cycle of six Jubilees.

2.1.1. Seven-Day Week. The most basic cycle is not natural, but theological: "And on the seventh day God finished the work that he had done" (Gen 2:2). As in the Hebrew Bible, the week began on "Sunday" and ended on the sabbath. The weeks were then designated by the names of the twenty-four priestly courses (1 Chron 24:7-18) which began their temple service on the sabbath (see *Sacrifice and Temple Service*). Zechariah, of the priestly division of Abijah, was serving his rotation when the angel appeared and announced the birth of his son, John the Baptist (Lk 1:5-23).

2.1.2. Twenty-nine-/Thirty-Day Lunar Month. The most curious feature of the Qumran calendar cycles is the inclusion of an alternating 29-/30-day lunar month. Although several of the calendars chart the full moon, the first crescent, and in some cases even its phases, it is everywhere subordinate to the solar month and regulates no liturgical matters.

2.1.3. Thirty-/Thirty-One-Day Solar Month. The sequence of numbered solar months follows the pattern of 30-30-31 days. This follows no natural phenomenon but is rather based on the seven-day week. Each quarter is exactly thirteen weeks.

2.1.4. The 364-Day Year. The year always began on a Wednesday; when, according to Genesis 1:14, God made the sun, moon and stars "for signs, and for seasons, and for days and years."

This 364-day year becomes a repeated polemic in the scroll corpus. 4Q252, *Commentary on Genesis*, recasts the flood story as a proof of the 364-day sectarian calendar. Exactly one year following the beginning of the flood (11/17 according to commentator), Noah left the ark. The *Psalms Scroll* from Cave 11 attests to 364 songs that David composed for the daily *sacrifice, thus associating the great king of Israel with the correct position in the debate over the calendar.

2.1.5. Three-Year Lunar Cycle. As in the Babylonian calendar, lunar months alternate between twenty-nine and thirty days, the first period reckoned at twenty-nine. Thirty-six lunar months total 1,062 days, thirty days short of a like number of months in the 364-day calendar (1,092 days). Hence, at the end of this thirty-six lunar-month period, instead of a twenty-nine-day month that the normal alternation requires, a thirty-day "leap month" is added to bring the sun and moon into accord once again. This phenomenon again emphasizes the theological nature of the calendar, as lunar-solar conjunctions on the first day of every third year do not occur naturally.

2.1.6. Six-Year Priestly Cycle. The twenty-four priestly courses recorded in 1 Chronicles 24:7-18 took turns serving in the temple. As a full year accounted for two and one-sixth full rotations of the priestly divisions, six years were required before first course (Gamul) was again serving at the beginning of the year. This six-year cycle enabled the scroll writers to refer to particular years, months or weeks according to the course that was serving in the temple.

2.1.7. Forty-Nine-Year Jubilee. For the scroll writers the Jubilee period was the forty-nine-year interval marked off by two Jubilee years. 4Q319, *Otot*, or "signs," is dependent on this cycle.

2.1.8. 294-Year Cycle of Six Jubilees. This period is defined by the number of forty-nine-year cycles necessary before the first priestly division (Gamul) was once again serving in the temple in the first week of a new Jubilee.

2.2. The Festival Calendar. The calendar polemic in the scrolls most frequently concerns the proper time for the festival days (see *Festivals and Holy Days*). Competing calendars would have meant that the proper day to celebrate a festival would have been disputed (1QS 1:11-15). Also of interest are the additions and subtractions from the biblical list. The following table

records the biblical festivals and the month/day on which they were celebrated.

Passover/Unleavened Bread	I/14 (evening)-21
Omer/Firstfruits of the Barley	I/26
Weeks/Firstfruits of the Wheat	III/15
Day of Remembrance	VII/1
Day of Atonement	VII/10
Feast of Booths	VII/15-22

2.2.1. *Date of the Feast of Weeks.* The biblical instruction for the dating of the Feast of Weeks (Lev 23:15-20) touched off a long-standing controversy within Jewish circles. The Qumran sectarians understood the word *sabbath* (Lev 23:15) to refer to the seventh day of the week and started counting the required fifty days on the first Sunday after the feast of Unleavened Bread. The rabbis took *sabbath* to mean the day after the first day of Unleavened Bread and dated Weeks to III/6 (*m. Menah.* 10:3). In the Qumran calendars the count is made inclusive from the day that the Omer was waved (I/26) to the fiftieth day on III/15. This festival, called Pentecost (fifty) in Greek, marked the coming of the Holy Spirit and the birth of the church according to Acts 2:1-13.

2.2.2. *Three Extrabiblical Festivals.* The following three extrabiblical festivals—firstfruit offerings of new wine and oil, and the wood offering—are additions to the biblical list.

Firstfruits of the Wine	V/3
Firstfruits of the Oil	VI/22
Wood Offering	VI/23-27, 29

2.2.2.1. *Firstfruit of the Wine.* On the pattern of the count to the Feast of Weeks another inclusive count of fifty is begun on III/15, determining V/3 as the Feast of Wine. The addition of this and the following Feast of Oil are never justified in the Qumran texts but were likely to have been felt implicit in the triad of the firstfruits of God's blessing: grain, wine and oil (see 11QTemple 43:3-10; Num 18:12; Deut 7:13).

2.2.2.2. *Firstfruit of the Oil.* Again following the pattern of the pentacontad count beginning on V/3, the Festival of the Oil is established on VI/22. This then is the fourth and last of a series of firstfruit festivals begun with the Waving of the Omer on I/26.

2.2.2.3. *Wood Offering.* Nehemiah 10:34-35 and 13:31 record that members of the Jerusalem community volunteered the regular supply of wood for the temple "for the wood offering."

The *Temple Scroll* directs the twelve tribes—two tribes a day for six days—to present the contributions associated with the Wood Offering. The date of the wood offering is somewhat doubtful but probably began the second day of the week following the Festival of the Oil.

2.3. *Esther.* The fact that the Feast of Purim (Esther 9:26-32) is not recorded in the calendars, coupled with the lack of Esther among the biblical manuscripts from Qumran, suggests that the Qumran sectarians might not have considered the book authoritative.

2.4. *Intercalation.* A 364-day calendar raises the question of intercalation to account for the 14-day differential with the true solar year. Although theories have been proposed (Glessmer), the explicit theological basis for the calendar tends to argue against any such intercalation. The calendar is clearly founded on the principle of the seven-day week and forty-nine-year Jubilee; these are theological, not observational phenomena. Even the moon is unrealistically harnessed to this theological construct and forced into conjunction with the sun every three years. Given this evident theological structure, it is more likely that the calendar was considered ideal and biblical. The lack of observational reality was likely explained by the evil nature of the time, a factor that God would make right at the end of the age when righteousness reigned.

2.5. *The Hebrew Bible and the 364-Day Calendar.* Despite the rather difficult biblical data, A. Jaubert has suggested a pattern among the disparate details (Jaubert). Beginning with the 364-day calendar of *Jubilees* and the supposition of a special Israelite attitude toward the sabbath, Jaubert was able to reconstruct the framework of the "Qumran" calendar before a description of the scroll manuscripts had been published. When this calendar was compared to the dates recorded in the Bible it was discovered that among the sixty dated events, with only two exceptions (Esther 9:15 and 2 Chron 3:2), the biblical dating favored activities on Sunday, Wednesday and Friday, while at the same time avoiding the sabbath. If this is purposeful, those who promulgated a 364-day calendar during the late Second Temple period might be considered conservative (biblical) rather than innovative in their calendar views.

2.6. *The Passion Week and the 364-Day Calendar.* Jaubert has also theorized that the presence

of two Jewish calendars might explain the discrepancy between the Synoptic Gospels and John regarding the events of the passion week (Jaubert). The Synoptics date the Last Supper (Passover Meal) to I/14 and the crucifixion to I/15, while John dates the crucifixion to I/14, before Jesus' captors had celebrated the Passover. According to Jaubert, the Synoptics used the 364-day calendar, whereas John reflected the "official" 354-day calendar. The Last Supper would have then been on Tuesday evening and the crucifixion on Friday, a result that is problematic to most NT scholars.

CANONICAL FORMATION OF THE NEW TESTAMENT

The NT canon, a fixed and closed collection of twenty-seven documents, was the outcome of a process spanning the first through the fifth centuries. This process was characterized by two movements: the growth of Christian writings and their rise to scriptural status, which transpired mainly in the first two centuries; and the limitation of those writings that were to be regarded as Scripture, read in the church and considered authoritative for its faith and life, which

occurred mainly in the fourth and fifth centuries. These two movements were not entirely separate and sequential, and the development of the canon was not purely linear. The process of canonical formation was also complex, being indebted to a variety of factors, including the composition and dissemination of Christian writings, the history of their use and interpretation, theological conflicts in early Christianity, judgments of scholars, promulgations of bishops and councils and even the technology of book production. Nevertheless, the canon of Scripture that finally emerged corresponded closely to those writings that had been most widely valued and used in the church of the first three centuries.

1. Scripture and Canon
2. The Growth of Christian Scripture and the Formation of Early Small Collections
3. The Shaping of the Canon

1. Scripture and Canon.

Differing conceptions of the history of the NT canon have turned largely upon definitions of terms. Until fairly recently, no sharp distinction was made between the terms *Scripture* and *canon*. If a writing was cited as authoritative by early witnesses, designated as Scripture (*graphie*) or quoted with a citation formula such as "it is written" (*gegraptai*), then it was commonly claimed that the document in question was at least functionally canonical. But the view that increasingly prevails rests upon a clear distinction between the terms *Scripture* and *canon*. Scripture (*graphē*) designates religiously authoritative literature, without regard to its scope or limits. The use or citation of a document as authoritative says nothing, however, about its canonical status. Canon, by contrast, signifies a definitive and closed list of religiously authoritative writings and thus explicitly addresses the question of their scope and limits (Sundberg). Although the Greek word *kanōn* means "measuring rod" and, by extension, a norm or rule, in its earliest application to Christian writings it signified a list, specifically the list of Christian writings that were permitted to be read in the church, that is, publicly in the liturgical assembly. Once such a list was drawn up, the writings within it were held to be exclusively authoritative canonical Scriptures. Thus the formation of the canon presupposes the availability of Scriptures, but the existence of religious Scriptures does not of itself imply or re-

quire the formation of a canon.

Although the recent emphasis on this distinction has tended to represent the fourth and fifth centuries as the critical period of canonical formation, this should not be permitted to obscure the early beginnings of the attribution of authority to Christian writings or the relatively rapid rise of certain Christian writings to scriptural status and use during the first three centuries. By the middle of the second century several Gospels and the Pauline letters, as well as a few other documents, had attained broad use and high authority in Christianity. The subsequent formation of the NT canon was therefore not a matter of conferring authority upon selected Christian writings but of clearly delineating the scope of those writings that had, at least for the most part, already acquired broad recognition as authoritative Christian Scripture and thus also of excluding others.

2. The Growth of Christian Scripture and the Formation of Early Small Collections.

The Scriptures of earliest Christianity were those it inherited from Judaism (*see* Hebrew Bible). These included the Torah, the prophetic books and a variety of other writings, though these had not yet come to constitute a canon in Judaism. Nevertheless, the Scriptures of Judaism were fundamental to early Christianity, being read in worship and used as resources of Christian preaching, teaching and practice. No distinctively Christian writings were available in the first decades of Christianity, and only gradually did they come into being. The earliest extant Christian writings are the letters of Paul, composed between A.D. 48 and 58. Other early Christian writings—Gospels, letters, apocalypses and Acts—were composed in the last several decades of the first century, and the production of Christian literature continued apace in the second century (*see* Genres of the New Testament). None of these early Christian writings was composed as Scripture or initially regarded as such. Yet through their dissemination and use, especially the reading of them in services of worship alongside the Scriptures of Judaism, many of them soon acquired a similar religious authority and came to be considered Scripture.

2.1. The Growth of Early Small Collections. It can readily be seen that the NT canon is largely made up of three smaller collections: the four Gospels, the letters of Paul and the General, or

Catholic, Epistles. Each of these collections had a prehistory distinct from the formation of the canon as a whole, yet the emergence of these collections is a part of the larger history of the canon.

2.1.1. The Fourfold Gospel. A great variety of Gospel-type writings were produced in the late first and early second centuries, though many of these are now known only fragmentarily or merely secondhand. Beyond Mark, Matthew, Luke and John, we must reckon also with the Synoptic Sayings Source (Q), *Gospel of Thomas*, *Gospel of Peter*, *Gospel of the Hebrews*, the "Unknown Gospel" (P. Eg. 2), *Dialogue of the Savior* and *Apocryphon of James*, among others (Koester). All such documents were partial redactions of a rich fund of oral traditions about Jesus that persisted for a time alongside written Gospels and sometimes was preferred to them, until it was finally displaced toward the middle of the second century. Thus the authority that belonged inherently to the words and deeds of Jesus in early Christianity gradually passed from oral tradition to written codifications of it. The various written Gospels were not only collections but also interpretations of the traditions about Jesus, and each has a distinctive character. Each Gospel writer apparently intended his composition to be a self-sufficient, if not exhaustive, representation of the tradition.

As written Gospels came into being, they circulated individually, and it was probably typical at first for any given Christian community to know and use only one. But with the ever wider dissemination of such documents during the second century, Christian communities became acquainted with multiple Gospels, which were then variously compared, criticized and defended. Early in the second century Papias (*Eusebius Hist. Eccl.* 3.39.15-16) knew the Gospel of Mark and possibly the Gospel of Matthew, and he defended Mark against some objections, though he expressed a preference, if not for oral tradition then for firsthand information.

The first Christian writer to show a clear knowledge and appreciation of written Gospels is Justin, who was active in Rome near the middle of the second century. Justin refers to Gospels as "memoirs" (*apomnēmoneumata*) of the apostles and those who followed them (Justin *Martyr Apol.* 1.66.3; 67.3; *Dial. Tryph.* 100.4; 101.3; etc.). He apparently knew at least the Gospels of Matthew, Mark and Luke, but he also cited tradi-

tions not found in these, and so he was acquainted with a wider body of materials. It is uncertain whether Justin knew the Gospel of John, but he seems not to have used it (Sanders; Hillmer). The Gospel of John was especially favored in the second century by gnostic Christians and Montanists, which may have inhibited its use by others. But reservations about this Gospel must have rested mainly on its far-reaching differences from other, more popular Gospels, and it was easier to neglect or reject it than to account for the discrepancies.

2.1.2. Multiple Gospels. The availability of multiple Gospels was problematic on two counts. First, from the beginning, Christians had used the term *gospel* to designate the fundamental Christian message, which was singular and unitary. When the term began to be applied also to written accounts about Jesus (a development attested by Justin), it was natural to think that there should be only one. Second, Christians regarded the written Gospels as historical records, and therefore the considerable discrepancies among them were found troublesome. These problems made it difficult to acknowledge or to use multiple Gospels.

The desire for a single, self-consistent and theologically adequate Gospel produced two conflicting tendencies in the history of Gospel literature: on the one hand, toward a continuing proliferation of Gospels, and on the other toward a reduction of their number, whether by preferring one to the exclusion of all others or by conflating several into one (Cullmann, Merkel). The signal but not the sole instance of the latter tendency was the *Diatessaron* of Tatian (c. A.D. 170), who wove together the texts of Matthew, Mark, Luke and John and drew also on some additional materials in order to create a single Gospel in place of many. The production of the *Diatessaron* also shows that, although the contents of written Gospels were valued, their texts could still be freely altered. Indeed, the larger manuscript tradition of the Gospels reveals that various additions to and harmonizations among the Gospels were made during the second century (Petersen), so that their texts were scarcely firmly fixed, much less considered sacrosanct.

2.1.3. Limited Gospel Collections. The problem of multiple and to some extent discordant Gospel writings was resolved in another way toward the end of the second century by the creation of

a limited collection of Gospels. The first witness to such a collection is Irenaeus, bishop of Lyons in Gaul (c. A.D. 180). He sharply criticized Christian groups that made use of only one Gospel (Irenaeus *Haer.* 3.11.7) and insisted, with the aid of elaborate allegorical warrants, that there could be neither more nor fewer than four Gospels, namely, John, Luke, Matthew and Mark (Irenaeus *Haer.* 3.11.8-9). Irenaeus speaks of the gospel as given "under four aspects" that are mutually complementary, or as having a "four-fold form."

This solution, which was ingenious in preserving the idea of the unity of the gospel while allowing a certain multiplicity through distributive authorship, seems to have arisen in the last decades of the second century (but cf. Skeat). It had not gained any strong foothold in the East, for about the same time in Egypt Clement of Alexandria made frequent appeal to the *Gospel of the Hebrews* and *Gospel of the Egyptians*, while in Syria the *Gospel of Peter* was still in use (Eusebius *Hist. Eccl.* 6.12.2), and Tatian's *Diatessaron* gained broad popularity. Even in Rome the Gospel of John could be drawn into question in the early third century (Epiphanius *Haer.* 51.3ff.). Nevertheless, just such a collection is represented in an early manuscript, P⁴⁶, dating from the early third century and containing the four Gospels and Acts, and during the third century the four-fold Gospel came into broad use and ultimately displaced all competitors.

2.2. The Pauline Letters. The letters of Paul are not only the earliest extant items of Christian literature but also the earliest Christian literature to be circulated and collected. One or more collections of Paul's letters must have come into being about the end of the first century, for by the early second century Ignatius, Polycarp and the author of 2 Peter were all acquainted with multiple letters of Paul, presumably in collections of some sort. But the early history of Paul's letters can only be inferred on the basis of editions of the Pauline corpus that were current in the second century and later.

2.2.1. Marcion's Edition. The first witness to a full-blown edition of the Pauline corpus is Marcion, about A.D. 140. His edition consisted of ten letters, in this order: Galatians, 1 and 2 Corinthians, Romans, 1 and 2 Thessalonians, Laodiceans (= Ephesians), Colossians, (Philemon?) and Philippians. It has become increasingly clear, however, that Marcion's Pauline corpus

was textually and structurally derivative from another (Frede; Dahl; Clabeaux). Notably, with the exception of Galatians, Marcion's order of the letters follows the principle of decreasing length, with letters to the same communities being counted together. But since the principle of decreasing length was not consistently followed by Marcion and had no real importance for him, his edition must have depended upon another for which this principle was constitutive. This earlier and probably original edition of Paul's letters was consistently ordered by decreasing length, counted together letters to the same community, and likewise had ten letters, but in this order: 1 and 2 Corinthians, Romans, Ephesians, 1 and 2 Thessalonians, Galatians, Philippians, Colossians and Philemon. Such an edition of the letters throws emphasis on the number of communities to which Paul wrote, namely, seven churches. This edition must go back to near the beginning of the second century and has a good claim to being the earliest form of the Pauline collection. Several observations support this claim.

2.2.2. *A Seven-Churches Edition.* An edition of Paul's letters as "letters to seven churches" was responsive to a problem that the early church saw in Paul's letters, namely, their particularity. Since Paul wrote to individual churches about issues of local and immediate interest, it was a question whether and how such letters could be relevant and useful to other churches. It can be seen from the manuscript tradition that early on, probably in the first century, the problem of the particularity of Paul's letters was met by textual emendations that generalized the addressees of some letters (1 Cor 1:2; Rom 1:1, 7; Eph 1:1).

An edition that presented the letters as written to precisely seven churches and thus (since the number seven symbolized universality) to Christendom at large met the same issue but more effectively (Dahl). It may be that a seven-churches edition of Paul's letters is reflected in the otherwise peculiar fact that in the late first and early second century we find two other groups of letters similarly addressed to seven churches: the letters of the Apocalypse (Rev 2:1—3:22) and the letters of Ignatius of Antioch.

2.2.3. *Other Forms of Pauline Letter Collections.* During the second century other forms of the Pauline letter collection arose. Apart from his own textual revisions, Marcion's edition was

probably not of his making. An order like his, placing Galatians at the head, must have antedated him and was perhaps an effort to adapt an order by decreasing length toward a chronological order (Frede). That this arrangement is also presupposed by the so-called Marcionite prologues, which are not Marcionite, indicates that the edition beginning with Galatians was a catholic product, not a Marcionite innovation (Dahl). Far more widespread, however, was a form of the collection presenting the same ten letters of Paul but ordering them individually by decreasing length, thus producing this arrangement: Romans, 1 Corinthians, 2 Corinthians, Ephesians, Galatians, Philippians, Colossians, 1 Thessalonians, 2 Thessalonians, Philemon. The earliest manuscript evidence of this edition is P⁴⁶, dating to about A.D. 200, in which, however, Hebrews is included after Romans. The epistle to the Hebrews was not an original element of this edition, and in the first several centuries was current mainly in the East (see also below).

2.2.4. *The Pastoral Epistles.* Like Hebrews, the Pastoral Epistles (1-2 Tim, Tit) do not appear to have belonged to any of the identifiably early editions of the *corpus Paulinum*, and they found no place even in P⁴⁶. It could be and apparently was objected that because they were addressed to individuals they lacked catholic relevance even more obviously than did Paul's letters to particular churches. Nevertheless, by the early third century they were made an addendum to the community letters and were valued not only for their ostensibly apostolic teaching but also for their practical administrative directives.

2.2.5. *Theories About Circulation of Paul's Letters.* How Paul's letters to specific churches initially entered into general circulation, became widely authoritative, were collected and edited is largely obscure, and several theories have been offered in explanation of this (Lovering). These theories depend partly on evidence about the shape and substance of second-century editions, partly on the internal evidence of the corpus and partly on general considerations.

A traditional view is that from the outset Paul's letters were highly valued by the communities that had received them, soon came to be exchanged among Paul's churches and then were made available to still other churches. In this way small partial collections could have emerged in different churches of the Pauline

mission field until, by a natural process of accretion, all of Paul's letters would finally have been brought together and published as a group. It is problematic for this view that some of Paul's letters were apparently lost (1 Cor 5:9; 2 Cor 2:4) or perhaps fragmentarily preserved. Since the letters were concerned with issues of local and immediate relevance, it cannot be taken for granted that their original recipients would have thought them permanently valuable or that other communities would have taken much interest in them. It can also be objected that the author of Acts evinces no knowledge of Paul's letters, which would be strange if the letters had early entered general circulation.

For these reasons, E. J. Goodspeed proposed that Paul's letters held only immediate and passing interest even for their original recipients, were soon neglected and were rescued from obscurity only by the publication of Acts, which stimulated some admirer of Paul to search out his letters among the churches mentioned in Acts and then to publish them as a collection. This collector, moreover, was thought to have written Ephesians as a summation of Paul's thought and a frontispiece to the collection, which thus consisted of nine authentic letters plus Ephesians. For all its ingenuity, this theory falters on many fronts: that Paul's letters were soon forgotten is no less an assumption than that they quickly gained notoriety; it is unlikely that their retrieval was occasioned by Acts since Acts does not mention the letters; and Ephesians is not a summary of Pauline thought, nor is there any evidence that it ever stood at the head of the collection.

Yet another theory was advanced by W. Schmithals, who proposed that the Pauline letters as we have them are editorial composites of diverse fragments, reworked to incorporate anti-Gnostic polemic and consolidated in a collection of precisely seven letters (1 and 2 Corinthians, Galatians, Philippians, 1 and 2 Thessalonians, Romans) in order to signify Paul's ecumenical relevance. The larger aim of this effort was to provide the church with a powerful weapon in its struggle against Gnosticism by representing Paul as a sternly anti-Gnostic apostle. This theory furnishes a context and motive for the extensive editorial confections that Schmithals discovers in the Pauline corpus, but few would agree that most or all of the Pauline letters are redactional products, and little patristic

or manuscript evidence supports the idea that the initial collection consisted of precisely seven letters.

A far more plausible theory is that the collection of Paul's letters was produced by a Pauline school, a group of persons who acknowledged Paul's authority, valued his teaching and sought to perpetuate, interpret and extend his influence after his death (Schenke). It is argued that such a school may have had roots in the circle of Paul's historical associates and coworkers, who would have taken up Paul's mantle after his death. Its activity would explain why the Pauline corpus shows evidence of some editorial revision in the authentic letters and also contains arguably *pseudonymous letters that are indebted to the authentic letters but seek to interpret and elaborate Paul's teaching in view of post-Pauline circumstances and issues (see *DLNTD*, Pauline Legacy and School).

From the end of the first century onward, Paul's letters commanded wide recognition and use (Rensberger; Lindemann) among Christian communities within and beyond Paul's original missionary field. They were valued not only for their substance, but also because few other writings were available that were certifiably from apostolic figures.

2.3. The General (Catholic) Epistles. The third major component collection of the NT canon comprises the seven letters: 1 and 2 Peter, James, Jude and 1, 2 and 3 John. Eusebius, early in the fourth century, is the first to refer to them as a collection (Eusebius *Hist. Eccl.* 2.23.25, "the seven called catholic"), though Eusebius himself reckoned all the General Epistles except 1 Peter and 1 John as "disputed" (Eusebius *Hist. Eccl.* 2.25.3). In fact only these two appear to have been widely known and used in the second and third centuries (Eusebius *Hist. Eccl.* 3.3.1; 3.39.17; 4.14.9).

During that time the other General Epistles were largely neglected. The earliest use of Jude was made by the author of 2 Peter (2 Pet 2:1-22, incorporating much of Jude 4-16), and it was sparingly cited by Clement of Alexandria, Origen and Tertullian. The first explicit mention of 2 Peter is provided by Origen (*Comm. Joh.* 5.3, disputing its authenticity). Irenaeus quotes from 1 and 2 John (Irenaeus *Harr.* 3.16.5, 8); Clement of Alexandria speaks of 1 John as the "larger epistle," thus implying at least a knowledge of 2 John (Clement of Alexandria *Strom.* 2.15.66);

and Origen apparently knew 2 and 3 John but considered them of doubtful genuineness (Eusebius *Hist. Eccl.* 6.25.10). Little else is heard of 2 and 3 John in the second or third centuries. The collection of seven General Epistles appears to have arisen only in the late third century. It was conceivably formed to document teaching ascribed to primitive apostles, perhaps principally the "pillar apostles" James, Peter and John (cf. Gal 2:9; Luhrmann), and to provide a broader apostolic witness than was offered by the letters of Paul.

2.4. Other Writings. Aside from these three groups, the canon of the NT came to include only two other writings, the Acts of the Apostles and Revelation, each of which had its individual history of reception and use.

2.4.1. Acts. Acts was originally the companion piece of the Gospel of Luke, both being parts of a continuous two-volume work (Acts 1:1), but its separation from Luke occurred early, when Luke was treated as one Gospel among others and eventually incorporated into the fourfold Gospel. The early history of Acts as a separate work is obscure. A knowledge of it seems to be shown by Justin (Justin Martyr *Apol. II* 50.12), but the first clear use of it was made late in the second century by Irenaeus (Irenaeus *Haer.* 3.12.1-15), who appealed to it in proof of the consensus of the apostles and their teaching, and it was cited also by Clement of Alexandria and Tertullian. While its early neglect can perhaps be accounted for by reason of its peculiar literary type, its depiction of the apostolic unity of the early church made it a valuable resource in the struggle against heterodox groups in the late second century.

2.4.2. Revelation. Revelation had an uneven history in the ancient church, even though it makes some of the most explicitly authoritative claims of all early Christian writings. Composed around A.D. 96, it was first clearly mentioned by Justin half a century later (Justin Martyr *Dial. Tryph.* 81.15). Nearer the end of the second century Irenaeus, himself a chiliast, mentioned it frequently. It was apparently well-known in Gaul (Eusebius *Hist. Eccl.* 5.1), and Tertullian knew and used it in North Africa. Thereafter it was widely received and used in the West, although it came under temporary dispute, along with the Gospel of John, because of the appeals made to these writings by Montanists.

In the East, however, Revelation fared less

well. Though it was variously used by Melito of Sardis, Theophilus of Antioch and Clement of Alexandria in the late second century, and also by Origen, Revelation was drawn into question about the middle of the third century. A certain Nepos wrote a treatise, "Refutation of the Allegorists," rejecting the allegorical interpretation of Revelation (practiced by Origen, among others) and insisting on a literalist approach in support of a millenarian view. Dionysius, bishop of Alexandria, responded with a treatise "On Promises" (excerpted in Eusebius *Hist. Eccl.* 7.25), in which he persuasively questioned the apostolic origin of Revelation, and thereafter Eastern Christian writers generally rejected it.

2.4.3. Hebrews. Although it was eventually drawn into the orbit of the Pauline epistles, the epistle to the Hebrews had a fate in the West that was in some respects comparable to that of the Apocalypse in the East. Hebrews had been known to Clement of Rome, and possibly to Hermas and to Irenaeus, but otherwise it was neglected in the West until the fourth century. The reason was probably its teaching against the possibility of any repentance after baptism (Heb 6:4-8; 10:26-31; 12:14-17), a view that appealed to moral rigorists like the Montanists and Tertullian but ran counter to the penitential ideas and practices developing in the Western church. In addition, Hebrews had no strong tradition of apostolic authorship even in the East, though there it was variously attributed to Paul (Eusebius *Hist. Eccl.* 6.25.11-14). Thus only in the late fourth century did Hebrews acquire general use and authority in the Western church.

2.4.4. Other Writings. Apart from these writings, many others that were not ultimately reckoned canonical nevertheless attained scriptural or nearly scriptural status in the first several centuries. Among these *1 Clement* was prominent. Irenaeus spoke highly of it (Irenaeus *Haer.* 3.3.3), and Clement of Alexandria called it "a writing of the apostle Clement" (Clement of Alexandria *Strom.* 4.17). Eusebius underlines its persistent popularity by remarking that it "was publicly read in the common assembly in many churches in the old days and in our own time" (Eusebius *Hist. Eccl.* 3.16).

Similarly, the *Epistle of Barnabas* early gained authority, especially in the East. Clement regarded it as a letter of the apostle Barnabas (Clement of Alexandria *Strom.* 2.6; 7.5). The *Shepherd of Hermas*, composed in Rome in the

first half of the second century, claimed to be an inspired revelation and was fully acknowledged as Scripture by Irenaeus (Irenaeus *Haer.* 4.20.2), Clement of Alexandria (Clement of Alexandria *Strom.* 1.17.29; 2.1.9, 12) and Tertullian (Tertullian *De Orat.* 16). It was appreciated for its teaching of the possibility of postbaptismal repentance (cf. Hebrews) and came into wide use in the East as well as the West (see Apostolic Fathers).

Other writings that gained a good measure of authority and bid fair for recognition as Scripture included the *Apocalypse of Peter*, *Didache*, *Gospel of the Hebrews*, *Gospel of Peter* and *Acts of Paul*. Indeed, some of these writings appear in canon lists of the fourth and fifth centuries and even in some early manuscripts of the Bible.

In sum, a considerable number of early Christian writings, even beyond those mentioned here, were widely reckoned as Scripture in the ancient church and were used as such. Others still had a more limited local or regional currency, and some undoubtedly are no longer known to us. Among all these writings, those that came to be most broadly known and used as Scripture were our four Gospels and the letters of Paul, but they were only foremost among many valued documents.

3. The Shaping of the Canon.

Strictly speaking, the canonical formation of the NT occurred with the creation of closed lists of authoritative writings. Such catalogs apparently began to be drawn up only in the fourth and fifth centuries. While it has been commonly supposed that one such list, the Muratorian Fragment, was created in Rome in the late second or early third century, it is increasingly acknowledged that this list had a fourth-century, Eastern origin (Sundberg; Hahneman). Hence there is a widespread reluctance to use the terms *canon* and *canonical* in reference to the preceding period. At the same time, it has to be recognized that by the beginning of the third century not only had many Christian writings acquired the status of Scripture but also some had been shaped into smaller collections that were effectively closed and definitive, namely, the fourfold Gospel and the Pauline corpus.

3.1. Early Canon Lists. Numerous canon lists survive from the ancient church, only some of which can be mentioned here. Although they are broadly similar, these lists do not all have

the same form. Some merely list accepted or recognized writings (sometimes individually, sometimes as groups) without elaborative comments, while others provide descriptions and explanations, and some work, explicitly or implicitly, with more than two categories. And the lists vary in stipulating what writings are canonical.

3.1.1. Eusebius. The earliest discussion of authoritative books that approaches the form of a catalog is provided by Eusebius, bishop of Caesarea, in his *Church History* (Eusebius *Hist. Eccl.* 3.25.1-7), written in the first quarter of the fourth century. Here Eusebius allocates into three categories those early Christian writings known to him that had been variously in use up to his time: (1) the "acknowledged" books (*homologoumena*): the four Gospels, Acts, the letters of Paul (presumably including Hebrews), 1 John, 1 Peter and, "if it seems desirable," Revelation; (2) the "disputed" (*antilegomena*) and "spurious" (*notha*) books: James, Jude, 2 Peter, 2 and 3 John, *Acts of Paul*, *Shepherd of Hermas*, *Apocalypse of Peter*, *Epistle of Barnabas*, *Didache*, and, "if this view prevail," Revelation and the *Gospel of the Hebrews*; and (3) the "fabrications of heretics," namely, the *Gospels of Peter*, *Thomas* and *Matthias* and *Acts of Andrew and John*.

This catalog is not clear-cut: there is a manifest uncertainty about Revelation, and the use of the subcategory *spurious* under the "disputed" books likewise indicates a certain fluidity of regard. It was apparently not possible in the time of Eusebius to make a simple division between acknowledged and disputed books. Moreover, the variety of categories and the admitted differences of opinion about which writings belong to them suggest that the use of such categories was relatively new in Eusebius's day and that on many books judgments diverged. Hence with Eusebius the effort to define a fixed list or canon of Christian Scriptures was in its early stages.

3.1.2. Codex Claromontanus. Another important early list is preserved in the Codex Claromontanus, a bilingual (Greek/Latin) manuscript of the sixth century, though the list itself seems to have a fourth-century and Eastern origin. It stipulates as comprising "the holy scriptures" the four Gospels, ten letters of Paul, the seven General Epistles, *Barnabas*, Revelation, Acts, the *Shepherd of Hermas*, *Acts of Paul* and *Apocalypse of Peter*. The omission of Philippians and 1 and 2 Thessalonians is almost certainly accidental, so that originally this list proposed a

canon of thirty writings (or possibly thirty-one, if Hebrews was also accidentally overlooked). However, a scribal mark stands before *Barnabas*, the *Shepherd*, *Acts of Paul* and *Apocalypse of Peter*, which probably indicates some hesitation about these items by the writer or a later copyist.

3.1.3. *Cheltenham Canon*. The so-called Cheltenham (or Mommsen) Canon, a stichometric catalog that originated in North Africa about A.D. 360, proposes a canon of twenty-four books (with appeal to the twenty-four elders of Rev 4:10): the four Gospels, thirteen unnamed letters of Paul, Acts, Revelation, three Johannine letters and two letters ascribed to Peter. The addition of the phrase *una sola* ("one only") after the Johannine and the Petrine letters suggests a preference for only 1 John and 1 Peter, and thus it echoes the early tendency to acknowledge only these two among the General Epistles.

3.1.4. *Cyril of Jerusalem*. Cyril, bishop of Jerusalem (A.D. 315-386), in the fourth of his *Catechetical Lectures* (c. A.D. 350), warns against the use of "apocryphal" or "disputed" writings and provides a catalog of writings that should be read as Scripture. His list includes the four Gospels, Acts, seven General Epistles and fourteen epistles of Paul, for a total of twenty-six books. Notable in this Eastern list is the absence of Revelation. Cyril relegates all others to "a secondary rank" and thus makes a clear distinction between what is read in the churches and what is not.

3.1.5. *Athanasius*. Importance has traditionally been attached to the canon list set forth by Athanasius, bishop of Alexandria, in his Thirtieth Festal (Easter) Letter, issued in 367. Seeking to regularize Egyptian usages and forestall heretical ones, he provided a list of those writings "handed on by tradition and believed to be divine," and his list is the first to name as exclusively authoritative precisely the twenty-seven books that belong to our NT. Athanasius mentions other books that, though not to be read in church, might yet be used by catechumens, namely, the *Didache* and the *Shepherd*, two works that were widely popular in the earlier period. Athanasius's list appears not to have been fully decisive even for Egypt (Brakke), let alone for other regions, and it should be regarded not as the final result but only as an anticipation of the final shape of a still-developing canon.

3.1.6. *Epiphanius*. Epiphanius, bishop of Salamis in Cyprus (c. A.D. 315-403), provided a cata-

log of Christian writings in his antiheretical treatise *Haereses* (or *Panarion*) 76.5. Here he stipulates the four Gospels, Acts, fourteen letters of Paul, James, 1 Peter, 1 John, Jude and Revelation. While omitting 2 Peter, 2 and 3 John, this list is remarkable because it includes Revelation, which was unusual in Eastern lists, and because it lists among Christian books the *Wisdom of Solomon and *Sirach, and thus it reckons twenty-six writings as canonical.

3.1.7. *Muratorian Canon*. The Muratorian Canon, which probably belongs to the same period and was originally composed in Greek, is fragmentary at the beginning, where Luke is mentioned as "the third Gospel book." It must have discussed Matthew and Mark first. In addition to the four Gospels, it lists Acts, thirteen letters of Paul, Jude, 1 and 2 John, Wisdom of Solomon, Revelation and *Apocalypse of Peter*, for a total of twenty-four books, though it is noted that some do not wish the *Apocalypse of Peter* to be read in the church. Explicitly rejected are an epistle of Paul to the Laodiceans and certain unnamed books of heretics. The *Shepherd* is named as suitable for reading, but not in the church. The Muratorian Canon is distinguished from other catalogs by its labored warrants for the various books it approves. The careless Latin translation in which we have it cautions against assuming that the original document is represented with full accuracy.

3.1.8. *Gregory of Nazianzus*. Two catalogs of canonical books have been transmitted under the name of Gregory of Nazianzus (A.D. 329-389). The first (Gregory of Nazianzus *Carm.* 12.30-39), doubtless written by him, lists the four Gospels, Acts, fourteen letters of Paul and seven General Epistles. Revelation is omitted in the Eastern custom. The second list is not from Gregory but from his contemporary Amphilochius of Iconium (fl. A.D. 380). In his list of "the canon of inspired scriptures" (Amphilochius of Iconium *Iamb. ad Sel.* 7.289-331), he included the four Gospels, Acts and fourteen letters of Paul. Otherwise he allowed that "of the catholic epistles, some maintain we ought to accept seven, and others three only, one of James, one of Peter, and one of John," and that Revelation "some reckon among the scriptures, but the majority say it is spurious." A considerable uncertainty is apparent, and beyond the Gospels, Acts and the Pauline letters, only James, 1 Peter and 1 John belong to consensus.

3.1.9. Church Councils. Catalogs of the NT were also drawn up by church councils of the fourth and fifth centuries. One of the earliest of these was adopted by the Council of Laodicea (A.D. 363), which specified "only the canonical books" as suitable for reading in church. It enumerated twenty-six of these, precisely those in our NT, save that Revelation was excluded. We also have records of two North African councils of the late fourth century that promulgated lists of authoritative books. The Council of Hippo (A.D. 393) and the Council of Carthage (A.D. 397) both named the twenty-seven books of our NT, but, in accordance with the Western disposition toward Hebrews, they speak of "thirteen letters of the Apostle Paul" and "of the same, one to the Hebrews."

3.1.10. Early Manuscripts. Although they are not catalogs, the contents of the earliest complete manuscripts of the NT are instructive about the state of the canon in the fourth and fifth centuries. Codex Sinaiticus, a fourth-century manuscript, contains all twenty-seven writings of our NT, but these were followed by the *Epistle of Barnabas*, the *Shepherd of Hermas* and perhaps some other writings (the end of the manuscript is lost). Codex Alexandrinus, written in the fifth century, also contains all twenty-seven writings of our NT, but after them it has also *1 Clement*, *2 Clement* and the *Psalms of Solomon*.

The frequent appearance of catalogs of scriptural books during the fourth century, and their absence before that time, indicates that the question of the precise limits of Scripture, and hence the notion of a canon, arose in this period, just as the variations in the terminology, categories and contents of these various catalogs show that the situation was still somewhat indeterminate and that some points were resolved only at a late date. The recognition of Revelation in the East and of Hebrews in the West was finally negotiated in this period, and hesitations about some of the General Epistles (Jude, 2 Peter, 2 and 3 John) were overcome. But the four Gospels, the letters of Paul and Acts are staple items of all such lists, and this indicates that they had become so firmly established in use and esteem from an early time that no question could arise about their place. Hence by the end of the fourth century there was a very broad, if not absolute, unanimity within the Christian community about the substance and shape of its canon of authoritative Scripture. This is remarkable in-

sofar as there was never any official, ecumenically binding action of the ancient church that formalized this canon.

3.2. Forces in the Formation of the Canon. Because the canonical formation of the NT was only a dimension of the larger life of the ancient church, many forces contributed to it in one way or another. But their significance has been diversely estimated, and often it is hard to determine their particular consequences.

3.2.1. Conflicts with Heterodoxy. It has commonly been claimed, especially by those who regard the second century as the decisive period in the history of the canon (Harnack; von Campenhausen), that the chief forces in the formation of the canon are to be sought in conflicts with heterodox movements, especially Marcionism, Gnosticism and Montanism. Marcion is often represented as the prime mover, compelling the church to create a more comprehensive canon of its own as a counter to his and providing the basic structure of Gospel and apostle, such that the NT canon is seen as "an anti-Marcionite creation on a Marcionite basis" (Harnack). It has been suggested that the Gnostics, who both produced writings of their own and appealed to unwritten, esoteric traditions of apostolic teaching, stimulated the church to create a canon that excluded gnostic writings and furnished instead a broad-based and accessible collection of apostolic writings embodying catholic teaching. And it has been argued that the Montanists, by invoking charismatic authority and offering new revelations, motivated the church to close its canon and limit authoritative revelation to traditional authoritative documents.

But none of these claims is persuasive. The Pauline letters had been collected and were widely valued prior to Marcion, and the dual authority of "the Lord and the apostles" was already well established. Gnostic groups appear to have valued most of the same literature as Christians at large but brought to them different hermeneutical assumptions and methods and so warranted their systems at the level of interpretation. And in response to Montanism the church did not deny continuing manifestations of the Spirit or confine revelation to a fixed number of books. While each of these movements accentuated questions about the appropriate resources, authorities and limits of Christian teaching, there is no good evidence that they had significant, much less decisive,

consequences for the development of Christian Scriptures, for the much later definition of the canon of those Scriptures, or for the structure or content of the NT canon.

3.2.2. Use in the Church. To the contrary, in the larger history of the NT canon the primary force was the developing pattern of the use of Christian writings in the early church, and principally their use in the liturgical assembly as resources of preaching and instruction. In drawing up his list of acknowledged books, Eusebius appealed almost exclusively to the traditional usage of those writings in the churches from an early time or to their use by prominent Christian writers such as Irenaeus, Clement of Alexandria and Origen.

In the nature of the case, the force of traditional usage could not come explicitly into play until the third and fourth centuries, by which time the church had some retrospect on its customary practices. Yet it is possible to see that the books that were held in highest regard in the fourth century were those that had been longest and most widely in use during the first three centuries. Statistical studies of the frequency of citation (relative to length) of early Christian writings demonstrates that from the second century onward, the Gospels and the principal Pauline letters were cited with very high frequency, that the other books eventually included in the canon were much less often called into service, and that books ultimately excluded from the canon were used very little (Stuhlihofer).

Thus the NT canon that finally took shape appears fairly to reflect which writings had in the earlier period consistently claimed the attention of the church and proven most useful in sustaining and nurturing the faith and life of Christian communities. To this extent the canonization of early Christian writings did not so much confer authority on them as recognize or ratify an authority that they had long enjoyed, making regulative what had previously been customary. The catalogs of the fourth and fifth centuries are for the most part articulations of a consensus of usage that had arisen through the practices of the preceding centuries, and they aimed to exclude rather than to include.

3.2.3. Other Influences. In relation to some writings, however, the pattern of usage was either unclear or regionally inconsistent, and in these cases other forces came into play. The

judgments of prominent Christian thinkers were often influential on the fate of individual books. Athanasius's favorable regard for Revelation was undoubtedly important in repristinating its standing in the East, which had suffered from the criticisms of Dionysius. Similarly, the eventual acceptance of Hebrews in the West, where it had had little currency, depended heavily on its acknowledgment by such figures as Hilary, Ambrose and Jerome.

Moreover, what was at stake in the history of the canon was not merely texts but equally the way they were understood, so that the history of interpretation also played a role. For example, Revelation finally found acceptance in the East only on the presupposition of its allegorical exegesis; earlier the Gospel of John was capable of being accommodated to the other Gospels on the premise that it was a "spiritual Gospel" and not a straightforward historical account; and even Paul's letters had to be read and understood as having catholic relevance, in spite of their particularity.

On a broader level, the literal-historical type of interpretation characteristic of Antiochene Christianity tended to favor a smaller body of authoritative writings, while the allegorical approach that typified Alexandrian Christianity allowed a much larger scope to Scripture. The canon that eventually took shape represents to some extent a compromise among regional usages, including more books than were traditionally recognized in Syria (e.g., all the General Epistles) but fewer than in Egypt (e.g., *Gospel of the Hebrews*, *1 Clement*, *Barnabas*, *Shepherd*).

Nor are certain events and circumstances in the life of the early church without relevance to the development of the canon. Early on, the relative paucity of Christian writings, especially in small and provincial communities, may have encouraged the use of almost anything that came to hand. In larger Christian centers, the rapid diffusion and local accumulation of Christian writings must have posed questions about which books ought to be used, and how. The experience of persecution sometimes entailed the confiscation and destruction of Christian books by Roman authorities, most notably in the Great Persecution (A.D. 303-305) under Diocletian. The requirement that Christian books be surrendered probably provoked pressing questions in the church about which books were sacred and should by no means be handed over and others

which might be given up to imperial agents.

Even the technology of book production had some bearing on the canonical formation of the NT. Early codices were not capacious, normally running to a maximum of about two hundred leaves, and most were much smaller. Christian Scriptures could not be collected and provided together in one volume, and early codices usually contained only one or two documents or a discrete collection. Not until the fourth century was it possible to manufacture codices that could contain many writings, and even then it was rare that whole Bibles (pandects) were produced. In their absence, the importance of lists or catalogs of Christian Scriptures is obvious. Still, any effort to produce a whole Bible or even a whole NT raised the practical issue of what should be included in it. All of these considerations belong, with varying importance, to the formation of the NT canon, but none of them had the fundamental and decisive consequence that followed from traditional use.

3.3. Criteria of Canonicity. Beyond the historical forces that were at work in the formation of the canon, certain theoretical considerations were also adduced, especially in the fourth and fifth centuries, by way of judging the suitability of writings for inclusion in the canon, most especially of writings about which there was some uncertainty. These so-called criteria of canonicity were mainly traditional use, apostolicity, catholicity and orthodoxy (Ohlig).

3.3.1. Traditional Use. As previously indicated, the primary basis for the inclusion of any document in the canon of the NT was its longstanding, widespread and well-established use among Christian communities. Such traditional usage was a matter of fact before the church began to reflect on its historic practice and made it an explicit criterion for canonical standing. Certain writings, including the Gospels and Paul's letters, had been used so widely and so long that there could be no question about their place in the canon. But if customary use was a clear prerequisite, it was not in every case sufficient by itself. Some documents that adequately met this standard were not finally included in the canon (e.g., *Shepherd of Hermas*, *Didache* and *1 Clement*). Other criteria were of a more theoretical sort.

3.3.2. Apostolicity. From an early time Christians considered their Scriptures to be apostolic. This did not necessarily mean that authoritative documents must have been written by apostles,

though from an early time apostolic authorship was valued. This is shown not only by the general authority that quickly accrued to Paul's letters but also by the development of traditions attributing certain anonymous Gospels (Matthew and John) to apostolic authors or at least to apostolic sources (Mark and Luke) by the use of apostolic *pseudonymity (e.g., 2 Peter, the Pastoral Epistles, *Barnabas*), and by the disuse that affected some writings by reason of doubts raised about their apostolic authorship (Revelation, Hebrews). Yet some documents explicitly claiming apostolic authorship either failed to gain canonical standing (e.g., *Didache*, *Barnabas*, *Gospel of Peter*, *Apocalypse of Peter*) or gained it only with difficulty (e.g., 2 Peter, Jude). Thus the criterion of apostolicity in the narrow sense of authorship was hardly decisive. In fact, the conception of apostolicity was elastic and might refer, beyond direct authorship, to indirect authorship, derivation from the apostolic period or conformity of content with what was generally understood as apostolic teaching.

3.3.3. Catholicity. Catholicity was another consideration: in order to be authoritative a document had to be relevant to the church as a whole and even intended to be so by its author. Writings addressed to only small groups or having a narrow purpose were accordingly devalued. Most of the writings that became canonical were originally intended for limited constituencies, and some even for individuals. Hence they failed to meet this criterion, but this was not so obvious to the ancient church or was counterbalanced by other factors. What is at work in the ideal of catholicity is a preference for broad accessibility and general usefulness, as against private, idiosyncratic or esoteric resources.

3.3.4. Orthodoxy. It was a largely tacit judgment that for a writing to be authoritative, let alone canonical, it must be orthodox; that is, its content had to correspond with the faith and practice of the church as that was generally understood. Such a judgment presupposes that what the church took to be its proper teaching was somehow available independently of Scripture, namely, in the rule of faith (*regula fidei*), a terse, traditional summary statement of principal convictions (cf. Irenaeus *Haer.* 3.1.1-2; Tertullian *De Praescr.* 8-12). Since the rule of faith was itself understood to be a summary of apostolic teaching derived through apostolic tradition, there could scarcely be discord between it

and Scriptures that were also taken to be apostolic.

These criteria were variously applied in the history of the canon, but rarely with systematic rigor. The *Gospel of Peter* was removed from use in Rhossus by Serapion, bishop of Antioch, because of doubts about its orthodoxy (Eusebius *Hist. Eccl.* 6.12.2-6), in spite of its putative apostolic origins. The *Shepherd of Hermas*, though catholic, orthodox and widely used, suffered because it did not derive from the time of the apostles (Muratorian Canon, ll. 73-80). The epistle to the Hebrews was ultimately accepted as canonical in the West in spite of persistent uncertainty about its authorship. Once established in general use, the catholic status of Paul's letters was taken for granted in spite of their particularity.

Such examples indicate that the more theoretical criteria of apostolicity, catholicity and orthodoxy were selectively used. Although they may be distinguished in respect of their specific foci, these criteria are closely related. The ancient church assumed that whatever was apostolic, even in the broadest sense, was also catholic and orthodox, and although what was orthodox and catholic might not be apostolic in the strictest (authorial) sense, it conformed by definition to a tradition that was considered apostolic in substance. While they were important as traditional warrants, such criteria were rarely the effective reasons for the positive canonical recognition of any writing. Rather they were employed mainly either to disqualify the authority of certain writings or to warrant the standing that others had attained by reason of established use.

CATENA (4Q177)

This composition, 4QCatena^a (4Q177), is an eschatological commentary on Psalms 6-17 and a number of prophetic texts. It is dated palaeographically to the first half of the first century B.C. and consists of more than thirty nonadjacent fragments, making the material reconstruction of the scroll extremely difficult and tentative. While the editor of the principal edition did not attempt a reconstruction (Allegro, 67-74, pl. XXIV-XXV^a), this was remedied by J. Strugnell, who offered a partial reconstruction and corrected a number of misreadings in the original publication (236-48, 260-61). The most thorough material reconstruction has been recently proposed by A. Steudel (1992, 1994), who argues on the basis of similar content and style that 4QCatena and *4QFlorilegium (4Q174) make up two different copies of the same literary work, identifying it as 4QMidrEschat^{a,b}, "A Midrash on Eschatology." While this is possible, the lack of any overlap between the manuscripts remains problematic. (For an English translation roughly following Steudel's reconstruction see García Martínez, 209-11, and for Strugnell's reconstruction see Wise, Abegg and Cook, 283-87.)

The manuscript consists of a series of quotations from Psalms 6-17 followed by their interpretation, hence the original title "Catena" (i.e., a string of interpretations). More properly the composition is a thematic midrash with some parallels with earlier *pesharim (Steudel 1994, 190-92; 1992, 538). The verses from Psalms are cited or alluded to in consecutive order according to the MT Psalter, with possibly two exceptions (Pss 11; 12; 5(?); 13; 16; 17; 6 according to Steudel [1994, 129], but Pss 6; 11; 12; 5(?); 13; 16; 17 according to Strugnell [236, 245]). The commentary on the psalms is typically introduced by

a peshar formula ("its interpretation is"), while quotations from prophetic books, which figure prominently in the interpretation, are typically introduced by the phrase "it is written" (*ktwb*).

The composition itself concerns the last days (*'hryt hymym*), the time of persecution and testing of the righteous before the final judgment when the wicked will be destroyed and the just will be delivered. This period before the end is characterized by the distress and suffering of the children of light on account of *Belial and his agents. As with other "sectarian" writings from *Qumran, the enemies are described as "the community of those seeking easy interpretations" (*'dt dwsy hlqwt*; cf. *Damascus Document; *Thanksgiving Hymns; 4QP^aNah; etc.). They will rise up and seek to destroy the community (*yahad*), but the righteous will be protected and delivered by God's angel of truth. Ultimately good will triumph and evil will perish at the final reckoning. The composition also mentions the coming of the "Interpreter of the Torah" (*dws' htwrh*). This eschatological figure is also mentioned in 4QFlorilegium and other Qumran writings and may refer to the anointed *priest (or possibly prophet) who will usher in the new and just reign of God.

While the fragmentary state of this work does not allow much elaboration, the general eschatological expectation of the Qumran community as reflected in this document has some affinities to the perspective found in the NT, such as the emphasis on the end times. Moreover, the emphasis on the psalms and their prophetic interpretation is similar to what is found in the NT.

CAVE 7 FRAGMENTS (QUMRAN)

Unlike the other ten caves, Qumran's seventh cave contained several Greek manuscripts. A sensation was created when it was claimed that some of these Greek fragments were of NT writings. Among these fragments, 7Q1 has been identified as Exodus 28:4-7. 7Q2 has been identified as Epistle of Jeremiah 43-44. In *DJD* 3 (Baillet, Milik and De Vaux) 7Q3-5 are cited as "biblical texts(?)." 7Q6-18, which comprise only tiny fragments, yielding only one complete word among them (the definite article in the masculine dative singular), are described simply as "various fragments."

A decade after the publication of the *editio princeps*, J. O'Callaghan began publishing studies in which he identified several of these fragments as belonging to various NT writings. His identifications are as follows:

7Q4	= 1 Tim 3:16; 4:1, 3
7Q5	= Mark 6:52-53
7Q6.1	= Mark 4:28
7Q6.2	= Acts 27:38
7Q7	= Mark 12:17
7Q8	= Jas 1:23-24
7Q9	= Rom 5:11-12
7Q10	= 2 Pet 1:15
7Q15	= Mark 6:48

O'Callaghan regards the identifications of 7Q4-6.1 and 7Q8 as "certain," the identifications of 7Q6.2, 7Q7 and 7Q9 as "probable" but 7Q10 and 7Q15 as only "possible."

Most scholars have rejected O'Callaghan's identifications, but a few have accepted some of them. His identification of 7Q5 as Mark 6:52-53 has been accepted by F. Rohrhirsch (1990) and C. P. Thiede. However, C. Focant, R. H. Gundry and papyrologists S. R. Pickering and R. R. E. Cook believe these identifications are highly improbable, if not impossible. The identification of 7Q5 is an interesting case in point, for this fragment is larger than the others and the chances of identification are somewhat better.

M. Baillet restores 7Q5 as follows: ²] . tōi a . [. . . ³]ē kai tō[. . . ⁴ ege]nnēs[en . . . ⁵]thēs[. The only complete, extant word is kai ("and"), while the one restored word is egennēsen ("he begat"). O'Callaghan restores it differently: ² a]utōn ē

[kardia . . . ³]ē kai ti[aperasantes . . . ⁴ Ge]nnēs[aret . . . ⁵ prosōrmis]thēs[en = "their heart . . . and crossing over . . . Gennesaret . . . they moored (the boat)." This reconstruction is problematical at four points: (1) The letter ēta in line 2, which O'Callaghan thinks is the definite article, is more probably an alpha. (2) The letter that O'Callaghan thinks is a nu in line 2, in order to restore autōn ("their"), is almost certainly an iota and not a nu (so Gundry and others). (3) O'Callaghan must assume that the prepositional phrase epi tēn gēn ("to the land"), which in almost all manuscripts of Mark occurs after the participle "crossing over," was not present in 7Q5. (4) O'Callaghan must assume that the letter tau, instead of the expected delta, was used in the spelling of ti[aperasantes] ("crossing over"). The first two problems virtually rule out the identification with Mark 6:52-53, with the second two only lending additional weight to this misidentification.

More recently scholars have identified some of the Greek fragments with the pseudepigraphal work known as *1 Enoch* (see Enoch, Books of). F. A. Muro has identified 7Q4.1, 7Q8 and 7Q12 as belonging to *1 Enoch* 103:3-8. E. Puech has identified 7Q4.2 as either *1 Enoch* 98:11 or *1 Enoch* 105:17, 7Q11 as *1 Enoch* 100:12, and 7Q13 as *1 Enoch* 103:15. It is probable that the other Greek fragments are either portions of Greek *Enoch* or other Greek *pseudepigraphal texts. This view is supported by the presence of several *Enoch* fragments found in other Qumran caves.

CHILDREN IN LATE ANTIQUITY

The life and experience of children in the world of the NT compared with the experience of being a child in the world of the twenty-first century clearly illustrates the difference between the two worlds. The modern understanding of a child and childhood as a special class of society with distinctive cultural worth and values stems from the Renaissance onward. When the word *child* is read in the NT, the understanding is quite different. The focus of this discussion is a brief survey of the role and place of children in late antiquity, second century B.C. to second century A.D., using the following divisions:

1. Children in Greco-Roman Culture and Society
2. Children in Jewish Culture and Society
3. Children in the Life of the Early Church
4. Relevance for the Study of the New Testament

1. Children in Greco-Roman Culture and Society.

There is little direct writing about children in the literature associated with Greco-Roman antiquity. Insights must be gleaned from com-

ments made in the context of another subject. Most of the ancient texts are written by males and by the upper socioeconomic groups. One wonders if the flavor and content of such comments would have been different if they were written by women (mothers) and by the common or poor social groups.

1.1. Role or Place of Children in Greco-Roman Society. It is difficult to articulate the place children held in Greco-Roman society. Their role was defined through the social and economic system. Children were seen as part of the kinship tradition who carried on the family name and business and who provided care for the elderly parents. In religious contexts, children were regarded as innocent, chaste and naive, thus channels or intermediaries for the gods. Children were perceived as unformed adults who lacked reason and thereby required training, which included beating. Plato stated: "Of all the wild beasts, the child is the most intractable; for insofar as it, above all others, possesses a fount of reason that is as yet uncurbed, it is a treacherous, sly and most insolent creature. Wherefore the child must be strapped up, as it were, with many bridles" (Plato *Leg.*, 808D). Children were also valued as individuals, and the many grave epitaphs reveal genuine parental love and affection.

Children were born into households (see Family and Household). It was in relation to this social network that children gained their primary identity. Boys were trained to take over headship, and girls were trained to take on the domestic responsibilities. The household would have included the parents, children, possibly extended family members, adopted children, paid servants and slaves. The household would have been presided over by the *paterfamilias*, the eldest surviving male ascendant. At one time the father of the Roman household had absolute rule, even over the life or death of a family member, especially the children, but this ultimate authority was curbed by law in the first century A.D. The father's authority was usually executed and mediated through a family council.

It was a Roman custom to place a newborn on the ground in front of the father for him to inspect. When the father lifted the child it symbolized the child's acceptance into the family (the Latin verb *suscipere*, "to lift up," came to mean "survival"). Weak, handicapped, unwanted girls, or another unwanted mouth to feed, would

be left on the ground with the implication that the child should be exposed. Exposure was the practice of leaving an unwanted child at a site, usually a garbage dump or dung heap, where the child either died or was taken by a stranger to be raised, usually as a slave. Such infanticide practices were never sanctioned but never condemned by Roman law (*see* Roman Law and Legal System). Exposure had a long history and was advocated by the philosophers (Plato *Rep.* 460 C; Plutarch *Lyc.* 16.1; cf. Philo *Spec. Leg.* 8.110-119, who condemns the practice).

The next step for the child was the naming ceremony, for boys on the ninth day, for girls on the eighth day. The delay is attributed to the high mortality rate of infants. Many newborns never survived the first week, less than half survived to their fifth year, and only 40 percent lived to their twentieth birthday (Wiedemann, 15-16). Those who lived the first week were ceremonially washed, sacrifices were offered on their behalf, and a name was given. The ritual was called *dies lustricus*, "day of purification."

In the early years, the child was often cared for by a wet nurse. Swaddling was perceived as an important part of training a young child. Weaning usually occurred at 18-24 months and was regarded as the time when children were old enough to receive blows and threats as instruction. When the child was mobile, he or she would be put into the care of a male child-minder, a *paedagogus*, often a Greek slave specifically secured for this task. Eventually the minder would take the child to school and stay with the child in order to discipline the child. Though the role of the *paedagogi* was not educational, the child would have learned much from their care, often including facility in the Greek language. Childhood would have included play, with toys like balls, board games, kites, models of people and animals, hoops, wooden swords, and with games like "knucklebone," a game like jacks with bones, and "Troy," a game of one person resisting the pack who tried to drag you across a line. The girls also played with rag dolls and dolls of wax or clay made to look like young women.

1.2. Education of Children in Greco-Roman Society. For centuries *education had two forms; at around age six or seven the Greeks sent children to organized schools with trained teachers, and the Romans based education in the home and assigned the primary task to the parents. In

the first century B.C., the Greek practice was adopted throughout the Roman Empire. Among the wealthy, at around the age of seven the male children and a few female children began their formal education, learning writing, reading and basic arithmetic, often combined with physical education. The school day was long, beginning early and lasting into the evening with a break for a midday meal. Flogging was a common practice and was perceived as an important practice to instill discipline. At age twelve those who could afford it, and only males, moved to the second stage; girls continued their education at home learning the expected duties of a female in a household. Under the *grammaticus*, *language, *literature, *music, *philosophy and basic *rhetoric were taught (Cicero, *De Orat.*, 1.187). The next stage began around age sixteen and the teacher was known as the *rhetor*. During this time the rhetorical school would build upon earlier studies, focusing particularly on literature, language and rhetorical skills in order to develop polished public speakers. The very elite finished formal study around age eighteen by studying at a foreign academy. In his work *Institutio Oratoria*, Quintilian, a former teacher (first cent. A.D.), describes this practice of education and calls for the reform of putting the needs of the child as foremost. Other forms of education included apprenticeships in practical skills and crafts, and military training.

More controversial is the education of males at the *gymnasium, which included sports, usually in the nude, and the pederasty which often went with it. The sexual relationship between an adult male and a boy was a Greek practice designed for military training; it later carried over to the gymnasium and then to the teacher and pupil relationship. The practice was not universal and opinions varied about its value, but it was commonplace enough to feature in the childhood experience of many young boys. Corollary to this was the experience of many slave girls and boys who served as child prostitutes.

1.3. Transition into Adulthood. For boys, usually between the age of fourteen and sixteen, the father would take the son to be registered on the list of citizens. This was the first stage in taking on adult responsibilities. Around the same time, at the feast of the *Liberalia* on March 17, a young man and his friends would ceremoniously exchange their *togā praetexta* (white with purple hem) for the *toga pura* (all white), which was a

public sign of adulthood. Sometimes this transition period included shaving the boy's first beard and keeping the shavings in a shrine (*depositio barbae*).

Marriage was the primary transition. Legally, girls could marry at twelve, boys at fourteen. But among the wealthy most girls married in their late teens with boys in their twenties; among the more common social classes, marriage was often earlier. Marriage included the ritual of taking off and storing the *bulla*, the good-luck amulet worn around the neck as a child. A girl also would dedicate her dolls to Venus as part of the marriage process. With marriage, for both girls and boys, childhood ended.

2. Children in Jewish Culture and Society.

Sources for understanding the role and place of children in Jewish culture are not numerous. The Bible and other Jewish religious writings give hints of family and social structures, but little direct or extended information. Equally, Judaism was not monolithic, so some social constructs and practices may have varied with different Jewish communities. In addition, differences between life in Palestine and life in *Diaspora Judaism probably affected the experience of children.

2.1. The Role and Place of Children in Jewish Society. The understanding of children must be placed within the context of Jewish identity. The perception of Jewish people as people of a "holy race" (Ezra 9:2), a covenant people, a people of the *Torah, defined community life and shaped the social boundaries. Within this community ethos, children were perceived as a blessing (Ps 127:3-5) and insurance of the nation's perpetuity. Conversely, a woman who was childless was considered barren and shamed (1 Sam 1:10-11; Lk 1:25). The expectation of maintaining the race through procreation was written into the law (Gen 1:28; 12:3). It was the obligation of the parents and the community to teach and pass on the faith to the children (Deut 4:9; 6:7; 11:19; 31:1-13; also Josephus *Ag. Ap.* 2.25 §204). In this context, it is not surprising that infanticide, abortion (Ex 21:22-25) and birth control (Gen 38:8-10) were not practiced and were often condemned (Philo *Spec. Leg.* 3.110-19; Tacitus *Hist.* 5.5).

Once again, the home and family were the primary social structure where children gained their identity. Sons, especially the firstborn, were the guarantee of lineage and the promise of

maintaining the family holdings. Levirate law (Deut 25:5-10) ensured that a man's name would continue if he died without children, as the brother was obliged to marry his sister-in-law, with any children of this union regarded as heirs of the dead kinsman. The emphasis on sons and the role of the father reveals the patriarchy of the Jewish culture (cf. Mt 14:21; 15:38).

The Jewish ritual of male circumcision occurred after eight days. It is possible in the first century A.D. that this practice included naming the child (Lk 1:59; 2:21), a practice probably adopted from Greco-Roman culture. Naming the child was an important cultural practice, whether for a girl or boy, and in Jewish culture the practice was to draw upon the family names with the mother selecting but with the father having the final say (Gen 35:18; Lk 1:58-64). Other rituals included presenting the firstborn sons to the Lord and the rite of purification for the woman following childbirth (Ex 13:2, 20; 34:20; Lev 12:6-8; Lk 2:22-24).

Perhaps the key social rule which dominated a Jewish child's perspective was the law, "honor your father and your mother" (Ex 20:12; Deut 27:16). Disobedient or dishonoring children could receive the most severe punishment (Deut 21:18-21). In this light, the training and discipline of children is an important topic in wisdom literature (Prov 13:24; 22:15; Sir 30:1-13). It included beating; in fact, the OT verb "to educate" is *yāsar* which originally meant, "to flog or chastise."

Children also played an important part in the religious life of the home as part of their training. Exodus 13:8 instigated the practice of children asking key questions in the home rituals for the Passover (*m. Pesah.* 10:4). This practice probably carried over into other key festivals and the weekly sabbath. Other home religious practices included citing the *Shema* (Deut 6:4-5) and Deuteronomy 33:4, "Moses commanded us a law, as a possession for the assembly of Jacob."

2.2. Education of Jewish Children. For centuries education was based in the home and was centered around the religious tradition and passing on the family trade. A girl was prepared for marriage, so it was important that her virginity be preserved (Sir 42:9-14) and that she be trained as a competent manager of the household (Prov 31:10-31).

For boys, education was primarily religious education centered on the study of Torah. This

began with learning biblical *Hebrew, then reading and memorizing large portions of the Scriptures. Writing was not a required part of this education and generally was learned, if learned, in the apprenticeship of a trade. The next stage was learning the comments and explanations of the Torah by the ancestral teachers of the law. According to the *Talmud, this education began passing from the home to formal schools (*Beth-Sepher*, "the house of the book") in the first century B.C. according to the instruction of Simeon ben Shetah, but was firmly established by Joshua ben Gamla in the first century A.D. It is possible that formal schooling was available at an earlier period (and continued in various forms) at local *synagogues. Boys began this formal schooling at age six or seven. These Jewish schools were probably both a counter to and imitation of the Greco-Roman education system. As such they preserved the cultural distinctive and made possible the description of Paul's Diaspora Jewish upbringing in Philippians 3:5. Nonetheless, many Jewish children received a "Greek" education as well, as is evident in the writings of Paul, *Josephus and *Philo.

2.3. Transition to Adulthood. One of the major rituals for adulthood for boys occurred at age thirteen when they took on the "yoke of the Torah." This signaled the completion of an education process and the assumption of responsibility for further study and observance of the Torah. *Marriage, generally perceived as an obligation, concluded childhood for both girls and boys. It was arranged early and most often occurred in the mid-teens for girls and late teens for boys ("at eighteen a man is fit for the bridal chamber" [*m. 'Abot* 5:21]).

3. Children in the Life of the Early Church.

Evidence of the life of children in the NT is scant. Two aspects dominated the life of children in the early church. First, they continued to live within the cultural patriarchy and the general social structure of the household. Second, they were accepted as part of the Christian community.

In the NT children are generally placed in relationship to the parents in line with the conventional social structures of the day, for instance as in the household codes (Eph 6:1-4; Col 3:20-21; 1 Tim 5:4). Similarly the parental responsibility for the discipline and instruction of

children is reinforced (1 Tim 3:4, 12; Tit 1:6; *1 Clem.* 26.6, 8; *Did.* 4.9; *Pol. Phil.* 4.2). The positive regard for children as in the Jewish perspective is also evident in the NT. Paul indicates that children of Christian parents are "holy" (1 Cor 7:14). The value of children as a blessing is continued in later Christian literature, which condemns the practice of infanticide (*Did.* 2.2; Justin Martyr *Apol.* 127).

What is more surprising is the assumed presence and participation of children in the Christian faith (Acts 2:39) and early Christian gatherings. The record of the growth of Christianity in Acts includes households (Acts 11:14; 16:15, 31, 34; 18:8) and children (Acts 20:9, 12; 21:5). The fact that the epistles to the Ephesians and Colossians includes instructions to children assumes their presence at such gatherings. Since the early church gathered in homes, it may have been natural to include children. Matthew 14:21 (cf. Mt 15:38), "some five thousand men shared in this meal, not counting women and children," a record of the feeding of the five thousand, may be a redactional indication of Matthew's view that the community of faith included women and children; this compares favorably with Paul's comment on children as "holy" (1 Cor 7:14).

4. Relevance for the New Testament.

A survey of children in antiquity provides several insights for the study of the NT (more detailed discussions can be found in *DJC*, Child, Children; *DPL*, Households and Household Codes; *DLNTD*, Household, Family; Sonship, Child, Children). First, it contributes to the overall understanding of the social and cultural milieu as the backdrop against which the NT was written and in which the writers of the NT lived. Second, it provides insight into the instruction regarding children found in the teachings of Jesus and in the epistles, with particular relevance to the household codes. Third, understanding the role and nature of childhood clarifies the use of the words "child," "infant" and related words and ideas as a metaphor for Christian growth or discipleship. In the epistles there is the general perspective that a child represents a stage of development that one is to grow out of (i.e., immaturity) or a state of being that is unrealized potential (1 Cor 13:11; 14:20; Jas 1:6; Heb 5:13; 1 Pet 2:2). In the Gospels children represent an identity to which disciples should aspire and from which disciples should

learn (Mt 18:1-5; Mk 9:33-37; 10:13-16). The difference between Jesus' teaching and the epistles is an interesting point of theological and historical reflection. A corollary use is the way Paul (1 Cor 4:14-15; Gal 4:19; 1 Thess 2:11) and the writer of the Johannine epistles (1 Jn 2:1, 18, 28; 3:7, 18; 5:21; 3 Jn 4) portray their relationship with the recipients as father to children, implicitly and explicitly.

CHRONOLOGY, NEW TESTAMENT

The study of chronology in the ancient world is highly complex. The major limitations are in terms of the amount of data and evidence available, the relatively few fixed points by which other dates can be set, and the facts that the ancients were not concerned in the same way with calculating and recording time as moderns are and that the means used to record dates are not always clear or easy to use. With few fixed and agreed upon dates to utilize, any attempt to set a chronology requires cautious weighing of a range of evidence, much of it coming from outside of the biblical documents and requiring knowledge of background material. This is the case for the two major sets of dates for the NT, events in the life of Jesus and in the life of Paul (see Porter, forthcoming, on which the following discussion depends).

1. Events in the Life of Jesus
2. Events in the Life of Paul
3. Conclusion

1. Events in the Life of Jesus.

The four major events in the life of Jesus are his birth, the beginning of his ministry, the duration of that ministry and his death. Each of them presents problems for establishing a chronology, much of it related to how the biblical events relate to extrabiblical data (the data are for the most part presented in Donfried; see *DfG*, Chronology).

1.1. Jesus' Birth. The birth of Jesus is inextricably intertwined with three other major events: the death of *Herod the Great, the Lukan/Palestinian census and the visit of the magi. Each of these dates is problematic and must be examined within its larger context of the world of the NT.

The NT says that Jesus was born during Herod's reign over Judea (Mt 2:1; Lk 1:5) and that Herod died while Jesus was less than two years old (Mt 2:15, 19-20). In determining the date of Herod's death, the Jewish *historian *Josephus proves crucial, though not without his own problems. Josephus states that Herod died thirty-four years after putting to death Antigonus (37 B.C.) and thirty-seven years after being appointed king by the Romans (Josephus *Ant.* 17.8.1 §§190-91; *J.W.* 1.33.8 §665). The date of Herod's death would be 4 B.C., if one calculates from 40 B.C. as the date of his regnal appointment (this date is determined through calculations dependent on Roman history, such as the reign of Augustus [see Roman Emperors]). Josephus also states that there was an eclipse of the moon the year Herod died (Josephus *Ant.* 17.6.4 §167), calculated for March 12 or 13, 4 B.C. Josephus also says that the Passover (see Festivals and Holy Days) that year occurred soon after Herod's son Archelaus assumed the kingship (Josephus *Ant.* 17.9.3 §213; *J.W.* 2.1.3 §10). In 4 B.C., the Passover would have occurred on April 17. Thus, by these calculations (nevertheless, some recent scholarship has argued for a date of 1/3 B.C. for Herod's death; see Kushnir-Stein), Jesus was born before April in 4 B.C.

Other references in the NT make this dating not as straightforward as it appears to be, however. Notoriously problematic is the Lukan/Palestinian census (see Pearson, who marshals and discusses the relevant data below). Luke 2:1-5

states that Augustus took a census before Jesus was born and that Jesus' parents traveled to their hometown, Bethlehem, to be counted. However, no Roman historian mentions a census in around 4 B.C. Luke 2 reports the census as occurring under the governorship of Quirinius, who became governor of Syria in A.D. 6 and took a census then (see Josephus *Ant.* 17.13.5 §§355; 18.1.1 §§1-2; see Roman Governors of Palestine). In the light of the tension between these two dates, many, if not most, scholars hold that Luke has made an error in his chronology. He may have made several possible errors, including incorrectly identifying the governor of Syria as Quirinius, giving Quirinius the wrong title or fabricating an earlier census that never occurred. Late in the nineteenth century, W. M. Ramsay (227-28) thought that an inscription from Tivoli, now housed in the Vatican Museum, may have identified someone as twice governor of Syria. But the inscription may have been mistranslated, and in any event it does not identify this person, to say nothing of identifying him as Quirinius.

In a situation in which there are clear difficulties in establishing a chronology, one must carefully sift the evidence available. A number of extrabiblical factors not at first apparently germane may help to clarify the biblical references. On the basis of the *papyri from Egypt, it is now recognized that the Romans undertook periodic censuses throughout their empire (see Roman Empire). In Roman Egypt, from A.D. 93/94 until 257/258 censuses were taken at fourteen-year intervals. This evidence has been known for a number of years but seems to work against the Lukan account. However, some recently discussed evidence indicates that Egyptian censuses were taken at seven-year intervals during the reign of Augustus and can be established with indirect and direct evidence for the years of 11/10 B.C., 4/3 B.C., A.D. 4/5 and A.D. 11/12 (see Bagnall and Frier).

At the close of Herod's reign, due in no small part to his paranoia over real and/or imagined threats to his power from within his family and strained relations between him and *Rome (leading to his sons not succeeding him as king), there was considerable turmoil in Palestine (see Josephus *Ant.* 16.10.1—11.8 §§300-404; *J.W.* 1.26.2—27.6 §§516-51). Herod's being a client king, and the inevitable difficulties with transition of power in such a context, might well have

led Augustus to extend the Egyptian census of 4/3 B.C. or perform one something like it in Judea. The reference in Luke 2:1 would then be the only reference to this census from antiquity. In A.D. 104 Vibius Maximus issued an edict that states that it is essential for all people to return to their homes for the census (P. Lond. III 904.18-27, repr. in LCL *Select Papyri* II 220), thus indicating at least the plausibility of the trip to Bethlehem recorded in the Gospels. B. W. R. Pearson argues that Luke 2:2 (in Greek) may be saying that this was "the previous census, before Quirinius was governor of Syria." In this case, Luke may be using Quirinius's governorship and his census as a reference point. Quirinius's census in A.D. 6 marked Judea's becoming part of Syria, which was traumatic for the Jews, since it indicated the formal end of even the pretense of self-rule. Since much historical study depends upon plausible reconstructions of events, the above factors might well be seen to provide further support for a date of around 4 B.C. for Jesus' birth.

Further difficulty attends the coming of the magi (or astrologers) recorded in Matthew 2:1-12, often introduced in calculations regarding Jesus' birth. They came searching for Jesus, since they had seen a star in the east. This star has been dismissed as a literary artifice in the Gospel account, but a number of scholars have attempted to correlate the literary with the historiographical evidence (see Donfried and Hoehner for suggestions). Halley's comet, which can be seen every 76 years, and would have been visible in 12/11 B.C., seems too early to be taken into account. There is no firm evidence for the positing of some form of exploding star or supernova around 5/4 B.C. The closest one can come to finding a firm phenomenon is the astronomer Kepler's calculation in 1606 that there had been a conjunction of the planets of Mars, Jupiter and Saturn in 7 B.C., which happens every 805 years. Astrology was widespread in the ancient Near East, with special events often seen to accompany the births of significant people (e.g., *Alexander the Great and Julius Caesar). That Herod is reported in the Gospels to have killed children of two years and younger may be related to the difference between when the magi saw the star (possibly in 7 B.C.) and when they appeared in Judea (5/4 B.C.), or it may reflect the paranoia that typified Herod at the end of his life (he had his own sons executed on very

slender evidence). The story of the magi, therefore, adds little to estimating the date of Jesus' birth (see *DJG*, Birth of Jesus).

All of this evidence indicates that Jesus was born at the latest in April 4 B.C. and possibly a short while before that, in 5/4 B.C. In the sixth century A.D. a mistake in calculating dates was made by Dionysius Exiguus; this error has not been corrected, thus accounting for the fact that Jesus was not born in the year "0" (there is no year 0 in our B.C./A.D. scheme, which goes from 1 B.C. to A.D. 1).

1.2. The Beginning of Jesus' Ministry. The second significant chronological point in Jesus' life is the beginning of his ministry. This event revolves around three temporal points, each of which presents its own chronological difficulties in the light of extrabiblical evidence: the ministry of John the Baptist, a statement in the Gospels about Jesus' age, and the building of the temple. Jesus' appearing in the temple when he was twelve years of age (Lk 2:41-51) provides no solid chronological evidence, due to the vagueness of the reference, to say nothing of dispute over the historicity of the event.

In Luke 3:1-2, the beginning of John the Baptist's ministry is directly linked to the fifteenth year of the reign of the emperor Tiberius. Regnal years are important for establishing ancient chronology; however, their calculation is often difficult. In this instance, if the newly instituted Julian calendar is used, the date would be A.D. 29; if the regnal years beginning with Tiberius's own regency are used (the most likely method of calculation), the date would be A.D. 28/29; if the regnal years beginning with Tiberius's co-rule with Augustus are used (11/12), the date would be A.D. 25/26 (this co-regency is disputed). These three schemes assume that Luke calculated dates according to these methods, something that cannot be taken for granted. According to most scholars, the last date, A.D. 25/26, would be too early, although for others the first two dates would be too late. Furthermore, the NT gives no indication regarding the amount of time between the beginning of John's ministry and Jesus' baptism by him. Failing to find a consensus, one can probably accept that the date of around A.D. 28/29 is likely for the beginning of John the Baptist's ministry, with Jesus' ministry beginning at about the same time or very soon thereafter.

A second strand of evidence considers a di-

rect statement in the Gospels about Jesus' age. Luke 3:23 says that Jesus was "about thirty years of age" when he began his ministry. The word translated "about" (*hōsei*) indicates that the figure "thirty" is being used approximately. Reckoning from the date of Jesus' birth in about 4 B.C. would indicate that he began his ministry around A.D. 27, or later since the figure is approximate.

A last indicator of the beginning of Jesus' ministry is found in John 2:13-3:21. While conversing with the Jews in Jerusalem at Passover (see Festivals and Holy Days), Jesus is told that the temple had already taken forty-six years to build (it was not fully completed when the Romans destroyed it in A.D. 70). Josephus says that Herod's rebuilding of the temple began in the eighteenth year of his reign (Josephus *Ant.* 15.11.1 §380; in *J.W.* 1.21.1 §401, however, Josephus dates it to the fifteenth year), the same year that Augustus arrived in Syria (*Ant.* 15.10.3 §354). According to information from Dio Cassius (*Hist.* 54.7.4) Augustus's arrival in Syria can be calculated to 20 B.C. Herod's eighteenth year would thus have been 20/19 B.C., and forty-six years from beginning the temple project would make the year approximately A.D. 28.

These several strands of evidence converge to indicate that Jesus probably began his ministry sometime around A.D. 28/29, when he was about thirty-one or thirty-two years old.

1.3. The Duration of Jesus' Ministry. This is one of the most controversial aspects in establishing the chronology of Jesus' life, in this instance since the Synoptic Gospels and John's Gospel appear to be at odds. The Synoptic Gospels mention one Passover (Mt 26:17; Mk 14:1; Lk 22:1), while John's Gospel mentions three (Jn 2:13, 23; 6:4 [some church fathers may not have had this reference]; 11:55). This apparent discrepancy in the sources has led to various proposals for the length of Jesus' ministry ranging from one to four years in length. Many of the church fathers held to a one-year ministry. Some of them argued this on the basis of John's Gospel, with John 2:13 and 11:55 marking the beginning and ending of Jesus' ministry with Passovers. Those who argue for a three-to four-year ministry for Jesus also base this upon John's Gospel, some advocating an unmentioned fourth Passover between John 2:13 and 6:4.

Much criticism has been leveled against those

who base a chronological reconstruction upon John's Gospel, due to his theological tendencies, which in this view means that he cannot be an accurate historical narrator. Attempts to eliminate any historically based chronology in John's Gospel and explain every reference to Passover in strictly theological terms is, at least in this instance, difficult to accept. The Synoptic Gospels emphasize that Jesus, from the beginning of his ministry, is heading toward Jerusalem. It is understandable that they would not mention more than one Passover so that Jesus' path to the cross is seen to be without diversion. Therefore, it is more likely that Jesus had a three- or four-year ministry, as John's Gospel indicates.

1.4. Jesus' Death. The death of Jesus involves consideration of two important temporal factors: the day of his death and the year. Neither of them is without problems in determining the chronology involved. Again, extrabiblical evidence comes into play in the calculations (see Hoehner).

All four Gospels agree that Jesus was crucified on a Friday (Mt 27:62; Mk 15:42; Lk 23:54; Jn 19:31, 42), before the beginning of the *sabbath, and that it was the time of the Passover, which occurs on Nisan 15 (they also agree that Jesus was resurrected on the third day, that is, Sunday). Furthermore, the Synoptic Gospels depict Jesus as eating a Passover-like meal (the Last Supper) with his disciples on the night before he was crucified (Mt 26:17-35; Mk 14:12-25; Lk 22:7-38). There is some question whether the Synoptics may consider the day of unleavened bread as the day before the Passover (Mt 27:62; Mk 14:12; Lk 23:54). In the Synoptics, Jesus' arrest, trial and crucifixion apparently take place on Passover (Nisan 15), the day before the sabbath. John's Gospel, however, portrays the situation differently, with Jesus eating the Last Supper on the day before the Passover (Jn 19:14, 16), that is, the day of preparation (Nisan 14), the same day on which he was killed, and also the day before the sabbath.

Numerous attempts have been made to reconcile these apparent discrepancies between the Synoptic Gospels and John's Gospel. Of the proposals with some likelihood of being correct, the following merit mention. Some scholars have proposed that Mark, who was followed by Matthew and Luke, made a mistake in linking the Last Supper with the Passover meal. Others contend that there was a private pre-Passover

meal celebrated by Jesus and his disciples. Still others believe that the Passover was celebrated on several successive days because of the large numbers of animals to be slaughtered. It has been proposed that there were two different calendars in operation, according to region or religious association. The *Qumran community may have followed a solar calendar, rather than the lunar calendar followed by other Jews. There is no evidence, however, that Jesus and his followers used the Qumran calendar, which is required for this theory. Lastly, some have proposed that what constituted a day was calculated differently, with some calculating from sunrise to sunrise (in this instance, the Synoptic Gospels, Galileans and *Pharisees) and others from evening to evening (John's Gospel, Judeans and *Sadducees). This last proposal provides a means of harmonizing the Gospel accounts. On the basis of John's Gospel and possible ambiguity in the Synoptics, many scholars contend that Jesus was crucified on Friday, Nisan 14, the day before the Passover. There is no scholarly consensus on this issue, however.

Not only the day but also the year of Jesus' death is the subject of disagreement. Determining the year of Jesus' death is also dependent upon what one determines for the day of his death, since the factors to consider are years when Nisan 14 falls on a Friday and the time when the people involved in Jesus' death were in office. Although Herod Antipas, tetrarch of Galilee and Perea from 4 B.C. to A.D. 39 (Lk 23:6-12; Josephus *Ant.* 18.7.1-2 §§240-56; 19.8.2 §351), and Caiaphas, high *priest from A.D. 18 to 37 (Mt 26:3, 57; Jn 11:49-53; 18:13-14; Josephus *Ant.* 18.2.2 §35; 18.4.3 §§90-95), are important people in terms of Jesus' death, the most important is Pontius Pilate, prefect of Judea from A.D. 26 to 36 (Mt 27:2-6; Mk 15:1-15; Lk 23:1-25; Jn 18:28-19:16; Acts 3:13; 4:27; 13:28; Josephus *Ant.* 18.4.2 §89). The years of A.D. 27, 30, 33 and 36 are theoretical possibilities for Nisan 14 falling on a Friday during Pilate's tenure. However, A.D. 27 is too early and A.D. 36 is too late for Jesus' death, according to the calculations above. Scholars who argue for a shorter ministry of Jesus tend to believe that Jesus was killed in A.D. 30, while scholars who argue for a longer ministry of Jesus favor his being killed in A.D. 33.

2. Events in the Life of Paul.

Determining the chronology of the life of Paul

involves examination of three major sets of data: the book of Acts, Paul's letters and extrabiblical people and events (see *DPL*, Chronology of Paul). Since Acts may well have been written by someone closely associated with the early Christian missionary movement and who may have known and even traveled with Paul, and since Paul's letters were not written with historical chronology in mind, the distinction often made between Acts as a secondary source and Paul's letters as primary sources is overdrawn. All of the available data must be seriously weighed (the data are presented in Donfried and esp. *DPL*, Chronology of Paul).

2.1. The Book of Acts. Acts provides the following sequentially listed information regarding the chronology of the early church. First are the stoning of Stephen, at which Paul is a "young man" (Acts 7:58; possibly indicating birth in A.D. 5 to 15); Paul's conversion, stay in Damascus and dramatic escape (Acts 9:1-25; cf. 22:5; 26:12); Paul's first trip to Jerusalem and then to Tarsus and *Antioch (Acts 9:26-30; 11:25-26); his second trip to Jerusalem, bringing famine relief from Antioch (Acts 11:27-30; 12:25). Next are Paul's and Barnabas's first missionary journey, from Antioch to Cyprus to Perga to *Pisidian Antioch to Iconium to Lystra to Derbe and back through the cities of Roman *Galatia to Antioch (Acts 13:1-14:28) and Paul's third trip to Jerusalem, for the so-called Jerusalem council, and then back to Antioch (Acts 15:1-35).

Then comes Paul's second missionary journey, from Antioch to Syria and Cilicia, passing through Phrygia and Galatia, to Troas to *Philippi to *Thessalonica to Berea to *Athens to *Corinth to *Ephesus to *Caesarea (then probably to Jerusalem) to Antioch (Acts 15:35-18:22; some scholars put the events of Acts 18:18-19:20 together; however, in Acts Antioch marks the point of termination and beginning for the Pauline journeys; see Porter 1999). Next in sequence are Paul's third missionary journey from Antioch through Galatia and Phrygia to Ephesus to *Macedonia to *Greece to Macedonia (Philippi) to Troas to Miletus to Tyre to Caesarea (Acts 18:23-21:16) and Paul's final (either his fourth or fifth) trip to Jerusalem, with a visit to the temple, arrest, hearing before the Sanhedrin (Acts 21:17-23:10). Paul then is imprisoned for two years in Caesarea under Felix and Festus, a time that includes his hearing before Festus and Agrippa (Acts 23:12-26:32). Finally Paul jour-

neys to Rome and is imprisoned there for two years (Acts 27:1-28:31).

Despite what appears to be a well-ordered chronology, it is extremely difficult to establish the amounts of time that each event in Acts took, since the book of Acts has only infrequent references to durations of time (see Acts 11:26; 14:3, 28; 18:11; 19:8, 10, 22; 20:3; 24:2, 7; 28:30; see Alexander, 119).

2.2. Paul's Letters. Paul's letters, especially Galatians 1-2, provide the following chronology. Since these events are reconstructed from the individual letters, there is substantial disagreement by scholars. These events include Paul's conversion (Gal 1:12-16), his stay in Arabia and his return to Damascus (Gal 1:17). "Then after three years" from either his conversion or his return to Damascus (these events may have been close in time), Paul first travels to Jerusalem for fifteen days (Gal 1:18-20) and stays in Syria and Cilicia (Gal 1:21-24). "Then through the interval of fourteen years" from either his conversion or his stay in Syria and Cilicia (in other words, fourteen years total or fourteen years added to the first three), he travels again to Jerusalem to confer with Peter (Gal 2:1-10), and there is the incident at Antioch with Peter (Gal 2:11-14), although some scholars think this occurred before the second trip to Jerusalem.

There are hints of a first missionary journey to Macedonia and Achaia (Greece), involving visits to Philippi, Thessalonica and Athens (1 Thess 1:8; 3:1; cf. Phil 4:15-16); Paul's stay in Ephesus, where he suffered some affliction (2 Cor 1:8-11), before his going to Troas and then to Macedonia (1 Cor 16:8-9; 2 Cor 2:12-13); and a clear reference to what was probably a later Macedonian (Philippian) and Achaian (Greece) missionary journey, with the intention of gathering a collection to take to Jerusalem before heading to Spain by way of Rome (1 Cor 16:1-9; 2 Cor 8-9; Rom 15:19-32).

Apart from the two references in Galatians (Gal 1:18; 2:1), there are no specific temporal indicators in Paul's letters. Thus the above list offers a likely chronological arrangement of the events. It is possible that the hinted-at first missionary journey occurred before the second trip to Jerusalem, however, since 1 Thessalonians does not mention the Jerusalem visit. The sequencing of Galatians 1-2 makes this unlikely, however.

2.3. Extrabiblical People and Events. There are

at least eight extrabiblical points of chronological reference that scholars cite as having possible bearing on the Pauline chronology. However, each one of these has debatable interpretations, which can only be mentioned in passing (see Alexander, 120; Ogg; and Jewett on most of these).

The first concerns when Aretas was king of Damascus. In 2 Corinthians 11:32-33, Paul mentions that the ethnarch of Aretas was guarding Damascus. There are several critical questions regarding this incident, however. One is a dispute over the date of Aretas's death, with the range being somewhere between A.D. 38 and 40; another is the date at which Aretas took control of Damascus, with this possibly occurring as late as A.D. 37 on the accession of the emperor Caligula; and a third is whether this passage requires that Aretas was in control of Damascus at the time. This event may indicate that Paul's escape took place between A.D. 37 and 38-40, although it may indicate that it took place before A.D. 38-40 (see Riesner, 75-89).

The second concerns Agabus. Acts 11:28 says that a prophet named Agabus foretold a great famine, which took place during the reign of the emperor Claudius (A.D. 41 to 54). Scholars have discussed a number of possible dates for this famine, ranging from A.D. 45, 46 or 48 to after 51. Others have disputed that there was a famine, and certainly that there was a worldwide one (see Suetonius *Claudius* 18; Tacitus *Ann.* 12.43). A further difficulty with this account providing information for the time of the second Jerusalem trip is that the prophecy may have been given well in advance of the famine.

The third point of reference is Acts 12:20-23 and the death of Herod Agrippa I in 41 (see Josephus *Ant.* 19.9.5 §§43-52). Acts places this event between the story of Peter in Acts 12:1-19 and the summative statement of Acts 12:24 and resumption of Paul's story in Acts 12:25. It is difficult to establish the exact chronological relation of these events, although it is likely that the sequence is correct, with the first missionary journey being after Herod Agrippa's death.

The fourth event is the proconsulship of Cyprus by Sergius Paulus in Acts 13:7. Several inscriptions link a Sergius Paulus with Cyprus (Ogg, 60-65), but information regarding the identification of this Sergius Paulus and his dates is lacking (see Riesner, 137-46).

The fifth significant event is the expulsion of

the Jews from Rome. Acts 18:2 refers to the emperor Claudius having commanded all the Jews to leave Rome, and Suetonius (*Claudius* 25.4), the second-century Roman historian, describes the expulsion of Jews from Rome who were causing disturbances at the instigation of a certain *Chrestus* (it is not certain that this is a reference to Christ). In neither case is a date given for the expulsion. The traditional date ascribed is A.D. 49, which is established on the basis of a statement by the fifth-century church historian Orosius (7.6.15), linking the expulsion to the ninth year of Claudius's reign (49). Dio Cassius states (*Hist.* 60.6.6) that, because of their large numbers, expulsion of the Jews was not possible during Jewish uprisings in A.D. 41. Nevertheless, the alternative date of A.D. 41 has been proposed due to the questionable reliability of Orosius's information and the possibility of harmonizing Dio Cassius's statement with Acts, with the expulsion involving only some Jews (e.g., Lüdemann, 164-71; Slingerland; contra Riesner, 157-201).

There are several consequential effects of shifting the date of the expulsion of the Jews from A.D. 49 to 41. The earlier date suggests an early date for Paul's first visit to Corinth but would also require a second visit to Corinth during the time of Gallio's proconsulship (discussed below), possibly either just before or just after the Jerusalem council. Acts 18 also provides some evidence of conflation of accounts, because Acts 18:8 refers to Crispus and Acts 18:17 to Sosthenes as the ruler of the synagogue. The later date, still probably the best estimation, suggests that Acts 18 records a single visit to Corinth during the time of Gallio.

Gallio's proconsulship is the sixth event to note. According to Acts 18:12, Paul was dragged by Jews in front of Gallio, the proconsul of Achaia. The fragmentary Gallio inscription, found at Delphi, records an edict by Claudius referring to Gallio as proconsul (see Inscriptions and Papyri: Greco-Roman). On the basis of this inscription and other inscriptions that establish the date of this one (see Ogg, 104-11), as well as the fact that proconsuls served one-year terms (except under unusual circumstances), it is possible to date Gallio's term of office to A.D. 51/52. Some scholars have recently doubted the certainty of this date, but they have not provided plausible alternatives. Whether Paul was in Corinth for the first time or not, it appears that

he had arrived there by A.D. 51 or 52 (see Ricsner, 202-11).

The seventh event is Paul's appearance before Ananias the high priest in Acts 23:2 and 24:1. Appointed in A.D. 47, Ananias was sent to Rome in A.D. 52 as the result of a dispute between the Jews and *Samaritans, but he was probably restored to power when Claudius ruled in favor of the Jews. He continued in that office until he was replaced, probably in A.D. 59 (see Josephus *Ant.* 20.6.2-3 §§128-36; *J.W.* 2.12.6 §§241-44), thus overlapping with Paul's imprisonment first in Jerusalem and then in Caesarea.

The final episode involves Paul's being in Roman custody (Acts 23:24—26:32). Paul was in the procurator Felix's custody for two years (Acts 24:27), before the procurator Festus succeeded him. Within a matter of days after his arrival in Palestine, so Acts says, Festus was persuaded in Jerusalem to put Paul on trial, whereby Paul appealed to Caesar. Then, a few days later, when King Herod Agrippa II visited Caesarea, Paul appeared before him. Josephus indicates that Felix took up his procuratorship in A.D. 52 or 53 (*J. W.* 2.12.8 §247; *Ant.* 20.7.1 §137). There is some dispute over when his term came to an end, however. Many biblical scholars argue for a date around A.D. 55, but classical scholars tend to argue for a later date. The early date is based on the notion that Felix's brother, Pallas, the wealthy and highly influential treasurer of Claudius (see Suetonius *Claudius* 28), when he fell out of favor with Nero in A.D. 55, must have immediately lost his power and with it his ability to keep Felix in power. However, there is also evidence (e.g., Tacitus *Ann.* 13-14) that Pallas retained much power, until he was poisoned by Nero in A.D. 62. This scenario is compatible with Josephus's account, in which it appears that Felix remained in power and quite active under Nero (Josephus *J.W.* 2.13.1-7 §§250-70). The exact date for Festus's succeeding Felix, however, is still disputed. Estimates range from A.D. 56 on the basis of the Latin translation of Eusebius's *Chronicle* (2.155) to A.D. 58 to 61. It is plausible that Festus assumed his position as procurator sometime around A.D. 59.

2.4. Creating a Plausible Pauline Chronology. Several different plausible and justifiable Pauline chronologies can be created on the basis of the evidence presented above. Alternative timelines can be found in other scholarly sources (see the bibliography), but the following

is one plausible reconstruction. What is significant from my standpoint is that the scenarios from Acts and the Pauline letters have a surprisingly high degree of harmony. Nevertheless, not all of the data fit equally well, as the several disputed items treated above indicate.

Paul was probably converted in A.D. 33 or 34, after which he stayed for three years in Arabia and Damascus, before visiting Jerusalem in A.D. 37 for the first time. After approximately ten more years (Gal 2:1 probably indicates fourteen years after his conversion), Paul made his famous visit to Jerusalem (Acts 11:28-30; probably to be equated with Gal 2:1-10). The first missionary journey was then from A.D. 47 to 48, and the Jerusalem council of Acts 15 in A.D. 49. This order, which follows Acts, is not incompatible with the Pauline chronology established by his letters. The second missionary journey (first Macedonian and Achaian visit noted above) lasted from A.D. 49 to 52 and the third (second Macedonian and Achaian visit noted above) from A.D. 53 to 57. Paul was arrested in Jerusalem and imprisoned in Caesarea from A.D. 57 to 59. In A.D. 59, after Festus became proconsul, he was sent to Rome, where he was imprisoned until A.D. 62, and he may well have died there. 42

At this point, Acts states nothing further about a Pauline chronology. The Pastoral Epistles, as well as evidence from the church fathers, suggest that Paul may have been released in A.D. 62, traveled for two years in the Mediterranean, possibly went west to Spain, and then was arrested and killed in Rome in A.D. 64 or 65 under the persecution of Nero.

3. Conclusion.

Like few other areas of NT study, the establishment of a NT chronology is directly dependent on a range of extrabiblical evidence (see Bickerman). However, in this case, the extrabiblical evidence is in many instances as problematic and subject to interpretation as is the evidence from the NT. Nevertheless, for those interested in historical questions, including establishing the background against which the NT was written, establishing a plausible and workable NT chronology is an important and necessary task. The result is that a careful process of weighing all of the available evidence and reconstructing and evaluating the various plausible scenarios is a vital task of the NT interpreter. Even if the resulting chronology is tentative at many points and

subject to further evaluation on the basis of either new evidence or reassessment of the existing evidence, it provides a useful framework for much interpretation of the rest of the NT account.

CICERO

Marcus Tullius Cicero (106-43 B.C.) was the dominant statesman of the Roman republic in the turbulent years of the first century, which witnessed the demise of the traditional constitution and the transition to imperial dictatorship.

1. Political Career

2. Works and Influence

3. On the Jews

1. Political Career.

Although he was a *novus homo* ("new man," not

of the nobility) from Arpinum, Cicero won election to the consulship (63 B.C.) mostly through *auctoritas*, gained by his eloquence in the courts (Cicero *Quinct.*; *Rusc. Am.*; *Div. in Caecil.*; *Verr.*). As consul, he exposed the conspiracy led by Cataline, and after compelling Cataline to leave Rome, he executed the conspirators without trial. This victory, which earned him the title *pater patriae* ("father of the fatherland"), resulted ironically in his exile instigated by his enemy Publius Clodius (58 B.C.). Upon his recall a year later, he led the opposition to Caesar, and after the dictator's death (44 B.C.) Cicero vehemently opposed Mark Antony (Plutarch *Cic.* 1.1-12). Often criticized as necessarily pragmatic in the temporary alliances he formed with Caesar, Pompey and Octavian (*see* Roman Emperors), Cicero remained the staunchest guardian of senatorial authority until the vengeful Antony ordered his head and hands nailed to the rostra (Plutarch *Cic.* 48-49; Seneca *Contr.* 7.2; Seneca *Suas.* 17).

2. Works and Influence.

The Ciceronian legacy is political, but more so literary. He delivered more than 150 speeches (58 extant), wrote 800 letters and authored more than 25 titles on philosophy, rhetoric and religion. The breadth, excellence and profundity of his work are the mark of a keen intellect and a mind of boundless energy. The quantity alone necessitates that most histories on the late Republic are dependant on Cicero, and he has greatly influenced the NT environment, especially its *rhetoric and *philosophy. Ciceronian rhetoric is persuasion based foremost on *ethos*, the character of the *bonus orator* (Cicero *De Orat.* 2.182-84). There is a moral position that can and should be defended, and this is the prevalent voice of the Gospels and Pauline letters (*see* Rhetoric), as well as the church fathers, most notably Augustine, Jerome and Ambrose.

3. On the Jews.

One year before his exile (59 B.C.), Cicero defended Valerius Flaccus against the charge, among others, of stealing gold that the Jews in his Asian province (62/61 B.C.) were sending to the *temple in Jerusalem. Cicero denied the theft: all the gold, although some was refused shipment, could be accounted for. This was not, however, Cicero's main defense; in typical fash-

ion he contrasted the *auctoritas* of his defendant with the unreliability of the complainants. Whereas Flaccus was following a precedent of the Senate and was acting for the Republic, the Jews, whose notorious *superstitio* often contradicted Rome, were known to band together for political attacks (Cicero *Flac.* 66-69). Although Cicero's caricature may well have been overstated for effect (as was the preceding description of the Greeks), its success relied on the common assumptions held by the jury, and it is evidence that already by the first century Jews, specifically their religious practices and the cohesiveness of their culture, were considered hostile to Rome. Cicero concludes, as Roman religion demands, that Jerusalem's capture and subjugation signaled the gods' rejection of the Jewish nation. Flaccus was acquitted.

CIRCUSES AND GAMES

The festivals, races and games of the circus held a place of prominence in Greco-Roman life. The social, religious and political functions of the place and its events formed an integral and often central part of the culture and context into which the New Testament authors communicated the Christian faith.

1. Definitions and Description
2. Games and Worship
3. Games and New Testament Analogies

1. Definitions and Description.

Circus is the Latin word referring to the oval-shaped grounds designed and sanctified for public festivals and for hosting chariot races. The typical circus consisted of a narrow, elongated racing track encircled with seating for spectators and enclosed at one end by stables and at the other by a semicircular stadium for additional seating. Any definition for games in the Greco-Roman world at the turn of the Christian era should take into account the two traditions in which the events participated, namely, the Greek *athletic games and the Roman festivals. The Roman religious festivals (*ludi*, frequently translated as "games") were events regularly given in the circus by magistrates and funded by the state treasury. The number of such festivals filling the Roman calendar year increased in the first centuries B.C., and by the time of Augustus (see Roman Emperors) seven annual state *ludi* took up sixty-five days (thirteen for chariot racing and forty-eight for theatrical festivals). In addition to the regular games, votive games, following a triumph (see Roman Triumph), were given as a thank offering to the gods for a recent military victory.

1.1. Locations. The grandest circus was the Circus Maximus, allegedly founded by the Roman king Tarquinius Priscus (616-579 B.C.) (Livy *Hist.* 1.35) and restored by Julius Caesar (Pliny *Nat. Hist.* 36.102). It was situated just south of the center of *Rome and could seat more than two hundred thousand people. Due to the enormous expense of chariot racing and games as well as the building costs, only the major cities in the provinces could afford circuses. There were famous sites at *Antioch, *Alexandria, Merida and Urso in Spain, and later at Constantinople. Often a combination of private and public funds was required to finance the smaller-scale shows in the provincial cities.

1.2. Events. Chariot racing was developed in the Greek world as a nonviolent form of competition between aristocrats and their cities. Along with other elements of Greek elite culture, it was introduced to Rome by the so-called Etruscan kings. These events consisted of normally four teams of from two to ten horses running multiple laps (usually seven) around a center set of rails. Under the emperors these teams became permanent institutions distinguished by color (Greens and Whites versus Blues and Reds). Teams drew the backing of ardent supporters, some with a loyalty to their color faction equal to and typical of any modern sports fan. The chariot race was a powerful force for vertical social integration, encouraging the participation (by cheering or betting) of everyone in Roman society from slave to emperor.

Circuses also hosted the athletic competitions (*agōnes*), the games of skill, speed and endurance that we have come to associate with the Olympic Games. These competitions of Greek origin often included footraces, jumping, boxing and wrestling as well as the more overtly military skills such as archery or javelin throwing. It is perhaps better to understand the stadium (*stadion*), the Greek running track, as inclusive of circuses rather than vice versa. The Roman festivals and chariot races were held throughout the empire (see Roman Empire), whereas the Greek games were disparaged and not celebrated in Rome itself until the institution of the Capitoline Games during the reign of Domitian (A.D. 81-96). The Romans adopted the custom from the Greek games of awarding perishable crowns as symbolic rewards, but perhaps symbolic of the cultural difference, the Romans traditionally awarded these crowns for valor rather than athletic competition. Before the construction of permanent amphitheaters, circuses also hosted gladiatorial combats (see Arenas).

Unlike other events, which had precedents in the Hellenistic world, the staged wild-beast hunt (*venatio*) was a peculiarly Roman event. Exotic animals were brought from the furthest reaches of the empire to be displayed, pitted against one another or hunted in the circus. Hence these hunts can be seen as not only a show of prowess but also a symbolic demonstration of the extent of Roman rule. The more infamous uses of these beasts were as tools of torture, as circuses were also one of the sites used for public execution of condemned criminals (see Arenas; Persecution).

2. Games and Worship.

The circus was sacred ground, the property of the gods, in essence a *temple. The Roman *ludi* as well as the Greek games served as a community offering to the gods.

In the provinces annual *ludi* were associated with honoring Rome and the *emperor. Hence the festival games became a visible symbol of loyalty to the Roman state, its power and its culture. These took place in whatever stadium the municipality could offer. It was not incongruent in polytheism for *ludi* honoring the emperor to be compatible with and even simultaneously expressed with games held in honor of traditional gods. Increasingly provincials in the East and West competed to integrate imperial worship into their own local cults (see Civic Cults). Herod (c. 73-4 B.C.) distinguished himself both by being the patron (*agōnothetēs*) of the Olympic games (12 B.C.) and by instituting the Roman games in honor of Augustus in the city he built for the same purpose, *Kaisareia Sebaste* (Josephus *J.W.* 1.12 §426-28; *Ant.* 15.8.1 §§268-76; 16.5.1 §§136-41). So while the calendar of games honoring the Olympic deities continued to have a large influence over which festivals were celebrated, both the control and the honor of the games were increasingly shared by the Roman emperor. The burden of religious responsibility also fell to the emperor, whose magisterial duty it was to ensure that such honors as were due the gods were performed. They believed the welfare of the state depended on the peace of the gods (*pax deorum*), which was achieved by dutifully and publicly performing acts of homage, including the games.

3. Games and New Testament Analogies.

The apostle Paul was familiar with athletic competitions; his letters are peppered with allusions to *agōnes*. This fact communicates much about the assumptions he makes regarding his audience. Like the many allusions in classical literature (Pindar is especially important in contributing to the athletic ideal), Paul assumes the games will be familiar, even commonplace, to his Hellenistic audience and to the Jews as well, albeit unpopular (see 1 Macc 1:14; 4:12-13), and he consequently utilizes them as analogies of the Christian life.

3.1. Analogy of Spiritual Struggle. The *agōn* signified the setting where the games were held or the assembly of spectators. It could also refer ge-

nerically to the contests, races, combats or conflicts themselves. In Hebrews 12:1-2 the author writes, "Wherefore seeing we have encircling us [*echontes perikeimenon hēmin*] so great a cloud of witnesses, let us put off all bulk weight, and the loosely fitting sin [Greek athletes competed in the nude], and let us run with patience the race [*agōna*] that is set before us. Looking unto Jesus, the leader [*archēgon*] and finisher [*teleiōtēn*] of the faith." This passage treats of both the contest and the settling of the spiritual struggle in the games. The stadium/circus crowd of saints and prophets encircles the athletes competing in their contest, and the runner is made the model of Christian endurance. For the author of Hebrews the Christian faith is metaphorically the *agōn*.

Christ ran and finished the race before us, and yet he is also in some sense above the games, governing them, and the one in whose honor and by whose beneficence the competition of faith is held, like many of the great provincial or city magistrates who served as *agōnothētēs*. The meanings of *archēgos* as "magistrate or ruler" and "first or initiator" are compatible and offer a double meaning in the context of the games. Not only does Jesus start the runner on his course, but also he demonstrated how the race was won. Christ himself endured his *agōn* to win joy and the victor's place of honor at the right hand of God, perhaps specifying even more clearly the metaphor of triumphal games.

3.2. Analogy of Moral Integrity. In 2 Timothy 2:5 Paul uses the games to teach a moral lesson. He writes, "And if a man competes in the games, he is not crowned unless he competes according to the rules" (*Ean de [kai] athlētis, ou stephanoutai, ean mē nomimōs athlēsē*). As in the strictly judged and monitored Greek games, the Christian contest cannot be won by cheating.

3.3. Analogy of Discipline. Paul also uses the character of a winning athlete as a model for success in the Christian life. He writes, "Do you not know that those running in a race-course [*en stadiō*] all run indeed, but one attains the prize. Run thus, that you may win. Everyone who contends [*agōnizomenos*] is self-disciplined in everything, that they indeed might win a perishable victor's crown [cf. Gal 2:2; Lucian *Anach.* 9-14], but we an imperishable. Therefore I run thus, not as if uncertainly; I box [*puktuō*] thus, not as if shadow-boxing [cf. Plato *Laws* 830a-c]; but I

punch [*hypōiazō*] my body and I treat it harshly [like beating a slave, *doulagōgō*], lest perhaps having proclaimed to others, I myself should become a failure [*adokimos*]" (1 Cor 9:24-27). Here the two commonplace analogies from the games, a race and a boxing match, underscore the severity of the Christian struggle. Paul warns against running to run instead of to win, and reminds the church at Corinth of the commitment and self-control required of the Christian. Paul himself is as merciless to his fleshly appetites as a boxer is to his opponent because he knows that as in the games, if he were to fail the test of valor against his opponent, he too would be eliminated from the spiritual contest. The Christian faith has an excellence modeled well and immediately by athletics to the Corinthians, who celebrated the Ithsmian Games, and for whom like the rest of the Hellenized world the concepts of discipline and education were bound to athletics.

3.4. Analogy of Spiritual Victory. The conclusion of athletic contests also provides parallels with the anticipated closure of the successful Christian's struggle. In Philippians 3:12 Paul writes, "Not as though I had already attained victory, or was already finished; but I strive (*diōkō*), if indeed I may win that for which I am won of Christ Jesus. Brethren, I count not myself to have won, but this one thing I do, forgetting those things which are behind, and stretching forward for those things which are before, I strive toward the goal for the prize of the high summons of God in Jesus Christ" (cf. Lucian *On Slander* 12). Here Paul does not say that he is finished, but he says that he is still in the race and focused on finishing and winning while remembering that he himself is the prize Christ won. Later, Paul exhorts Timothy to "compete a good contest of faith" (*agōnizou ton kalon agōna tēs pisteōs*) (1 Tim 6:12; cf. 1 Tim 1:20), which requires exertion expended toward the goal. Finally, in 2 Timothy 4:7 Paul is able to say "I have competed a good contest, I have finished the race, I have kept the faith: Henceforth there is laid up for me a victor's crown of righteousness" (*ton agōna ton kalon ēgōnismai, ton dromon teteleka, tēn pistin telērēka: loipon apokeitai moi ho tēs dikaiosynēs stephanos*). The analogy, like the games themselves, seeks the closure, the consummation of struggle not just in completion of the race but in the promised reward, the victor's crown.

CITIES, GRECO-ROMAN

While ancient Greek and Roman cities clearly had their unique features, they were remarkably similar. These cities, found throughout the ancient Mediterranean, were modeled on the *polis* (city) of classical Greece. The *polis* was adapted for empire building by *Alexander the Great and his generals in the Hellenistic era and later by the Romans. The Greek *polis* was the cradle of democracy and Greek civilization. Alexander the Great used the city as a vehicle of stability and cultural influence in his new empire. The Romans also discovered the value of colonial cities for military and economic stability in their new empire (see Roman Empire), imitating the Greeks in founding new and refounding old cities.

Ancient cities of Greece and Rome were founded on well-traveled roads, along rivers and near natural harbors. These cities were often walled for security, with gates that were opened during the day and closed at night. In the first century A.D., *Rome and *Alexandria had approximately five hundred thousand inhabitants. More typical was Pompeii with twenty thousand inhabitants.

1. The Classical Greek *Polis*
2. The Hellenistic *Polis*
3. The Roman City

1. The Classical Greek *Polis*.

This form of the city emerged in Greece and its colonies by at least the seventh century B.C. as a walled, fortified city. The *polis* was a politically and economically independent city that governed the surrounding countryside. The inhabitants of the *polis* were the aristocracy, the official citizens and resident foreigners. The *polis* ranged in size from fewer than one thousand to more than two hundred thousand people, the latter being the case for *Athens in the fifth and fourth centuries B.C.

The *polis* was governed by a constitution that defined its form of government as oligarchic or democratic, and it was governed by a *boulē*, *dēmas* and a group of magistrates. The *boulē* was a council made up of aristocratic families that generated legislation. The assembly was the official citizens of the city, which discussed the legislation of the *boulē*. The magistrates were usually appointed or elected for one year and administered the city and its civic religion. They maintained public buildings, streets, roads and the water works.

The *polis* funded public works by various means. The aristocracy funded larger projects, such as outfitting a warship or paying for a religious festival. The *polis* owned farms and imposed *taxes and tolls on resident aliens that provided income for other expenses. Agriculture was the mainstay of the economy of the *polis*. People within the city walls often derived their income from farms they owned outside the walls. In addition to agriculture, the work of the various craftsmen and artisans contributed to the ideal of the self-sufficient *polis*.

The portion of the *polis* within the city walls was called the *asty*. Its pattern and buildings were distinctive and became the defining features of a Greco-Roman city. City planners from the fifth century B.C. preferred the orthogonal, or grid, plan developed by Hippodamos of Miletus. The grid was formed by laying down three or four parallel avenues of considerable width and then constructing streets intersecting the avenues at right angles. Colonnades often covered the sidewalks along the main streets for the convenience of conversation and business. In older cities the grid often did not extend beyond the

public spaces to the residential areas, for the latter were organized earlier on an organic plan following the contours of the land and previous settlement.

One of the main avenues led from the gate to the *agora*, or market, located in the heart of the city. The *agora* was the center of commerce as well as a public meeting place or civic center. Many public buildings were located near the *agora*. The *bouleuterion*, or council house, was an enclosed building for meetings of the *boulē*. Large, open steps were constructed for the meetings of the citizen assembly. The *prytaneion* was a meeting house for the magistrates that housed the sacred hearth of the city—the symbol of security—and statues of gods and heroes. The *agora* was graced with stoas, roofed colonnades for walking while conducting teaching, business or law. Throughout the city one would find temples to various gods, springs, fountains and statues.

The *gymnasium* was the educational and physical training facility for the young men and the continuing education and exercise facility for the older men (e.g., the Academy of Athens). To provide room for the needs of *athletics*, the *gymnasium* was located outside the city walls. Other public facilities included a *stadion* for athletic contests and a *theater* descending a hillside with seating surrounding a circular staging area at the bottom.

Houses were positioned on the side streets with their backs to the street and the door facing the street. They were either built around a center courtyard or faced a garden in the rear. Construction was of adobe brick with flat roofs. Wealthy homes were of multiple stories, built around a courtyard and decorated with mosaic floors. They might even have been connected to the city water supply if it was available.

With such warm and dry weather, the majority of the population spent its time outdoors in public places. A quarter of each city was devoted to public areas, with private areas being densely packed. Daily conversation and business were conducted in the streets. These public places were spectacular because cities strove to outdo others in the grandeur of their public buildings and receive the greater honor.

2. The Hellenistic Polis.

Alexander the Great founded cities throughout his new eastern empire to solidify his power and advance the influence of Greek culture. He

modeled these cities on the Greek *polis* as he built cities in *Asia Minor*, Syria, Palestine, Egypt and Mesopotamia. These cities provided the models for future cities built by Alexander's generals and their successors. These cities served as royal capitals, military posts and trading centers. Alexandria in Egypt and Antioch in Syria were built as royal capitals. These cities had a rich mix of peoples and cultures. Typically inhabitants included Greek settlers, native peoples, Jews and immigrant merchants and craftsmen. For example, Antioch was founded in 900 B.C. with a mixture of Greeks, Syrians and Jews.

Royal cities were financed largely by the kings themselves. Local aristocracy often funded major building projects to increase their favor with the king and honor with the people. For example, Herod the Great (see Herods) paved in marble one of the main streets of Antioch of Syria in honor of Augustus (see Roman Emperors). Traditional means of financing from agriculture, taxes and tolls continued in the smaller cities. Cities prospered depending upon their proximity to good harbors and trade routes and concentration of coveted industry.

Hellenistic cities looked like the classical cities of Greece except that the buildings were larger and more heavily decorated. The traditional public buildings remained the same with the addition of large estates for the aristocracy and palaces in royal cities for the kings. The temple of the guardian deity was also a dominant building in the oriental city.

Old cities often experienced Hellenistic makeovers. Buildings were remodeled and Greek institutions added. Antiochus IV Epiphanes tried to make Jerusalem into a *polis* with a *boulē* and temple priests into magistrates. Herod the Great rebuilt Samaria in Hellenistic style, added a roofed stadium and renamed it Sebaste (Gk for Augusta, after Caesar Augustus). He rebuilt much of *Jerusalem*, especially the *temple*, in Hellenistic style and added a theater and stadium. Herod built *Caesarea Maritima* (25-13 B.C.), which included an artificial harbor, colonnaded streets, forum, baths, aqueduct, theater, amphitheater, hippodrome and stadium (see Archaeology of the Land of Israel).

3. The Roman City.

As Rome began its expansion in Italy in the fourth and third centuries B.C. it built cities in its colonies and inhabited them with Roman citi-

zens, and it built Latin cities and inhabited them with Latin peoples. These cities were laid out in the orthogonal pattern of the Greek *polis*. In the expansion of Rome outside the Italian peninsula in the first century B.C., Roman generals founded similar towns and rebuilt conquered towns in this image. The colonial cities were governed by councils of decurions and administered by committees of magistrates elected yearly by all the inhabitants (see Roman Administration). During the Roman period Hellenistic cities were governed more on the oligarchic than the democratic model. Being ruled by an aristocracy themselves, the Romans were more comfortable utilizing the aristocracy of the areas they conquered to establish regional government.

The Roman city was walled, with the majority of the population living in small houses on the individual farms surrounding it. Whereas the Greek city had three or four parallel streets, the Roman city was laid out around the intersection of main streets running north-south (*cardo*) and east-west (*decumanus*). Ideally these streets intersected at the *forum*, the commercial and political hub of the city. Streets ran through the *forum*, whereas in the *agora* they did not. The *forum* contained a temple to Jupiter in imitation of the temple to Jupiter on the Capitoline Hill in Rome, a *curia* for meetings of the town council, a *basilica* for conducting law and business, statues, temples, public baths, theaters and amphitheaters for gladiatorial games (see Arenas).

The two main intersecting streets determined the layout of the city as well as the surrounding farmland that radiated from it. The most important buildings would run down one of the two main streets. Unlike Greek cities, specific public and residential areas were more carefully distinguished in Roman cities. In Rome the wealthy lived in villas outside the city and in apartments in the city. Many city dwellers lived in small apartments within large, multistoried apartment buildings. Housing reflected the more rigid social stratification within the Roman society.

The Roman cities copied many buildings found in Rome, including the statues, arches and temples. Peculiar to Roman architecture was the widespread use of concrete in construction; the commemorative arch; the basilica, a hall near the *forum* for conducting business and law; the amphitheater; public baths (see Gymnasia and Baths) for exercise, bathing and lec-

tures; and aqueducts. In the first century A.D. construction in Greek cities also used concrete, and cities were retrofitted with some of the innovative Roman buildings. Culture was shared, for styles of glassware, pottery, furniture, and wall and floor coverings were similar throughout the empire.

Agriculture provided the mainstay of the economy. Similar businesses clustered together in the city, so that there would be streets of jewelers, cobblers and booksellers, among many others. Those in the same business often formed trade associations to pursue not economic advantage but honor for the group. Some occupations, like traders, drovers and porters, gathered near the city gates, while others less suited to an urban environment, like smithies and tanners, were relegated outside the city gates.

CITIZENSHIP, ROMAN

Possession of Roman citizenship in its various shades was one of the significant markers of personal identity. While increasingly more extensive grants of citizenship throughout the empire into the second century A.D. were perceived by some to have cheapened the value of the franchise (Tacitus *Ann.* 3.40.2), the eagerness of many to obtain it was undiminished for the advantages it conferred.

1. Citizenship and Privilege
2. Obtaining Citizenship
3. Citizenship and Trouble

1. Citizenship and Privilege.

Citizenship was attended by distinctions and entitlements that affected every area of life. In the realms of business (holding property, making contracts and paying taxes), domestic affairs (getting married, having legitimate children and making wills) and litigation (courts, custody and punishment), the citizen was accorded better treatment than was the imperial subject who did not possess the franchise. Admittedly, other markers (e.g., family heritage, offices held, honors received, wealth, gentility, and such) did cut across the distinction between citizens and aliens and did figure prominently in the process of coming to one's rights (Ulpian *Digest of Justinian* 48.3.1; cf. Garnsey, Kelly). But Roman citizens, particularly those living or traveling among extern populations as did Paul and Silas, possessed significant advantages if they chose to make a disclosure.

2. Obtaining Citizenship.

2.1. Dual Citizenship. It was not possible in the time of the Republic actively to maintain dual or multiple citizenship because of what some have called the rule of incompatibility, which asserted that change of soil meant change of state (Sherwin-White 1974, 46; cf. Cicero *Balb.* 28-30; Cicero *Caec.* 100; Cicero *De Leg.* 2.2.5). The principle stood behind the practices of exile (*exilium*) and return (*postliminium*), which implied loss of and reinstatement to citizenship respec-

tively. This either-or arrangement posed obvious difficulties when the franchise began to be extended as a reward to loyal allies. The disadvantages were at first mitigated by extending a limited type of Roman citizenship. However, as the pressures of disadvantage became more acute, the principle was relaxed.

By the time of Claudius (*see* Roman Emperors), the principle of dual citizenship was thoroughly established. The fact that the apostle Paul claims Roman and Tarsian citizenship (Acts 16:37-38; 21:39; 22:25) cannot be contested. That he claims to be citizen born, however, calls for precedents at least as early as the turn of the first century A.D. and possibly earlier. Legal precedents dating to the reign of Augustus can be found (FIRA 1:55, 68), so the probability for Paul's claim is high.

2.2. Citizenship and Judaism. Bringing together a serious Judaism with Roman citizenship created significant tensions. *Roman military service, one means of obtaining citizenship, was scarcely an option for religious Jews because it called for involvement in the *ruler cult, the consecrated standards and the *auguria*. It also called for *sabbath breaking. The Romans realized the impracticability of pressing normal expectations upon religious Jews. *Josephus's record of three consular edicts by Lucius Cornelius Lentulus Crus (Josephus *Ant.* 14.10.13 §§228-29; 14.10.16 §234; 14.10.19 §§237-40) and the letters of Mark Antony (Josephus *Ant.* 14.10.17 §235), Titus Ampius Balbus (Josephus *Ant.* 14.10.18 §230) and the Syrian governor Publius Cornelius Dolabella (Josephus *Ant.* 14.10.12 §§225-27) confirm the simultaneous possession of strong Jewish religious sensibilities and citizenship. The documents grant exemption from military conscription to "Jews who are Roman citizens" and "Jewish citizens of ours."

Roman citizenship also called for inclusion in a tribe (*gens*), but this was not significantly problematic. Outside Rome, one's inclusion in a *gens* was a political and legal fiction requiring no religious bond; in Rome and especially for those who wished to vote or hold office, however, there would be religious implications.

Religious Jews would not sacrifice to the *emperor. But Jews did offer sacrifices for him twice a day in the Jerusalem *temple and more often on special days. They prayed for him throughout the *Diaspora and showed their devotion to him through various dedicatory symbols and ac-

tions (sources in Scramuzza, 5:284). Inscriptional evidence also shows citizen Jews holding formal offices in Diaspora communities and *synagogues (sources in Schürer, 2:485; 3:161, 133; *New Docs.* 4:111; Trebilco, *passim*). While Paul's declarations of an ardent *Pharisaism (Acts 23:6; Phil 3:5) and his simultaneous status as a Roman citizen might create tensions, they were not seriously incompatible.

2.3. How Citizenship Was Obtained. The franchise could be obtained in one of a number of ways. One might be born to citizen parents (*ingenuus*). A *slave might receive citizenship by manumission (*manumissio*; Pliny *Ep.* 10.104-5). Auxiliary soldiers who had completed the required military service were extended the grant (*ARS* 131, 179, 184, 186, 189). Citizenship might be the reward for some valuable service rendered to the Roman state (*ARS* 60; Cicero *Balb.* 8.19). It could be granted en bloc through colonization or promotion to Latin rights (Strabo *Geog.* 5.1.6; Suetonius *Julius* 28). Finally, preferment in the grant of citizenship was available at times for financial consideration (Cicero *Phil.* 2.92; 5.11-12; Dio Cassius *Hist.* 60.17.5-6; Tacitus *Ann.* 14.50.1).

Paul obtained his citizenship by the first means (Acts 22:28; cf. 22:3). How Paul's parents received the citizenship, however, is unclear. The later theory (Jerome *In Philem.* 23; *Vir.* 5) that Paul and his parents were taken from Gischala to Tarsus as prisoners of war, receiving the grant thereafter, contradicts the NT record at several points (Acts 22:3, 28). The notion that Paul's father was a nonobservant Jew serving in the Roman army as a leather worker is questionable in light of Acts 22:3 and 23:6.

Favorable relations between the city of Tarsus, where Paul was born, and Pompey, Julius Caesar, Mark Antony and Augustus, who had the power of conferral, allow that Paul might have been born Cn. Pompeius Paulus, C. Julius Paulus or M. Antonius Paulus (Hemer, 179). The chiliarch Claudius Lysias's purchase of citizenship at great expense matches well what we know of the earlier period of Claudius's reign (Dio Cassius *Hist.* 60.17.5-6). Of Silas (Acts 16:37-38), we know nothing.

2.4. Proof of Citizenship. In the regular course of life it was expected that one's citizen status would be disclosed and its advantages seized.

2.4.1. Roman Names. Citizens had three names (*tria nomina*): a personal or individual

name (*praenomen*), a name that associated one with the largest number of relatives (*nomen* or *nomen gentilicium*) and a *cognomen* by which one normally was known. We have only the names *Saul* and *Paul* by which to evaluate the apostle. The context of Acts 13:9 suggests that "Paul" is the apostle's Roman *cognomen* and "Saul" his unofficial Jewish name (*signum* or *supernomen*). As *cognomina* go, "Paulus" would sound most respectable to Roman ears and suggest citizenship (Judge, 13, 36 n. 20). Paul would hardly have risked making two disclosures of citizenship and an appeal to Caesar unless he could legitimately use the *tria nomina*. There were severe penalties for the false use of Roman names (Suetonius *Claudius* 25.3; Arrian *Epict. Diss.* 3.24.41; cf. Paulus *Sent.* 5.25.11). Even an unsatisfactory claim could result in prosecution or death (Cicero *Arch.* 4.7; Cicero *Verr.* 2.5.169). These indications suggest citizenship for Paul.

2.4.2. Documents. F. F. Bruce (39-40) notes that legislation at the turn of the first century A.D. called for a legitimately born child of Roman citizens to be registered within thirty days of birth. Children born in the provinces would be legally acknowledged (*professio*) before the Roman provincial authority at the public record office (*tabularium publicum*). The *professio* was then entered in the register (*album professionum*). We do not know if Paul's birth was before or after this legislation, but some such formal procedure had to have been in effect earlier. At regular intervals a citizen's name, age, status and property holdings would thereafter be recorded by census.

Near home, most citizens would have no problem proving their citizenship. Away from home, a certified private copy of the *professio*—called a *testatio*—might be carried in which the letters *c.r.e.*, representing *c(iuem) r(omanam/um) e(xscripsi/t)*, clearly indicated citizenship (Sanders, 410; Schulz 1943, 56). Pensioned auxiliary soldiers received a document in bronze (*diploma militaris* or *instrumentum*) that was more serviceable for travel, and there is record of civilian citizen documents under the name *diploma* (Suetonius *Nero* 12). Magistrates might give such documents credit, but they were not bound by law to do so. In Tarsus or Jerusalem Paul's claim of citizenship might be confirmed with little difficulty; on missions, the presumptive proof would rest on verbal declarations, documentary support and the circumstances of their employment.

3. Citizenship and Trouble.

When persons stood in a Roman court of law, it was expected that they would disclose their full legal identity and claim its entitlements for the most favorable possible consideration. Among the privileges was the right to appeal for protection from the capital jurisdiction or violent discipline of magistrates. Successive laws were passed over time to revive these protections, perhaps owing to the growing population of citizen travelers and of externs newly granted the franchise. There are examples of consideration to citizen status (Josephus *J.W.* 1.32.5 §640; 1.33.7 §664; *Ant.* 18.6.6 §§189-90; Tacitus *Ann.* 16.10; Pliny *Ep.* 6.31; 10.96; Lucian *Tox.* 17; *Let. Chur. Lyons Vien.* 1.44). In other cases, however, magistrates and communities discounted or disregarded citizenship (Suetonius *Calba* 9.1; Josephus *J.W.* 2.14.9 §308; Dio Cassius *Hist.* 54.7.6; 57.24.6; 60.24.2; 64.2.3; Tacitus *Hist.* 3.12; Pliny *Ep.* 2.11; FIRA 1:103). A citizenship unadorned by sufficient additional upper-class markers might not garner magisterial or public consideration.

In *Philippi (Acts 16), Paul's and Silas's failure to make a claim of citizenship against abusive treatment at the "Roman" (i.e., the earliest possible) time has been the cause of much modern skepticism regarding Paul's possession of citizenship. Given the fact that they are accused as trouble-making Jews by Roman citizens, a claim of citizenship would be tantamount to a denial of their fulfilled Judaism (= Christianity) and their gospel message. Moreover, the fledgling Philippian church might wonder whether only those suitably enfranchised could afford to be believers. Silently submitting to official action preserved the apostles' religious and missionary integrity at the expense of giving a false public impression concerning their legal identity as Romans.

The apostles' disclosure of their true legal identity and the sit-down strike the next day in the prison are late from a Roman perspective, but they have an ancient logic to them. Paul protests the outrage of a public humiliation and a private release for Romans (Acts 16:37; cf. 1 Thess 2:2). He insists upon a status transfer to restore a measure of dignity—it calls for the magistrates to lift up the apostles by humbling themselves in providing a public escort out of the prison (Acts 16:39). Paul's intent beyond this may have been to protect the Philippian congregation from further troubles.

The priorities underlying Paul's conduct at Philippi are also evident in Jerusalem (Acts 22). Paul will not trade away his heritage in and connections with fulfilled Judaism by resort to a well-timed (i.e., Roman) citizenship declaration before his countrymen. Rather, it occurs late and in the sole presence of the Roman military. Moreover, far from protesting, pleading or declaring the right, Paul insinuates his citizenship by a hypothetical, second-person query (Acts 22:25). Paul is fully prepared to suffer if needs be (Acts 9:15-16). This, coupled with a citizenship superior to that of the prosecuting authority, which subsequent comparison reveals (Acts 22:27-29; cf. Suetonius *Julius* 17.2), bears remarkable fruit in a lightened custody and substantial official assistance.

Exactly what principle in Roman law underlies Paul's appeal to Caesar before Festus (Acts 25:10-12) has been extensively debated. Discussion early focused upon whether it was a case of *provocatio* (to the people and against the magistrate's verdict) or *appellatio* (to a superior magistrate against a colleague or a subordinate before or after a verdict). Some have spoken of a special case of *provocatio*, that is, appeal before the verdict. P. D. A. Garnsey has argued that Paul invokes the principle of *reictio* whereby a defendant rejects a judge, plan or tribunal as hostile or unjust. More recently, A. W. Lintott has offered that *appellatio* and *provocatio* are not strictly defined and that Paul's may be an example of one form of recourse to the tribune's help (*auxilium*). Whatever the specific underlying principle in law, it is clear that Paul's appeal was unusual. It is equally clear from Festus's recourse to counsel before final decision (Acts 25:12) that he was not bound or compelled to grant referral, though Roman law counseled strongly that he do so.

Questioning the accuracy of the record in Acts, based upon the Pauline epistles' silence regarding Paul's citizenship and their eloquence concerning his troubles (esp. 2 Cor 6:4-10; 11:23-25), hardly seems legitimate. We have seen that Paul's citizenship disclosures in Acts are rather consistently untimely and allusive. Moreover, it is as a citizen that Paul has profound troubles. The disclosures in Acts, far from being naïve Lukan romancing, rather reflect a strategy governed by ministry priorities—namely, that Paul's religious identity, the integrity of his message, the most favorable hearing of his listeners

and the faith of his converts should never be compromised in the interest of personal dignity, comfort or safety. Ministry priorities define the parameters within which the apostle permits the Roman franchise to serve him. Simply put, Paul is a Christian charged with a mission first; he is a Roman citizen second.

CIVIC CULTS

Civic cults, usually dedicated to a specific deity, were sponsored by local cities or city governments. Early Christian mission, which encountered some of these civic cults, sometimes found them to be a source of opposition.

1. The Role of Cities' Foundational Myths
2. Civic Cults and the Jews
3. Civic Cults and the New Testament

1. The Role of Cities' Foundational Myths.

Throughout the Mediterranean world prior to the conquests of Alexander the Great, the city (*Gk polis*), in a reciprocal relationship with surrounding countryside, was the basic form of government and administration. Such "cities" were typically small civic centers and would generally be dedicated to the worship of a particular god or goddess, whose cult was often centered either in the city itself or nearby (for instance, *Jerusalem, dedicated to Yahweh; Memphis, dedicated to the *Atis bull*; *Ephesus, in which the great temple to Artemis was located). This is perhaps a simplistic presentation, but it is generally correct for all areas throughout the Mediterranean world.

However, in the new world of widespread *Hellenistic culture in the wake of *Alexander's conquests, the life of each individual *polis* and its position within the wider Greco-Roman world depended partially upon the connection of these local cults and their foundation myths with acceptable Greek mythology. As a result, many local deities of non-Greek extraction often became associated with some aspect of Greek mythology. As Wallace and Williams point out, "this could be done by fabricating foundation stories and associating local cults with the myths of the Olympian gods" (Wallace and Williams, 97). There were some convenient ways of doing this. In Greek mythology, heroes such as Perseus, the demigod Herakles and the god Dionysus were reputed to have traveled widely. This allowed cities such as Tarsus in Cilicia (the home city of Paul, which claimed to have a connection to Argo via Perseus [*Strabo Geog.* 14.5.12.678c; cf. Wallace and Williams, 99]) and Tyre (which Alexander the Great

was convinced contained an altar to his "ancestor" Herakles, but was actually an altar to the Tyrian god, Melkarth; Fox, 181) to claim truly Hellenistic roots. Another manner of accomplishing this "connection" was to claim that the city had been founded by settlers from a Greek city. In some areas this was, of course, true (for instance, the Magnesians who had been convinced by either Antiochus I or II to settle *Antioch-next-to-Pisidia), but was often a concoction (Sparta was a favorite place of origin for several cities in Asia Minor; cf. Jones, 50).

One of the most important ways of establishing priority via a foundation myth, however, was the association of a local cult with the city. Wallace and Williams (100) point out the interesting example of the oracle of Apollo at Klaros, in the territory of the rather minor city of Kolophon (just north of Ephesus). In a sense, the inhabitants of Kolophon parleyed this rather insignificant shrine into a major first-century religious "theme park," complete with temple, underground passages, mysteries into which one could be initiated and, of course, the oracle, but an oracle which delivered its messages in complex variations of sung metrical verse.

Even in places where there was no such internationally famous shrine, the civic cult was an important source of social integration and order within the life of the *polis*. Regular *festivals were generally held by the city in honor of its deity, and it is not uncommon to find the deity's picture on a city's coinage. Processions in honor of the deity were not uncommon, and lavish amounts of money were often dedicated to their worship and veneration. Although a city such as Corinth or Ephesus might contain a plethora of different shrines and other cult centers, the typical practice was for one deity in particular to be the favored one and for that god or goddess to then be seen as that city's protector. Important temples in a city, such as that of Artemis in Ephesus, would bring enormous prestige to the city. In the case of Ephesus, the city was known as *neōkoros*, "warden of the temple" (e.g., *IE* II:236; IV:1288) or, once the imperial cult became established in the city, *dis neōkoros* "twice temple-keeper" (cf. Friesen, 52-56; van Tilborg, 197-201). This title is used as an honorific in inscriptions relating to the city and its activities.

2. Civic Cults and the Jews.

The idea of a civic cult is often discussed strictly

in connection with cities and peoples who saw themselves as fitting within the Hellenistic or Greco-Roman world. We are not surprised to see *Corinth, *Rome, *Ephesus, *Athens, etc. appearing in such discussions. However, the *Interpretatio Graeca*—that way of seeing all things as reflections of the Greek myths or culture—caused many cities which may not have formerly cast their own traditions in such a light to feel the need to do so now. Hengel's (1:255-309) sustained treatment of the *Interpretatio Graeca* of Judaism in light of the later attempt of Hellenistic reform in (and possibly refoundation of) Jerusalem itself in the mid-second century B.C. is a good example of this (cf. 1 Macc 1:11-15; 2 Macc 4:7-20). As Hengel (1:278) states, to advance the causes of the pro-Hellenistic faction within Jewish life and leadership, "these aims could be most easily achieved by the transformation of Jerusalem—and thus of the whole Jewish ethnos in Judea—into a Greek 'polis'." There were other attempts to show the superior nature of the Jewish people and cult: for example, the Jewish philosopher *Aristobulus tries to show that the Greek philosophers had taken their ideas from *Moses; and within the Maccabean literature, there is evidence that there was an attempt to show the Jewish origin of the Spartan people (1 Macc 12:5-23; cf. Josephus *Ant.* 12.4.10 §§225-27; 13.5.8 §§166-70). It may also be that the way in which Philo treats Moses, whom he typically calls the "Lawgiver," is in keeping with a further aspect of some foundation myths: the existence of an early lawgiver or leader who provided the essential elements of the constitution of a given *polis* (e.g., Solon of Athens; cf. Wallace and Williams, 97-98).

3. Civic Cults and the New Testament.

There are some very obvious examples of civic cults that show up in the NT. Paul's predicament in Ephesus at the hands of Demetrius the Silver-smith (Acts 19:23-41) is, according to the author, the result of a perceived threat to the smith's trade providing votive statuettes for the worship of Artemis. The multiple difficulties experienced by the earliest Christians in Jerusalem also fit within this rubric—the conflict between this new religion or sect of Christianity with the older, more established Jewish cult centered in Jerusalem. On the other hand, there are less obvious examples than these. The way in which, for instance, Jesus Christ is portrayed by Paul in the letter to the Philippians (esp. Phil 2) may

very well be meant by Paul as a distinct contrast to the way in which the Roman emperor was portrayed. In the setting of the Roman *colonia* of *Philippi, this would be a direct attack on the increasingly important pan-Roman civic cult: emperor worship (see Ruler Cult). It may also be that the Lycaonians' "mistaking" of Paul and Barnabas as Zeus and Hermes (Acts 17) is less an example of extreme credulity on the part of the Lycaonians than of their attempt to place these two messengers of the gods into a context more in keeping with their syncretistic religious understanding, possibly linked with their local cult.

As Christianity developed into a religion in its own right, there was an increasing concern that the single-minded devotion of its adherents was a threat to the overall fabric of Roman religion. As the famous correspondence of *Pliny and Trajan shows, "the spread of Christianity in Bithynia had alarmed [Pliny], for temples had become deserted and rites suspended" (Bowersock, 184; cf. Pliny *Ep.* 10). Trajan's *rescriptum* (Pliny *Ep.* 10.97) would provide the basis for Roman legal treatment of Christians until the time of Hadrian (approximately A.D. 122), when Hadrian made it clear, in a response to the pro-consul of Asia, that he had no desire to see anyone punished in a way that was out of keeping with the crime they had committed (Eusebius *Hist. Eccl.* 4.3). On the other hand, if Golan's hypothesis with regard to the foundation of Aelia Capitolina on the former site of the Jerusalem temple is correct (Golan, 226-39), Hadrian's desire to combat the growing influence of the Christian movement may have been far more excessive than that of his predecessor Trajan. A threat to civic religion was a threat to the warp and weft of Roman society and Roman life.

COINAGE: GRECO-ROMAN

The contribution that ancient coins make to our understanding of the Greco-Roman world has been largely focused on their role in dating archaeological sites. Although coins have an invaluable contribution to make in terms of addressing such matters as historical dating, they also can enhance our understanding of the NT in several other ways. As a primary resource of antiquity, coins stand as one window through which we can catch glimpses of the first-century world in which the events described within the NT took place and were recorded for posterity. In this respect, coins, together with the various surviving inscriptions, statues and paintings of the first-century world, are direct evidence of the NT world. Coins are legitimate historical sources, even if they are infrequently called upon to give their evidence within relevant scholarly investigations into the background of the NT documents. Yet a number of recent NT studies have begun to give consideration to the contribution of numismatics for our understanding of the background of the NT (see Kraybill, Kreitzer and Scott, to name but a few examples).

1. Portraiture of Historical Figures
2. Indicators of Places, Events and Dates
3. Evidences of First-Century Life

1. Portraiture of Historical Figures.

It is universally agreed that the NT story takes place against the backdrop of the early years of the *Roman Empire. In the NT we are introduced to many people who "helped to shape the course of history. Through the agency of coins we are able to see what some of these key players in the drama of human history looked like. For example, the NT mentions or alludes to several *Roman emperors, including Augustus, Tiberius, Claudius and Nero, all of whom are well represented on coin issues of the Roman

mints. We can see the idealized portraiture of Augustus, styled after the image of the demigod Julius Caesar; we can inspect the no-nonsense, grim-faced Tiberius of "tribute-penny" fame; we can examine the visage of the scholarly Claudius, who drove the Jews and Christians from Rome in A.D. 49; we can gaze at the bull-necked emperor Nero and recall that to this man Paul made his "appeal to Caesar" (Acts 26:32).

In addition, within the NT we have mention of other political figures, such as the Jewish leaders Herod Philip II (Lk 8:1), Herod Agrippa I (Acts 12:1-3, 21-23) and Herod Agrippa II (Acts 25:13; 26:2, 28). Each of these men has his portrait preserved on coins of the time. At the same time, other NT figures can also be brought to life through the agency of coins. Thus we feel that people such as Pontius Pilate (Mt 27:2; Lk 8:1; Acts 4:27; 1 Tim 6:19) and Antonius Felix (see Acts 23:23-24:27), although not visible to us in the form of coin portraits, are nonetheless made a bit more real through the bronze coins that bear both their names and their inscriptions and emblems.

2. Indicators of Places, Events and Dates.

Coins serve as valuable indirect evidence of some of the historical events that helped to shape the NT world. Within the ancient world coinage functioned much as postage stamps do in the modern world, with the various themes, concerns and topics of the issuing authority in evidence within the artistry of the coin types. Thus there is a sense in which Greco-Roman coinage could be described as a medium of political propaganda. Here the interests of the imperial mints are proudly set forth for all to see, particularly on the coins that serve as the basis for trade and monetary exchange. One of the most important examples of this is the so-called Jewish revolt of A.D. 66-70, which culminated in the destruction of the city of Jerusalem by the Romans (see *Jewish Wars with Rome*). The city of Rome awarded a triumph for the emperor Vespasian and his son Titus, who commanded the Roman legions at the destruction of the city. Scenes of this military triumph, including a portrayal of a personification of a female Judea figure being conquered and overshadowed by a Roman soldier, are among the most common reverse types on imperial coins of the Flavian period (coins of Vespasian, Titus and Domitian depict the subjugation of the Jewish nation in

some fashion). Such coins also provide useful background for the triumph imagery that is contained in 2 Corinthians 2:14-16 and Colossians 2:15 (see *Roman Triumph*).

Other examples of imperial coinage also reflect the circumstances of the day. Thus we may find an indication of the tension between Paul the apostle and the religiopolitical authorities in *Ephesus (Acts 19:23-41) surfacing in Roman coinage. The emperor Claudius issued a series of silver *cistophorii* in A.D. 50-51 to celebrate his marriage to Agrippina the Younger. These coins depict on their reverse evocative portrayals of the temple of Diana in Ephesus, including the cultic statue of the goddess, which appears to have been at the heart of Paul's confrontation with Demetrius and the silversmiths.

It is sometimes suggested that the Matthean account of the so-called temple tax (Mt 17:24-27, and unique in his Gospel) reflects the situation of A.D. 70-96, in which the tax was being levied by the Romans for the reconstruction of the temple of Jupiter Capitolinus following the Jewish revolt. Such a scenario has radical implications for the dating of the Gospel of Matthew as a whole, shifting the arena of conflict between Christians and Jews from one based in Jesus' own life to that of the Matthean community following the destruction of the *temple in A.D. 70.

Much of our discussion has concentrated on coinage of the Greco-Roman world, and within the NT period this means our focus falls upon coins that are issued under the auspices of the Roman state, which to a large degree controlled the production of money. However, individual cities of the ancient world often issued their own coins, proudly proclaiming on these the images and sites associated with their locality. One of the best examples of how this numismatic evidence can be used within NT studies concerns the seven churches of Revelation 2-3. Through the various coins issued by these cities of *Asia Minor we gain a better understanding of local religious beliefs and practices within the province, and through that we arrive at a more balanced interpretation of the meaning of the Apocalypse as a whole.

By means of coins we are able to glimpse some of the sights that would have been seen by the early Christians as they traveled around the Roman Empire in the course of their missionary journeys. For example, we see on the reverse of a *sestertius* from the reign of Nero a depiction of

the harbor at Ostia, which Paul may have visited during his final captivity in Rome. We have on another sestertius a fine depiction of Vespasian's Colosseum, according to legend the site at which many early Christians were martyred for their faith.

3. Evidences of First-Century Life.

One of the most intriguing ways in which coinage can lift the veil on the NT world is by its revelation of the details of everyday life. One could argue that the kinds or denominations of coins mentioned within the various Gospel accounts serve as an indicator of the relative wealth of the community concerned. (Does the fact that Matthew uses coin designations that seem to indicate a familiarity with wealth suggest his congregation is richer than that of Luke?) In short, it seems reasonable that the sociological profiles of the various churches of the NT be plotted against their engagement with wealth.

All sorts of images are portrayed in coinage. Everything from the kinds of sacrificial implements employed in making an offering to the gods, to snapshots of sacrificial ceremonies in which we see the wild-eyed bull whose life is to be offered, to images of taxes being gathered for the Roman state, to depictions of the kinds of boats that are used in travel, to the wide variety of women's hairstyles, and much more, are there for the attentive observer.

In conclusion, the study of numismatics may be likened to a new continent waiting to be explored as far as NT studies is concerned. Careful study of numismatics offers not only the possibility of new explanations of some passages long deemed difficult and troublesome but also the chance discovery of unimagined answers to problems that have hitherto proved insoluble for interpreters of the NT.

COINAGE: JEWISH

Ancient coins produced by or for Jews have been studied since the Renaissance for insights into political, economic and religious history. Coins were introduced into biblical lands through trade with neighboring nations perhaps as early as the sixth century B.C. Coins were rare in Israel until the last part of the fifth century B.C. References to money or silver in earlier periods indicate payments in raw metal, measured by weight. Transactions in coined money became common by the second half of the fourth century, but they never completely displaced bartering.

1. Coins from the Persian Period
2. Coins from the Hellenistic Period
3. Hasmonean Coins
4. Coins from the Roman Period

1. Coins from the Persian Period.

Under Persian rule (see Jewish History: Persian Period), small silver coins intended for local use were minted in or near Jerusalem beginning in the early fourth century B.C. These coins are known as the Yehud series because the Aramaic form of Judea (*YHD*) appears on many of them. The designs imitate those of Greek coins.

Prior to E. L. Sukenik's study, the inscription on a unique, larger specimen was incorrectly read as *YAHU*, the divine name. Therefore the coin's depiction of a deity seated on a wheeled and winged throne was associated with the visions of Ezekiel 1. This coin was probably issued by Persian rather than Jewish authorities, but the interpretation of the image is still debated.

Late in the Yehud series, the legends "Hezekiah" and "Hezekiah the Governor" suggest that Judea enjoyed a limited degree of autonomy within the Persian Empire. A few coins of similar design bear the legend "Yohanan the Priest."

2. Coins from the Hellenistic Period.

The Yehud coins continue into the Hellenistic period (see Jewish History: Greek Period), and

some may date to the reign of *Alexander the Great. Regional coins minted under the early Ptolemies employ the Hebrew form of Judea (*YHDH*). Their imagery, which derives from royal issues, includes portraits of Ptolemy I and Queen Berenice produced under Ptolemy II. Later Ptolemaic rulers standardized their coinage, eliminating regional varieties.

The *Seleucid kings continued direct supervision of mints in the region. One coin type belonging to Antiochus VII Sidetes and dated to 132-130 B.C. is found frequently near Jerusalem. A mint was probably opened there after the Syrians reasserted control of Judea in 134 B.C.

3. Hasmonean Coins.

The *Hasmoneans were the first Jewish rulers to issue coins on their own authority. Apart from one rare type in lead, their coins are bronze issues meant for local use. Foreign mints, especially Tyre and Sidon, still supplied silver and gold coins. Most Hasmonean coins employ symbols made familiar on Seleucid coins: anchor, star, lily, palm branch and double cornucopia with a pomegranate. However, no portraits appear, often an inscription surrounded by a wreath identifies the minting authority.

Debate continues on the question of which Hasmonean first produced coins. Some scholars believe that John Hyrcanus I (135/4-109 B.C.) issued coins in his own name. It is more likely that Alexander Jannaeus (103-76 B.C.), who assumed the title of king as well as high priest, produced the first Hasmonean coins.

One of Jannaeus's designs has a lily surrounded by "Yehonatan the King" in Hebrew on the obverse. The reverse bears an anchor and the legend "Alexander the King" in Greek. His most common type has a similar reverse, but its obverse displays an eight-rayed star surrounded by a royal diadem. Between the rays of the star an inscription in Hebrew or Aramaic reads "Yehonatan the King." Some of these coins are dated to the twenty-fifth year of his reign. A third type pairs the inscription "Yehonatan the High Priest and the Community of the Jews" within a wreath on the obverse with a double cornucopia and pomegranate on the reverse. This combination was often imitated by later Hasmoneans.

Many of Jannaeus's coins were overstruck to replace "Yehonatan the King" with "Yonatan the High Priest and the Community of the Jews,"

eliminating both the royal title and the combination of letters *YHW*, which could be read as the name of God. The restriking was probably done after Jannaeus's death, during the reign of Queen Salome Alexandra (76-67 B.C.).

The power struggle between Salome's sons is reflected in the numismatic record. Judah Aristobolus II, who held the high priesthood from 67 to 63 B.C., inscribed his coins with "Yehudah the High Priest and the Community of the Jews" in Hebrew within a wreath. The reverse carries the double cornucopia with pomegranate. The first coins of John Hyrcanus II (67, 63-40 B.C.) are similar but bear the legend "Yehohanan the High Priest and the Community of the Jews." The change to "Yehohanan the High Priest, Head of the Community of the Jews" reflects the grant of the title *ethnarch* from Julius Caesar in 47 B.C. The monogram A or AP on many of Hyrcanus's coins indicates that the mint was supervised by Antipater, Hyrcanus's Idumean advisor and father of Herod the Great. Hyrcanus II issued coins in several other varieties and denominations.

The last Hasmonean, Mattathias Antigonus, spent his entire reign (40-37 B.C.) fighting Herod for control of the country. His initial designs were similar to those of his predecessors except that he restored the claim to kingship and the use of Greek along with Hebrew. Shortly before his defeat, he introduced a new type, which displayed temple furnishings, the showbread table and the menorah, for the first time.

4. Coins from the Roman Period.

Under Roman rule (*see* Jewish History: Roman Period), numerous local and foreign coin types were used in Judea.

Herod the Great and his successors minted bronze coins with Greek (rarely Latin) inscriptions. The designs are typical of the Roman provincial mints. Later Herodians, whose coins were intended for mixed or predominantly Gentile populations, employed portraits of Roman emperors and occasionally themselves.

Some Roman officials in Judea also minted small bronze coins, the equivalent of a *peruta* or *quadrans*, for local use. They generally avoided imperial portraits, used Hebrew characters and chose symbols that had Jewish associations. Only Pilate, who was unusually insensitive to Jewish opinion, portrayed distinctively Roman cult implements on his coins. The temple tax

was probably paid with a Roman silver denarius. The "widow's mite" of Mark 12:42 would have been a Greek *lepton*, a tiny bronze coin weighing just over half a gram.

During the first Jewish revolt (A.D. 66-70) both silver and bronze coins were minted in Jerusalem (see Jewish Wars with Rome). The production of large silver coins was a clear assertion of autonomy. The silver coins are identified by denomination: shekel of Israel, half-shekel or quarter-shekel. The inscription surrounds a chalice. The reverse bears a pomegranate and the legend "Jerusalem the Holy" or "Holy Jerusalem," perhaps in imitation of the legend "Tyre, Holy and Inviolable" found on the Tyrian coins they were meant to replace.

Bronze coins were issued in the second and third years of the revolt with the inscription "For the Freedom of Zion." In the fourth year the slogan was changed to "For the Redemption of Zion." No bronze coins are dated to either the first or last year of the revolt. The bronzes employ a greater variety of symbols associated with the land or temple: a palm tree or branch, a grapevine or pomegranate, the etrog and lulav, an amphora or a chalice.

Roman authorities celebrated their victory in the Jewish War with an extensive series of Judea Capta coins (see Coinage: Greco-Roman).

The coins of the second revolt (A.D. 132-35) were all made by restriking coins already in circulation. The process replaced offensive, mostly Roman, images with the religious and political propaganda of the rebels on the only mass medium known to the ancient world. The Bar Kokhba coins are dated "Year one of the Redemption of Israel" and "Year two of the Freedom of Israel." Coins from the third and fourth years carry only the slogan "For the Freedom of Jerusalem." Since none of the Bar Kokhba coins have been found in Jerusalem, it appears that the rebels never captured the city.

The silver shekels bore an image of the temple, which the rebels hoped to rebuild. Between the central pillars the ark appears in a form that resembles a torah shrine. The word *Jerusalem* surrounds the temple on the early types; it was replaced by "Simon" during the second year. The reverse bears the date or slogan and a lulav, usually accompanied by an etrog.

During the second year, a pair of crossed lines was added above the temple facade. On later dies, the lines become a rosette, a design

that frequently represents a star in ancient architectural decoration. The star may allude to Simon, since the rosette first appears on the dies that introduce his name. Because the appellation "Bar Kokhba" does not appear in contemporary documents, it is more likely that the star suggests divine, perhaps angelic, power protecting or returning to a restored temple. The wavy line above the cornice of the temple on late coins probably represents the gigantic, golden grapevine that had adorned the front of the second temple.

The smaller silver coins carry symbols associated with the land and temple: palm branches, grape clusters, vessels and musical instruments. The most common obverse has Simon's name within a wreath, but sometimes the name flanks one of the symbols. The phrase "Eleazar the Priest" appears on some early coins.

The bronze coins were grouped into three denominations according to size. In the first year some were issued under the name of Eleazar the priest. Later that name was replaced by "Jerusalem," "Simon" or "Simon, Prince of Israel." In addition to the symbols found on the denarius, a seven-branched palm tree was particularly popular.

With the defeat of Bar Kokhba, the coins lost their status as legal tender, but many were saved and worn as amulets by later generations, in spite of rabbinic objections.

Early in the third century, the alliance between the mostly Jewish citizens of Sepphoris and the people of Rome was commemorated on the last ancient coins that might be considered Jewish.

COLOSSAE

Colossae was a small town in the first century A.D. located on the southern bank of the Lycus River at the foot of Mt. Cadmus (elevation, 8,435 feet) 11 miles east of Laodicea and about 15 miles south southeast of Hierapolis (Pamukkale). It was located near a major highway running through the territory of Phrygia in the Roman province of Asia (see Asia Minor). The closest town is Honaz Dagi, which is on the slopes of Mt. Cadmus in western central Turkey.

1. History

2. The Church and Doctrinal Questions

1. History.

According to Herodotus (*Hist.* 7.90), the city was the largest in the Lycus Valley in the five centuries before the Christian era. Xenophon (*Anab.* 1.2.6) described it as a large and prosperous city in about 400 B.C., but by the first century B.C. it had declined considerably in size and importance and was overshadowed by its closest neighbor, Laodicea. Numerous *coins have been found in the area that point to the worship of the Ephesian Artemis, the Laodicean Zeus, Men, Selene, Demeter, Hygieia, Helios, Athena, Tyche, Boule and the Egyptian deities Isis and Serapis (see Religion, Greco-Roman). The make-

up of the population is not certain, but *Cicero indicated that in the three cities of Hierapolis, Laodicea and Colossae there were some ten thousand Jewish males (*Cicero Flac.* 68). By the middle of the first century A.D., the Jews of this area were so plentiful that the Roman governor, in order to finance many projects in the region, would not allow them to send money outside of the province to pay their Jerusalem temple *tax. The Jewish influence in this region can also be seen in the references in the letter to the Colossians to circumcision (Col 2:11), keeping the *sabbath (Col 2:16) and the differences between Jews and Gentiles (Col 1:27; 3:11).

By the first century A.D. Colossae was overshadowed by Laodicea and was described as a smaller city by Strabo (*Geog.* 12.8.13). The days of its former wealth were apparently over. After a major earthquake in the Lycus Valley that destroyed Colossae and Laodicea (c. A.D. 60-64; *Tacitus Ann.* 14.27), Colossae was never fully rebuilt, and by the eighth century it was abandoned. The site has not yet been excavated.

2. The Church and Doctrinal Questions.

While it is possible that Paul may have visited this area on his way to Ephesus by way of the Lycus and Maeander valleys (Acts 18:23; 19:1) and that he may have founded this church, few scholars draw the latter conclusion. Most agree that Epaphras, the companion of Paul, started the church at Colossae (Col 1:7), most likely in the home of Philemon, whose famous runaway *slave, Onesimus, became a companion of Paul's in ministry (Philem 2, 10, 22; 2 Tim 3:20; Col 4:9). Paul's awareness of the church was probably due to the reports from Epaphras (Col 4:7-17; Philem). Colossians 2:1 suggests that he had not been there when he wrote the letter, but later he made plans to visit Colossae (Philem 22).

When that church faced a significant doctrinal threat, Paul, the likely author of the letter to the Colossians, addressed a number of doctrinal issues that were surfacing in the city. Primary among these issues was the identity of Jesus Christ, which Paul dealt with by citing a hymn of the early church (Col 1:15-20), but also Jewish legalistic concerns (Col 2:8-14) and behavioral issues (Col 3:1-17). A strange and imprecise syncretism or mixture of elements found in Hellenistic *mysticism and *Hellenistic Judaism appears to have influenced or concerned the

small church at Colossae. This syncretistic milieu included the worship of angels, understanding the identity of Jesus and matters of ethical behavior. While these issues were a part of the so-called Colossian heresy that Paul confronted, the precise nature of these religious concerns is still not clear. It is unlikely that what is later called *Gnosticism was current during the time when Paul wrote, but early strands of that philosophy were likely present in that community. Nothing in the first century, however, can clearly be equated with the Gnosticism of the second century.

CONSOLATIONS/TANHUMIN (4Q176)

The *Qumran document known as 4Q176Tanhumim was originally published by J. M. Allegro as a collection of fifty-seven fragments. Of these, only fragments 1-11 and 19-21 are of sufficient size for identification. Fragments 19-21, the more tenuous of the two sets, have been identified as the text of *Jubilees* 23:21-23, 30-31. These fragments are of great value for evaluating the accuracy of extant Latin and Ethiopic translations that currently preserve the book of *Jubilees* (see *Jubilees*). In their translation of the scrolls, M. O. Wise, M. G. Abegg and E. M. Cook claim that fragments 19-20 do not belong to 4Q176 but to a different document (some suggest 4QJub^f; but see the studies by M. Kister and G.-W. Nebe).

Fragments 1-11 are of greater value for NT studies. They are a fairly well preserved anthology of biblical texts. Except for the possible reference to Psalm 79:2-3 at the beginning of the first fragment, all of the quotations are taken from what is today called Second Isaiah, namely, Isaiah 40:1-5; 41:8-10; 43:1-7; 49:7, 13-18; 51:22-23b; 51:23c—52:3; 54:4-10a. The quotations are arranged sequentially and preserved accurately, which suggests that the compiler read progressively through Isaiah 40—55 and recorded certain texts. While the fragmentary condition of the document prevents us from understanding the broader significance that the quotations once had for the Qumran community, an informed inference can be made on the basis of a common theme running through the quotations. In every quotation Yahweh offers words of consolation or comfort—the meaning of the Hebrew word Tanhumim in the title given the scroll—to his people Israel by assuring them that he is a faithful and loving God who will soon bring restoration to those in despair. Although Second Isaiah was originally concerned with the release of the Israelites from Babylonian exile, the Qumran community interpreted these texts as prophecies relevant for their own day.

4Q176 is important for NT studies in at least two ways. First, it sheds light on the use of written texts by ancient readers. This type of note taking may have provided the basis for the inclusion of select biblical quotations in early Christian writings. But, unlike the long-standing proposal that early Christian writers relied on a common thematic collection of quotations from various sources (as we see in 4Q175), 4Q176 raises the possibility that individual writers compiled their own collections of important texts in the course of their reading. C. D. Stanley argues that this explanation best accounts for the close integration of many biblical quotations into Paul's arguments. Second, the *eschatological interpretation of these select passages from Second Isaiah may illumine their function in early Christian writings. Of particular importance is Isaiah 40:3, since it is quoted in all four Gospels. Like the Qumran community, the early Christians found in this text the prophetic announcement of imminent restoration and deliverance from exile, albeit in spiritual terms through the work of Christ.

COPPER SCROLL (3Q15)

One of the most enigmatic of the *Dead Sea Scrolls, the *Copper Scroll* is a list of buried treasure inscribed in Hebrew on three copper sheets, originally riveted together to form a single metal scroll. When it was discovered in 1952 in Cave 3 (2 km north of *Qumran), the copper was completely oxidized, and the scroll could not be unrolled. In 1956 it was finally coated with adhesive and then cut open for reading. It proved to contain a text that consists of sixty-four sections, each describing a treasure (usually various amounts of gold and silver) and indicating where the treasure is hidden (usually in places in or near the *temple in Jerusalem). Although some scholars have doubted the authenticity of the document or dated it later than the other Dead Sea Scrolls, most accept it as a genuine first-century record of real treasure, originally belonging either to the Qumran covenanters or more probably to the temple in Jerusalem. Thus the treasure may well represent part of the vast wealth of the temple, hidden before the destruction of Jerusalem by the Romans in A.D. 70 (see Jewish Wars with Rome).

Apart from this probable connection with the temple in Jerusalem, the *Copper Scroll* is relevant for the study of the NT in two ways: in demonstrating that *Hebrew was a living language in first-century Palestine and in helping to recover the name of the pool in Jerusalem where Jesus healed an invalid (Jn 5:2).

The *Copper Scroll* is written in a kind of Hebrew that is quite different from the classical literary Hebrew of the other Hebrew Dead Sea Scrolls. In fact, it represents an early form of Mishnaic Hebrew, marked for example by the use of the preposition *šl* and the masculine plural ending *-m*, and thus reflects the spoken form of the language as it had developed from bibli-

cal Hebrew. This provides decisive evidence against the view that Hebrew was no longer a living language in the first century and that Jesus is therefore unlikely to have spoken it.

In column 11, line 12 of the *Copper Scroll* one of the hiding places is described as follows: "In Beth Eshdatain, in the reservoir [or pool]." This is probably a reference to the place described in John 5:2 as "a pool, which in Aramaic [or Hebrew] is called Bethesda." The Greek manuscripts of this verse vary between "Bethzatha," "Bethsaida," "Bethesda," and other readings, but the evidence of the *Copper Scroll* seems to clinch the correctness of the reading *Bethesda*.

COPTIC NEW TESTAMENT. See NEW TESTAMENT VERSIONS, ANCIENT.

CORINTH

Corinth was named from the currant, a type of grape that grew in abundance in the vicinity. The city is situated about 50 miles west of *Athens on the northern side of the Peloponnesus. Three locations named Corinth exist in proximity. A modern village called Old Corinth, which was partially destroyed by an earthquake in 1858, contains the ruins of ancient Corinth (the Corinth of Paul's time). The devastation wrought by the earthquake allowed excavations in search of the ancient city to begin in 1886, and they continue today. New Corinth, the modern commercial city, was rebuilt in recent times 3.5 miles northeast of the old city, on the coast of the Gulf of Corinth, 1.5 miles west of the Corinthian canal.

1. Location and Description
2. Religious Structures in Corinth
3. Prominent Converts in Corinth

4. Opposition to Paul in Corinth
5. Paul and Gallio
6. Roman Influence in Corinth
7. Jewish Influence in Corinth

1. Location and Description.

Unlike Athens, Corinth was an international crossroads of commerce and travel. Since it was situated southwest of the Corinthian Gulf and northwest of the Saronic Gulf it was served by harbors on these two gulfs (Strabo *Geog.* 8.6.22). Ships sailed from Asia and Egypt into the eastern Saronic harbor at Cenchrea and from Europe into the western Corinthian harbor at Lechaicum. Corinth was thus a gateway between Asia and Europe. All the vices and crimes of such a melting pot must have characterized this city. It would undoubtedly have been the last city of all those through which Paul traveled that he might have expected to be receptive to the gospel.

The city was situated between the northern slopes of the Acrocorinth (elevation 1,886 feet) and the Gulf of Corinth, 4 miles to the north. It had a population far exceeding that of Athens, and although no scientific calculation has been definitively made, estimates run from 150,000 (Wiseman) to 300,000 or more (Barber), plus 460,000 *slaves, according to Athenaeus, who lived in the first century B.C. The walls are now known to have extended for 6 miles around the city.

Corinth was one of the largest and most important commercial cities in the Roman Empire, ranked by some after *Rome and *Alexandria (Fee, 2 n. 5). Strabo wrote that "the city of the Corinthians was always great and wealthy" (Strabo *Geog.* 8.6.23). Isthmia, near Corinth, was one of four permanent sites for the Pan-Hellenic Games, which resembled the modern Olympics (see Athletics; Circuses and Games). Mentioned by Strabo (*Geog.* 8.6.20), Plutarch (*Conv.* 5.3.1-3; 8.4.1) and Pausanias (*Descr.* 2.2), these games must have provided enormous income for the city. The superintendent of these games had his office in the south stoa of the forum at Corinth.

There was a large forum in Corinth around which were located a number of commercial and civic buildings, as well as fountains, shops and public toilets. The forum was entered from the north by means of a gravel road, later paved, originating in the harbor of Lechaicum on the

Gulf of Corinth. On the south it could be entered on a road coming from Cenchrea, a route Paul would have walked when he left Corinth at the end of his second journey (Acts 18:18).

2. Religious Structures in Corinth.

In A.D. 49, during his second missionary journey, Paul, being unable or unwilling to wait for the return of Timothy and Silas from Thessalonica, left Athens and went on to Corinth. He probably entered the city from the north on the Lechaicum road. Architecture everywhere reflected the transition from a half millennium of Greek culture to a Roman colony—religious, commercial, civic and athletic—a shift the apostle had recently seen in the Roman colony of *Philippi.

Pagan sanctuaries abounded in Corinth. Just inside the northern city wall, on the west side of the road, was the sanctuary of Asclepius, where medicine was practiced in the context of pagan idolatry. Nearer the forum was the temple of Athena. It is one of the oldest in Greece and had been restored by the time Paul arrived. Its earlier identification as the temple of Apollo is derived almost entirely from the imprecise account of Pausanias (*Descr.* 2.3.6). Fragments of an inscription found on Temple Hill, where this temple is located, suggest Athena as a better possibility (Williams, 26-37; Wiseman 1979, 475, 530 and footnotes). Nearby, on the west end of the forum there was a huge temple that was probably built during the reign of the emperor Tiberius (A.D. 14-37; see Roman Emperors) or possibly earlier to house the imperial cult. The temple testifies to the shift in emphasis in the first century from worship of the Olympian gods to that of the emperor (see Ruler Cult). Adjacent to the temple of the imperial cult, another small temple stood on the northeast corner of its temenos, and the identity of this temple is uncertain.

The sanctuary of Demeter and Persephone, on the slopes of the Acrocorinth, had been remodeled, and one of its buildings served as the temple, while ritual dining was done outside in tents. In addition, several other smaller temples were standing at the western end of the forum.

According to Strabo, the temple of Aphrodite, located on the Acrocorinth, once "owned a thousand temple-slaves, prostitutes, whom both men and women had dedicated to the goddess," and because of these temple slaves, he maintained, "the city was crowded with people and grew rich." The accuracy of this statement has

been challenged by J. Murphy-O'Connor (1984, 152), who calls it "pure fabrication" (*ABD* 1:1136). But there can be little question that Corinth had a history of being an exceptionally immoral city, and it was still filled with immorality in Paul's day. Paul speaks of the "prevalent immorality" in the city (1 Cor 7:1).

The existence of the temple of Aphrodite in the time of Paul is clearly indicated by Strabo, who used the present tense when he said "Now the summit [of the Acrocorinth] has a small temple of Aphrodite" (*Strabo Geog.* 8.6.21). C. Blegen, who did some limited excavation on the Acrocorinth and found evidence of the temple's foundations, estimated its size to have been no larger than 33 feet by 52 feet, which agreed with Strabo's description of it as small. Furthermore, Corinthian coins show the temple of Aphrodite as restored on the Acrocorinth (Williams).

3. Prominent Converts in Corinth.

During the eighteen months he was in Corinth (Acts 18:11) Paul evidently converted a man named Erastus, who provides an interesting cross-cultural link in the Corinthian church. One of the most imposing structures in Corinth was the fourteen-thousand-seat *theater, located northwest of the forum and renovated about five years before Paul arrived. About this time (c. 50, during the reign of Claudius) a large stone plaza was also laid at the northeast corner of the theater area. There an inscription was found that contained part of an abbreviated Latin statement: "Erastus in return for his aedileship laid [the pavement] at his own expense." The Erastus of this inscription is identified by the excavators with the Erastus mentioned by Paul in a letter later written from Corinth to Rome, in which he said: "Erastus, the city treasurer, salutes you" (Rom 16:23). This is undoubtedly the same Erastus who later remained in Corinth when Paul was taken to Rome (2 Tim 4:20). He was also with Paul in *Ephesus on his third journey (Acts 19:22). Although this name is found among prominent people in Ephesus, it is an uncommon one in Corinth, not otherwise found in the literature and inscriptions of the city.

People who held Erastus's position possessed both wealth (Kent, 100) and high civic status (Meeks, 59). Those who held office by the permission of Roman authority (*see* Roman Administration) found it expedient to express appreciation by donating some work of art or ar-

chitecture to the city. It is obvious that Paul did not limit his ministry to the poor. Another inscription was found on a monument erected earlier by Cnaeus Babbius Philinus, who was a city treasurer in the reign of Augustus. This inscription says Babbius erected the monument at his own expense.

Another example of the sociological level of Paul's churches includes a couple who were also somewhat prosperous. In Corinth, Paul met Priscilla and her husband, Aquila (Acts 18:2), who had recently arrived from Rome because the emperor Claudius had expelled the Jews (c. 49). Like Paul, they were tentmakers, or leatherworkers (Acts 18:2-3), but apparently they had done well in their business. They were prosperous enough either to have a home in which Christians could meet, presumably in Corinth, certainly later in Ephesus (1 Cor 16:19) and even later in Rome (Rom 16:5), or possibly they rented a vaulted shop with a high ceiling, and, as was customary, built a wooden platform halfway up to the top to divide the room into two levels. The upper room was often used as living quarters for the shopkeepers. These rooms were usually 8 to 14 feet wide and 12 to 24 feet deep. Such a room could accommodate ten to twenty persons. In large cities only prosperous people could afford a private home, called a *domus*, or a *villa*, some of which have been found in Corinth just northwest of the forum. The poorer classes lived in high-rise apartment houses.

The fact that Priscilla's name is mentioned before that of her husband, once by Paul (Rom 16:3, but not in 1 Cor 16:19) and twice by Luke (Acts 18:18, 26, but not in 18:2), may suggest that she had a higher status than he (Meeks, 59). And the fact that she, as well as her husband, was involved in teaching the eloquent and learned Apollos (Acts 18:24-26), her name even being mentioned first on this occasion, underscores her stature.

In Corinth, Paul "argued in the synagogue every sabbath, and persuaded Jews and Greeks" (Acts 18:4). The typical reaction of Jewish opposition and reviling of his message² caused Paul to "shake out his garments" and "go to the Gentiles" (Acts 18:6). He was subsequently hosted by a Godfearer, Titius Justus, who "lived next door to the synagogue" (Acts 18:7). The use of the word *synagogue* in this context indicates a building, not just a group of people. The ruler of this synagogue, Crispus, also believed, together with

all his house (Acts 18:8). Titius Justus was among Paul's "first converts in Achaia" (cf. 1 Cor 16:15 with 1:15-16), and since he was Paul's host in Corinth, he may be otherwise known as Gaius, whom Paul also says was host to him in Corinth and to all the church (Rom 16:23). If so, his Roman name would have been Gaius Titius Justus. Paul specifically remembered baptizing Gaius, as well as Crispus and the house of Stephanas. "Beyond that I do not know whether I baptized anyone else," he said (1 Cor 1:15-16). Timothy and Silas probably did most of the baptizing for Paul, since they arrived soon after Paul arrived in Corinth (Bruce, 252).

4. Opposition to Paul in Corinth.

Even though Corinth was different from any other city where Paul had ministered, he did not become discouraged by his rejection and leave Corinth as he did at Athens (Acts 17:38-18:1). Nor did he feel the need to flee the city as he had at Iconium (Acts 14:6). Neither was he driven out by irate synagogue members and civic leaders as he had been in some cities of Galatia and Macedonia (Acts 13:50; 14:19; 16:39). Nor did the new converts send him away for his own safety as they had previously done in Thessalonica (Acts 17:10) and Berea (Acts 17:14). Why? Luke writes that in Corinth "the Lord said to Paul one night in a vision, 'Do not be afraid, but speak and do not be silent; for I am with you, and no man shall attack you to harm you; for I have many people in this city'" (Acts 18:9-10).

After a year and a half, the Jews made a united attack on Paul, presumably because of the inauguration of a new proconsul named Gallio in May or June of 51 (Acts 18:12). This man was the brother of *Seneca, a Greek *Stoic philosopher who would become an adviser to the emperor Nero and perhaps influence the favorable outcome of Paul's first arrest in Rome. Gallio found no violation of Roman law or custom by Paul, no "wrongdoing or vicious" crime (Acts 18:14). Refusing to be a judge of Jewish law, Gallio drove Paul's accusers from the "tribunal" (Acts 18:16-17).

5. Paul and Gallio.

One of the most important discoveries at Corinth relating to the NT is this very tribunal (Gk *bēma*), or speaker's platform, from which official proclamations might be read and citizens

might appear before appropriate officials. Here Paul stood before Gallio. The structure was identified by several pieces of an inscription found nearby and dated to the period between A.D. 25 and 50, just prior to Paul's arrival in the city (Scranton).

Since Gallio became proconsul in A.D. 51, the year in which the Pan-Hellenic Games were being held at Isthmia, he may have been en route to the games and stopped by Corinth, where the office of the superintendent of the games was located in the forum.

6. Roman Influence in Corinth.

The extent to which the rebuilt Greek city of Corinth had become Roman, after the commissioning of the colony in 44 B.C., is seen in the fact that after this date Latin predominated its inscriptions. Of 104 inscriptions prior to the reign of Hadrian in the early second century, 101 are in Latin and only 3 in Greek (Kent, 19). The structure and administration of Corinth was Roman, but Paul wrote to the church there in Greek, which indicates that the unofficial language was still Greek. By the time of Hadrian and the visit of Pausanias, Greek had established itself once again as the official language. Corinth was a Roman colony, like Philippi, and exhibited evidence of its Roman base through these Latin inscriptions. Eight of the surviving seventeen names of Corinthian Christians are Latin: Aquila (Acts 18:1), Fortunatus (1 Cor 16:17), Gaius (Rom 16:23), Lucius (Rom 16:21), Priscilla (Acts 18:1, or Prisca, Rom 16:3), Quartus (Rom 16:23), Tertius (Rom 16:22) and Titius Justus (Acts 18:7). The other names are Greek: Achaicus (1 Cor 16:17), Erastus (Acts 19:22; Rom 16:23; 2 Tim 4:20), Jason (Acts 17:5, 6, 7, 9; Rom 16:21), Crispus (Acts 18:8; 1 Cor 1:14), Phoebe (Rom 16:1), Sosipater (Rom 16:21), Sosthenes (Acts 18:17; 1 Cor 1:1), Stephanas (1 Cor 1:16; 16:15, 17) and Chloe (1 Cor 1:11).

7. Jewish Influence in Corinth.

Corinth contained a sizable Jewish population. There were Jews in Corinth as early as the reign of Caligula (A.D. 37-41; Philo *Leg. Gai.* 281), and others came during the expulsion of Jews from Rome under Claudius (Acts 18:2; Suetonius *Claudius* 25.4; Orosius *Hist.* 7.6.15). Jewish inscriptions have appeared in the recent publication of inscriptions that were found piecemeal in the area of Corinth from 1951 to 1976. Most

of these are funerary inscriptions of the Christian period, and one of them (#29) is bilingual, in Hebrew and Greek (Pallas and Dautis, 61ff.; Blegen, VIII. Part I, 111, 115, Part III, 214).

CREEDS AND HYMNS

Hymnic and creedal statements are thought to have played a significant role in the development of the Christian church. Fragments of these and references to others are thought to be

found in the NT and merit further discussion.

1. Definition of Terms
2. Approaches to the Material
3. A Closer Look at Some Hymns and Creeds
4. Other References to Hymns and Creeds

1. Definition of Terms.

The writing of hymns has a long history. For instance, the Greek word *hymnos* ("hymn") was used for many centuries in Greek classical culture before Christianity's inception. At least since the time of Homer, a hymn was a song of adoration to a god (Allen and Sikes). Performance of a hymn addressed to a god was also the focus of competitions in the ancient world, which probably includes the second-century B.C. paean to Apollo, known as the First Delphic Hymn (Henderson, 363; see also West, 14-21). Later examples include Cleanthes' *Hymn to Zeus* (*SVFI*, no. 537).

Biblical psalms that are considered hymns are those that express adoration to God (Cumming, 18), and the language of some NT hymnic passages is reminiscent of hymns found either in the *Hebrew Bible or in the Greek *Septuagint. However, the kind of language found in OT psalms/hymns is common also to some Assyrian and Sumerian hymns (see, e.g., Cumming; Vanderburgh). The Christian hymn from the third century after Christ (*P. Oxy.* 1786 in Grenfell and Hunt) also shows a use of language similar to that of these various predecessors.

Sometimes the context distinguishes NT hymns from pagan hymns, and sometimes it is the language, such as the use of terms like "the God of Israel" and certainly references to Christ. Many NT hymns and creedal statements are also distinct from those found in the OT in that they are christological (although see Hengel, 86, who refers to Psalm 110 as christological).

The earliest Christians' perspective on the hymn seems to be fairly broad. E. Werner writes that "early Christianity frequently referred indiscriminately to all sung praises as hymns" (1959, 1:207) and that the "difficulty lies chiefly in the ambiguous term *hymnos*, since Biblical pieces like the canticles, as well as post-Biblical spontaneous utterances and Apocryphal compositions were all termed hymns" (1947, 434). Augustine's often cited definition is "Hymns are praises of God with song. . . . If there be praise, and it is not of God, it is not a hymn; if there be praise,

and praise of God, and it is not sung, it is not a hymn. If it is to be a hymn, therefore, it must have three things: praise, and that of God, and song" (McKinnon 1987, no. 360).

Since the early part of the twentieth century there have been increasing numbers of studies on hymns and creeds in the NT, although the distinctions between the two are often a matter for debate (Meeks, 144). Hymnic or creedal passages are often formally identified, for instance, on the basis of heightened poetical language or structure, uncharacteristic vocabulary or the formulaic use of introductory phrases such as *pistós ho logos* ("this is a faithful saying," e.g., 2 Tim 2:11-13) or *homologoumenós* ("undeniably," e.g., 1 Tim 3:16), a relative pronoun, such as *hús* ("who," e.g., Phil 2:6-11; Col 1:15-20) or the connective *hoti* ("that," e.g., Rom 10:9; 1 Cor 15:3-5). E. Norden mixes content and form when he distinguishes three basic kinds of hymn, one addressed to God, one about God and one based on the relative clause or participle that introduces it (Norden, 143-76). R. P. Martin tends toward the criterion of content when he says that scholars look for passages that have "a lyrical quality and rhythmic style, an unusual vocabulary. . . , some distinctive piece of Christian doctrine" (Martin 1978, 48). Frequently the definitions used are fairly general and mixed, although each hymnic passage is usually thought to have a poetic quality that contributes to its distinctiveness within the larger context (see *DPL*, Hymns, Hymn Fragments, Songs, Spiritual Songs; *DLNTD*, Hymns, Songs).

The threefold reference in the NT to "psalms, hymns and spiritual songs" (Eph 5:19; Col 3:16) has raised the obvious question as to what distinctions there are between these three terms. Most scholars think there is none. However, F. Wellesz's view should perhaps be reconsidered. He musically differentiated psalms as referring to psalmody or the cantillation of Jewish psalms (combining some features of speaking as well as of singing), hymns as more syllabic songs of praise, and spiritual songs as jubilant or ecstatic chants and alleluias (Wellesz 1955, 2; 1998, 33-34). Other NT references to hymns include the parallel verses in Matthew 26:30 and Mark 14:26 ("when they had sung a hymn"; commonly thought to refer to the *Hallel*, Psalms 113-18), the hymns that Paul and Silas were singing at midnight in prison (Acts 16:25) and the kind of hymn a Corinthian brings

"when you come together" (1 Cor 14:26).

Creedal formulas are statements that succinctly sum up the basic beliefs of the Christian faith (Leith; see *DPL*, Creed; *DLNTD*, Creeds, Confessional Forms). It has long been thought that the earliest and most essential statement of Christian belief is found in the brief creedal statement "Jesus is Lord" (Rom 10:9). Creedal formulas are frequently associated with baptism; however, while several NT creeds are clearly derived from the context of baptism, the liturgical context of others is unknown. Creedal phrases or related concepts include the following categories: "Jesus is the Christ/the Christ is Jesus" (Mk 8:29; Acts 17:3; 18:5; 1 Jn 5:1); "Jesus the Son of God" (Acts 9:20); "Jesus (Christ) is Lord" (Acts 10:36; 11:20; Rom 10:9); "Jesus Christ our Lord" (Rom 1:3-4); "Jesus is the Son of God" (1 Jn 4:15); "Jesus Christ has come in the flesh" (1 Jn 4:2); the significance of the death of Christ (1 Jn 2:2); the oneness of God (Jas 2:19); formal doxology (Rom 16:25-27; Jude 24-25); creedal formula centered on the resurrection of Christ (1 Cor 15:3-5); observing the Lord's Supper as proclaiming Christ's death (1 Cor 11:26); two-article affirmation of "one God, the Father . . . one Lord, Jesus Christ" (1 Cor 8:6); three-article affirmation of Father, Son and Holy Spirit (Mt 28:19; 2 Cor 13:13); creedlike phrases (1 Tim 1:17; 6:15-16); statements opening with "faithful is the saying" (Knight; 1 Tim 1:15); anti-docetic creedal formulation (Phil 2:5-11, but generally regarded as a hymn). A later creedal formula is found in the well known acronym $\text{I}\chi\Theta\Upsilon\text{C}$ (*ichthys*: "Jesus Christ, Son of God, Savior," | *Iēsous* = Jesus; χ *Christos* = Christ; Θ *Theou* = (of) God; Υ *Huios* = Son; Σ *Sōtēr* = Savior).

Categorizing the passages, as has already been noted, is not without its difficulties. Basic distinctions have been made, but frequently texts will fall in more than one category, and there are numerous differences of opinion regarding categorization. Some hymns are direct quotations from the *Hebrew Bible/OT (e.g., 1 Pet 2:6-8), while others are based more on the Greek OT, the *Septuagint (such as Lk 1:46-55). Some of the texts are highly poetic (e.g., 1 Tim 3:16), while some are basic creedal statements (e.g., Mk 8:29; Rom 10:9). Some are thought to be baptismal (e.g., Tit 3:4-7). Some are doxological in nature (e.g., 1 Tim 6:15-16; Rev 4:8) and some are christological (e.g., Phil 2:5-11; Col

1:15-20). Some have binary parallel structures (e.g., 1 Cor 8:6), and some have ternary parallel structures (e.g., Eph 5:14).

Passages that may be hymnic or creedal include Matthew 28:19; Mark 8:29; Luke 1:46-55, 68-79; 2:14, 29-32; John 1:1-16; Acts 4:24-30 (or 24-26); 5:42; 9:20, 22; 10:36; 11:20; 17:3; 18:5, 28; 22:6; Romans 1:3-4; 3:13-18, 24-26; 9:33; 10:9-10; 11:33-36; 16:25-27; 1 Corinthians 5:4; 8:6; 11:26; 12:3; 13:1-4; 15:3-5; 2 Corinthians 1:3-4; 5:18-21; 11:12-15; 13:13; Ephesians 1:3-14; 2:12-19 (or 14-16); 4:4-9/10; 5:14; Philippians 2:(5)6-11; Colossians 1:15-20 (12-14); 2:8, 9-15 (or 13-15); 1 Timothy 1:15, 17; 3:16; 6:12, 15-16; 2 Timothy 1:8-10; 2:11-13; Titus 3:4-7; Hebrews 1:3; James 2:19; 4:12; 1 Peter 1:3-5 (or 3-12); 1:18-21 (or 1:20); 2:6-7/8 (or 4-8); 2:21-25 (or 21-22); 3:18-22 (or 18); 1 John 2:2, 22; 4:2, 10, 15; 5:1, 5; Jude 24-25; Revelation 1:4-8; 4:8, 11; 5:9-10, 12, 13; 7:10, 12; 11:15, 17-18; 12:10-12; 14:3; 15:3-4; 16:5-7; 19:1-2, 3, 5; 19:6-8; 22:17 (or seven antiphonal units: 4:8-11; 5:9-14; 7:9-12; 11:15-18; 16:5-7; 19:1-4, 5-8 [Aune, 315]).

2. Approaches to the Material.

2.1. Source-Critical Studies. The beginning of source-critical studies of these passages began especially with the form-critical work of Norden that pointed to certain passages originating in earlier sources. Norden noticed that there was a higher level of writing in certain brief passages and suggested that this may be because the verses came from a source other than that particular writer. Source-critical studies have often focused on the Jewish backgrounds to these passages. The structure of the passages themselves is thought to give indications of their original language, giving rise to the notion of translating them back into their original language (for example, *Aramaic) for the purpose of study. Some of the hymnic passages, such as the canticles found in Luke, are obviously paraphrased from or rendered in the style of the Hebrew or Greek OT. It has also been suggested that the Greek sources of some passages were written and used by the earliest church gatherings, for example, the church at Antioch (Gundry 1970, 221-22). Some scholars have more recently included the possibility of the biblical author writing these passages, though perhaps in an elevated style (e.g., Wright).

2.2. Form-Critical Studies. Related to source-critical studies, as noted above, features of these

passages have been important in attempts to distinguish different forms. For instance, what may seem at first like a simple question—whether 1 Timothy 3:16 consists of two groups of three lines or three groups of two lines—has been the subject of a long debate that has not reached a consensus (Gundry 1970). Each passage has a history of its own regarding the scholarly view of its structure and form. Passages of high contention also include Colossians 1:15-20 and Philippians 2:5-11.

2.3. Functionalist Studies. A fundamental issue that has been the subject of more recent discussion is how these passages function within the NT contexts. S. E. Fowl concentrates this approach on several supposed hymns in Paul's writings (Phil 2:5-11; Col 1:15-20; 1 Tim 3:16). Fowl suggests that isolating the definition, source and form of a hymn may be of less importance than how it functions in its present NT context. The fact that Paul does not call these passages hymns suggests that it is an unimportant distinction for his purpose, which is to develop his point or to present his case.

2.4. Musical and Liturgical Studies. In attempting to reconstruct the musical and liturgical world of the NT and the early church, scholars are dependent on isolated and fragmentary references to musical and liturgical practice. Some scholars contend that the early church took over the practices of the Jewish *synagogue, while others believe that psalmody, for instance, was not widely used in early Christian liturgy. Nonetheless, there is a steadily increasing body of knowledge about the sacred music and the liturgy of the early Christian church, with ongoing attempts to find more clues as to its earliest history (see, e.g., Bradshaw; Holleman; Jeffery; McKinnon 1986; Quasten; J. A. Smith; W. S. Smith; Werner 1984).

3. A Closer Look at Some Hymns and Creeds.

3.1. Luke 1:46-55. The Magnificat, which begins "My soul magnifies the Lord," is thought to be in the line of traditional Jewish psalmody (Farris, 116). J. A. Fitzmyer considers it to be much like other "'hymns of praise' among the canonical psalms," such as Psalm 136 (Fitzmyer, 359). The language of the Magnificat, or Mary's song, seems to rely on the Greek Septuagint, however, with little evidence of the song having existed previously in Hebrew or Aramaic. Fitzmyer calls it "a mosaic of OT expressions drawn

from the LXX" (Fitzmyer, 359). The Jewish thought, rather than Christian, suggests an author other than the Lukan author (Marshall 1978, 79). Some textual variants have the name Elizabeth instead of Mary, although the attribution to Mary is generally upheld; whether this means that she wrote the song is debatable. A text that has some similarities to Mary's song is 1 Samuel 2:1-10, the song of Hannah, thought by many scholars to be the main influence on the Lukan passage. S. Farris writes that the hymn "displays . . . the characteristic structure of the declarative psalm of praise," which means that it begins with praise and then gives the reasons for that praise (Farris, 114). He thinks that attempts to divide the hymn into strophes, which have variously resulted in two, three and four strophes, are unnecessary and contends that the hymn fits within the "consistent promise-fulfilment-praise progression in Luke 1-2" (112), thereby fulfilling the function of Luke's narrative to show this progression (see DJG, Mary's Song).

3.2. John 1:1-18 (or 1:1-16). Scholars are not agreed on whether the prologue to John's Gospel, "In the beginning was the Word," is a hymn. Those who say it is point out the uses of parallelism and chiasm, for instance, that elevate the language from prose to poetry. Some split the passage into sections of verses that may represent an earlier hymn, with authorial insertions of polemical and explanatory prose (Dunn 1977, 137). However, D. A. Carson suggests that the prologue to the Fourth Gospel may not be drawn from a source but that it was written in its entirety by the author, an opinion he bases on the similarity of the writing style of the prologue to that of the rest of the Gospel, as well as the close correspondence of the material to the rest of the book (Carson, 112). This relates to its function as well, for Carson notes that the prologue is essential and integral to the rest of the book. Musically, C. K. Kraeling and L. Mowry believe that this passage suggests a combination of Jewish and Greek musical characteristics (Kraeling and Mowry, 309).

3.3. Romans 10:9. This creedal statement, "That if you confess with your mouth, 'Jesus is Lord,' and believe in your heart that God raised him from the dead, you will be saved," is thought by many to contain the earliest baptismal confession of faith: "Jesus is Lord." J. D. G. Dunn writes that it "is clearly a public confes-

sion of a solemn nature" and that Paul is citing a creedal formula that is well established (Dunn 1988, 606). Discussions about the use of the word *Lord* attempt to determine whether this word would have been perceived with Jewish overtones because of its common use in the Septuagint, where it is frequently used to replace the Hebrew, Yahweh, or understood in its contemporary usage in the Greco-Roman world.

3.4. 1 Corinthians 15:3-5. First Corinthians 15:3-5 is one of the main NT creedal statements (see Schweizer's comparison with 1 Tim 3:16), the essence of which is Christ died, was buried, was raised and was seen. R. P. Martin clearly sees the characteristics of a "creedal formulary" in these verses: "The four-fold 'that' introduces each member of the creed. . . . The vocabulary is unusual, containing some rare terms and expressions which Paul never employs again. The preface to the section informs us that Paul 'received' what follows in his next sentences as part of his instruction . . . now in turn, he transmits . . . to the Corinthian Church what he has received as a sacred tradition" (Martin 1963, 57-58). Although there are many arguments for a Semitic source and the passage shows dependence on Isaiah 53, the form in the NT is a Greek composition (Conzelmann). H. Conzelmann says the passage is clearly two double statements: in the first statement, "he died, he was buried," and in the second, "he was raised, he appeared." Others find an essentially three-part statement: Christ died, was buried and was raised from the dead.

3.5. Ephesians 5:14. This hymnic fragment reads "Therefore, it is said, 'Wake up, O sleeper, rise from the dead, and Christ will shine upon you.'" The rhythm of the language and the two introductory phrases both indicate the distinctiveness of the passage. Whether it is an early Christian hymn or one written by Paul himself, two OT references that seem to have influenced the passage are Isaiah 26:19 and 60:1, 2. From the first passage there is the influence of the rhythmic pattern and the use of the three concepts rise, waken and the dead. From the second comes the contrast of light and darkness (O'Brien 1999). Some consider the form of this hymn to be ternary, although the first two are a couplet of parallel imperative statements, while the third is a responding statement. The function of this hymn seems to be calling the nonbeliever to believe and is thought to have been

used in a baptismal context.

3.6. *Philippians 2:6-11*. This passage is widely acknowledged as an early Christian hymn (but see Fee, 30). Fowl states that "in calling these passages hymns we are using a term that is the construction of a later, critical community, and not a straightforward translation of *hymnos* in either its specific or generic sense" (Fowl, 33). Nevertheless, most would agree that the writing style of these six verses is distinctly different from the preceding and following verses. As a result, many scholars think that this passage is a quotation by Paul of a work written earlier than the writing of the epistle (Martin 1997, xxxiv). However, Pauline authorship is gaining ground (Fee; Gundry 1994, 288; Silva, 105; Martin 1997, 42-62; Wright, 352). The Philippian hymn may stand at the forefront of christological hymns of the Christian church, providing a template for Christian theology and hymn writing that reflects a ternary pattern: Christ's preexistence, his incarnation and death on a cross, and his resurrection and ultimate exaltation (contra Dunn 1989, 114-25).

Fowl's discussion of hymns as exemplars suggests that Paul uses it to offer a solution to the Christian community that was being persecuted (Fowl, 93). Musically speaking, Kraeling and Mowry think the hymn exemplifies a mixture of features: "As read in the original Greek the lyric . . . has a regularity of construction hardly to be imitated in translation. . . . The absence of parallelism, the brevity and equality of the lines and the stanza-form shows that we are dealing here with a composition even more remote from Jewish psalmody. The lyric is in fact a hymn to Christ as *Kyrios* or Lord, and hence quite out of keeping with Jewish tradition. Yet the rhythm is not quantitative but accentual, with three beats to the line, which suggests that it must have been sung in oriental fashion and not in one of the Greek modes" (Kraeling and Mowry, 309).

3.7. *Colossians 1:15-20*. This christological passage, which begins "he is the image of the invisible God," uses exalted language to declare the supremacy of Christ in creation and in redemption. The use of an introductory relative clause *hos estin* ("who is"), a style that suggests a strophic arrangement, the use of rhetorical devices and distinct language are all considered indications that this is a traditional hymn (O'Brien 1982), and the majority of NT scholars see this as clearly a pre-Pauline hymn (see discussion in

Cannon). Various proposals as to sources or influences on this passage include Jewish circles influenced by Greek ideas, *Gnosticism, *rabbinic Judaism and *Hellenistic Judaism. P. J. Achtemeier (1990) and others maintain that claims that the hymn is non-Pauline do not hold up, however, and that it is much more likely that Paul wrote the hymn, whether prior to the writing of the epistle or at the time, for the passage is central to the work, not a disjunctive leap. As to its form, many scholars agree that the passage consists of two strophes but disagree as to where the second strophe begins. The hymn may have been used against the Colossian heresy by emphasizing that even the cosmic powers are subject to Christ: Christ was first in creation; now through his resurrection, he is first in everything. E. Käsemann, however, discusses it in terms of a primitive Christian baptismal liturgy (Käsemann, 149-61).

3.8. *1 Timothy 3:16*. Traditionally Paul the apostle has been thought to be the author of 1 Timothy, although many scholars now think that the letter is *pseudepigraphal and was written later than the time of Paul, with proposals ranging from the end of the first century to as late as mid-second century (Guthrie 1970, 623-24; see *DPL*, Pastoral Letters). There is a similar lack of consensus regarding who wrote the specific passage found in 1 Timothy 3:16. Since the beginning of the twentieth century, the view that has found increasing acceptance is that the writer of 1 Timothy quotes an early Christian hymn or creed (Norden, 250-63; cf. Fowl, 37-45). The use of *homologoumenōs* ("undeniably") in the introductory phrase is thought to be an indicator of this hymnic passage, as is the use of *hos* ("who"; but see Marshall 1999, 523).

In Martin's outline of the characteristics of a creed compared with those that define a hymn (Martin 1968, 14-17), 1 Timothy 3:16 fits with some of his criteria of a creed, but in more cases with those of a hymn. The verse uses a different style of writing that sets it apart from the rest of the letter. The writing is compact—a total of eighteen words in six lines. The content, however, of these six lines is expansive, summarizing six events in which Christ is central. The use of the six verbs in the passive voice is a means by which Christ is understood to be the grammatical subject of each clause. The fact that this hymn was placed within the letter provides an insight into the author's view of the story of

Christ, as well as how he saw it functioning within the larger context of the letter. In its bold christology, the hymn addresses asceticism in the church (Fowl), as well as negative speech among its members (Guthrie 1990, 42-43). The succinct and poetical nature of the words of the hymn is particularly apparent in its parallel Greek form with its six passive verbs, a factor that suggests musical and liturgical use.

3.9. 1 Peter 3:18-22. The beginning of this creedal hymn states "For Christ died for our sins once for all, the righteous for the unrighteous, to bring you to God. He was put to death in the body but made alive by the Spirit." Of the full passage, L. Goppelt says that "nowhere else are so many aspects of the second article of the Apostles' Creed found in a preliminary stage of development" (Goppelt, 247). But, although both traditional creedal and hymnic elements are used, P. H. Davids writes that "arguments for a hymnic structure in part or all of this passage are not yet convincing" (Davids, 134-35). Achtemeier suggests that failed attempts to reconstruct an original hymn or creedal statement are because this passage only alludes to familiar traditions without taking over their original form (Achtemeier 1996). He identifies some of the more important linguistic features that point to the use of earlier traditions or materials as the use of *hoti* ("that"), *hina* ("so that"), *hos* ("who"), parallel phrases, reference to the exaltation of Christ, a threefold statement that Christ died, was made alive and ascended into heaven, and the use of *hapta legomena*. It is thought that the context for this passage is a baptismal setting, but F. L. Cross proposed that it is baptism within the paschal liturgy, noting that "as far back as our evidence takes us, the Paschal Liturgy has been for Christians a regular occasion for baptism" (Cross, 28).

3.10. Revelation 4:8. The hymn found in this verse "Holy, holy, holy, Lord God Almighty, who was, and is, and is to come" bears a resemblance to Isaiah 6:3: "Holy, holy, holy is the Lord Almighty; the whole earth is full of his glory" (the latter is known as the *Tersanctus*, "Thrice Holy," found in the Hebrew liturgy). The first name of God in Revelation 4:8 is "Lord God Almighty," which seems to be used because of its frequent use in the Septuagint, while the second name of God, the one "who was, and is, and is to come," has been thought to be drawn from the Hebrew OT and Jewish exegetical tradition (Beale, 332).

It is also, however, a familiar description found in Greco-Roman literature (e.g., Plato *Tim.* 37E; see Aune). D. E. Aune contends that John depended on two main influences in writing the hymns found in Revelation: Jewish traditions regarding the heavenly liturgy and the court ceremonial practices of Hellenists and Romans to sing hymns and shout acclamations to the emperor (Aune, 316). The context of this verse has been thought to be directly related to the liturgy of the early church or Jewish synagogue. G. J. Beale argues that the passage does not indicate what the liturgical patterns were but is meant to be the pattern after which the church shapes its worship.

3.11. Revelation 5:12. This doxological hymn, rather than describing attributes of God, lists those things that the Lamb is worthy to receive: "Worthy is the Lamb, who was slain, to receive power and wealth and wisdom and strength and honor and glory and praise." These are of the highest order and by rights belong only to God, but it is clearly shown that now they are also transferred to Christ, the Lamb. Lists similar to the one found here can be found in 1 Chronicles 29:11 and in the Greek version of Daniel 2:37 but also in writings such as *Philo (*Ebr.* 75).

4. Other References to Hymns and Creeds.

There are hymnic or creedal passages and references to others in contemporary literature outside the NT, but only brief reference can be made to them here. Early references to hymns are found in the well-known letters of Pliny the Younger to the emperor Trajan (written c. A.D. 107-115; for some discussion, see van Beek), and mention of primitive Greek hymns is found in the *Apostolic Constitutions* (fourth century), examples of which are appended to Codex Alexandrinus (fifth century) and are expanded forms of the greater doxology, "Glory to God in the highest." The lesser doxology, *Doxa Patri* (identical with the Latin *Gloria Patri*) "Glory be to the Father, and to the Son, and to the Holy Spirit: as it was in the beginning, is now, and ever shall be, world without end. Amen," was in use in Rome already by the time of Clement, about A.D. 91 (Bichsel).

CUMAEAN SIBYL. See **PROPHETS AND PROPHECY.**

CUMANUS, VENTIDIUS

Ventidius Cumanus was the Roman procurator of Judea from A.D. 48 to 52 (see Roman Governors of Palestine). *Josephus and *Tacitus are the only extant ancient sources on Cumanus's career, although Tacitus's account is more concerned with Antonius Felix, the procurator mentioned in Acts 24 (who was also the less discerning brother of Pallas, the ex-slave who rose to power as financial secretary under Claudius; see Tacitus *Ann.* 12.53; Suetonius *Claudius* 28).

Josephus tells two stories that precede Tacitus's account. The first (Josephus *J.W.* 2.12.1 §§223-27 = *Ant.* 20.5.2-3 §§103-12) relates that Cumanus was the successor to Tiberius Alexander as procurator of Judea. He goes on to tell of an incident during Passover where a soldier, on duty on the roof of the *temple portico, showed his backside (Josephus *J.W.* 2.12.1 §224) or genitals (Josephus *Ant.* 20.5.3 §108) to the people in the temple yard. In response, some people in the crowd began throwing stones at

the soldier. Cumanus, instead of disciplining the soldier, began pouring in reinforcements, and between ten thousand and thirty thousand people were purportedly trampled to death (there is a discrepancy between the number in *J.W.* and *Ant.*, as well as a text-critical problem in some of the manuscripts of *J.W.*). The second event (Josephus *J.W.* 2.12.2 §§228-31 = *Ant.* 20.5.4 §§113-17) was the attack by brigands on one Stephen, slave of the emperor, who robbed him of his baggage. In response to this, Cumanus sent troops to round up prominent men from neighboring villages. One of these troops, finding a copy of the Torah, ripped it up and threw the pieces into a fire, which enraged the Jews in the area. They demanded the death of the soldier, to which Cumanus acquiesced, apparently having learned caution from his earlier mishandling of Jewish religious sentiment.

The end of Cumanus's career followed on his mishandling of an armed conflict between the Galileans and the Samaritans (Josephus *J.W.* 2.12.3-7 §§232-46 = *Ant.* 20.6.1-3 §§118-36; Tacitus *Ann.* 12.53). The problem started when several *Samaritans set upon and killed some Galilean Jews attempting to go through Samaritan territory to get to Jerusalem at *festival time. Cumanus refused to avenge the deaths, as he was in the pay of the Samaritans (Josephus *Ant.* 20.6.1 §118). As a result, several Galileans, angered by Cumanus's failure to act, sought vengeance under the leadership of Eleazar Ben Dinai, known elsewhere as a very violent zealot (see *Song Rab.* 2:18 and *m. Sota* 9:9). They massacred the inhabitants of several villages and were deterred from further violence only by the intervention of Cumanus and his troops and by the entreaties of several leaders from Jerusalem. In the aftermath, the Samaritans sent an embassy to Umnidius Quadratus, the governor of Syria, presenting their grievances, not as an offense against themselves but as an offense against Rome. The Jewish counterembassy focused instead on Cumanus's corruption. Quadratus's investigation showed that the Samaritans had been responsible for the disorder and, by extension, that Cumanus was to blame for its escalation. Cumanus was subsequently tried either by Claudius in Rome (Josephus *J.W.* 2.12.7 §§245-46 = *Ant.* 20.6.3 §§134-36) or by Quadratus in Judea (Tacitus *Ann.* 12.53), where he was found to be culpable and banished. Tacitus adds that Felix

was governor of Samaria at the same time and that both governors were responsible. According to Tacitus, because of Felix's link with Pallas, Cumanus was made to take the blame for both of them—a sequence of events which seems to fit with the political climate of that (or any) period.

CYNIC EPISTLES

*Cynicism, as a *philosophical movement, rested on the lived example of its proponents rather than on a body of doctrine systematically elaborated. Some Cynics produced a literary output in traditional forms such as tragedy, dialogue and poetry, but the countercultural stance of the philosophy led its teachers to bend these forms toward parody and burlesque. More characteristically, however, Cynics tended toward satire and smaller forms such as the *chreia* or anecdote and the *letter.

Although many of the letters date from the Augustan Age, there is a considerable range in the date of composition among them. The bulk of the letters in the collection are ascribed to prominent Cynics of the past such as Diogenes, Antisthenes and Crates. Others bear the names of non-Cynics as well, such as Anacharsis, Heraclitus, Hippocrates, Socrates and his followers. The Cynic views advanced in the letters represent Cynicism as it experienced a revival after a two-century lapse into obscurity. The letters range from Cynic propaganda to a discussion of issues that were being debated within Cynicism at the time.

1. The Epistles of Anacharsis
2. The Epistles of Crates
3. The Epistles of Diogenes
4. The Epistles of Heraclitus
5. The Epistles of Socrates and the Socratics

1. The Epistles of Anacharsis.

Ten letters are attributed to Anacharsis, a sixth-century B.C. Scythian prince who visited *Greece to find wisdom. This "noble savage" came to be characterized as one who despised all Greeks but the Spartans. His critical attitude and more natural way of life suited him well to be connected with Cynic philosophy. F. H. Reuters places all but *Epistle 10* in the third century B.C., thus expanding U. von Wilamowitz-Moellendorf's view that *Epistle 5* dates to the third century B.C. Reuters's argument rests on the fact that the letters are written in Koine Greek with words not used before the third century; the absence of Atticism, a second-century movement; and vocabulary that predates 250 B.C. Thus a date of 300 to 250 B.C. seems most likely.

The Cynic critique of culture in the letters is attributed to Anacharsis, uncultured by Greek standards. To A. J. Malherbe they represent a rare witness to Cynicism in the third century B.C., a time when the movement was long claimed to have died out until its revival in the early empire. *Epistle 10* is circulated only by Diogenes Laertius and is in Ionic with no traces of Koine and seems to be by a different author from *Epistles 1-9*. It probably dates to the fifth or fourth centuries B.C. Topics in the letters include the value of content over dialect and pronunciation; wisdom even among non-Greeks; sobriety; envy; the good ruler; kindness; possessiveness.

2. The Epistles of Crates.

The thirty-six letters in this collection have long been recognized to be different from those that Diogenes Laertius (*Vit.* 6.98) ascribed to Crates of Thebes, pupil of Diogenes and prominent Cynic philosopher in the fourth to third centuries B.C. With the exception of letters 24 and 25, all the letters relate in content and/or language with the letters ascribed to Diogenes and are believed to be literarily dependent on them but from a different author. The letters of Crates, later than those of Diogenes, date no earlier than the first or second centuries B.C.

Within the collection, *Epistle 35* has been found to be more *Stoic than Cynic and *Epistles 27* and *32* are very similar to *Epistles 26* and *30*. Thus one hypothesizes that *27* and *32* served as rhetorical exercises based on *26* and *30*. W. Capelle finds three authors for the collection: I for *Epistles 1-26, 28, (29?), 30, 31, 33, (34?)* and *(36?)*; II for *Epistles 27* and *32*; III for *Epistle 35*,

while A. Olivieri suggests up to six authors. The letters are generally paraenetic except for *Epistles 20* and *24* (narrative) and *Epistles 7, 24* and *25* (invective). Topics in the collection include the philosophical (Cynic) life; praise of Diogenes; virtue's adornment; temperance; asceticism; friends; women philosophers; slave and free.

3. The Epistles of Diogenes.

A now lost collection of letters was ascribed by Epictetus (*Ench.* 4.1.29-31, 156) and Julian (*Or.* 7.212D) to Diogenes of Sinope (fourth century B.C.) and were known to Sotion (200 B.C.) and Diogenes Laertius (*Vit.* 6.80). The fifty-one letters in the collection of Cynic Epistles come from a later period.

Diversity in style, content and point of view indicate multiple authors to W. Capelle, who hypothesizes four groups of letters. The first group is *Epistles 8, 30, 31, 33* and *35-38*, which share an anecdotal and nonrhetorical style. Perhaps also included in this group are *Epistles 3, 9-12, (26), 44, 47* and *(34)*. References to the Olympiad and one of its victors in *Epistle 31* date that letter to the first century B.C. and thus also all the other letters in the group. The second group is *Epistles 1, 2* and *4-7*. The third group is *Epistles 13-18, 20, (21), 22-25, 27, 32, 41-43, 46* and *48-51*. *Epistle 16* was known to Diogenes Laertius (*Vit.* 6.23) and so the group might well be dated to the late second or early third century A.D. *Epistles 19, 28, 29, 39, 40 (43, 45)* are from a variety of authors and over a long period of time; that is, from shortly after 28 B.C. for *Epistle 19* to the fourth century B.C. for *Epistle 39*, which reflects a decline in Cynicism and the rise of *Platonism. Most were probably written as Cynic propaganda.

K. von Fritz, who focuses on form rather than content, notes that *Epistles 28-40* seem to belong together because of their length. Furthermore, *Epistles 31, 33* and *35-39* exhibit Socratic influence. *Epistles 29-40* focus on philosophical formation in a Socratic mode.

V. E. Emeljanow agrees that *Epistles 30-40* share Socratic interest and a late Hellenistic vocabulary and characterize Diogenes as a wandering Cynic. He finds that *Epistles 1-29* are simpler, shorter, explain less and depict their characters differently from *Epistles 30-40*. The fact that some manuscripts have only these letters suggests that *Epistles 1-29* are an earlier collection (first century B.C. or earlier). *Epistles 30-40* (c. second century A.D.) were written with

Epistles 1-29 in mind but were published separately. *Epistles* 41-51 are like *Epistles* 30-40 with their Socratic references, but they lack contexts for the anecdotes, which are themselves more abrupt and pointed. They might constitute a separate collection.

All told, Malherbe finds that three or even four authors were at work on the collection that they wrote to provide a positive picture of Cynicism in answer to critiques such as that in *Lucian. In doing this they presented a picture of diversity over the course of development in Cynicism. Topics include Cynic simplicity; subduing passions; begging and *beneficence; rough path to virtue; indifference; hospitality; honor.

4. The Epistles of Heraclitus.

The nine-letter corpus contains two (*Ep.* 1 and 3) under the name of the Persian king Darius and seven attributed to Heraclitus (sixth to fifth century B.C.). Text-critical studies, especially of PGen 271, establish their date to the middle of the second century A.D. They were probably written by members of the same school. H. W. Attridge separates *Epistles* 1 and 2 from the others; places together *Epistles* 3, 4, 7 and 8, which deal with Hermadorus's exile; and joins them with *Epistle* 9 on the same topic. The latter is always first in the manuscripts that contain it, as an introduction to the collection. *Epistles* 5 and 6 treat Heraclitus's attitude toward medicine but share particular details with the letters on Hermadorus's exile, such as piety and the setting up of altars. They were either written along with those letters or added to conform to them. Attridge showed the letters, especially 4 and 7, to reflect a Cynic-Stoic orientation and not Jewish, as J. Bernays hypothesized. Topics include satisfaction with little; gods; healing; law and justice; virtue.

5. The Epistles of Socrates and the Socratics.

Codex Vaticanus Graecus 64 (1969-70) preserves this collection of thirty-five letters, and all other manuscripts depend on it. *Epistle* 28, from Speusippus to Philip, might be genuine, while *Epistle* 35 seems to belong with Pythagorean literature in view of the exclusivity of the philosophical enterprise described there. The other letters, deemed pseudepigraphical since R. Bentley in the seventeenth century, include those of Socrates, *Epistles* 1-7, and those of his disciples, *Epistles* 8-27 and 29-34. Different authors for

these groups have been detected from their content, language and style.

Epistles 1-7 are didactic and use Socrates as an ethical paradigm. Cynic thought is preferred, and historical details are not given great attention. *Epistles* 1 and 6 are a diatribe in letter form. Mention of these letters in a third-century A.D. papyrus establishes their date as earlier, perhaps even to the first century.

The letters of the Socratics are less didactic and show more historical interest. The individual characters conform to their depiction in the biographical tradition, but the author papers over the differences among the members of the Socratic circle, save for the opposition between Antisthenes and Aristippus. Rigorous Cynicism is not in favor with this author, whose sympathy is with Aristippus. The author knows rhetorical theory and quotes a rule on the use of a tone appropriate to the situation of the letter writer, which *Cicero also refers to (*Cicero Fam.* 2.4.1). He also seems to use *Plutarch and possibly the epistles of Diogenes and Crates. These letters are mentioned by Stobaeus (fifth century A.D.), who refers to no author later than the fourth century. This leads Malherbe to date them to the early third century. The author might have known the letters of Socrates and most likely had contacts with Platonists from the knowledge and esteem for Plato that he expresses. The effort to mediate between rigorous and hedonistic Cynicism in these letters is readily apparent. Their characterization of these two trends provides valuable insight into the course of development in the Cynic movement. Topics include true and false teachers; Cynic virtues; friendship; rulers; memoirs of Socrates and his followers.

CYNICISM AND SKEPTICISM

In contemporary New Testament studies, cynicism is sometimes appealed to as a philosophical movement that illuminates our understanding of Jesus and his followers as well as of Paul. In discussing Cynicism it is useful to begin with ancient Skepticism.

1. Skepticism
2. Cynicism

1. Skepticism.

Skeptics commonly believed that true happiness could be found only apart from existing reality and from the attempt to derive knowledge from its interpretation. Doubt affected scientific and dogmatic knowledge, and this led Skeptics to view probability as a satisfactory foundation for moral action. What resulted from this was eclecticism. Guided by one's own judgment or experience of usefulness, one could accept or reject any opinion or insight of a *philosophical school without the need to adhere to an entire system or even to think it through.

Skepticism started with the question of whether it is possible to gain objective knowledge and then to give any results completely and unmistakably. At the same time, the Skeptics criticized the reliability of sense perception. The resulting doubt ultimately led to the criticism of ethical decisions and norms. *Cicero, who learned modified Skepticism from Academician Philo of Larissa, held that action is superior to theoretical knowledge and thus that ethics is the primary subject of *philosophy.

Heraclitus is said to have delivered many Skeptical pronouncements such as "the majority understand Logos not at all." Socrates showed Skeptic tendencies in his mistrust of the absolute value of truth claims and the Sophists' ethical valuations. He seems to have understood knowl-

edge (*epistēmē*) to be the knowledge of things acquired through practical activity.

After Socrates, three groups of Skeptics can be identified. First is the school of Pyrrho of Elis (360-271 B.C.) and Timon of Phlius (320-230 B.C.). Pyrrho is the recognized founder of Skepticism. His Skepticism rests on the view that value judgments rely on human convention (*ethai kai nomoi*) for their confirmation or denial. He also rejected nature (*physis*), as opposed to convention (*nomos*) as an absolute criterion. He thereby challenged not just the value of things but even their knowability. Pyrrho preferred to suspend judgment (*epochē*) about value and existence, for each statement is as well-founded as its equally persuasive counterpart (*isostheneia tōn logōn*). As a result people should be undisturbed (*ataraxia*) by external occurrences that are unavoidable (*adiaphora*).

With Timon, his disciple, Pyrrhonism dissolved and was carried forward through Arcesilaus of Pitane (d. c. 242 B.C.) and the Middle Academy. Their appeal to satiric verses and Homeric parodies led Xenophanes to produce parodies on philosophical questions (*silloi*) that approached Cynic wit and sharply critical polemic.

The second group was the younger Skeptic school of Aenesidemus of Cnossos (fl. 40 B.C.) and Sextus Empiricus, to whom we are indebted for nearly all of what we know of Skepticism. Taught by Herodotus of Tarsus (fl. end first century A.D.), Sextus wrote from A.D. 180 to 200 and brought Pyrrhonic Skepticism's arguments to bear on all areas of knowledge. His works constitute a negative encyclopedia of knowledge. The Pyrrhonic Hypotheses opposed the dogmatists and the mathematicians. Aenesidemus taught in *Alexandria, and his *Eight Books of Pyrrhonic Sayings* reestablished Pyrrhonic Skepticism, prematurely declared dead by Cicero (*De Orat.* 3; *De Offic.* 1.6).

The third group comprised the Academics in *Athens in their Skeptic phase from Arcesilaus to Philo of Larissa. Carneades of Cyrene (219-129 B.C.) restored the Skeptical foundations of Arcesilaus by disputing the reliability of the senses and the Stoic teaching of *kataleptikē phantasia* (Cicero *Acad.* 1.64-90). While he promoted suspension of judgment (*epochē*), he left open the possibility of practical decisions on the basis of what appears to be true, that is, the probable (*to pithanon*). His pupils and heirs are Clitom-

chus of Carthage (187/6-110/9 B.C.), Zeno of Alexandria, Hagnon of Tarsus, Metrodorus of Stratonicea and Philo of Larissa (160/59-80 B.C.). The latter, pupil and successor to Clitomachus as head of the Academy, in 88 B.C. went to *Rome, where he influenced Cicero. He later moved away from Skepticism and claimed that things could be known on the basis of their nature (*physis*).

2. Cynicism.

Cynicism is a fourth-century B.C. popular philosophical movement whose aim was to extricate people from a life of vice and set them on the road of virtue. Since it stressed example as its primary teaching tool Cynicism is commonly thought to have been an oral rather than a literary movement. Nonetheless, literary remains give evidence of a wide range of literary activity among Cynics.

Diogenes Laertius (*Vit.* 6.2-15) suggests that Antisthenes of Athens (455-360 B.C.) gave lessons in the *gymnasium at Cynosarges and was the first to achieve the Cynic ideals of indifference (*apatheia*), self-control (*enkrateia*) and patient endurance (*karteria*), thus founding the Cynic doctrine and name. But Diogenes of Sinope (414-323 B.C.), his pupil and continuator according to Diogenes Laertius, came to Athens after Antisthenes' death. Despite Diogenes Laertius's views, it seems that later tradition (only in the third century is he linked to the folded mantle) appropriated Antisthenes to Cynicism. Some scholars even suggest that Cynicism was not a Socratic derivation but rather stemmed from mendicant Pythagorean sectarians from Sicily who were resident in fourth-century Athens. Diodorus of Asperidus, for example, was said (Diogenes Laertius *Vit.* 6.13) to have been the first to double his mantle, let his beard grow and carry a staff and knapsack, all later Cynic signatures.

Diogenes of Sinope would then be the sect's originator and provided a model of life for other Cynics, including Bion of Borysthenes (325-255 B.C.), Teles of Megara (fl. 295 B.C.), Cercidas of Megalopolis (290-220 B.C.) and Onesicritus of Astypalaea. The sect's name would then derive not from Cynosarges but from the shameless, doglike life of the early Cynics.

Cynics' criticism of the folly (*anoia*) of popular opinion led to their reputation as irreligious (*atheoi*). They saw the requirements and cultic practices of traditional religion and popular

fears of the caprices of the god Fortune (*Tychē*) and of death and punishment as naïve and obstacles to self-sufficiency (*autarkeia*) and indifference (*apatheia*). Religion, as part of convention (*nomos*), held no interest for Cynics, as they pursued life according to the role assigned by nature (*physis*). Antisthenes is quoted as expressing the Cynic ideal as leading a pious and just life (*eusebos kai dikaios zēn*).

Bion of Borysthenes' diatribes on religious problems, Diogenes' anecdotes and chreiai on religious topics and Menippus's spiritual letters in the name of divine personages represent some of the diverse and original forms of literary productions of Cynics. These smaller forms, at the margins of classical literature, consisted in prose of burlesques, parodies on myths, proverbs, wills, diaries, diatribes, satires and epistles. In poetry they expressed their views in iambs, elegiacs, hexameters and in the new meter meliambus. The new forms served the Cynics' critique of conventional thought and literary genres.

Diogenes' chreiai and anecdotes, rhetorical puns, parodies and symbolic gestures (e.g., his choice of a *pithos*, or large wine jar, in which to dwell in the marketplace at Athens) were applications of *rhetoric to immediate circumstances. This expressed Cynic rejection of high theory and elaborated doctrine in a systematic body of abstract argument as irrelevant to practice and instructive example. Diogenes (Diogenes Laertius *Vit.* 6.38) saw himself as a character in a tragedy: without a city, a house or a fatherland, a beggar, a wanderer, with bread for a single day. The Cynics held freedom high among their values and practiced freedom of speech (*parrēsia*) and playful satire (*spondogelasion*) to challenge conventional thought and opinion.

Cynics claimed attachment to no city, for a city was against nature, but were citizens of the world. They belonged to the community of wise persons and expected a commonality (*koinōnia*) of all goods as humanity's common patrimony. Their effort to teach, lead, oversee, cure, save and benefit people constituted a deep philanthropy. Cynic life had three aspects: itinerant begging with knapsack, cloak and staff; the slogan "be countercultural" (*paracharaittein to nomisma*); the Cynic literary genres such as Bion's diatribes and playful satire of Monimus, Crates, Metrocles and Menippus.

Cynics did not establish a school as such but

comprised a small circle of disciples who practiced Diogenes' ascetical way of life. *Plato is said to have called Diogenes "Socrates gone mad" (Diogenes Laertius *Vit.* 6.54) in that he pushed the chief features of a wise man to extremes: frugality to asceticism, oblique reference (*eironeia*) to frank criticism (*parrēsia*), moderation (*sōphrosynē*) to indifference (*apatheia*), disregard of opinion to shamelessness. His followers included Hegesias of Sinope, Philiscus of Aegina, Menander, Monimus of Syracuse, Pasiophon and Androstheneis. They fashioned their own versions of the Cynic life. Crates of Thebes (d. c. 290 B.C.) was known for *philanthrōpia* (versus Diogenes' reputation for *autarkeia*) and criticized his friends for their own improvement but did not beg. He wed Hipparchia, the "female philosopher," and wore Cynic garb. Bion of Borysthenes left memoirs, sayings and diatribes and was court philosopher to Alexander Gonatas at Pella. Menippus of Gadara (first half of the third century B.C.) adapted the dialog for comic and satiric purposes (*to spoudogeloion*).

The Cynics lost prominence after 200 B.C. until the revival in the first century A.D. Romans preferred *gravitas* as suited to well-bred Romans, and they lauded their own countercultural heroes such as Cato and Cincinnatus. Demetrius is the first Cynic name to appear (mid-first century) after two centuries of obscurity. The Cynics were banished from Rome along with the Stoics, with whom they were confused, from 75 to 71 B.C. for teaching doctrines inappropriate to the age and for thereby corrupting people (Dio Cassius *Hist.* 65.12). From the reign of Vespasian to that of Marcus Aurelius Cynicism grew stronger, and Cynics were the butt of uncomplimentary references in literature, especially in Alexandria. Cynics tended to stay in the East, where the climate favored their mendicant ways, and they avoided large urban centers in favor of the countryside and towns. *Slaves and artisans found in Cynicism an alternative to their oppressive and monotonous lives, and many used Cynicism to find escape from the restraints of ordered society. It might be called the philosophy of the proletariat.

From the first century A.D. on Cynicism was characterized by significant diversity. Contrary to their original distance from philosophical considerations, Cynics became more open to philosophy, and prominent Cynics favored those doctrines that they viewed as contributing

to progress in virtue. Evidence from the pseudonymous *Cynic Epistles under the name of the Socratic philosophers indicates a leaning toward philosophy generally. Other features of diversity can also be detected in the movement, despite idealized characterizations of Cynics by *Epictetus, *Lucian of Samosata, Maximus of Tyre and the emperor Julian.

The Cynic Epistles express the contrasting tendencies of austere or rigorous and mild or hedonistic Cynicism. The pseudonymous epistles of Crates and Diogenes, as well as those of Simon the Shoemaker and Antisthenes, express the ideals and practices of austere Cynicism. These include wearing Cynic garb and battling against moral softness, common opinion and appearances by their example of simplicity and direct rebuke. The rigorous Cynics had a generally pessimistic view of the moral prospects of the mass of people. To counteract the depravity and intransigence of the corrupt human condition, they resorted to scathing criticism (*parrēsia*) and blunt, shameless gestures to force a spiritual cure (see the Cynic Epistles of Crates, Heraclitus, Diogenes and Hippocrates). This earned them the reputation of misanthropy.

Less pessimistic and dismissive of popular culture were the mild or hedonistic Cynics. These are represented in the Cynic letters of Plato and Aristippus, which stress the benefit of their approachable lifestyle and behavior. These maintained Cynic simplicity of life and dress and gave scant attention to conventional calculations of virtue and vice but proved warm toward education and culture while avoiding shamelessness and off-putting ascetical extremes. Lucian of Samosata identifies this diversity in the presentation of his Cynic characters; that is, Peregrinus for austere Cynicism and Demonax for the milder variety.

DAILY PRAYERS (4Q503). See LITURGY: QUMRAN.

DAMASCUS DOCUMENT (CD AND QD)

The *Damascus Document* is one of the Dead Sea Scrolls containing an admonition and a series of laws. The "C" in the abbreviation CD stands for Cairo, where the first copies of the text were found in the genizah of the Quaraite Ezra Synagogue in 1896. The community that produced the document could not be identified. It was attributed to an unknown Jewish sect until publication of the *Dead Sea Scrolls made it probable that its authors came from the same group. This hypothesis became a certitude when fragments of CD were discovered in Caves 4, 5 and 6 at *Qumran. The inhabitants of Qumran were *Essenes (Fitzmyer 1995).

"Damascus" appears in the title because the document focuses on those who entered a "new covenant in the land of Damascus" (CD 6:19; 8:21; 19:34; 20:12). S. Schechter, its discoverer and first editor, called it *Fragments of a Zadokite Work* (1910) because of its references to "Zadok" (CD 4:1, 3; 5:5). This was retained by R. H. Charles in his influential *Apocrypha and Pseudepigrapha of the Old Testament in English* (1913). C. Rabin preferred *The Zadokite Documents* as the title of his critical edition (1954). *Zadokite Fragments* is still found occasionally (e.g., ABD 6:1086) but has been supplanted by *Damascus Document*. German scholars started to use this title immediately after the First World War (e.g., Bertholet), and its neutrality won it growing popularity. In addition it came to be recognized that "Zadokite" was misleading in that it was also applicable to the *Sadducees, the sworn enemies of the Essenes. In modern usage the abbreviation CD is supplemented by QD to designate the copies of the *Damascus Document* found at Qumran.

1. Manuscripts
2. What QD Adds to CD
3. The Admonition
4. The Laws
5. History
6. The *Damascus Document* and the New Testament

1. Manuscripts.

Schechter recovered two manuscripts from the genizah. Manuscript A contains eight leaves written on both sides and numbered 1—16. It is dated to the tenth century A.D. The twelfth-century A.D. Manuscript B is represented by only one leaf written on both sides and numbered 19 and 20, to make it clear that it belonged to a different document. The best published photographs of these manuscripts are to be found in M. Broshi, where the transcription of the text is by E. Qimron. Broshi's volume also contains a bibliography (1970-1989) by F. García Martínez. J. M. Baumgarten (9-16) and D. R. Schwartz (1-8, 19-20) have published a critical edition and translation.

The fragments of QD found in Caves 5 and 6 at Qumran, first published by M. Baillet and J. T. Milik, have been republished by Baumgarten with M. T. Davis. The one fragment from Cave 5 (5Q12) contains five lines corresponding to CD 9:7-10 in the legal section. Four fragments from Cave 6 contain minute sections of the admonition. The fifth fragment of 6Q15 contains very few words and has no parallel in the genizah manuscripts but corresponds to a passage in 4Q270.

Eight copies of QD were found in Cave 4 at Qumran. All are to be dated in the century following 70 B.C., the oldest belonging to the period 70 to 50 B.C. (Milik, 58). With the exception of the sections dealing with skin disease (Baumgarten with Davis, 64-75) the official critical edi-

tion has not yet been published, but an English translation has been made available by García Martínez (47-70). Together the Cave 4 fragments yield 689 lines of text, of which 144 parallel the admonition and 182 parallel the laws. The 363 additional lines, however, make it clear that the genizah material represents a truncated version of the *Damascus Document* in use at Qumran (Baumgarten with Davis, 59).

2. What QD Adds to CD.

Material from every page of the admonition in CD, with the exception of 19, is found in at least one of the QD fragments, some in as many as four. There is no evidence of different recensions. The QD fragments, however, reveal that CD lacks the equivalent of two pages at the beginning of the admonition. The first page is represented by 4Q267 fragment 1 and the second by 4Q267 fragment 2 = 4Q266 frag. 1, both of which continue with CD 1:1ff. (García Martínez, 47-48). The new material is an exhortation addressed to the Sons of Light to depart from the paths of wickedness and heed the voice of *Moses.

With respect to the laws, Milik's deduction (151) from the content that CD 15-16 should come before CD 9 is confirmed by 4Q267 fragment 17, column ii (García Martínez, 54). CD 15, however, is preceded by much new material, whose content the editors (Baumgarten and Schwartz, 5; Baumgarten with Davis, 60-61) summarize, with slight inconsistency regarding the order, thus: (1) introduction to the laws; (2) the role of priests; (3) the ordeal of the suspected adulteress; (4) diagnosis of skin diseases; (5) impurity resulting from fluxes and childbirth; (6) the law of fraud applied to the arrangement of marriages; (7) agricultural laws; (8) impurity of metals used in pagan cults. Then follows the legislation of CD 15-16, 9-14, which is brought to a conclusion by a penal code for infractions of community discipline and a ritual for the expulsion of those who fail to conform. The last line of the ordinances is "And so, then, all this is with regard to the last interpretation of [the law]" (4Q270 frag. 11 col ii, 14-15; García Martínez, 67), which is followed by six blank lines before the bottom margin.

3. The Admonition.

The admonition lacks a coherent structure. There is no clear line of development. The infidelity of Israel past and present, the lessons of

history, the imminence of a final judgment, the renewal of the covenant by a privileged few, the inspired role of the Teacher, the revelation of hidden things, the need for perfect observance of the exact interpretation of the law—all these fundamental themes weave around each other surfacing and fading only to reappear in a slightly different guise. The result is a vigorous summons to the members of the sect to be faithful to their covenant commitment. To this extent one may speak of the admonition as "essentially a unity" (Knibb 1994, 155).

Schechter's impression that the admonition was made up of "extracts from a larger work" (x) put the question of its literary unity on the academic agenda from the beginning. Many responded to the challenge. Their hypotheses are explained and criticized by P. R. Davies (1983, 5-47). He maintains that the original admonition contained only 1:1-7:9 + 20:27-34. After the return to Palestine 7:9-8:19 was added. A number of interpolations were inserted by a redactor at Qumran who added 19:33-20:27. The complexity of Davies's suggestion does more justice to the problems of the admonition than hypotheses of one basic source broken up by later insertions, but it does not adequately account for all facets of the text.

Recognizing that very different situations are implied by the various parts of the text, J. Murphy-O'Connor (1972, 562-63; 1985, 232; see Knibb 1987, 14, 27, 50, 67, 71) considers the admonition to be made up of four originally independent source documents: (1) a missionary document (CD 2:14-6:11) designed to win converts to the Essene reform; (2) a memorandum (CD 6:11-8:2) whose purpose was to recall members of the community to more faithful observance; (3) a document (CD 8:3-19) criticizing the ruling class in Judea for its lack of support for the Essene movement and (4) a document (the source behind CD 19:33-20:22) written as part of an effort to stem a rising tide of disaffection within the community.

These sources, which for Murphy-O'Connor antedate the move of some Essenes to Qumran, were combined into the present admonition at Qumran, where an editor added the QD material mentioned in section 2 above + CD 1:1-2:13, and two series of interpolations, one to enhance the hortatory effect by adapting it to a Qumran perspective, the other to identify a particular individual as the focus of opposition to

the community (QD 4:19; 8:13).

The admonition was compiled within forty years of the death of the Unique Teacher (CD 20:1, 14-15; Fitzmyer 1992). This personage is to be identified with the Teacher of Righteousness (CD 1:11; 20:32), who was a mature adult in the middle of the second century B.C. (Murphy-O'Connor *ABD*). Hence the compilation can be dated around 100 B.C., which harmonizes perfectly with the date of the oldest manuscript (see 1 above).

4. The Laws.

Nothing in the admonition demands that it be understood as a hortatory preface to the laws. Part of the beginning may be missing, but 20:22-34 is a formal conclusion (Knibb 1987, 76). It is a literary whole, capable of independent existence. Equally a legal corpus can stand by itself. Moreover, the two are very different in tone. The polemical edge of the admonition is absent in the laws (Knibb 1994, 153). An organic relationship between the admonition and the laws has been presumed simply because of the format of Schechter's publication. However, the handwriting and number of lines of CD 1-8 differ from those of CD 9-16; the two do not belong to the same manuscript. Admonition and laws, however, are found together in 4Q267 (Stegemann in Knibb 1994, 160), and some relation can no longer be denied (against Stegemann 1990).

Certain elements in the admonition presuppose the laws, which may explain why the two documents were copied together. The reminder "observe the sabbath day in its exact detail" (CD 6:18; *see* Sabbath) is pointless unless highly specific legislation is provided elsewhere. This is precisely what we find in CD 10:14-11:18 and nowhere else in the Qumran literature (Schiffman 1975, 77-133). Similarly the "hidden things" (CD 4:14) must be spelled out somewhere. The laws, therefore, antedate the sources of the admonition. They governed the lives of the Essenes prior to the advent of the Teacher of Righteousness (CD 1:7-11). They were "the first ordinances," which are distinguished from "the last ordinances" laid down by the Teacher of Righteousness (CD 20:8, 31-32). Their permanent validity for the group at Qumran is asserted by IQS 9:10 and confirmed by the number of copies of QD, the latest dated in the early first century A.D. (Baumgarten with Davis, 60).

The laws give a rather clear picture of the

group they governed. The head of the whole movement (CD 14:8-12) supervised communities with a minimum membership of ten each with its own overseer, who should be a priest if possible (CD 13:1-4). He was responsible for instructing the community (CD 13:7-10), examining and admitting new members (CD 9:17-22). Legal matters were the province of ten judges, four priests and six laymen aged between twenty-five and sixty (CD 10:4-10). At meetings all sat in order, priests, Levites, laymen and proselytes (CD 14:3-4). The membership comprised men, women and children (CD 7:7; 15:5; 16:10-12; 4Q268 frag. 1 i 12-14). Whether women were full members is debated (Schuller). The members had private incomes from which they had to contribute at least two days' wages a month to the common fund to meet charitable needs, which included subsidies to unmarried women (CD 14:13-16).

Since Genesis 1:28 was understood as a commandment, it must be assumed that all male Essenes were married. According to *Josephus (*J.W.* 2.8.13 §§160-61), however, they married very young women who had menstruated only three times (reading *trimenoi* ["three months"] for the impossible *trietia* ["three years"]; Beall, 112). These were expected to have a child every year, because procreation was the only justification for *marriage. Inevitably many women died prematurely, and their husbands could not marry again (CD 4:20-21; *see* 6 below). Hence, the false impression of their contemporaries (*Philo in Eusebius *Præp. Ev.* 8.11.14; Josephus *J.W.* 2.8.2 §120; *Ant.* 18.1.5 §21) that there were two branches of the Essenes, married and unmarried (Stegemann 1993, 269-71). Qumran, therefore, was not a celibate community, and the legislation of CD remained relevant.

According to L. H. Schiffman (1983b, 14-17), the laws were produced by inspired exegesis of Scripture. Regular study sessions (IQS 6:6-8) were the medium through which God made known the hidden things. Since these sessions continued throughout the whole life of the sect one must assume that the laws were accumulated gradually over many years as problems were perceived and dealt with.

An unusual feature of the laws is the high proportion of ordinances dealing with relations with Gentiles (Schiffman 1983a). They concern trade, *slave labor, lodging, food, sabbath rest and the need to maintain good public relations with the majority (CD 11:14-15; 12:6-11). Such

laws reflect a time when the community lived in "a foreign, non-Judean environment" (Iwry, 85). This excludes both the hypothesis that the laws were the legislation of the pre-Qumran Hasidians (1 Macc 2:42; Stegemann 1990, 428) and the common view that the laws were written for Essenes living outside Qumran in the towns and villages of Palestine (Knibb 1987, 15). No matter how Hellenized Judea was it could not be considered a Gentile environment at any stage.

5. History.

According to CD, the Interpreter of the Law (CD 6:7) brought the sect into being during the exile in Babylon, which it called "Damascus" (CD 6:19; 8:21; 19:34; 20:12; Davies 1990 against Knibb 1994, 159). This is an appropriate Gentile context for the laws. Some members of the sect returned to Palestine (CD 1:5-8), 390 years later, in 172 B.C. (Pucch, 506 n. 29). They strove to win converts to their interpretation of the law (CD 2:14-6:11) but got no support from the religious establishment in Judea (CD 8:3-18). In consequence, morale in the group began to deteriorate (CD 6:11-8:3).

About twenty years later the Teacher of Righteousness joined them (CD 1:10-11). A senior Zadokite, who had been acting high priest until displaced by Jonathan in 152 B.C., he was the conduit by which Judean ideas and works entered the sect's bloodstream (Murphy-O'Connor 1985, 239-40). His assumption of the title and role of the expected "Teacher of Righteousness at the end of days" (CD 6:11; Davies 1983, 123) led to a split in the group (CD 19:33-34), for which the followers of the Teacher blamed the Man of Mockery (CD 1:15; 4:19) also called the Man of Lies (CD 8:13), even though it was the Teacher's group that moved out to Qumran. The new legislation for the small foundation at Qumran in CD 20:1-8 shows it to be secure in its faith and confident in its organization. The death of the Teacher (CD 20:1, 14-15) must have been traumatic. Subsequently there was an influx of Jewish converts (CD 20:22), probably refugee *Pharisees seeking safety around 100 B.C. (Milik 88). The admonition was written in order to rekindle the idealism of the enlarged community.

6. The Damascus Document and the New Testament.

When taken literally CD 4:19-5:2 permits only one wife in a man's lifetime (Davies 1987, 73-85).

It is commonly interpreted as a prohibition of polygamy and remarriage after divorce (amounting to a prohibition of divorce, which is the right of remarriage: "you are free to marry any man," *m. Git* 9:3) by invoking 11QTemple 57:17-19, which forbids polygamy and divorce, for the king but authorizes him to take a second wife after the death of the first. The legitimacy of such an extension to all of a royal prerogative is debatable; what is forbidden to the king is forbidden to all, but not vice versa. If the limiting interpretation is accepted, CD 4:19-20 forbids divorce and affords a historical background for the question on divorce addressed to Jesus in Mark 10:2-12 and the parallels, to which he gives the Essene answer.

CD 5:8-11 classifies as *zenut* ("unchastity") all marriages within the forbidden degrees of kinship, not just those explicitly excluded by Leviticus 18:6-18. Since *porneia* ("unchastity") is the normal Greek translation of *zenut*, this text confirms the interpretation of the exceptive clauses in Matthew 5:32 and 19:9 based on the technical use of "unchastity" in Acts 15:20, 29 to refer to the forms of sexual relations condemned by Leviticus 18:6-18 (Fitzmyer 1976). Matthew, in other words, excluded from the dominical prohibition of divorce those marriages that Jewish law considered invalid. To break up such marriages would not have been a divorce.

CD 9:2-8 demands the same series of three steps as Matthew 18:15-17 in dealing with a member who has committed a fault. First the offender must be reproofed privately (CD 7:2-3). Then the reproof must be uttered before witnesses. Finally the individual is brought before the assembly or its representatives. Despite the structural identity of the procedure, the differences are profound (Carmody). In the laws the first reproof is motivated by the accuser's intention to avoid complicity. The second is to ensure that there are the witnesses required by law. Finally the judges must apply the prescribed penalty. In Matthew's community, on the contrary, there is no such legalism. The concern at each stage is for the reformation of sinners. Even if they remain intransigent before the assembly no punishment is assigned, only the recognition that the sinners have removed themselves from the community.

DANIEL, ESTHER AND JEREMIAH, ADDITIONS TO

The Greek translation of the OT, the *Septuagint, or LXX, includes in three biblical books some extra material that is not present in the *Hebrew Bible. LXX Daniel contains an additional 172 verses and LXX Esther a further 107 that have no counterpart in the traditional Masoretic Text, and LXX Jeremiah has appended to it two further compositions comprising 213 verses unknown in Hebrew.

1. Additions to Daniel
2. Additions to Esther
3. Additions to Jeremiah
4. Possible New Testament Resonances

1. Additions to Daniel.

LXX Daniel includes extra material at two

places. The first comes after Daniel 3:23, where Daniel's three Judean compatriots have been thrown into a furnace of blazing fire by the Babylonians. The Greek text provides a prayer on the lips of one of the men (Azariah, also known as Abednego) and a hymn of praise to the Lord on the lips of all three men; accordingly, this addition is known as the Prayer of Azariah and the Song of the Three Young Men (LXX Dan 3:24-90). The second block of extra material comes after Daniel 12:13, where the Hebrew book ends but the Greek version continues with further stories illustrating Daniel's wisdom and zeal: Susanna (LXX Dan 13), in which he establishes the innocence of a woman accused of *adultery; and Bel and the Dragon (LXX Dan 14), in which he establishes the falseness of two gods worshiped by the Babylonians.

2. Additions to Esther.

LXX Esther includes extra material at five places, although it is all grouped together at the end of the book in the Vulgate and thus also in some English versions. The first comes before Esther 1:1 and introduces the hero Mordecai by means of a dream he has and a plot against the king that he foils (LXX Esther A:1-17 [Vulgate 11:2-12:6]). After Esther 2:13 the Greek version presents the text of the king's first letter (B:1-7 [13:1-7]); after Esther 4:17 it presents prayers by Mordecai and Esther (C:1-30 [13:8-14:19]) and describes Esther's approach to the king (D:1-16 [15:1-16]); and after Esther 8:12 it presents the text of the king's second letter (E:1-24 [16:1-24]). Finally, after Esther 10:3, where the Hebrew book ends, the Greek version rounds matters off with Mordecai's account of the fulfillment of his dream and a short postscript on the transmission and translation of the book (F:1-11 [10:4-11:1]).

3. Additions to Jeremiah.

After the book of Jeremiah, the Greek Bible includes two further Jeremianic works in addition to the book of Lamentations, which it also places in this category. The first is the book of *Baruch, sometimes called I Baruch to distinguish it from other compositions associated with the name of Jeremiah's secretary. It comprises an introduction on the purpose of the book (Bar 1:1-14), a prayer of confession (Bar 1:15-3:8), a poem in praise of wisdom (Bar 3:9-4:4) and a psalm of encouragement and hope (Bar 4:5-

5:9). The other addition is the brief Epistle of Jeremiah (79 verses, presented as Baruch 6 in the Vulgate and thus also in some English versions). It calls upon the Judean exiles in Babylon not to become involved in the worship of the Babylonian gods.

4. Possible New Testament Resonances.

Although it is reasonable to suppose that these additions were a seamless part of the Greek Bible familiar to the early Christians, no clear citation of or allusion to them appears in the NT. The additions may, however, have made a modest contribution to some of the ideas expressed by NT writers.

Dragons are uncommon and inconsequential in the canonical OT, but they appear with significance in the additions to Daniel (14:23-27) and Esther (A:5 [11:6]; F:4 [10:7]), where they play the part of a false god in Daniel's clash with idolatry and portend a mighty battle in Mordecai's vision of the struggle between the people of God and their enemies. The figure of a dragon who stands opposed to God is deployed also in a NT vision (Rev 12-13), but there is no place in John's imagery for Mordecai's corresponding good dragon. The dream of Esther's guardian utilizes other images too that become familiar in eschatological discourse (cf. Esther A:7-8 [11:8-9] with Mk 13), though these are not unique within the OT writings.

Baruch presents some possible affinities with certain NT texts. Wisdom appearing on earth and living with humankind (Bar 3:37) may be echoed in the Word becoming flesh and living among us (Jn 1:14). Perhaps too Baruch's rhetorical point that no one has ascended into heaven (*see* Heavenly Ascent) to bring wisdom down (Bar 3:29) but that God has given her to his loved ones (Bar 3:36) is reflected in John's assertion that no one has ascended into heaven except the Son of Man (Jn 3:13), whom God has given to the world out of love (Jn 3:16). Paul's disparaging reference to making sacrifices to demons rather than God (1 Cor 10:20) is matched by the same language in Baruch 4:7—but both writers probably derived their image from Deuteronomy 32:17 (*see* Demonology).

A final example of a NT writer's thought apparently echoing an expression in one of the additions is the claim in James 2:23 that Abraham was called "the friend of God." Abraham is not so called in Genesis, but he is in the prayer

of Azariah (at Dan 3:35 [Azariah v. 12]), though the choice of Greek words is different in the LXX and NT occurrences (forms of *agapao* and *phileo* respectively). However, the expression found in Azariah's prayer also appears elsewhere in the OT (in Is 41:8 and 2 Chron 20:7), so once again we are left with no clear instance of a NT writer making use of an addition to Daniel, Esther or Jeremiah.

DEAD SEA SCROLLS: GENERAL INTRODUCTION

In late 1946 or early 1947 a Bedouin shepherd, Muhammed edh-Dhib, followed a stray into a cave along the shores of the Dead Sea and so chanced upon the first of a group of ancient manuscripts that have since revolutionized biblical studies and the study of ancient *Judaism. Seven substantial scrolls emerged from that cave, copies of biblical and extrabiblical writings alike. They were only the beginning. Following the initial discovery, Bedouin and scholars competed to explore the caves of the region in hopes of new manuscript finds. After a search of hundreds of caves, eleven eventually yielded literary texts, now known as the Dead Sea Scrolls (DSS). Approximately 875 (generally fragmentary) manuscripts came to light in the course of these ex-

plorations. The nearby site of *Qumran, hitherto regarded as an ancient fortress, was also excavated during five campaigns between 1952-1956, for scholars suspected that the site was connected to the caves and the scrolls.

Publication of the discoveries was comparatively rapid at first. Six of the seven major scrolls from the site of the first discovery, now known as Cave 1, were completely published within seven years. The sixth, the **Genesis Apocryphon*, appeared in a partial edition in 1956 (and much more of the work has since been deciphered and published in preliminary form). The great bulk of the discoveries were early consigned to an international editorial team of seven scholars from Europe and the United States. This team succeeded in sorting most of the fragments and published some of the DSS in a series of volumes, *Discoveries in the Judaean Desert* (DJD; "of Jordan" appears on some volumes). Five volumes of DJD appeared in the decade spanning the late 1950s to the late 1960s. In the decades that followed, however, even with occasional preliminary editions, the rate of publication slowed to a crawl. Volume 6 of the series appeared in 1977, nine years after volume 5; volume 7 had to wait another five years, and volume 8 seven more, only appearing in 1989. By 1991, estimates of the percentage of material that remained unpublished ranged between 40 and 60 percent. The reasons for failure to publish so much vital material after forty years were various, some legitimate (the fragmentary condition of the scrolls; deaths of original team members; the demands of academic responsibilities), but others suggesting scandalous scholarly conduct. The late 1980s, in particular, were marred by growing scholarly wrangling over the slow pace of publication and rights of access to the unpublished materials.

In December 1991, pressured by bootleg editions of the scrolls that had begun to appear and the Huntington Library's decision to open its virtually complete collection of photographs of the unpublished texts to all qualified scholars, the Israel Antiquities Authority (IAA) decided to lift restrictions. Henceforth it would allow people to study the unpublished manuscripts and, within certain limits, publish the results of their research. At about the same time, the IAA and the new editor-in-chief of the publication project, E. Tov, moved to expand the number of scholars working on the texts for official publi-

cation in the DJD series. Over sixty scholars were now assigned texts. The augmented team soon began to publish the scrolls at a pace much faster than ever before in the history of the project. Some twenty additional volumes of DJD appeared between 1994 and early 2000. As a result of these changes, what had been a stagnant field of research from 1968-1990 became a swirl of scholarly activity.

1. Description of Contents
2. Interpretation of the Finds
3. The Dead Sea Scrolls and the New Testament

1. Description of Contents.

1.1. Biblical Materials. The biblical scrolls recovered from the caves number about 225. They include copies of every book of the Hebrew Bible, with the exception of the book of Esther. The most frequently attested books are Genesis, Exodus, Deuteronomy, Isaiah and Psalms—this last book numbering some thirty-five copies.

The biblical scrolls from Qumran have had a tremendous impact on the study of the Hebrew Bible, both with regard to textual criticism and with regard to what was once known as higher criticism. Their importance for textual criticism is obvious when one considers that prior to their discovery the oldest complete manuscripts of the Hebrew Bible dated from the tenth century A.D. The DSS lifted the curtain to a period over a millennium earlier in the formation of the text (*see* Hebrew Bible).

With regard to matters of higher criticism, perhaps a discussion of the manuscript known as 11QPs^a can serve as a typical example of the rich applications the scrolls make possible (*see* Psalms and Hymns of Qumran). It contains forty-one of the biblical psalms as well as apocryphal Psalms 151, 154 and 155. 11QPs^a also embraces three hitherto unknown psalms, a portion of Ecclesiasticus chapter 51, and a ten-line prose supplement enumerating the total of David's writings (given as 3,600). The date of composition for the three unknown psalms is disputed by scholars, but is probably the late Persian or early Hellenistic period. The scroll's text of Ecclesiasticus 51 differs markedly from the form previously familiar from the *Septuagint and other early versions. Its presence in a collection attributed entirely to David is instructive, serving as a premier example of the tendency in Second Temple Judaism to ascribe

poetic writings of unknown authorship to David. Concomitantly, its inclusion in 11QPs^a appears to confirm the long-held suspicion that Jesus ben Sirach did not write the fifty-first chapter of Ecclesiasticus (*see* Sirach).

But this manuscript of the book of Psalms raises much broader issues. The order of the psalms in 11QPs^a differs significantly from the order in the traditional or Masoretic Text. At least once (Ps 145), the Qumran scroll evidences a different form of a canonical psalm. Certain groupings of psalms, such as the Songs of Ascent and the Passover Hallel—viewed as units by the Masoretic Text—appear scattered throughout the Qumran text. And 11QPs^a is not an isolated example. Half a dozen other non-Masoretic psalters are included among the DSS. These facts suggest that the Psalter as we know it was only one variant in use among the Jews at the time of Jesus. Taken together with other similar evidence, 11QPs^a tends to suggest that the third division of the canon, the Writings, was still in flux at the time. Indeed, the Qumran biblical scrolls have reopened study of the formative process of the entire canon. Variant literary editions of Exodus, Numbers, Jeremiah, Psalms and numerous other books seem to show that the writings we consider canonical grew and assumed new forms for a considerable period after the traditional time of their composition. Other writings that did not become part of the canon for later Judaism or Christianity quite likely were such for some groups of Second Temple Jews.

1.2. Nonbiblical Materials. The vast majority of manuscripts from the caves near Qumran are nonbiblical texts. Many of these writings were entirely unknown prior to the discoveries. Others were familiar to scholars only by name or through short quotations in ancient literature. Since the diversity of the scrolls does not lend itself to a single classificatory scheme, what follows is organized according to these broad categories: major (i.e., lengthy) texts, interpretive texts, apocryphal and pseudepigraphic texts, liturgical texts, legal texts, and "magical" and calendrical texts.

1.2.1. Major Texts.

Damascus Document (CD). This work, once known as the Zadokite Fragments, first came to light long before the discovery of the Qumran texts. At the end of the nineteenth century, S. Schechter discovered two fragmentary excem-

plars deposited in the genizah of a Karaite synagogue in Fustat, the old city of Cairo. To these medieval manuscripts the DSS have added extensive fragments of eight copies of the **Damascus Document* from Qumran Cave 4 (4Q266-273) and tiny fragments of two other copies of the work from caves 5 and 6.

Taken as a whole, the twelve copies represent two versions, or recensions, conventionally designated A and B. Recension A is by far the better attested. When dealing with either recension, scholars usually subdivide the work into two approximate halves according to content: the Admonition and the Laws. The term "Admonition" is something of a misnomer, for one can isolate at least four separate addresses or "sermons" within this section. The Admonition encompasses stylized historical summaries that prefer ciphers to actual names when designating the actors in the drama. So one finds mention of a "Teacher of Righteousness," a "Spouter of Lies" and an "Interpreter of the Law." An enemy group, the "Seekers After Smooth Things," is also prominent. The thrust of the Admonition is to compare two periods of God's wrath: the first at the time of Nebuchadnezzar (586 B.C.; see Jewish History: Persian Period), and the second at the time of the Roman invasion of Palestine (63 B.C.; see Jewish History: Roman Period). The point of the comparison is to proclaim a typological parallel: just as apostasy in the first instance led to destruction and *exile for Israel, so, too, in the Roman period disaster of an even greater magnitude lies ahead—unless the people repent and embrace the text's legal perspectives.

These perspectives, the laws, constitute halakic regulations for a communal life lived out in "camps," but their contents differ somewhat from manuscript to manuscript. No single, "canonical" form of the *Damascus Document* ever developed. Rather, different leaders of the movement evidently modified a central core to fit their own needs. Most telling in this regard is the substantial overlap between the legal portions of the *Damascus Document* and the *Rule of the Community* (see *Rule of the Community* [1QS]). In some instances manuscripts of these two works contain identical laws, suggesting that one and the same sectarian group used both. This inference gains additional support from the fact that other Qumran writings also overlap similarly (e.g., *Halakha A* [4Q251], *Serekh-Damascus* [4Q265] and *4QMMT* [4Q394-399] all over-

lap one another). The oft-repeated hypothesis that a stricter branch of the sect lived at *Qumran and followed the *Rule of the Community*, while a less disciplined, broader movement living throughout Palestine was regulated by the *Damascus Document*, no longer seems viable.

The Rule of the Community (1QS). Among the initial discoveries from Cave 1 was a virtually complete copy of the writing variously termed the **Rule of the Community*, *Discipline Scroll*, or *Manual of Discipline*. The *Rule of the Community* (its actual, ancient Hebrew designation, found inscribed on a scroll tab) describes sundry regulations for the communal life of a group calling itself the *Yahad*. They are to share all meals, pool their property and follow a very strict regimen of ritual *purity. Scholars early recognized that this is a work whose form, as with the *Damascus Document*, is the result of a process of editing and redaction. Recent publication of the fragments of eleven copies of the *Rule of the Community* from Cave 4 (4Q255-264a) have confirmed this understanding and afford insight into the redactional process by which the work grew. In turn, recognition of the literary growth-pattern carries historical implications. It now appears that the movement behind the text was organized at first in semidemocratic fashion. "The Many" (*hārabbīm*), or general membership, had much of the power to make decisions about policy and finances. At a certain juncture a group called the Sons of Zadok (presumably related, whether actually or mythically, to the Zadokite priesthood) usurped this power. The Many was thereafter governed by a priestly oligarchy. Why and when this change took place is unknown. The Cave 4 copies also show that, as with the *Damascus Document*, no canonical version of the *Rule of the Community* ever displaced all rivals. Instead, earlier versions continued to be recopied even after more developed ones had come on the scene. Presumably the unavailability of developed forms at the time a copy was needed explains the scribal decision to recopy older ones. Such scarcity was common in book cultures of Greco-Roman times (see *Literacy and Book Culture*).

In addition to the principal text, the Cave 1 manuscript included two so-called appendices. The first, known as the *Rule of the Congregation* or *Serekh ha-edah* (1QSa/1Q28a), is two columns long and deals with the "last days" (see *Rule of the Congregation/Messianic Rule* [1QSa]). The work's actual connection with the principal text

is unclear, for although it originally belonged to the same scroll, it was written by another scribe and differs both in concept and terminology. The *Rule of the Congregation* legislates for the education of children raised in the community, the stages of progression within the movement according to age and ability, and procedures for the communal meal presided over by *priests and a so-called "messiah of Israel." Recently five additional copies of the *Rule of the Congregation* have been identified, written in a cryptic script on papyrus (4Q249a-249e). The second appendix, the *Rule of Benediction* (1QSb/1Q28b; see Book of Blessings [1QSb]), is very poorly preserved. Several blessings pronounced by the *maškil* ("wise leader") over the community, the priests and the prince make up its content. As with the *Rule of the Congregation*, this second appendix has a very pronounced eschatological setting (see Messianism).

The War Scroll (1QM). This scroll consists of nineteen badly deteriorated columns. It was originally somewhat longer, but how much is now impossible to determine. The work is ostensibly a manual to guide the self-styled "Sons of Light" in a final eschatological war, in which they are to face, and eventually vanquish, the "Sons of Darkness." Nevertheless, the text is essentially a theological, not a military, composition.

Among the topics the *War Scroll* treats are: preliminary preparations for the war; rules for the sounding and inscription of trumpets used to guide the course of the battle; the dimensions and inscriptions of shields and standards used; the battle array, including who may and may not participate in the conflict; the role of the priests and Levites; and the ebb and flow of the final battle against the *Kittim* (probably the Romans).

Most scholars agree that the weapons and tactics that the scroll describes suggest Roman rather than Greek military strategy. If so, these descriptions enable the dating of the text in the form we have it to be narrowed to the later decades of the first century B.C. But literary analysis further suggests that the text as we now have it is considerably expanded and reworked from an earlier version or versions, perhaps utilizing as its kernel a work based on Daniel 11:40—12:3. This literary hypothesis finds some support in fragments of six exemplars of the *War Scroll* discovered in Cave 4. Some of these fragments reveal a much shorter version of the work and

otherwise differ markedly from the Cave 1 manuscript.

A work intimately related to the *War Scroll*, even perhaps part of one recension of it, is *Sefer ha-Milhamah*. Two copies have survived, 4Q285 and 11Q14 (see War Scroll [11QM] and Related Texts). One fragment of this writing has been interpreted to say that a messianic figure known from several of the DSS, the "Prince of the Congregation," will be put to death by his enemies. He would then be a sort of dying messiah. A more probable interpretation of the ambiguous Hebrew phrase in question is that the Prince of the Congregation himself puts an enemy king to death.

The Hymns (1QH^a). The composition known as the *Hymns*, or 1QHodayot (see Thanksgiving Hymns [1QH]), comprises in the *editio princeps* eighteen partial columns and sixty-six numbered fragments. Subsequent to that original edition scholars identified two additional fragments. Because none of the columns is complete, students of the text have proposed differing divisions and, consequently, competing reckonings as to the number of hymns 1QH^a contains. Six manuscripts from Cave 4 further complicate the situation. While these copies fill in lacunae in the manuscript from Cave 1, they also prove that the order of hymns was somewhat variable. Indeed, the Cave 4 copies tend to support literary analysis arguing that more than one version of the work existed. At the core, and originally circulating as a self-contained book, were some eight columns of hymns authored by the Teacher of Righteousness. These were the so-called *Teacher Hymns*. Subsequent leaders of the movement added hymns fore and aft, sometimes deriving these added hymns from sources that have also come down to us separately. The added hymns are conventionally known as *Community Hymns*.

Most of the hymns begin either "I thank Thee, Lord," or "Blessed Art Thou, O Lord." Many scholars have tried to fit them into a model known to biblical form critics as "psalms of individual thanksgiving." Deviations from the biblical patterns, however, are sufficient to make the genre of these compositions a moot point. Many of the hymns have nothing to do with thanksgiving, or even lament, but are more like a discourse. Also debated is the question of what function(s) the writings served within the movement(s) that produced or employed them. An-

other important aspect of the hymns is their midway position between the psalmic literature of the Hebrew Bible and that of later Judaism, including the NT.

One of the hymns added to the core of the *Teacher Hymns* (at 1QH^a 25:35—26:10) survived only in fragmentary form but has recently been the subject of considerable research. The Cave 4 materials make it possible to reconstruct about half of the hymn. The writer portrays a remarkable figure who asks, "Who is like me among the angels?" (Heb *'elim*, lit. "gods"), echoing in daring fashion the biblical question addressed to God, "Who is like you among the angels?" He also asks, "Who is like me for lack of evil? Does any compare to me?" and (alluding to the Servant Songs of Isaiah) "Who has been contemptuously despised like me?" Though much research remains to be done on this "Hymn of the Exalted One," it bears obvious comparison to NT statements about Jesus and to the NT use of divine language from the OT to describe him. Moreover, the figure is, like the Jesus of Hebrews, seated on a throne at the right hand of God.

The Temple Scroll. Known in three copies from Cave 11 and one or two from Cave 4, the principal copy of the *Temple Scroll* (11QTemple; also 11QTorah; see *Temple Scroll* [11QTemple]) is the longest of the surviving DSS. Unwound, this copy of the scroll is twenty-eight feet from beginning to end. The *Temple Scroll* is a melange of biblical and extrabiblical ordinances and descriptions concerned with a *temple, its services and its *festivals. The first well-preserved columns describe the temple building with its key installations. From there the text proceeds to detail various festivals, *sacrifices and procedures, the temple courtyards and laws of impurity (see *Purity*), finishing with extracts from the Deuteronomic Code (Deut 12—26). Among the most striking literary features of the scroll is the change of all biblical quotations attributed to Moses from third to first person. This well-calculated change has the effect of making Moses seem at once the author and addressee of the text, thus imbuing its contents with Mosaic authority.

The New Jerusalem Text. Although not well enough preserved to be considered "major," a text that is related to the *Temple Scroll* may conveniently be brought into the discussion here (see *New Jerusalem Texts*). This is the Aramaic writ-

ing designated the *New Jerusalem*, which is attested by copies from caves 1, 2, 4, 5 and 11. The author presents the work as a vision in which he ("Ezekiel"?) is led about a future Jerusalem by an angel and shown various buildings, streets and gates; in each case measurements both in cubits and reeds are provided. The description is very schematic, and many measurements are unrealistically large. Evidently inspired by Ezekiel 48:16-17, the city described is approximately 18 by 13 miles in size. Numerous measurements for features of the city and its temple are identical to those of the *Temple Scroll*, suggesting that the *New Jerusalem* was a source for that work.

The Copper Scroll (3Q15). Perhaps no DSS has occasioned greater difficulties in its reading and interpretation than the *Copper Scroll* (see *Copper Scroll* [3Q15]). This is the only work inscribed on copper, and unlike all but a few it was composed in early Mishnaic *Hebrew rather than in archaizing Late Biblical Hebrew. The twelve columns consist of a series of sixty-four or sixty-five topographic descriptions, or toponyms, often followed by the instruction to dig a given depth. Then follows a specified weight of bullion or amount of money, precious vessels or the like. The *Copper Scroll*, in other words, is a list of treasure trove and a guide to the hiding places. At first glance the amounts of treasure seem incredible; estimates in terms of modern value exceed one hundred million dollars.

Interpretations of this document include the original editor Milik's theses that it represents either a "folkloristic treasure trove" or the work of a madman, in either case having no connection to the Qumran movement. For Milik the *Copper Scroll* was only coincidentally found along with the group's materials in Cave 3, being removed somewhat from the other deposits of that cave. His approach requires two independent deposits. The first deposit in Cave 3 occurred about A.D. 70, when all the other DSS were hidden in the caves. The *Copper Scroll*, on the other hand, belonged to a putative second deposit made around A.D. 100. Although popular in the 1950s and 1960s, Milik's views can claim no significant support today. Most scholars now believe that the scroll was placed in the cave at the same time as all the others. They further deny that the scroll is a work of imagination; its genre is documentary, that of "list," a common genre in Greco-Roman times. The contents described in the scroll are therefore of an actual

treasure, probably associated with the Jerusalem temple. Only the connection with a major institution of Jewish society can explain the vast sum of treasure. Some argue that the treasure was taken from Herod's temple, others that it was intended for Herod's temple. Accordingly, the *Copper Scroll* occupies a central position in arguments about who wrote the Dead Sea Scrolls.

1.2.2. Interpretive Texts.

Pesharim. Among the most fascinating of the Hebrew texts discovered in the caves are those known as the *pesharim (*p̄šārīm*, pl. of *p̄šer*, meaning "solution" or "interpretation"). These are usually grouped into two categories—thematic and continuous. Thematic pesharim consist of selected portions of the Bible with interpretive comments and are organized around a central theme or idea. In contrast, continuous pesharim comment *seriatim* on a portion of the Bible, usually the prophets, but sometimes so-called prophetic psalms. At least fifteen, perhaps eighteen, texts belonging to this latter category have been identified.

The pesharim purport to be mysterious explanations of divine truth from Scripture, a truth revealed only to the author and his group. None of these commentaries is concerned with the literal sense of the text; instead, they use metaphor, paronomasia and development of key words or phrases to unmask the hidden significance of a given biblical portion. The most complete of the pesharim is the commentary on Habakkuk (see Habakkuk Commentary [1QpHab]). This pesharim preserves thirteen almost complete columns, providing the text of Habakkuk along with commentary. The form of the book of Habakkuk to which it witnesses is often different from that of the Masoretic Text.

Also relatively complete is the pesharim designated 4Q171, which preserves the text of Psalms 37:7-40; 45:1-2 and possibly 60:8-9. Psalm 37 is a psalm of personal tribulation, offering the righteous hope in spite of the evident prosperity of the wicked. It thus fits perfectly the literary requirements for the author of the pesharim, who interprets the tribulation in terms of his community's own troubles, their enemies and approaching eschatological justification.

From a historical vantagepoint, the pesharim on Nahum (4Q169) is the most important of the pesharim. Eschewing ciphers at certain junctures, this author mentions a "Demetrius, King

of Greece," and refers to a Jewish ruler who crucified great numbers of his opponents. Apparent references to these same persons and events appear in the writings of *Josephus, leading most scholars to identify Demetrius as Demetrius III Eucærus (95-87 B.C.) and the Jewish ruler as Alexander Jannæus (103-76 B.C.). The crucifixion mentioned equates, most think, with Jannæus's known execution of eight hundred of his opponents in the wake of a failed *coup d'état*. That event occurred in 88 B.C.

Of the thematic pesharim, none has aroused more profound interest than 11QMelchizedek (see Melchizedek, Traditions of). Fourteen fragments preserve the remains of three columns of this manuscript. The author comments on isolated OT texts (in particular Lev 25:9, 10, 13; Deut 15:2; and Is 61:1), but Daniel 9:24-27 structures his commentary. The events connected with these biblical texts are portrayed as taking place in "the end of days," which is further identified as the "tenth Jubilee" and the "Day of Atonement." Melchizedek will free those who belong to his "inheritance" and (if suggested restorations are followed) "atone for their iniquities." He will further exact God's vengeance upon *Belial and those of his "lot." The text presents a conception of Melchizedek that is both approximately contemporary with and comparable to that of Hebrews 7: connecting him with divine judgment, a Day of Atonement and a primary role among God's *angels. A second figure in the pesharim, the "Herald," may be identified with the Teacher of Righteousness, but this point remains controversial.

Three additional thematic pesharim are important. The first of these is known as 4QOrdinances, which exists in three copies (4Q159, 513-514). This halakic pesharim interprets Exodus 30:11-16 (the scriptural basis for the temple tax traditionally required of all male Jews annually) as referring not to annual taxes, but instead to a one-time payment. Leviticus 25:39-46, which prohibits the purchase of fellow Israelites as slaves, is here understood to ban also the sale of a Jew to Gentiles.

The second thematic pesharim is 4QFlorilegium (see Florilegium [4Q174]). Here four large fragments have been joined to form two columns, leaving twenty-three extra, unjoined sections. The author combines quotations from 2 Samuel 7:10-14; Exodus 15:17-18; Amos 9:11; Psalm 1:1; Isaiah 8:11; Ezekiel 37:23 (uncertain)

and Psalm 2:1 with interpretive comments. All of these verses are related to the "end of days," when God will order that a new "temple of Adam" be built. Therein men will perform sacrifices and the "deeds of the Torah," free from outside harassment or impurity. Prominent in the text are references to the "Shoot of David" and the "Interpreter of the Law," eschatological figures familiar from other Qumran texts.

The third thematic pesher, 4QTestimonia, has (perhaps falsely) furnished many scholars with the basic substance of Qumran messianic expectation (see Testimonia [4Q175]). The text is a catena of quotations from Deuteronomy 5:28-29; 18:18-19; Numbers 24:15-17; Deuteronomy 33:8-11; Joshua 6:26 and an extrabiblical work also found among the scrolls, 4QPsalms of Joshua (see Apocryphon of Joshua [4Q378-379]). The body of the text arranges these quotations into four groups, each group set off by a scribal device and so, inferentially, concerning separate topics. One reason this text is important is because it furnishes explicit evidence for the existence, long posited, of *testimonia*, or *florilegia* (collections of proof-texts), in pre-Christian Judaism.

Targumim. Three Aramaic targumim (*targūmim*, plural of *targūm*, meaning "translation" or "interpretation" of the Hebrew Bible; see Aramaic Targums: Qumran) number among the DSS. Much the longest and most complete of these is the Job targum from Cave 11 (see Targum of Job [11Q10 & 4QtgLev, 4QtgJob]). This text represents the only incontestably pre-Christian targum of any appreciable length. Surviving portions include Job 17-42, with the last six chapters the least damaged. On the whole, despite slight additions, subtractions and dislocations, the Hebrew text behind the Aramaic translation seems to have been essentially the Masoretic Text. Even the supposedly disordered third cycle of debates (22:1-31:40) and the Hymn to Wisdom (28:1-28:28, often regarded as an interpolation) are here and in the same problematic order as in the Masoretic Text.

The other two targumim are extremely fragmentary. The first (4Q156) contains an Aramaic rendering of Leviticus 16:12-15, 18-21, but whether these fragments were part of a targum at all is uncertain. Equally conceivable is that they come from a liturgical work that quoted these verses. If, nevertheless, they do represent portions of a targum, then we have for the first

time a pre-Christian targum to a book of the Pentateuch. The translation of the Hebrew is literal (unexpanded). Finally, 4Q157 preserves portions of Job 3:5-9 and 4:16-5:4, reflecting a text virtually identical to the Masoretic Text.

1.2.3. Apocryphal and Pseudepigraphic Texts. Included among the DSS are manuscripts of non-biblical books that were known in some form even before the discoveries at the caves. Apocryphal writings attested include *Tobit (in both Hebrew and Aramaic) and Ecclesiasticus (also known as *Sirach). Pseudepigraphic works include the *Testament of Levi* (in Aramaic), a portion of the *Testament of Naphtali* (in Hebrew; see Testaments of the Twelve Patriarchs), **Enoch* and **Jubilees*. *Jubilees* was especially popular, to judge by the fourteen or fifteen manuscripts thus far identified from caves 2, 3, 4 and 11. Not surprisingly, previously unknown texts that can now be classified as pseudepigraphic were also unearthed. Among these are testaments of Jacob, Judah, Joseph and Kohath, the *Psalms of Joshua* mentioned above and a Daniel cycle.

1 Enoch. In 1976, Milik published his long-awaited book on the fragments of *Enoch* discovered in Cave 4. Milik's book contains most (but not all) of the Qumran *Enoch* manuscripts, all in Aramaic, and attests parts of every subdivision of *1 Enoch* except for one. Thus it includes seven fragmentary manuscripts (4QEn^{a-f}) that together preserve some of the Book of Watchers, the Book of Dreams and the Epistle of Enoch. Also included in the book are four other manuscripts (4QEnastr^{a-d}) that point to a much longer recension of what is known in *1 Enoch* as the Astronomical Book. Additionally, portions of a literature clearly related to *1 Enoch*, but previously unknown, are included under the title, Book of Giants (4QEnGiants^{a-c}). Significant by its absence from the Qumran fragments is the so-called Book of Parables, which uses the term "son of man," an important self-designation of Jesus. Scholars are divided on the reason for this absence. Milik himself thought that the Book of Parables must be a Christian writing, but most scholars today reject that view. The Book of Parables was probably, at least in an early form, pre-Christian, but was not included among the Qumran deposits either fortuitously or because some of its ideas were unacceptable.

Genesis Apocryphon. One of the pseudepigraphic texts that surfaced among the DSS was the otherwise unknown **Genesis Apocryphon*

(1QapGen). Dated around the turn of the eras, this Aramaic writing presents the patriarchs of Genesis telling their own stories. In so doing it adheres closely to the biblical stories, but with frequent expansions derived from unknown midrashic sources (including, it seems, a Testament of Noah). Columns 1 through 5 mostly concern the birth of Noah; 6 through 17 deal with the flood and the postdiluvian division of the earth among Noah's sons; 18 through 22 (where the text breaks off) concern Abram according to Genesis 11–15.

Most scholars, while recognizing features more akin to the known *targumim, regard the *Genesis Apocryphon* as a *midrashic composition. It is thus related to intertestamental works such as *Jubilees*, which are often called *"rewritten Bible." Perhaps the primary importance of the text lies in its language. Because it is one of the longest Aramaic texts from Qumran, the *Genesis Apocryphon* is of special significance in the effort to recover the varieties of Palestinian *Aramaic used by the Jews at the time of Jesus. In general its language is of a form transitional between the book of Daniel and the targumim, antedating as well the materials from the Wadi Murabba'at, Wadi Seiyal and Wadi Habra.

Prayer of Nabonidus. Fragments of an Aramaic pseudepigraphon known as the *Prayer of Nabonidus* were found in Cave 4 (see *Prayer of Nabonidus* and *Pseudo-Daniel* [4Q242-245]). The fragments make up two incomplete columns, including the beginning of column 1. As the name suggests, the text is ostensibly a prayer delivered by the last king of Babylon, Nabonidus, telling the story of the king's seven-year period of illness—a time when he prayed to "the gods of silver and gold" for a cure. At length, a Jewish "exorcist" delivered him, and in gratitude the king wrote this prayer. The parallels with the fourth chapter of Daniel and the story of Nebuchadnezzar's madness are patent, leading many scholars to conclude that in this text we have remnants of the popular traditions from which the Aramaic portions of Daniel derived.

The Daniel Cycle. The prayer of Nabonidus is just one part of a "Daniel cycle" that apparently included at least five additional works. Three of these (4QpsDan^{ac} [4Q243-245]) contain one or more apocalyptic overviews of Jewish history narrated by or involving Daniel. The fourth writing (4Q552-553) recounts a dream in which four trees (or their "angels") speak to the author.

Each tree represents a kingdom (compare Daniel 2 and 7), the first of which is identified as Babylon and the second as Persia. This work has a bearing on the interpretation (or history of interpretation) of the fourth kingdom mentioned in Daniel 2 and 7. Another text from this Daniel cycle is known as 4QpsDanA^a (see *Son of God Text* [4Q246]). This fragmentary but striking work preserves the phrases "son of God" and "son of the Most High," as well as phraseology reminiscent of Luke 1:32 and 1:35. One additional writing, 4Q248, the *Acts of a King*, is related to the contents of Daniel but of disputed interpretation. According to one view, it relates events from the time of Ptolemy I Soter, about 300 B.C.; according to the other, it records episodes of the reign of Antiochus IV Epiphanes, about 170 B.C.

Words of Moses. The **Words of Moses* (1Q22) is a sort of apocryphon to Deuteronomy. God speaks to Moses, who in turn relays the commands to the people, evidently via Eleazar and Joshua. At one point the text requires the appointment of officials (perhaps priests), "to clarify . . . all these words of the Torah." Another example of interpretive explanation occurs in the third column (3:8-10), where the date of the Day of Atonement is explained by reason that "your fathers were wandering in the desert until the tenth day of the month."

Book of Mysteries. Another tantalizing pseudepigraphon is the **Book of Mysteries*, known in three or four copies (1Q27, 4Q299-300; 4Q301 is disputed). The work derives its name from the recurrent and prominent term *raz*, "mystery, secret." Some of the work is cast as poetic oracles, while the eloquent prose that follows each poetic section provides "signs" by which the truth of the oracles is to be proved. The most extensive run of continuous text, in 1Q27 column 1, delivers an indictment against those who neither meditate upon the "former things" nor recognize the significance of the "mystery of existence" (*raz nihyeh*; see *Secret of Existence* [4Q412-413, 415-421]). Of particular interest is the appearance in 1Q27 of the phrase *razê peša'*. This phrase is probably the Hebrew equivalent of the Greek *mystērion tēs anomias* of 2 Thessalonians 2:7.

Other Pseudepigraphic Writings. The Cave 4 materials include a wealth of material that is difficult to classify using the scholarly categories familiar from the past. For many of these works

the term now being used is *parabiblical*. They relate to the biblical corpus and to the authors of the Hebrew Bible in varied, even uncertain ways, yet the relation is incontestable. Such works include *Reworked Pentateuch* (4Q158, 364-367; see *Rewritten Bible*), which comprises a running commentary on the Pentateuch with exegetical additions and omissions. Some of the additions are of significant size. Other parabiblical writings new to scholarship include: 4Q369, the **Prayer of Enosh*; 4Q382, *Parakings* (or *Paraphrase of Kings*); and 4Q422, a paraphrase of Genesis and Exodus. *Commentaries on Genesis* (or *Genesis Peshet*), including both straightforward and sectarian exegesis of the biblical text, are found in 4Q252-254a. Also parabiblical is 4Q473, *The Two Ways*, a work related to Deuteronomy but also bearing comparison with early Christian writings using this motif, such as *Didache* 1-6. Numerous additional, very fragmentary parabiblical works, most having no evident sectarian characteristics, have also come to light. Among these are 4Q559, *Biblical Chronology*, an Aramaic chronograph whose surviving portions treat the length of the Egyptian sojourn, the time of Israel's wandering in the wilderness and the period of the early judges.

1.2.4. *Liturgical Texts*. Among the texts from Qumran many are either clearly liturgical or plausibly so construed (see *Liturgy: Qumran*). Of these writings perhaps the most interesting is the *Angelic Liturgy*, or **Songs of the Sabbath Sacrifice*. The composition is partially preserved in eight manuscripts from Cave 4 (4Q400-407), as well as in fragments from Cave 11 (11Q17) and Masada (Mas1k). The author portrays heaven as a complicated temple consisting of seven sanctuaries attended by seven chief prince-priests, their deputies and seven angelic priesthoods. Also detailed are the praise offerings that the *angels offer up on the *sabbath. Altogether the work comprises thirteen separate compositions, one for each of the first thirteen sabbaths of the year. The *Songs of the Sabbath Sacrifice* is important for the study of angelology, Second Temple liturgical song and early Jewish *mysticism. A striking phrase in the first hymn avers that the angelic priests, by their heavenly cultus, "atone for those who turn from sin." One may understand this statement to mean that the earthly temple cultus is really not essential. Here, then, is an important witness to a conception of Judaism that is not temple-centered (at least in a

physical sense). Such ideas, of course, were starting points both for Christianity and rabbinic Judaism.

A second noteworthy liturgical opus is the *Words of the Luminaries* (4Q504-506). Fragmentary remaining headings show that the compositions contained in this manuscript were meant to be recited on given days of the week. With one exception, the mood of these compositions is penitential; hence, they may appropriately be classed *tah^anūnim* (confessional prayers reflecting such biblical passages as Dan 9:4-19). The instructions evidence that these *tah^anūnim* were used liturgically, as in later Judaism. The single evident exception to the somber tone of the *Words of the Luminaries* is a composition for the sabbath. This prayer is full of praise rather than contrition, reflecting the traditional Jewish understanding of the sabbath as a time of joy.

Among many that might be singled out, two further liturgically oriented works can be mentioned here. One is 4QApocryphal Lamentations A (4Q179). The text is comprised of five fragments, the order of which is still uncertain. As the name implies, it is a lament or series of laments over the city of Jerusalem, whose imagery is achieved chiefly by allusion to Lamentations, Isaiah and Jeremiah. Possibly the work was occasioned by a destruction of Jerusalem at the time of Antiochus IV Epiphanes (compare 1 Macc 1:29-32), or by another destruction at Roman hands in 63 B.C. Alternatively, 4Q179 may be no more than a poetic reminiscence of the famous razing by the forces of Nebuchadnezzar in 586 B.C.

The second text contains vocabulary strikingly similar to that of the *Rule of the Community* and the *Rule of Benediction*, and is known as *Berachot* (4Q286-290) (see *Blessings* [4Q280, 286-290]). The writing depicts a covenant ceremony incorporating numerous blessings and curses. The blessings are recited by all heavenly and earthly creatures faithful to the laws of creation and by the members of the movement who are faithful to the Law. The curses descend upon *Belial and the evil angels who are his lot.

Another group of manuscripts from Qumran that are broadly related to liturgy and worship are the phylacteries or *špīllin*. A number have surfaced from caves 1, 4, 5, 8 and an unidentified cave, "Cave X." They are instructive regarding the content and order of the portions of Scripture they contain and also witness to note-

worthy textual variants. Four *ʿpillin* were discovered in their capsules, enabling scholars to investigate technical points that are treated extensively in rabbinic literature—such matters as the shape of the capsule, the nature of the leather for scriptural portions, and the type of thread with which the capsules are tied.

Moreover, the order of the scriptural portions in the *ʿpillin* has been a matter of heated controversy in the history of Judaism. The most famous controversy on this subject occurred in the early medieval period between Rashi and Rabbenu Tam. As a whole, the Qumran *ʿpillin* are not strictly in the order for which either man argued. The fact that some from Cave 8 are arranged according to Rashi's system, while others from the approximately contemporary finds at Murabba'at accord with the position of Rabbenu Tam, suggests that first-century Jews used both systems concurrently. The contents of the *ʿpillin* published so far often add verses to the classical portion of Scripture, but the verses added differ among the various examples. No clear rationale has been adduced to explain this fact. Notably, 1Q13, 4Qa (4Q128) and XQPhyl. 3 all contain the Decalogue (Deut 5:1-21), which is never included in rabbinic phylacteries. Thus the phylacteries from Qumran raise many questions about the laws governing their production and do not seem to fall into a single "sectarian" categorization.

1.2.5. Legal Texts. Many of the writings already discussed have a significant legal component, especially the *Rule of the Community*, the *Rule of the Congregation*, *Damascus Document*, *Temple Scroll* and 4QOrdinances. Another writing of great importance for understanding the types and functions of religious law in Second Temple Judaism is 4QMMT, short for **Miqsat Ma'asey ha-Torah*, "some rulings concerning the Law." Published in the DJD series in 1994, 4QMMT includes a list of some twenty-three legal controversies concerning which the authors find fault with current practice in the Jerusalem temple. The work appears to be addressed to someone in position to change those practices, presumably the reigning high priest (although some have argued that the work is intrasectarian). In at least two instances, the laws of 4QMMT are identical to those of opponents to the Pharisees in rabbinic writings, making clear once again (for there are many other indicators) that the Qumran movement was in its essence antiphari-

saic. The laws of 4QMMT also demonstrate, if further demonstration were needed, the priestly character of the movement: the laws favor the priests when compared with rabbinic legislation. Such is true of the entire Qumran legal corpus. 4QMMT seems to prove that the Qumran movement split with greater Judaism primarily over legal issues, not matters of philosophy or the legitimacy of the high priest, as often suggested. Indeed, the publication of this writing has spurred—and coincided with—a much greater attention to the importance of religious law for an understanding not only of the culture, but also of the history, of the NT period. Different movements in Second Temple Judaism, including Christianity, were different in large part because of different ideas about the law.

A variety of other legal works among the scrolls have added impetus to this research (see *Legal Texts at Qumran; Torah*). These writings include *Halakhah A* (4Q251), which tabulates a variety of laws on subjects such as the sabbath, firstfruits, the selling of ancestral lands and the slaughter of pregnant animals. *Tohorot A* (4Q274) legislates for the type of impurity produced by leprosy. *Tohorot B^b* and *Tohorot B^c* (4Q276-277) deal with the ritual preparation of the red heifer—the only means for purification from impurity of the dead—as stipulated by Numbers 19. 4QLeqet (4Q284a) provides laws to regulate gleanings; unlike the Bible, it requires gleaners to be ritually pure. The work entitled *Rebukes by the Overseer* (4Q477) lists by name several members of the Qumran movement whom the Overseer has publicly rebuked for breach of the group's laws. The movement required the overseer to record all such rebukes in writing. Several of the legal causes for rebuke are unknown from other Qumran writings. *Serekh Damascus* (4Q265) regulates the paschal sacrifice, procedures for the novitiate, group life (with a penal code largely but not entirely identical to that known from the *Damascus Document* and the *Rule of the Community*), and the parturient.

1.2.6. "Magical" and Calendrical Texts. Calendar and "magic" were not entirely separate concerns in the ancient world, for magic often—and the calendar always—involved study of the heavenly bodies. Thus one magical work from Qumran combines a peculiar calendar (see below), the earliest known Jewish naming of the signs of the zodiac, and divination by thunder (4Q318; see *Thunder Text*). 4QHoroscope

(4Q186) is an encoded series of horoscopes whose scribe mixes the ordinary Jewish script with the alphabets of Paleo-Hebrew, Greek and Cryptic Script A (one of three secret alphabets found among the scrolls); he further inscribes his text, à la Leonardo da Vinci's notebooks, in mirror writing. The surviving fragments describe three people in reference to their astrological birth signs, deriving therefrom each person's physical and spiritual qualities. 4QHoroscope possesses notable terminological parallels with the *Rule of the Community*. These writings show that astrological ideas had been assimilated deeply by the Jews, in spite of the apparent biblical condemnations (for example, Is 47:13-14; Jer 10:1-3). Interest in such matters may be related to the story of the magi in Matthew's Gospel. An Aramaic work similar in method to 4QHoroscope, but lacking the sectarian terminology, is 4Q561.

Another scroll known as the *Elect of God* (4Q534) has been termed a "messianic horoscope." This very poorly preserved Aramaic text contains the phrase *bhyr 'lh*, the equivalent of the Greek *ho eklektos tou theou* ("the elect of God") witnessed by some manuscripts of John 1:34. It is uncertain, however, that the Aramaic phrase carries a messianic connotation. The words occur as part of the description of an unborn child who will possess wisdom and precocious intellect. He is to have a long life, and the success of his plans is assured by his position as the "elect of God." Since the text lacks astrological terminology, it might better be considered an example of physiognomic literature rather than as a horoscope. Moreover, as some scholars maintain, the *Elect of God* may describe the birth of Noah, not a messiah (cf. *1 Enoch* 106).

A work hesitantly identified by the original team as a collection of proverbs, 4Q560, has now been shown to be an apotropaic incantation or exorcism, the earliest ever known from Palestine (see *Magical Papyri*). The preserved portions of the formula adjure various spirits by name, evidently employing the sacred name of Yahweh. The concerns are those of similar texts elsewhere in the ancient Near East: childbirth, diseases, sleep or dreams, and (perhaps) safety of possessions. One of the demons, the Fever-demon, may illuminate the Synoptic story of Peter's sick mother-in-law. Matthew 8:15 and Mark 1:31 report the event as a simple healing by Jesus, but Luke 4:39 can be translated, "Then he

stood over her and rebuked the Fever-demon, and it left her."

Perhaps the one element that more than any other binds the DSS into an ideological unity is the type of calendar they insist upon. Unlike the 354-day luni-solar calendar of the Pharisees and rabbinic Judaism (which is essentially the modern Jewish calendar), the calendar of the scrolls is a solar device. Each year comprises 364 days, and each quarter of the year has 91 days; months are either thirty or thirty-one days long. The regularity of this system is such that all festivals occur on the same day from year to year, and never on the sabbath. Avoiding having a festival fall on the sabbath solved all sorts of halakic problems. This "Qumran calendar" was actually a very old priestly mechanism antedating the rise of the Qumran movement. Forms of this calendar date to at least the third century B.C. Evidence of its use is clear from the Septuagint—even, some scholars believe, from the Hebrew Bible. And its later advocacy was not limited to Qumran circles. The texts found at Masada include at least two writings embracing or probably embracing the solar calendar (Mas1j, 1k), and *Josephus's narrative describing the *sicarii* at Masada (Josephus *J.W.* 4.7.2 §§402-5) further suggests that this priestly group followed a calendar different from their contemporaries at En Gedi. In fact, for at least three centuries a kind of calendar war raged among the Jews of Palestine, finally being settled only by the destruction of one party to the dispute in the First Revolt against Rome (A.D. 66-73/74). The DSS are a strong witness to the views of the losing priestly party.

The 364-day calendar underlies or is explicit in all of the major Qumran writings: the *Rule of the Community*, the *Damascus Document*, the *War Scroll*, the *Temple Scroll*, the *Hymns*, the *pesharim*, 4QMMT. Likewise, it underlies or is explicit in many of the lesser works. Hundreds of the DSS attest to this calendar. (On the other hand, not a single Qumran writing favors the pharisaic version.) A significant number of calendrical works—that is, writings whose sole purpose is to explain certain details of the calendar—have also emerged from the caves. Such works include 4Q320-321a, synchronistic calendars that tabulate a form of the luni-solar calendar over against the 364-day instrument. Other calendar writings explain the timing of priestly service in the temple by sabbaths, months and seasons, ac-

ording to a six-year cycle: 4Q325, 4Q326, 4Q328, 4Q329, 4Q329a and 4Q334. An especially interesting calendrical writing, sometimes called the *Annalistic Calendar*, is extant in six fragmentary copies (4Q322-324c). Similar to certain modern calendars that mention "President's Day" or "Independence Day" on the appropriate day of the year, the *Annalistic Calendar* refers to historical events on given days, and uses actual names of the Hasmonean period. The names of John Hyrcanus I, John Hyrcanus II, Aristobulus II and Shelamzion or Alexandra all appear in the work. These were rulers of the Jews between 134-63 B.C. The name "Aemilius" also appears, doubtless a reference to M. Aemilius Scaurus, one of Pompey's leading generals when the Romans invaded Palestine and ended Jewish independence in 63 B.C. This writing, in particular, is very important in the attempt to discover who wrote the scrolls and when.

2. Interpretation of the Finds.

The majority of scholars identify the DSS as the products of the ancient Jewish sect known as the *Essenes. For this identification scholars rely on a combination of "external" and "internal" evidence.

The "external" evidence combines a passage from *Pliny the Elder with the archaeology of the site of Qumran (see Qumran: Place and History). In the course of a late first-century travelogue, Pliny describes the Essenes as living along the shores of the Dead Sea, with En Gedi "below" or "south" of them (the Latin preposition *infra* is ambiguous; "below" means topometrically lower, as the bottom of a hill is below the top). This description could fit Qumran. Archaeology further indicates that the site was in use during the time Pliny describes. Structures found at Qumran have been identified as functional for such a community and include what have been understood as a potter's shop and a communal dining hall. Three inkwells and other materials construed as evidence of scribal activity suggest to some scholars that the scrolls found in the nearby caves were written on the site. Recent analysis of the graveyard near Qumran by J. Zias indicates that only men were buried there in ancient times; the few graves of women seem to be much later, early-modern Bedouin intrusions. If so, then the graveyard suggests a celibate male community, just what Pliny describes for the Essenes.

"Internal" evidence consists of a comparison between passages describing the Essenes in *Philo and Josephus, on the one hand, with the contents of texts such as IQS and CD on the other. All these sources agree in describing or presupposing a communal organization. Similarities include novitiate periods, communal regulations, strict observance of the sabbath vis-à-vis rabbinic law, and certain legal positions such as the transmission of ritual impurity by oil.

Neither the external nor the internal evidence is without problems. N. Golb in postulating his "Jerusalem hypothesis" has pointed out many of them. As the name suggests, Golb argues that the DSS derive from Jerusalem and various libraries there. To date, however, Golb and his fellow advocates remain a minority in scholarship on the scrolls. One point on which he has persuaded many scholars is that of provenance. While most would reject his view that the DSS are not, as a whole, Essene products, the modified notion that many of the scrolls were produced by *Essenes* elsewhere than at the site, perhaps in Jerusalem, has proved attractive.

If such a view were correct, then the potential significance of the scrolls for an understanding of Judaism at the time of Jesus is substantially greater than the 1950s view of provenance would imply. For on this interpretation, the DSS represent the product of a wider portion of society than the hypothesis of their production at Qumran stipulates. The ancillary question of how much wider remains to be addressed by further research.

3. The Dead Sea Scrolls and the New Testament.

On the whole, NT scholarship in relation to the DSS is best described as outdated. For example, no book is more often quoted in this regard than the volume edited by K. Stendahl in 1957, *The Scrolls and the New Testament*. It is paradigmatic that rather than produce a new series of essays on relations between Qumran studies and the NT, the book simply continues to be reprinted. Similarly, the excellent two-volume work by H. Braun, *Qumran und das Neue Testament*, is now outdated. Both of these works still contain useful material, but because so much has happened in DSS studies since they were written, one must use them very cautiously.

An illustration of the potential for new understandings may be found in the work alluded to above, 4QMMT. As noted, this text lists over

twenty legal topics upon which the text's authors and the temple authorities disagree. In this fact alone its significance for NT studies is enormous, for previously we really had no factual statement about what was going on in the temple just before Jesus' day. Josephus's descriptions of the temple cultus are difficult to use with confidence, because he often describes things the way they ought to have been (that is, as he understood the relevant OT texts) rather than the way they really were. This fact becomes apparent when comparing the theoretical descriptions of his *Antiquities* with the historical narratives of his *War and Vita*; not infrequently they disagree. The tannaitic legal discussions are likewise often idealizing (see Rabbinic Literature). With 4QMMT, we can discover what was really happening, at least with regard to the topics upon which it touches. For example, the authors oppose allowing Gentiles to make offerings on the grounds that such promotes idolatry. The assumption was that, regardless of outward procedures, in their hearts Gentiles would be honoring their own gods, not the God of Israel. It will be recalled that the First Revolt with Rome was partly fueled by just such sentiments, as Eleazar bar Ananias seized control of the temple and refused to allow any more sacrifices on behalf of Gentiles (see Jewish Wars with Rome).

Another insight from 4QMMT consists in the manner of its halakic argument. Repeatedly its authors precede their legal positions with the phrases *"nahnû hōsbîm* *"nahnû 'ōmrîm*, "we believe, we say." The formal identity with Matthew's depiction of Jesus' legal arguments in the Sermon on the Mount ("You have heard . . . but I say") is patent. Presumably, therefore, Matthew has preserved a common first-century rhetorical structure heretofore unparalleled in early Jewish materials.

Moving to more general considerations, perhaps the most interesting relationship between the DSS and the NT concerns their principal personages. The NT focuses, of course, on Jesus of Nazareth; correspondingly, a group of the DSS focus on the enigmatic figure of the Teacher of Righteousness, (*mōrēh haššedeq*). One can examine the Teacher's writings, the *Teacher Hymns*, to extract his ideas about himself. To do so fully, one must in every case compare what he writes with the hundreds of OT portions that he cites or to which he alludes. Understanding the

original literary context of his quotations is essential. Also, the Hebrew words his hymns do not actually quote, but that surround those quotes in the original OT context, are assumed to be in the minds of his audience. Analyzing the implied ideas these portions might communicate is very important, too. By this method of "deep reading" one can reconstruct aspects of the Teacher's theology or ideology, and then compare other DSS to round out the picture. It emerges that, like Jesus, the Teacher considered himself a prophet, and more than a prophet. Like Jesus, the Teacher proclaimed a completed law of Moses, perfected by his own direct revelation from God. Like Jesus, the Teacher spoke of charity, the poor and love of one's fellows; forbade *divorce; and proclaimed the imminent coming of the kingdom of God. And, like Jesus, the Teacher was received as a *messiah by his followers and founded an apocalyptic Jewish movement that within a century numbered in the thousands. Many other parallels exist, inviting much further research, just as is true of the DSS and the NT generally.

It has been said that Christianity is an apocalyptic Judaism that survived. The DSS are in many regards our best analogy, for this movement, too, was an apocalyptic Judaism. It did not survive, but thanks to the discovery of many of its writings in the Judean Desert, it lives again.

DECAPOLIS

Literally "ten cities," the term *Decapolis* refers to a region in southern Syria and northeastern Palestine that was composed of a number of Hellenistic cities with the surrounding countryside pertaining to each. During the first century A.D. the territory was an administrative unit attached to Syria. Jesus' visits to the territory anticipate the church's ministry among Gentiles and reveal the boundless nature of his messianic authority.

1. Cities of the Decapolis
2. Nature of the Decapolis
3. History of the Decapolis
4. Jews and the Decapolis
5. New Testament and the Decapolis

1. Cities of the Decapolis.

In Pliny's *Natural History* (5.18.74) he admits that the known lists of the cities of the Decapolis were not in agreement, but he suggests that most lists included the following: Damascus, Philadelphia, Raphana, Scythopolis (the only member situated west of the Jordan River), Gadara, Hypos, Dion, Pella, Galasa (Gerasa), and Canatha. Since Josephus (*J.W.* 3.9.7 §446) tells us that Scythopolis was the largest city of the Decapolis, it has been doubted whether he considered Damascus to be a part of the Decapolis. A certain "good-messenger—Abila of the Decapolis" is mentioned in a Greek inscription from A.D. 134 found in the region of Palmyra in Syria (Parker, 128; Rey-Coquais, 116) and suggests that Abila was counted as a city of the Decapolis. Ptolemy, the second-century A.D. geographer, provides a list of the cities of the Decapolis and Coele-Syria, which includes all of Pliny's cities except Raphana, and adds nine more cities of southern Syria. Stephen of Byzantium indicates that the Decapolis consisted of as many as fourteen cities at one point (Parker, 128). It seems that for part of the history the number ten may have been more traditional than it was precise.

2. Nature of the Decapolis.

Although there is no evidence that the cities ever formed a league or confederation, as was suggested in the past, they all shared a commitment to Hellenistic culture that distinguished them from their neighbors. A Greek inscription from the late first century mentions a Roman prefect or procurator of the Decapolis indicating that at the time it was a Roman administrative

unit attached to the province of Syria (Isaac, 70-71; *see* Roman Administration).

3. History of the Decapolis.

3.1. Hellenistic Period. Although most Decapolis sites show signs of occupation since the pre-classical period, the majority of the cities claimed to be founded by *Alexander the Great or one of his successors (Parker, 128; Rey-Coquais, 117-18).

In his conquest of Syria, southern Phoenicia and Palestine in 200 B.C. Antiochus III (the Great) brought the Decapolis region under *Seleucid rule. At the end of the second century and the beginning of the first century the Jewish and Nabatean kingdoms took advantage of the weakening of the Seleucid empire. The *Hasmonean king Alexander Jannaeus took the cities of Scythopolis, Gadara, Abila, Dion and Pella (Josephus *Ant.* 13.15.3-4 §§393-97), and the Nabateans gained possession of Philadelphia (Josephus *J.W.* 1.6.3 §129; *see* Jewish History: Greek Period).

3.2. Roman Period. When Pompey established Roman authority over the region in 63 B.C. the Decapolis cities were given their freedom (municipal autonomy) and were attached to the province of Syria (Josephus *Ant.* 14.4.4 §§74-76; *J.W.* 1.7.7 §§155-57).

Augustus (*see* Roman Emperors) gave *Herod part of the area north of Hauran after 23 B.C. In 30 B.C. he added Gadara and Hippos to Herod's kingdom (Josephus *Ant.* 15.7.3 §217). Upon Herod's death in 4 B.C., Gadara and Hippos regained their autonomy and were reattached to the province of Syria (Josephus *Ant.* 17.11.4 §320), while the area north of Hauran, including Canatha and Raphana, was passed on to the tetrarch Philip and then to king Agrippa I. After a period under Syrian administration, the kingdom went to Agrippa II until his death in A.D. 93.

The emperor Trajan brought the end to any political entity known as the Decapolis in A.D. 106, when he established the province of Arabia and divided the cities of the Decapolis among the provinces of Syria, Arabia and Palestine.

4. Jews and the Decapolis.

Between the second century B.C. and the first century A.D. there was constant tension regarding Jewish authority over, or ambitions regarding, the region. The territory had at one time been incorporated into the Davidic kingdom

(2 Sam 8:5-15; Josephus *Ant.* 7.5.3 §104), and David's empire may have come to set the standard for Jewish hopes and expectations (Hengel and Schwemer, 55). When the Hasmonean king Alexander Jannaeus retook much of the territory, he forced its inhabitants to accept the Jewish religion (Josephus *Ant.* 13.15.3-4 §§393-97; cf. 13.11.3 §318). The cities' liberation by Pompey was the key theme of their *coins. Although there were significant Jewish communities within the cities of the Decapolis in the first century A.D., there is also evidence of a strong hostility toward them on the part of their Gentile neighbors (Josephus *J.W.* 2.18.2, 5 §§461, 478; 7.8.7 §367; 1.4.3 §88; *see* also Kashner). At the outbreak of the Jewish revolt in A.D. 66, the Jews attacked a number of the cities of the Decapolis. Most of the cities retaliated by slaughtering their Jewish citizens (*see* Jewish Wars with Rome).

5. New Testament and the Decapolis.

5.1. Jesus and the Decapolis. The Decapolis passages in the Gospels are Matthew 4:24-25; 8:28-34; Mark 5:1-20; 7:31-37; and Luke 8:26-39. The two key themes emphasized to different degrees by the Gospel writers in their references to the Decapolis or its territory are mission and christology. A third issue to be considered is the geographical accuracy of the references made to the region of Gadara or Gerasa in the Synoptic Gospels.

5.1.1. Mission. The references to Jesus' presence in the Decapolis or its regions are intended to emphasize that Jesus has crossed into Gentile territory. It is generally agreed that in such passages we find an affirmation of Jesus' ministry to Gentiles in Gentile territory that anticipates and affirms the church's outreach to the broader Gentile world. Although the fear and distrust of the people in the region of Gerasa or Gadara are consistent with the history of resistance to any show of Jewish power in the region, in the Gospel narratives (perhaps especially in Luke) we can see that the scene anticipates not only the future ministry of the church to the Gentile world but also the opposition that the gospel will encounter there (Green).

5.1.2. Christology. The attraction of large crowds from these territories (Mt 4:24-25; 8:34; Mk 5:14; Lk 8:35-36) and the exercise of Jesus' power over Gentiles (and demons) and the acclamation of that power by Gentiles in Gentile territory (Mk 5:20; 7:37; Lk 8:39) all serve to re-

inforce Jesus' limitless authority and his messianic credentials. Through the demoniac(s), Jesus' messianic identity and authority are recognized even in Gentile territory (Mt 8:29; Mk 5:7; Lk 8:28).

The list of places mentioned in Matthew 4:24-25 echoes the earlier quotation (Mt 4:15-16) from Isaiah 9:1-2 and may be intended to symbolically represent "the whole of Israel" (Hagner). The fact that Jesus draws followers from such a vast area suggests his charismatic power and perhaps a subtle hint that like David's power and influence, his is also felt throughout the larger territory that was once the whole of Israel.

5.1.3. Geography. The fact that the Gospels of Mark and Luke indicate the encounter with the demoniac takes place in Gerasa and that Matthew indicates it was in the region of Gadara has been a problem for commentators, as has the fact that Gadara was located about 6 miles southeast of the Sea of Galilee while Gerasa was located about 38 miles southeast of it. Some manuscripts read "Gergesa" for each text, and that reading has been adopted by some commentators for both Mark and Luke. It has been suggested that Gergesa was located at modern Kursi, a village on the shore of the Sea of Galilee just outside the Decapolis but in Gentile territory. The event may have occurred at Gergesa, but the better manuscripts seem to support Gerasa (for Mark and Luke) and Gadara (for Matthew). It is not necessary to suppose that the Gospel writers had vague or inaccurate knowledge of the area, as has often been suggested. It may be a question of each author choosing to mention the nearest geographical reference point that he thinks his particular readers are likely to recognize given the fact that their knowledge of the area is sketchy (Bock).

5.2. Paul and the Decapolis. Even if Damascus is not counted as one of the cities of the Decapolis, Paul would have passed through that region on his way to Arabia and then on his return trip to Damascus (Gal 1:17). The Hellenistic Jewish communities there with their God-fearing Gentile associates would have been attractive contexts for his ministry (Hengel and Schwemer).

5.3. The Early Church and the Decapolis. Eusebius (*Hist. Eccl.* 3.5.5) informs us that the Christians of Jerusalem fled to the countryside of Pella before the fall of Jerusalem in 70 (see

DLNTD, Pella, Flight to).

DECURIONS. See *ROMAN SOCIAL CLASSES.*

DELPHIC ORACLE. See *PROPHETS AND PROPHECY.*

DEMETRIUS

Of the six fragments usually attributed to Demetrius, only four bear his name (frags. 2-4). The first five of these fragments are preserved in Eusebius (*Praep. Ev.* 9) and the sixth in Clement of Alexandria (*Strom.* 1.141.1-2). The five fragments from Eusebius are quotations of Alexander Polyhistor (*On the Jews*), which quotes from Demetrius's work. If Clement is to be trusted, the title of this work was *On the Kings in Judea*. There is some question as to whether or not fragments 1 and 4 are by Demetrius, as fragment 1 is anonymous and fragment 4 is very brief. Certainty in either case is difficult. Difficult to date with any certainty, the sixth fragment (from Clement) suggests that the reign of Ptolemy IV Philopator (221-204 B.C.) is a *terminus ante quem* for Demetrius's work.

The extant work of Demetrius revolves

chiefly around the chronology of the biblical accounts as found in Genesis. Because Demetrius's work is similar in content to books such as **Jubilees*, the rabbinic *Seder 'Olam Rabbah* and the **Genesis Apocryphon* from Cave 4 at *Qumran, B. Z. Wacholder (1964, 56) has suggested that these writings fall into three different schools of interpretation of biblical history, with Demetrius on the most developed end and the rabbinic *Seder 'Olam Rabbah* on the most conservative, with the sectarian *Jubilees* and *Genesis Apocryphon* closer in approach to Demetrius and other writings such as [pseudo]-Eupolemus and Artapanus. In fragment 2, Demetrius precisely calculates the dates of the various figures in Genesis starting with Jacob and ending with Moses. Fragment 3 picks up the story with Moses' murder of the Egyptian overseer and ends with a discussion of the genealogy of Zipporah, explaining the difficulty of Moses' and Zipporah's marriage (Ex 2:16 LXX), since they seem to come at mutually exclusive points in the lineage from Abraham. Fragment 4 is a conflation of unknown ratio of both the OT and Demetrius's chronographic work, dealing with the short story in Exodus 15:22-27 of the bitter fountain turned sweet after the appropriate wood is thrown in, and the oasis at Elim. Fragment 5 explains the possession by the Israelites of weapons (Ex 17:8-13), when they supposedly only went out to pray for three days, and suggests that the arms were salvaged from the drowned Egyptians. Fragment 6, taken from Clement of Alexandria, is a brief chronology of the time from the fall of the northern kingdom of Israel until the accession of Ptolemy IV. There is apparently some corruption in this last fragment, leading to chronological problems, for which various emendations have been suggested.

Demetrius is obviously concerned to deal with lacunae and contradictions found in the biblical writings, especially with regard to chronology, but also, apparently, with regard to other thorny details, such as the possession of weapons by the Israelites when they had merely gone out to pray. So little of Demetrius's work survives that it is difficult to determine its exact nature—it is entirely possible that the chronographic sections that make up the bulk of the surviving Demetrius were only a small part of the whole, which his title (if we are to trust Clement), *On the Kings of Judea*, would suggest

might have been wider in scope.

DEMONOLOGY

Demonology is the study of the influence of supernatural entities, usually malevolent and invisible, upon human life and society. Epigraphic, papyrological and literary sources for the study of demonology are widespread. Since amulets and *magical texts have been undervalued as a source of comparative material, they will be highlighted here, along with the material from Qumran.

1. Semitic Terms for Demons
2. Greek Terms for Demons
3. Demonic Attacks and Diseases
4. Therapy
5. Conclusion

1. Semitic Terms for Demons.

1.1. Old Testament and Ancient Near Eastern Texts. The distinctive terms for "evil spirits," *śēdīm* ("demons"; Deut 32:17; Ps 106:37) and *ś'rifm* ("hairy demons," "satyrs"; Lev 17:7; 2 Chron 11:15; Is 13:21; 34:14), occur in the plural only. General references to natural phenomena as demons and to theriomorphic demons (Lilith, Azazel etc.; cf. Kuemmerlin-McLean, 139), al-

though important, are rare in the OT and do not seem to have influenced later concepts. More important is the classical reference in 1 Samuel 16:14-23; 18:10 to an "evil spirit" (*rūah-rā'āh*) said to come from God (Yahweh/Elohim) that both "startles" (*b't*) Saul and either "rushes to" or actually "enters into" him (*slh . . . el*), causing him to "rave in a prophetic trance" (Hitpa'el of *nh'*). This spirit would "depart" (*srh*) whenever young David played his harp. The notion, despite the pejorative "evil" spirit, is akin to the Greek concept of *enthousiasmos*, the divine prophetic indwelling of a spirit. This early concept of David as exorcist recurs in the DSS.

1.2. *Dead Sea Scrolls and Intertestamental Period.* The DSS notion of a conflict of "Sons of Light" versus "Sons of Darkness" is widely known. More importantly, the **Genesis Apocryphon* (1Q20) is remarkable for its retention of the notion of an "evil spirit" sent by God to protect Abraham's wife from Pharaoh. In *Genesis Apocryphon* 20:16-30 God sends a "pestilential spirit" (*rwḥ mkdš*), or "evil spirit" (*rwḥ b's'*), that "afflicts" (*ktš'*) Pharaoh, his household and all the magicians sent to heal him (cf. too 4Q213^a Levi).

Equally important is the famous exorcistic passage in the fragments of Tobit from the DSS, already known from the LXX. There Michael describes how the innards of a fish smoked before one possessed by a demon or spirit will exorcize it (4Q196 frag. 13 = Tob 6:7-8; frag. 14 i = Tob 6:14-15, 16-18).

More traditional biblical nomenclature is found in the exorcistic poems in the Songs of the Sage, where, for example, the Master proclaims God's majesty in order "to frighten and terrify all the spirits of the bastards, the demons, Lilith, the howlers (?) and [the yelpers]" (4Q510 5; trans. Vermes, *DSS*, 420). More specific demonology occurs in the *Damascus Document*, which speaks of potential members "ruled" (*mšl*) by the "spirits of Belial" (*rwḥwt blyl*) who preach apostasy (CD 23:2-3 A). Belial is the principal "satanic" figure throughout the DSS (1QH; 4Q286 = Berakhot^a, frag. 7, etc.; cf. 2 Cor 6:14-7:1). Another, a kind of counterpart to *Melchizedek, is the satanic Melkiresha' (= "My king is wickedness," 4Q280 = QBenedictions^a, 4Q545 frag. 2 = Test Amram). Azazel, as a demonic figure, occurs in connection with the scapegoat ritual (*Temple Scroll*, 11QTemple 26:3-

13; cf. Lev 16). In the same class belongs the so-called Plea for Deliverance (11Q5 19:1-18), a non-Masoretic psalm whose lines 15-16 read, "Let not Satan rule over me, nor an unclean spirit [*rwḥ (m'h)*], neither let pain [*mk'wb*] nor the evil / inclination [*ḡsr r'*] take possession of my bones" (trans. J. A. Sanders, in Charlesworth, 195). The "unclean spirit" is the exact equivalent of the Gospels' *pneuma akatharton*, and the concept of the possession within the bones is mirrored in the later amulets (see 3.1 below).

More specifically, the text known as "David's Compositions" (11Q5 27:2-11) mentions in an inventory four "songs for the stricken" (lines 9-10) whose very texts seem to have been preserved in fragmentary condition in 11QApPs^a = 11Q11 ("A Liturgy for Healing the Stricken"). This document preserves four incantatory "psalms" addressed specifically to the exorcism of demons: Psalm I (frags. A-B-C) mentions an "adjuration" (*šrw'h*, frag. A, 2; *mšbly'*, frag. A, 6); "the demons" (*hšydm*, frag. A, 9); Psalm II (cols. 1.1-4.3) contains a Solomonic adjuration of "spirits and demons" (1:2-3), "Belial" (1:5), an "adjuring of all angels" (2:5), including Raphael (4:3); Psalm III (cols. 4.4-5.3) preserves an "incantation in the name of YHWH" (4.4), apparently against Belial and Satan; and Psalm IV (5:3-14) contains the text of Ps. 91, famous in later antiquity as an amuletic prayer. In a word, these texts are all early amuletic compositions, perhaps even pre-Qumranic (see Sanders, 216, with refs.). In this respect they belong in the same class as 4Q560, an actual amulet against evil spirits that cause fever, chills and other afflictions: (1) an "evil visitant" (*pqr b'yš*, 1:2); (2) a "demon" (*šydl*); and perhaps (3) a male and female "wasting demon" (?) or "poison" (*hlhly'*, 1:3); (4) a "shrine-spirit" (*prk*); and (5) a "breacher" demon (reading unsure). All but the first are conjectural. The genre of the text clearly belongs to that of the later amulets, discussed below. Particularly important, too, is the notion of the spirit entering the flesh of the possessed (*'l hšbr'*, 1:3).

In the intertestamental period, the "pseudepigraphic" fame of Solomon and of Raphael the archangel as exorcists are particularly noteworthy. Raphael's role has been alluded to above (cf. 11Q11; Tob), and Solomon's fame as an exorcist of demons is most famously known from the *Testament of Solomon* (of uncertain date) and from numerous Greek amulets of a Jewish sort

(Kotansky 1995; Jordan and Kotansky 1997).

1.3. *Palestinian Jewish Amulets.* The corpus of amulets published by Naveh and Shaked (cited here by amulet #) provides an important source for contemporary beliefs. Even though most texts postdate the NT period, they are to be classed with the earlier exorcistic "amulets" of the DSS. The following are the types of demons named:

(1) "(evil) spirit" (*rwht*'/h / *rwht byšth*: A 1:20, 21; 2:9; 3:4; 4:15; 7:6, [12]; 9:1; 12:1, 12, 32; 13:7, 11; 14:[3]; 15:25; 18:1, 8; 19:3, 24, 26; 21:4; 23:3; 24:20 [*rwht r'h*]; 25:5; 26:10, 14; 27:12, 15, 19, 29; 29:7);

(2) "demon/demoness" (*šd*/*šydh*: A 2:8; 7:6, 12; 7b:3; 13:7; A 21:5; 24:20; 29:7; cf. Deut 32:17; Ps 106:37; Assyr. *šēdu*; JPArAm *šēd* / *šēdā*'h);

(3) "shadow demon" (*šryth*: A 4:15; 7:6, 13; 7b:3; 11:8; 13:8; 22:3; 24:2, 12 ["male or female"], 20);

(4) "harmer" (*mzqh*/*mzyq*': A 7:13; 7b:2; 11:8; 13:5, 9; A 27:5-6 ["evil"]); [noun from the verb *mzq*, "injury," "harm"; cf. *mizq*, "accident," "harm," "injury," from *zqq*, "touch"; "junction");

(5) "destroyer" (*mhbh*: A 7:13; 7b:2 [from *hbl*, "to injure," "ruin," "destroy"]);

(6) "blast demon" (*zyq*': A 11:8 and bowls);

(7) "pebble spirit" (*hwmr*': magic bowls B 1:5; 13:17, 22, etc.);

(8) "vision" (*hzw*': A 20:3 [cf. Gk *phantasma*, "apparition"]);

(9) "evil assailant" (*s'y' byšh*': A 27:5).

2. Greek Terms for Demons.

In the Greek papyri the demonic "entity" is called a *daimōn* (or *daimonion*); a "spirit" (*pneuma*, lit. "wind/breath") and can be qualified as "bad" (*kakon*), "impure/unclean" (*akatharton*) or "soul" (*phaulon*); a "shadow" (*skia*, viz. a "shade" of the dead, SM I.13). Literary sources also use *eidōlon* ("phantom/ghost"; from *eidos*, "what is seen," "image"); *phantasma* ("apparition," "ghost," Plutarch *Dion* 2; *phantasmation* in Plutarch *Dion* 2.766b) for visual appearances (see, in general, Johnston; Kotansky 1995, 246-47). Common to magical texts is the *nekhdaimōn*, "spirit-of-a-corpse" (viz. "ghost"), although this (with *daimōn*) is commonly found in curses and love-spells that adjure (*exorkizō*) subterranean spirits to work magic on the practitioner's behalf (Kotansky 1995, 250-51, 260). The concept of a demonology of the dead may owe considerably more to the general anthropology of NT de-

monic possession than to anything else (see the insights of Bolt).

3. Demonic Attacks and Diseases.

3.1. *Semitic Evidence.* In the Jewish Aramaic amulets, the demonic affliction itself is described with a rich array of expressions. In A 1:21-22, a demon is referred to as the "spirit of the bones" (*rwht grnyh*) that "walks within the tendons and bones of Quzma, son of Salmina." Similarly, a cache of silver amulets found in the synagogue of Nirim includes one (A 11) that expels demons causing *kplrgy*'—clearly the exact equivalent of Greek *kephalargia*, "headache," a term common in Greek magic.

In A 26 we have an unusual "encounter" (see below) of a demon that "rushes" upon its victim, taking the form of "either a male or female, a Gentile or Israelite" and "any likeness by which you appear to people." Here we may have an instance of a spirit of the dead invoked to harm the living.

The presence of the demon is felt to be the universal cause of the medical complaint, most often fever, an acute malady particularly life-threatening in antiquity. Female demons (*šydh*) and spirits (*rwht*) are judged responsible for the "fever-and-shivering" of Ya'itha on an amulet from Horvat Kanaf in Galilee (A 2); on a copper amulet from the same site (A 3) we find that a "bad, evil-causing demon" causes pain and fever to Rabbi Eleazar; similarly, on another amulet the "shadow spirit, whether male or female" is said to be the cause of Qaduma's "fever and shiver" (A 24:11-12); a "shadow spirit" and other fever-causing demons need to be "shaken" from the 248 limbs of Aqemu, daughter of Em-Rabban (A 4 [Aleppo]); an amulet from Oxyrhynchus exorcizes "the spirit called fever-shivering" from the 248 limbs of Marian, daughter of Esther (A 9); a bronze amulet from Horvat Kannah (biblical Cana?) removes sundry fevers from Simon son of Kattia (A 19) by invoking divine and angelic names, among which is a *Yšr-ṯmnu'* "who sits on the river whence all evil spirits emerge" (A 19:35-37).

A handful of amulets were written, too, to protect mothers and their unborn children from malignant, abortifacient demons (A 12, A 24, A 28, A 30). One of these appears, as well, to have been written for dystocia or amenorrhea (A 24:13-14).

3.2. *Greek Evidence.* A common term for the

demonic attack uses the language of "encounter" (*synantēma/apantēma*) or "occurrence" (*synkyrcma* [Jordan and Kotansky 1996]) or "the thing that comes" (*ton erchomenon* [SM I 13:9, 22]). In magical amulets various diseases (esp. fever) are said to "possess" (*synochēin*) or "hold" (*echein*; SM I 14:3) the victim.

As with the Semitic evidence, diseases are explained as demonic attacks. The preponderance of fever complaints far outweighs any other medical complaints in the papyrological and epigraphic literature.

4. Therapy.

4.1. Semitic Evidence. A number of mechanisms, using various forms of prayers, threats and incantations, are employed to eradicate a demon. The use of the *adjuration* (*šb'*) against demons is common in the Aramaic/Hebrew amulets (A 18:1; 19:10, 30, 34; 26:1, 9, 14; 27:14), but the most important "exorcistic" verb, as shown below, is *g'r*, "to shout" or "to rebuke," which is usually rendered "to drive away"/"to expel"/"to exorcize" (A 2:8 [comm.], 11; 9:2, 4; 14:9; 18:2; 19:1, 24; 20:3; 22:4; 25:5; 27:12, 15, 16, 18).

Additional verbs addressed to demons are the following: "to be extinguished" (lup. of *kly*, "to terminate; extinguish," A 7 [Turkey]); "to be moved away and expelled" (*tzw' utg'r*); "to be chased away" (*rdp*, A 22:4) by God; "to move away from" (*zw'*), "to be expelled" (*g'r*) and "to keep far from" (*rthq*) the client; "to uproot/eradicate" (*qr*, A 11, A 17).

More prophylactic terminology is expressed in the verb "to heal" (cf. *šwth*, "healing" in A 21:3 [left]; 22:3). The imperfect form *y's'* (cf. A 1:13) makes plausible a wordplay on Jesus as healer (both Greek *iaomai* "heal"—cf. *iatro*s, "physician"—and *therapeia*, "cure," to be compared with Aramaic *trpyh*, "may you heal him/her," in A 22:3), if we suppose a Semitic background to such passages as Mark 1:34; 3:10, 15; 5:29, etc.

"Sealing" as a mode of protection seems also to be a distinctly Semitic phenomenon (A 18:6), early on associated with the activity of Solomon. So also "to guard" (*ntr*) someone from demons (A 19:7; 25:9; 27:22; 29:3, 6, 8; 31:7).

4.2. Greek Evidence. Magical texts employ a combination of ritual and amulet to ward off demons, including a "passive" language of prevention (protection, warding off, banishing, containment) and a more "active" vocabulary of

exorcism and expulsion (Kotansky 1991). The popular mindset also presumes the use of some divine agency (a deity, set of angels, powerful names, syllables, magic "symbols" [*charaktēres*], or string of vowels) to cure disease.

The most common verb for guarding against demonic attack is *diaphylassō*, "to protect (from)," although a number of special verbs are employed: for example, "check and annihilate" (*hataščēson kai katargēson*, as in SM I 13:7-8).

A standard and perhaps very old formula in Greek magic is the "flee"-formula (Greek *phugō*), as well as that of "chasing away" (*apodiōkein*) and "driving off" (*apelaunein*) the entity (Kotansky 1991).

Magic texts also employ the language of "exorcism" (*[ex]orkizō*, "adjure"; *[ex]orkismos*, "adjuration"), whose original sense was that of employing a "solemn oath" (*ex-*, "utterly" + *hor-kos*, "oath") to call up a spirit of the dead; however, in exorcistic contexts the verb has come to refer to the "oathing out" (*ex-*) of a demon from a person (hence, "to exorcize" = "to adjure [the demon] out" [Kotansky 1995]). This concept is probably Jewish in origin (Kotansky 1995) and is reflected in the Hebrew and Aramaic of the Dead Sea Scrolls.

5. Conclusion.

The use of *g'r* has important implications for the study of NT demonology. The verb means "to shout, rebuke," viz. "to shout (a demon) out" (hence, "to expell/exorcize" it), and this is precisely the equivalent found in the NT (Twelftree, 44-47, who seems unaware of Greenfield 1980 and Naveh 1983).

It has been observed that *epitimaō* in Greek is a suitable equivalent of the exorcistic *g'r* in Semitic. When Jesus "rebukes" Peter's disapproval of the Son of Man's prediction of death in Mark 8:31-33 (par.), referring to him as "Satan," he is in effect performing an exorcism: he is "expelling by rebuke" (*g'r*) the "Satan" in Peter. This is mirrored in a fragmentary sentence of A 14 that reads, "exorcize Satan from" (*g'ur s/n mn*, line 9). It is also possible that *g'r* preserves a root (viz. *g'*; cf. *g'h/g'*, "to roar, scream"; *g's*, "to rumble(?), belch") that lies at the heart of a classical Greek term for "sorcerer"/"magician," the *goēs* (cf. *goēteia*, "sorcery" or "magic"). Part of the itinerant magician's repertory included "wailing" (cf. *goētēs* in Aeschylus *Ch.* 822; the Greek verb *goaō* means "to groan, wail"; cf.

Johnston, 112).

The idea that spirits may be exorcized from the body of a person is Semitic. Greek spells that preserve the notion have a thoroughly Jewish ring about them. This is borne out in the vocabulary of the amulets, for the Aramaic pieces often refer to spirits being driven "from the body" (*mn goph*) of the afflicted. This accords with the Semitic disposition of seeing demons as largely (unseen) spirits that enter the body. Exorcism, per se, is a Semitic concept (Kotansky 1995).

DESTRUCTION OF JERUSALEM

1. The Jewish War
2. The Destruction of Jerusalem
3. The Destruction of Jerusalem in Jewish Literature
4. The Destruction of Jerusalem in the Gospels

1. The Jewish War.

The destruction of Jerusalem in A.D. 70 brought

to a climax a war between the Romans and the Jews of Palestine (see Jewish Wars with Rome). The war has become known as the Jewish War, following the lead of the first-century Jewish historian Flavius *Josephus, who referred to his seven-volume history of events leading up to the fall of the Jerusalem as *peri tou Ioudaikou poleμου* ("concerning the Jewish War," *Life* 74 §412).

1.1. Events Precipitating the War. After many years of tension under Roman rule, several crucial events directly led to the outbreak of the war. On the one hand, the policies and cruelty of the Roman procurator Florus (A.D. 64-66) set the stage for the war (Josephus *Ant.* 20.11.1 §257; Tacitus *Hist.* 5.10.1). First, he antagonized the Jews by siding with the Greeks in several incidents during A.D. 66 in a long-standing civil-rights conflict between the Jews and Greeks of *Caesarea. Then in the summer of A.D. 66 Florus took seventeen talents from the sacrosanct *temple treasury to allay governmental expenses (Josephus *J.W.* 2.14.6 §293) and compounded the offense by having Roman troops sack part of the city and scourge and crucify prisoners in reaction to the resulting public protest (Josephus *J.W.* 2.14.6-8 §§296-308). When he later moved two cohorts (c. 1200 men) to Jerusalem, crowds prevented them from reaching the Roman garrison at the Antonia in a confrontation that resulted in a stampede that left many dead (Josephus *J.W.* 2.15.5 §§325-28).

On the other hand, in response to Florus's activities, the Jews laid the "foundation for the war" by stopping *sacrifices for Gentiles and thus the twice-daily sacrifices for the emperor's welfare (Josephus *J.W.* 2.17.2 §409). This was an act of rebellion. The sacrifices represented a special concession from the Romans to the Jews in lieu of their participating in the rituals of emperor worship (Josephus *J.W.* 2.17.3 §§415-16; see Ruler Cult). Florus's activities in Jerusalem gave rise to a group of insurgents in Jerusalem (see Revolutionary Movements) who captured the Antonia and massacred the Roman garrison there in August of A.D. 66. Later they attacked Herod's palace and the camp of Florus's cohort and massacred the Roman forces after they had agreed to surrender in exchange for safe passage (Josephus *J.W.* 2.17.7-8 §§430-40). With the Roman fortress of Masada having already fallen to a rebel force (Josephus *J.W.* 2.17.2 §408), the revolt spread to other attacks against the Romans and the taking of the Herodian fortresses

of Cypros near Jericho and Machaeros in Perea (Josephus *J.W.* 2.18.6 §§484-86).

1.2. The Course of the War. After the Jews' successful attack and massacre of the Roman forces in Jerusalem, the capture of the surrounding fortresses in early fall of A.D. 66 and the outbreaks of violence in Caesarea, the Decapolis and Syrian cities (Josephus *J.W.* 2.18.1-5 §§457-80), it was time for *Rome's intervention. Cestius Gallus, the Syrian legate, assembled an army of 30,000 and moved on the province on Rome's behalf. He took control of *Galilee with little resistance (Josephus *J.W.* 2.18.11 §§510-12) and then marched on Jerusalem, eventually making his camp a mile to the north on Mt. Scopus in November of A.D. 66 (Josephus *J.W.* 2.19.4 §§527-28). Though victory was in his grasp, Cestius for some inexplicable reason abandoned the siege after about a week (Josephus *J.W.* 2.19.6-7 §§538-40). Withdrawing his forces in retreat, he suffered nearly 5,000 casualties and the loss of valuable military supplies to the Jews (Josephus *J.W.* 2.19.7-9 §§540-55).

During the winter months of A.D. 66/67 the Jews made preparation for the inevitable attack by Rome in the spring by setting up a revolutionary government throughout the province. The peace party led by the high priests, having greater influence on the populace than the rebel leaders, initially took control and selected the ex-high priest Ananus as commander of the forces (Josephus *J.W.* 2.20.3 §§562-64). The revolutionary government divided the territory into six districts (Idurea, Perea, Jericho, western Judea, northeastern Judea, Galilee) and set up military governors to establish civil administration and prepare for war (Josephus *J.W.* 2.20.3-4 §§562-68). Josephus was made the military governor of Galilee (Josephus *J.W.* 2.20.4 §568; *Life* 7 §29). Many distinguished inhabitants, however, took the occasion to leave Jerusalem as if it were a "sinking ship" (Josephus *J.W.* 2.20.1 §556).

In the spring of A.D. 67 the Roman general Vespasian, sent by Nero, and his son Titus arrived with an army of nearly 60,000 men (Josephus *J.W.* 3.4.2 §69). Using friendly Sepphoris as a base in Galilee, Vespasian encountered little resistance in that district except from the fortified places where most of the resistance had moved. His first sustained opposition came from the hilltop fortress Jotapata under Josephus's command. After a seven-week siege it fell in July

A.D. 67 (Josephus *J.W.* 3.7.5-31 §§150-288; 3.7.33-36 §§316-39). Josephus surrendered and was taken prisoner (Josephus *J.W.* 3.8.8 §392; cf. 4.10.7 §§622-29). Then the Roman forces took the port of Joppa (Josephus *J.W.* 3.9.7-8 §§445-61) in late July to protect the supply routes, Tiberias in August (Josephus *J.W.* 3.9.2-4 §§414-31), Tarichaeae in September (Josephus *J.W.* 3.10.1-5 §§462-502), the fortress of Gamala in October after a four-week siege (Josephus *J.W.* 4.1.3-7 §§11-53; 4.1.9-10 §§62-83) and finally Gischala. There the rebel leader, John of Gischala, escaped with his band of followers for Jerusalem (Josephus *J.W.* 4.2.1-5 §§84-120). Having subdued the district of Galilee, Vespasian set up garrisons throughout the area during the winter months to maintain control.

Military activities resumed in the spring of A.D. 68. In March Vespasian took the district of Perca, except for the fortress Machaeros, when the wealthy surrendered the capital Gadara (Josephus *J.W.* 4.8.3 §413). He then moved through western Judea with little resistance and took Idumea (Josephus *J.W.* 4.8.2 §§443-48). Jericho capitulated on his arrival in June (Josephus *J.W.* 4.8.1-2 §§450-51), leaving him with control of almost all the province of Judea. He then set up strategic military camps to prepare for the attack on Jerusalem (Josephus *J.W.* 4.9.1 §§486-90).

The actual siege of Jerusalem, however, was delayed for nearly two years. First came the news of Nero's death in June A.D. 68. Since a military command terminated with the death of the emperor who had given it, Vespasian waited for word from the new emperor (Josephus *J.W.* 4.9.2 §§497-98). But no word came out of the ensuing political turmoil in Rome, with Galba's accession and assassination in January A.D. 69, then Otho's accession and assassination in April A.D. 69, followed by Vitellius's struggle for power. In June of A.D. 69, still having received no official word, Vespasian resumed military action on his own and consolidated his gains in Judea, only to break off the activities in July when he was proclaimed emperor by the Roman forces in the East (Josephus *J.W.* 4.10.4, 6 §601, §§616-20). After consolidating his strength in the East in the spring of A.D. 70 he left Alexandria, Egypt, for Rome and placed Titus in charge of taking Jerusalem (Josephus *J.W.* 4.11.5 §658).

2. The Destruction of Jerusalem.

Josephus, our primary source of information

about the war, describes the isolation, surrounding, siege and fall of Jerusalem in *Jewish War*, books 4—6. It is a period of political turmoil in Rome, a change of Roman command in Judea and a disastrous civil war among the Jews within the walls of Jerusalem. The city eventually fell to the Romans but more a result of Jewish self-destruction than Roman military power.

2.1. Civil War. The city was torn by internal power struggles almost from the beginning of the war. On the one hand, the political forces were divided between extremists and moderates, a war party and a peace party. On the other hand, the extremists themselves were divided not only from the moderates but among themselves.

Initially, after the successful rout of Cestius, the moderates had gained control of Jerusalem under the leadership of the ex-high priest Ananus. By the end of A.D. 67, however, the war party led by Eleazar son of Simon, who had distinguished himself in the attack on the retreating Cestius, and a group around him which Josephus called the "Zealots" (Josephus *J.W.* 2.8.13 §§160-61) gained strength from numerous other extremists and brigands who had moved to Jerusalem after Vespasian's invasion of Galilee (Josephus *J.W.* 4.3.3 §§135-36).

Joined by these extremist forces Eleazar and his band began terrorizing the moderates and attacking the authority of the high priests (Josephus *J.W.* 4.3.4-6 §§138-50). They seized the temple and replaced the high priest with a priest chosen by lot (Josephus *J.W.* 4.3.6 §§147-50). Ananus, supported by a public aroused by the sacrilege, regained the outer courts and pinned Eleazar and the Zealots inside (Josephus *J.W.* 4.3.11-12 §§193-207). The Zealots, however, were encouraged by John of Gischala, who had come to Jerusalem after being routed from Gischala by Titus (Josephus *J.W.* 4.2.4 §106; 4.3.1-3 §§121-28, 135-37) and was supposedly on the side of Ananus and the moderates, to seek help from the Idumeans (Josephus *J.W.* 4.4.1 §§224-32). Eventually a large Idumean force entered the city under cover of a severe storm (Josephus *J.W.* 4.4.6-7 §§288-304) and linked up with the Zealots by retaking the outer courts and killing the ex-high priest Ananus (Josephus *J.W.* 4.5.1-2 §§305-17). The Zealots then went on such a brutal rampage, attacking supporters of the moderates, that the majority of the Idumean force broke with Eleazar and returned home. Others went over to John of Gischala and his

band (Josephus *J.W.* 4.5.5—6.1 §§345-65). The extremists had gained control of the city.

The Zealots under Eleazar, however, soon split with John of Gischala because of his desire for absolute power (Josephus *J.W.* 4.7.1 §§389-90; 5.1.2 §§5-8). In the spring of A.D. 69 these two rival groups were joined by a third led by Simon bar Giora from Gerasa. Simon had first moved to Masada after losing his command in northeastern Judea in A.D. 67 (Josephus *J.W.* 4.9.3 §§503-8). When he learned about Ananias's death, he gathered a force from the refugees of the Zealot's brutal campaign in Jerusalem, along with some Idumeans, and pitched camp outside Jerusalem (Josephus *J.W.* 4.9.8 §§538-44). From there he was admitted into the city by the remainder of the moderates and a populace wearied of the brutality of John and the Zealots (Josephus *J.W.* 4.9.11 §§573-76).

In the struggle that followed, Simon became the "master of Jerusalem" (Josephus *J.W.* 4.9.12 §577), with an army of nearly 15,000 that controlled most of the city. John occupied the outer courts of the temple and part of the Lower City of Jerusalem with 6,000 men. The Zealots held the inner temple with 2,400 (Josephus *J.W.* 5.6.1 §§248-51). During Titus's siege of Jerusalem in the spring of A.D. 70, John used the opening of the temple during the Passover to storm the inner courts and force the Zealots to join him against Simon (Josephus *J.W.* 5.3.1 §§98-105). Only as Titus was about to breach the walls did he reluctantly agree to recognize and work with Simon in defense of the city (Josephus *J.W.* 5.7.4 §§278-79). Meanwhile the civil war had not only cost unity and hundreds of lives, but the vital stores of grain had been destroyed by fire during the internal conflict (Josephus *J.W.* 5.1.4-5 §§22-28). According to Josephus the ensuing famine alone cost over 600,000 lives (Josephus *J.W.* 5.13.7 §569).

2.2. The Fall of Jerusalem. In the spring of A.D. 70 Titus took command of the Roman forces. During Passover of A.D. 70 he moved his troops closer to the city walls and began his assault from the north. In May he breached Agrippa's wall after nearly two weeks of attack (Josephus *J.W.* 5.6.4—7.2 §§275-302).

When the Jewish resistance appeared to slow the preparations for the siege of the second north wall and the Antonia, Titus threw up a four-mile circumvallation around the city with troops stationed at posts along the wall to pre-

vent provisions from reaching the famine-starved inhabitants (Josephus *J.W.* 5.12.2 §§502-11). On more than one occasion Josephus noted the impossibility of escape from the city, a condition that existed even prior to the building of the Roman wall around it (Josephus *J.W.* 4.9.1 §490). Attempted escape from the city meant death either from the rebels on the inside or from the Romans on the outside (Josephus *J.W.* 4.9.10 §§564-65; 5.13.4 §551; 6.6.2 §323).

In July Titus broke through the second north wall and the Antonia and moved his forces into position to attack the north and west temple fortifications. He managed to get control of the outer courts on the ninth of August and took the inner courts on the tenth, plundering the temple, setting it on fire and slaughtering thousands (Josephus *J.W.* 6.4.7—5.2 §§260-85). John's troops, who had held the temple and the Lower City, escaped to the Upper City (Josephus *J.W.* 6.5.1 §277). In celebration the Romans desecrated the Jewish sanctuary by offering a sacrifice to their standards in the outer court (Josephus *J.W.* 6.6.1 §316).

In September Titus ordered the burning and sacking of the city (Josephus *J.W.* 6.6.3 §354). After taking the Lower City, his forces took the Upper City, breaching it in less than a day and gaining control of Herod's palace and towers (Josephus *J.W.* 6.8.4 §§392-99). John, who along with Simon, had escaped into underground passages, eventually surrendered (Josephus *J.W.* 6.9.5 §439). Simon was captured attempting to tunnel his way out (Josephus *J.W.* 7.2.1 §§26-33). Titus then had the temple and city walls razed "to the ground" except for Herod's three towers and a part of the west wall, which he left standing to show the "character and strength" of the city (Josephus *J.W.* 6.9.1 §413; 7.1.1 §§1-4). Since it was too late in the year to sail to Rome, he waited until the spring to return with his spoils from the temple and nearly 100,000 prisoners, including Simon and John, to join Vespasian in a triumphal march in Rome in A.D. 71 (Josephus *J.W.* 7.5.3-6 §§121-57; see Roman Triumph).

The fall and destruction of Jerusalem effectively ended the Jewish War. The only resistance remained in the fortresses of Herodian, Machaeros and Masada. Their reductions followed in A.D. 71-73, with Masada, commanded by Eleazar son of Jair (Josephus *J.W.* 7.8.1 §253), the last to fall (Josephus *J.W.* 7.8.5—9.2 §§304-106). [R. A. Guélich]

3. The Destruction of Jerusalem in Jewish Literature.

The destruction of Jerusalem in A.D. 70 stimulated a great deal of theological meditation in the Jewish community. Some of this literature attempts to discover why God allowed the tragedy. Some literature claims that the destruction was in fact foreseen.

3.1. Explanation of the Destruction. In the guise of reflection on the first destruction of the city and temple at the hands of the Babylonians in 586 B.C., some literature portrays the priests as admitting their corruption and unworthiness to be the stewards of God's house (cf. 4 Ezra 10; 2 Bar. 1:1-5; 3 Bar. 1:1-7; 4 Bar. 1-4; b. *Ta'an.* 29a; Lev. Rab. 19:6 [on Lev 15:25]). Much of this literature goes on to reassure readers that the city's destruction was but one more step in the divine plan that will eventually lead to Israel's redemption.

3.2. Predictions of Destruction. There is significant evidence that the destruction of Jerusalem and the temple were predicted by various persons and literary traditions. According to *Testament of Levi* 10:3, "the curtain of the temple will be torn." The destruction of a corrupt priesthood is foretold in *Testament of Levi* 15:3 (cf. 16:1-5), while siege, destruction, fire and captivity are forecast in *Testament of Judah* 23:1-5. Jerusalem's siege appears to be predicted in *Sibylline Oracles* 3:665. The men of the Renewed Covenant at *Qumran anticipate the destruction of the Jerusalem *priestly establishment (1QpHab 9:2-7; 12:3-5; 4QpNah 1:1-3). The author of the *Lives of the Prophets* also foretells the destruction of Jerusalem and the temple (*Jonah* 10-11; *Habakkuk* 11). Josephus says he predicted the city's doom (Josephus *J.W.* 3.8.3 §§351-52; 6.2.1 §109; 6.5.4 §311). Josephus also tells us of one *Jesus ben Ananias who, alluding to Jeremiah 34, foretold the doom of the city and the temple (Josephus *J.W.* 6.5.3 §§300-309). Finally, there are rabbinic traditions that claim that certain *rabbis, most notably Yohanan ben Zakkai and Zadok, predicted the destruction of Jerusalem and the temple (y. *Sota* 6:3; b. *Yoma* 39a; *Lam. Rab.* 1:5 §31; b. *Git.* 56a; *'Abot R. Nat.* 4). Most of these traditions have been informed by the vocabulary and imagery of Israel's classical prophets who foretold the first destruction of Jerusalem and the temple. [C. A. Evans]

4. The Destruction of Jerusalem in the Gospels.

Apart from the mention of the destruction of a

city in the parable of the great supper in Matthew 22:7 (frequently taken as an allusion to the destruction of Jerusalem) and the lament over Jerusalem in Matthew 23:37-38 (par. Lk 13:34-35), only Luke directly alludes to a siege of the city. The lament of Matthew 23:37-38 and its parallel in Luke 13:34-35 speak generally of a coming abandonment and desolation of her "house" in the language of Jeremiah 12:7 and 22:5. By contrast Luke 19:43-44, with the reference to a siege and surrounding of Jerusalem, comes closest to the actual events described by Josephus (19:43-44; cf. Josephus *J.W.* 5.6.2 §262; 5.11.4 §466; 5.12.2 §§508-11), while Luke 21:20 [cf. Mk 13:14] identifies the city's approaching "desolation" (cf. Dan 12:11 LXX) with the surrounding of the city by troops (cf. Josephus *J.W.* 5.11.6 §§486-90). The frequent reference to Jerusalem's destruction corresponds to the prominent role of Jerusalem for Luke-Acts.

All four Gospels have Jesus making reference to a future destruction of the temple (Mt 24:2; Mk 13:2; Lk 21:6; cf. Mt 26:61; Mk 14:38; Jn 2:19), an event that of necessity would seem to assume the fall of Jerusalem. Furthermore, the warning against the "abomination of desolation" in the Olivet Discourse (Mk 13:14; cf. Dan 12:11) has often been interpreted as referring to the Roman desecrating presence in one form or another in the temple during the war.

Despite those who would attribute these references to the influence of hindsight, nothing in either of the references to the fate of Jerusalem or the temple corresponds so closely to the events as to necessitate the sayings being created in the light of the events of A.D. 66-70. Luke's description of the siege and razing of Jerusalem (Lk 19:43-44; 21:20) reflects the normal strategy for taking a fortified city in the ancient world (e.g., Jer 6:3, 6). Neither reference contains any distinctive feature of the destruction of Jerusalem such as the barricading of the city with a four-mile wall, the disastrous civil war and famine from within, or the fall of the temple. Some elements actually conflict with the information given by Josephus. For example, the Roman presence and wall leaves the warning against entering and the summons to flee the city (Lk 21:20) without a historical reference point. Furthermore, the Roman presence in the temple could hardly have represented the

"abomination of desolation" (Mk 13:14). Rome breached the temple at the climax of the war, a fact that again makes the call for those in Judea to flee anachronistic: by that time they had been conquered and under control of Roman forces for nearly two years. The frequent use of OT prophetic imagery in these passages indicates that these sayings were prophecies of pending judgment. The events of A.D. 70 may have given poignancy to Jesus' sayings in Luke 19:43-44 and 21:20, but the underlying prophecy of the coming destruction of Jerusalem and the temple ultimately have their roots in Jesus' ministry. Jesus, as had several in his time, warned of impending judgment. This warning, doubtlessly interpreted by the ruling priests as a threat, was a major factor in the decision to have Jesus arrested. DEVIL. See BELIAL, BELIAR, DEVIL, SATAN.

DIADOCHI

The Greek word *diadochoi* ("successors") has been used since the first century B.C. to refer to the immediate successors of *Alexander the Great. Since there were many important figures of the period, there is no agreed-upon list of *diadochi*. Generally, however, the term is used of the dozen or so Macedonian generals who carved out kingdoms in the eastern Mediterranean during the half-century after Alexander's death. While the period of the *diadochi* clearly begins in 323 B.C., its end is variously put at 301 (death of Antigonos), 286 (defeat of Demetrius), 281 (deaths of Lysimachus and Seleucus) or 276 (Antigonos Gonatas ensconced in Macedon). The most inclusive meaning is used here. Having mentioned the chief sources for the period, we will sketch the complicated political history of the period in a greatly simplified form and conclude with an overview of its major social, religious and cultural developments.

1. Sources
2. Political History
3. Politics and Society
4. Religion and Philosophy
5. Literature, Art and Architecture

1. Sources.

The most helpful ancient literary sources for this period are Diodorus Siculus (especially *Bib. Hist.* bks. 18-22), who reproduces lost contemporary source material, especially the work of Hieronymus of Carda, an intimate of Eumenes, Antigonos and Demetrius, whose history covered our entire period; and Plutarch's lives of Demetrius, Eumenes, Phocion and Pyrrhus. These must be supplemented by the epitome of Pompeius Trogus's work and the appropriate parts of Arrian's *History of Alexander* and Appian's *Syrian History*. Documentary sources include epigraphical, papyrological, numismatic and archaeological evidence of importance.

2. Political History.

2.1. 323-321 B.C. When Alexander died suddenly in 323 at Babylon, not only the kingship of Macedon but also rule over his vast conquests

was left vacant. The only close blood ties to the royal house were those of his half-brother Philip III Arrhidaeus (seemingly epileptic and/or mentally unfit) and Alexander IV, Alexander's soon-to-be-born son by his Bactrian wife, Roxane. Alexander's Macedonian generals and advisors opted to divide the empire: Antipater would remain general and regent of Macedon and Greece; Perdiccas would have charge of the royal army in Asia; Craterus was named guardian of the two royal family members. In addition, Ptolemy was given charge of Egypt, Antigonus the One-Eyed of western Anatolia, Lysimachus of Thrace, and Eumenes, the only Greek, of Cappadocia and Paphlagonia, still mostly unconquered.

Alexander's idea of interracial marriages between his Macedonians and the conquered Persian aristocracy was promptly abandoned. Only Seleucus remained married to his Persian wife, and only Eumenes joined him in retaining important roles for his eastern generals and troops. While anti-Macedonian uprisings took place among the Greeks of Bactria, on Rhodes and in Greece, the biggest battles were soon among the *diadochi* themselves. Perdiccas and Craterus were the first victims (321) in what was to become a half-century of jockeying for territory and treasure. A new balance of power was brokered at Triparadeisus in 321, with Seleucus joining the inner ranks as governor of Babylon. Already at this early date little hope remained of keeping the empire united. The coming decades would repeatedly see one of the *diadochi* becoming too successful and the others promptly allying themselves against him until his ambitions were thwarted.

2.2. 321-311 B.C. When Antipater died, he left the regency of Greece and Macedon to Polyperchon, passing over his own son, Cassander. The latter promptly gathered an army and fleet and spent two decades seeking to carve out a kingdom for himself. With the empire hopelessly divided, Alexander's two blood heirs were eliminated (Arrhidaeus in 317, Alexander IV in 310) along with the other remnants of the royal household. Eumenes also failed to find his niche in the new order and was executed in 315. For a time Antigonus's share expanded to include much of Mesopotamia, but he was forced to cede the east to Seleucus in 312, the date the *Seleucids would give to the foundation of their kingdom. By 311 Cassander controlled much of

Greece, and Lysimachus much of Thrace, while Ptolemy held Egypt, Antigonus kept *Asia Minor, and Seleucus controlled Mesopotamia.

2.3. 311-301 B.C. Antigonus failed in his continued attempts to recapture eastern territory. Seleucus meanwhile was taking over more and more of Iran, though he had to concede the far eastern empire to the Indian general Chandragupta. Cassander prospered in Macedonia while Polyperchon was confined to governing the Peloponnese until his death (302). The aged Antigonus meanwhile sought continued expansion of his realm through his son, Demetrius Poliorkētēs ("the Besieger of Cities"). Demetrius earned his nickname by taking away Cyprus from Ptolemy (306) but failed in his advance on Egypt. After a second failure, this one against Rhodes (for which the Rhodians in thanksgiving erected the famous Colossus), Demetrius gained a foothold at Athens and organized a new Greek league as a base from which to attack Cassander in Macedon. However, the other players attacked Antigonus's realm from the east, forcing father and son to meet their combined forces at Ipsus in Phrygia (301). Antigonus was killed, but Demetrius escaped. After the great victory over Ptolemy in 306, Antigonus and Demetrius had assumed the title, honors and regalia of kings. They were soon followed by Ptolemy, Seleucus, Lysimachus and Cassander.

2.4. 301-276 B.C. The victors at Ipsus annexed Antigonus's realm, giving Lysimachus much of Asia Minor, Seleucus northern Syria, and Cassander more of Greece. Ptolemy took southern Syria and Palestine for himself. Meanwhile Demetrius, whose kingdom was now reduced to Cyprus, Tyre, Sidon and some Greek cities and islands, used his control of the sea to harass his enemies and build a new power base. His chance in Greece and Macedon came after the death of Cassander (298/297), and he established a firm base there by 294. By his death in 286, however, he had lost his other islands and cities and left his son Antigonus Gonatas with only a foothold in Greece and Thessaly and a claim to Macedonia.

Lysimachus, who started this period in control of Thrace, also experienced initial successes in seizing much of Asia Minor, Thessaly and parts of Macedonia. When Seleucus invaded Asia, however, and penetrated as far as Sardis, the aging Lysimachus's support melted away, hastening his end (281). Seleucus tried to follow

up this victory by crossing into Macedon but was assassinated. His son Antiochus I took over his throne but had to be satisfied with a mainly Syrian and Mesopotamian kingdom.

After fighting off a Gallic invasion (277), Antigonus Gonatas firmly established himself in Macedon. Ptolemy continued his rule of Egypt and many of the Mediterranean islands until his death (283/282), and he was succeeded by his son, Ptolemy II Philadelphus, who ruled jointly with him at the end. Thus, though they would continue to feud over borders (Palestine would be caught in the ongoing struggle between Ptolemies and Seleucids), the general lines of the hereditary Hellenistic kingdoms were now established for the coming decades. ➤

3. Politics and Society.

An array of Greek and Macedonian cultural elements were present at the courts of the *diadochi* and in the garrisons and colonies that buttressed their rule. This influence Hellenized the various regions to different degrees and at different paces. The kingdoms sought to increase their external stability with interdynastic marriages, especially after 301. Supplies of loyal soldiers and administrators were ensured by the founding of Greek colonies and garrisons throughout the subject regions. *Antioch-on-the-Orontes and Alexandria Troas are but two of the cities founded by the *diadochi* that were important in the NT world. A king advised by a council (*synedrion*) made up of his Greek and Macedonian advisors or friends (*philoi*) became the administrative model. Local laws usually remained in force and local dynasties were allowed to rule as long as they remained loyal to the larger realm, but the king's decisions were in reality if not in name the final law. International commerce, as well as royal *patronage of literature and the arts, eventually produced commonalities in language (Koine or Hellenistic Greek) and culture (see Greek of the New Testament).

4. Religion and Philosophy.

Alexander had not only become the new "Great King" or "King of Kings" (The Title of the defeated Persian emperor; see also 1 Tim 6:15; Rev 17:14, 19:16) but had been the recipient of cultic worship (see Ruler Cult). While giving divine honors to living men had also occasionally occurred in the Aegean world (e.g., the cults of Lysander, Dionysius of Syracuse and the previ-

ous Macedonian kings), the scope changed dramatically when many of the *diadochi* were so honored. Cassander and Lysimachus as well as Antigonus, Seleucus, Ptolemy and their successors all received divine sacrifice and worship. While the form varied from ruler to ruler and from city to city, the main elements were the same: being officially decreed as savior (*sōtēr*), divinity (*theos*) or *benefactor (*euergetēs*); the erection of a divine statue (*agalma*), often in a new public temple and at times with specially appointed priests; regular sacrifices; annual festivals with competitive musical, dramatic and *athletic games (*agōnes*); and often having months or days of the week renamed in their honor. In addition each main dynasty took a distinctive divinity as its patron and protector.

While local gods in the East were often identified with members of the Greek pantheon and some oriental deities in turn were introduced among the Greeks, the traditional gods often took a back seat to the new dynasts, the god-men who affected daily life most and responded most clearly to such worship (see Religion, Greco-Roman). The Athenians sang the praises of Demetrius in 290 by saying, "For other gods are either far away, or have no ears, or don't exist, or don't listen to us; but we can see you with our own eyes, not in word or in stone, but truly!" (Austin, #35). While some expressed such sentiments merely to gain political points, others were doubtless sincere.

Meanwhile, the unsettled political world inherited by the *diadochi* gave rise to a new search for peace—inner peace and self-sufficiency (*autarkeia*) rather than a peace based on the *polis* (city-state). Not only did the cult of Fate (*Tychē*) grow rapidly, but also new worldviews and lifestyles deemphasized the city and exalted the individual. While the Golden Age of Greek philosophy had just ended (*Plato, 347; *Aristotle, 322), the founders of Cynicism, Stoicism and Epicureanism (see Philosophy) all lived during the period of the *diadochi* and provided their adherents with new philosophical answers—all downplaying the *polis* and the traditional religious pantheon and championing political indifference and personal withdrawal. Zeno, the founder of *Stoicism, emphasized the brotherhood of man and the world as a single state in which each man must play to the fullest his fated role in the cosmic drama. Epicurus preached withdrawal from politics and society.

The good life for him was found in a circle of friends all seeking spiritual peace in mastery of their passions. While the educated had these philosophical options for dealing with fate, the common person was more likely to strike a bargain with an Olympian god (promising an *ex voto* offering in return for help), seek initiation into one of the increasingly popular mystery cults or turn to *magic.

5. Literature, Art and Architecture.

The lack of political interest is seen also in the popularity of the New Comedy at Athens. Menander and his colleagues avoided the political jibes that pervaded Old and Middle Comedy. Instead complicated plots and misunderstandings set the stage for very ordinary stock characters—the grumpy father, the lovesick son, the insolent and scheming slave, the pompous soldier.

Painters like Apelles and sculptors in the tradition of Praxiteles (who died shortly before this period) pushed representational realism to new levels, striving for the ideal representation (*mimēsis*). Meanwhile Ptolemy I in his final years founded a new scientific and artistic research center, the museum of *Alexandria. Painters, poets (like Aratus, quoted by Paul [Acts 17:28]), literary critics, philosophers, scientists, mathematicians and medical experts were supported in scholarly pursuits amid the tranquility of the museum and its library (see Alexandrian Library).

In architecture the energy of the times was shown in projects like the Colossus of Rhodes, the Pharos lighthouse at Alexandria and the vastly expanded temple complexes at Ephesus, Didyma, Sardis and Priene (see Temples, Greco-Roman). Thus while the distinctive form of the Greek *polis* had now dotted vast new areas of the East, during the period of the *diadochi* the atmosphere within had changed somewhat. Few of the older cities were as independent as they had been in the classical period, but there were important new religious, philosophical and social breezes blowing that would influence civilizations in the coming millennia.

DIASPORA JUDAISM

By the first century A.D. Jewish communities had become established in almost every part of the then-civilized world. Our period of investigation will be from the foundation of the various Diaspora communities until the second century A.D., although material relating to later periods will be discussed occasionally.

13. Conclusions

1. Definitions.

Scholars of earlier generations categorized *Judaism as either Palestinian Judaism or *Hellenistic Judaism. The former was regarded as "uncontaminated" and "normative" and, as the name suggests, restricted to Palestine. The latter was an adulterated, Hellenized form of Judaism found in the Diaspora. However, recent scholarship has noted how inadequate such a distinction is since strong Hellenizing influences were at work in Palestine, and Diaspora communities continued to regard themselves as Jewish and can in no way be thought of as somehow less genuine.

Therefore, the primary distinction made in the study of Judaism is a geographical one between Judaism in Palestine and that in the Diaspora. Further, it is generally acknowledged that there was much diversity in Judaism in both geographical areas and that the development of Jewish life was influenced by the social and political context of each community.

2. Sources.

Often it is difficult to determine which Jewish texts from our period come from the Diaspora, but the following certainly or almost certainly do: Artapanus, *Aristobulus, *Demetrius, Ezekiel, *Joseph and Aseneth, *Josephus, the *Epistle of Aristeas, *3 and 4 Maccabees, *Philo, *Pseudo-Philo, *Pseudo-Phocylides, the *Septuagint, some of the *Sibylline Oracles, *Testament of Abraham and *Wisdom of Solomon. We have a significant number of papyri and inscriptions that shed valuable light on Diaspora Jewish life, although their preservation and discovery is haphazard, and it is often difficult to determine their dating and whether they are Jewish. In addition six Diaspora *synagogues have been excavated. Further information about Diaspora Judaism comes from texts written by non-Jewish authors who provide us with insight into how Jews and Judaism were perceived by others. Overall our evidence is suffi-

cient for us to construct a coherent account of Jewish life in only a very few places.

3. A Geographical Survey of Diaspora Communities.

By the first century A.D. there were significant Jewish communities throughout the Greco-Roman world, so that there were probably few major cities or regions that were without a community of resident Jews (see Philo *Leg. Gai.* 214, 281-83; *Flacc.* 45-46; *Vit. Mos.* 2.232; *Josephus Ant.* 14.7.2 §115; *J.W.* 7.3.3 §43; 1 Macc 15:23-24; *Sib. Or.* 3:271-72; Acts 2:9-11). There were two main reasons for the development of communities in the Diaspora. First, on occasions conquerors forcibly deported Jews; for example, the Babylonians carried numerous Jews to Babylonia, and Pompey took hundreds of Jews to *Rome as prisoners of war. Second, voluntary migration from Palestine to the Diaspora, arising from diverse motives, was highly significant.

The origins of the Jewish communities in Babylonia lie in the exile, since many Jews chose to remain in Babylonia when Cyrus allowed them to return to *Jerusalem (2 Chron 36:22-23; Ezra 1:1-4). Josephus wrote of the size of the Jewish population beyond the Euphrates in his time (*Josephus Ant.* 15.8.2.2 §14; cf. Philo *Leg. Gai.* 216, 282); there were significant Jewish settlements in Nehardea, Nisibis (*Josephus Ant.* 18.9.1 §§311-12) and Seleucia (*Josephus Ant.* 18.9.8-9 §§372-79). Queen Helena of Adiabene and her son Izates were converted to Judaism in the middle of the first century A.D. (*Josephus Ant.* 20.2.1-5 §§17-53). During the Jewish War of A.D. 66-70 Jews in Palestine attempted to arouse hostility against the Romans among their fellow Jews beyond the Euphrates (*Josephus J.W.* 6.6.2 §343). The synagogue in Dura-Europos, which was a modified house, was decorated with the most elaborate frescoes to survive from the ancient Jewish world.

The Jewish community in *Antioch, which was the largest in Syria, probably began in the third century B.C. (*Josephus Ant.* 12.3.1 §119). Under the Romans the Jewish community continued to grow, and Josephus notes its size, wealth and success in gaining sympathizers and proselytes (*Josephus J.W.* 7.3.3 §45). However, Jewish-Gentile tensions grew in the first century A.D., particularly among the lower social classes, and during the Jewish War of A.D. 66-70 the Jewish communities in many Syrian cities suffered

on several occasions at the hands of the Gentile majority (Josephus *J.W.* 2.18.1 §§457-60; 2.18.5 §§477-79; 7.3.1-4 §§40-62). After the war the inhabitants of Antioch asked Titus to expel the Jews from the city, but Titus refused to do so and confirmed the Jews' former rights (Josephus *J.W.* 7.5.2 §§100-111). We also know of other Jewish communities in Syria in Apamea, Damascus, Caesarea and elsewhere.

Between 210-205 B.C. Antiochus III transferred two thousand Jewish families from Mesopotamia and Babylonia to Lydia and Phrygia as military settlers; this provides us with the first unambiguous evidence of Jewish communities in Asia Minor (Josephus *Ant.* 12.3.4 §§147-53). In *Pro Flacco* 28.67-68 Cicero writes of significant amounts of temple tax that had been seized in Asia in 62 B.C. by the Roman governor, Flaccus, giving evidence of the size and prosperity of some Jewish communities. A series of probably generally authentic documents preserved by Josephus and to be dated from 49 B.C. to A.D. 2/3 provide evidence for a number of Jewish communities in Asia Minor (Josephus *Ant.* 12.3.2 §§125-28; 14.10.1-26 §§185-267; 16.2.3-5 §§27-61; 16.6.1-8 §§160-78; Philo *Leg. Gai.* 315). They indicate these Jewish communities experienced ongoing tension in their local cities with respect to their social and religious privileges. The evidence suggests the Jewish communities were a significant and influential presence in the cities concerned and some Jews were of social and economic importance, but their limited participation in the main currents of city life led to their being a considerable irritant as far as the local cities were concerned (see Jewish Communities in Asia Minor).

By the beginning of the first century A.D., however, hostility toward the Jewish communities seems to have abated. An inscription from Acmonia shows that Julia Severa, a high priestess of the imperial cult in the time of Nero (see Ruler Cult), built the Jewish community a synagogue (*CIJ* 766). She was thus a Gentile *benefactor of the local Jewish community, a fact that shows Jews had friends in the highest social circles. Luke indicates that Jews were able to influence the local Gentile population in some places, which suggests that the Jews were respected in their cities (Acts 13:50; 14:2, 5). The presence of Godfearers of some social standing also suggests Jews were a respected group (e.g., Acts 13:16, 48-50; 14:1). Revelation 2:9 and 3:9

suggest that around A.D. 95 the Jewish communities in Smyrna and Philadelphia actively opposed Christians. Asian Christians addressed by Ignatius clearly were tempted to go to the synagogue and adopt Jewish customs (Ign. *Phld.* 6.1-2; Ign. *Magn.* 8.1; 9.1-2; 10.3), a circumstance that points to the impact of some Jewish communities on local Christians.

From the second century A.D. onward it seems clear that some Jewish communities and individuals in Asia played a prominent part in their cities (e.g., *CIJ* 745, 748, 770; *Monumenta Asiae Minoris Antiqua* 6, 335a; Trebilco, 37-103). The size and prominence of the Sardis synagogue points to the social integration and civic prestige of this Jewish community. It seems that at least some of these communities were able to become acculturated and integrated into their cities while remaining faithfully Jewish. They seem to have belonged in their cities, where they were respected and made significant social contributions without compromising their Jewish identity.

We know that Jews lived in at least three towns in the kingdom of Bosphorus. An almost certainly Jewish inscription from Gorgippia, dated A.D. 41, refers to the manumission of a female *slave, which was carried out in a synagogue (*CIJ* 690; cf. *CIJ* 683-84, 683a-b from Panticapaeum).

We are best informed about the Jewish communities in Egypt, which were the largest Diaspora communities in our period. At the time of the Babylonian conquest some Jews fled to Egypt (Jer 43:6-7; 44:1; 46:14); Aramaic papyri of the fifth century B.C. give evidence of a Jewish military colony at Elephantine, a colony that included a Jewish temple.

Jewish immigration into Egypt, both forced and voluntary, was significant from the third century B.C., with the result that Jews came to be settled throughout Egypt. The Ptolemaic era was a period when the Jews in Egypt encountered little hostility (although there were some notable exceptions) and came to fill a significant and prominent role in the economic, political, military and social life of Egypt (see Hellenistic Egypt). They generally flourished as Jews who retained their ethnic identity while also being strongly attracted to Hellenistic culture. However, their position was also precarious, since they had become alienated from significant sections of the wider populace.

At Leontopolis there was another significant Jewish community, formed by Jewish military settlers around 160 B.C. and including the temple of Onias, which served the needs of the military colony (Tcherikover and Fuks, hereafter *CPJ*, 3:145-63; Josephus *Ant.* 13.3.1-3 §§62-73). In Philo's day Jews lived throughout *Alexandria but were particularly concentrated in two of its five quarters (Philo *Flacc.* 55; Josephus *J.W.* 2.18.8 §495). Synagogues were to be found throughout the city (Philo *Leg. Gai.* 132).

Octavian reaffirmed the privileges of the Jewish community in Egypt when he annexed that country in 30 B.C. The Romans also redefined the various classes of the population and emphasized the distinctions Romans, citizens of Greek cities and "foreigners." The Jews seem to have been relegated en bloc to the same category as the Egyptians and thus were compelled to pay the poll tax (*laographia*); Romans and citizens of Greek cities were exempted from paying this tax or paid at a lower rate. This was not only a financial burden; to be grouped with the native Egyptians was also a grave cultural affront, particularly to the upper classes of the Jewish population. Hence the matter of civic status became an increasingly important one for some Jews. Thus began a period of decline for the Jews in Egypt.

Jewish-Greek tension erupted in A.D. 38, when the Greeks destroyed synagogues or put up images of Gaius inside them. Flaccus, the Roman governor, declared the Jews to be "foreigners and aliens" in Alexandria and ordered them all to live in one section of the city (Philo *Flacc.* 25-57; *Leg. Gai.* 120-35). Murder of Jews and widespread looting also occurred. Flaccus was subsequently dismissed from office, and both sides sent delegations to Caligula, who died in A.D. 41 before giving his decision on the matter of Jewish communal privileges, which Flaccus had annulled.

Further trouble erupted in A.D. 41, which led to hearings before Claudius. He wrote a letter to the city (*CPJ* 153; cf. Josephus *Ant.* 19.5.2 §§280-85) in which he called upon the Alexandrians to allow the Jews to keep their customs and ordered the Jews not to seek any privileges beyond those they had enjoyed for a long period. He also forbade the Jews from participating in the *gymnasium and told them to be satisfied with the benefits they were enjoying in "a city not their own." Both these last factors

support the view that the Jews had never possessed *citizenship rights as a body in the city (Smallwood, 235-55). However, it seems clear that some Jews had become citizens individually. Claudius's letter halted the social and cultural integration of such Jews and their children.

The conflict between Jews and Greeks erupted again in A.D. 66 and resulted in the slaughter of a large number of Jews (Josephus *J.W.* 2.18.7-8 §§487-98). After the Jewish War some of the most zealous insurgents escaped to Egypt, where they endeavored to stir up the Jewish population against the Romans, although they met strong opposition from the leaders of the Jewish community (Josephus *J.W.* 7.10.1 §§409-19). In A.D. 115 to 117 Jews in Egypt, Cyrenaica, Cyprus and Mesopotamia attacked their Greek neighbors and launched a revolt. The loss of life was huge, and the Diaspora communities concerned were decimated as a result. Messianic expectation, resentment against the local population and radical social disaffection seem to have been factors behind this revolt.

Jewish settlement in Cyrenaica probably dates from near the beginning of Ptolemaic rule in the area (Josephus *Ag. Ap.* 2.4 §14), with numerous inscriptions testifying to a large Jewish population (see Lüderitz). In Cyrene the Jews formed a well-established and independent body, since Strabo notes that the population of the city was made up of citizens, farmers, resident aliens and Jews (Josephus *Ant.* 14.7.2 §115). Inscriptions show that in the first century A.D. some Jews were taking part in the life of the city and had attained considerable standing politically and culturally. The city also produced the Jewish historian Jason, who wrote a history of the Hasmonean revolt that was abbreviated in 2 Maccabees. He indicates the high cultural level attained by some Jews in Cyrene.

Three inscriptions suggest that some Jews in Berenice had been successful in their social and cultural integration into city life and that other Jews considered this to be legitimate (Lüderitz, nos. 70-72). The community seems to have called a building it owned an amphitheater. We also know of Jewish communities in Teuchira, Apollonia and Ptolemais and in Latin-speaking North Africa.

Philo (*Leg. Gai.* 281-82) gives evidence for a number of Jewish communities in Macedonia and Greece; he lists Thessaly, Boetia, Mace-

donia, Aetolia, Attica, Argos, Corinth, most of the Peloponnese and the islands of Euboea and Crete. In Paul's time there were Jews in Philippi, Thessalonica, Berea, Athens and Corinth (Acts 16:13; 17:1, 10, 17; 18:4). The Jewish communities in these areas were probably never large, and the epigraphical data for them are limited. One inscription from Corinth, to be dated after the NT period, speaks of a "synagogue of the Hebrews" (*CIJ* 718). An inscription from Stobi (*CIJ* 694) records the grant of part of a private house for use as a synagogue. The Jews of Cyprus participated in the revolt under Trajan; clearly they were numerically strong. We have some information about Jews living on Cos, Rhodes and Samos, and a synagogue, built in the first century B.C., has been discovered on Delos.

A significant number of Jews lived in Rome. We do not know when Jews first settled there, but given the significance of Rome and the contacts between the Romans and Hasmonean Judea, it was probably in the second century B.C. Some Jews were probably expelled from the city in 139 B.C. (see Valerius Maximus 1.3.3; Goodman in Lieu, North and Rajak, 69-70). A number of Jews were brought to Rome as prisoners of war by Pompey in 63 B.C. (Josephus *Ant.* 14.4.4-5 §§70-71, 79), and in 59 B.C. Cicero suggests that they were securely established in the city (*Flac.* 28.66-67). Josephus reports that eight thousand Roman Jews supported an embassy from Judea in 4 B.C. (Josephus *Ant.* 17.11.1 §300). The community flourished in the Augustan era while maintaining its Jewish identity; a number of Roman authors commented on the presence and practices of Jews in Rome in this period (e.g., Horace *Serm.* 1.4.139-43; 1.5.96-104; 1.9.60-78; Ovid *Art. Am.* 1.75-80, 413-16).

In A.D. 19 the Jews were expelled from Rome because of their burgeoning influence (Josephus *Ant.* 18.3.4-5 §§65-84; Tacitus *Ann.* 2.85); however, it is doubtful that all the Jews living in Rome left the city. There was further trouble in the 40s, although the evidence is problematic. Two events probably occurred: first, a prohibition of assemblies in A.D. 41 referred to by Dio Cassius (*Hist.* 60.6.6), and second, an expulsion mentioned by Suetonius (*Claudius* 25.4), Acts 18:2 and Orosius (*Hist.* 7.6.15-16), which the latter dates to A.D. 49. According to Suetonius, the Jews were expelled since "they were constantly rioting at the instigation of Chrestus." This probably refers to troubles resulting from Jewish

Christian missionaries' preaching about Christ among Jews in Rome; it seems likely that only known troublemakers were expelled (e.g., Acts 18:2: Priscilla and Aquila).

For the rest of the first century A.D. the Jews in Rome were in an ambiguous position; they thrived, were able to maintain their identity through faithfulness to their traditions and won admirers and imitators from Romans belonging to a range of social classes. They were also subject to criticism from some quarters, mainly because they were seen as a threat to Roman traditions.

Inscriptions from the Roman Jewish catacombs, mostly to be dated in the second to fourth centuries A.D., show that there was a significant number of Jews spread over several parts of the city in this period. From these inscriptions we learn the names of eleven synagogues in Rome, including "the synagogue of the Hebrews," and synagogues named after Augustus and probably Marcus Agrippa. *I Clement*, written from Rome in the A.D. 90s (see Apostolic Fathers), tells us nothing about Jews in the city.

A synagogue has been discovered in Ostia, the port of Rome. Part of the building was erected toward the end of the first century A.D.; it was expanded in the second and third centuries and received its final form in the fourth century A.D. We also know of Jews in other cities in Italy, including Puteoli, Pompeii, Venosa and Naples.

4. Population.

Although we lack sufficient data to ascertain accurately the number of Jews in the Diaspora, our sources give some information. Some ancient authors emphasize the large numbers of Jews in Egypt and elsewhere (Strabo *Geog.* 16.2.28; Philo *Vit. Mos.* 2.232; *Leg. Gai.* 214, 245; *Flacc.* 43; Josephus *Ant.* 11.5.2 §133; 17.11.1 §300; 18.3.4-5 §§65-84; *J.W.* 7.9.2 §445), and the amount of temple tax seized by Flaccus in four Asian cities suggests a considerable Jewish population in these areas (Cicero *Flac.* 66-69). That the Jews of Egypt, Cyrenaica, Cyprus and Mesopotamia fought a protracted war in the time of Trajan suggests that the total population of the Jews in these areas of the Diaspora was considerable, although again we are unable to give estimates. It does seem clear, however, that the total Jewish population of the Diaspora considerably exceeded the Jewish population in Palestine (Tcherikover, 292-95) and that Diaspora Jews

constituted a group of significant size. Scholars often suggest that five to six million Jews were living in the Diaspora in the first century, but such figures can be only speculative.

5. Economic Situation.

Diaspora Jews participated in a variety of branches of economic life. We know, for example, of Jews who were soldiers, land-owning farmers, agricultural laborers, shepherds, artisans, manual workers, traders, merchants, bankers, government officials and slaves. In some Roman writers Jewish poverty was a byword (e.g., Juvenal *Sat.* 3.14-16; 6.542-47), but we also know of some very wealthy Jews (Josephus *Ant.* 20.7.3 §147; *J.W.* 7.11.1-2 §§442-45). Diaspora Jews, then, were found in almost all socioeconomic strata of the period (Safrai and Stern, 701-27).

6. The Diaspora Synagogue.

6.1. Synagogue Buildings. Synagogues have been discovered at Delos, Ostia, Sardis, Dura-Europos, Stobi and Priene. The existence of many others is clear from inscriptions or literary evidence. There would have been more than one synagogue in a large city; eleven are attested for Rome, and Philo says that there were many synagogues in Alexandria (Philo *Leg. Gai.* 132; cf. *Spec. Leg.* 2.62). Acts shows that there were many synagogues throughout the regions where Paul traveled (Acts 9:2; 13:5, 14; 14:1; 17:1, 10, 17; 18:4-7, 19-26; 19:8). Small communities would meet in a house belonging to a member. The earliest synagogue buildings were probably originally private houses modified for use by the community (e.g., Delos and Priene).

The earliest references to a Diaspora synagogue building are dated between 246-221 B.C. and come from Egypt (Horbury and Noy, nos. 22, 117). At first the building seems to have been called a *proseuchē*, or place of prayer (see *CPJ* 129, 134, 138, 432; Horbury and Noy, nos. 9, 13, 22, 25, 27, 125-26; 3 Macc 7:20; Philo *Flacc.* 41, 45, 122; Josephus *Vit.* 280; *CJF* 682-84, 690, 726); sometimes the congregation that gathered in the building is called *synagōgē*, which means "assembly." However, later the building in which they assembled is more often called the *synagōgē*.

There was no uniform architectural design for Diaspora synagogues, and the very different plans of the six known buildings are clearly in-

fluenced by local factors; however, they do share some common features. They generally contain an architectural feature for keeping the biblical scrolls and sometimes had a platform for a reader and benches. Often there were also guest rooms or a dining hall adjoining the assembly room. The Dura-Europos synagogue contains an outstanding set of frescoes that provide our most important evidence for the existence of Jewish figurative art in this period. The Sardis synagogue, which was one part of a complex of buildings including a bathhouse and gymnasium in the center of the city, is the largest synagogue known from antiquity. The synagogue reveals a confident Jewish community that was also integrated to some extent into the wider city (see Kraabel in Urman and Flesher, 95-126).

6.2. The Synagogue as an Institution. The synagogue was the focus of community life for Diaspora Jews and was organized by the community for the community. Not only was it the center of religious life where the sabbath service was held, but also it was the focus for the educational, political, economic, social and judicial life of the community; communal meals were also often held there. It was thus a crucial institution for the maintenance of Jewish identity and played a central role in Jewish life.

Sources describe synagogue services primarily in terms of the reading and study of Scripture (Philo *Vit. Mos.* 2.215-16; Josephus *Ag. Ap.* 2.17 §175). That some of the buildings were called "prayer houses" indicates that prayer was also an important feature.

6.3. Godfearers. A recently discovered inscription from Aphrodisias lists, along with a number of Jews, fifty-four Gentiles who are called *theosebists* or "Godfearers" (see Reynolds and Tannenbaum). Although some scholars argue that the title *Godfearer* here means the Gentiles concerned have simply expressed their support for the Jews as fellow townspeople, it seems much more likely that the term indicates that these Gentiles were linked in some formal way to the Jewish community, without being proselytes. This and other inscriptions, and some literary sources, strongly suggest that there were a number of Gentile "Godfearers" who were formally associated with the Jewish community, were involved in at least some facets of synagogue life and kept some of the commandments without becoming proselytes who joined the community

(see Trebilco, 145-66; Juvenal *Sat.* 14.96-99; Josephus *Ant.* 14.7.2 §110; *J.W.* 7.3.3 §45; see Proselytism and Godfearers).

Although Diaspora Jews do not seem to have been involved in an organized active mission to convert Gentiles (see Goodman in Lieu, North and Rajak, 53-78), they do seem to have welcomed Gentiles who were attracted to the Jewish community either as Godfearers or proselytes. The role of the Jews here then was passively to bear witness through their existence and life. It also seems likely that at least some Diaspora synagogues were visible and open to outsiders. It is also noteworthy that we know of some proselytes (see Juvenal *Sat.* 14.96-106; Josephus *J.W.* 2.19.2 §520; 2.20.2 §§559-61; Acts 6:5 and some inscriptions), although their numbers are quite small.

We can also note the fairly widespread adoption of some Jewish customs such as lighting of lamps (Josephus *Ag. Ap.* 2.38 §282; Persius *Sat.* 5.179-84) and not working on the sabbath (Ovid *Ars Am.* 1.413-16) by Gentiles who did not come into the more formal category of Godfearers. Clearly Gentiles were attracted to Judaism to varying degrees throughout our period.

7. Community Leadership.

The names and functions of community leaders probably varied from place to place. In the third century B.C. a *gerousia* represented the Jews of the whole city of Alexandria (*Ep. Arist.* 310). At the time of Strabo an *ethnarchēs* stood at the head of the Jews (Josephus *Ant.* 14.7.2 §117 quoting Strabo), but in A.D. 11 Augustus modified the situation by either reintroducing the *gerousia* or giving it the power previously vested in the *ethnarchēs* (Philo *Flacc.* 74, 117).

The position of *archōn* or ruler was widespread among Diaspora Jews, although the title may have meant different things in different places. In some communities the *archontes* were elected, formed the executive committee of the *gerousia* and looked after all the affairs of the community. The title of *presbyteros*, or elder, is found in some places (e.g., *Clj* 663, 735, 739; *Ep. Arist.* 310). The relation of *archōn* and *presbyteros* is unclear; they may have been alternative titles, or the members of the *gerousia* who were not members of the executive committee (the archons) may have been called *presbyteroi*. In some places a *gerousiarchēs* was head of the *gerousia*. The *archisynagōgos*, or ruler of the synagogue,

had a role in making arrangements for the services of the synagogue (Acts 13:15) and probably also had some responsibility for maintaining Jewish life and teaching (Acts 18:17). They were often wealthy people of influence and standing in the community, who were *benefactors and *patrons.

Other titles found in inscriptions include *phrontistēs* ("overseer"), *grammateus* ("clerk"), *prostatēs* ("patron"), father or mother of the synagogue, rabbi and priest. It is often difficult to determine what these titles meant (see van der Horst, 89-98).

We know of more than twenty women who held titles such as "ruler of the synagogue," "mother of the synagogue," "elder," "leader" or "priestess." If holding the equivalent title involved a man in active leadership (as opposed to being an honorary title), then it seems likely that when a woman held the title she too was involved in active leadership in the synagogue. There is a continuing debate, however, about whether some of these positions were essentially honorific for all holders of the posts, in which case those who held the titles would have benefited the Jewish community through their munificence or patronage (see Rajak in Lieu, North and Rajak, 22-24). We have no evidence that women were segregated in Diaspora synagogues, and no ancient text calls for segregation.

8. Diaspora Communities in the Greek City.

We do not have any clear evidence that in the Hellenistic and early Roman periods Jews possessed citizenship as a body in any Greek city. Josephus's statements that suggest that they did have citizenship (e.g., Josephus *Ant.* 12.3.1 §119; 12.3.2 §§125-26; *Ag. Ap.* 2.4 §§37-39) are all historically dubious or ambiguous (see Safrai and Stern, 440-81). Clearly, however, some individuals did obtain citizenship in their cities (e.g., Paul in Acts 21:39; Philo *Leg. Gai.* 155-57; Trebilco, 172).

Diaspora Jews generally organized themselves into communities, although the constitutional position of these communities varied from place to place and over time. The position of the Jewish community within any city probably depended on local factors such as when, how and for what purpose the Jewish community became established in that particular locality. In some cities, such as Alexandria, they seem to have formed self-governing groups. It is often

suggested that the Jews there were officially recognized as a *politeuma*, that is, a formally constituted, semiautonomous civic body within a city whose members were not citizens but possessed some important rights. However, the term *politeuma* is found only once in Jewish literature from Alexandria (*Ep. Arist.* 310). Since it is unclear to whom it refers there (see Lüderitz in van Henten and van der Horst, 183-225), it is precarious to base far-reaching theories on this one reference. In Berenice we have evidence for a Jewish *politeuma*, but it was probably a kind of council of the Jews of the city rather than an organization for the whole Jewish community. In other cities the position of the Jews is best compared with that of other associations of immigrants who lived as foreign people in a city. The actual form of communal life probably varied from place to place, as is shown by the variety of terms used to express the notion of community, including the terms "the Jews," "the people," *synodos*, *politeuma*, *katoikia*, the *ethnos* and the *synagōgē*.

A crucial matter in relations between the Jewish Diaspora communities and the cities in which they lived was being granted certain privileges that enabled them to live as Jews in accordance with their law and maintain their identity as communities. The support of the Roman authorities for these privileges was crucial in the face of periodic challenges from individual cities, with Julius Caesar and Augustus being particularly noteworthy in their support for Jewish privileges. These included being able to meet regularly, organize their own community life and have internal jurisdiction, to own buildings, to have their "ancestral" food, to collect and send the temple tax to Jerusalem and to live according to their customs and laws, such as observing the sabbath. Privileges connected with observing the sabbath included being free from appearing in court on the sabbath and an exemption from serving in the Roman army. That they enjoyed these privileges, without being citizens and participating fully in a city's life and cults, often led to friction between the Jews and the city authorities.

The status of Diaspora Jewish communities was not greatly affected after the revolt of A.D. 66-70, in which Diaspora Jews were little involved. Titus resisted demands for the abolition of Jewish communal privileges in Antioch and Alexandria (Josephus *J.W.* 7.5.2 §§100-11), and

generally privileges remained unmodified outside Judea. The diversion of the temple tax to the *fiscus Judaicus* in order to support the temple of Jupiter Capitolinus was the one important change that affected the Diaspora after A.D. 70. Domitian exacted the tax with special severity; Nerva prohibited the accusations to officials that had resulted from Domitian's policy.

9. The Assimilation, Acculturation and Accommodation of Diaspora Communities.

We have noted that the old distinction between "pure" Palestinian Judaism and "Hellenized" Diaspora Judaism is no longer viable. We cannot analyze Diaspora Judaism by simple measurement against Palestinian Judaism; we must find appropriate criteria for the analysis of Diaspora Judaism and in particular the ways Jews reacted to their environment.

In this regard J. M. G. Barclay notes that we can distinguish among different kinds of Hellenization, such as political, social, linguistic, educational, ideological, religious and material Hellenization. Further, engagement with Hellenism could occur to a different degree in each of these areas, which were not all equally significant. Barclay has devised three scales to depict these different kinds of Hellenization (Barclay, 92-102).

First is an assimilation scale, which refers to the level of social integration and concerns social contacts, interaction and practices. Someone at the top of the assimilation scale had abandoned the social distinctives fundamental to Jewish identity; someone at the bottom confined his or her social life entirely to the Jewish community. Second is an acculturation scale, which refers to the linguistic, educational and ideological aspects of a cultural matrix. Someone at the top of the acculturation scale had scholarly expertise in Hellenistic scholarship; someone at the bottom knew no Greek. Third is an accommodation scale, which refers to the use to which acculturation is put. Here Barclay distinguishes between integrative trends, which involved the imitation of Hellenistic culture and its use in reinterpreting the Jewish traditions and could lead to the submersion of Jewish cultural uniqueness, and oppositional trends, which involved the use of Hellenistic weapons in polemic against Hellenism itself and could lead to antagonism to Greco-Roman culture. Thus "acculturation could be used to construct

either bridges or fences between Jews and their surrounding cultures" (Barclay, 98). Although our evidence only rarely enables us to plot Diaspora Jews on these three scales, their use allows us to distinguish among the many different ways Diaspora Jews interacted with their environment. (For the following see in particular Barclay, 103-228, 320-80.)

9.1. Assimilation. There was an enormous range in the degree of assimilation of Diaspora Jews into non-Jewish society. Those who were highly assimilated, to the degree of losing their Jewish distinctiveness and abandoning Jewish practices, included Jews who were fully integrated into political and/or religious affairs of state (e.g., Tiberius Julius Alexander [see Barclay, 105-6]; *CJF* 749; Josephus *J.W.* 7.3.3 §50); those who abandoned some aspects of Jewish customs in order to be socially successful or to gain some other benefit (Philo *Vit. Mos.* 1.31; Josephus *Ant.* 12.4.6 §§186-89; 18.5.4 §141); those who married Gentiles and did not rear their children as Jews (e.g., Philo *Spec. Leg.* 3.29); those who had become critics of their own traditions (Philo *Abr.* 178-93; *Conf. Ling.* 2-13); those whose allegorical interpretations of the law led them to abandon key Jewish practices (Philo *Migr. Abr.* 89-93); and those whose isolated social circumstances necessitated a high level of assimilation (e.g., *CJF* 7, 148).

The category of medium assimilation includes those who had significant social ties with the non-Jewish environment but who also preserved their Jewish identity. Again, types of assimilation can be discerned. First were those who were well educated and participated in the social and cultural life of a city or had significant social ties to the non-Jewish world but remained faithful to Jewish tradition (e.g., Alexander the Alabarch [Josephus *J.W.* 5.5.3 §205]; the author of the *Epistle to Aristaeas*; Philo; Jewish ephebes, city magistrates and citizens [*CJF* 755; Acts 21:39; citizenship did not necessarily entail loss of Jewish distinctiveness]). Many Jews were well integrated into civic life (e.g., Lüderitz, no. 36; *CJF* 748), attained influential positions within their cities and adopted many local customs; yet "a degree of integration did not mean the abandonment of an active attention to Jewish tradition or of Jewish distinctiveness. It was as Jews that they were involved in, and a part of, the life of the cities in which they lived" (Irebilko, 187). Second were those who were in various forms of

employment with or for non-Jews (e.g., in the Ptolemaic army). Third were those who were associated with non-Jews in legal matters. Fourth were those who gained patrons, supporters or converts among non-Jews, which suggests there was considerable social interaction between these Jews and non-Jews.

Barclay (329) concludes that "the patterns of life we have observed in the Mediterranean Diaspora suggest that Jews were neither socially and culturally isolated nor simply blended into some social amalgam. While their boundaries may have been defined variously in differing circumstances, it was precisely the ability to maintain these boundaries while continuing everyday social contacts with non-Jews that was the peculiar achievement of the successful Diaspora communities."

In the category of low assimilation are Jews whose social contact with non-Jews was minimal. Factors leading to low assimilation include the existence of Jewish residential districts (e.g., *CJF* 423, 468; Josephus *Ant.* 14.10.24 §§259-61); the isolation of some communities such as the *Therapeutae, a group found throughout Egypt that in some ways resembled the *Essenes (Philo *Vit. Cont.* 2-90); and social conflict with non-Jews (e.g., in Alexandria in A.D. 38), which expressed and encouraged social alienation.

This range in levels from high assimilation to careful preservation of Jewish distinction means that we cannot rule out in advance what was or was not possible for Jews in their assimilation.

9.2. Acculturation and Accommodation. Clearly there was a range in the levels of acculturation of Diaspora Jews, from those authors who expertly utilized different genres of Hellenistic literature to Jews who had no capacity in Greek, although the latter must have been rare, since papyri and inscriptions show us that Greek was used for nearly all communication in virtually all Diaspora communities. In general the involvement of Diaspora Jews in the life, ways and thought forms of the Greek city (*see* *Cities, Greco-Roman*) helps to explain the flourishing of Diaspora Jewish literature written in Greek in this period (*see* *Writing and Literature: Jewish*). But what use did Diaspora Jews make of their acculturation? This leads to the question of what sort of accommodation was effected by Diaspora Jews with their social and cultural environments. Barclay (125-228, 336-80) divides the writ-

ten texts that can be assigned to the Diaspora with some confidence into those that embrace cultural convergence (while normally retaining some form of Jewish distinction) by integrating Jewish practices with the norms and values of their cultural context and those that emphasize cultural antagonism.

9.2.1. Cultural Convergence. A number of texts exhibit cultural convergence and show the ability of Diaspora Jews to express their traditions within a Hellenistic moral, historical, philosophical and theological framework. The following examples are representative. First, Artapanus was self-consciously Jewish while also being supportive of the Hellenized Egyptian culture he clearly appreciated (*see Jewish Literature: Historians and Poets*). Artapanus claims biblical characters brought culture and *philosophy to Egypt, thus claiming national superiority for the Jews; yet his work also has a pro-Egyptian tone, for example, when it is asserted that Moses established the annual flooding of the Nile. In order to boost Moses' and his people's reputation further, Artapanus gives a positive evaluation of Egypt and its religion. Clearly the author is very much at home in Egypt, whose culture, temples, priests and cults he eulogizes. Artapanus represents a cultural synthesis, an Egyptianized Judaism, and shows that some Jews stood for an important measure of synthesis with Egyptian culture, including Egyptian religion. Barclay (182) notes that "he indicates the possibility of being both a proud Egyptian and a self-conscious Jew." He is a clear example of cultural convergence.

Second, Ezekiel the Tragedian (*see Jewish Literature: Historians and Poets*) rewrote the exodus in the form of a Greek tragedy and thus represents a synthesis with Greek literary tradition. He has an enthusiastic appreciation of Greek *education and is another example of acculturation. The drama is thoroughly Jewish in character, but the form and cultural framework of the classical Greek tradition has made it comprehensible and attractive to Greeks. The work seems to be an attempt to align Jews with Greeks in the common environment in Egypt, without weakening Jewish ethnic loyalty. Ezekiel was Greek and Jewish at the same time, being skilled in Greek poetry, literature and history and committed to the Jewish tradition.

Third, *Philo represents the climax of a Jewish philosophical tradition that was deeply en-

gaged with Hellenistic culture. He received a thorough Hellenistic education and participated in *Alexandrian cultural life. He also received an intensive Jewish education and was intimately acquainted with the life and traditions of the Jewish community in Alexandria, to which he was deeply loyal. He does not give any indication of a tension between Greek and Jewish values. As Barclay (91) puts it, Philo was both "Jewish to the core and Hellenized to the same core."

For Philo the most sublime expression of philosophy was found in the Pentateuch. However, his debt to *Plato was just as great, since his thought was structured by Platonic dualism. Philo tried to show the profound philosophical truths found in the Pentateuch by means of allegorical exegesis. An effect of his allegorization was to dehistoricize the text and to shift from the particular to the universal. Hence the exodus was about the escape of the soul from the confines of the body to the virtues (Philo *Som.* 2.255). His philosophy thus led away from Jewish particularity; Jewish laws were of universal significance. In this way he sought to build bridges between his Mosaic text and Hellenistic culture and to understand Judaism in the light of the themes, motifs and intellectual horizons of his Hellenistic environment. However, "ultimately his allegorical reading of Scripture functions not to submerge Moses' authority in the sea of Hellenism or to parallel Moses with Plato as equal sources of truth. Rather the whole gamut of Hellenistic culture is subordinated to Moses, pressed into service to endorse his original achievement. As Dawson observes, Philonic allegory "is an effort to make Greek culture Jewish rather than to dissolve Jewish identity into Greek culture" (in Barclay, 173). Thus Greek culture is subordinated to Jewish cultural and religious identity.

Overall Philo's erudition in Greek ways of thought was used in the service of his Judaism. In his reaction to extreme allegorizers (Philo *Migr. Abr.* 89-93), Philo shows that his identity was ultimately defined by the Jewish community; his leadership of the embassy to Gaius showed that this was where his social and political commitments lay. With Philo the integration of Judaism into Hellenistic culture was exceptionally profound, but he ultimately used that synthesis for the Jewish community and remained loyal to his Jewish heritage.

Other examples of cultural convergence in-

clude the **Epistle of Aristeas*, **Aristobulus* and **Pseudo-Phocylides*.

9.2.2. *Cultural Antagonism*. In some other Diaspora texts acculturation is used in the service of a sociocultural stance that is predominantly oppositional and antagonistic to Judaism's social and cultural environment. In these cases acculturation results in a religious and social critique of other peoples and a call to resist the cultural pressures of the wider society. Again, some representative examples can be noted.

First, the author of the *Wisdom of Solomon* clearly had a thoroughgoing Greek education, and there is a strong universalist strand in the work. However, the predominant theme is social and cultural antagonism between Jews and non-Jews. The author's Greek education and acculturation serve not to integrate his Judaism with his environment but rather to construct a sophisticated attack upon the latter. It is a deeply Hellenized exercise in cultural aggression and a vigorous defense of Jewish particularity.

Second, the author of **Joseph and Aseneth* uses the Hellenistic form of the romance to launch an attack on Hellenistic religion (see *Religions, Greco-Roman*). A sense of cultural antagonism and alienation between Jews and non-Jews is the predominant tone of the book. The work may be thought to show an open attitude to outsiders, but such outsiders can be welcomed only if they have been totally changed by conversion.

Third, **Sibylline Oracles* 3 and 5 speak of the moral and religious superiority of Israel and the author's cultural antagonism toward non-Jews. They also reveal a cultural and social alienation between Jews and non-Jews. The oracles emphasize the Jews' national greatness, centered on **temple* and **Torah*. The acculturation revealed by the use of the Sibylline genre is thus used to express antagonism toward that culture.

Other examples of cultural antagonism include *3 and 4 *Maccabees*.

10. Facets of Jewish Identity in the Diaspora.

Despite the evident diversity of Diaspora Judaism, we can also identify elements that enabled Jewish communities to endure as coherent entities and that made the difference between a Jew and a non-Jew clear to Jews themselves and to others. We should note that we are looking at Diaspora Judaism as a social as well as a religious and intellectual phenomenon. The following facets were integral to the identity of Diaspora

Jews; they were bonds that held Diaspora Jews together and enabled their communities to survive as coherent entities over time (for what follows see in particular Barclay, 399-444; Trebilco, 12-19).

10.1. *Ethnicity*. At the core of Diaspora Jewish identity was ethnicity or the ethnic bond, that is, the combination of ancestry and customs that could be voluntarily adopted or abandoned. The importance of ethnicity is demonstrated by the following evidence. First, Diaspora literature emphasizes the significance of the "nation," "race" or "people" as the bearer of the Jewish tradition, with Jews being seen as "people of the same race," bound together by a common ethnicity (e.g., Philo *Vit. Mos.* 2.43-44; *Exag.* 12, 35, 43; Noy 1995, no. 240). Second, non-Jewish authors consistently refer to Judaism as an ethnic entity. Thus the Romans allowed the Jews to follow their "ancestral customs," or time-honored ethnic practices, which points to the combination of kinship and custom that defines ethnicity. Third, proselytes who joined the Jewish community underwent a thorough resocialization, so that they acquired a new ethnicity. The conversion process meant that they were transferred to the Jewish nation (Philo *Spec. Leg.* 1.51-52; *Jos. and As.*), which points to the significance of ethnicity. Fourth, the recognition of the importance of endogamy by Diaspora Jews underlines the significance of ethnicity (e.g., Demetrius in Eusebius *Praep. Ev.* 9.29.1; Philo *Spec. Leg.* 3.29). Finally, the emphasis on the training of children in the Jewish way of life was to ensure that Judaism continued as an ethnic phenomenon (e.g., 4 *Macc* 18:10-19; Philo *Leg. Gai.* 115, 195). The evidence thus suggests that ethnicity constituted the core of Jewish identity.

10.2. *The Local Community*. A crucial factor in affirming the identity of Diaspora Jews was the life of the local community. As we have indicated, the nature of the local Diaspora Jewish community varied from place to place and over time, with some owning prayer houses or synagogues, others meeting in private houses, some communities having a range of officials, operating their own courts, voting their own decrees and negotiating with civic authorities, while other communities were less institutionalized. Clearly a strong local community of Jews would have provided invaluable support for the retention of Jewish identity by individuals.

Some elements of communal life were partic-

ularly important in binding Jews together. First, *festivals and fasts (Passover [*Exag.* 184-92; *CJF* 777]; Tabernacles [*CPJ* 452a; Lüderitz, no. 71]; the Day of Atonement [*CJF* 725]; see also Philo *Vit. Mos.* 2.42; Josephus *Ag. Ap.* 2.5 §55) meant Diaspora Jews could express their solidarity with one another. Second, the weekly sabbath gathering at the synagogue was of immense social significance and was a crucial feature of Diaspora Jewish life (Philo *Leg. Gai.* 156-57; *Spec. Leg.* 2.62-63). These gatherings and the instruction that occurred during them bound the community together in loyalty to their distinctive way of life. Third, Diaspora communities generally paid the temple tax (Philo *Spec. Leg.* 1.77-78; *Leg. Gai.* 156-57, 311-16; Josephus *Ant.* 14.10.1-26 §§185-267; 16.6.17 §§162-73; 18.9.1 §§312-13; Cicero *Flac.* 28.67-68); its payment reinforced the individual's sense of belonging to the local community.

10.3. Links with Jerusalem and Other Diaspora Communities. Diaspora Jewish communities were connected with Jerusalem and "the homeland" by payment of the temple tax and other gifts for the temple. Through the tax, Diaspora communities were linked to and participated in the temple's life and worship. Diaspora literature shows a deep respect for the holiness of the temple (*Ep. Arist.* 83-120; Philo *Leg. Gai.* 184-85). Diaspora Jews also went on pilgrimage to the temple, probably in considerable numbers (Philo *Spec. Leg.* 1.69; Josephus *Ant.* 18.9.1 §§310-13; *J.W.* 6.9.3 §425; *CJF* 1404), indicating that the temple's symbolic power was considerable even if its impact on daily life was less significant. Pilgrimage to Jerusalem probably provided significant contact for the Diaspora communities with developments in Jerusalem and Palestine in general and further consolidated the bond between the Diaspora and Palestine. On pilgrimage and in other ways Diaspora Jews would have come into contact with others from the Diaspora and thus forged important connections.

There were also strong social and political links between the Diaspora and Palestine (e.g., 2 Macc 1:1-9; Josephus *Ant.* 12.3.2 §§125-26; 17.12.1 §§324-31), and some Diaspora literature expresses a strong attachment to the land of Palestine (see Israel, Land of) and a sense of solidarity between the Diaspora and Jews in *Judea (Artapanus 27-21; *Sib. Or.* 5:281, 328-32; Wis 12:3, 7; 3 Macc). However, an attachment to Palestine did not necessarily weaken a strong sense of be-

ing at home in the Diaspora (Philo *Flacc.* 45-46). In general Palestine retained some significance as the Holy Land, and the continuing relationship between Diaspora communities and Palestine was an important facet of Jewish identity, but the strength of attachment to Palestine probably varied from community to community.

10.4. The Torah. The *Torah was clearly the key text for Diaspora Jews (Josephus *Ag. Ap.* 2.32 §§232-35; *Sib. Or.* 3:584-85, 768-69; 4 Macc 5:16-21). The existence of the *Septuagint, a translation begun in the third century B.C. probably in Alexandria, shows that at this time Egyptian Jews regarded the Torah as their key text. This is also illustrated by synagogue architecture in which some piece of furniture for the law was prominent (e.g., Ostia; see Noy 1993, 22-26). The dependence of Diaspora authors on the Scriptures is clear (e.g., *Pseud.-Phoc.*), and the allegorical method used by Aristobulus and Philo presupposes the supreme authority of the Scriptures. "Whether as legislation, mystery, constitution, philosophy, founding legend or moral guide, the Jewish Scriptures were integral to all the social and intellectual achievements of Diaspora Judaism" (Barclay, 425).

Instruction in the law formed a key element in Diaspora synagogue life and laid the foundation for Jewish identity (Josephus *Ag. Ap.* 2.16-18 §§171-78; Philo *Leg. Gai.* 156-57). Devotion to the law is regularly noted in the inscriptions from Rome (Noy 1995, nos. 103, 212, 281, 576). In general Diaspora Jewish communities preserved the distinctive customs that were laid down in the law. That Jewish communities took the initiative in the defense of their customs in the face of difficulties with the civic authorities in, for example, Asia and Cyrenaica, and the consistency with which the distinctive traits prescribed by the law were noted as characteristics of Diaspora Jews by outsiders indicate the continuing loyalty of Diaspora Jews to the law and their conviction that their way of life should be ruled by God's law.

Moses, as the person most prominent in the Torah, was also a key figure for Jewish identity. He was seen by Diaspora Jews as a skillful lawgiver, a profound philosopher, a noble king, a supreme military commander, miracle worker and priest (e.g., Philo *Vit. Mos.*; Josephus *Ag. Ap.* 2.15 §§151-72).

10.5. Jewish Practices and Beliefs. Four features of Jewish practice and belief visibly marked off Diaspora Jews from their neighbors and thus

were key boundary markers of Jewish identity, with great social significance.

First, Diaspora Jews generally worshiped the one God of Israel (3 Macc 5:13; *Jos. and As.* 11:10) and rejected other alien and iconic cults (*Wis* 13:1–15:17; *Ep. Arist.* 134-39; Josephus *Ant.* 12.3.2 §126; Philo *Conf. Ling.* 168-73). It seems that Jews were generally exempt from the obligation to worship local gods; we have no documentary evidence for this (and it is unlikely that such an exemption was ever officially expressed), but the outrage expressed when the customary exemption was in danger of being suspended suggests it was a privilege with some consistency (Philo *Leg. Gai.* 117, 134).

Second, the evidence suggests that Jewish dietary laws were generally kept in the Diaspora (e.g., 3 Macc 3:3-7; 7:11). These customs and the consequent separatism at meals would have bound the Jewish communities together and created a consistent social distinction between Jews and non-Jews (Philo *Leg. Gai.* 361-62; *Ep. Arist.* 139-42).

Third, although circumcision was practiced by some other groups, it seems to have constituted a strong affirmation of Jewish identity for men (Philo *Migr. Abr.* 89-93; Josephus *Ant.* 1.10.5 §192).

Fourth, sabbath observance was well-known by non-Jews as a characteristic feature that marked off Jewish communal life from that of other peoples (e.g., Horace *Sat.* 1.9.69-70). The evidence suggests that Diaspora Jews generally observed the sabbath and abstained from work on this day (Philo *Som.* 2.123-24; *Leg. Gai.* 158; Josephus *Ant.* 14.10.12 §§225-27; 14.10.25 §§262-64; *CPJ* 10). The vigor with which Asian Jews, for example, defended the sabbath indicates the depth of their commitment to its observance (e.g., Josephus *Ant.* 16.2.3 §27; 16.6.2-4 §§163-68). It was a highly visible sign of their unique identity as a people.

Each of these strands of Jewish identity—ethnicity, the local community, links with Jerusalem and other Diaspora communities, the Torah, and specifically Jewish practices and beliefs—was interwoven with the others. Together they enabled Diaspora communities to survive in very diverse circumstances.

That Diaspora Jewish identity was reinforced by this combination of factors meant that Diaspora Jews could interpret their traditions in many different ways. "It was not necessary, for

instance, to interpret the ethnic bond only in terms of 'election' and 'covenant.' Other metaphors, derived from historical (Ezekiel) or political (Aristeas) spheres, could serve equally well so long as they fulfilled the requisite social functions" (Barclay, 443). This led to diversity in interpretations of Judaism in the Diaspora; unanimity was unnecessary, provided the various customs were preserved intact. This meant that Diaspora communities endured and flourished not by being isolated from their environment but by having clearly differentiated boundary markers at key points. This very strength meant Diaspora communities suffered hostility at times, precisely because they were considered a social and political offense as communities that remained unassimilated. [P. R. Trebilco]

11. Diaspora as Exile.

Although *Diaspora* often functions as a merely descriptive, neutral term, in many Jewish religious writings it is associated with *exile, with roots reaching back to the Babylonian captivity itself. The fact that Israel remained a country with free access to its temple and holy city, at times even more or less politically autonomous, until the defeat of *Simon ben Kosiba, means that traditions persist in seeing the scattered state of the Jewish people in negative terms.

This perspective is attested in diverse writings ranging from the Greek to the Roman periods. Jesus ben Sirach prays, "Gather all the tribes of Jacob and give them their inheritance, as at the beginning" (*Sir* 36:11; cf. 48:10). The righteous Tobit laments, "He has scattered us among them" (*Tob* 13:9). The author of 2 Maccabees comments, "We have hope in God that he will soon have mercy on us and will gather us from everywhere under heaven into his holy place" (2 Macc 2:18). Writing shortly after the Roman capture of Jerusalem in 63 B.C., the author of the *Psalms of Solomon* prays, "Bring together the dispersed of Israel with mercy and goodness" (*Pss. Sol.* 8:28). He anticipates that God will gather his people: "Sound in Zion the signal trumpet of the sanctuary; announce in Jerusalem the voice of one bringing good news . . . and look at your children, from the east and west assembled together by the Lord" (*Pss. Sol.* 11:1-4). Indeed, the Lord's Messiah "will distribute [the Jewish people] upon the land, according to their tribes" (*Pss. Sol.* 17:28). According to the author of the *Testament of Moses*, "the ten tribes will grow and

spread out among the nations during the time of their captivity" (*T. Mos.* 4:9). The author does not have in mind primarily the Babylonian exile, but the ongoing dispersion of the Jewish people at the time of writing (c. A.D. 90).

Philo believes that this exile will come to an end, not by human effort but by divine power: "For even though they dwell in the uttermost parts of the earth, in slavery to those who led them away captive . . . one day will bring liberty to all . . . they will pass from exile to their home" (*Philo Praem. Poen.* 162-63). Following the disaster of A.D. 70, these hopes continue to be expressed. According to the author of 2 *Baruch*, the Lord "will assemble all those again who were dispersed" (2 *Bar.* 78:7). The idea that God "will bring near our exiles" is expressed in the Targum, especially with respect to messianic expectation (cf. *Tg. Isa.* 53:8; *Tg. Hos.* 14:8; *Tg. Mic.* 5:1-3).

12. Diaspora in the New Testament.

In the NT the Diaspora is referred to in a more or less neutral sense (as in *Jn* 7:35 and *Jas* 1:1). But the Diaspora is also associated with exile, in reference to Israel's subjugation to the nations (particularly Rome), which only Messiah Jesus can remedy.

12.1. Jesus and the Gospels. Jesus says very little about the Diaspora. Nevertheless, two sayings may have important bearing on the question. In a saying found in Q, Jesus says, "I tell you, many will come from east and west and sit at table with Abraham, Isaac and Jacob in the kingdom of heaven" (*Mt* 8:11; cf. *Lk* 13:29, which also has "north and south"). Although many commentators have assumed that Jesus is speaking of Gentiles, it is more probable that he is speaking of Jews, as the allusion to Isaiah 43:5 ("I will bring your offspring from the east, and from the west I will gather you"), Zechariah 8:7 ("Behold, I will save my people from the east country and from the west country") and Psalm 107:3 ("gathered in from the lands, from the east and from the west, from the north and from the south") implies. The contrast lies between privileged Jews who live in the land of Israel under the shadow of the temple and have seen and heard Jesus personally (i.e., "sons of the kingdom," *Mt* 8:12) and less privileged Jews who live outside the Land (Allison).

Jesus' allusion to Isaiah 56:7, during his action in the temple precincts (*Mk* 11:17), also ap-

parently envisions a regathering of the Jews of the Diaspora, including eunuchs and Gentiles (cf. *Is* 56:1-8). If the temple fulfills its God-given task, then it will be a place of worship for all, scattered Jews and even Gentiles who respect God (Evans; Hengel; Schnabel).

Finally, Jesus' appointment of the Twelve points to the restoration of the nation of Israel as a whole and to the renewal of the covenant. Implicit in the number twelve is the anticipation of the regathering of all twelve tribes, including the ten "lost" tribes.

12.2. Paul. For Paul, Israel's exile has more to do with spiritual blindness and hardness of heart and little to do with the geographical realities of the Diaspora. Israel is in bondage, not because many Jews are scattered and the Roman Empire dominates the land of Israel, but because the Jewish people attempt to establish their righteousness through the law.

However, Paul's missionary efforts attest to his concern that the gospel be preached to Jews in the Diaspora and not only to the Gentiles. His motto, "to the Jew first, then to the Greek" (*Rom* 1:16; 2:9-10; cf. *Acts* 13-18), reflects implicitly a commitment to the Jews of the Diaspora, who must hear the gospel, for "all Israel will be saved" (*Rom* 11:26).

12.3. General Epistles. James addresses his letter "to the twelve tribes in the Diaspora: Greeting" (*Jas* 1:1). There is no hint here of exile. But exile is associated with the Diaspora in the address of 1 Peter: "Peter, an apostle of Jesus Christ, To the exiles of the Diaspora in Pontus, Galatia, Cappadocia, Asia and Bithynia" (1 *Pet* 1:1). The author goes on to exhort Christian believers: "Beloved, I beseech you as aliens and exiles to abstain from the passions of the flesh that wage war against your soul. Maintain good conduct among the Gentiles" (1 *Pet* 2:11-12). Here we have the traditional Jewish picture: these "exiles" live among Gentiles in the Diaspora, awaiting redemption. [C. A. Evans]

13. Conclusions.

One feature to emerge from recent study of Diaspora Judaism is its diversity. Diversity within and among Diaspora communities is clearly apparent in a number of areas, including social status and conditions, wealth, size, community organization, assimilation, acculturation and accommodation. We must investigate each community and period as well as the particular cir-

circumstances of Jewish individuals and communities in each environment. Clearly factors such as when the Jews settled in a given city and under what conditions, how the community developed, ongoing relations with other groups and the number of new Jewish settlers over time were all crucial factors in the development of particular communities and their religious traditions, and these factors led to diversity among communities. This means that there were no typical Diaspora conditions; nor can we speak of a Diaspora Jew or a Diaspora community as typical.

It is also to be noted that Diaspora communities in the imperial period seem to have developed largely outside rabbinic control and influence, so these communities were not directed by any central authority and should probably be thought of as nonrabbinic (see Rajak in Lieu, North and Rajak, 9-28). Without an authority to impose uniformity, great variety could develop in Diaspora Judaism, which became a complex and variegated phenomenon. We should also note that at least for a time Jewish Christian communities in the Diaspora would have been seen as one more dimension of this diversity.

Some earlier scholars thought that in order to remain as faithful Jews, it was necessary for Diaspora communities to live in social isolation. It is now recognized that although some Diaspora Jews probably did form tightly enclosed communities with relatively closed boundaries, many other Diaspora communities showed a higher degree of openness to their political, social and cultural environment. Yet clearly different Diaspora communities, with different sociocultural stances, continued to regard themselves as Jewish and maintained their identity as Jews over time while often expressing that Judaism in a particular way that varied from the practices of other Jewish communities. Thus we have been able to draw attention to a number of facets of Diaspora Jewish identity that enabled Jewish communities to endure as coherent entities over time and that meant that there was some commonality between different communities. We also have no evidence that Diaspora Jews were significantly involved in syncretism.

Literary and inscriptional sources indicate that some Jewish communities in the Diaspora continued to flourish until the end of antiquity. The presence of local Diaspora Jewish communities was often a real factor in the life of the

early Christian churches. [P. R. Trebilco]

DIATESSARON. See NEW TESTAMENT VERSIONS, ANCIENT.

DIATRIBE

Diatribes is a dialogical form of teaching in which the teacher proceeds to knowledge by means of question and answer with the students. A number of books in the NT, reflective of the wider use of diatribe in the Greco-Roman world, utilize diatribal literary techniques. The major question in discussion of diatribe with regard to the study of the NT is whether the diatribe constituted a literary form or *genre or whether it represents merely a set of literary conventions.

1. Authors of Diatribes Outside of the New Testament
2. Characteristics of Diatribe
3. Diatribe in the New Testament and Its Interpretive Significance

1. Authors of Diatribes Outside of the New Testament.

The diatribe became a well-known literary form in the Greco-Roman world and is reflected in a number of authors of importance for study of the NT. The diatribe perhaps has its basis in the dialogues of *Plato. Some of these literary constructions were probably based upon dialogues between Socrates and his disciples, but many of them may well have been greatly enhanced literarily by Plato, with some of them almost certainly his own creation. In these dialogues, Socrates engages in discussion with enquirers and leads himself and his discussion partner(s) to knowledge through posing and answering of questions. The process of discovering transpires through Socrates posing questions that lead the respondent either to suggest the answer or to defer to Socrates, at which point Socrates often develops the answer in greater length before moving the dialogue forward.

A number of authors in the Greco-Roman period made use of the techniques of diatribe.

Some of the best known include *Epictetus, Dio Chrysostom, Teles and *Musonius Rufus. Diatribes are also attributed to a number of other authors, especially *Stoic writers, for example, in Diogenes Laertius. The former *slave Epictetus, who became an itinerant *philosopher with a group of followers, has left eight books of his disputations with his followers. They are recorded by Arrian, who also wrote a history of *Alexander's conquest of Persia. They purport to be the record of Epictetus's conversations with his students, and a number of features suggest that they may be genuine. However, a number of features indicate that literary artifice is involved in these dialogues, presumably by Arrian in the course of recording these dialogues. Several of these features include consistent and stylized use of *rhetorical questions, distinctive phrasing by Epictetus and, perhaps most importantly, the feature of Epictetus's inevitable ability to respond appropriately.

2. Characteristics of Diatribe.

A number of features of diatribe are often cited as characterizing this literary form. Once these have been discussed, the question of whether diatribe constitutes a literary genre will be asked.

The major features of the diatribe are, first, its dialogical format. In many diatribes, such as those of Epictetus and Teles, there is what purports to be actual questioning and answering that is recorded, often with the questioner posing short questions that the philosopher-teacher answers. These questions and answers often involve the use of rhetorical questions, that is, questions in which the answer becomes obvious from the way that the dialogue has progressed and the question is posed. These questions also sometimes use the so-called hortatory subjunctive, in which the speaker includes himself in the question being asked, in the form of "should we say . . . ?" or the second person imperative. Often the questions and answers involve parallelism and balance in their construction, so it is obvious that the answer directly addresses the question being asked. This parallelism distinguishes much diatribe. Epictetus, like Paul but unlike most other writers of diatribe (see A. J. Malherbe), uses the phrase translated "may it never be" (*mē genoito*) a number of times as a response to a particularly outlandish suggestion in one of the rhetorical questions, showing the absurdity of such a proposal, which runs contrary to the wisdom of

the teacher. In the course of making a moralistic appeal, the philosopher-teacher would often draw upon examples, and these would often involve citing a particular figure, such as an earlier philosopher or wise person, often referred to as an *exemplum*. Often connective words are used that heighten the dialogue (e.g., strong adversatives or contrastive statements).

In the late nineteenth and early twentieth centuries, diatribe was fairly widely recognized as a genre by such scholars as E. Norden and P. Wendland. In his 1910 work on Paul and *Cynic-Stoic diatribe, R. Bultmann took this position in his study. The conclusion at that time was that diatribe constituted a distinct literary form or genre, which was utilized by a number of writers of the ancient world, including some of those in the NT (see § below). This consensus did not last, however, with scholars soon afterward beginning to question and then abandon the concept of diatribe as a genre. After World War II, the view emerged that diatribe was to be seen as a literary style or set of techniques, often found in rhetorical philosophical prose.

In the most recent major studies, S. K. Stowers (1981) and T. Schmeller analyze the Pauline writings in terms of the diatribal characteristics rather than in terms of it being a distinct ancient genre. The same kind of debate is paralleled among recent discussion by classicists (see Porter for a survey of research). To a large extent, the debate over whether diatribe constitutes a distinctive genre reflects how the literature of the NT is being viewed by the scholarship of the time. In a period in which the books of the NT are being placed firmly within their Greco-Roman literary milieu or as the product of history of religions research, it is more typical to find advocates of NT diatribe as a genre in its own right. However, when the texts of the NT are being analyzed in terms of their being part of a specifically religious milieu, such as distinctive Jewish or Christian literature, the tendency is to see the diatribe as a set of literary conventions utilized within these other literary genres.

3. Diatribe in the New Testament and Its Interpretive Significance.

Several books within the NT can be characterized as diatribe, or at least as utilizing various features of the diatribe style. These include the book of James and some of Paul's letters, such as Romans and 2 Corinthians, among others. One

of the major distinctives of the NT use of diatribe, however, is that the author of the respective book creates a fictive dialogue in which he writes both sides of the debate. This is particularly obvious in the use of rhetorical questions, where the biblical author guides the course of the argument by means of posing questions that he then answers.

The book of Romans provides one of the most instructive NT books for appreciating the features of diatribe. Scholars have seen elements of diatribe in at least Romans 2, 3, 4, 5, 6, 9, 11 and 14, if not others. Some of these features include the following. For example, in Romans 3:1-9 Paul carries on a dialogue with himself, posing rhetorical questions that he then answers in order to get at the issue of God's faithfulness, despite human failing. There are various ways to analyze these questions and answers in terms of which ones are to be put into the mouth of Paul's interlocutor and which ones into his own mouth, but Paul is writing both sides of the discussion (see Stowers 1984).

Paul also uses the rhetorical question with the hortatory subjunctive in such places as Romans 4:1 and 6:1 ("What then shall we say . . .?"). In Romans 6:1 Paul responds to the absurdity that believers should continue to sin by answering "may it never be" (*mē genoito*). Romans 5 has many more features of diatribe than has often been recognized (see Porter). For example, if the better-attested textual variant is accepted in Romans 5:1, the section can begin with a hortatory subjunctive ("Let us enjoy peace with God"). There is also abundant parallelism throughout the chapter. Romans 5:9-11 makes parallel statements regarding justification, reconciliation and salvation. Romans 5:12-21 is also full of parallelism, in which statements are made of Christ and Adam. The use of Abraham in Romans 4, as well as Christ and Adam in Romans 5, illustrates the use of the *exemplum* (see Stowers 1981, 65-71), in which one person stands as an example for others. Other features in this and other books could be cited, but the above give an idea of how diatribal style is used in some places in Romans.

The interpretive significance of the use of diatribal style is severalfold. First, one can more fully appreciate the literary milieu in which certain books of the NT were written. They were written following recognized literary conventions of the Greco-Roman world, possibly even adapting a

recognized literary genre. However, one can more fully appreciate the way in which the biblical author presents and develops his argument. Rather than consisting of the presentation of propositions, biblical books utilizing features of diatribe present their arguments in a progressive way that moves from point to point, often in the course of disputing the opposing views of others. Thus one must exercise caution in how much weight is placed upon any particular statement without considering the larger context in which this part of the argument is developed.

DOMESTIC RELIGION AND PRACTICES

Domestic religion, briefly defined, is the practice of religion in the home or in private circumstances. At times this sort of religious expression

may have been very public (such as in a wedding or a funeral), while other expressions would have been more closed, such as pouring out libations to gods before a meal or in the consummation of a *marriage. Nevertheless, these sorts of religious expression played a fundamental role in the experience of ancient peoples. This article focuses especially on the Roman period and makes references to domestic religion in the NT.

1. Domestic Religion in the Greco-Roman Period
2. Domestic Religion and the New Testament
3. Addendum on Syncretism

1. Domestic Religion in the Greco-Roman Period.

1.1. Roman Domestic Cult: The Gods of Family Life and the Families of the Great Gods. In a well-known passage, Augustine (*Civ. D.* 6.9.9) mocks the pagan belief in a variety of gods and goddesses related to the everyday aspects of life by cataloguing those deities connected with various aspects of the wedding night: "If there is any modesty among men, though there be none among the gods, when a bridal pair believe that so many gods of both sexes are present and intent on the operation, are they not so affected with shame that he will lose his ardour and she increase her resistance? And surely if the goddess *Virginensis* is there to undo the virgin's girdle, the god *Subigus* to subject her to her husband, the goddess *Prema* to keep her down when subjected so that she will not stir, then what job does the goddess *Pertunda* have here? Let her blush and go outside, let the husband have something to do!" This is, of course, an outsider's perspective. Nevertheless, this passage gives us an interesting picture of the intricate weaving of religious sensibilities into the daily life of the Roman people.

The chief gods of the home were the *Genius* (or protective spirit) of the master of the household, the *Lar domesticus* and the *Penates*. The center of this cult was the hearth, which "was in primitive times in the atrium, the common room, which it blackened with its smoke. When images of these gods were made, it was here that they were placed. Here too was where the *pater* said the family prayer and where, before the meal, he offered the household gods the first helpings of food and drink from the nearby table" (Dumézil, 2:611-12). The rhythms of family

life were reflected in the cadences of domestic cult, and the theology of the Roman cult used this as the basic building block in its understanding of how the gods related one to another. Dumézil's theory concerning the organization of the multiplicity of minor gods suggests that the "catalogs of *indigitamenta* [i.e., lists of gods associated with various aspects of daily life like marriage, agriculture, etc.] are not breeding grounds for the gods" (Dumézil 1:35), as some have suggested, but rather that the "minor entities grouped in one of these lists are as it were the *familia* of a 'great' god" (Dumézil 1:38). This traditional reflexive relationship between Roman society and religion was one of the key aspects underscoring the importance of Roman devotion to the ancestral cult.

1.2. Domestic Religion and Social Upheaval in the Hellenistic Period. In the wake of *Alexander the Great's conquests, the structures of *family and city life, including the traditional, stabilizing roles of *civic cults and domestic religion, were thrown into a degree of flux. Personal mobility—geographical, social, financial, etc.—was possible in a way not previously experienced in the Mediterranean world, and this mobility brought about change to the religious structures of the traditional cultures of the entire Mediterranean basin. The *interpretatio graeca* (the identification of others' gods in Greek terms) is perhaps the best-known element in the new drive toward the conglomeration of religious sensibilities, but too much emphasis can be placed on the syncretistic characteristics of religion in this period (see § below). As with modern society, the most conservative unit in society tends to be the family. If one were looking for an area where a reactionary trend might be found, certainly domestic religious practices and sensibilities must represent one such force. (Hence, as with Rome, whose famous concern for societal responsibilities and adherence to tradition marked it as different from surrounding groups, so must the strong reliance on tradition and family within Jewish practice help to explain its ability to resist syncretism in many quarters.)

The marked societal movement which characterized both the Hellenistic period and that of Rome's early expansion into the East (see Roman East) often brought with it a concomitant weakening of the traditional building blocks of both Greek and non-Greek society. As the article on

voluntary *associations in this dictionary makes clear, Greco-Roman society grew during this period to allow for the enfranchisement of those members of society who, traditionally, would have been so enfranchised through family and *polis*—the voluntary association allowed those who had been left out of the life of the *polis* to find a valid role within an identifiable group. As discussed in that article, it is clear that, without known exception, voluntary associations were religious in character, though to differing degrees. This Greco-Roman social phenomenon must surely, then, likewise be within the rubric of "domestic religion."

2. Domestic Religion and the New Testament.

The NT contains comparatively few scenes of daily household life. Various scenes and vignettes from the life of Jesus as represented in the Gospels do allow us glimpses into several Jewish households (e.g., dining with Zacchaeus, Lk 19:1-10; the meal with the disciples in Emmaus, Lk 24:28-35), and, by definition, most of what Jesus does in these instances could be construed to be "religious." This introduces a difficulty in discussing "domestic religion" in the NT, for, as with everything in the Gospels, we are constantly faced with issues of authenticity. In the case of religious or liturgical actions undertaken by Jesus—especially those that are somehow mirrored in the developed Christian cult—the tenets of form criticism suggest that we are in even deeper difficulty than in other instances, for many of these scenes and vignettes are easily lent to interpretations which suggest that their genesis was not in the lifetime of Jesus but rather in the cultic celebrations of the early Christians. Or, perhaps more moderately, one could suggest that their form as represented in the Gospels may reflect *not only* the story of Jesus but *also* the liturgical needs of the early Christian communities.

An excellent example of this is, of course, the representation of the Last Supper (Mt 26:17-30; Mk 14:12-26; Lk 22:7-31; Jn 13:21-36)—an event which, by its very definition, represents not only domestic religion (for how else can the Passover meal be thought of?) but also a defining moment in what would eventually become a very nondomestic event. This reveals a tension that is seemingly inherent in any discussion of domestic religion in the NT: at its inception and for centuries afterwards, *the entire Christian movement*

could be construed as a domestic cult. Christian worship took place in homes (see Family and Household). There were no public buildings (see DLNTD, Architecture, Early Church). Even in Jerusalem, where it appears that Christians were, to some degree, still involved in the *temple cult, the specifically *Christian* element of their religious practice took place elsewhere, and most probably in the homes of its wealthier members (Acts 2:2; cf. Philem 1; Rom 16:3-5).

It is possible to construe the house churches of the earliest Christian communities as representatives of the wider social phenomenon of voluntary associations (see Associations for further discussion of this point). The brief discussion of associations above (see 1 above) outlines a means by which we might then characterize—at least in its early days—the whole of Christianity as "domestic religion." In many ways this perspective could allow us new insights into the way in which we try to reconstruct the early Christians' ideas of how their "religion," or perhaps their religious sensibilities, fit into the wider religious makeup of their societies. One danger faced by all who wish to view the NT historically is that gaps in our knowledge about the time of the NT—especially those gaps that are not perceived as such—will be filled in by our own modern understandings. In the case of positioning earliest Christianity within the religious makeup of different Mediterranean societies, this becomes especially difficult after the larger part of two millennia of the church's religious dominance in most Western societies. No matter what our country of origin or residence, we are likely familiar with the idea of a church building and, indeed, with church buildings of great immensity. The ancient cathedrals and churches of Europe and Asia, the crystal cathedrals of North America, the great sites of pilgrimage in South America—these are all locations of Christian public worship, past and present—and they have left an indelible mark on our understanding of the place of Christianity within the religious makeup of society as a whole. This, however, was not the case in the earliest days of the church. As suggested above, we would perhaps do better to construe earliest Christianity as primarily a domestic religion, whose identity is not equivalent to that of modern or even post-Constantinian Christianity.

There are, however, elements of the NT that seem to reflect the more traditional definition of

"domestic religion," such as that characterized above (see 1.1 above) by Dumézil. One thinks here especially of the conversion of entire households in the book of Acts (e.g., Acts 16:33, the conversion of the household of the Philippian jailer; and Acts 18:8, the conversion of the household of the *archisynagōgos*, Crispus), and those mentioned by Paul (e.g., 1 Cor 1:16). This sort of action, often discussed in connection with the appropriate *time* of baptism for a Christian (i.e., in infancy, or upon some sort of adult decision), could also play a very important role in determining how the tradition of a domestic religious cult headed by the *paterfamilias* functions in earliest Christianity (Hartman, 195-86, comes close to seeing this). The household baptisms in Acts come at three or four junctures in the book: two at Philippi (the households of the jailer, mentioned above, and of Lydia, Acts 16:14-15) and one at Corinth (the household of Crispus). Likewise, it may be that Peter's baptism of the centurion Cornelius and those in his household represents a similar household baptism, but in this case, it would appear that the audience is somewhat larger than merely the household of Cornelius (cf. Acts 10:24), and the baptism at the end of chapter 10 of those who hear Peter's message does not use the same language as in the three mentioned cases of Paul's baptisms of whole households. This is not the place for an extended discussion of the nature of these passages. Yet, no matter what one makes theologically of the baptism of an entire household, the idea that whole households had now become part of the new religion must have spoken volumes to Roman readers of Acts. These converts were more than merely individuals who were now joining a fringe group, or even (avoiding a value judgment) joining a group whose identity was that of a voluntary association without the same value of traditional Roman religion. In at least these three instances in the book of Acts, the author portrays Christianity as a religion at least partly in the traditional mold.

The above paragraphs are not meant to give the impression that Christianity was simply another voluntary association like all the rest—possibly even trying to capitalize on traditional religious values usurped by other domestic voluntary associations. The Christian groups of the earliest centuries exhibited differences from these standard varieties. Christian local specific-

ity was not, in our opinion, as realized as in most specifically religious voluntary associations (cf. Pearson 46 n. 11 on the local nature of the different groupings of one such cult in the Roman world). The lines of communication between different Christian communities and the interchange of ideas, writings, teachings and controversies so common to the later church seem, at least to some degree, to have distinguished the Christian endeavor from the beginning. Nor was the kind of countercultural message of the earliest Christian church something that could sit entirely comfortably with, or function as an exact replacement for, traditional domestic religious practice.

Instead, we might say that Christianity *functioned* within the vacuum created by the demise of the traditional domestic religious practices of its adherents (or that more amorphous space opened up by the wide-scale social movement within the Greco-Roman world). Yet this does not constitute sufficient evidence to establish its *identity* as a domestic cult (if "domestic cult" could even be construed as an independent category). Its emergence into the light as a tolerated and eventually official religion of the Roman Empire gives us an indication that Christianity, while occupying the above-mentioned space, was nevertheless quite able to expand into the larger stage without much difficulty.

3. Addendum on Syncretism.

Syncretism is difficult to define, for its identity seems to revolve around a resistance to definitions and the blending of categories. In the period of the NI, as mentioned above, there was a tension between a variety of differing religious sensibilities. On the one hand, the Roman Empire was built on the strength of tradition and a strong "Roman" identity. The strict social stratification of Roman society was even represented within the way traditional Roman religion was conceived by its practitioners, and the responsibility of Roman citizens to observe the ancestral cult was keenly felt (cf. Cicero *Flac.* 28; La Piana, 825).

On the other hand, the *interpretatio graeca* represents the attempt in the Hellenistic period to essentially do away with those boundaries. On one level, this was represented by such things as the identification of various ethnic gods as simply different names for the same de-

ity. On a different level, this represented the move to de-localize the worship of various gods, making them into deities whose worship was both transportable and transplantable.

The first of these two levels is clearly demonstrated in Plutarch's discussion of the Egyptian religion, especially the common identification of Osiris with Dionysus (Plutarch *Is. Os.* 356B; 362B; 364E-65B; 377D: "But as for Isis, and the gods associated with her, all peoples own them and are familiar with them, although they have learned not so long ago to call some of them by the names which come from the Egyptians," 377F LCL; cf. also Diodorus Siculus *Bib. Hist.* 1.11.3-4; 1.13.5; 1.22.6-7). Another striking passage in this regard is Diodorus Siculus *Bibliotheca Historica* 1.25.1-2, where he discusses the identification of Sarapis with Dionysus, Zeus, Pluto, Ammon and Pan.

The second level is observable in the spread of nontraditional religions in various forms throughout the Roman world. A striking example of this is in the development of the Phrygian Mother Goddess cult in Rome itself. La Piana (297, cf. 335-37) assesses the Claudian legalization of this cult as follows: "this grant, which was a departure from tradition, could not fail to create a precedent and to mark a turning-point in the religious policies of the government. There were sound motives behind it . . . the oriental cults had gained a firm foothold in Rome and were a real power in the life of the masses. To ignore them officially was to let them develop and spread without public control, a bad policy for a government so suspicious of all associations . . . it seemed better and safer to bring them entirely within the law, rather th[an] let them live by tol-

eration or privilege." This reflects both the desire to transport and transplant gods and the role that Roman sensibilities played in both blocking and facilitating this ongoing movement of different religious practices throughout the empire.

ECONOMICS OF PALESTINE

The economic historian Karl Polanyi noted that there have been two senses of the word *economic*: a substantive economics that strives to provide the necessities of life for the individual, family, tribe or society; and a formal economics that refers to rational choices between scarce means in the pursuit of human ends.

While both of these senses are applicable to antiquity, the ancients tended to think consciously about economics primarily in the first sense. For them, economics had essentially to do with the management of the household (Gk *oikos*, "house"; *nomia*, "management"). "Household" could mean the family homestead, the large estate or even the imperial realm (see Family and Household). Since the fundament of ancient economics was agriculture, both Greek and Roman literature produced moralistic treatises on this subject (Xenophon, Cato). In NT times, the Roman Empire was managed by the imperial powers as an extended household. Easy access to the Mediterranean Sea encouraged maritime trade in the Hellenistic-Roman periods, but this was controlled by elites or their agents (Trimalchio in *The Satyricon* of Petronius).

Thus it is equally crucial in considering the economics of Palestine in the biblical periods to keep in mind that social ends were determined by powerful elites, and so ancient economy was political economy. Moreover, in the conservative, traditional agrarian societies of antiquity, individual or even group economic choice was a relatively limited factor in the context of larger ecological and social forces.

1. Palestine as a Region of Mediterranean Ecological Adaptation
2. Agrarian Economy and Society Within the

Bible

3. The Economic Values of Jesus
4. Economic Factors in Early Christianity and the Later New Testament Period

1. Palestine as a Region of Mediterranean Ecological Adaptation.

F. Braudel referred to the Mediterranean region as the land around the Mediterranean Sea from the limit of the olive to the north to the appearance of the palm to the south. As a part of the Mediterranean littoral, Palestine has always been characterized by peculiar ecological factors pertinent to a discussion of economics. Geology and climate have unquestionably shaped ecological-economic dynamics and related human adaptations. Since the Cretaceous period, the Mediterranean area has experienced severe faulting and on the south tectonic stresses and repeated encroachments by the sea itself. The geology of Palestine shows these features well in its abrupt transitions between lowlands and mountain; its extensive limestone formations, combined to the north with volcanic features; and its rainfall and weather patterns that produce the typical Mediterranean vegetation pattern of "evergreen thicket-woodland" (Hepper).

The Mediterranean climate of Palestine produces rainfall in the winter and drought in the summer. With as little as 50 meters annually in the Negev increasing to 800 meters or more in Upper Galilee and the Lebanese Mountains, dry-farming methods of agriculture need to prevail. Plowing breaks only the topsoil in order to preserve the subsoil moisture; grains and trees are naturally selected that have quick growing properties or can survive the annual drought. The Bible, therefore, characterizes Canaan as "a land of wheat and barley, of vines and fig trees and pomegranates, a land of olive trees and honey" (Deut 8:8 NRSV). The difficulty of

agriculture in ancient Palestine is also acknowledged (Gen 3:17-19). Biblical parables often speak through the imagery of the typical vegetation (Judg 9:8-15) or familiar agricultural operations such as sowing (Mk 4:3), harvesting grain (Mk 4:29) or gathering the vintage (Mt 20:1; see Rev 14:19-20).

The main agricultural objects of production were grain, especially barley and wheat, olives for oil and grapes for wine. Grain, wine and oil were the staples of life (Hos 9:2, 4; Prov 9:5; Neh 5:11). Grain was harvested in late spring and early summer; grapes were gathered and processed in summer, olives in early fall. The early rains of September-October helped to prepare the soil hardened by drought for plowing. Once sown, growing grain had to be weeded and was threatened by many natural predators (Mt 13:26; Mk 4:4-7). The late rains of winter helped the cereals to mature toward harvest in late spring. The average yield was around fivefold, compared with thirty- or fortyfold today (aided by modern fertilizers). Fig and olive trees often appear in the Bible because they, along with the grapevine, can withstand the summer drought. Such trees have wide-spreading or deep root systems to capture water and pass a minimal amount of moisture to the air through their leaves. Fig and olive trees take time to come into bearing years and so are associated in the Bible with peaceful times (1 Kings 4:25; Mic 4:4; 1 Macc 14:12).

Herding played an important role in biblical economy as well. Goat's milk and cheese supplemented the proteins and calories from grain and oil. Sheep appear in biblical parables (2 Sam 12:1-4; Lk 15:3-7). Animals might be *sacrificed for their meat, though ordinary people partook of meat only on important occasions (Lk 15:23). The temple economy depended upon significant numbers of animal offerings per year (Josephus *Ant.* 3.9.1 §§224-32).

Some generalizations can be made about the organization of production and labor, as well as distribution and consumption, in the biblical periods. Preindustrial societies depended mainly upon human and animal energies devoted to producing enough to eat. Such societies have been called agrarian societies because they were made possible by the plow (Lenski). In agrarian societies, a social chasm always existed between the relatively few elite urban and town dwellers whose energies were devoted to politics or reli-

gious occupations and the many villagers who tilled the soil. The finite surplus made possible by preindustrial agriculture placed restraints on the absolute size of the elite. The long sweep of ancient Near Eastern history witnessed a succession of world empires whose civilizations were dependent upon collecting the agrarian surpluses of the sedentary agriculturalists. The earliest known writings often have to do with accounting in royal and temple operations. Village economy in such empires was focused on domestic need and agriculture; urban economy was based on taxation of surplus and redistribution for elite ends.

While the Greco-Roman society of the NT period was more complex than that of predecessor societies, especially in the encouragement of Mediterranean commerce, its population was still divided between the majority who labored (around 90 percent) and the elite fraction of the population who did not and whose estates worked by tenants or *slaves supplied the necessities of life (Mt 13:24-30; Lk 12:16-21). Strong rulers could also utilize peasant labor to build aqueducts, temples, palaces and cities (Herod the Great: Sebaste, *Caesarea Maritima, *Jerusalem).

Josephus's claim that "ours is not a maritime country" (Josephus *Ag. Ap.* 1.12 §60) rings true for the biblical literature, except that in special circumstances elites did take advantage of trading opportunities offered by caravans to the east or sea-lanes to the west. Both villager and city dweller sought self-sufficiency, having all of the necessities stored up or readily available near-by. Commercial ventures and fine imported wines and wares were available only to powerful elites. Pliny relates that frankincense caravan tolls for a trip from Sabota (in Arabia) to Gaza on the Mediterranean coast ran to 688 denarii per camel (Pliny *Nat. Hist.* 12.63-65; a denarius was a day's wage on an estate [Mt 20:2]).

Villagers not only labored to raise agricultural produce but also made their own clothing, sandals, simple tools and even houses. Specialists, usually holding monopolistic power and controlled by powerful families, produced pottery, glass vessels, metal tools and weaponry, fine furniture, and the like. Literate elites nonetheless looked down on all who worked with their hands (Sir 38:25-34). Free markets hardly existed in the ancient world; participants in ur-

ban markets, except for small-value exchanges, traded on very unequal terms. Money was essentially an elite tool to facilitate tax collection or to aid elite-sponsored commerce. For the majority of the population, after they had paid their taxes there was barely enough to eat.

Such an ecological adaptation encouraged certain values within biblical culture. Low productivity and social inequities encouraged a notion of limited good, in which the goods of life were believed to have been distributed and could not be increased absolutely (in contrast to modern, postindustrial values in which productivity is ever-increasing). Biblical references to the evil eye are manifestations of limited-good beliefs—evil eye refers to the envious glance that would lead to seizure of what is not rightfully one's own (Prov 23:1-6; 28:22; Mt 20:15).

2. Agrarian Economy and Society Within the Bible.

Economic justice was a constant preoccupation in biblical times. W. Brueggemann has identified a useful paradigm by which to discuss social tensions within Israelite traditions. In discussing the "royal consciousness" exhibited by Pharaoh in Egypt and again by Israelite monarchs like Solomon, Brueggemann analyzes agrarian social dynamics in terms of a politics of oppression, an economics of affluence and a religion of immanence. Just as Rameses II, a god on earth, had conscripted the Israelites as forced labor (Ex 1:11), so Solomon was remembered ambivalently by the Deuteronomistic historians as both wise and oppressive (1 Kings 4:29-31; 5:12 contrasts with 1 Kings 9:15-22). The usurpations of Israelite kings were condemned in traditions like 1 Samuel 8:11-18 or the story of Naboth's vineyard (1 Kings 21). Conversely, Moses and the prophets appear as Yahweh's champions, as critics of a religious ideology that underwrites the royal arrangements. Elite economics is thus organized around the provisioning of the royal estate (1 Kings 4:22-28) as well as the royal temple (1 Kings 6).

Biblical law is concerned with justice in economic arrangements—for instance, regarding slaves (Ex 21:2-11; Deut 15:12-18), property and damages (Ex 22) or the regulation of debt (Deut 15). The classical prophets, with varying emphasis, denounce "immanent religion" and economic injustice (Amos 5:21-24; 8:4-6; Is 1:10-17;

Mic 2:1-2). Of special concern are the widow and the orphan (Ex 22:22; Is 1:17). Israelite wisdom too mulls over the plight of the poor and the persistence of the wicked wealthy (Prov 22:16, 22-23; Eccles 4:1-3). Poverty in the Bible means not only powerlessness and physical want but also public disgrace and shame (Malina).

The context of Jesus likewise was afflicted by social disparities and concerns (Lk 16:19-31). In his day, Palestine had been under the control of great world empires since the Babylonian exile. *Hasmonean rule (1 Macc 13:41-42) marked about a century's exception (142-63 B.C.). The house of Herod the Great provided client rule for the Romans at the turn of the eras. Jesus' parables often describe the typical social features of a colonial situation with large estates controlled by absentee landlords: A landlord's departure provides the occasion for moneylending by retainers (Lk 19:12-27). A landlord has to resort to violence to collect the rent (Mk 12:1-9). A tax collector secures the tax with his own body (Mt 18:23-34). Estate stewards (*oikonomoi*, "household managers") and slaves make frequent appearances (Lk 12:42; 16:1-8; Mk 13:34-35).

Many of these social features are common to agrarian or peasant societies. Comparative studies have shown that preindustrial societies often have enormous social disparities and inequities, that economic phenomena are controlled by powerful centralized or urban elites and that injustice is regularly experienced by the majority. The biblical traditions set the stage for a more hopeful type of human relations. Such hopes come into sharp focus in some of the Mosaic traditions, the prophets and especially Jesus of Nazareth.

3. The Economic Values of Jesus.

The recent third quest for the historical Jesus and Galilean studies enhanced by archaeology have reinvigorated the question of the relationship of the historical activity of Jesus of Nazareth to economic dimensions of his contemporary society. While many aspects of this discussion are as yet undecided and debate centers especially around the social character of Jesus' environment and the movement that emerged through his activity, it is clear that Jesus paid careful attention to economic phenomena. These were entwined with the meaning of his

work, and understanding those phenomena can enhance our understanding of Jesus.

Central to the vision of Jesus of Nazareth was his conviction that the reign of God (Aramaic *malkūtha' dīsmayā'*) was imminent or even present in his activity. Scholars debate the degree to which Jesus' vision should be construed through wisdom perspectives (God's reign is integral to creation or the natural order [Lk 12:22-31]) or through *apocalyptic Jewish elements, which surely appear in the Gospels (Mk 13:26-27). The question of the meaning of the reign of God for Jesus depends upon such assessments.

There is strong evidence that Jesus associated God's reign with his own activity. It is likely that some aspects of this phrase resonated with the views of Judas the Gaulanite or Galilean (Josephus *Ant.* 18.1.1 §4; 18.6.6 §23), since Jesus gained a following in the vicinity of the Galilean lake. Jesus can refer to God's power at work in his exorcisms (Lk 11:20, alluding to Ex 8:19). He also showed strong interest in Passover, the time for remembrance of God's liberation of the Israelites from Egyptian bondage. The passion narratives link Jesus' understanding of God's reign with Passover (Mk 14:22-25 and par.). There are perhaps echoes of the beginning of the Passover Haggadah in Jesus' Q-Sermon:

Passover Haggadah (Aramaic introduction):
This is the bread of poverty which our forefathers ate in the land of Egypt. Let all who are hungry enter and eat; let all who are needy come to our Passover feast. This year we are here; next year may we be in the Land of Israel. This year we are slaves; next year may we be free men (Glatzer).

Passover Haggadah	Q-Beatitudes (Lk 6:20-21)
The bread of poverty	Blessed are you poor
Let all who are hungry	Blessed are the hungry
This year we are here	Blessed are those who mourn

Central in the early Jesus traditions is also a concern for debt and taxation. The politics of oppression familiar to first-century Galileans had to do with the Roman colonial arrangements of client rule. After Judas the Gaulanite and the revolt surrounding the census of A.D. 6, questions about taxation became loaded. Jesus did not speak openly against imperial taxation (Mk 12:17), but he did suggest to his disciples

that the "sons are free" of *temple taxation (Mt 17:26; see *DJG*, Taxes).

In the Lord's Prayer (Lk 11:2-4/Mt 6:9-13) God's rule is related directly to release from indebtedness and concomitant taxation. While a complete analysis of the prayer is not possible here, the petitions seem internally integrated by reference to social-systemic problems: Hunger (Lk 11:3/Mt 6:11) is a function of indebtedness to landlord or overlord (Lk 11:4a/Mt 6:12), and the courts enforced debt contracts (Lk 11:4b/Mt 6:13) if the tradition about Hillel's *prashol* is to be trusted (*m. Seb.* 10.3-7; *b. Git.* 37a; *Murabba'at* 18, a mid-first-century debt contract from the Dead Sea area, secures a loan without the *prashol*). Relations of indebtedness have as their social corollary that the few will have security in more than they need. Jesus carries on a vigorous critique against *mamōnas*, "mammon" (Gk, from an Aramaic word), signifying stored wealth upon which one places trust (Lk 12:16-20; 16:13).

One of Jesus' strategies was to go to the friction point between the Greco-Roman order and the harassed producers. Jesus ate with tax collectors and "sinners" (debtors?) in order to achieve some relief for the indebted (Mk 2:15-16; Lk 18:9-14). The story of Zacchaeus (Lk 19:1-10), however one judges its authenticity, captures the economic import of such associations.

Jesus thus spoke in behalf of a politics of liberation and compassion (Borg). For Jesus, God's rule was a power opposed to the social order established by *Rome. Its arrival offered the poor and lowly a vision of hope and new social possibilities, just as in the first exodus. What did Jesus envision constructively as an expression of that rule? He offers a theology of paradoxical transcendence (*malkūtha'*, "reign") and immanence ('*Abba'*, "Father"). God's rule overthrows the dominant political economy in favor of a fictive family. Political economy is to be transformed into domestic economy, a vision consonant with the traditions of Israel (Deut 15:2; Lev 25:35-46; Neh 5:6-13).

Relations within Jesus' entourage are to be modeled on those of close kin. Exchanges are to take place through arrangements of generalized reciprocity (Lk 6:27-36; 14:12-14; Mt 18:23-34). Generalized reciprocity, unlike the redistributive arrangements of the dominant powers, takes no accounting of exchanges. Seeking the reign of God first will bring carefree economic security

and true happiness (Lk 12:22-31; Mk 10:29-30).

Jesus' vision of the reign of God and his concomitant call for human solidarity against injustice through fictive kin relations apparently was rejected by worldly wise villagers. The message made sense to fishers and some alienated peasants, but Jesus' reception in Nazareth seems to have been typical (Mk 6:4). He garnered no large-scale peasant following. No vestiges of Galilean Christianity are apparent in the years after his death. The horizon of most peasants is limited; discontent does not often consolidate into transvillage movements. When Jesus was crucified in Jerusalem as a bandit, a rebel against the Roman order, not only did his popular support vanish, but also he was abandoned for a time even by his close associates. Experience of his resurrection signified a new stage of his cause, and his message would be carried beyond Palestine within a new social stratum.

4. Economic Factors in Early Christianity and the Later New Testament Period.

Jesus' hope for a more humane economic order did not die. The Gospels continued to mediate his economic interests and values to later Christian communities, though interests appropriate to town and urban contexts also come into view. W. A. Meeks gives evidence that a substantial role was played in early Christian communities by freedmen, those former slaves who were now legally free though sometimes still obligated to former patrons. Freedmen tended to be involved in trade and commercial pursuits, a point that seems generally corroborated about leaders in the Christian circles of the eastern Mediterranean by the Acts of the Apostles (e.g., Acts 16:14-15; 18:2-3).

Such interests are already evident in the Pauline literature. Paul indicates that urban Christian groups such as those in *Corinth are comprised of few who could be recognized as elite (1 Cor 1:26; note that birth and power are key social variables, not economics). The Corinthian community is sundered by inequities of social power and wealth (1 Cor 11:22). It is patronized by powerful people like Erastus, the city treasurer (Rom 16:23) but networks with others who have lesser status (Stephanus, 1 Cor 16:15). The Corinthian correspondence well illustrates that early Christian groups were organized around households, with the more

powerful and wealthy as sponsors of a fictive-kinship assembly/*ekklesia* (1 Cor 16:15, 19; Philem 1-2). D. Georgi has argued that Paul's collection (1 Cor 16:1-4; 2 Cor 8-9) was an animating issue in his historical activity, both an expression of solidarity with the Jerusalem church (Gal 2:10) and a statement of conviction about the eschatological ingathering of the Gentiles anticipated in the Israelite prophetic tradition (Is 45:14, 20, 22-25). This collection already represents an anomaly in terms of Jesus' interests, since a collection is a redistributive tax (like the temple tax sent in the first century by Diaspora Jews to Jerusalem).

In the later first century, issues of political economy present recurrent moral difficulties for the developing Christian movement. Revelation states the situation in apocalyptic terms (Rev 13:16-17; 18:3, 9, 11, 15-18). Jesus' loyal followers are those who have no truck with Roman commerce (Rev 2:9; 3:8, 17; 13:16-17). Others, however, are perceived to have been permanently corrupted (Rev 2:14-15, 20; 3:9; probably cryptic references to Christians who compromise with Greco-Roman culture in pursuit of economic interests). Acts provides a more irenic picture of the Christian position under the Roman Empire. Roman justice furthers the interests of the movement (Acts 18:15; 26:31-32). Commerce is not demonized as in Revelation (or *Gos. Thom.* 64). Moreover, economic relations within the early Christian community are viewed in communistic terms (Acts 2:44-45; 4:32, 36-37; see 1QS 6:22).

The paraenesis of James identifies central economic problems for the future. As the Christian movement experienced success, wealth became a divisive issue (Jas 2:1-7), and social injustice emerged clearly as an intra-Christian concern (Jas 2:16; 5:4). James exhorts the wealthy to take stock (Jas 1:9-10; 5:1-6) and to practice the royal law of neighborly love (Jas 2:8; cf. 1:25). With similar moral stress, Acts reports that Jesus "himself said, 'It is more blessed to give than to receive'" (Acts 20:35, the only explicit saying of Jesus in the NT preserved outside the Gospels; see Lk 22:26). The moral standing of wealth becomes a permanent concern of the Christian tradition, leading to later developments such as Clement of Alexandria's treatise *Quis Dives Salvetur?* and the Franciscan movement in medieval Italy or the Anabaptist communities of the Reforma-

tion. Jesus' followers are still left perhaps with uneasy consciences in times that celebrate mammon and the successes of industrial and technological capitalism.

EDUCATION: JEWISH AND GRECO-ROMAN

In the Greco-Roman world there was no public system of education. Families paid fees for the education of their youth, either at home by tutors or in a teacher's private school. Curriculum was established by convention, and the methods used and the authors studied were rarely changed. Primary education focused on reading and writing skills. Secondary education concerned the seven liberal arts: grammar, *rhetoric, dialectic, arithmetic, music, geometry and astronomy. Study of the professions of medicine and architecture was also available. In Greece *philosophy was the pinnacle of education, while in Rome it was rhetoric, which prepared the student for public life in law and politics. In Greece the seven liberal arts continued to be the core of education, while in Rome grammar and rhetoric became the more narrow focus, with the other liberal arts being subordinate and studied for utilitarian reasons from Greek tutors. The Hellenistic age witnessed the separation of

education into the three stages of primary, grammar and rhetoric. Education became specialized, with grammar, rhetoric, mathematics and philosophy being taught in separate schools.

Jewish education was instituted in part as a response to the influence of Hellenism. It was centered on learning to read and memorizing the Torah and the oral tradition. Teachers came from within *Judaism. Education culminated in an apprenticeship for a trade rather than rhetorical instruction. The religious life of the Jews was also an important tool of education.

1. Greco-Roman Education

2. Jewish Education

1. Greco-Roman Education.

Greek education was well established before the Roman conquest. After the Roman conquest of Greece, Greek scholars went to Rome, bringing with them their language, curriculum and teaching methods. It can be said that Roman education was patterned after Greek education. Rome eventually developed its own grammar and rhetoric courses in Latin. However, both Greek and Roman language and literature continued to be studied side by side.

1.1 Primary Education. The Greeks had an established system of primary education in the Hellenistic period. The *gymnasium was the center of *athletics, reading, writing and music. Boys were accompanied to school by a pedagogue (*paidagogos*) who protected them from physical and moral harm from boyhood to adulthood and often provided the primary education.

In the agrarian society of early Rome of the third century B.C., when their sons were about seven, fathers trained them at home in reading, writing, Roman law and tradition and the use of weapons. Roman tradition was encapsulated in paternal precepts (*praecepta paterna*), which covered practical, social, political and moral subjects, illustrated by the examples of famous individuals from Roman history. There was also some practical instruction in mathematics and weights and measures. If the father died prematurely or in war, the mother or other relatives assumed the role of educator. In wealthy Roman homes, Greek tutors from Greece and Asia Minor were employed to supplement the father's instruction. They taught the Greek language and literature (especially Homer), *poetry, rhet-

oric, philosophy, sculpting, painting and sports. Girls were educated by tutors in reading, writing and poetry.

Primary schools began to appear in Rome in the late third century B.C. The teachers of the primary schools began as *slaves. They were educated by their masters to enhance their value and/or were reared with the master's sons and accompanied them to school. Upon manumission they founded schools. Instruction was mainly in Latin for the poorer students and in Greek and Latin in the better schools. The curriculum centered on reading, writing and some arithmetic. Reading was taught in progression from letters to short passages with moral content and value for living, often from the poets. Writing, memorization and recitation were next, along with needed grammatical instruction to facilitate writing.

1.2. Secondary Education: Grammar. By the Hellenistic period Greece had a systematic grammar education. In the mid-second century B.C. native Greek tutors came to Rome, either as slaves or freedmen. They became tutors for the wealthy and, not finding any educational system in place in Rome, later opened grammar schools patterned on those of Greece. By the early empire, grammatical instruction was available in Rome in both Greek and Latin. Boys and also some girls attended grammar school from ages twelve to fifteen.

A grammar teacher was known as a *grammatikos* (Gk) or *grammaticus* or *ludi magister* (Lat). He taught reading, grammar, literature, exposition of poetry and mythology, for which the study of poetry was essential. Grammatical instruction focused on speaking and writing correctly. Such instruction was in two parts. The first part was learning the phonetic value of letters and their classifications, syllables and the parts of speech. The second part concerned pronunciation, spelling and syntax, especially to avoid barbarisms (faults in the use of a word) and solecisms (faults in syntax) in both speaking and writing. Dionysius Thrax, a student of Aristarchus, wrote the first systematic grammar textbook, which formed the basis of all subsequent Greek grammars (*see* *Grammarians*, *Hellenistic Greek*).

Literary instruction centered on studying the complete texts of the poets. Epic poetry was primary, especially Homer's *Iliad* and *Odyssey* from Greece, and in the first century A.D. the Romans

added their own Virgil's *Aeneid*. The teacher would introduce the poetic text, discussing its author, plot and purpose. He would model the reading of the text for imitation, and then students would read and later recite the text from memory. After the reading the teacher commented about the text's tropes, figures of speech and thought, poetic technique, arrangement, characterization, subject matter and mythological and historical background. Commentaries on the poetic texts were also studied.

1.3. Secondary Education: Rhetoric. By the fourth century B.C. there was systematic teaching of rhetoric in Athens, typically by the Sophists. By the mid-second century B.C., rhetoric instruction was available in Rome by private Greek tutors and a century later by Roman teachers using Latin rhetorical handbooks (e.g., Cicero *De Inventione*). Greek and Latin rhetorical instruction flourished side by side in Rome until the first century A.D., when the latter prevailed. Boys attended rhetoric school from ages fifteen to seventeen.

Rhetorical instruction focused on judicial and deliberative rhetoric in preparation for the legal profession. Both rhetorical theory and practice were taught. Theory included the instruction of Greek and Latin rhetorical handbooks (*technai*), which encapsulated rules learned from practice. Practice included voice training, reciting speeches from law courts and public assemblies and composing and delivering speeches.

A major component of rhetorical instruction was the *progymnasmata*. These were preliminary exercises in composing speeches. They developed in the Hellenistic period and were standardized in the first century B.C. They were graded by order of difficulty and included work with the sayings of famous people (*chreia*), maxims (*sententia*), fables, mythological and historical narrative, development of commonplaces, encomium and denunciation, comparison, speech in character (impersonation), vivid description, thesis and discussion of the advantages or disadvantages of a law. These exercises were illustrated by famous prose works. Students would work each exercise using paraphrase, negation, pro and con, example and comparison. These elements of a full speech were combined with instruction from the rhetorical handbooks, which outlined how to compose and deliver a speech using invention of arguments, arrange-

ment of the parts of the speech, style, memorization and delivery techniques. These were expounded by the teacher and illustrated by famous speeches, with Cicero's speeches being the favorite in Roman education.

Declamation was one type of practice speech for specific training as a judicial advocate. Declamations were of two types: deliberative (*suasoriae*) and judicial (*controversia*). Deliberative speeches offered counsel to a famous historical or legendary person or group at a moment of crisis. The judicial speeches supported one or the other side of an imaginary court case. Being easier, the deliberative speeches were learned by younger students, while the more difficult judicial speeches were learned by older students. The teachers offered situations for declamations and helped the students isolate the main and subsidiary issues. The students then composed their declamations and delivered them from memory, arguing one or both sides of the issue.

In Rome, when boys took the toga of manhood at fifteen to seventeen years of age, they left the rhetorical school to work a year as apprentices in either the forum if they were interested in the legal and political arenas (*see Roman Law and Legal System; Roman Political System*) or the military life if they were interested in a military career (*see Roman Military*). Sometimes this apprenticeship was followed by the study of philosophy, history, law and more rhetoric, occasionally abroad.

1.4. The Means and Mechanics of Instruction. In Hellenistic Greece education was conducted in public institutions. These included the gymnasium, palaestrae and temples dedicated to the Muses (the Museum). If teachers were not employed in these public institutions, they had to find their own accommodations. In Rome education was not conducted in public institutions. In both Greece and Rome the climate permitted education outdoors. In Rome education took place near the forum, temples, public squares and arcades. Rooms could be rented above the arcades of shops. In the time of Trajan public buildings, like the gymnasium, were extended for instruction.

The teacher sat in a high-backed chair, and his students sat on backless benches in a semicircle around him. There were no desks, so all work was done on the lap. Using a stylus of metal or wood, the students wrote on wooden

tablets coated with wax that could be brushed smooth after each use. By the first century A.D. parchment (animal skin) bound in books was in use among those who could afford it.

Class sizes ranged from a handful to two hundred in both the grammar and rhetorical schools. The teacher of larger classes had assistants that he paid out of his own fees. School began at dawn. The morning of instruction was followed by exercise, lunch and a bath, and then an afternoon of more instruction. Homework of composition and memorization was common. Summer break was from June or July to mid-October.

Teachers were paid by the parents for negotiated fees. In Rome primary, grammar and rhetoric teachers were paid in the proportion of one-four-five respectively as indicative of their skill level. In Hellenistic Greece some positions were funded by the public, a wealthy benefactor or an endowment. In Rome Vespasian was the first to appoint imperial chairs, one for Greek and one for Latin rhetoric.

1.5. The Quadrivium. The quadrivium are the mathematical arts of arithmetic, geometry, astronomy and music. These subjects were being taught in Athens as early as the fifth century B.C. and continued as a standard part of education. In Roman education these remained subordinate to grammar and rhetoric and were learned for utilitarian purposes from Greek tutors, usually philosophers. Some mathematics were included in primary education and were also studied by those going into business. Astronomy was studied for its practical benefit in navigating, planting crops and literary allusions. The standard text was Aratus's *Phaenomena*. Musical instruction was in voice and instruments to enable a citizen to participate in social and religious gatherings.

1.6. Professional Education. Medicine, architecture and teaching were the three learned professions of the ancient world. Teaching did not require formal training beyond secondary education. Medicine emerged as a discipline by the fifth century B.C. in Greece and came to Rome by the close of the third century B.C. The Romans did not develop medical instruction for themselves but left it to the Greeks, and it remained in the Greek language. Students were apprenticed to physicians beginning about age fourteen, when they had finished grammar school. They lived with the physician and stud-

ied texts, like the works attributed to Hippocrates and those of Galen, as well as observed the physician on his hospital rounds. Schools of architecture had their own curriculum and standard textbooks. Formal education in law did not develop until the Augustan age. It was a five-year course with a set curriculum as to which categories of laws and which legal works would be studied each year.

1.7. Philosophical Schools. Four philosophical schools began in Athens in the fourth century B.C. Plato founded the Academy, and Aristotle founded the Lyceum. Epicurus started a school for the Epicureans, and Zeno formed a school for the Stoics. Under Marcus Aurelius the four schools had salaried chairs at Athens. Unlike other students in education, philosophy students usually lived on their master's estate.

The philosophical schools assumed the completion of the grammar education. Curriculum in these schools varied, but the texts of the founder of the school and commentaries on them were central. The teacher gave an introduction to the texts, the students read them, and the teacher expounded upon them. Formal lectures were akin to moral exhortation, almost like a sermon, followed by student question and answer after the Socratic method.

2. Jewish Education.

The study of Jewish education comes mainly from Talmudic sources, particularly Palestinian. The study of the Torah was the main component of all the stages of Jewish education in the Greco-Roman period. The Torah was the basis of the social and legal system and the corporate and individual lives of the Jews.

2.1. Home Instruction. At home it was the father's responsibility to teach the Torah to his sons. There is evidence for Jewish primary schools emerging in Jerusalem in the first century B.C. and of secondary schools in the second century B.C., partly in response to maintaining Jewish identity in light of the influence of Hellenism. The primary schools developed a century later than the secondary schools because primary education was considered the father's responsibility. By the first century A.D. many boys were educated in primary and secondary schools. In the second century A.D. virtually all towns in Israel had elementary schools for learning written law (*bet sefer*) and secondary schools for oral law (*bet talmud, bet midrash*),

which each had its own scribes. Girls did not regularly attend school.

2.2. Primary and Secondary Education. Boys attended primary schools from six to ten years of age. The curriculum was akin to Greco-Roman education, but Hebrew replaced Greek or Latin as the language of study, and the Scriptures replaced the classics like Homer and Virgil. Boys learned the alphabet by writing the letters on a small wax tablet with a stylus. There was little grammar education. Reading was a matter of memorization. The Greco-Roman practice of writing from dictation was absent because of the prohibition of copying Scripture from dictation. Instead of dictation the class read small scrolls with passages of Torah written on them (*megillah*) and eventually entire books. Students began reading portions of Leviticus and then turned to Genesis. They eventually read all the books of Scripture in this order: Torah, Prophets and Writings. Memorization of large portions of the texts read was the desired result. In great distinction from Greco-Roman education, writing was taught separately from reading as a professional skill.

Boys attended secondary school from ten to thirteen years of age to study the oral Torah in the forms of midrash (sustained commentary on the text; see Rabbinic Literature: Midrashim) and mishnah (study of the text by topical arrangement; in Gal 1:14 Paul indicates he studied at this level; see Rabbinic Literature: Mishnah). The oral law was taught by recitation, usually chanting aloud, until the material was mastered.

No Greek was taught in Jewish schools. Those who needed Greek to administrate or trade within the *Diaspora were taught in Greek schools, both in Israel and elsewhere. These people included the upper classes of *Sadducees and *Pharisees (e.g., Paul knew Greek). The earliest reference to gymnasia in Palestine is one in Jerusalem founded by Jason the high priest in 175 B.C., but Greek education was probably available from Greek tutors before that time. After that time there are references to gymnasia scattered in larger cities of Israel. The sons of the upper class of Jerusalem may have been sent to study rhetoric in *Alexandria or other centers of Hellenistic education. In the Diaspora many Jews of the upper class were anxious for their children to have a Hellenistic education, while others preferred the traditional Jewish education, considering the influence of

the polytheistic nature of Greek instruction to be a danger to faith (see Hellenistic Judaism).

2.3. Apprenticeship. There was no systematic education for a boy after age thirteen. After this age the father was obligated to teach his son his trade or apprentice him to a craftsman of another trade of the boy's choice. A boy could further study the law with adults who studied in their spare time. If he were gifted he could study with a scholar for several more years. Those preparing to be scribes, teachers, judges or heads of the synagogue continued their study of the Torah, often in small groups or as disciples of a scholar. There was also the study of astronomy and mathematics to calculate time, months and years, and mystical and philosophical studies centered on Genesis 1 (creation) and Ezekiel 1 (chariot vision), also at the instruction of a scholar.

2.4. Means and Mechanics of Instruction. Sometimes schools were attached to the *synagogues and classes held in the prayer hall or a room adjoining the synagogue. Sometimes scribes held class in the courtyard of their homes. Mothers accompanied their sons to school. Classes started early in the morning and went until noon, reconvening in the evening. School was held every day of the week, including the *sabbath. However, on the sabbath no new material was taught; only previously studied material was reviewed. The scribes were paid by the fathers and by taxes levied on the town's inhabitants.

2.5. Other Formal and Informal Education. In addition to public education from the second century B.C. there was the *bet midrash*, which was a school of the scribes or rabbis for study of the written and oral law and for study in the methods of interpretation. These were located in Palestine and the Diaspora. The scribe usually supported himself with a trade and studied the law in his spare time. Their pupils did likewise, so instruction was often in the evening in school, synagogue, town square or market. Some scribes wandered from town to town using the hospitality of individuals for support (cf. Mt 10:9-11). Question and answer was a typical method of instruction.

Informal education was an important part of worship in the synagogue (see Liturgy). On the sabbath and other *festivals there was public reading of the targums to the Pentateuch and the Prophets and a sermon based on both. The

Aramaic targumim were translations of the biblical text into Aramaic and explanation by midrashic, legal, and didactic interpretation (see Rabbinic Literature: Targumim). The sermon was usually haggadic and brought the developments of the school and public together.

ENOCH, BOOKS OF

The name *Enoch* first appears in Genesis 4:17, where we are told that Cain begat Enoch and named a city after him. According to Genesis 5:24, "Enoch walked with God. Then he was no more, for God took him" (the word for "God," *elohim*, could also be interpreted as "angels"). In later tradition this enigmatic verse is taken to mean that Enoch was taken alive up to heaven, where he was shown the tablets of heaven and mysteries hidden from other mortals. Enoch thus resembles the legendary Sumerian king, Enmeduranki, or Enmenduranna, who appears as seventh king in several Mesopotamian lists of antediluvian rulers, and was taken into the council of the gods where he was set on a throne of gold and shown the techniques of divination and the tablet of the gods. The statement that "God took him" also likens Enoch to the Babylonian flood hero Utnapishtim, who was taken to live with the gods at the end of his life. For Jews of the Babylonian exile, Enoch would likely have been viewed as a Jewish counterpart to both the Sumerian hero-king and the Babylonian flood hero. Within Judaism of the Second Temple period there developed a rich tradition of speculation regarding Enoch's ascent to heaven. This continued in the Jewish mystical tradition and is preserved in several extant books of Enoch.

1. *First Enoch*
2. *Second Enoch*
3. *Third Enoch*, or *Sefer Hekhalot*
4. The Status of Enochic Writings

I. *First Enoch*.

1.1. *The Composite Book.* The oldest writings attributed to Enoch are found in the composite book known as *1 Enoch*, which is fully preserved in Ethiopic and was made known to the Western world by the translation of R. Laurence in 1821. Fragments of this book are preserved in Greek, and Aramaic fragments of several sections have been found among the *Dead Sea Scrolls. This book includes at least five distinct compositions: The Book of the Watchers (*1 Enoch* 1—36), the Similitudes (*1 Enoch* 37—71), the Astronomical Book (*1 Enoch* 72—82), the Book of Dreams (*1 Enoch* 83—90) and the Epistle of Enoch (*1 Enoch* 91—105). Within the Book of Dreams, the Apocalypse of Weeks (*1 Enoch* 93:1-10; 91:11-17) stands out as a distinct unit. It is generally believed that fragments of a *Book of Noah* are also preserved in *1 Enoch* (García Martínez; cf. *1 Enoch* 10:1-3; 54:7—55:2; 60:7-10, 24; 106—7). The Similitudes is the only section of the book of which no fragments have been found in the Dead Sea Scrolls.

1.2. *The Book of the Watchers.* Itself a composite book, this part of *1 Enoch* takes its name from the story of the fallen angels, or Watchers, of Genesis 6, which is retold in expanded form in *1 Enoch* 6—16 (see Angels of the Nations). J. T. Milik held that this form of the story was presupposed in Genesis, but most scholars agree that it is more likely to be an expansion of the biblical text. The oldest Aramaic fragments of this work in the Dead Sea Scrolls date from the first half of the second century B.C. The story of the Watchers is presupposed in other sections of *1 Enoch* that can be dated by content to the time of the Maccabean revolt. The Book of the Watchers, then, took shape in the third or early second century B.C.

Chapters 1—5 serve as an introduction to the book. The opening chapter describes a theophany on the day of judgment, but chapters 2—5 have the character of wisdom instruction. Chapters 6—16 tell the story of the Watchers, in which two stories seem to be woven together. In one, the leader of the fallen angels is named Asael (Azazel in the Ethiopic text), and the primary sin is improper revelation; in the other the

leader is Shemihazah, and the primary sin is marriage with humans and procreation of giants. These stories can be understood plausibly as an allegory for the impact on the Near East of *Hellenistic culture, with its new attitudes to knowledge and sexuality. But they also constitute a way of explaining the origin of sin and evil as the products of *demonic forces (Sacchi). The Watchers beget giants on earth by their union with human women. Out of these giants come evil spirits that lead humanity astray (*1 Enoch* 15:11-12; this motif is elaborated further in **Jubilees*). In the short term, the crisis of the Watchers is resolved when God sends the flood to cleanse the earth.

Enoch is introduced in chapter 12 as a scribe, whom the Watchers ask to intercede for them. Enoch ascends to heaven on a cloud and comes before the heavenly throne in chapter 14, in a passage that is important for the history of Jewish *mysticism (see Heavenly Ascent). His intercession, however, is rejected. The Watchers abandoned heaven for the attraction of the flesh. Enoch represents the opposite tendency: he is a human being who is taken up to heaven to live with the angels.

In chapters 17—36, Enoch is taken on a tour by the angels, to the ends of the earth. He sees cosmological secrets such as the storehouses of the winds and the elements, but much of what he sees has *eschatological import. In chapter 22 he sees the places where the spirits of the dead are kept inside a mountain. This passage is not preserved in Aramaic, and the text is corrupt. The spirits are divided into three compartments: the righteous, the wicked who were not punished on earth, and sinners who were killed. (There are indications that originally four compartments were envisioned.) Chapter 25 describes a fragrant tree that will be given to the righteous when God "comes down to visit the earth for good," and chapters 26—27 describe Gehenna. In chapter 32 Enoch sees the garden of Eden and the tree from which Adam ate. While the Book of the Watchers knows of the sin of Adam, it does not attribute to it any importance comparable to the sin of the Watchers.

1.3. *The Astronomical Book.* *1 Enoch* 72—82 may be even older than the Book of the Watchers. The oldest Aramaic fragments have been dated to the third century B.C. This book is primarily concerned with the movements of the stars. The astronomical observations are primi-

tive in relation to the contemporary Babylonian and Hellenistic astronomy. The heavens are peopled with angels. Uriel, the leader of the lights of heaven, is said to serve as Enoch's guide. One major purpose of this text is to show that "the year amounts to exactly three hundred and sixty-four days" (*1 Enoch* 72:32). It thus supports a *calendar that was different from the 354-day calendar that came to be accepted by *rabbinic Judaism and was probably already in place in the Second Temple period. The 364-day calendar is also defended by *Jubilees* and is presupposed in the sectarian Dead Sea Scrolls. The *Astronomical Book* concludes with some eschatological predictions. According to chapter 80, "in the days of the sinners the years will become shorter . . . and many heads of the stars in command will go astray." This will eventually lead to destruction. Chapter 81, which is probably an addition to the *Astronomical Book*, speaks of the death of the righteous and seems to imply some form of afterlife.

1.4. The Book of Dreams. *1 Enoch* 83—90 consists of two *apocalypses. The first, in chapters 83—84, is a simple vision of cosmic destruction. The second, known as the *Animal Apocalypse*, is a complex allegory in which people are represented by animals. Adam is a white bull. Cain and Abel are black and red bullocks; Israel are sheep. In the period after the exile, the sheep are given over to seventy shepherds, representing the angelic patrons of the nations. The reign of these shepherds is divided into four periods, which are allotted twelve, twenty-three, twenty-three and twelve shepherds respectively. At the end of the third period we are told that "small lambs were born from these white sheep, and they began to open their eyes" (*1 Enoch* 90:6). This is generally taken to refer to the Hasidim who supported Judas Maccabaeus. Judas is represented by a great horn that grew on one of the sheep. Eventually God comes down and sets up his throne for judgment. The Watchers and the seventy shepherds are destroyed, but so are the "blind sheep," or apostate Jews. Those that had been destroyed are brought back, presumably by resurrection, and all are transformed into "white bulls"—the condition of Adam and the early patriarchs. This apocalypse was evidently written at the time of the Maccabean revolt by people who supported the Maccabees (see *Jewish History: Greek Period*).

1.5. The Apocalypse of Weeks. *1 Enoch* 93:1-10;

91:11-17 also comes from the Maccabean era. The order of this text was disrupted in the Ethiopic manuscripts, but it is preserved in the Aramaic fragments from *Qumran. The apocalypse reports what Enoch saw in a heavenly vision and understood from the tablets of heaven. The content of revelation concerns the course of history, which is divided into "weeks," presumably weeks of years as in *Daniel* 9. Ten weeks are specified. These are punctuated by the emergence of righteous figures, for example, Noah in the second week, Abraham in the third. The seventh week is dominated by an apostate generation, but at its end "the chosen righteous from the eternal plant of righteousness" will be selected. The election of this group is the focal point of the text. In the eighth week, sinners are destroyed by the sword. In the ninth, the righteous judgment is revealed to the whole world, and "the world is written down for destruction." In the tenth week "the eternal judgment will be executed on the Watchers." Then the first heaven will pass away, and a new heaven will appear. After this "there will be many weeks without number forever in goodness and righteousness."

In view of the reference to the sword, it is reasonable to conclude that this apocalypse too supported the Maccabean revolt. The group that is here called the chosen righteous is presumably the same as the lambs whose eyes were opened in the *Animal Apocalypse*. These people probably represent the circles where the early Enoch books were written. Some scholars identify them with the Hasidim.

1.6. The Epistle of Enoch. *1 Enoch* 91—105 differs from the other early Enoch books insofar as it is not a report of revelation but an instruction and exhortation. Enoch asserts his authority by such formulae as "I say to you" or "I swear to you," and he undergirds his authority by claiming that "I have read the tablets of heaven and seen the writing of the holy ones" (*1 Enoch* 103:1-2). The bulk of the epistle is taken up with woes against sinners and exhortations for the righteous. The sinners are condemned mainly for social offenses. They "build their houses with sin" (*1 Enoch* 94:8) and "trample upon the humble through your power" (*1 Enoch* 96:5). The reward of the righteous, however, has ultimately an otherworldly character. They will "shine like the lights of heaven and be associates of the host of heaven" (*1 Enoch* 104:2-6).

They are also promised some more mundane gratification. The wicked will be given into their hands, and they will cut their throats (*I Enoch* 98:12). Some scholars have dated the epistle to the early first century B.C. (Charles, 171). More recent scholarship, however, favors the view that this text originated about the same time as the other early Enoch books, in the early second century B.C.

1.7. The Similitudes. *I Enoch* 37–71 constitute the only section of *I Enoch* that is not found in the Dead Sea Scrolls. The date of the composition is disputed. J. T. Milik suggested that it was a late-third-century A.D. Christian composition (Milik, 89–98), but there are no clear Christian features in this text. The most striking feature of the Similitudes is the repeated reference to a figure called “that Son of Man,” who is implicitly identified as the “one like a son of man” of Daniel 7. It is unlikely that a Jewish author would have given such prominence to this figure after the “Son of Man” had become widely identified with Jesus by the early Christians. The closest parallels in the NT are found in Matthew 19:28 and 25:31, which refer to a glorious throne. These Matthean passages may well depend on the Similitudes. The only explicit historical references are the mention of the Parthians and Medes in *I Enoch* 56:5–7, which point to a date after 40 B.C., and the mention of hot springs in *I Enoch* 67:5–13, which has been taken as an allusion to Herod’s search for a cure in the waters of Callirhoe (Josephus *Ant.* 17.6.5 §§171–73; *J.W.* 1.33.5 §§657–58). None of these references is conclusive for dating, but the most probable date is the early first century A.D., prior to 70. An earlier date would be difficult to justify in view of the absence of the Similitudes from Qumran.

The Similitudes consist of three “parables” (*I Enoch* 38–44, 45–57 and 58–69) and a double epilogue in *I Enoch* 70 and 71. The main theme is the coming judgment, “when the Righteous One appears before the chosen righteous whose works are weighed by the Lord of Spirits” (*I Enoch* 38:2). Then the rulers of the earth will be dumbfounded and humbled. The Righteous One is also called the Chosen One and “that Son of Man” who accompanies the “Head of Days” as in Daniel 7 (*I Enoch* 46:1–2). We are told that the Son of Man was named “even before the sun and the constellations were created” (*I Enoch* 48:3), and that “he was chosen and hid-

den before the world was created” (*I Enoch* 48:6). There is no suggestion that he has ever appeared on earth. The righteous are those who believe in him or those to whom his existence has been revealed. The kings and the mighty do not believe in him and will be astounded when they see him sitting on his throne of glory (*I Enoch* 62:5).

In the first epilogue (*I Enoch* 70:1) we are told that Enoch’s name was lifted up to the presence of that Son of Man and to the presence of the Lord of Spirits. In the second epilogue, however, Enoch is greeted by an angel who tells him “you are the Son of Man who was born to righteousness” (*I Enoch* 71:14). It is very unlikely that Enoch was supposed to be identified with the Son of Man throughout the Similitudes, as there is no reference to his earthly life, and he never recognizes himself. Also Enoch is clearly distinct from the Son of Man in *I Enoch* 70:1. It is possible that the angel’s greeting means only that Enoch is “a son of man who has righteousness” and so is akin to the heavenly righteous one. If he is meant to be identified with the heavenly Son of Man, then we must assume that this is a secondary addition to the Similitudes, possibly intended to preclude the Christian claim that the Son of Man was identical with Jesus.

2. *Second Enoch.*

The Book of the Secrets of Enoch, or *2 Enoch*, is preserved in two Slavonic recensions, one short and one long. The original language was probably Greek. Although Milik claimed that it was a late, Christian work (Milik, 107–16), the consensus is that it was Jewish, because of the importance attached to animal sacrifice. Egypt is the most likely place of composition, because of parallels to Philo and allusions to Egyptian mythology.

Second Enoch provides a far more lengthy account of Enoch’s ascent than was found in *I Enoch* (*2 Enoch* 3–37). Enoch ascends through seven heavens. This may be the earliest instance of the motif of seven heavens in a Jewish or Christian apocalypse. The observations in the first, fourth and sixth heavens are mainly cosmological (e.g., the governance of the stars and the movements of the sun). The second, third and fifth heavens contain the places of reward and punishment. Paradise is located in the third heaven. Enoch writes down all he has seen in 360 books, which he transmits to humanity. Chapters 38–66 of

2 Enoch contain Enoch's instructions to his children after his return to earth. These instructions are remarkably humanistic and are mainly concerned with feeding the hungry, clothing the naked, and so forth. "Whoever offends the face of a man offends the face of God" (*2 Enoch* 44:1; cf. 52:6; 60:1). This ethic is grounded in creation: God made humanity in his own likeness. Moreover, a link between humanity and animals was established at creation, and the souls of animals may accuse humanity at the judgment (*2 Enoch* 58). Unlike the apocalypses in *1 Enoch*, *2 Enoch* shows little interest in history, and its revelations may be regarded as wisdom teaching, although the wisdom rests on the authority of heavenly revelation. The story of the birth of Melchizedek is appended to the apocalypse of *2 Enoch* but does not appear to be intrinsically related to it, except insofar as both Enoch and Melchizedek are figures from the dawn of history (see Melchizedek, Traditions of).

3. *Third Enoch*, or *Sefer Hekhalot*.

The last Enochic writing to be considered here is a Hebrew composition from the fifth or sixth century A.D., which is part of the *Hekhalot* literature, or Jewish mystical tradition. This is not strictly a book of Enoch. It purports to be the account of an ascent to heaven by Rabbi Ishmael. His heavenly guide is a superangel called Metatron, who identifies himself as follows: "I am Enoch, the son of Jared. . . . The Holy One, blessed be he, appointed me in the height as a prince and ruler among the ministering angels" (*3 Enoch* 4). The objections of the angels are overruled by the Most High, who makes for Enoch a throne like the throne of glory, gives him a crown and calls him "the lesser YHWH" (*3 Enoch* 12). At first Metatron sat and judged the heavenly beings, but when 'aher (the heretic Elisha ben Abuya) entered paradise, he declared "There are indeed two powers in heaven." Then Metatron was made to stand on his feet and was given sixty lashes of fire (*3 Enoch* 16). Much of the work is taken up with discourses on the hierarchies of the angels and the mysteries of the cosmos. While this book is considerably later than *1 Enoch* and *2 Enoch*, it may in a sense be considered the culmination of the tradition about Enoch's ascent to heaven.

4. The Status of Enochic Writings.

Since multiple copies of several of the compo-

nent writings of *1 Enoch* were preserved at Qumran, it is quite possible that they were regarded as Scripture by the Dead Sea sect. It was not preserved by *rabbinic Judaism, but it enjoyed high status in some Christian circles. The epistle of Jude in the NT alludes to the story of the Watchers and seems to regard the story as authoritative (see DLNTD, Jude). This is also the case in the *Epistle of Barnabas* (see DLNTD, Barnabas, Epistle of). *First Enoch* was still cited as authoritative Scripture by Tertullian at the end of the second century A.D. Tertullian addresses the status of *1 Enoch* explicitly. He acknowledged that the authority of Enoch was not acknowledged by all and that some people doubted whether it could have been transmitted from before the flood. Tertullian countered that Enoch was grandfather of Noah and that Noah would have preserved the tradition. Moreover, the Spirit could have restored the book through inspiration (VanderKam 1996, 52). Eventually the Enochic writings were rejected by the Western church and were lost to a great extent. They were preserved, however, in Ethiopia, where they were regarded as sacred Scripture.

EPHESUS

As the capital of the province of Asia during Roman occupation, Ephesus enjoyed significant prosperity due to its strategic location, banking and commerce. Ancient Ephesus was situated at the mouth of the Cayster River near modern Selçuk on the western coast of Turkey. Its best known history dates from the seventh century B.C. but certainly predates that period, and in the NT era Ephesus was one of the largest and most important cities of the *Roman Empire. In Ephesus Paul ministered some three years (Acts 19:8-10; 20:31). His Corinthian correspondence was produced in Ephesus, and perhaps also several other letters (see discussion below).

1. Early Mythology and History
2. The Classical Period
3. The Ministry of Paul and His Companions
4. Pauline Correspondence Produced at Ephesus
5. The Ministry of John

1. Early Mythology and History.

There is a scarcity of reliable information from antiquity about the city, but both Strabo and Pausanias relate the story of the founding of the city by the legendary Amazons, a mythical race of female warriors, who removed ("pinched out" or "cauterized") the right breast so not to impede their javelin-throwing abilities (Strabo *Geog.* 11.5.1; Apollodorus 2.5.8). The Amazons derived their name from this practice (*maza*,

"breast"; *amaza*, "breastless"), and at Ephesus Hippolyte and her Amazons reportedly set up a statue of Artemis and established an annual circular dance with weapons and shields (Callimachus *Hymns* 3.110). The particular Amazon who captured Ephesus was named Smyrna (later Izmir).

The name *Ephesus* is somewhat obscure but may derive from *Apis*, which means "bee." Some early Ephesian coins had a bee on them; in the ancient mythology of that region this had significance because of the abundance of bees as well as their ability to produce honey and also offer a sting. Pausanias claims that the earliest temple to the Ephesian goddess was begun by Coresus, an aboriginal, and by Ephesus, "who is thought to have been a son of the river Caijster," from whom the city may have received its name (Pausanias *Descr.* 6.2.7). Pausanias himself, however, reported that Androclus of Codrus came to Anatolia by appointment from *Athens primarily because of an oracle from Apollo. In this vision he was told to settle where he found a fish and a boar. As his company landed at the harbor of Ephesus, a boar jumped out of a thicket, and Androclus chased after the boar and killed it. On the site of that killing, he supposedly founded the city of Ephesus. A picture of that story is depicted on a frieze from the temple of Hadrian, which is still visible.

Ephesus may also have acquired its name from the mother goddess known as Artemis Ephesia, whose followers believed her to be a fertile mythological woman from around 7000 B.C. and the mother of everything who also ruled everything. She was the most popular goddess in Anatolia, and her fame and influence spread to Mesopotamia, Egypt, Arabia, Greece, Rome and even Scandinavia. Pausanias claims that even before the Ionians came from Athens to the coastal areas of Anatolia, the "cult of Ephesian Artemis" was already established (Pausanias *Descr.* 6.2.6). Relics from a Mycenaean grave at Ephesus suggest that the city may have originated sometime between 1400 and 1300 B.C., but the details of that presence in the area are lacking. Similarly, Hittite cuneiform tablets found at Miletus just south of Ephesus contain the name of a village, *Apasas*, which some scholars consider an older form of the name *Ephesus*.

2. The Classical Period.

Little of the earliest history of Ephesus is known

for certain, but it appears that before the arrival of the Greeks in Ephesus, the residents there offered sacrifices to the mother goddess Cybele, who later was identified with the Greek goddess Artemis (see Religion, Greco-Roman). After the Ionian cities were established on the western coast of Anatolia (c. 750 B.C.), Lydian kings attacked these cities (primarily Ephesus, Miletus, Priene and Didyma) and ruled over them in the seventh and sixth centuries B.C. After Cyrus of Persia defeated Croesus, the last Lydian king, in the sixth century, Ephesus was ruled by the Persians until the time of *Alexander the Great (334 B.C.).

The famous Artemision, or temple of Artemis, commonly identified as one of the seven wonders of the world, was built in her honor in the seventh century B.C. The elaborate marble temple, the first of its kind, was later attacked by the Cimmerians and was demolished. It was rebuilt on a grander scale in the mid-sixth century and was under construction when Croesus captured the city. He aided in the rebuilding of the temple by adding a number of column capitals and reliefs to its construction along with golden statues of calves. One of the column capitals had his name on it. During this period the famous philosopher Heraclitus lived in the city. Hipponax, a sixth-century poet who was expelled from Ephesus in 540 B.C., claimed that a section of Ephesus was called Smyrna. Later, according to Strabo, Smyrneans left Ephesus and resettled near today's Izmir, which is the location of NT Smyrna (Rev 2:8-11; see Asia Minor).

Ephesus became a tributary of Athens in 466, but it fell again to the Persians at the beginning of the fourth century B.C. In 356 the Artemision was set on fire and partially destroyed by a madman seeking fame. Alexander the Great took the city without resistance in 334, and the temple had not yet been rebuilt. He offered to help the citizens of the community rebuild the temple, but they implored him not to do the rebuilding since it was inappropriate for a god to do that. Lysimachus, one of Alexander's successor generals (see Diadochi), built a 6-mile-long wall around the city of Ephesus, some of which can still be seen. The temple of Artemis was again rebuilt and was recognized as a place of asylum or refuge, though the limits and conditions of the refuge policy often changed without notice and frequently at the expense of those who wrongfully thought that they could find security

there. In 289 Lysimachus named the city after his wife, Arsinoe, but soon after his death the name was changed back to Ephesus.

Ephesus was under Greek rule until 133, when it was bequeathed to the Romans by Attalus III of Pergamum. At this time Ephesus replaced Pergamum as the capital of the province of Asia and was one of the most prominent cities of the *Roman Empire throughout the early Christian era. Under Roman rule the worship of Artemis continued uninterrupted, but the residents also erected an altar to honor Augustus (see Roman Emperors) in the sacred precinct of the temple. At the end of the first century, a temple was built to honor Domitian, but it was torn down after his death. Later in the second century a temple was built to honor Hadrian. Strabo described Ephesus's place among the league of twelve Ionian cities as "the royal seat of the Ionians" (Strabo *Geog.* 633). By the first century A.D. the city had grown to around 250,000 citizens and was perhaps the third largest city in the east behind *Alexandria and *Antioch on the Orontes (Syria), but its place of prominence was third behind *Rome and Alexandria.

3. The Ministry of Paul and His Companions.

There is considerable question about the origins of the Christian community in Ephesus. It appears from Acts 18:18-22 that Paul spoke briefly with the Jews at Ephesus on his first visit to that city, but it is not clear that he started a church at that time. Priscilla and Aquila were left in the city, and they, along with Apollos, may be the founders of the church at Ephesus (Acts 18:24-28) even though its most significant growth came later through Paul's ministry.

After a lengthy stay in *Corinth, Paul returned to Ephesus for three years of ministry (Acts 19:8-10; cf. 20:31). When his ministry in the synagogue began to have a more hostile reception, he met in the lecture hall of Tyrannus for an additional two years. As a result of the effectiveness of Paul's preaching at Ephesus, the sales of religious paraphernalia diminished and fear broke out that worship at the temple of Artemis would be scorned. The enraged residents of the city came to the *theater, which seated twenty-four thousand people, to demand that this be stopped and that those causing the problem be punished (Acts 19:23-41). It may well be that this was the occasion of an arrest and imprisonment of Paul in Ephesus. Paul himself

states that his ministry at Ephesus was mixed with danger that included being forced to "fight with wild animals" (or fierce opponents) and "many adversaries" (1 Cor 15:32; 16:9). A careful sifting of his letters and other early traditions about his stay in Ephesus strongly suggests that Paul was imprisoned at Ephesus (1 Cor 16:8-9; 2 Cor 1:8; Rom 16:3-4).

On his return to Jerusalem, Paul was apparently fearful of stopping at Ephesus and chose to meet with the elders of the city while his ship docked at Miletus (Acts 20:14-15). This also fits with the tradition of Paul's imprisonment on the western end of the wall built by Croesus and the numerous Christian pilgrimages to that place in later church history. This story of Paul's lengthy ministry in Ephesus culminates the story of his missionary career in Acts.

The size of the church at Ephesus in the first century is not known, but it is likely that Ephesus was the center for Christian missionary activity in Asia that led to the founding of the churches at Laodicea, *Colossae, Hierapolis and elsewhere (Col 4:13) and perhaps also at Smyrna, Pergamum, Thyatira, Philadelphia, Sardis and elsewhere (Rev 2-3). In most of these cities there were significant numbers of Jews and *synagogues where, according to Paul's practice (Rom 1:16-17; Acts 13:5, 14-16; 14:1; 16:13; 17:1-2, 10-11; 18:4-7, 19-21; 19:8), he frequently launched his ministry. *Josephus tells of the presence of a large Jewish community at Ephesus that petitioned and was granted considerable freedom in the observance of the "sabbath and other of religious practices, as well as their freedom from military service (Josephus *Ant.* 14.10.25 §§262-64). He also observes that similar grants from Rome were given to the Jews at Delos, Laodicea, Pergamum, Halicarnassus and Sardis (Josephus *Ant.* 14.10.11-24 §§228-61).

4. Pauline Correspondence Produced at Ephesus.

Of the several letters written by Paul, the Corinthian correspondence (1 Cor 16:8) was written here shortly after his arrival in Ephesus, probably in the fall of A.D. 52. The letter to the church at Colossae and also the personal letter to Philemon were perhaps written at Ephesus. The fact that Paul sent greetings to the Corinthians from the "churches of Asia" (1 Cor 16:19) further indicates that Ephesus was the location of his writing of this correspondence. It is possible

that the letter to the Philippians was written from here, and, if his letter to the Galatians was intended for a north Galatian destination, then it is likely that this letter was written here as well.

Many scholars today do not believe that Romans 16 was an original part of the letter to the Romans, but rather it was added later when the letters of Paul began to be circulated in the churches. H. Koester (122-24) argues that Romans 16 was written by Paul to the church at Ephesus, indicating that the list of twenty-six names is more logically located in Ephesus than any other community with which Paul was associated. This list of names is mentioned in the fourth century by Eusebius (Eusebius *Hist. Eccl.* 3.3.6). If this list of greetings was originally sent to the Ephesian church, it would appear that the composition of the church was largely Gentile. Only six in the list of twenty-six names are clearly Jewish (Maria, Prisca, Aquila, Junia, Andronika and Herodion).

It is likely, whether or not Paul wrote the NT letter, that Ephesians was not sent to the church at Ephesus. The opening designation "in Ephesus" (Eph 1:1) is lacking in the most important ancient manuscripts of this letter (P⁴⁶, K and B), and there is little in the letter that shows any familiarity with the readers such as one would expect from one who had ministered three years in that church. There is no typical list of greetings at the end such as one would expect from Paul's normal practice. The correspondence to Timothy, whether by Paul or another, presumes that the letters were sent to Ephesus (1 Tim 1:3). Second Timothy presumes that Onesiphorus from Ephesus was also in Rome and was not ashamed of Paul but ministered to him in Rome and in Ephesus (2 Tim 1:16-18). Alexander the coppersmith, about whom Timothy is warned (2 Tim 4:14-15), may be the Alexander of Acts 19:33, but that is not certain. Timothy's connection with the Ephesian church as its first appointed bishop is mentioned by Eusebius (Eusebius *Hist. Eccl.* 3.4.5). Onesimus, who fled his master (Philemon) in Colossae and was allowed to return to Paul in Ephesus (Col 4:9), may eventually have become the bishop in Ephesus at the beginning of the second century (see Ign. *Eph.* 1.3; 6.2), but again, that is not certain.

At the end of the first century, the author of the book of Revelation wrote letters to seven churches of Asia. The first was addressed to the

Ephesians, who were praised for their vigilance for the truth (Rev 2:2-3, 6), though it was at the expense of their love. Their diligence for the truth is also praised later by Ignatius, but so is their love (Ign. *Eph.* 9.1; cf. Acts 20:29-30; 1 Tim 1:3, 18-20; 4:1-4; cf. 1 Cor 15:32; 16:9b; see also Clement of Alexandria *Quis Div.* 42; Irenaeus *Haer.* 3.3.4). Both Acts 19 and the apocryphal *Acts of John* tell of the continuous conflict between the Christians at Ephesus and those who followed the religion of Artemis.

5. The Ministry of John.

There is a strong church tradition but little clear evidence that connects John the apostle with Ephesus in the latter part of the first century. Ignatius of Antioch, for instance, refers to Paul's ministry at Ephesus in his letter but says nothing of John the apostle. Eusebius identifies John the apostle as the author of the Fourth Gospel and 1 John (Eusebius *Hist. Eccl.* 3.24) and tells of John's banishment to the island of Patmos (see also Rev 1:7) during the reign of Domitian, but he may have the prophet or elder John confused with the apostle.

Justin Martyr stayed in Ephesus near the middle of the second century and frequently refers to the Gospels of Matthew and Luke, but he never mentions John or his Gospel (see Justin *Dial. Tryph.* 81.4). The same could be said of Polycarp and Papias. Eusebius's references to two Johns are confusing, and it is not clear which he has in mind, but he may well confuse the two (Eusebius *Hist. Eccl.* 2.22.5; 3.1.1; 3.23.4-5; 3.24-25). After Domitian's death, Eusebius claims, John was released from prison and took up residence in Ephesus. He cites both Clement of Alexandria and Irenaeus as sources for this information (Eusebius *Hist. Eccl.* 3.20.9-3.23.19). In the second century (the date is uncertain) a small church was built over the site of the grave where it is believed that John the apostle was buried. In the sixth century a major reconstructed basilica was built by the emperor Justinian on the same spot, and the supposed burial place was located under the apse of the church.

EPICLETUS

The Stoic philosopher Epictetus lived through the reign of Nero and the Flavian Emperors, and on into the second century. He is thus a near-contemporary of the NT writers and one of the earliest non-Christian witnesses to the spread of Christianity into Europe. His acerbic comments on what he saw as the follies of most ordinary life, and the calling of the philosopher to help people reform their lives, provide a crucial window into the moral environment of the NT.

1. Life
2. Sources of Information
3. Teachings
4. Knowledge of Christianity
5. Parallels and Contrasts with Early Christian Ideas
6. Later Influence

1. Life.

Epictetus lived in the period A.D. 50-120. Born a slave in Hierapolis (10 km. north of Laodicea) in Phrygia, and like his older contemporary *Seneca in poor health throughout his life, he was

also lame (*Disc.* 1.8.14; 1.16.20), possibly due to his master's mistreatment in his youth (Origen *Cont. Cels.* 7.53, though cf. *Suda* *sv.* Epictetus). His primary philosophical training, while he was still a slave of Epaphroditus, Nero's freedman and official (*Disc.* 1.1.20; 1.9.28) was under *Musonius Rufus, an unconventional Roman Stoic who flourished under Nero and the early Flavians, and whom Epictetus often quotes. We do not know how or when he gained his freedom.

Epictetus taught philosophy in *Rome until philosophers were banished by Domitian in 89 or 92/93 (Aulus Gellius *Noc. Att.* 15.11.5), and eventually he settled in Nicopolis, in Epirus, which seems to have remained his base for the rest of his life. There he taught his students, mostly wealthy young men seeking public careers (though one slave is mentioned by one of his students, writing later). Occasionally he was visited by curious travelers. One such was the Corinthian student of rhetoric to whom he delivers a dressing down in *Discourses* 3.1.1-45. Late in life he is said to have married, in order to bring up an abandoned child.

2. Sources of Information.

We have detailed reports of Epictetus's views only because one of his students, later the noted historian Arrian of Nicomedia, recorded (somewhere before A.D. 113) at least five and possibly eight detailed books of his teachings (frag. 9, Aulus Gellius *Noc. Att.* 19.1.14). Four of these survive, along with a brief outline (the *Enchiridion*, or *Handbook*). They seem to reflect the lecture-room teaching of Epictetus, though the degree of stylistic interference from Arrian is unclear. Epictetus used a vigorous *diatribe, studded with interjections and objections from students and from imagined opponents, and false conclusions stated only to be refuted. Its style is strongly reminiscent of that of Paul, particularly in Romans.

3. Teachings.

3.1. Ethical Focus. We learn little from Epictetus of the study of cosmology or formal logic among the *Stoics, except that he valued and taught those subjects to his students (*Disc.* 1.7.1-33). What he cared about, and what Arrian particularly wanted to record, was his concern for practical ethics. Cosmology and logic, he regularly reminds his students, are worthless when

they are studied for their own sakes. What matters is that people apply logic and cosmological premises to the improvement of their own moral will and life (*Disc.* 1.4.1-17; 1.17.13-29; 2.9.13-22; 3.2.1-18).

For one who held up calm (*apatheia*) and serenity (*euroia*) as the best state for humanity, Epictetus gives the impression of being extraordinarily vigorous and mentally robust rather than serene. He held, with the rest of Stoicism, that the only good that humans had within their grasp was the control of their own moral choices. All else—wealth, public office, good health or reputation—was outside human control, and hence morally indifferent. To desire such things was irrational and the cause of all human misery. Freedom and happiness were to be found only in the studied judgment of all impulses to desire or avoid things, and the rejection of those desires, the outcome of which were beyond our control.

3.2. Moral Optimism. Epictetus believed in the rationality of human moral judgment. Wicked people make moral errors, or are deceived, but they do not sin deliberately. They ought to be pitied as blind rather than despised or hated as immoral. He subscribed to the Socratic dictum that no one is deceived willingly. Good and evil lie fully within the realm of human choice (and are the only things that do). Nothing is to be feared except mistakes about the nature of good and evil, because to value irrationally is to make oneself a slave (*doulos*, *Disc.* 1.25.23). However, some people are naturally better suited to philosophy, and hence to a virtuous life, than are others. The truly rational man, according to Epictetus, cannot be enslaved by his desires or by anything else: Zeus has set him free. "Or do you really think he was likely to let his own son be made a slave?" (*Disc.* 1.19.9; cf. 4.7.17). On true freedom and slavery see the striking formulation in *Discourses* 4.1.175: "Freedom is not acquired by satisfying yourself with what you desire but by destroying your desire." Unlike many earlier Stoics, Epictetus believed in moral progress, particularly by way of the studied development of good habits.

3.3. Religious Views. Stoics generally were critical of many forms of popular religion but not of religion as such. They firmly believed in divine providence and benevolence and tended toward an inclusive monotheism that was equally happy talking about "God" or "the gods." Epictetus not

only emphasized divine providence and benevolence but also expressed a profound personal piety. Humans are not just creations of but children of Zeus; their rationality makes them so (*Disc.* 1.3.1-3).

4. Knowledge of Christianity.

Nothing in Epictetus can be shown to demonstrate direct knowledge of the NT. One passage in the *Discourses*, however, demonstrates an awareness of the existence of the early Christian movement. In *Discourses* 4.7.6, arguing that both insanity and habit can produce moral firmness and lack of fear, "as with the Galileans," he goes on to argue that rational demonstrations of the nature of things ought to be able to produce such effects. There is little doubt that the "Galileans" in question are members of a church in Nicopolis, mentioned in passing in Titus 3:12.

A second passage has often been understood to refer to Christians, but the inference is far less likely. In *Discourses* 2.9.19-21 Epictetus describes certain people as "play-acting the Jew, though they are Greek." This could be a misunderstanding of Gentile conversion to Christianity, but it could equally refer to Godfearers or to nonobservant Diaspora Jews. The reference in the same context to "counterfeit baptists" (*parabaptistai*, a term not found in Greek before Epictetus) who have pretensions to the reputation of philosophy may or may not suggest that Christians are meant. The translation *baptists* may be a red herring. *Parabaptistai* may be a dyeing analogy, meaning people whose "colors are false" or "false dyers." But since the term is an emendation in the text, it is best not to put too great a weight on it.

5. Parallels and Contrasts with Early Christian Ideas.

Epictetus's thought exhibits both striking parallels with and contrasts to early Christian language and ideas. Since it is most unlikely that Epictetus has read any of the NT, these parallels and contrasts must reflect the differing uses the various authors make of their common linguistic and cultural background.

5.1. Gospels. *Handbook* 33.5 advises us to avoid oaths as far as possible (though Epictetus gives no reason; cf. Mt 5:33-34). In *Discourses* 3.14.4-6 Epictetus warns the budding philosopher not to do his *asketikos*, his training in self-discipline, so as to be noticed by people (cf. Mt

6:1-4). Likewise in *Discourses* 4.10.25 (cf. *Handbook* 13): "You cannot be continually giving attention to both externals and your own governing principle" suggests Jesus' statement, "No man can serve two masters."

5.2. Letters. In *Discourses* 1.28.25 Epictetus uses the metaphors of the besieging and destruction of cities in warfare to describe what happens to people who accept faulty judgments. Similarly in 2 Corinthians 10:4-5 Paul describes arguments that "demolish [other] arguments and every pretension that sets itself up against the knowledge of God" as being weapons that destroy fortresses in spiritual warfare.

In *Discourses* 2.10.4-5 citizen duties are briefly discussed using the common "parts of the body" metaphor, but with the emphasis on order, subordination and unity more than on unity in diversity, as it is in 1 Corinthians 12:12-26.

In *Discourses* 2.23-29, the various faculties of the human being are described as *charitas theou*, gifts of God's grace, but preeminently so the "ruling faculty" of rational judgment.

On marriage and celibacy as callings see *Discourses* 1.11 and 3.22.67-82. Epictetus here articulates common Greco-Roman attitudes in a manner reminiscent of Paul in 1 Corinthians 7:28-40.

In *Discourses* 3.9.14, like Paul in 2 Corinthians 11:6, Epictetus sees himself as vulnerable to the charge of being an inelegant speaker, but he asserts the superior importance of substance over style. His critique of the carefully groomed young student orator from *Corinth (*Disc.* 3.1.1-45) tells us precisely the sorts of graces Paul was criticized for lacking by the Corinthians (2 Cor 10:10).

Because of his firm belief in divine providence, Epictetus expresses a positive attitude to death and suffering combined with an awareness of the necessity of living to serve God (*Disc.* 1.9.10-17; 2.1.38; cf. Phil 1:20-26). Note his detailed discussion of the life of sufferings of the "missionary Cynic" in *Discourses* 3.22: the *Cynic's life involves being flogged like an ass but loving as a father or brother those who flog him (cf. *Disc.* 3.22.54, 82); Diogenes, the archetypal Cynic, took pride in his many sufferings (or, more precisely, in his attitude to them, *Disc.* 3.22.58-59). All this is tied to the Cynic's role as herald (*keryx*) of the gods (*Disc.* 3.22.69), exercising oversight (*episkopountes*) over humanity (*Disc.* 3.22.77) as worship to Zeus, whom he serves

(*Disc.* 3.22.82). God is to be praised in all circumstances (*Disc.* 1.16.16-21; 4.7.9).

It should be noted here that Epictetus, a Stoic, seems to conceive of the Cynic not as a follower of a separate school but as a true Stoic, a "front-line Stoic." The Cynic must embody what he teaches in a particularly dramatic fashion.

5.3. General Teachings. More broadly, for Epictetus the rational person is a child of God; God is creator, Father and guardian, and human beings are naturally akin (*syngeneis*) to God (*Disc.* 1.9.25). In *Discourses* 2.16.44 being a friend of God and a child of God are linked; friendship with God is also said to be true freedom (*Disc.* 2.17.29).

For Epictetus the role of the philosopher is delineated with several striking metaphors. The philosopher ought to function as a scout (*kataskopos*) for the rest of humanity, sent by God to spy out the "moral territory" (*Disc.* 1.24.3). The philosopher acts as a witness (*martyr*) for God (*Disc.* 1.29.46-49; cf. 3.24.112). The Cynic is sent (*apesteltai*) to humanity by Zeus as both messenger (*angelos*) and scout (*kataskopos*, *Disc.* 3.22.23). Zeus exhibits him (*deiknysi*) to humanity in his poverty, powerlessness and illness, in exile or prison. The parallel with Paul's concept of his apostolic embodiment of the gospel, in its most radical and alienating form (1 Cor 4:9-13), is remarkable.

Epictetus presents four crucial metaphors for humanity's proper role in the world. God is putting on spectacular festival games (see *Circuses and Games*); it is our task to be good spectators and applaud (*Disc.* 4.1.105-6). (For a more standard *athletic metaphor comparable to Paul's in 1 Cor 9:24-27, see *Disc.* 4.4.30-32). God has provided a feast: enjoy what is set before you and do not grumble (*Ench.* 15). Play the game of social life you are part of, but without coveting the implements, as children will play games with potsherds without coveting the sherds themselves (*Disc.* 4.7.5, 20, 30). Merely play your role. Play, like the children, until you can no longer enjoy the game; then leave it (*Disc.* 1.24.20; 1.25.7-8). Play the role you are given like a good actor (*hypocritēs*, *Handbook* 17, cf. *Disc.* 1.29.44-46).

6. Later Influence.

Epictetus is first mentioned in early Christian literature by Origen *Contra Celsum* 6.2. Thereafter his popularity as a moral writer grows slowly but

steadily and remains high into the nineteenth century.

EPICUREANISM

Epicureanism refers to the system of moral and natural *philosophy that was founded by Epicurus in the late fourth century B.C. Epicurus promoted pleasure and friendship as ideal values and encouraged withdrawal from civic activities. His philosophy spawned close-knit communities of followers, most famously the Garden in *Athens, and met with both popularity and controversy throughout the *Hellenistic era.

1. Beginnings
2. Other Figures
3. Leading Ideas
4. Epicureanism and the New Testament
5. Evaluation and Comparison

1. Beginnings.

Epicurus was born to Athenian parents on the island of Samos in 341 B.C. He began the study of philosophy as a teenager and came under the influence of Nausiphanes, a follower of the atomism and naturalism of Democritus, the likely source of Epicurus's theory of physics. After establishing schools during brief sojourns in the Aegean cities of Mitylene and Lampsacus, Epicurus moved to Athens in about 306 and bought a house, including a garden that became the headquarters and eponym of his school. Unlike the more famous Academy of Plato and the Lyceum of Aristotle, the Garden of Epicurus admitted women and slaves. Followers of Epicurus lived on simple fare, shunning political involvement and enjoying one another's friendship.

Epicurus was a prolific writer; according to one report he composed about three hundred works (Diogenes Laertius *Vit.* 10.26). Only a few of these writings are extant, chiefly three letters and two collections of sayings: the *Letter to Herodotus*, dealing with Epicurus's physics; the *Letter to Pythocles*, on meteorology; the *Letter to Menoeceus*, a summary of Epicurean ethics; the *Kyriai Doxai* or Authoritative Maxims, forty ethical reflections; and the *Vatican Sayings*, a collection of eighty-one similar maxims found in a Vatican manuscript discovered in the late nineteenth century. The first four sources are preserved in the *Lives of Eminent Philosophers* by Diogenes Laertius. In addition to these writings, there are the remains of the library of Philodemus, a first-century B.C. Epicurean, fragments of whose works survived the eruption of Mt. Vesuvius in Herculaneum, entombed but significantly charred by ash and lava.

2. Other Figures.

Unlike most other schools of Hellenistic philosophy, the Garden of Epicurus generated more loyal followers than it did creative and independently minded successors. The essential points of Epicurus's philosophy were dogmatic and remained unchanged in the succeeding centuries. His estate was turned over to trustees; the direction of the school was left to Hermarchus of Mitylene, who was followed by Polystratus. The school's founder was commemorated monthly, and his birthday was celebrated each year. Prominent Epicureans of the second and first centuries B.C. included Demetrius of Lacon, Apollodorus, Phaedrus and Zeno of Sidon. The

popularity of the school in the late Roman republic is seen in Cicero's favorable remarks and especially in the work of Lucretius (c. 95-55), whose *De Rerum Natura*, "On the Nature of Things," is a poetic exposition of Epicurus's atomism and, to a lesser extent, his ethics. Our present-day knowledge of Epicureanism owes much to Lucretius.

3. Leading Ideas.

Atomism, pleasure, friendship and retirement from public life were among the central ideas of Epicureanism. The basis of Epicurus's physics was atomism, a doctrine for which he was probably indebted to Democritus. Epicurus taught that all matter was composed of indivisible particles called atoms. Atoms existed in space, or the void, and were in constant motion, "falling" as Epicurus put it. But for objects to be formed, atoms had to collide and coalesce; therefore, their motion could not be entirely uniform. Thus, Epicurus introduced the swerve, a random movement of the atoms that permitted the formation of all things and ultimately made possible human free will.

Epicurus was, in the truest sense, a materialist. Matter was eternal, uncreated and without a divinely imputed purpose. Anything that had existence was material; this necessarily included the soul and even the gods. The soul was composed of finer atoms than the body but was still material. The gods likewise had material existence. They had immortal bodies, dwelt apart from the world in supreme happiness and did not interfere in human affairs. This understanding of the soul and the gods was closely related to a second Epicurean idea: pleasure.

Epicurus identified pleasure as the supreme value in life, the goal of philosophy. This was not, however, the kind of immoderate self-indulgence that is commonly associated with the modern term *Epicurean*. Pleasure was understood as the absence of disturbances. Epicurus taught that "whenever we say that pleasure is the goal, we do not mean the pleasures of dissolute persons or the pleasures that are found in sensuality, . . . but rather the absence of pain in the body and of trouble in the soul" (Diogenes Laertius *Vit.* 10.131). External testimony corroborates this; Diocles, a first-century B.C. philosopher, speaks of the Epicureans as "living a very simple and frugal life; at all events they were content with half a pint of thin wine and were, for the

rest, thoroughgoing water-drinkers" (Diogenes Laertius *Vit.* 10.11) Thus Epicurus's hedonism was quite temperate. The pleasurable life, Epicurus insisted, must also be a wise and just life (Diogenes Laertius *Vit.* 10.140).

An important concept in Epicureanism was *ataraxia*, or imperturbability, the capacity to live life free of vexation and fear. Epicurus was especially concerned to eradicate the fears that popular religion inflicted on human beings: the fear of death, the gods and punishment in the afterlife. Since the gods were unconcerned with human beings in this life and there was no afterlife (inasmuch as the soul was material and disintegrated at the point of death), there was no need to fear one's demise or the prospect of judgment. Epicurus reasoned that "death is nothing to us since, while we exist, death is not present, and when death arrives, we do not exist" (Diogenes Laertius *Vit.* 10.125).

Two final ideas are closely related: friendship and retirement from public life. In contrast to the schools of Plato and Aristotle, Epicurus discouraged involvement in politics. Civic entanglements were likely to lead to stress; it was better to spend one's life quietly and in relative privacy, living simply and enjoying the company and conversation of friends. In antiquity even the enemies of Epicureanism had to concede that the fellowship and mutual devotion of members of the Garden were attractive.

4. Epicureanism and the New Testament.

Epicureans are mentioned together with *Stoic philosophers in Acts 17:18 in connection with Paul's preaching of the gospel in Athens. The crowd's response to Paul, particularly to his mention of the resurrection of the dead, was mixed: some scoffed, but others requested a further audience with him (Acts 17:32). Although the connection is not explicitly made, it is plausible that the Epicurean philosophers were the scoffers and the Stoics were those intrigued enough to suggest a continued conversation (Croy). Epicurean physics and their emphasis on pleasure would have ruled out any notion of resurrection and final judgment, whereas Stoics entertained theories of the soul's at least limited survival of death.

Although Epicureans are not mentioned elsewhere in the NT, it has been suggested that they or some like-minded group are the targets of the polemic in 2 Peter (Neyrey 1980). The au-

thor of this epistle combats skepticism about the return of Christ and the judgment that will accompany it. Although doubts about prophecy and the afterlife were by no means limited to Epicureans, the opponents of 2 Peter may have belonged to, or at least been influenced by, this school of thought.

5. Evaluation and Comparison.

Epicureans were falsely criticized in antiquity on two accounts: hedonism and atheism. It was noted that Epicurus's advocacy of pleasure was a call not to self-indulgence but to the moderate enjoyment of life's goods and the avoidance of pain. Moreover, Epicurus distinguished between immediate pleasures, which would sometimes be rejected, and long-term or ultimate pleasures that were to be pursued. The atheism of Epicurus was also a false charge. He clearly affirmed the existence of the gods, their immortality and their blessedness (Diogenes Laertius *Vit.* 10.123-24). He did not, however, affirm providence in the sense of divine care and provision for human beings and, in particular, any judicial or punitive role for the gods. Prayer was therefore meaningless, although the contemplation of the gods might serve the purpose of inspiring human beings to a similar happiness. In some of these respects, the Epicureans were remarkably like the Jewish sect of the Sadducees. Of the latter *Josephus wrote, "The Sadducees . . . do away with Fate altogether, and remove God beyond, not merely the commission, but the very sight, of evil. . . . As for the persistence of the soul after death, penalties in the underworld, and rewards, they will have none of them" (Josephus *J.W.* 2.8.14 §§164-65).

Epicureanism clearly differed from early Christianity and non-Sadducean Judaism on a number of points. Resurrection of the body had no place in Epicurean philosophy; neither did divine providence or judgment. Monotheism was never explicitly affirmed, and the Christian notion of divine incarnation would have violated Epicurus's belief in the gods' perfect blessedness. However, the intimate fellowship of Epicureans in the Garden and elsewhere, inclusive of *women and slaves, compares favorably with early Christian groups, which, according to Paul, also relativized distinctions of socioeconomic class and gender (Gal 3:28; 1 Cor 12:13). Finally, one can occasionally see in some of Paul's letters certain Epicurean-like emphases:

the call to a quiet, unobtrusive and responsible life in close community (1 Thess 4:9-12) and the need for personal freedom to be tempered by love and service to others (Gal 5:13).

EPISTOLARY THEORY

An analysis of epistolary theory in Greco-Roman antiquity is confronted with three sobering realities. First, our knowledge of ancient epistolary theory is limited due to the paucity of

available sources as well as the uncertainties surrounding their authorship and date. Second, the few epistolary handbooks and other relevant writings that have survived fail to provide a unified picture of how people viewed a letter in the Greco-Roman world. Third, what little can be learned about ancient epistolary theory does not comport well with the practice of letter writing (see Letters, Greco-Roman). Despite these realities, it is important to see what ideals about letter writing can be discerned from the epistolary handbooks, *rhetorical theory and the *educational curriculum.

1. Letter Writing in the Epistolary Handbooks
2. Letter Writing in Rhetorical Theory
3. Letter Writing in the Educational Curriculum
4. Summary

I. Letter Writing in the Epistolary Handbooks.

Although it is clear that more epistolary handbooks were in existence in the ancient world, only two such manuals have survived: Pseudo-Demetrius's *Epistolary Types* and Pseudo-Libanius's *Epistolary Styles*.

1.1. Pseudo-Demetrius. The first handbook, *Epistolary Types*, is falsely attributed to Demetrius of Phalerum (commonly referred to as Pseudo-Demetrius). Proposed dates for this work range from 200 B.C. to A.D. 300, and recent investigation has failed to provide any narrower limits for its origin. It is possible that the handbook has undergone a number of revisions before it assumed its present form.

The document is ostensibly addressed to a certain Heraclides whom the author wishes to advise about the various epistolary types (*typoi*) and the proper style of writing. Pseudo-Demetrius stresses that the type of letter chosen must fit the circumstance to which it is addressed and be written as skillfully as possible. He then distinguishes between twenty-one kinds (*genē*) of letters, each named after its primary function: friendly, commendatory, blaming, reproachful, consoling, censorious, admonishing, threatening, vituperative, praising, advisory, supplicatory, inquiring, responding, allegorical, accounting, accusing, apologetic, congratulatory, ironic and thankful. For each of these twenty-one *genē* of letters, Pseudo-Demetrius provides some introductory comments that are followed by a sample letter.

1.2. Pseudo-Libanius. The second surviving

handbook, *Epistolary Styles*, exists in two differing manuscript traditions, one attributing the document to Libanius, the other to Proclus. Although the two versions differ greatly in title, contents and arrangement of material, they both likely originate from a common archetype that was produced by neither named author. Yet because the version attributed to Libanius has greater external support, the handbook is more often associated with his name than with Proclus. No fixed date exists for the work, with proposals ranging from A.D. 300 to 600. Although there are some superficial similarities between the handbooks of Pseudo-Libanius and Pseudo-Demetrius, the differences are so great that there is likely no interdependence between these two documents.

The prologue (1—4) to this epistolary handbook encourages letters to be written with the greatest precision and care. Yet it also recognizes that a letter is a kind of written conversation in which one should speak not too formally but as if in the presence of the absent person. The first major section (5—45) introduces some forty-one kinds (*prosēgoriai*) of letters: paraenetic, blaming, requesting, commending, ironic, thankful, friendly, praying, threatening, denying, commanding, repenting, reproaching, sympathetic, conciliatory, congratulatory, contemptuous, counteraccusing, replying, provoking, consoling, insulting, reporting, angry, diplomatic, praising, didactic, reproving, maligning, censorious, inquiring, encouraging, consulting, declaratory, mocking, submissive, enigmatic, suggestive, grieving, erotic and mixed. The second major section (46—50) contains instructions on various writing styles (*charaktēres*) that can be used, arguing for clarity, unpretentious speech and a length appropriate to the subject matter. The final section (51—92) presents sample letters of each of the forty-one kinds.

1.3. Observations. The focus of concern in the two extant handbooks lies in the body section of letters, as nothing is said about the opening and closing sections (the only exception is Pseudo-Libanius's brief comment that epistolary prescripts should be very plain: "So-and-so to So-and-so, greeting" [51]). Although each manual differs in the number and names of the distinct letter types that are identified, they share the conviction that the type chosen must match the specific situation of the letter. In other words, the letter type must be appropriate to the nature

of the relationship that exists between the sender and the recipient as well as to the particular occasion for writing.

The criteria that Pseudo-Demetrius and Pseudo-Libanius use for classifying letters is different from modern typologies for ancient letters. The epistolary theorists were seemingly not concerned with the structural form of a letter or with formulaic expressions but instead categorized letters according to their purpose or historical occasion. Modern epistolographers have preferred instead to classify ancient letters into various forms or genres (*Gattungen*).

The most striking observation about the epistolary handbooks, however, is how few of their sample letters are found in the correspondence of that day. With the exception of the letter of introduction or commendation, the proposed letter types are only sparsely represented among the thousands of ancient letters that have thus far been recovered. The evidence indicates, therefore, that the epistolary theorists were not successful in influencing the practice of letter writing.

2. Letter Writing in Rhetorical Theory.

A second source for ideas about letter writing in the Greco-Roman world is rhetorical theory. Nevertheless, the subject of letter writing is connected with ancient *rhetoric in only a tangential way. The discussion of epistolary theory is absent from the earliest extant rhetorical handbooks and is found merely as an excursus or appendix in later writings on rhetoric.

The most important and extensive treatment of letter writing by a rhetorician is found in the treatise *De Elocutione* ("On Style"), erroneously attributed to Demetrius of Phalerum (the same person who is also wrongly associated with the epistolary handbook). No agreement for the exact date of this document exists, but most proposals range from the second century B.C. to the first century A.D. Demetrius's remarks about letter writing come in an excursus (223-35) on the plain style, the third of the four styles of speaking.

After citing the opinion of Artemon, the editor of Aristotle's correspondence, that the letter ought to be written in the same manner as a conversation, Demetrius argues instead that the style of the letter should be a little more studied than a dialogue, since it is committed to writing and sent to the recipient as a kind of literary gift.

Yet the letter must not be too stilted or long, or else it will only be a treatise with letter headings. Demetrius further advises that the letter must reflect the writer's character such that he "reveals his own soul." In addition to a proper epistolary style, there also are appropriate epistolary topics. Subjects such as natural history or logical subtleties do not belong in letters, while the use of proverbs and old sayings are acceptable as long as they serve merely to augment the expression of one's affections and friendship.

Other rhetoricians also broach the topic of letter writing but in a much more cursory fashion. And while a survey of this material reveals that they repeat a number of the points found in Demetrius, it also exposes the strikingly brief attention given to letter writing. Demetrius discusses this subject in an excursus, Cicero makes no room for a systematic treatment of it in his works on rhetoric, Quintilian and Theon contain only sporadic references to it, Philostratus of Lemnos (*On Letters*) and Gregory of Nazianzus (*Epistle 51*) address it in brief fashion, and Julius Victor relegates it to an appendix (*Art of Rhetoric 27*). The lack of attention given to letter writing is especially surprising in light of the fact that many who were trained in rhetoric functioned as secretaries in chanceries.

Letter writing and rhetoric, therefore, should not be too quickly linked. Not only do the rhetorical handbooks contain few references to letters, but also the epistolary handbooks similarly fail to relate letter writing to the five traditional aspects of rhetorical practice (invention, arrangement, style, memory and delivery) or to the three traditional species of rhetoric (judicial, deliberative and epideictic). This fact serves as an important caution against the all-too-popular practice of using Greco-Roman rhetoric as a hermeneutical key to interpret NT letters, especially the letters of Paul.

3. Letter Writing in the Educational Curriculum.

A third source for understanding more about ancient epistolary theory is the educational curriculum, since this subject was likely taught in the second stage of education (see Education). After completing an elementary training in the grammar and form of letters, it seems that students (now about twelve to fifteen years old) went on to receive instruction in epistolary theory and the subtleties of letter writing.

The epistolary manuals that would have been used to teach letter writing and that would provide clear evidence that this subject was taught in the educational curriculum have not survived (the handbooks of Pseudo-Demetrius and Pseudo-Libanius were probably used in the training of professional letter writers rather than in the regular educational curriculum). Nevertheless, the fact that the overall form of a letter and its constituent epistolary formulas remain so consistent over several centuries is most likely due to the training in letter writing that took place in school. In addition, the grammatical handbooks used in this era (e.g., Dionysius of Alexander [first century A.D.], Apollonius Dyscolus [second century A.D.]) presuppose a basic knowledge of letters—a knowledge that the students had previously been taught in school. There is also the evidence of the bilingual Bologna Papyrus, PBon 5 (third to fourth century A.D.), which appears to be the exercises of a student who was working with a manual on epistolary theory. This manuscript contains eleven examples in Latin and Greek of various types of letters, without any accompanying explanation of each type. But despite compelling evidence that epistolary theory was taught in the education curriculum in the Greco-Roman world, virtually none of the texts used in the schools have survived, thereby providing little information on how the ancients conceived of letters.

4. Summary.

The epistolary handbooks, the rhetorical writings and the educational curriculum reveal a genuine interest in epistolary theory—the ideal characteristics and style of a letter. Nevertheless, the epistolary theorists and rhetoricians did not appear to have much impact on the practice of writing letters, and very little about this subject can be learned from the training received in the schools. A more accurate understanding of letter writing, therefore, requires an analysis of the several thousand letters from antiquity that have survived.

EQUESTRIAN ORDER. See ROMAN SOCIAL CLASSES.

ESCHATOLOGIES OF LATE ANTIQUITY

The word *eschatology* was coined by Protestant theologians in the seventeenth century. It refers to the last things, which may be either the end of the world or the end of the individual and that which follows it. The range of the word has broadened over time to include any kind of teleology. In this article we will distinguish four kinds of eschatology: political eschatology, which envisions a definitive kingdom or other form of society; cosmic eschatology, which envisions the end of this world and a new creation; personal eschatology, which is concerned with forms of afterlife; and realized eschatology, in which the definitive future state is anticipated in the present.

1. Political Eschatology
2. Cosmic Eschatology
3. Personal Eschatology
4. Realized Eschatology

1. Political Eschatology.

1.1. The Hope for Definitive Kingship. The hope for a definitive, lasting political order was widespread in the ancient Near East and was most often associated with ideal kingship. The Babylonian Uruk prophecy from the sixth century B.C. extols a king who "will establish judgments for the land" and restore the shrines of Uruk. The king in question is most probably Nebuchadnezzar. The prophecy continues: "After him his son will arise as king in Uruk and rule the entire world. He will exercise authority and kingship in Uruk and his dynasty will stand forever. The kings of Uruk will exercise authority like the gods" (Hunger and Kaufman). The biblical prophet Isaiah envisions the reign of "a shoot from the stump of Jesse" in utopian terms.

The wolf will lie down with the lamb, and the child will play safely by the adder's lair (Is 11). This kind of royal ideology could be used in late antiquity either as an imperial ideology, to vindicate the powerful, or as a revolutionary ideal on the part of peoples who had lost their native kingship.

1.2. The Motif of Four Kingdoms and a Fifth. One widespread formulation of political eschatology that could be adapted to meet different purposes was the schema of four kingdoms followed by a fifth. The Greek *historian Herodotus, writing in the fifth century B.C., had already noted a sequence of empires in Asia: first the Assyrians, then the Medes, then the Persians (Herodotus *Hist.* 1.95, 130). This view became traditional and may be taken to reflect the official Persian view of history, whereby the Persian Empire represented the end of the process. In the *Hellenistic era, however, the sequence of kingdoms was extended. A fragment of an otherwise unknown author Aemilius Sura, preserved by Velleius Paterculus around the turn of the era, says that "the Assyrians were the first of all races to hold power, then the Medes, after them the Persians and then the Macedonians. Then when the two kings, Philip and Antiochus, of Macedonian origin, had been completely conquered, soon after the overthrow of Carthage, the supreme command passed to the Roman people" (Swain, 2). The references to the overthrow of Macedonia and Carthage suggest that Aemilius wrote in the second century B.C., probably about 175 B.C. The same sequence of kingdoms, with Rome as the climactic fifth, is found in Polybius, in the late second century B.C., Dionysius of Halicarnassus around the turn of the era and *Tacitus, about A.D. 100.

A similar sequence, without reference to Rome, is found in several Near Eastern writings. Best known of these is the book of Daniel. Daniel interprets Nebuchadnezzar's dream of a huge statue made of different metals in terms of a sequence of kingdoms, which are easily identified as Babylon, Media, Persia and Greece (Dan 2; J. J. Collins 1993, 166-70). Since Media never ruled over Judea, the sequence is evidently traditional (see Jewish History: Persian Period). Daniel departs from the traditional order only insofar as he substitutes Babylon for Assyria as the first kingdom. In Daniel's interpretation, the four kingdoms represented by the statue will be shattered, and then the God of heaven will set

up a kingdom that will never pass to another people. The sequence is repeated in Daniel 7, where the kingdoms are represented by beasts rising from the sea and the kingdom is given to the heavenly "one like a son of man" and the holy ones of the Most High.

The traditional order of Assyria, Media, Persia and Greece is found in another Jewish source, the fourth *Sibylline Oracle*. The kingdom of the Macedonians coincides with the tenth generation and the fourth kingdom. In the extant text of the Sibyl, however, the fourth kingdom is followed by the rise of Rome. Rome is not assigned a number and seems to be a late insertion to update the oracle. The original oracle probably dated from the Hellenistic period and implied that Macedonia would fall when the fourth kingdom had exhausted its allotted time (Flusser).

A close parallel to Daniel is found in a Persian source, the *Bahman Yasht*, which is late in its present form but probably reflects the basic structure of a text from the Hellenistic period. Zoroaster is shown "the trunk of a tree on which there were four branches: one of gold, one of silver, one of steel and one of mixed iron." Each branch is interpreted as the reign of a king. That of mixed iron is the evil sovereignty of "the 'divs' having disheveled hair." These latter were probably the Macedonians. The unkempt hair of Alexander and his followers contrasts with the neatly stylized hair of the Persians in ancient portrayals. The implication of the vision is that the course of history will be reversed when the fourth kingdom has run its course (Eddy, 17; Hultgård 1991, 114-34).

The Roman author Aemilius Sura shows that the motif of four kingdoms and a fifth could easily be made to serve as propaganda for an imperial power. Conversely, Daniel 2, the Sibyl and probably also the *Bahman Yasht* show that it could be a medium for revolutionary hope that the sovereignty of the present order is predetermined and limited. The same is true for any idea of a definitive kingdom.

1.3. Imperial Eschatology. The main examples of imperial eschatology from late antiquity are provided by the *Roman Empire. In book 1 of Virgil's *Aeneid*, Jupiter teaches the mother of Aeneas about the secrets of fate and concludes: "For these [the Romans] I set neither bounds nor periods. Dominion without end (*imperium sine fine*) I give to them" (Virgil *Aeneid* 1.278-79).

The Fourth Eclogue similarly claimed that a

final age (*ultima aetas*) was at hand when the earth would be transformed. This age would be the confirmation and fulfillment of Roman rule, not its overthrow (see further Cancik).

1.4. Resistance to Hellenistic and Roman Rule. Naturally the peoples of the East who had been subjected by Rome saw things differently. The richest deposit of revolutionary political eschatology is found in Jewish literature, replete with hopes for a kingdom of God or for a messianic reign on earth (see Apocalypticism). S. K. Eddy made a sweeping argument that such revolutionary eschatology was widespread throughout the Near East in the Hellenistic and Roman periods. There is some evidence in support of this thesis, but it is limited. The *Bahman Yasht* may have been formulated as an anti-Hellenistic apocalypse (see Apocalyptic Literature). Somewhat later (first century B.C.) the *Oracle of Hystaspes* professed hope that a great king would come from heaven to restore the right order. (Whether the *Oracle* can be accepted as an authentic expression of Persian ideas is disputed, but it has been ably defended by Hinnells.)

In Egypt, the *Demotic Chronicle* speaks enigmatically of a man from Heracleopolis who would arise after the Ionians. The least controversial example of an anti-Hellenistic prophecy from the ancient Near East is found in the *Potter's Oracle* from Hellenistic Egypt (second century B.C.). This oracle clearly looks for the destruction of the city by the sea (*Alexandria) and for the coming of a king from the sun—a legitimate Egyptian king (Koenen). It should be noted that several passages in the Jewish **Sibylline Oracles* are of uncertain provenance and could well have been written by Gentiles. A notable example is found in *Sibylline Oracle* 3.850-80, which denounces Rome for its greed and arrogance and prophesies that the wealth will be returned to Asia (see further J. J. Collins 1997a). In all of these texts, the goal is the restoration of a righteous society on earth. This was also the goal of Jewish messianic hope.

1.5. Early Christianity. Early Christian eschatology is ambiguous with respect to the political order. On the one hand, we find scathing denunciations of Rome in the book of Revelation. On the other hand, little is said about the nature of the just society that should ensue when Rome is overthrown. Revelation at least provides for a thousand-year reign on earth; however, its ultimate goal is not the transformation of the politi-

cal order but the destruction of this world and the emergence of a new creation. We do find a continuing interest in political eschatology in such texts as the *Apocalypse of Elijah* and *Sibylline Oracles 8* from Egypt in the second to third centuries A.D.

2. Cosmic Eschatology.

2.1. Jewish and Christian Apocalypses. The classic expressions of cosmic eschatology are found in Jewish and Christian apocalypses, culminating in the book of Revelation. The notion of the end of the world had its origin in the hyperbolic metaphors of the Hebrew prophets, who used the language of cosmic destruction to predict the downfall of specific places. Beginning in the early second century B.C. this language comes to be understood more literally. The *Apocalypse of Weeks* in *1 Enoch* (see *Enoch, Books of*) says that at a fixed point in the future the world will be written down for destruction and the old heaven will be taken away and replaced with a new one (*1 Enoch* 91:15-17). In the *Dead Sea Scrolls* we read of fiery floods of **Belial* that will consume the earth (*1QH* 11:29-36). The apocalypse of *4 Ezra*, written at the end of the first century A.D., envisions a period of primeval silence between the destruction of the old world and the new creation (*4 Ezra* 7:30; see *Esdras, Books of*). Revelation also predicts the destruction of this world and a new creation (*Rev* 21:1).

In the Jewish apocalypses, cosmic eschatology usually complements and completes the traditional political eschatology. In the earlier apocalypses and in the *Dead Sea Scrolls*, the relationship between the two is often left unclarified. The book of Daniel (*Dan* 7) still speaks of a kingdom of the people of the holy ones on earth, but the kingdom is given to a figure who comes on the clouds. The holy ones are **angels*, and the emphasis in Daniel is on the transformation of righteous humanity to an angelic state. The writings of the first century A.D., however, are increasingly systematic. So, for example, *4 Ezra* 7 provides for a four-hundred-year messianic reign in which the promises to **Israel* are fulfilled before the new creation. Revelation also provides for a period of earthly fulfillment in the thousand-year reign of Christ. But Christianity in general had less interest than did Judaism in the promises to Israel or in earthly fulfillment. In the Gospels and in the epistles of Paul the focus of eschatology is on the coming

of Christ on the clouds, final judgment and afterlife. Although Jesus is called Christ, Messiah, he does not restore the kingdom of Israel but is understood in cosmic terms after the model of Daniel's "one like a son of man."

2.2. Zoroastrianism. Outside of Judaism and Christianity, the main source for cosmic eschatology in the ancient world was Zoroastrianism. Zoroastrian eschatology is complex and is fully developed only in the Pahlavi literature of the early Middle Ages (Hultgård 1998). Already in the Gathas, however, there is a strong belief in the ultimate triumph of righteousness. Plutarch reports a form of Zoroastrian myth that he claims to have derived from Theopompus, who wrote about 300 B.C.

According to this myth, the world is divided between *Horomazes* (*Ahura Mazda*) and *Areimanius* (*Ahriman*), representing light and darkness respectively. Each is said to dominate the other for three thousand years, and for another three thousand years they will fight and make war, until one smashes up the domain of the other. In the end Hades shall perish, and humanity shall be happy (Plutarch *On Isis and Osiris* 46-47). Centuries later we find a more explicit form of this myth in the *Bundahishn*, a compendium of cosmological material whose final compilation dates to the period after the Arab-Muslim conquest of Iran: "Ohrmazd knew in his omniscience that within these nine thousand years, three thousand years would pass entirely according to the will of Ohrmazd, three thousand years in the period of mixture according to the will of both Ohrmazd and Ahreman, and that in the last battle it would be possible to make the Evil Spirit powerless and that he [Ohrmazd] would [thus] prevent aggression against the created world" (Hultgård 1998, 45-46). This dualistic view of history is adapted in the writings of the Jewish Dead Sea sect (see especially the *Treatise on the Two Spirits* in *1QS* 3-4 and the *War Rule*; see *Rule of the Community/Manual of Discipline*; *War Scroll*).

The last three thousand years of this system is subdivided into three millennia, and the end of each millennium is characterized by tribulations and disasters, heralding the coming of a new savior. At the end of the final millennium, those who are still alive will not die, and those who are dead will be raised in a general resurrection. The righteous go to paradise, but the wicked are thrown back to hell for three days

and three nights to purify them. Then they are brought back to earth and finally cleansed in streams of fire, as part of the purification of the world. The classic expression of this conflagration is found in the *Bundahishn*:

Afterwards the fire and halo melt the Shatvairo in the hills and mountains, and it remains on this earth like a river. Then all men will pass into that melted metal and become pure; when one is righteous, then it seems to him just as though he walks continually in warm milk; but when wicked, then it seems to him in such manner as though in the world he walks continually in melted metal. (*Bundahishn* 34; West, 125-26)

A similar account is found in Lactantius (*Divinae Institutiones* 7.21), who most probably derived it from the *Oracle of Hystaspes*. Justin Martyr (*Apol. I* 20.1) also affirms that Hystaspes, like the Sibyl, predicted the destruction of the world by fire. After this conflagration, all things will be made new.

2.3. Greek and Latin Literature. Cosmic eschatology is not prominent in Greek and Latin writings, but there are some relevant ideas. Hesiod portrays world history as a sequence of ages, symbolized by metals, and may imply a doctrine of eternal return. (At the end of the sequence he says "I would not want to sojourn with the fifth, but either die before it or live after it"; Hesiod *Op.* 106-201). *Plato puts in the mouth of an Egyptian speaking to Solon the legend that the world must undergo many destructions, the chief ones being by fire and water (Plato *Tim.* 22b). The periodic destruction of the world, first by water and then by fire, is an important motif in the Jewish and Christian *Sibylline Oracles* and also appears in the *Life of Adam and Eve* 49:3 (see Adam and Eve) and in 2 Peter 3. For Plato, however, the world was ultimately made imperishable and immortal (Plato *Politicus* 273b).

The notion of cosmic conflagration (*ekpyrōsis*) held a prominent but controversial place in *Stoic thought (Cancik, 115-16). The *ekpyrōsis* would effect the purification of the cosmos but would not entail a judgment. The Stoics disputed among themselves whether it would be followed by *palingenesis*, renewed birth, and the repetition of all things. *Seneca offered one formulation of Stoic eschatology in his *Consolation to Marcia* (Seneca *Marc.* 26): "When the time comes at which the world extinguishes itself in order to renew itself again, the elements will

scatter through their own power, and stars collide with stars, and when all matter burns, what now shines disposed in distinct places will burn with one single fire." Seneca claimed support for these ideas from Berossus, the Babylonian priest who presented Babylonian lore in Hellenistic dress in the early Hellenistic period: "Berossus, who translated Belus, said these things happen in accordance with the course of the stars. He makes the assertion so confidently that he even assigns a time for the conflagration and the flood" (Seneca *Nat. Quaest.* 3.29). There is no basis for such predictions in Babylonian tradition, however (Lambert).

Greek thinkers usually thought of the cosmos as eternal. *Cicero similarly speculates that the world either must be eternal or at least must last a very long time because of nature's providential care (Cicero *Nat. Deor.* 2.85). The Jewish philosopher *Philo similarly allowed that the world may be made immortal by the providence of God (Philo *Decal.* 58) and cites the view of some philosophers that "though by nature destructible it will never be destroyed, being held together by a bond of superior strength, namely the will of its Maker" (Philo *Rer. Div. Her.* 246; cf. Plato's *Tim.* 41A). The *Wisdom of Solomon, which comes from the same *Alexandrian milieu as did Philo, seems to imply a similar view.

2.4. Egyptian Tradition. A rare example of cosmic eschatology in the Egyptian tradition is found in the late *Apocalypse of Asclepius*, which is written in Greek and associated with the *Hermetic corpus. This apocalypse retains some of the essential characteristics of political oracles. An evil age is caused by the invasion of foreigners, and this is followed by a radical transformation of the earth. This apocalypse differs from earlier Egyptian tradition, however, by envisioning a destruction of the world by fire and flood and a restitution of the world to its pristine state (*Asclepius* 24-26; Nock and Festugière, 326-30).

3. Personal Eschatology.

3.1. Egypt. Most peoples in the ancient world believed in the survival of a soul after death, but in many cases this was a weak, shadowy existence. This was true both of the Hebrew idea of the *nepeš* and of the Homeric idea of the *psychē*. Egypt was distinctive in the ancient world for its belief in the judgment of the dead (Griffiths). The *Book of the Two Ways* describes ways that await the deceased, many of them tortuous and

fearful. The text was usually inscribed on the inside base of coffins, as a guide for the dead. The deceased must pass through a series of gates, each one defended by a terrifying guardian, which must be overcome by spells. But the main issues that determined the welfare of the person in the hereafter were innocence and purity. In the *Book of the Dead* (125) the deceased is instructed to say: "See I have come to you without sin, without guilt, without evil, without there being any evil in me, without there being a witness against me." Other motifs that are characteristic of Egyptian eschatology are the weighing of the souls of the dead and the association of the right side with salvation and of the left with damnation. Also characteristic is the role of the god Thoth as impartial recorder in the tribunal after death.

3.2. Greece and Rome. In Greek tradition belief in the judgment of the dead is associated especially with the Orphic tradition. New light has been shed on Orphic eschatology by a series of texts inscribed on gold leaves, found in tombs in Italy, Crete and Thessaly (Graf; Cancik, 97-98). Typical of the tradition is the reversal of life and death: "Now you have died and now you have come into being, O thrice happy one, on this same day." The dead are instructed to say to Persephone that "Bacchus himself has freed you" from the sin of the Titans who had killed and eaten the child Dionysus. The dead person awaits transformation into a god and will partake in a symposium of the blessed. Similar ideas informed the mystery cults. Cicero, who was initiated in the Eleusinian mysteries, writes that "we truly have recognized the foundations (*principia*) of life and not only received a reason to live with joy, but also to die with a better hope" (Cicero *De Leg.* 2.14.36). A passage in Plutarch comments on the connection between death and the mysteries:

Here [on earth] it [the soul] is ignorant, unless it is already at the point of death. Then, however, it has an experience like those who are initiated into the great mysteries; therefore, the word is similar to the word and the thing is similar to the thing: *teleutân—teleisthai*, die—be initiated. First a wandering in error, an arduous running around, a fearful walking in the dark, which finds no goal; then before the end itself, all the monstrosity, shudders, trembling, sweat and astonishment. After this a wonderful

light comes to meet [them], pure places and meadows receive them with voices and dances and the celebration of holy sounds and venerable apparitions: amidst this moves the already perfected initiated, having been freed and released. (Plutarch frag. 178, in Stobaeus; see Cancik, 97)

Plato's ideas on the judgment of the dead are generally believed to be derived from Orphic tradition. In the *Gorgias* 258, he tells us that "he who has lived all his life in justice and holiness shall go, when he is dead, to the Islands of the Blessed, and dwell there in perfect happiness out of the reach of evil; but he who has lived unjustly and impiously shall go to the house of vengeance and punishment, which is called Tartarus," and he goes on to describe the judgment in detail. The most influential Platonic discussion of the judgment is found in the Myth of Er in *Republic* 10.614b-621. The Pamphylian Er, who had apparently died on the battlefield, is sent back from the netherworld as a "messenger of the afterlife." He reports the judgment of the dead and the punishment of the wicked and then the choice of lifestyle by the soul and reincarnation. For Plato, the soul was eternal, uncreated and imperishable. Souls must be reincarnated repeatedly for ten thousand years but can be freed earlier from the cycle of reincarnation by the philosophical life or by a life of virtue (Plato *Phaedr.* 248-49).

The motif of the otherworldly journey is used by philosophical authors such as Cicero (*Somn.*), Seneca (*Marc.*) and Plutarch (*Gen. Socr.*; *Ser. Num. Vind.*) as a way of inculcating beliefs about the afterlife. This motif is ridiculed by the second century A.D. humorist Lucian in his *Icaromenippus*. The motif of the descent to the netherworld is found in Homer's *Odyssey* 11. In Virgil's *Aeneid* 6, the descent of Aeneas to the netherworld provides an occasion for scenes of postmortem judgment and a prophecy about the future of Rome. The descent motif too was parodied by Lucian in his *Nekyomanteia* (see further Attridge). The ascent texts (see Heavenly Ascent) sometimes entail the idea of astral immortality. Already in the fifth century B.C. Aristophanes had joked about "what people say, that when we die we straightaway turn to stars" (Aristophanes *Pax* 832-34). The popularity of this belief is attested in epitaphs of the Hellenistic and Roman periods (Cumont, 142-288).

3.3. Persia. The belief in the afterlife of the

soul is well attested in the Gathas, the oldest stratum of Zoroastrian tradition. After death, the soul must cross the Činwad bridge, or the bridge of the accountkeeper or judge. The souls of the deceitful recoil when they reach the bridge. The most elaborate account of the afterlife is provided by the late Pahlavi *Ardā Wirāz Nāmag*. *Wirāz* is a pious man who is commissioned to go to heaven to verify the utility of the religious ceremonies of his community. He is taken to a fire temple and given a drink of wine mixed with henbane. When he falls asleep, his soul leaves the body and crosses the Činwad bridge. On the seventh day he awakes and gives a report of his journey. He is accompanied by two heavenly figures who function as guides. He visits both the abodes of the righteous and the places of punishment of the damned. (Most of the book is devoted to the latter.) There are references to such otherworldly journeys in other texts. Such journeys are attributed to Zoroaster himself and to *Vistāsp*, the first king to embrace the teachings of Zoroaster (Hultgård 1998, 62-63).

3.4. Judaism. Traditionally Israelites believed in the survival of the *nepeš*, or shade, in Sheol but rejected the idea of a judgment of the dead. This skeptical view still persists in the book of **Sirach* (Sir 41:1-4), written in the early second century B.C., and is stated emphatically by *Qoheleth*. About this time, however, the belief in a differentiated afterlife was emerging in apocalyptic circles. *1 Enoch* 22 describes three distinct places in which the spirits of the souls of the dead are segregated before judgment. (The original text seems to have envisioned four.) More typical of the early apocalyptic tradition is *1 Enoch* 104, which assures the righteous that they will shine like the lights of heaven and become companions of the host of heaven. Similarly, in Daniel 12 the resurrected wise ones will shine like the stars. The stars were commonly identified with the host of heaven in Semitic traditions. In the case of Daniel, there may also be some overtones of the Hellenistic belief in astral immortality (J. J. Collins 1998, 994-98).

These early apocalypses do not envision bodily resurrection. The book of **Jubilees* says explicitly that "their bodies will rest in the earth and their spirits will have much joy" (*Jub.* 23:22). Resurrection takes on a physical character, however, in the story of the **Maccabean* martyrs, in *2 Maccabees* 7. Both the idea of a spiritual body and of a physical **resurrection* were current in

the first century A.D. The issue of the form of the resurrected body is discussed explicitly in *2 Baruch* 50-51, written at the end of the first century A.D. Baruch is assured that the earth will restore bodies just as it received them so that they can be recognized. The righteous, however, "shall be made like the angels and be made equal to the stars; and they shall be changed into whatever form they will" (*2 Bar.* 51:10; see Baruch, Books of).

There are few clear references to resurrection in the **Dead Sea Scrolls* (J. J. Collins 1997b, 110-29). These are found in the so-called *Messianic Apocalypse* (4Q521) and **Pseudo-Ezekiel* (4Q385 + 4Q376). There is ample evidence in the scrolls, however, for reward and punishment after death. According to the Treatise on the Two Spirits in the *Rule of the Community*, those who walk in the way of light will be rewarded with "eternal enjoyment with endless life, and a crown of glory with majestic raiment in eternal light" (1QS 4:7-8). The wicked will receive "a glut of punishments at the hands of all the angels of destruction, for eternal damnation for the scorching wrath of the God of revenge, for permanent error and shame without end, with the humiliation of destruction by the fire of the dark regions" (1QS 4:12-13; compare **Josephus's* account of the eschatology of the **Esenes*, in *J.W.* 2.8.11 §§154-56).

The abodes of the blessed and the places of punishment of the damned are explored in greater detail in apocalypses that describe ascent through the heavens (*2 Enoch*, *3 Baruch*) or descent to the netherworld (**Apocalypse of Zephaniah*). While the prototype of such visions was the Enochic Book of the Watchers (*1 Enoch* 1-36), the main examples of this subgenre come from the Hellenistic **Diaspora*. Also typical of the *Diaspora* is the Platonic idea of the immortality of the soul, which is endorsed by the philosopher Philo and the **Wisdom of Solomon*.

3.5. Early Christianity. Because of the central role of the resurrection of Jesus, belief in afterlife is ubiquitous in early Christianity. In the Gospels, the resurrection is associated with the stories about the empty tomb. Paul, however, who is probably our earliest witness to the tradition, does not mention the empty tomb in his defense of the resurrection of the dead in *1 Corinthians* 15. Instead he argues that "flesh and blood cannot inherit the kingdom of God" (*1 Cor*

15:50) and that what is raised is "a spiritual body." After the NT period, Christianity increasingly emphasizes the immortality of the soul while retaining the expectation of a final, general resurrection. There is an abundance of early Christian apocalypses, in the names of Peter, Paul, John, Mary and others (A. Y. Collins). These are predominantly otherworldly journeys and are largely concerned with rewards and punishments in the afterlife. Even an apocalypse like the *Apocalypse of Peter*, which does not describe a heavenly journey, contains an extensive account of the places of punishment and a brief vision of paradise. The Christian fascination with the punishment of the damned can be seen in *Sibylline Oracle 2*, in which an older Jewish oracle has been adapted by a Christian interpolator. There is also an extensive corpus of *Gnostic apocalypses from Nag Hammadi, in which the primary concern is with personal eschatology (Fallon).

4. Realized Eschatology.

4.1. John. Finally, we may deal more briefly with the idea of realized eschatology, which claims that the salvation promised to the righteous after death can be experienced proleptically in the present. The classic expression of realized eschatology is found in the Gospel of John, in which Jesus assures his followers that "anyone who hears my word and believes him who sent me has eternal life, and does not come under judgment, but has passed from death to life" (Jn 5:24).

4.2. The Dead Sea Scrolls. A precedent for such an idea of present salvation can be found in the Dead Sea Scrolls, in which the author of the *Hodayot* claims to enjoy in the present the life with the angels that is promised to the righteous after death in the apocalypses of Daniel and *Enoch*: "I thank you, Lord, because you saved my life from the pit, and from Sheol and Abaddon you have lifted me up to an everlasting height, so that I can walk on a boundless plain. . . . The corrupt spirit you have purified from the great sin so that he can take his place with the host of the holy ones, and can enter into communion with the congregation of the sons of heaven" (1QH 11:19-29). This belief explains why there is so little interest in resurrection in the Dead Sea Scrolls. The transition to eternal life was made upon joining the community.

4.3. Gnosticism. The idea of realized eschatol-

ogy is especially characteristic of the Gnostic writings from Nag Hammadi. At the risk of some overgeneralization, it may be said that gnosis is enlightenment and involves the retrieval of the particles of light from the realm of darkness (Rudolph, 115). This process can be completed only at death, but enlightenment can be experienced in this life. Resurrection is understood as spiritual awakening. So we read in the *Gospel of Philip*: "Those who say: 'First one will die and [then] rise' are wrong. If men do not first experience the resurrection while they are alive, they will not receive anything when they die" (Rudolph, 191).

According to the Letter to Rheginus on the resurrection, the resurrection is "the revelation of those who have [now already] risen. . . . It is not an illusion [*phantasy*] but truth! But rather it is fitting to say that the world [*kosmos*] is more an illusion than the resurrection" (Rudolph, 192). Death is viewed as liberation, followed by the ascent of the soul. This too can be called resurrection: "'The dead shall leap up from the grave,' that is, from their earthly bodies, being regenerated as spiritual men, not carnal" (so the Naasenes according to Hippolytus *Refutatio* 5.8.22-24). The Gnostics could also conceive of an end of the world. For the Valentinians, according to Irenaeus, this would take place "when all that is 'spiritual' [*pneumatic*] is shaped and perfected through knowledge [*gnōsis*]" (Irenaeus *Adv. Haer.* 1.6.1). Some texts speak of an *Apokatastasis*, or restoration of the particles of light, in the Pleroma, in a manner reminiscent of Stoic eschatology (Rudolph, 196). What is envisioned is the dissolution of the material world rather than a new creation. It should be emphasized, however, that the Gnostic texts do not constitute a consistent system and that there is considerable variation among the texts.

ESDRAS, BOOKS OF

Ezra the scribe is remembered in Jewish tradition as one of the central figures in the history of Judaism and the Jewish people. According to the biblical narratives, Ezra led a group of exiled Jews back to Jerusalem in 458 B.C. with the authorization and financial support of the Persian government (see Jewish History: Persian Period). Ezra's appointed task was to enforce obedience to Jewish law as understood and applied by the Jewish authorities who had returned from Babylon to Jerusalem. Ezra was ultimately regarded as second only to *Moses as a divinely inspired lawgiver. Because he held such an exalted position in Jewish tradition, numerous extrabiblical texts were *pseudepigraphically attributed to him.

1. Second Esdras
2. Other Ezra Texts

1. Second Esdras.

The book of 2 Esdras is a compilation of three different Ezra texts. The core is the Jewish *apocalypse in 2 Esdras 9-14, commonly known as 4 Ezra. There has been considerable variety in designating the other two Christian texts collected in 2 Esdras. Chapters 1-2 are Christian texts that were prefixed to 4 Ezra (2 Esdr 3-14) and intended to serve as an introduction to the Jewish apocalypse. Second Esdras 1-2 is designated either 2 Ezra or 5 Ezra. Second Esdras 15-16 is a Christian appendix to the apocalypse, and these final two chapters of 2 Esdras are designated either 5 Ezra or 6 Ezra. This inconsistency in how scholars refer to these three texts can be confusing; however, their contents are so distinct that any description immediately clarifies which text is meant.

In 2 Esdras 1-2 (5 Ezra) we read of Ezra's call into ministry, a call that is lacking in the Bible, and of his denunciations of the Jewish people for failing to obey the commandments. The text focuses on God's denunciation of the people for failing to obey his commandments in spite of all the benefits he had bestowed on them throughout their history. Although Jewish texts can take up the theme of Israel's failure to obey the commandments, that this is a Christian composition is clear from two passages. First, we

read that God decided to replace *Israel with other people (i.e., the Christians) who would believe and follow the commandments and who though they had not seen the prophets nonetheless follow their morality (2 Esdr 1:35-36). Second, at the end of 2 Esdras 2 we read of people who are lauded and rewarded for having confessed the "Son of God" in the world (2 Esdr 2:45). This Christian text has no explicit link to the Jewish apocalypse in 2 Esdras 3-14 (4 Ezra), but the editors who prefixed it to the apocalypse must have thought that it served as a fitting introduction to the apocalypse. By adding this introduction, the editors were trying to transform the original Jewish text into a Christian one.

Second Esdras 3-14 (4 Ezra) is a Jewish apocalypse in which Ezra and God debate theodicy in a manner that reminds one of Job's debates with his interlocutors. Ezra is dumbfounded as he watches the wicked prosper while the righteous suffer. Moreover, the wicked can even inflict severe sufferings on the righteous. How can this be? Does God not see? Does he not care? The debate is at times biting, and we occasionally blush at the utter boldness of Ezra's challenges to God's sense of justice. How can he speak so impudently with God?

Fourth Ezra was written around A.D. 100 as one response to the sufferings of the Jewish people in the wake of the destruction of the Jerusalem temple by the Romans in A.D. 70. It seems that this apocalypse is a literary work that reflects the anonymous author's struggles over these painful issues. That is to say, rather than being a theological treatise, this is almost a biography of one person's psychological and theological struggles over the sufferings of his people at the hands of the Romans. It is an intensely personal text. The narrative is presented as seven separate visionary experiences.

In the first three visions (2 Esdr 3:1-9:25), Ezra and God (or his angel) argue in a question-and-answer format. Ezra's difficult questions are never directly answered by God in these visions that all end with God showing Ezra the signs of the end times. These signs are inadequate answers that seem to disregard Ezra's anguished questions.

Then, in the fourth vision (2 Esdr 9:26-10:59), Ezra sees a woman weeping over the loss of a child. Ezra tells her to stop crying for the loss of one child when all Israel is suffering.

This woman then suddenly transforms into a city, *Jerusalem. Ezra learns that the advice he gave to the woman is the advice he should heed: stop wailing over your personal pain and consider the travail being suffered by all Israel. The fourth vision is thus Ezra's catharsis. He learns that the traditional theology set forth by God and his angel in the first three visions, the very theology that Ezra had opposed or found inadequate, is the only answer. Ezra converted. Now that he had accepted the traditional theological explanation of things, he has three much more traditional apocalyptic experiences (visions 5-7). In visions 5 and 6 he sees messianic figures coming to rescue Israel (2 Esdr 11-13). The book ends with an account of how Ezra received the revelation of the twenty-four books of the Hebrew Bible and seventy esoteric books (the apocryphal/apocalyptic books). He made known the biblical books but hid the seventy other books that were meant only for the eyes of the elect.

This powerful apocalypse intends to show that the traditional theology—that God decrees and accomplishes all that takes place and yet is not the author of evil—is the only adequate answer to the problem of evil in the world. Humans sin, and God holds them accountable. Sometimes that sin brings harm to others, including the righteous. The first three visions show that apocalypses do not necessarily focus exclusively on eschatological matters. Here the information God revealed to Ezra in the course of their debate has to do with practical intellectual or theological issues. The fifth and sixth visions focus almost exclusively on eschatological matters and suggest that one day God will send the Messiah to rescue the righteous and destroy the wicked, and this hope inspires God's people to remain steadfast to his teachings and enables them to endure the many tribulations they face.

As typical historical apocalypses focusing on the eschaton, the fifth and sixth visions (2 Esdr 11-13) have many thematic links with Daniel and the book of Revelation. These are historical apocalypses whose focus is on the final, cataclysmic battle between the forces of good and evil when good triumphs and vanquishes all evil. Thus, what one encounters in the book of Revelation, although rather odd when compared with the rest of NT literature, is a typical example of one kind of ancient apocalypse.

Second Esdras 15-16 (6 Ezra) is a Christian

appendix to the Jewish apocalypse that continues the eschatological focus of 2 Esdras 11—13 by cataloging the calamities that mark the onset of the eschaton, a catalog that has thematic affinities with similar descriptions of the end times in the NT (cf. Mt 24; Mk 13; Lk 17:20-37; 21:5-36; 2 Thess 2:1-12; 2 Pet 3:3-13; Rev 4—22). This dark piece nevertheless intends to inspire the faithful because no matter what trials and tribulations they may face, in the end God will rescue them and give them the reward for which they have hoped.

2. Other Ezra Texts.

Ezra is surely one of the most prominent figures in the Bible, but this is not what inspired the wealth of texts *pseudepigraphically attributed to him. Each of the other Ezra texts discussed below in some way depends upon or is inspired by 4 Ezra (2 Esdr 3—14). The fact that they were all indebted to 4 Ezra indicates the popularity of this text. Moreover, 4 Ezra was part of the *Septuagint, or Greek Bible, used by the early Christians. This was the official Bible of most churches, and so 4 Ezra was read as Scripture, as it still is in Roman Catholic and Orthodox churches.

The *Greek Apocalypse of Ezra* is a Christian composition, but precisely when it was composed is not certain. Dates ranging from the second to the tenth centuries A.D. and later have been suggested. This apocalypse, much like 4 Ezra, opens with Ezra praying and fasting in order to induce God to grant him a vision. Unlike 4 Ezra, however, the *Greek Apocalypse of Ezra* is an ascent text (see Heavenly Ascent). Here Ezra ascends to heaven and descends into Tartarus in his quest to understand God's justice and to intercede for sinners who suffer postmortem punishments. This text serves as a powerful tool to persuade people to live a righteous life because it describes the bliss enjoyed by the faithful as well as the punishments endured by sinners. Still, Ezra's concern is with the sinners who suffer, and he asks God to have pity on them. Knowing that a good fate awaits the righteous surely induces people to live righteous lives in order not to miss out on postmortem bliss. In the end Ezra realizes that God is just in whatever he does, even though humans might not be able to understand the details of his justice. All persons will be rewarded or punished accordingly when they die.

Visions of heaven and hell became popular in Christianity, culminating in Dante Alighieri's *The Divine Comedy*. Why were these stories of journeys to heaven and hell so popular? They give humans the kinds of information that is otherwise beyond their reach. Everyone wants to know what the realms beyond earth are like and what awaits humans after death. These extraterrestrial travelogs provide just such information. Of course, the authors use these travelogs to promote their own kinds of piety. Thus, a Christian text will promote Christian virtues, although the particulars will differ from community to community, and a Jewish or an Islamic ascent text will promote Jewish or Islamic values. Moreover, these travelogs prove that there is another realm beyond our experience and that admission into the regions of bliss is based on strict requirements. This is then the power of these texts. Everyone wants to go to heaven and enjoy a blissful eternity in the presence of the divine. By defining precisely how one gets into heaven and avoids the punishments of hell, these texts shape behavior and beliefs. The real or pseudepigraphic authors of these texts stand as witnesses to the reality of the other realm and the guidelines for admission.

The *Vision of the Blessed Ezra* is a Christian document composed in Greek sometime between the second and eleventh centuries A.D. This text recounts how Ezra first visited Tartarus to see the excruciating punishments of the wicked and then visited paradise to see the glorious abodes of the righteous. Again, much like the *Greek Apocalypse of Ezra* and later medieval texts such as Dante's *Divine Comedy*, the visions of this text are intended to encourage fidelity to the traditional values of the church. Depictions of the frightening postmortem torments of sinners and the indescribable bliss of the righteous create a striking portrait of the afterlife. God assured Ezra that each person will get the reward he or she deserves. After death everyone faces a test, and only the righteous escape unscathed while the wicked fall irretrievably into punishment.

The *Apocalypse of Sedrach* consists of a Christian sermon on love and what appears to be an originally Jewish ascent text describing Sedrach's tour through the heavenly realm. We associate this text with Ezra because the name *Sedrach* appears to be a corruption of Ezra and does not seem to be the friend of Daniel by this

same name (Dan 1:7). The sermon on love praises the value of love to transform and enoble human life—"O blessed love that bestows all good things" (*Apoc. Sedr.* 1:24). As we have come to expect with Ezra texts, the apocalypse contains a debate between Sedrach and God over the issue of God's justice in condemning sinners. Sedrach learns that sinners are punished because they refuse to repent of their wicked deeds. If people should repent, God is ready to deliver them "in an instant" (*Apoc. Sedr.* 15:2-3). There is thus hope for everyone until the end.

The last two Ezra works discussed here have proven to be very difficult to date, and they may have been composed as late as the early Middle Ages. The *Questions of Ezra* has been preserved only in Armenian and describes what happens to a human's soul after death. As is his custom, Ezra debates with the angel of God over the justice of sentencing people to punishment for having sinned, since all people sin in some way. Ezra's questions focus on the final state of the soul after death, but God's answers highlight the values of righteous living; the two never really come together, again much like the debates in the first three visions in 4 Ezra (2 Esdr 3-14). Ezra learns that after death the righteous will experience great joy while the wicked will suffer unceasing torment. Moreover, the purpose of the postmortem ascent of the soul is to test and purify it before allowing it to enter the realm where God dwells.

The *Revelation of Ezra* differs from all the other Ezra texts in that its interests are strictly astrological. This text claims to predict the nature of the coming year based on the day of the week on which a year begins. For example, if the year begins on Venus Day (i.e., Friday) then "winter will be moderate, summer bad, fall dry; the grain harvest will be worthless, the grape harvest good; eyes will be inflamed; infants will die; there will be an earthquake; kings will be in danger; oil will be abundant, but sheep and bees will die." The *Revelation of Ezra*, therefore, transforms Ezra into an astrologer.

Ezra holds a prominent place in Jewish and Christian tradition. In Jewish tradition he is principally remembered as a lawgiver second only to Moses. In Christian tradition this feature is augmented by the depiction of Ezra as the friend of sinners. In the several texts pseudepigraphically attributed to him, Ezra appears as

the one who is willing to argue with God incessantly in order to move God to have mercy on sinners. Ezra saw the many punishments being inflicted on sinners both in the heavenly and the infernal realms, and the sight of these people's sufferings drove him to pity. Although in the end he bows to God's omniscience and omnipotence, his concern was to save sinners from the punishments they unfortunately deserved. The writings attributed to Ezra intend to warn people of the consequences of sin and to inspire them to live holy lives. The changes in how Ezra was being depicted in the early Jewish and Christian communities indicate that when these people mention biblical (i.e., OT) figures, the image they have of them is not strictly limited to what was written about them in the Hebrew Bible. The depictions of biblical figures in later writings shows how the popular understanding of these characters continued to evolve. These changes in depicting these figures indicate how the later authors were updating the images of the ancient, esteemed figures in order to have them speak to the pressing moral, theological or cultural issues of their days.

J. E. Wright

1 ESDRAS

The book of 1 Esdras has survived in Greek as one of the books of the *Apocrypha, at least as far as the Hebrew canon is concerned. The church, too, has not granted 1 Esdras a definite canonical status, especially because of Jerome's influential position, which relegated the book to an appendix in the Vulgate.

In the main Greek tradition, 1 Esdras is the title of the book, whereas it is called 3 Esdras in the Latin tradition. Thus it is distinguished from the other books named after Ezra, primarily the canonical books of Ezra-Nehemiah, for which there is a continuous, consistent translation in the corpus of the *Septuagint known as 2 Esdras (*see* Esdras, Books of).

1. Contents and Chronology

2. Relationship to Canonical Books

1. Contents and Chronology.

The greater part of 1 Esdras (1 Esdr 1—2; 5—9) is a straightforward translation of 2 Chronicles 35—36, Ezra 1—10 and Nehemiah 8. Only two chapters (1 Esdr 3—4) that tell the Story of the Three Youths have no counterpart in the canonical books. The relationship between 1 Esdras and Chronicles and Ezra-Nehemiah is therefore somewhat similar to the relationship between the canonical books of Daniel and Esther and their expanded Septuagint versions (*see* Daniel, Esther and Jeremiah, Additions to). In our view, the Story of the Three Youths was originally written in Aramaic and interpolated into the Hebrew-Aramaic material that now forms the canonical books. This composite version was then translated into Greek.

The contents of 1 Esdras are similar to its parallel parts in Chronicles and Ezra-Nehemiah, except for the additional story and the ensuing changes in the course of events. It begins with the last part of the kingdom of Judah—from Josiah's Passover through the destruction and exile (1 Esdr 1 = 2 Chron 35—36). It continues with Cyrus's edict permitting the return of the exiles and the building of the temple (*see* Jewish History: Persian Period). It passes abruptly to the complaint sent to Artaxerxes that brought about the interruption of the building of the temple (1 Esdr 2 = Ezra 1; 4:6-24). At this point the Story of the Three Youths is introduced. The story, which takes place in Darius's court, tells about a contest between three of the king's bodyguards. The contest consists of a question:

What is the strongest thing of all? The first praises the power of wine, the second advocates the king, and the third, Zerubbabel, argues for women and finally for truth. Zerubbabel wins and is granted permission to return to Jerusalem and resume the building of the temple and the city (1 Esdr 3—4, unparalleled in the OT).

After the list of returnees is provided, Zerubbabel and Jeshua are said to have built the altar and founded the temple. However, the work is interrupted again by adversaries (1 Esdr 5 = Ezra 2:1—4:5). It is resumed by the encouragement of the prophets Haggai and Zechariah at the beginning of Darius's reign. Thus, in the sixth year of Darius, the temple is completed and celebrated (1 Esdr 6—7 = Ezra 5—6). Then the book turns to the story of Ezra, his return, the separation from foreign women and the reading of the Torah and celebration of the Feast of Tabernacles (1 Esdr 8—9 = Ezra 7—10; Neh 8).

The chronology of 1 Esdras is difficult and the course of events is cluttered, passing from Cyrus to Artaxerxes and back to Darius. The confusion comes from the interpolation of the Story of the Three Youths, which provides another version of the rise of Zerubbabel in addition to the one borrowed from the book of Ezra. The two versions exclude one another.

2. Relationship to Canonical Books.

The differences between 1 Esdras and the canonical books may be summed up as follows: the outer limits of the book; the interrelationships among the books of Chronicles, Ezra and Nehemiah; the order of the chapters; above all, the interpolation of the Story of the Three Youths. This story is the *raison d'être* of the book, and therefore it explains almost all the differences between 1 Esdras and the parallel canonical material.

In 1 Esdras, Ezra 1 directly continues 2 Chronicles 35—36. In our view, the author of 1 Esdras did not initiate the combination of the books of Chronicles and Ezra. Since his obvious goal was to present his version of the return as portrayed in the Story of the Three Youths, he had no reason to combine the last two chapters of Chronicles were it a separate book. Rather, Chronicles and Ezra constituted one cluster in his tradition. This argumentation is also relevant regarding the ongoing debate of whether 1 Esdras originally contained the entire book of Chronicles or

whether it opened, as it does, with Josiah's celebration of the Passover. It seems illogical that in order to interpolate the Story of the Youths the author copied the entire book of Chronicles. He rather made his decision to begin with Josiah, the cherished king (see his addition in 1 Esdr 1:21-22), and continue with the return and revival of Judah under Zerubbabel and Ezra.

In 1 Esdras the letter of complaint to Artaxerxes (Ezra 4:6-24 = 1 Esdr 2:15-25) stands immediately after Cyrus's edict (Ezra 1 = 1 Esdr 2:1-14), while the parallel to Ezra 2:1-4:5 shifts to just after the Story of the Three Youths. Undoubtedly the events are reordered to form a reasonable context for the story. That is, since the latter is designed to introduce Zerubbabel, the material that features Zerubbabel (Ezra 2:1-4:5) must be postponed until after the Story of the Three Youths is completed.

In 1 Esdras, Nehemiah 8 directly continues Ezra 10. The fact that the author of 1 Esdras used together with Nehemiah 8 the preceding verse (Neh 7:72), which concludes the former unit, proves that 1 Esdras does not attest an original version in which the reading of the Torah (Neh 8) continued the story of Ezra's activities (Ezra 7-10). Rather, the author of 1 Esdras decided to extract the material concerned with Ezra and place it with the rest of Ezra's activities. In 1 Esdras there is no trace of Nehemiah 1-7; 9-13. It appears that the author of 1 Esdras decided to attribute Nehemiah's achievements to Zerubbabel. Thus the story of the return revolves around Zerubbabel and Ezra.

The outer limits of the current version of 1 Esdras make it difficult to see the book as a self-contained entity. The book begins in the middle of Josiah's reign, and the end, which parallels Nehemiah 8:13, breaks off not only in the middle of the events but also literally in mid-sentence. The damage most probably took place in the Greek translation, as the translator of 1 Esdras would not perpetuate a defective ending in the original work.

First Esdras is neither a fragment surviving from a book that for the most part has been lost nor strictly a compilation of chosen units from the canonical books. Rather, the author of 1 Esdras deliberately cut a section from the books of Chronicles and Ezra-Nehemiah to form a framework for the Story of the Three Youths. First Esdras seems to be one of the first products of the rich literary activity around the books of

the OT that took place in the last centuries B.C.

ESSENES

The Essenes were an ancient Jewish sect existing from the second century B.C. to the end of the first century A.D. Various Greek and Latin writers, most notably *Philo, *Josephus and *Pliny, describe the group. Since the discovery

of the *Dead Sea Scrolls at *Qumran in 1947, most scholars have regarded the Qumran community as Essene. In the treatment that follows, Essene customs and beliefs according to the classical sources will first be presented, followed by a comparison of this information with the data from Qumran.

1. Sources
2. Essene Customs and Beliefs
3. The Essenes and the Qumran Community
4. The Essenes and the New Testament

1. Sources.

Unlike other Jewish sects such as the *Pharisees or *Sadducees, the Essenes are not mentioned in the NT or in Talmudic literature. The earliest mention of the Essenes is by Philo, in *Quod Omnis Probus Liber Sit* 12-13 §§75-91 and *Hypothetica* 11.1-18, both written prior to A.D. 40. Philo does not seem to have firsthand knowledge of the Essenes, and he presents what appears to be an idealized picture of the group, with frequent favorable comparisons to Greek thought and practice.

A second important reference to the Essenes is given by Pliny the Elder, in his *Natural History* 5.15 §78, completed in A.D. 77. Pliny mentions the Essenes in the context of his description of the topography of Judea. He states that they are located on the west bank of the Dead Sea, with Engedi below them, and Masada even further south. Pliny's account thus puts the Essenes in the same area as Qumran.

The Jewish historian Josephus (c. A.D. 37-100) provides the most detailed ancient description of the Essenes. He mentions the group thirteen times in his writings, with two extensive descriptions in *The Jewish War* (*J.W.* 2.8.2-19 §§119-61), written about A.D. 73, and in *The Antiquities of the Jews* (*Ant.* 18.1.2, 5 §§11, 18-22), written about A.D. 94. While Josephus claims to have spent time with each of the three sects (Pharisees, Sadducees and Essenes) at the age of sixteen, the chronology he presents indicates that he could have spent only a few months with the Essenes (*Life* 1.2 §§10-12). Still, the probability of his having direct contact with the group makes his account all the more important. As with Philo, Josephus's desire to present *Judaism in a favorable manner to his audience undoubtedly resulted in idealization and accommodation to Greek thought in his description of the group.

The Essenes are also mentioned briefly by

Hegesippus, a second-century Christian historian. The Roman bishop Hippolytus (c. A.D. 170-236) describes the Essenes in a more lengthy account similar to that of Josephus, an account that may be dependent upon Josephus or derived from a common source (*Refut.* 9.18-28). Hippolytus is the first of many later Christian writers to view the Essenes as a heretical Jewish sect. The later Christian writers provide no new information about the group.

2. Essene Customs and Beliefs.

The classical sources give us information on several facets of Essene customs and beliefs. (For parallels with the Qumran community see § below.)

2.1. Name. The name of the sect is rendered variously in the classical sources. The group is generally called *Essēnoi* or *Essaioi* in Greek, while in Latin they are called *Esseni*. Epiphanius mentions both a group called the *Ossēnoi* as well as a different group he calls *Esseni*.

The etymology of the name is unclear. Philo suggests that it is related to the Greek word *hosiotes* ("holiness"); elsewhere he calls the group *hosioi* ("holy ones"; *Omn. Prob. Lib.* 12 §75; 13 §91). Similarly, some modern scholars believe the name is derived from the Aramaic *hasayyā* (= Heb *hasidim*, "pious ones"; so Schürer, Cross). If this is correct, it might suggest that the Essenes are related to the Hasideans (*hasidim*, Gr *asidaioi*) mentioned in 1 Maccabees 2:42; 7:13 and 2 Maccabees 14:6 (see 1 and 2 Maccabees), though the root *hsy* does not mean "pious" in the Palestinian dialect.

Some of the many recently suggested etymologies in light of the Qumran material are that the name is taken from the Hebrew word *'ēšā*, which means "council" in Qumran literature (so Dupont-Sommer); that it is from the Hebrew verb *'asā* ("to do, bear, bring forth"), with the idea that the Essenes are the "doers" of the law who will "bring forth" redemption (so Goranson); or that it is derived from the Aramaic *'ryy* ("healers"; so Vermes). But none of these proposals are compelling.

2.2. Location. Philo and Josephus both indicate that the total number of Essenes was more than four thousand and that they lived in many cities in Palestine (Josephus *J.W.* 2.8.4 §124; Philo *Hypoth.* 11.1; though in *Omn. Prob. Lib.* 12 §76 Philo says they avoided the cities). Pliny places them by the Dead Sea, above Engedi. Per-

haps there was a major settlement in the Dead Sea area with other, smaller pockets of Essenes scattered around Palestine.

2.3. Admission and Organization. There was a three-year initiation period to attain full admission. During the first year, the novice followed the Essene way of life but remained outside the community; in the second and third years, he could join in their purificatory baths but could not share the common meals. Finally he was admitted as a full member after taking "awesome oaths" (Josephus *J.W.* 2.8.7 §§137-42). Rigid organization and adherence to authority characterized the group. Obedience to the elders was stressed, with severe offenses resulting in expulsion (Josephus *J.W.* 2.8.6 §134; 2.8.7 §142; 2.8.8-9 §§143-46).

2.4. Property. Entrants to the sect transferred their property to the order. Even food and clothing were shared. Extreme frugality was practiced. Members elected overseers of the common property (Josephus *J.W.* 2.8.3 §§122-23; 2.8.4 §126; *Ant.* 18 §20; Philo *Hypoth.* 10.4; 11.10-12; *Omn. Prob. Lib.* 12 §77; Pliny *Nat. Hist.* 5.15 §73).

2.5. Celibacy. Josephus, Philo and Pliny all state that all Essenes were male and did not marry (Josephus *Ant.* 18 §21; *J.W.* 2.8.2 §120; Philo *Hypoth.* 11.14-17; Pliny *Nat. Hist.* 5.15 §73). Josephus later mentions a second group of Essenes who did marry (*J.W.* 2.8.13 §§160-61).

2.6. Daily Work. While Josephus states that the Essenes worked entirely in agriculture, Philo indicates they were also shepherds, beekeepers and craftsmen (Josephus *Ant.* 15 §19; Philo *Hypoth.* 11.8). They did not own slaves or make implements of war (Philo *Omn. Prob. Lib.* 12 §§78-79), though Josephus speaks of John the Essene as leading in war (Josephus *J.W.* 3.2.1 §§9-12). Their daily routine consisted of rising before sunrise, prayer, work until midday, purificatory bath and common meal, work until evening and a second common meal (Josephus *J.W.* 2.8.5 §§128-32).

2.7. Rituals. Ritual *purity was very important to the Essenes. A daily purificatory bath was taken by all except novices, they dressed in white, and senior Essenes touched by juniors were required to wash (Josephus *J.W.* 2.8.3 §123; 2.8.5 §129; 2.8.10 §150). They treated the common meal as sacred, with the *priest praying before and after the meal, and silence during it (Josephus *J.W.* 2.8.5 §§129-33). Ritual morning

prayers were offered before sunrise (Josephus *J.W.* 2.8.5 §128).

With respect to *sacrifices, the evidence is unclear. The Latin version of Josephus indicates that the Essenes did not offer sacrifices, but the Greek text omits the negative. Assuming the Greek text is correct, Josephus indicates that the Essenes offered sacrifices by themselves rather than at the *temple, because of a disagreement over purification rites (Josephus *Ant.* 18.1.5 §19).

*Moses and the law were revered by the Essenes. As part of their devotion to the law, they were very strict in observing the *sabbath, not cooking, moving a vessel or even in relieving themselves (Josephus *J.W.* 2.8.9 §§145, 147; Philo *Omn. Prob. Lib.* 12 §§81-82).

2.8. Other Beliefs. The Essenes were interested in the study of "the writings of the ancients" (Josephus *J.W.* 2.8.6 §136; 2.8.12 §159; Philo *Omn. Prob. Lib.* 12 §§80-82), including both the biblical books and most likely other books as well, since Josephus notes that the Essenes used these writings to "search out medicinal roots and the properties of stones" (Josephus *J.W.* 2.8.6 §136). They also regarded the "names of the angels" as important (Josephus *J.W.* 2.8.7 §142). They were deterministic, believing that "fate is the ruler of all things" (Josephus *Ant.* 18.1.5 §18; 13.5.9 §§171-72).

Some Essenes apparently were *prophets. Josephus states that "rarely, if ever, do they err in their predictions" (*J.W.* 2.8.12 §159). Elsewhere he gives three examples of Essene prophecies: Judas (*J.W.* 1.3.5 §§78-80 and *Ant.* 13.11.2 §§311-13), Simon (*J.W.* 2.7.3 §§111-13 and *Ant.* 17.13.3 §§346-48); and Menahem (*Ant.* 15.10.4-5 §§371-79).

On the afterlife, Josephus depicts the Essene view as similar to that of the Greeks, with the body considered a prison house of the soul and the soul set free after the body's death (Josephus *J.W.* 2.8.11 §§154-58). Hippolytus states that the Essenes believed in a bodily resurrection (*Refut.* 9.27). Hippolytus may be adding a Christian slant to the Essene beliefs, but it is also possible that his account here is more trustworthy than that of Josephus.

3. The Essenes and the Qumran Community.

Ever since the discovery of the Dead Sea Scrolls, many scholars have identified the Qumran community as Essene. This identification rests on the similarities between the ancient accounts of

the Essenes and the archaeological and scroll evidence from Qumran.

3.1. Chronology. The archaeological and paleographic data from Qumran confirm the existence of the Qumran community from the mid-second century B.C. to A.D. 68. Since Josephus first mentions the Essenes during the exploits of Jonathan Maccabeus (c. 145 B.C.; Josephus *Ant.* 13.5.9 §171) and himself claims to have spent time with the group during his youth (c. A.D. 53), the chronology of the Essenes fits that of the Qumran community.

3.2. Location. Pliny's placement of the Essenes on the west bank of the Dead Sea between Jericho and Engedi is an important piece in the identification of the Essenes with the Qumran community. Pliny states that the Essenes lived among palm trees, fitting the region between Qumran and Ain Feshka, the spring immediately south of the community's farmland. There is no other known site that would match the description given by Pliny. Though Pliny writes about the Essenes in the present tense, even though Qumran would have been destroyed earlier (in A.D. 68), it is probable that he used source material written earlier than the final publication of his work in A.D. 77.

3.3. Admission and Organization. Admission into the Qumran community is described in detail in the Dead Sea Scroll writing entitled the **Rule of the Community* (1QS 6:13-23). The general process is similar to Josephus's account of the Essenes. Both speak of a period of time spent outside the group followed by a two-year initiation period within the community. The common meal is denied to the novice, and an elaborate oath is made before the applicant is fully accepted.

The Qumran documents also stress the importance of order and obedience to authority. The person of lower rank had to obey those of higher rank, and anyone who murmured against the authority of the community was expelled (1QS 5:2-3, 23; 6:2, 25-26; 7:17).

3.4. Property. Both the Qumran documents and archaeology of the site confirm the sharing of property that Philo and Josephus mention as a prominent feature of the Essenes. The *Rule of the Community* speaks of new members transferring their property to the community (1QS 1:11-12; 5:1-2; 6:17-22). Elsewhere, however, 1QS 7:8-9 deals with reimbursement to the community for damaged property; and another sectarian

writing, the **Damascus Document*, indicates that property could be lost or stolen from its owner (CD 9:10-16). Thus there may have been some personal property each member was allowed to keep.

Archaeology supports pooled possessions at Qumran. Hundreds of coins were found in the administration building, but none in the living quarters. Furthermore, according to F. Cross and E. Eshel, an ostrakon found in 1996 at the site records the gift of a man's property (including a slave) to the community, further supporting the practice of transfer of a new member's property to the group (though A. Yardeni disputes the Cross/Eshel reconstruction; see *IEJ* 47 [1997] 17-28, 283-87).

3.5. Celibacy. Evidence from Qumran is mixed on the matter of celibacy. The *Damascus Document* and the *Rule of the Congregation* speak of **marriage* (prohibition of polygamy in CD 4:19-5:2; see also CD 5:6-7; 7:6-7; 12:1-2; 16:10-12; and 1QSa 1:9-12), but the *Rule of the Community* is silent. In the excavation of the site of Qumran, all skeletons excavated in the main, planned part of the cemetery were male, while the outskirts also yielded skeletons of women and children. While this evidence has been used to suggest that there may have been both a celibate group at Qumran as well as a married group nearby, recent findings indicate that the skeletons on the outskirts may be only several hundred years old. Thus the only skeletons that come from the time of the ancient Qumran settlement are male. This supports the statements by Josephus, Philo and Pliny that the Essenes were male.

3.6. Daily Work. The scrolls do not speak of the daily work of the group at Qumran, but archaeology of the area indicates that they were involved in agriculture and craft work. This matches the statements by Philo and Josephus concerning the Essenes.

3.7. Rituals. Both the *Rule of the Community* and the *Damascus Document* describe purificatory washings (1QS 5:13-14; CD 11:21-22). In addition, archaeologists have found seven large cisterns with steps that may have been used for washings.

Evidence for the common meal spoken of by Josephus is also present at Qumran. The *Rule of the Community* describes the common meal (1QS 6:2-5; see also 1QS 5:13; 6:16-17, 22, 24-25; 7:19-20; 8:16-18). Archaeological evidence includes a

large room with an adjacent pantry containing more than one thousand vessels.

Similar to Josephus's statements on the subject, the matter of sacrifices at Qumran is not clear. Though CD 6:11-13 states that "none of those who have entered the covenant shall enter the temple to kindle his altar in vain," this statement may be speaking of exercising care when offering sacrifices rather than being an outright prohibition (see also CD 6:14; 11:17-22). Probably both Josephus and the Qumran data should be understood as permitting sacrifices that were offered in a ritually pure manner.

The Qumran scrolls also speak often of devotion to the law and strict sabbath observance (see 1QS 1:1-3; 5:8; 8:22; CD 10:14-11:18; T5:8-9, 12-13; 16:2).

3.8. Other Beliefs. The Essene interest in books is abundantly evident at Qumran. In addition to many sectarian works, biblical, deuterocanonical and *pseudepigraphical books are all well attested. As with the Essenes, there is much interest in angels in the Qumran writings (*1 Enoch, *Hodayot, *War Scroll and the *Songs of the Sabbath Sacrifice). A deterministic outlook is also seen in their writings, especially in the *Hodayot* (1QH 1:7-8; 7:31-32; 15:12-15, 17; see also 1QS 3:15-16; 9:23-24; 1QM 17:5).

The importance of prophecy and prophets is seen both in the large numbers of copies of biblical prophetic books as well as the citations from prophetic books in other Qumran literature. In addition, there are eighteen *pesharim, or commentaries, found at Qumran that reinterpret biblical prophetic texts to find fulfillment in the community's current situation (for example, 1QpHab; see Habakkuk Commentary).

On the *afterlife, the scrolls speak of everlasting life (1QS 4:6-8; CD 3:20) and possibly bodily *resurrection (see 1QH 3:10-22; 6:34; 11:12; 1QM 12:1-4).

3.9. Possible Discrepancies. All in all, there is a good correspondence between the Essenes as described by the ancient sources and the Qumran community, even in matters of small detail (see Beall, 123-29). Sometimes our sources concerning the Essenes disagree with themselves (for instance, on the issue of marriage, where Philo states the Essenes are celibate but Josephus acknowledges a group of Essenes who do marry). Sometimes the Qumran scrolls differ from one another (for example, the *Rule of the Community* speaks of joint ownership of prop-

erty, but the *Damascus Document* describes individual ownership). Here it should be recognized that these documents were almost certainly written during different stages of the community's development, and this may well account for the differences. In general, the classical sources on the Essenes agree more closely with the *Rule of the Community* than with the *Damascus Document*.

Some areas mentioned in the scrolls are not discussed in the classical descriptions of the Essenes: the importance of priests; prominent figures such as the Wicked Priest and the Teacher of Righteousness; the *messianic expectations of the group; and the solar *calendar. Perhaps Josephus and Philo did not consider these matters important to their overall purpose: to present this Jewish sect favorably to Greeks.

In recent years, especially with the publication of **Miqsat Ma'asey ha-Torah* (4QMMT), some scholars have gone back to an earlier suggestion that the Qumran community may be Sadducean rather than Essene. 4QMMT provides agreement with the Sadducees (versus the Pharisees) in a few legal matters, such as the view that a stream of liquid conveys impurity. But 4QMMT does not contradict any known Essene position; in fact, it supports Josephus's statement about the Essene avoidance of oil. In addition, the scrolls speak of the existence of angels and the importance of fate, both contrary to the Sadducean way of thinking as we know it.

In summary, though the precise history of both the Essenes in general and the Qumran community in particular is still hotly debated (see works in the bibliography for further discussion), both the chronology and the location of the Qumran community correspond well with what we know of the Essenes. The numerous parallels in customs and beliefs, as briefly outlined above, all point forcefully to the identification of the Qumran community as an Essene group.

4. The Essenes and the New Testament.

In light of the Dead Sea Scrolls, there has been a resurgence of interest in the question of Essene influence on the NT. The Essenes are not directly mentioned in the NT, as are the Pharisees, Sadducees and *Herodians, but they may have influenced some of the main people and writers of the NT. For the purposes of this section, the identity of the Qumran community as Essene will be assumed, and thus the Qumran

data will also be considered here. We will briefly look at four areas: John the Baptist, Jesus, Paul and John.

4.1. *The Essenes and John the Baptist.* Some scholars have contended that John the Baptist was an Essene. It is true that John began his ministry in the wilderness of Judea, that is, the western shore of the Dead Sea; his father was a priest; his diet and appearance were ascetic; and his baptism for the remission of sins is similar in some respects to the purificatory washings of the Essenes. Yet, while John the Baptist may have had some contact with the Essenes, it is unlikely that he was an Essene. John's ministry was centered north of Qumran at Bethany and Aenon (Jn 1:28; 3:23); John's diet of locusts and honey is not mentioned by the ancient sources or Qumran literature; and most importantly, his baptism was a one-time act performed publicly for anyone who came to him, not a daily washing available only to members of a sect. Still, the testimony concerning the Essenes from the ancient sources and Qumran literature helps to paint a fuller, richer background for the ministry of John the Baptist within first-century Judaism.

4.2. *The Essenes and Jesus.* A few scholars have suggested that Jesus was an Essene or possibly even the Teacher of Righteousness mentioned in Qumran literature. But these suggestions have less to commend them than the linkage of John the Baptist and the Essenes. Jesus' teachings differed from the Essenes on a number of vital issues: Jesus was not as concerned about the law (sabbath was made for humanity, not humanity for the sabbath); he was not ascetic; there is no emphasis on rituals in Jesus' ministry; and he freely associated with those regarded as unworthy by first-century Jewish standards. As for Jesus being the Teacher of Righteousness, the Teacher preceded the birth of Jesus by more than a hundred years; the Teacher was not regarded as the end-time Messiah; and there is no special significance attached to the Teacher's death (and no resurrection).

4.3. *The Essenes and Paul's Writings.* There are a number of similarities between Paul's writings and Essene/Qumran writings. These include the utter sinfulness of humanity; dualism, especially the figurative use of light and darkness (see esp. 2 Cor 6:14^f—7:1, which also contains the name *Belial, used frequently in Qumran literature); and the concept of mystery, indicating

a secret hidden in God and now made manifest. But the idea of the utter sinfulness of humanity is rooted first in the OT, which Paul cites freely in Romans 3; and Paul's solution to the problem of humanity's sinfulness—justification by faith in Christ—is nowhere found in Essene/Qumran theology. As for the light/darkness dualism representing good and evil, this concept too is seen frequently in the OT (e.g., Job 30:26; Is 5:20). And the content of the mystery for Paul is quite different from the Qumran sectarians: for Paul it is the church or salvation in Christ, but for the Qumran sect it is the interpretation of Scripture as given by the Teacher of Righteousness.

A possible reference to Essene thinking may be present in Paul's warnings against false teachers, especially in Ephesians and Colossians. At the least, Paul's opponents in these letters appear to have some of the same tendencies as did the Essenes: excessive observance of external rituals and devotion to angels, to mention but two.

4.4. *The Essenes and John's Writings.* Finally, similarities may be seen in John's writings and Qumran literature. Chief here are the dualistic concepts of light/darkness and truth/lying. While similar language is sometimes employed in John's writings and the scrolls (e.g., the sons of light, the Spirit of truth), the content of the image is often quite different. For instance, at Qumran the Sons of Light are those who obey the law, while in John the sons of light are those who follow the Light of the world, Jesus. And in the sectarian writings, the spirits appear to be cosmological beings. One important result of a comparison of the Dead Sea Scrolls with John's writings is that there is no longer need to assume a second-century Greek model for the concepts in John, since these parallels also clearly existed within a first-century Palestinian environment.

While direct Essene/Qumran influence upon the people and writings of the NT is difficult to prove, a greater understanding of this ancient Jewish sect significantly enhances our knowledge and appreciation of the first-century Jewish background of the NT.

EXILE

The term *exile* conjures up social, political and religious images of judgment, captivity, banishment, displacement, uprootedness, alienation

and deportation. In the OT exile constitutes a major theme, weaving itself through almost every major account from Genesis to Malachi. It is so pervasive that the OT has on occasion been referred to as the foundational metanarrative of exile. Some of the more well known expressions of exile are found in stories such as *Adam and Eve's banishment from the garden of Eden, Abraham's journey to the land of Canaan, Joseph's deportation to Egypt, *Moses' wandering in the wilderness, David's escape from Saul's paranoia, and the most established of them all: *Israel's exilic experiences in Assyria and Babylon. The theme of exile, however, does not function in isolation. In the two most important expressions for the study of the NT—the stories of Adam and Eve's banishment and the deportation of the Israelites to Babylon—exile, which is always a result of sin, is accompanied by the hope that God will liberate and restore.

1. Exile in Second Temple Judaism
2. Exile in the Teaching and Activities of Jesus
3. Exile in the Gospels
4. Exile in Paul

1. Exile in Second Temple Judaism.

While the biblical accounts of exile serve as an important background for NT studies, the retelling and reexperiencing of these accounts among the Jewish people in the Second Temple period is all the more influential. When the literature of this period is probed to see if a fulfillment of the promises proclaimed by the exilic prophets was realized, one is hard pressed to show a postexilic return in the grandiose manner often predicted. The hope of the prophets, from Isaiah to Zechariah, of a return from exile was not realized. When Persia provided an opportunity for an exodus, the majority of Jews either remained in Babylon or assimilated themselves among their neighbors (see Diaspora; Jewish History: Persian Period).

During the Second Temple period, many in Palestine still considered themselves as being in exile because they were under foreign rule, which was an indication to the faithful that Yahweh had not yet returned to Zion (Ezra 9:8-9; Neh 9:36). This perception was continually confirmed by the oppressive regimes of Antiochus IV Epiphanes, *Pompey and Titus (see Seleucids and Antiochids; Jewish History: Roman Period). The underlying reason why many Jews saw

themselves as still remaining in exile was their assumed perennial state of sinfulness (Bar 1:15—3:8; *1 Enoch* 89:73-75), a concept that is grounded in the "cursing and blessing" motif in Deuteronomy 27—32. The true return from exile was inseparably bound with the forgiveness of sins. And as long as Israel was dominated by foreign oppressors, the sins were not yet forgiven.

Several key examples within this period underscore not only the feeling of exile but also the *eschatological anticipation of God coming to restore his people (Is 40:3-5). One important example that has often been considered is Daniel 9, a text that extends Jeremiah's prophecy (e.g., Jer 25:11-12) of a seventy-year desolation for Jerusalem sevenfold. Recently J. M. Scott, following A. Lacocque and O. H. Steck, has shown how Daniel's *prayer of confession for the transgression of his people parallels the "sin-exile-restoration" theme of Deuteronomy 27—32 and thus brings to the forefront the reason for the belief in a continued exile, namely, covenant unfaithfulness.

Second, the *Dead Sea Scrolls contain a number of references that recall biblical accounts of the Egyptian exodus (e.g., 4Q385 [see Pseudo-Ezekiel]), the Assyrian exile (e.g., 4Q372 [see Apocryphon of Joseph]) and especially the Babylonian exile (e.g., CD 1:4-11 [see Damascus Document]). In some cases the imagery is used in relation to the *Qumran community that is camped in the wilderness outside Jerusalem awaiting the eschatological battle that will bring liberation (e.g., 1QM 1:3 [see War Scroll]). The community understands itself as the righteous remnant that is in exile and yet in the process of exodus. In other cases, the imagery is used in relation to the Teacher of Righteousness who is pursued by the Wicked Priest (e.g., 1QpHab 11:4-6 [see Habakkuk Commentary]) who seeks to destroy the Teacher and to disperse his followers. Despite the difficulty in trying to establish a consistent exile theology, the exilic imagery plays a significant role in the soteriological understanding of the community at Qumran.

A third example is found in *Josephus's depiction of first-century hope and the idea of exile in the activities of Theudas (Josephus *Ant.* 20.5.1 §§97-98) and the Egyptian Jew (Josephus *J.W.* 2.13.4-5 §§258-63; *Ant.* 20.8.6 §§167-72). Each of the two revolutionaries saw himself as the promised successor to Moses (Deut 18:15, 18-19) who would reenact the exodus and lead

the Israelites in a new conquest of the promised land. Though this example expresses a more military tone, it nevertheless conveys the common feeling of exile among the Jews in first-century Palestine.

And fourth, one of the most expressive texts showing the enduring experience of exile is the prophecy of restoration in Tobit 14:5 (see Tobit), which reads:

But God will again have mercy on them, and God will bring them back into the land of Israel; and they will rebuild the temple of God, but not like the first one until the period when the times of fulfillment shall come. After this they all will return from their exile and will rebuild Jerusalem in splendor; and in it the temple of God will be rebuilt, just as the prophets of Israel have said concerning it. (NRSV)

On the whole, the exilic motif is found dispersed throughout literature extending from the Babylonian era well beyond into the tannaitic and early amoraic periods (*Sir* 36:8; *T. Mos.* 10:1-10; *1 Enoch* 85—90; *T. Levi* 16—18; *Apoc. Abr.* 15—29; *T. Jud.* 24:1-3; *Jub.* 1:15-18, 24; *T. Naph.* 4:2-5; *T. Asher* 7; *T. Benj.* 9; 2 Macc 1:27-29; 1 Esdr 8:73-74; 2 Esdr 9:7).

2. Exile in the Teaching and Activities of Jesus.

Biblical exile theology together with its expression in the interpretive traditions in early Judaism constitutes an important background for understanding Jesus and the origins of Christianity. With reference to Jesus, much discussion has taken place about the relationship between Jesus' understanding of his mission and the alleged despair or feeling of exile experienced in popular Jewish *piety, especially among peasants who endured not only Roman occupation and a burdensome tax load, but also the corruption of the *temple establishment.

N. T. Wright's proposal in *Jesus and the Victory of God* has recently captured much of the attention. According to Wright, Jesus understood himself to be the Messiah who had come to liberate Israel from its continuing state of exile ("the present evil age") and bring it into a state of restoration ("the age to come"). He came as a messiah who not only represented the people of Yahweh by taking on himself the suffering of the nation in the tradition of the Jewish martyrs and the wrath of disobedient Israel but also enacted their liberation from exile by intentionally

dying in order to achieve victory over Satan, who constituted the true enemy of Israel. The result is a renewal of the covenant, the forgiveness of sins, the coming of the kingdom of God and the fulfillment of Israel's original mission to be a servant people who are a light to the world.

Whereas Wright's approach is broad, other scholars have pointed to specific points of contact between Jewish exile theology and the teaching and actions of Jesus. For example, C. A. Evans argues that at least five features justify a connection: Jesus' appointment of the Twelve, which may suggest the reconstitution of the twelve tribes of Israel; the request for a sign from heaven (Mk 8:11-13), which may reflect the signs promised by *messianic pretenders; Jesus' appeal to Isaiah 56:7 during the demonstration in the temple (Mt 21:12-13 par.), which, when the oracle of Isaiah 56:1-8 is in view, indicates that Jesus chastises the religious leaders for neglecting to live up to the eschatological expectation; Jesus' allusion to Zechariah 2:6 (Heb v. 10) in Mark 13:27, which recalls the gathering of God's people; and Jesus' criticism of the Jewish religious leaders (Mt 11:21-23 par.), which appears to threaten judgment of exile.

3. Exile in the Gospels.

Exile theology has also played an important role for some scholars in understanding the aim of the Evangelists. Though the exile motif emerges in all the Synoptics, perhaps the most concentrated use of the exile-exodus motif is found in recent studies of Mark, which is not surprising given the Evangelist's placement of the quotation of Isaiah 40:3 at the beginning of his narrative. For example, R. E. Watts argues that the exile-exodus motif in Isaiah provides the best integrative paradigm for reading Mark's Gospel as a whole. The internal basis for Watts's schema is the conflation of Scripture texts from Exodus 23:20, Malachi 3:1 and Isaiah 40:3 in Mark 1:2-3, which fuse together two basic thematic contours of the Gospel: the fulfillment of the delayed new exodus promise and the possible judgment due to the lack of preparedness.

In this light, Watts claims that recognized references to Scripture were perceived by the audience as iconic indicators that pointed back not so much to the larger biblical themes of restoration as antitypes but to actual promises that were regarded as fulfilled in the coming of Jesus. In addition to the textual basis, Watts claims that

the self-understanding of Mark's original audience was shaped by the ideological paradigm of Israel's hope of restoration since the exile, namely, the prophetic transformation of the first exodus into the future hope of a new one.

Watts's attempt to integrate Markan structure and themes, particularly the function of Isaiah's new exodus motif within a structural paradigm, is a valiant response to approaches that reject theological or literary coherence of Mark's Gospel as a whole. And "the way" or "new exodus" may well be a legitimate theme that aids the reading of Mark's story. The difficulty, however, with this and other similar readings of Mark is that the metanarrative of the Isaianic new exodus threatens to overshadow whatever narrative might be discovered as latent in the Gospel itself as well as the role of Mark's quotations and echoes of other books of Scripture, such as the Psalms, Daniel, Zechariah and the Pentateuch. Metanarratives may be helpful as analogies, but as hermeneutical keys they can distort the originality and integrity of Mark's story and his creative reading of Scripture.

Matthew and Luke also incorporate the exile motif, but it is not as pronounced. In Matthew it often lies in the shadows of more major motifs such as Jesus as a second Moses who comes to bring the new Torah and Jesus as the fulfillment of Scripture. The prominent motifs of exodus and liberation are grounded in an assumption that Israel is in a state of alienation and in need of restoration. The same state of exile undergirds Luke's major theme of salvation, though unlike in Matthew, it also incorporates the Gentiles. What is further unique about Luke is that his Jesus preaches not only a spiritual liberation but a social and economic one as well. Luke's emphasis on the marginalized, oppressed and neglected people of his day (e.g., the poor, *women) suggests that the motif of exile can be extended to the daily realities of life (Lk 6:20-24; 12:16-11; 14:12-14; 16:19-26). One of the ways in which this is strongly conveyed is through Jesus' announcement in Luke 4:16-21 (quoting Is 61:1-2; 58:6), when he proclaims to his fellow Nazarenes at the beginning of his ministry that he has come to bring "good news to the poor," "liberty to the captives," "freedom for the oppressed" and the arrival of the "acceptable year of the Lord."

In the Johannine tradition, the motif of exile is also subtle, often overshadowed by the theme of exodus, expressed in Jesus' activities

as a liberator and the prophet like Moses. Several scholars have observed that John is not only influenced by the promise of the prophet in Deuteronomy 18:15-18 but is indebted to the Moses tradition especially for the construction of Jesus' farewell discourse. In addition to the Deuteronomistic influence, John presents Jesus as a preexistent messianic figure who comes to rescue his people from this world of darkness, hostility and sin. Those who place their faith in Jesus participate in "eternal life" (Jn 3:16). They are born of the Spirit (Jn 3:5), live in the "light" (Jn 8:12), become the children of God (Jn 1:12), are known and given knowledge (Jn 10:14) and are connected with God through the Son of Man who spans heaven and earth (Jn 1:51). By implication, these images of restoration and exodus suggest that the individual who does not believe in Jesus exists in the realm of darkness, ignorance and death. Since those who do not believe in Jesus are not regarded as the "children of God," they are in a spiritual sense living in exile because they are alienated from God.

4. Exile in Paul.

With regard to Paul, the exilic motif fits well within his large-scale attempt to explain the coherence of the revelation of Jesus with the salvation history of Israel. Although Paul never explicitly mentions the exilic judgment of Israel, his understanding of the "old covenant" that spanned from Abraham to Christ is informed by it. The larger motif of Israel's restoration in light of the coming of Christ is necessarily rooted in Israel's and the world's alienation from the Creator (see *DPL*, Restoration of Israel). For Paul, the coming of Christ brought to an end an era that resulted in judgment against both Israel and the world. Israel's failed mission to be a light to the world, due to its sin, resulted in the world's slavery to sin and "exile" from God (e.g., Gal 1:4; 4:1-11). The new era in Paul's twofold redemptive history brings to fulfillment the mission of Israel in the coming of its representative, Jesus Messiah, whose obedience unto death and vindication in the resurrection constitutes a new Adam and a new Israel (e.g., Rom 5:12-21). This is effective, however, only for those Jews and Gentiles who receive by faith through the Spirit their inheritance as adopted sons and daughters of God (e.g., Rom 8:14-17). Members of this remnant are no longer "in Adam" but "in Christ,"

for they have been liberated from "slavery" (and thus released from exile) and re-created to be the eschatological people of God (2 Cor 5:17).

FAMILY AND HOUSEHOLD

The vast disparity between the income of rich and poor makes it somewhat difficult to generalize about all ancient households; a wealthy householder had more than seven hundred times the income of a peasant, and the extremely wealthy might have more than fifteen thousand times the income of a peasant (Bastomsky). Although most of the literary remains depict life in fairly well-to-do households that could include *slaves, most of the free inhabitants of the Roman Empire were impoverished peasants whose households differed significantly from this norm. Their houses were overcrowded (sometimes twenty-five to a one-room house; MacMullen, 13-14), helping explain why many peasants abandoned babies on local trash heaps. Nevertheless, extant information on ancient Mediterranean households is abundant and provides numerous insights into first-century home life. Much information from the ancient household relevant to early Christian texts focuses on *marriage; here we focus on other household relationships, especially parent-child and slaveholder-slave relationships.

1. Household Codes and Marriage
2. Children
3. Slaves
4. Conclusion

1. Household Codes and Marriage.

Ancient moralists frequently defined household relationships in terms of the authority relations between the male householder and other respective groups within the aristocratic household: wives, children and slaves.

1.1. Household Codes. *Aristotle developed household codes to advise aristocratic men

about the various ways they should rule their wives, children and slaves (Aristotle *Pol.* 1.2.1-2, 1253b; 1.5.3-4, 1259b; 3.4.4, 1278b); see Balch 1981, 1988); these three groups also appear together (with some other groups) not only in Greek (e.g., Artemidorus *Oneir.* 1.24) but also in *rabbinic sources (Swidler, 84, 117). Aristotle and others thought that order in the household would produce order in society as a whole; thus societal norms and household norms affected one another. Although there were differences between them (e.g., Aristotle *Pol.* 1.1.2, 1252a; 1.5.6, 1260a), codes concerning household management could be linked with the broader category of advice on city management, as in the context in Aristotle (Aristotle *Pol.* 1.2.1, 1253b) and some other works (Lührmann; Lycurgus 21 in Plutarch *Sayings of Spartans, Mor.* 228CD).

Household codes probably also affected the formulation of some laws in terms of relationships among children, wives and slaves (Gaius *Inst.* 1.48-51, 108-19). *Josephus's apologetic included an emphasis on biblical law's great virtues (Josephus *Ag. Ap.* 2.42 §§291-96), and it is not surprising that Jewish writers with Greek or Hellenized audiences stressed such codes as a way of identifying Judaism with the prevailing values of the dominant culture (see Balch 1988, 28-31). Citing the three groups that appeared in household codes from Aristotle forward, Paul adapts the content of the codes but retains their structure (Eph 5:21-6:9; Col 3:18-4:1), possibly to help Christians witness within their culture (1 Cor 9:19-23; Tit 2:5, 8; cf. Keener, 133-224).

1.2. Marriage. Although some writers advocated either celibate or promiscuous singleness, marriage was the norm in both Jewish and broader Greco-Roman society. Adultery was widespread but viewed as immoral (see Adultery, Divorce); divorce was widespread but usually

was viewed as merely unfortunate. Although homosexual relations were common, especially in Greek culture, marriages were heterosexual, a primary purpose of marriage being seen as procreation, and the Greek and Roman norm was monogamy. In Greek society men on average were about a decade older than their wives, perhaps due to a shortage of women stemming from a greater percentage of girl babies being abandoned; among Jews the age disparity was less, but throughout the ancient Mediterranean women usually first married in their teens. Husbands held much higher rank than did wives in the marriage relationship, though the husbands proved more dominating in some societies (e.g., classical Athens) than in others.

In contrast to Jewish people, most Mediterranean Gentiles, especially those influenced by Greek culture, did not limit male sexual activity to marriage. In Greek culture, where men typically married around age thirty (Hesiod *Op.* 696-98; see Marriage), boys could have intercourse with slaves, prostitutes or one another.

1.3. Relations with Stepfamily and Extended Kin. For remarriages, see the article on divorce, but here we comment briefly on typical relations in stepfamilies. The image of the stepmother was often one of cruelty (Lucan *Civ. W.* 4.637-38; Dixon, 49), even a "viper" (Euripides *Alc.* 310), and in a dream constituted a bad omen (Artemidorus *Oneir.* 3.26). Many times stepchildren resented their father's new wife; for example, a man throwing a stone at a dog missed, struck his stepmother instead and concluded that he had done better than expected (Plutarch *Dinner of 7 Wise Men* 2, *Mor.* 147C). Stepmothers could be compared with days of misfortune, as opposed to good days compared with a mother (Hesiod *Op.* 825; Aulus Gellius *Noc. Att.* 17.12.4).

Thus one selecting a new wife might consider a stepmother who would care for the children (e.g., Tacitus *Ann.* 12.2); it was said that one lawgiver even prohibited from office a man who brought home a stepmother over his children, regarding it as a sign of poor administrative skill (Diodorus Siculus *Bib. Hist.* 12.12.1). Sexual desire for a stepson or a stepmother was regarded as terrible (Euripides *Hipp.* 885-90; Appian *Rom. Hist.* 11.10.59; Gaius *Inst.* 1.63-64; *Pseud.-Phoc.* 179-81), though it was known to exist (Apuleius *Met.* 10.3), and some Eastern rulers were thought to allow for this more readily (Appian *Rom. Hist.* 11.10.61).

Extended kin ties were important (see Gardner, 5-6), but inscriptions suggest that the nuclear family was the primary close bond in Roman antiquity (Saller and Shaw), as well as in Roman Palestine (Goodman, 36; cf. Prov 27:10). Male patriarchs held power not only over their children but also over grandchildren and great-grandchildren, if they lived that long (Gardner, 5-6).

Fictive kin ties were also important in ancient Mediterranean society; fictive kinship language was common both among ethnic and religious groups, so that a Jew might thus address fellow Israelites (Tob 5:10; 6:10; 7:3; 2 Macc 1:1; Acts 2:29; 3:22; 9:17). Sibling terminology could likewise extend to fellow rabbis or fellow disciples (*Sipre Deut.* 34.5.3; *b. Abod. Zar.* 18a, *Bar.*; cf. Mt 23:8); co-initiates into mysteries (Burkert, 45); alliances (e.g., 1 Macc 10:18; 12:6, 10, 21; 14:40); friendships (Euripides *Iph. Taur.* 497-98; Plutarch *Many Friends* 2, *Mor.* 93E; Marcus Aurelius *Med.* 1.14; *Ahiq.* 49, col. 4); and other commonalities (*CPJ* 3:41 §479; Diodorus Siculus *Bib. Hist.* 1.1.3); in conspicuous hospitality to a stranger (*T. Abr.* 2:5B; see also fictive parental language in Virgil *Aen.* 9.297; Diodorus Siculus *Bib. Hist.* 17.37.6; Rom 16:13).

2. Children.

Both minor and adult children were responsible to honor their parents; adult children were required to care for aged parents.

2.1. Honoring and Obeying Parents. Despite some Jewish suspicions that Gentiles might dishonor or even kill their parents (*Sipre Deut.* 81.4.1-2), Greek moralists stressed honoring one's parents, which could appear with similar exhortations to respect authority in paraenesis (Isocrates *Dem.* 16; *Or.* 1; Solon in Diogenes Laertius *Vit.* 1.60). Greek thinkers sometimes advised that one should behave toward one's parents as one would wish one's children to behave toward oneself (Isocrates *Dem.* 14; *Or.* 1; Hierocles *Fraternal Love* 4.27.20; Thales in Diogenes Laertius *Vit.* 1.37). Jewish wisdom similarly stressed that one's old age would go better if one took care of one's father in his old age (Sir 3:12-15); in Jewish narrative one who dishonored his parents might meet the same fate at the hands of his children (*Jub.* 35:10-11; 37:5, 11).

Jewish tradition emphasized the honor of parents even more heavily than did Greek and Roman tradition (*Jub.* 7:20; 35:1-6; *Ep. Arist.*

238; *Sent. Syr. Men.* 95; *Pseud.-Phoc.* 180; *Gen. Rab.* 36:6; Eph 6:1-3). One should honor one's parents, without whom one would not exist (*'Abot R. Nat.* 35 §79). Because one biblical text mentions the mother first (Lev 19:3), rabbis argued that one should honor both parents equally (*Mek. Pisha* 1.28; Bahodesh 8.28-32; *Gen. Rab.* 1:15); one should "honor" and "please" one's mother, given the pregnancy and the pains of birth she endured for her children (Tob 4:3-4; *Sent. Syr. Men.* 96-98). Later rabbis consistently extolled people who honored their parents (*b. Qidd.* 31ab; *Pesiq. Rab.* 23/24:2). Not surprisingly, a Jewish philosopher like *Philo, who draws on both Jewish and Greek thought, strongly emphasizes honoring parents (*Philo Spec. Leg.* 2.42 §§234-36; *Ebr.* 5 §17; *Omn. Prob. Lib.* 12 §87).

Jewish teachers often claimed that one should honor one's parents directly after God (*Josephus Ag. Ap.* 2.27 §206; *Sent. Syr. Men.* 9-10; *Pseud.-Phoc.* 8); many considered honoring parents the greatest commandment in the law (*Ep. Arist.* 228), though they undoubtedly implicitly accepted obedience to God first. Some rabbis held that the honor due one's parents is equivalent to that due God, though ultimately obedience to God came first (*b. B. Mes.* 32a, *Bar.*); because parents participated in a person's creation, honoring them counted as honoring God (*b. Kid.* 30b, *Bar.*; *Pesiq. Rab.* 23/24:2). For Philo parents are copies of God's power because they also create (*Philo Spec. Leg.* 2.1 §2); as begetters they are midway between human and divine, to their children what God is to the world (*Philo Spec. Leg.* 2.38 §§224-25; cf. *Decal.* 22 §§106-7).

The Jewish understanding of parents as divine representatives probably reflects broader Mediterranean conceptions; philosophers sometimes regarded parents as images of the gods (*Hierocles Toward One's Parents* 4.25.53). On a more popular level, a Gentile could exhort a sibling to honor their mother as one would honor a deity (*Select Papyri* 1:320-21, lines 27-28); deities like Isis also offered such exhortations (*Horsley*, 1:11, 17 §2); one should not dishonor one's father because Zeus was god of fathers (*Epictetus Disc.* 3.11.5). Philosophers often counseled the highest honor for gods, but among people the highest honor for parents (Pythagoras in *Diogenes Laertius Vit.* 8.1.22-23; *Stoics in *Diogenes Laertius Vit.* 7.1.120; *Hierocles Toward*

One's Parents 4.25.53).

Moralists also insisted that one should love one's parents (*Dicta Catonis* collection of distichs 2; *Cato Distichs* 3.24; *Sent. Syr. Men.* 94); the affection between parents and children could be undermined only by a terrible misdeed (*Cicero Amicitia* 8.27). One item for biographers' praise was gratitude to one's parents (*Diogenes Laertius Vit.* 10.1.9). The harmony of children with parents was highly valued (Menander's maxims 4 in *Select Papyri* 3:260-61). Foolish behavior shamed one's family (*Prov* 10:1; 17:21, 25; 23:24-25; 28:7; 29:3, 15), and ancients typically understood juvenile delinquency as a problem for the youth's family (Garland).

Anger with one's mother was shameful (*Diogenes Laertius Vit.* 2.29). Striking one's father was very bad (e.g., *Aristophanes Nub.* 1332-33), warranting death in Jewish law (*Ex* 21:15); Josephus felt that even attempted misbehavior toward parents warrants execution (*Josephus Ag. Ap.* 2.31 §217). Some early writers had predicted that children would stop honoring aged parents in the end time, after which the human race would be quickly destroyed (*Hesiod Op.* 182-85; cf. *Mk* 13:12; *2 Tim* 3:1-2). Abusive language toward an aged father invited divine punishment (*Hesiod Op.* 331-34); dishonoring one's mother invited calamity (*Dion. Hal. Ant. Rom.* 8.53.1). Even a countercultural sage like Diogenes the Cynic reportedly reproved one who despised his father by reminding him that he owed even his ability to act thus to his father.

Early Jewish and Christian sources also warned of divine judgment against those who dishonored their parents (*Sent. Syr. Men.* 20-24; *Sib. Or.* 1.74-75; 2.275-76; *Rom* 1:30, 32; *Ethiopic Apoc. Peter* 11). Those who honored parents would have long life (*Ex* 20:12; *Deut* 5:16; *Sir* 3:5-6; *Pseudo-Philo Bib. Ant.* 11:9); many taught that this work would also be rewarded in the world to come (*m. Pe'ah* 1:1; *Sipre Deut.* 336.1.1; *ARN* 40A).

Part of honoring one's parents was obeying them. Although far more texts emphasize honoring parents than obeying them, perhaps because the latter applied in practice most fully to minors still at home, many texts do emphasize children's obedience to their parents. Only children who learned the discipline of obedience would understand how to exercise authority over others (*Isocrates Ad Nic.* 57, *Or.* 3.37). Some qualified the demand by debating whether all a father's commands must be obeyed (*Aulus Gel-*

lius *Noc. Au.* 2.7; cf. 1 Sam 19:1-6; 20:31-33); an adult son who found it necessary to act contrary to his mother's wishes nevertheless would need to do so very respectfully (Dixon, 180-82, 234). Jewish wisdom emphasized honoring and obeying one's parents (Sir 3:1-4) in deeds as well as words (Sir 3:8), serving them as one's masters (Sir 3:7); positive models in stories also honored and obeyed their parents (*T. Jud.* 1:4-5; *7. Abr.* 5B).

Some philosophers did write that gratitude toward one's parents for conception was unnecessary, since they had procreated for pleasure rather than intentionally (Diogenes *Ep.* 21); true kinship was determined by shared commitment to the good, rather than genetic ties (Diogenes Laertius *Vit.* 7.1.33), just as in Jewish texts God's law took priority over family fidelity (Deut 13:6-9; 4 Macc 2:10). Skeptics like Sextus Empiricus even regarded such norms as parent-honoring as cultural, pointing to Scythians who allegedly slit their parents' throats once they reached the age of sixty (*Pyr.* 3.210, 228). Most, however, counseled that one bear with even an unjust parent (Publilius Syrus 8) and respected a son who did so (Appian *Rom. Hist.* 3.2; *b. Qidd.* 31a).

2.2. Providing for Aged Parents. Providing for aged parents was essential in ancient ethics (Diogenes Laertius *Vit.* 1.37), and in Jewish tradition it was part of honoring them (*Jub.* 35:11-13). Roman law required children to support aged parents or face imprisonment, an implicit exception obviously being made for minor children (Quintilian *Inst. Orat.* 7.6.5); elsewhere in Mediterranean antiquity a mother could file suit against a daughter who failed to provide for her (*P. Enteuxeis* 26; 220 B.C.). From a Jewish and a Christian standpoint, whoever abandoned parents in old age was like a blasphemer (Sir 3:16) or worse than a typical Gentile (1 Tim 5:8).

Ancient writers viewed this care of parents as repayment for rearing children (1 Tim 5:4). From an early period writers complained that those who died young failed to repay their parents (Homer *Il.* 4.477-78; 17.302). Some early Greek writers declared that children ought to repay aged parents for rearing them but would not do so in the end time (Hesiod *Op.* 188-89). Caring for parents in this manner imitated their care for the children after birth (Hierocles *Toward One's Parents* 4.25.53); however one provides for one's parents, one can expect from one's children (Diogenes Laertius *Vit.* 1.37).

Some Jewish sources claim that a son who fails to provide for his parents, so repaying them, must die by stoning (Josephus *Ag. Ap.* 2:28 §206); or that those who fail to repay aged parents, abandoning them, will suffer eternal punishment (*Sib. Or.* 2.273-75, maybe a Christian interpolation). Some other cultures also believe that God punishes those who neglect aging parents (Mbiti, 269); modern Western culture, with its societal safety nets for the aged, is more the exception than the rule in history. Some of these texts may reflect the wider concern for just treatment of widows (Is 1:17; Wis 2:10; Jas 1:27; *Sipre Deut.* 281.1.2; elsewhere in the Mediterranean, e.g., *P. Ryl.* 114.5), incumbent first of all on the heirs (*Gen. Rab.* 100:2).

2.3. Stereotypical Parent Images. In contrast to stereotypes one might expect from Greek New Comedy, the Roman mother was seen not as a sentimental model of gentleness but as an "unbending moral mentor, guardian of traditional virtue and object of a lifelong respect" (Dixon, 7; cf. 105). She was a figure of authority to her children of both genders, especially for the daughters (Dixon, 227). The most critical point in the mother-daughter bond may have formed especially when the daughter became a young woman starting her own family (Dixon, 211-12). Perhaps in contrast with (or nuancing) this western Mediterranean model, however, eastern Mediterranean Jewish sources portray mothers as more affectionate than fathers, sharing their children's feelings (4 Macc 15:4).

Fathers were expected to provide for their children (Socrates *Ep.* 6; Seneca *Ben.* 3.11.2; *Ep. Arist.* 248; 2 Cor 12:14) and became the ideal model for ancient benefactors (Stevenson). They could be known for their gentleness (Homer *Odyss.* 2.47, 234; 1 Cor 4:15, 21; 1 Thess 2:11; Dixon, 28). One could address as "father" an elder brother who functioned more broadly in this role (*P. Par.* 47.1).

Fictive kinship terminology based on active rather than genetic relationship was common (e.g., Phaedrus *Fables* 3.15.18), and "father" was a title of great respect (Homer *Il.* 24.507; Virgil *Aen.* 8.115; 9.735; 11.184, 904; 12.697). Ancients employed such fictive kinship terminology in an honorary manner, sometimes in direct address (e.g., 2 Kings 5:13; 13:14; Diodorus Siculus *Bib. Hist.* 21.12.5). For example, they employed titles like "father of the Jews" (2 Macc 14:37); "fathers of the world" for the first-century schools of Hil-

lel and Shammai (*Gen. Rab.* 12:14); "fathers" for Roman senators (Plutarch *Rom.* 58, *Mor.* 278D; Lucan *Civ. W.* 3.109; Livy *Hist.* 1.8.7; 1.26.5; Sallust *Catil.* 6.6), for other societal leaders or benefactors (Dionysius of Halicarnassus *Ant. Rom.* 12.1.8; Pausanias *Descr.* 8.48.5-6; 8.51.7) and for older mentors (Homer *Odys.* 1.308). "Father" could apply to any respected elders (Acts 7:2; 22:1; 1 Tim 5:1; 1 Jn 2:13; 4 Bar. 5:28; Homer *Il.* 24.507); thus, for example, the honorary title "father of a synagogue" (e.g., *CJJ* 1:xcv-xcvi; 1:66 §93; 1:250-51 §319); see also "mothers of synagogues" (*CJJ* 1:118 §166; 1:362 §496; 1:384 §523). Age by itself was grounds for respect (*t. Meg.* 3:24; Hom. *Il.* 1.259; 23.616-23), so from the earliest period younger persons could address older men respectfully as fathers (Homer *Il.* 9.607), and older men could address younger men as sons (Homer *Il.* 24.373; *Odys.* 1.308; 4 Bar. 5:28), as could leaders their followers (e.g., Virgil *Aen.* 1.157). One could address even an older stranger as "father" (Homer *Il.* 24.362, 371; *Odys.* 7.28, 48; 8.145, 408; 17.553; 18.122; 20.199).

Various texts apply father/son language to teachers and their disciples (Epictetus *Disc.* 3.22.82); disciples were called children of their teachers (4 Bar. 7:24; *Sipre Deut.* 34.3.1-3, 5; 305.3.4; 3 Jn 4), and their teachers were their fathers (2 Kings 2:12; 4 Bar. 2:4, 6, 8; 5:5; *t. Sanh.* 7:9; Mt 23:9). Wisdom discourses, which employ the sort of rhetoric one would expect among the early sages, were often addressed to sons (Prov 1:8; *Ahiq.* 96.14A; Sir 2:1; 1 Enoch 81:5); such wisdom language often occurs in the testamentary *genre and hence requires such language (*Jub.* 21:21; Tob 4:3-12; 1 Macc 2:50, 64; 1 Enoch 92:1; *T. Job* 1:6; 5:1; 6:1; *T. Reub.* 1:3). Because rabbis sometimes claimed greater respect than parents (*m. B. Mes.* 2:11; *m. Ker.* 6:9; *Sipre Deut.* 32.5.12), it is not surprising that some early sages used the paternal title *abba* in the same way that most came to use "rabbi" (Sandmel, 106). Thus Jesus calling his disciples "children" (Jn 13:33) would have offered ancients no confusion between the Father and Son roles elsewhere in that Gospel.

2.4. Paternal Authority. It is not without reason that Paul addresses not parents but fathers in Ephesians 6:4: a father held the primary authority in the household as the *paterfamilias*, the male head of the home addressed in household codes (see 1.1 above). By contrast, despite the authority inherent in their role, mothers held

no legal authority over their own children (Gaius *Inst.* 1.104).

A father was expected to govern his household (Marcus Aurelius *Med.* 1.9). Indeed, because the skills necessary to govern a household were also those necessary to govern cities (Euripides *El.* 386-87; Isocrates *Ad Nic.* 19, *Or.* 2; Plutarch *Dinner of Seven Wise Men* 12, *Mor.* 155D) and because it was natural to reason from private to public affairs (Demosthenes *Leq.* 9), many regarded this demonstration as a prerequisite that one could govern in the larger society (Isocrates *Ad Nic.* 41, *Or.* 3.35; Diodorus Siculus *Bib. Hist.* 12.12.1; Marcus Aurelius *Med.* 1.16.4; Diogenes Laertius *Vit.* 1.70; *Sipre Deut.* 32.5.12; 1 Tim 3:4-5).

Patria potestas, the father's authority of life and death over family members, permeated the fabric of Roman society (Lacey) but had declined in effectiveness by the period of the empire to the extent that in practice fathers could not kill their children (Sextus Empiricus *Pyr.* 3.211; Carcopino, 76-80), though some laws were officially revoked only much later. The father's power of life and death over children was distinctive of Roman law (Gaius *Inst.* 1.55), but Josephus concluded that parents had sufficient authority to function as their children's judges (Josephus *Ant.* 4.260).

Paternal authority remained the standard throughout the Mediterranean world; a writer could describe the father's just rule over his children as a "universal law" (Dionysius of Halicarnassus *Ant. Rom.* 3.23.19). Greek ethical tradition granted a father authority over his children comparable to that of a ruler over his subjects (Aristotle *Eth. Nic.* 8.11.2, 1161a). Children were freed from the Roman father's authority only by his death or loss of Roman citizenship (Gaius *Inst.* 1.127-28). The nature of paternal authority did differ depending on whether the children were minors or adults (Cohen, 174); both household codes (Aristotle *Pol.* 1.5.12, 1260b) and Roman law (Sextus Empiricus *Pyr.* 3.211) recognized that boys, unlike wives, matured and became sharers in governing the state. Given the average life expectancy, many adult children no longer had fathers living (Saller, 264), though in theory the older custom of *patria potestas* extended even to grandchildren (Gardner, 5-6).

It is clear, however, that Roman parents loved their children (Dupont, 118-19), as did

Greeks (Aristotle *Eth. Nic.* 8.12.2-3, 1161b). Latin poetry expressed great affection for one's children (Frank, 25); Stoics felt that such love came naturally to good people but not so to bad ones (Diogenes Laertius *Vit.* 7.1.120). Greek ideals suggested ruling one's children lovingly (Agasicles 2, in Plutarch *Sayings of Spartans, Mor.* 208B). Fathers could be severe, but most extant cases of such severity are reported as exceptional (Dixon, 27). A satirist condemns a miser hated even by his wife and children because he values money more than their welfare (Horace *Sat.* 1.1.84-87).

2.5. Parental Instruction and Discipline. The mother apparently constituted the main parental influence on a son until age seven, after which the father assumed primary responsibility (Lincoln, 400); the father's deferred responsibility also appears in other cultures (2 Kings 4:18-19; Mbiti, 169). Some scholars argue that children often appear in Greek texts as objects of instruction rather than as individuals (Lindemann).

Moralists emphasized the need for good *paideia*, *education and discipline (e.g., Plutarch *Educ.* 7, *Mor.* 4C; Epictetus *Disc.* 1.2.6; *Wis* 3:11; *Ep. Arist.* 248). Such education was the father's responsibility in Palestinian Jewish (Sir 30:2-3; Goodman, 72; Safrai, 770) as well as Greek and Roman (Meeks, 61) circles. Some educators emphasized discerning to what forms of guidance (such as control, fear, appeals to ambition) each boy responded (Quintilian *Inst. Orat.* 1.3.6-7); teachers should be strict in their discipline (Quintilian *Inst. Orat.* 2.2.4). Rigorists naturally preferred harsher treatment even for young children, to condition them to life's hardships (e.g., Crates *Ep.* 33).

Character was particularly developed in youth, though it could be modified later (Gill; Quintilian *Inst. Orat.* 1.1.5, 9); serious learning might begin later, but emotional development occurred in the earliest years (Dixon, 141). Many later rabbis did not regard young children as morally cognizant or responsible (*m. Parah* 3:4; *Gen. Rab.* 26:1), a view shared by most Roman jurists (Gaius *Inst.* 3.208). Rabbis believed that the evil impulse started in infancy (ARN 16A; cf. Crates *Ep.* 12), but knowledge of the law brought moral power (4 Macc 2:23; *Sipre Deut.* 45.1.2; ARN 16A; *b. Qidd.* 30b, *Bar.*; cf. *T. Asher* 3:2). Romans had a coming-of-age ceremony (e.g., Dupont, 229; Gaius *Inst.* 1.196; 2.113); Jewish boys

also became young men around puberty (1 Esdr 5:41), and later rabbis attributed the beginning of the good impulse and moral responsibility to this time (*m. 'Abot* 5:21; ARN 16A). Children could not bear legal witness (*t. Sanh.* 9:11).

Disciplining a son with a rod was considered loving behavior for a father (Columbanus, probably Catonian lines, 52; Petronius *Sat.* 4), and even mothers could be exhorted not to spoil their children by encouraging their pleasure (Pseudo-Theano in Malherbe 1986, 83). Like slaves (e.g., Aristophanes *Nub.* 1414), children could be beaten or whipped (Aristophanes *Nub.* 1409-10), but a parent who acts in rage will regret it (Publilius Syrus 514; cf. *Pesiq. Rab Kah.* 15.4). Jewish wisdom also emphasized physical discipline in rearing boys (Sir 7:23; 30:12; *Ahiq.* 81.3; 82.4; see Pilch), regarding beating as loving (Sir 30:1; cf. *Prov* 13:24; *Pss. Sol.* 13:9-10; *Heb* 12:6; *Rev* 3:19). Though one might combine firm discipline with loving gentleness (ARN 31, §67B), some sages felt laughing and playing with one's children were too indulgent (Sir 30:9-10). (One should teach a good son wisdom but pray for a bad son's death and train him for gladiatorial combat, *Sent. Syr. Men.* 27-44.) Jewish custom also permitted rabbis to beat their disciples (Goodman, 78), though the rabbis disapproved of beatings that were dangerously severe (*m. Mak.* 2:2).

Some writers protested against excessive discipline or harshness (*Pseud.-Phoc.* 150, 207; *Eph* 6:4), but they appear to have been the minority. Quintilian notes that flogging was the standard custom but nevertheless rejects it as useful only for slaves, not pupils (Quintilian *Inst. Orat.* 1.3.13-14); he felt that excessive severity sometimes discouraged a boy from trying (Quintilian *Inst. Orat.* 2.4.10). Other moralists, while not necessarily balking at corporal punishment, advised gentleness before scolding (Plutarch *Flatterer* 28, *Mor.* 69BC).

2.6. Childbearing. Ancient texts, both Jewish (*Wis* 7:2; 4 Macc 16:7; *Sent. Syr. Men.* 97) and Gentile (Virgil *Ecl.* 4.61; Ovid *Fasti* 1.28-33; Quintilian *Inst. Orat.* 8.3.54; Aulus Gellius *Noc. Att.* 6.1.4; Arrian *Anab.* 7.12.6; PGM 101.96-97; Isis aretology in Grant 1953, 132), regularly speak of the duration of human pregnancy as ten months; this was the consensus of both physicians and philosophers (Aulus Gellius *Noc. Att.* 3.16). One Epidaurous inscription (inscr. 1) does note an exception: a woman named Cleo was

pregnant for five years until Asclepius healed her, and on his birth the boy born to her immediately washed himself and began walking around (Grant 1953, 56). It was understood that children normally bore their parents' image (Gen 5:3; 4 Macc 15:4; Pseudo-Philo *Bib. Ant.* 50:7; Chariton *Chaer.* 2.11.2; 3.8.7; *P. Oxy.* 37).

Especially among peasants in impoverished areas like much of Egypt, the childhood mortality rate was extremely high. A disproportionate number died in infancy, and of those who survived into adolescence roughly half reached twenty-five, with the number of survivors continuing to be halved every decade of life, making the average life expectancy for live births around twenty-five or thirty years (N. Lewis, 54; elsewhere in the empire, see Dupont, 222; for other traditional societies, see Mbiti, 153). Skeletal remains in Palestine likewise testify to a very high child mortality rate (see several articles in *'Atiqot* 21 [1992]: 55-80; among ancient Jews in general, survey *CJ*, e.g., 1:308, §399, though burial inscriptions probably disproportionately report the youngest deaths [Leon, 230]). Even among the well-to-do, children often died tragically young (Plutarch *Consol. to Wife, Mor.* 608C, 609D, 611D), though ancient medical writers attest significant knowledge of medical care for children (Demaitre). (For the importance of childbearing in Mediterranean antiquity, see Marriage §§1.3, 1.4).

2.7. Exposure of Unwanted Infants. The father had the right to refuse to rear a newborn, even against the mother's objections (Gardner, 6). Deformed infants were sometimes killed (Den Boer, 98-99, 113, 116; in other cultures, e.g., Dawson, 324), but most babies were abandoned. Even if the percentage of babies abandoned has been overestimated (see Engels 1984, skeptical of the ten percent figure for infanticide), the exposure of children was a widely known custom (Pausanias *Descr.* 2.26.4); abandoned babies figure commonly in legends (Diodorus Siculus *Bib. Hist.* 4.64.1; 8.4.1; 19.2.3-5; Appian *Rom. Hist.* 1.1.2) and novels (Longus *Daphn. Chl.* 1.2, 5).

The high mortality rate among children may have provided one contributing factor for the abandoning of children; at the least it may have reduced the openness to emotional attachment (cf. Dixon, 113; Dupont, 221). Still, ancients were sad when their children died and did not abandon infants out of dislike for them (Golden). Often poverty required exposure or killing (Ovid

Met. 9.675-84) of infants, but even a rich family might expose a child if they already had too many (Longus *Daphn. Chl.* 4.24; perhaps Suetonius *Tiberius* 47).

For economic reasons (the expense of the dowry), girls appear to have been abandoned more often than boys (*P. Oxy.* 744; Ovid *Met.* 9.675-84, 704-13), resulting in a high age for marriage for Greek males (see Marriage). Of the dozens of census declarations from Egypt, only two list more daughters than sons, and even then only one or two more (N. Lewis, 54-55; cf. Tarn, 101). Some scholars object that high rates of female infanticide would decimate the population (Engels 1980), but this ignores substantial concrete evidence (Harris). Moreover, Roman writers do suggest gradual declines in the Greek population, and in any case selective abandonment did not prevent propagation as effectively as widespread infanticide would. Rescued females often became slave prostitutes (see Adultery, Divorce).

When women married, they were lost to the family of origin, thus supporting a preference for sons (*Gen. Rab.* 26:4), but for whatever reasons, most families appear to have preferred sons, both among Gentiles (Artemidorus *Oneir.* 1.15; 4.10) and Jews (*Sipre Deut.* 138.2.1; 141.2; *b. Ber.* 5b; *Pesiq. Rab Kah.* 9.2). Nevertheless, daughters were loved, especially by fathers (mothers loved especially sons; Plutarch *Bride* 36, *Mor.* 143B). And though all early Jewish sources portray the birth of a daughter as a relative disappointment, Jewish people did not seek to artificially reduce their numbers as their pagan counterparts did (Ilan, 44-48).

Because Egyptian religion prohibited killing infants, Egyptians often rescued babies exposed by Hellenistic settlers in Egypt's nomcs; the rescue is reflected in some children's names (e.g., Kopreus, "off the dunghill" [N. Lewis, 54]). Sometimes those who rescued such infants adopted them as children (Juvenal *Sat.* 6.602-9), but the children more often became *slaves; the Roman government imposed heavy inheritance tax penalties on those who tried to adopt them as children (BGU 1210; N. Lewis, 58). In places like *Ephesus the public bought infants cheaply, whom they then enslaved to Artemis (*I. Eph.* 17-19 in Trebilco, 343). Under Roman law a father who later recognized a child he had abandoned must pay the expenses of his rearing before taking him back (Quintilian *Inst. Orat.* 7.1.14).

Those infants not rescued would have been eaten by dogs and birds (Philo *Spec. Leg.* 3.115).

Like Egyptians and reportedly Germans (Tacitus *Germ.* 19), Jewish people rejected the exposure of infants (Philo *Spec. Leg.* 3.115-17; Josephus *Ag. Ap.* 2.25 §202; *Sib. Or.* 3.765-66; Diogenes Siculus *Bib. Hist.* 40.3.8), just as they abhorred child sacrifice (Lev 20:2-5; Wis 12:5-6; 14:23; Pseudo-Philo *Bib. Ant.* 4:16) and pagan oppressors killing others' infants (Pseudo-Philo *Bib. Ant.* 2:10). It is possible that some Jewish parents in mixed cities may have exposed their infants, but it was far less frequent than among Gentiles (*m. Makš.* 2:7); Jewish and Chinese cultures may have also had a lower incidence of child abuse than did Roman society (see Breiner). Due to their emphasis on procreation Stoics also rejected child abandonment (Malherbe 1986, 99). Child exposure became illegal in A.D. 374 (Gardner, 6), and Justinian in the sixth century regarded all exposed children as free (Rawson 1986a, 172; see Marriage).

2.8. Nurses. The milk that sustained infants normally came from human breasts, often from a nurse (e.g., Marcus Aurelius *Med.* 5.4). Sheep and goats' milk usually was pressed into cheeses (Longus *Daphn. Chl.* 1.23; Epictetus *Disc.* 1.16.8) after it was taken to town (Virgil *Priapea* 2.10-11). It was known, however, that one could use animal milk to sustain a child if necessary, though most examples stem from novels, myths and legends (Virgil *Aen.* 11.570-72; Livy *Hist.* 1.4.6; Propertius *Elegies* 4.1.55-56; Longus *Daphn. Chl.* 1.2, 5, 16); adult Scythians' drinking of mares' milk was noteworthy enough to have merited specific mention (e.g., Hesiod *Cat.* 39-40). In 1 Corinthians 3:1-2 Paul, like some of his contemporaries, thus employs the image of nurse or mother.

Roman women of high status often employed nurses (Dixon, 146), but Mediterranean women of high status rarely became nurses unless they were forced by dire financial straits (Demosthenes *Orat.* 57; Euxistheus *Ad Eub.* 35). Nursing contracts stipulating the amount of pay were a standard practice (Horsley, 2:7-8 §1). The nurse could be slave or free. If she were the former (e.g., Chariton *Chaer.* 1.12.9), the slaveholder profited from her labor (*P. Oxy.* 91.16); if the latter, she would agree to nurse the child in her own home for a fixed amount of time: sixteen months (BGU 1107.7), eighteen months (*CPJ* 2:15-19 §146) or two years (the median, N. Lewis, 146; Pseudo-Philo *Bib. Ant.* 51:1). If the

child dies, she must nurse another child for the full length of time or lose her pay. She would be paid some money in advance, more in monthly installments of both olive oil (presumably for the infant's skin) and cash (N. Lewis, 146-47). In one case a foundling died, and those who entrusted it to the nurse demanded not merely the advance but also her own child, which they insisted was the foundling; the child looked like her and the judge ruled in her favor (*P. Oxy.* 37). Some contracts prohibit the nurse from intercourse, pregnancy or nursing another child lest she deplete her milk (BGU 1107.13-14; *CPJ* 2:15-19, §146); later rabbis also permitted a husband to spill his seed outside for two years after his wife had given birth to avoid another pregnancy that could interfere with lactation (Safrai, 764). Most often the nurslings in Egypt were abandoned babies whose finders wanted to raise them as slaves (N. Lewis, 146).

The well-to-do sought educated nurses from whom children from infancy would learn correct manners of speech (Plutarch *Lib. Educ.* 5, *Mor.* 3DE; Quintilian *Inst. Orat.* 1.1.4-5). Nurses were thought to love their charges (Epictetus *Disc.* 1.11.22, from a former slave); nursing at the same breast was also thought to nurture fraternal bonds (4 Macc 13:20). After growing to adulthood, a boy who had been nursed might honor his nurse even if she were a slave (Homer *Odys.* 1.495; 19.354; Dixon, 145), and nurses were so fondly recalled that they sometimes became models for teachers (Malherbe 1970, 211-12; Quintilian *Inst. Orat.* 2.4.5-6), an image Paul may employ in 1 Thessalonians 2:7. (Jewish teachers could also compare their teaching with nursing [*Sipre Deut.* 321.8.5].) Such nurses' epitaphs may not reveal how nurses felt about their profession, however, which many may have experienced as demeaning despite the bonds (Bradley 1986, 220-22; cf. Plutarch *Table Talk* 5, *Mor.* 672F-673A; Joshel appeals to more recent historical analogies).

For the sake of the maternal bond, some moralists advised mothers to nurse their own babies if possible (Plutarch *Lib. Educ.* 5, *Mor.* 3CD; Aulus Gellius *Noc. Att.* 12.1), yet few well-to-do Roman mothers appear to have followed this counsel (Treggiari 1976, 87; Dixon, 3), and there is little evidence that bonds between children and nurses prevented the child's bonding with parents (Dixon, 129). Some Jewish teachers felt that a wife could delegate breastfeeding if she

brought enough slave help (*m. Ketub.* 5:5; *T. Benj.* 1:3); even a Gentile could nurse an Israelite baby (*m. 'Abod. Zar.* 2:1). In some later rabbinic Haggadah, God miraculously enabled a male to nurse so the child would not starve (*b. Sabb.* 53b, *Bar.*; *Gen. Rab.* 30:8), or God miraculously enabled Sarah to feed a multitude of Gentile infants (*Gen. Rab.* 53:9).

3. Slaves.

The most basic distinction between persons in Roman law was that between free person and *slave (Gaius *Inst.* 1.9), and among the free, whether they were freeborn or freed (Gaius *Inst.* 1.10). Household slaves were regularly considered as part of the household, under the authority of the *paterfamilias*, or male head of the household.

3.1. Slaves in Relation to Other Members of the Household. The inclusion of slaves in traditional household codes is not surprising; both in the Greek *oikos* and in the Roman *familia*, slaves were members of the household (Rawson 1986b, 7; Dixon, 16; N. Lewis, 57; Barrow, 22-64). The same is true of Jewish households (*CPJ* 1:249-50 §135; *y. Ter.* 8:1); the extended household designation was broad enough for one early sage to include the poor who depended on a charitable householder (*m. 'Abot* 1:5). Although we do not treat them here, freedpersons were also part of the household (e.g., Cicero *Fam.* 1.3.2).

The portrait of a centurion's household in Acts 10:2 may presuppose slaves (cf. Acts 10:7; Mt 8:6; Lk 7:2). Soldiers enlisted for twenty or more years, during which time they were not officially permitted to marry. Although soldiers often did marry or cohabit with local women (Livy *Hist.* 43.3.2), their offspring were not considered legitimate, preventing soldiers from leaving them any inheritance (BGU 5.34-35). This situation was, however, often remedied by a special grant from the government (BGU 140.10-33; Plutarch *Fabius Maximus* 4, *Sayings of Romans*, *Mor.* 195FF; Herodian *Hist.* 3.8.5). High officers had more freedom but might refrain for the sake of honor (Plutarch *Scipio the Elder* 2, *Sayings of Romans*, *Mor.* 196B). In the first century an auxiliary horseman would make about 300 sesterces per year (Speidel); a legionary soldier made roughly three drachmas a day, which if entirely saved in a year would provide enough funds to pay for a modest house or one of the less expen-

sive slaves (N. Lewis, 208; although one would then have to feed and clothe the slave). A centurion received at least fifteen times the pay of a legionary, whereas a *filius primus*, a senior centurion, could receive four times that amount (sixty times that of a legionary; Jones, 202-3); thus many retired centurions could have acquired servants.

In urban areas, slaves constituted about one-third of the population (based on the report of Galen; Verner, 63). In classical Athens and in the southern United States in slaveholding times, about one-quarter of free families held slaves, and the percentage in Roman Italy would probably not be higher. In Roman Egypt about 10 percent were slaves and about 20 percent of families held slaves, because there were few slaves per household rather than larger plantations as in Italy (Verner, 60; Finley 1980, 80; MacMullen, 109). Slaveholding was more common in the urban centers of Roman Egypt: most Hellenistic citizens in capitals of Egyptian nomes apparently had one or two slaves, and about a quarter of their households had more (N. Lewis, 53). In a major urban center like *Alexandria, a wealthy family might hold one hundred slaves (N. Lewis, 57).

Though making distinctions between the specific roles, Aristotle linked the householder's relationship to his wife with that to his slave (Aristotle *Pol.* 1.1.5-6, 1252b). Josephus compared the character and status of wives and slaves (Josephus *Ant.* 4.219), as did many rabbis (*m. Hag.* 1:1; *m. Sukk.* 2:8; Stern, 628). Despite such comparisons, however, many would have distinguished clearly between the household head's guardianship of his wife and his rule over his slaves (Livy *Hist.* 34.7.13).

That slaves were often bought as young children (e.g., *CPJ* 3:73 §490) suggests that slaveholders often broke up slave families, selling off young children (Dixon, 17). Of more than sixty private slave-sale documents, no male slave sold was accompanied by a wife or children; only rarely were children sold alongside women (Finley 1980, 76; for a fuller description of slaves' hardships, see Bradley 1992). Slaves could be divided among children as part of an inheritance (*PSI* 903). Establishing a family life proved particularly difficult if the partners belonged to different households (Rawson 1986b, 24). Even after the decline of slavery in the empire, slave unions did not count as legal marriages

wronged by adultery (Justinian *Cod.* 9.23). Nevertheless, many slaves in Egypt remained in the same family for three or four generations and often were then manumitted rather than sold (N. Lewis, 58-59). Further, that slave parents at times found the funds to dedicate a funerary inscription for a deceased child now in another household shows that the bonds of affection ran deep (Dixon, 17-18).

3.2. Sources for Slaves. Various sources existed for slaves (see Buckland, 397-436; Barrow, 1-21; Barchy, 45-50; Lyall, 29-35), but the most common initial reason was war. Typically prisoners of war were enslaved (Diodorus Siculus *Bib. Hist.* 2.18.5; 14.68.3; 20.105.1; Livy *Hist.* 4.29.4; 26.34.3; 41.11.8), especially the women and children, who were less able to retaliate (Dionysius of Halicarnassus *Ant. Rom.* 10.26.9; Diodorus Siculus *Bib. Hist.* 17.46.4; Pausanias *Descr.* 3.23.4; Herodian *Hist.* 3.9.11); the funds from their sale might be placed in the state treasury (Livy *Hist.* 5.22.1). This practice was viewed as a form of mercy—saving prisoners of war rather than killing them (Justinian *Inst.* 1.3.3). Thus one historian explains that Romans procured slaves “by the most just means,” normally from prisoners of war (Dionysius of Halicarnassus *Ant. Rom.* 4.24.2, I.C.I.). At one point up to ten thousand slaves were said to be sold in a day on Delos, the primary slave market, for various prices depending on their skills and utility (Grant 1964, 104).

Recently enslaved children often died, but this offered little trouble to the empire so long as wars provided a fresh supply of slaves. Because wars declined in the first two centuries A.D., however, slaveholders began encouraging the production of slave offspring, so that “home-born” increasingly appears as a description of slaves in papyri from this period (N. Lewis, 57). Both before (*CPJ* 1:125-27 §4) and during the Roman period a number of Jewish people were slaves (see Jewish History: Roman Period).

3.3. Slave Roles. Many slaves in Italy worked the massive agricultural estates, which appear to have proved economically profitable to the owners (Appian *Civ. W.* 1.1.8; Petronius *Sat.* 37-38; Finley 1973, 83-84; Barrow, 65-97); the Greco-Roman world took slavery to a new level and became one of the economies in history most dominated by slavery (Finley 1980, 9, 67; Padgug, 21-22). Agricultural slaves were rarer elsewhere in the empire, however; in Egypt peasants could be exploited far more cheaply

(N. Lewis, 57). In most of the empire slavery was primarily an urban phenomenon (Finley 1980, 79).

The most degrading and deadly form of slavery was condemnation to work the mines, usually at isolated outposts, described by W. W. Tarn as “a hell on earth” (Tarn, 104). For this job employers used lower-class convicts and slaves, notably captives from the Jewish revolts and in a later period Christians (N. Lewis, 137-38).

Slaves in wealthy households tended toward specialized roles (see Treggiari 1975; Barrow, 22-64). Some slaves in well-to-do households may have appreciated their positions; a servant on an estate ruled by a benign landowner might well fear the change of masters (Apuleius *Met.* 8.15). A high-ranking slave in the imperial household might wield more power than did free aristocrats (Herodian *Hist.* 1.12.3). Those who slept with slaves were thereby enslaved (Tacitus *Ann.* 12.53), but some could marry into slavery to improve their status. Some people employed slavery as a means of upward mobility (Martin, 30-42). For most slaves, however, their state was degrading and difficult (Euripides *Androm.* 88-90; *Hec.* 332-33); half the female imperial slaves died before thirty (Pomeroy, 194), and in poor homes the ages may have been younger (cf. *ILS* 5215, 7420, 7428 in Sherk, 227-28).

A variety of occupations were open to women servants in wealthy households (Treggiari 1976). Slave women had long functioned as concubines (Sophocles *Ajax* 485-91; Arrian *Anab.* 4.19.5), and slaves continued to be sexually exploited in the Roman period (e.g., Appian *Civ. W.* 4.4.24; Babrius *Fables* 10.1-5; see Adultery, Divorce, the section on the sexual use of slaves).

Although slaves in comparable roles held lower social status than did free persons (Livy *Hist.* 4.3.7), roughly the same range of occupations existed among slaves as among the free (Finley 1980, 81-82; Dupont, 56-57). Rural peasants constituted perhaps 90 percent of the empire's free work force, and they, like field slaves but unlike household slaves, had virtually no opportunities for social mobility (Phaedrus *Fables* 1.15); rare is an inscription in which a peasant rose to a local aristocracy (*CIL* 9.3088 in MacMullen, 47). Cato's slaves received more bread than the average Egyptian peasant could eat, and the freer (less dependent on a *patron) a peasant was in some locations, the closer to potential starvation (Finley 1973, 107-8).

3.4. Negative Views About Slaves and Treatment of Slaves as Property. In aristocratic ideology, slaves were of inferior moral character (e.g., Josephus *Ant.* 4.8.15 §219); *Cicero lumps them with the insane and exiles (Cicero *Acad.* 2.47.144). Various sources present them as evil rather than virtuous (Plato *Alc.* 1.135C), as insulting (Seneca *Dial.* 2.11.3); deceptive (Terence *Haut.* 668-78; *And.* 495; Chariton *Chaer.* 2.10.7; 6.5.5) or even a perjurer (Apuleius *Met.* 10.7); lazy (Homer *Odys.* 17.320-21; *Sir* 33:24-28; *b. Qidd.* 49b); gossipy (Lucian *Lucius* 5); cowardly (Achilles Tatius *Leuc.* 7.10.5); or promiscuous (*m. 'Abot* 2:7; *m. Sota* 1:6). One loses half one's worth when one becomes a slave (Homer *Odys.* 17.322-23).

It was thought that one could distinguish one of royal descent by his appearance (Homer *Odys.* 4.63-64), but also a slave (Homer *Odys.* 24.252-53; Arrian *Anab.* 5.19.1; *T. Jos.* 11:2-3); free persons were normally thought more attractive (Chariton *Chaer.* 1.10.7; 2.1.5; 2.2.3; 3.3.10). A free person acting as a slave was shameful (Josephus *Ant.* 4.238), and slavery was a state intolerable to a genuinely free person (Dionysius of Halicarnassus *Ant. Rom.* 19.9.4; Dio Cassius *Hist.* 1.5.12; 8.36.3; Chariton *Chaer.* 1.11.3; Philo *Praem. Poen.* 24 §137; *Omn. Prob. Lib.* 5 §36); calling a free person a "slave" thus constituted a deliberate insult (Demosthenes *Lep.* 132; Epictetus *Disc.* 1.6.30; 1.9.20; Diogenes Laertius *Vit.* 6.2.33, 43).

In some respects law and custom treated slaves as property, in connection with their economic functions (Buckland, 10-38). Thinkers like Aristotle had long before declared the slave to be the master's tool, analogous to the body as the soul's tool (Aristotle *Eth. Eud.* 7.9.2, 1241b; cf. *Pol.* 1.1.4, 1252a; 1.2.3-6, 10, 1253b-54a); as there could be no friendship between a person and an inanimate object, neither could there be friendship between a slaveholder and his slave, a living tool (Aristotle *Eth. Nic.* 8.11.6-7, 1161b). Slaves and animals alike had no purposes for their own lives (Aristotle *Pol.* 3.5.10, 1280a); subordinating and using them was no different from one's use of animals (Aristotle *Pol.* 1.2.8-14, 1254ab).

Such theories translated naturally into economic practice. Thus slaves were regularly sold, both before (P. Cair. Zen. 59003) and during (*P. Oxy.* 95; Buckland, 30-72) the Roman period. In the Ptolemaic period as later slaveholders paid taxes on slaves as on other kinds of property (*P.*

Columb. Inventory 480); failure to register slaves in a Roman census could lead to their confiscation (BGU 5.60.155), as could exporting slaves in violation of proper tax rules (BGU 5.65-67). Slaves could be branded (Diodorus Siculus *Bib. Hist.* 34/35.2.32); divided as part of the deceased's estate (Horsley, 1:69-70 §24); or at times all executed for the suspected act of one, despite notable public protests (Tacitus *Ann.* 14.42-45).

Slaveholders in the empire officially held the power of life and death over their slaves (Gaius *Inst.* 1.52). Jewish legal interpreters in what probably represented the dominant tradition also understood slaveholders as exercising considerable authority because slaves were technically their property (*m. Git* 1:6); at least one early rabbi even forbade saying a funeral oration over a deceased slave, arguing that this death should be treated merely as lost property (*b. Ber.* 16b, *Bar.*).

Gentler Romans might say that flogging was appropriate not for children but only for slaves (Quintilian *Inst. Orat.* 1.3.13-14). Slaves were also far more likely to receive capital sentences than were more directly guilty free persons (Apuleius *Met.* 10.12), even if the latter were foreigners (Livy *Hist.* 22.33.1-2).

Slaves could be examined under torture under the supposition that this practice increased their truthfulness, both in classical Greek culture (Demosthenes *Pant.* 27; *Olymp.* 18-19; *Tim.* 55-58; *Neuer.* 122) and in the Roman period (*Rhet. Ad Herenn.* 2.7.10; Tacitus *Ann.* 3.67; 4.29; Appian *Civ. W.* 1.3.20; Apuleius *Met.* 10.28; Herodian *Hist.* 4.5.4), though in the latter it was often a final resort (Justinian *Dig.* 48.18.1). So typically was torture the lot of slaves that free persons who suffered this abuse could be compared with slaves (Livy *Hist.* 32.38.8). The custom seems to have generated fewer objections than one might hope: even a novel's hero might torture female servants without any remorse (Chariton *Chaer.* 1.5.1). Many ancients were, however, skeptical of torture's effectiveness in always securing truth (Apuleius *Met.* 10.10); in the law court one would either accept or question such evidence depending on the side for which one was arguing (Aristotle *Rhet.* 1.15.26, 1376b; Quintilian *Inst. Orat.* 5.4.1).

In contrast to Israelite law (Deut 23:15), most legal systems did not look favorably on harboring escaped slaves (e.g., Eshnunna 50; it is a capital offense in Hammurabi 15-19). Roman law

prohibited encouraging slaves to run away or harboring them (Justinian *Dig.* 48.15.6.2; Llewelyn with Kearsley, 6:56-57 §7), perhaps explaining Josephus's understanding that God's law mandated punishment for fugitive slaves (Josephus *J.W.* 3.8.5 §373). In the empire methods of locating and capturing such fugitives could prove harsh (Finley 1980, 111-12); if the country from which a slave escaped was on good terms with the country to which the slave escaped, the slave might be extradited (Livy *Hist.* 41.23.1-5). Escaped slaves were sometimes thought to spend money extravagantly (Chariton *Chaer.* 4.5.5).

3.5. Views About Slaves as Persons. In other respects law treated slaves as persons, and popular sentiments generally viewed them in this manner as well, albeit not with a modern egalitarian slant. It was illegal to kill or inflict excessively cruel punishment on a slave (Gaius *Inst.* 1.53); by the late first century slaveholders could not arbitrarily hand over innocent slaves to fight in the wild animal shows (Justinian *Dig.* 48.8.11.2). In the Roman period, slaves were usually considered responsible for their own misdeeds (Llewelyn with Kearsley, 7:188-89 §8); slaves also often proved loyal to slaveholders (Martial *Epigr.* 3.21; Appian *Rom. Hist.* 7.1.2; 8.3.17; *Civ. W.* 4.4.26; *T. Abr.* 15A), although some did not (Herodian *Hist.* 5.2.2). By means of what constituted a legal fiction, slaves could procure and hold money or property (e.g., Apuleius *Met.* 10.13), even at times other slaves (y. *Yebam.* 7:1 §2; on this institution, called the *peculium*, see further Buckland, 187-238; Cohen, 179-278).

Relationships between household slaves and slaveholders usually reflected the reality of persons interacting. Slaves could offer good advice, although slaveholders might disregard it (Aristophanes *Plut.* 1-5; 1 Sam 9:6). Even Aristotle admitted that in practice slaves were human, though different by nature from their masters (Aristotle *Pol.* 1.5.3, 1259b).

Many writers advocated concern for slaves or warned against harsh discipline of them (Seneca *Clem.* 1.18.1; 1.26.1; *Ep. Lucil.* 47.4-5, 18-19; Epictetus *Disc.* 1.13.2), sometimes warning that those who failed to show appropriate care provoked the suffering that resulted (Diodorus Siculus *Bib. Hist.* 34/35, 2.32-39; Seneca *Clem.* 1.18.3). *Epicurus warned against harsh discipline of slaves, and they were among members of his school (Diogenes Laertius *Vit.* 10.1.9; 10.118).

Beating another person's slaves violated convention (Demosthenes *Conon* 4), but most people seem also to have disapproved of or ridiculed harsh beatings of one's own (Martial *Epigr.* 2.66.1-8; 8.23; cf. 2.82), especially if the beatings risked disfiguring slaves (Achilles Tatius *Leuc.* 5.17.8-9).

Jewish writers could warn against mistreating a slave (*Pseud.-Phoc.* 223-27) and could advocate especially kind treatment for the diligent servant (Sir 7:18, 21; 10:25; *Sent. Syr. Men.* 166-67); rabbinic literature suggests generally friendly relations between slaves and slaveholders (Bonsirven, 147-48), perhaps because the norm appears to have been household slavery on a relatively small scale.

Some moralists could report with approval the notion that honor accrues to merit, not to free birth (Phaedrus *Fables* 2.9.1-4); indeed, some philosophers were slaves (Aulus Gellius *Noc. Att.* 2.18). Many felt that slaves differed from free only by their circumstances, not by their nature (Dionysius of Halicarnassus *Ant. Rom.* 4.23.1; Seneca *Ep. Lucil.* 47.11; Epictetus *Disc.* 1.13.4; Hierocles *Fraternal Love* 4.27.20); they were equal in their humanity (Seneca *Ep. Lucil.* 47.10; Sevenster, 185-89). Thus by serving willingly, a slave can grant a benefaction to the slaveholder (Seneca *Ben.* 7.4.4; 1 Tim 6:2). Some went further. Some philosophers argued that slavery was against nature; people should be judged by virtue rather than class, and hence one should not object to eating with slaves (Heraclitus *Ep.* 9).

Such a position would have disturbed Aristotle, who wrote a few centuries before most of these writers. Aristotle maintained that nature demonstrates the superiority of some over others and that it is to the advantage of both for the superior to rule (Aristotle *Pol.* 1.2.12, 1254b); the equality of those who were not equal was unjust (Aristotle *Pol.* 3.5.8-9, 1280a). Slaves differed by nature from free persons (Aristotle *Pol.* 1.2.7-8, 1254a); unlike free persons, they were physically designed for manual labor, as animals were (Aristotle *Pol.* 1.2.14, 1254b), and differed from free persons not only in body but also in soul (Aristotle *Pol.* 1.2.14-15, 1254b). Barbarians by nature were always fit to be slaves and ruled by Greeks (Aristotle *Pol.* 1.1.4, 1252b; 1.2.18, 1255a). Aristotle warned, however, that a few people thought slavery was *para physin*, "contrary to nature," hence unjust—a view to which Aristotle himself

strenuously objected (Aristotle *Pol.* 1.2.3, 1253b).

3.6. *Views About Slavery as an Institution.* Despite Aristotle's earlier worry, however, most people did not translate the theory of equality into practical abolitionism. When a slave protested to Zeno, founder of the Stoic school, that it was merely his fate to have misbehaved, Zeno allegedly responded, "And also to be beaten" (Diogenes Laertius *Vit.* 7.1.23). Seneca argued not for abolition but for just treatment (Watts). One of the more radical examples is that Pliny dined with his freedpersons by bringing himself to their level (Pliny *Ep.* 2.6.3-4), but these were freedpersons and not slaves, and this is hardly abolition. Seneca urged friendlier association with slaves, allowing for talking and planning together (Seneca *Ep. Lucil.* 47.13). A few went so far as to advocate treating a servant as oneself (Sir 38:30-31; but cf. 33:24-28), even serving them (Eph 6:9 in the light of 6:5-8).

Yet writers could cite more radical models on the fringes of Mediterranean society to challenge the excessive material desire of their culture, even if these models did not prove perfect for their purposes. Some report with approval the lack of slaveholding among Indians (Diodorus Siculus *Bib. Hist.* 2.39.5; Arrian *Ind.* 10.8-9), although sometimes observing with curiosity the caste system (Diodorus Siculus *Bib. Hist.* 2.40.1). Egyptian tradition reportedly punished with death the murder of slave and free alike, regarding slavery as a mere difference in circumstance (Diodorus Siculus *Bib. Hist.* 1.77.6). Tacitus seems impressed by the character of slavery in Germany, where slaves' independence struck him more than their subordination (Tacitus *Germ.* 25), though he reports some sacred slaves drowned in a ritual (Tacitus *Germ.* 40).

Most striking is the model of the *Essenes. Philo claimed that the Therapeutae regarded slaveholding as contrary to nature (Philo *Vit. Cont.* 70) and claimed that the Essenes rejected slaveholding as contrary to nature, which established equality (Philo *Omn. Prob. Lib.* 79; *Hypoth.* 11.4), a good Greek concept. In similar language, Josephus claimed that Essenes avoided slaveholding lest it make them unjust (Josephus *Ant.* 18.21). In contrast to the earlier *Institutes* of Gaius, Justinian, perhaps from Christian or Stoic influence and possibly in conjunction with the economic decline of slavery in late Roman antiquity, also regards slavery as *contra naturam*,

"against nature" (Justinian *Inst.* 1.3.2; 1.5 introduction). One wonders, however, the extent to which the image concerning the Essenes is the rhetorical invention of Hellenistic Jewish apologetic; wilderness Essenes possessed neither slaves nor other private property, but some other Essenes may have simply been forbidden to sell their slaves to Gentiles (CD 12:10-11; see Damascus Document).

Of those who may have disliked slavery, no one in the first century seemed prepared to try to overthrow it as an institution, nor would such an attempt have been successful. A number of slave revolts did occur in Roman history (Diodorus Siculus *Bib. Hist.* 34/35.2.5-48; 36.4.1—36.11.3; Livy *Hist.* 32.26.4-8; 39.29.8), including the earlier full-scale war led by Spartacus (Lucan *Civ. W.* 2.554; Appian *Rom. Hist.* 12.16.109; *Civ. W.* 1.14.116-20), and various agitators sought to encourage this (Sallust *Jug.* 66.1; Livy *Hist.* 3.15.9). But such revolts were sometimes undermined by other slaves who betrayed them (Livy *Hist.* 4.45.2; 32.26.9, 14). Most slave revolts were small in scale, so that M. I. Finley estimates only four full-scale slave wars in recorded history, of which three occurred in Italy or Sicily from 140-70 B.C.; all were unsuccessful (Finley 1980, 114-15). He admits that the Haitian revolt of the modern period was successful, however; he also seems unaware of several successful major slave revolts against Arab rulers in the medieval period (see B. Lewis, 56-57). But these represent military situations different from that of the Roman Empire at the pinnacle of its power.

Even when slaves sought their own freedom by various means, this does not indicate that they sought to abolish the institution of slavery. Freedpersons themselves acquired slaves whenever possible (*ILS* 7503; Martin, 42), as occasionally happened in North American slavery (Koger). Although some early Christians such as John Chrysostom made a case for emancipation, Augustine's tradition permitting slavery prevailed through most of the church's history until it was repudiated by some nineteenth-century Christian abolitionists (Longenecker, 60-66; Rupprecht; Sunderland).

3.7. *Manumission.* Emancipation contracts are common fare among ancient business documents (e.g., *P. Oxy.* 722), and the matter was so routine that manumissions were sometimes enacted en route from one location to another (Gaius *Inst.* 1.20). Slaves were sometimes freed

for loyal service or special skills (e.g., Aulus Gellius *Noc. Att.* 2.18.9-10), but sometimes they purchased their own freedom (Dionysius of Halicarnassus *Ant. Rom.* 4.24.4; *m. Qidd.* 1.3; see on the *peculium*, §3.5 above). Roman law permitted a slaveholder to free as many slaves as he wished while alive (Gaius *Inst.* 1.44) but set limits on manumission in wills (Gaius *Inst.* 1.41-43; revoked in Justinian *Inst.* 1.6-7). Roman grave-stones suggest more freedpersons than freeborn (Finley 1973, 71), but former slaves were more apt to boast in having acquired freedom than slaveholders were apt to provide grave-stones for all slaves.

Slaves of citizens meeting specific conditions automatically become Roman citizens on their emancipation (Gaius *Inst.* 1.13-17; Dionysius of Halicarnassus *Ant. Rom.* 4.23.3), providing a higher status than that of provincials. Nevertheless, freed slaves were of lower social rank than were the freeborn citizens (Gaius *Inst.* 1.10); rabbinic sources generally rank them below proselytes and offspring from illegitimate unions (e.g., *Num. Rab.* 6:1). They remained dependents of the person who had freed them, hence his clients (Dupont, 65-66); they could be included as heirs and consequently share responsibilities for debts (*CPJ* 2:20-22, §14).

Because freed slaves continued to be part of a wealthy patron's household, they received a considerable political and economic boost not available to most of the freeborn (see *HS* 7486, 7558, 7580 in Sherk, 228-29; MacMullen, 124; López Barja de Quiroga). They often possessed significant economic and social power (*CIL* 6.8583 in Sherk, 240), though some of higher rank despised them (Epictetus *Disc.* 1.1.20); reminding one of slave birth could constitute an insult (Martial *Epigr.* 1.81). So rapidly did many freed slaves advance in society that they became targets of aristocratic satirists, sometimes with a hint of envy (Petronius *Sat.* 38, 57). Although first-generation freedpersons were barred from aristocratic status, their children represented a disproportionate percentage of the free population to achieve higher status; in urban centers like Ostia perhaps one-third of the local aristocracy consisted of sons of freed slaves (Finley 1973, 72).

4. Conclusion.

The ancient household included spouse and children, but also other dependents who lived in

the household. Among the well-to-do, especially some of the urban free, households often included some slaves. Ancient thinkers most frequently defined household relationships in terms of the male householder's appropriate authority relationships with regard to various groups, especially wives, children or grandchildren and slaves.

FESTIVALS AND HOLY DAYS: GRECO-ROMAN

Festivals and holy days not only were important to the Jews (see Festivals and Holy Days: Jewish) but also were widely celebrated by many people throughout the Greco-Roman world. Festivals or holy days as repeated rites, whether yearly or otherwise, and often of great length and elaboration, were widely celebrated during Greco-Roman times for a variety of reasons. Some of these festivals were celebrated for religious purposes, although often the celebrations had been enshrined in the Roman calendar and the exact reasons for them forgotten. There were also celebrations that were related to personal religion that were not part of the official calendar (see Religion, Personal). The rural population, which constituted the largest portion of the population in ancient times, also celebrated festivals in ways that did not necessarily coincide with the more institutionalized festivals that occurred in the major cities, such as *Rome. As important as all of these celebrations were, this article focuses on the festivals and holy days recognized throughout the Roman world of the first century A.D.

1. The Origins and Development of Festivals and Holy Days
2. The Roman Calendar and Festivals in Rome
3. Greco-Roman Festivals and Holy Days Outside of Rome

1. The Origins and Development of Festivals and Holy Days.

In antiquity, religion and folklore were not separate, as they are today (Nilsson 1961, 40). The origins of Greek and Roman religious festivals are obscure but seem to be related to the cycle of nature. This relation to nature is found in both the object of worship and the time of worship. Festivals were apparently mostly formed around the celebration of significant times in the cycle of nature, such as spring and harvest, and took place in conjunction with the cycle of the moon, often at full moon. Many of the religious celebrations that grew up around these significant events appear to have predated worship of a specific deity, often were first located in particular places rather than situated in *temples, and reflect the rural and agrarian origins of pagan worship. The objects central to worship and the times of year reflect the life cycle of those in a rural context, who were dependent upon nature

for their survival. Only later did these celebrations come to be linked to a particular deity, with stronger deities later pushing out lesser deities to establish themselves as the cultic focus, and centered upon specific sites built for their worship, such as temples.

Other types of celebrations besides worship, which often involved such rituals as *sacrifice, soon became associated with these festive occasions as well, such as *games and markets, which drew people together from the surrounding area (Nilsson, "Festivals," 435). From the outset, therefore, festivals and holy days are also joined to calendrical calculations. Although Roman religion followed similar patterns to that of Greek religion, Roman religion did not have the same background of a heroic age. Hence the Romans inherited much of their religious mythology from others, such as the Greeks (see E. Ferguson, 125). There was also a strong tendency in Roman circles for what were originally religious festivals to lose their religious significance and to take on a mainly social or even highly political character.

2. The Roman Calendar and Festivals in Rome.

One of the distinguishing features of Roman religious festivals and holy days is how they are linked to the Roman calendar. The calendar was early on used by the Romans, probably as a means of indicating the times of religious celebration. Although mythology has it that Romulus derived the first calendar, the Roman calendar was probably established in 450 B.C. as part of the Twelve Tables, indicating the days when legal proceedings could not occur due to religious worship. A calendar was later posted on white tablets in the Roman Forum, so Livy (*Hist.* 9.46.5) and *Cicero (*Att.* 6.1.8; *Pro Murena* 25) say, indicating dates for conducting legal business and probably listing the dates for meetings of the assemblies.

It also became fashionable for calendars to be placed on the walls of various buildings, including private residences. They were decorative but also functional for their information, including personal days of remembrance and lucky and unlucky days (the Romans were highly superstitious, especially avoiding odd numbers). This practice seems to have reached its high point in the first century A.D., no doubt because of the need to widely publish the new solar calendar instituted by Julius Caesar (Salz-

man, 4-7; cf. Ogilvie, 70-72).

The earliest Roman calendar was based on the lunar cycle and had only ten months, with the period following the conclusion of the agricultural year and prior to the beginning of the new one not being indicated. Probably during Etruscan times two more months were added, which encompassed the entire year. This calendar had four months with 31 days each, seven with 29 days and February with 28, totaling 355 days. The calendar became a vital instrument for indicating a variety of information, including a number of fixed festivals as well as a number of festivals whose days varied. One can see that the calendar would soon get out of line, so at periodic intervals a number of days would be added to bring the calendar back into line. Due to a variety of circumstances, including miscalculations but also political manipulation of the calendar, the calendar would often not get adjusted appropriately to bring the months and seasons into calibration. During the time of Julius Caesar, he inaugurated a new solar rather than lunar calendar with months of thirty and thirty-one days, with one day repeated in February every four years (Rose 1948, 50-52; Ogilvie, 70-71).

The month in a Roman calendar had three main days: the Kalends, or day of proclamation, on the new moon of the length of time until the next main day; the Ides, or the time of the full moon; and the Nones the day eight days (nine by Roman counting) before the Ides. Around these three main days all other days were arranged in terms of their being a number of days before or after these named ones. A Roman calendar indicated the status of every day of the year in terms of whether it was a holiday or working day. There were also several different levels of holidays. On the Roman calendar, about one-third of the days qualified as some form of holiday, with some months being predominantly holidays, such as February. The calendar also indicated working days and the days when the assemblies or other legal bodies could meet (Ogilvie, 71-72). Once the calendar was established under Augustus, there were few alterations of the formal structure of the Roman calendar, except for the further addition of public holidays, often in terms of honoring *emperors or worshiping other deities (see below; Reid, 101, in Sandys). However, the Julian calendar was not adopted everywhere in the empire at the

same time. In the West it was adopted early on, but in the East it was accepted with local modifications at various times and in conjunction with its acceptance by local rulers. The province of Asia, for example, did not accept the Julian calendar until 9 B.C. on Augustus's birthday of September 23, commemorated in the well-known Priene calendar inscription (see Bickerman, 47-50).

Some months had more festivals and holidays than others (see Ogilvic, 73-99, for discussion of the following festivals and holy days of Rome; cf. Fowler, 172, in Sandys for a chart of the festivals). For example, January 1 was the day in which the consuls made a procession to the Capitol, and white bulls were sacrificed to the god Jupiter to keep the Roman state safe. This was a fixed event, even though the calendar indicates it as a working day, while the Compitalia was a movable festival, celebrating the close of the agricultural year and making remembrance in anticipation of a productive following year. February had two major festivals, Parentalia, a celebration commemorating the dead during which temples were closed and marriages were forbidden, and the Lupercalia, celebrated at the same time, when two rival groups of young men had a feast and engaged in a race at the bottom of the Palatine Hill. March had a number of festivals for Mars, the god of war, including a feast on March 14, and on March 1 the sacred fire was relit in the shrine of the Vesta.

April, with the coming of spring, meant a number of festivals were celebrated, although many of these were more social than religious occasions. Still important, however, were Parilia, Floralia and Ferae Latinae. Parilia on April 21, originally a festival to purify the sheep, became a celebration of the founding of Rome; Floralia on April 28 became a whole week of games in celebration of fertility; and Ferae Latinae was a festival of the unification of the Latin people. May's chief festival was Lemuria on May 9, 11 and 13, which commemorated the dead members of a household who came to haunt their homes. June had a major time of celebration at the shrine of Vesta. From June 7 to 15 a series of celebrations took place, culminating in a thorough cleaning of the shrine. June 13 was also, however, a night of drunken festivities for certain groups. June also had the Fors Fortuna festival on June 24, during which huge numbers of

Romans went to offer sacrifices at the shrines of Fortune.

July's festivals were small by comparison, but August had several major festivities: August 12 involved sacrifice to Hercules, who was beloved by Romans; August 13 celebrated the cult of Diana and involved a day off for *slaves (a rare occasion). September had a number of celebrations in conjunction with games; most notably September 13 celebrated the dedication of the temple of Jupiter, the patron god of Rome, with a huge feast.

October marked a shift in emphasis in celebrations, with October 19 becoming a formal marking of the change of seasons; and October 15 a sacrifice of a horse to Mars. November also had a feast of Jupiter similar to the one in September. The year closed with a number of festivals in December. These included the movable feast to Bona Dea (the "good goddess") in a magistrate's house at which men were forbidden; and December 17, the feast of Saturnalia or Cronos, the father of Zeus, involving sacrifice at the temple of Saturn and a public banquet attended by all.

3. Greco-Roman Festivals and Holy Days Outside of Rome.

The preceding festivals and holy days are particularly related to Rome and its environs. It is known that other cities had comparable calendars, although these calendars are not extant in a number of important areas, such as the eastern provinces of the empire and Africa especially for the first century. The assumption is that many of the Roman colonies would have had similar calendars, since keeping track of consuls was also part of the calendrical function (see Sherwin-White, 105). However, much of the information we have about calendrical cycles is furnished by a number of calendars that date to the fourth century A.D., and it is difficult to judge how much they reflect the practice of festivals and holy days in the first century.

Religious cults of the Greco-Roman world had a variety of celebrations and forms of worship of their deity or deities, many of them private celebrations not part of official festivals and holy days. For example, worshipers of the Cabiri or "mother of the gods" of Samothrace grew in numbers during this time in the Greek and Aegean area, until they became a dominant force in such cities as *Thessalonica in the third cen-

ture. However, despite their importance—we know that they had places where they met and worshiped—we know virtually nothing about their actual forms of worship, except that one could become an initiate at any time of the year. This was more attractive in many ways than the Eleusian cult, which had initiatory rites that occurred twice a year, in February and September, and attracted a number of people throughout the Roman republic and empire from the first century B.C. to the second century A.D. (see E. Ferguson, 199-205).

Two further sets of religious events resulted in festivals and holy days being added to the Roman calendar. The first was the growth of the emperor cult (see Ruler Cult). Julius Caesar was the first to have been accorded divinity, followed by Augustus, and in the first century Claudius, Vespasian and Titus. Within the finds of *papyri from Dura-Europos is a small scroll with four columns of Latin writing giving a list of religious festivals. Dating to Severus Alexander (A.D. 224-35), this calendar provides a list of the religious festivals celebrated by those in the Roman auxiliary stationed in this area in the eastern part of the empire. It is reasonable to think, however, that this reflected practice throughout the empire and may well reflect practice from the time of Augustus, who was responsible not only for institutionalizing the calendar on a widespread basis but also for military reform. This calendar indicates that twenty people, including six women, were worshiped as divine figures in the early third century A.D. (see Kreitzer, 72-73, for the above information; cf. J. Ferguson, 95-96, for a list of the divine figures).

The second religious development of this time is the growth in importance of the Egyptian deities, Isis, Osiris and Serapis (see Mysteries). Egyptian religion was very popular in the Roman Empire of the first two centuries A.D. Even though these deities originated in the East, they became Hellenized and were integrated into the Roman world of religious belief as well, but without losing their sense of foreignness and the related intrigue that went along with this. Although in the first century B.C. and into the first century A.D. there were attempts to suppress Egyptian religion, by A.D. 38 a temple to Isis had been built in Rome, indicating that full integration into the empire had occurred (note that evidence of the Isis cult can be found throughout the empire; see Witt, 264-65, for a map). The Isis cult had two annual

festivals, one in October/November and the other in March, besides daily ceremonies in the Isis temples. Forms of worship of the Isis cult outside of Egypt added practices of the mystery religions patterned after those of the Eleusian cult (see E. Ferguson, 211-21, on the Isis cult). These Isis festivals were integrated into the Roman religious calendar (Reid, 101, in Sandys). Witt argues that Paul's missionary journeys and his letter correspondence are to a large extent directed against various elements of the Isiac cult, found throughout the Roman Empire of the first century A.D. (Witt, esp. 255-68).

FESTIVALS AND HOLY DAYS: JEWISH

The festivals of *Israel mark a deep involvement with the agricultural rhythm of the land set aside by God for his people. Each festival is at base a week or so of harvest: in the spring, in the sum-

mer, in the autumn. Spring brings early grain and is also time to move the flocks on from one pasture to another. Summer sees the larger harvest of grain. Autumn is the last time of gathering for the cycle, and the grapes and olives win more attention than do other crops. Although the *calendar of ancient Israel developed in the depth of its explanations of these festivals and in the addition of other feasts, fasts and commemorative moments, the primacy of agricultural practice and experience needs to be recollected throughout if one is to appreciate the sense of the calendar and the joy involved in the festivals. The fundamental importance of the three great agricultural festivals is signaled by the requirement that every male of Israel appear before the Lord every year at these times (Ex 23:14-17; 34:23; Deut 16:16-17). Even if that is an idealized expectation, it enables us to appreciate how deeply felt was the connection between the rhythm of the fields and the rhythm of God's choice of Israel.

Each of the major festivals has its own character and over time would generate its own explanation in terms of the remembrances that formed the understanding of Israel (the exodus, the covenant, the sojourn in the wilderness that brought Israel to its land; see *DJG*, Judaism). But the fact of harvest in each case gives the festival a communal, celebratory and sacrificial character. The greater and richer the harvest, the more intense and cooperative the work of any agricultural commune in Israel must be. That demands a social structure at the local scale, and the hard labor of harvesting was undertaken by the Israelites themselves: slavery does not appear to have been a major institution until the monarchy, and even then it had more to do with building and service than with agriculture. A primary motivation in this communal work was the urgency of harvest. Once ripe, a crop must be taken in quickly, with as little waste and damage possible, if the full benefit is to be enjoyed. One way to enjoy the crop is to share some of it (indeed, a great deal of it) at the time of harvest itself. That celebration leads naturally to sacrifice, a moment when Israel gathers with Israel's God to consume with pleasure and generosity what God permits to be produced on God's land.

1. The Foundations of Judaic Festivals and Holy Days.

1.1. Passover. The spring festival as a whole, including the Feast of Unleavened Bread, came to be called Passover, as is attested by the end of the first century by Josephus (Josephus *Ant.* 17 §213; 20 §106; cf. his tendency to distinguish the two in his earlier work, *J.W.* 2 §280; 6 §§423-24). The historical association of the exodus from Egypt is dominant to this day and has been since the *rabbinic period (see *m. Pesah.* 10:5; see *DJG*, Rabbinic Traditions and Writings). But the term *pesah* means "limping" (or "skipping," as some scholars more delicately express the same kind of movement) and referred initially to the limping of the spring lamb, a male yearling, hobbled prior to its being slaughtered, sacrificed and eaten.

It was a regular practice in Israel throughout the year not to eat the sinew on the inside of the hip (see Gen 32:32); the reason for that seems to be that the animal was bound or wounded there before it was killed. The ritual dance of those who took part in the sacrifice could be designated by the term *pesah*, as could the entire festival. Killing a lamb in spring prior to moving on to new pastures produced an early benefit of the extensive organization required to shepherd flocks and provided an occasion for the gathering of Israel, even before Israel possessed its land (see *DJG*, Judaism). It is striking that Jacob, a rich shepherd at this point in Genesis, is given the name *Israel* for struggling with God (Gen 32:28), that he is caused to limp by his wrestling and that his injury is directly connected to the Israelite practice of not eating the sinew on the inside of the hip (Gen 32:24-32). Here we have an image of Israel before the possession of the land: the struggle with God is linked to the consumption from the flock and the blessings that are promised.

The pastoral festival of *pesah* was already an Israelite tradition during the period in Egypt. Indeed, the desire to sacrifice is given by Moses to Pharaoh as the motivation for what at first was to be a brief departure to offer in a way Egyptians would find objectionable (Ex 5:1; 8:8, 25-32). That departure, in a sequence of events remembered as constituting national Israel, proved to be definitive, and the events of Passover and Unleavened Bread in that sense came to dominate over the meaning of the spring festival, at least for those who composed the Scrip-

tures (see Ex 12); now it is God who misses a step when he comes to the houses of the Israelites (Ex 12:28), and the lack of yeast in the bread is a sign of Israel's haste in departing (Ex 12:34).

But the persistent celebration of Passover as households (authorized in Ex 12:3-4), rather than in the central *temple in Jerusalem, reflects the deeper roots of the festival, both in the history of Israel and in the affections of those who kept the practice. Under the reign of Josiah (see 2 Kings 23:21-23; Deut 16:1-8), a determined and largely successful attempt was made to centralize the feast by arranging for the sacrifice of the animals in the temple, prior to their distribution for consumption in Jerusalem alone. The animals at issue now are not only lambs but bulls as well, in keeping with the more elite institution in the wealthier, national Israel that is envisaged. The temple was destroyed soon after Josiah's reform, but the process of canonizing Scriptures (see Canonical Formation) favored the tight association between Passover and the temple. As a result, later rabbinic practice, established after the destruction of the temple in A.D. 70, does not include the consumption of lamb and distinguishes itself from "the Passover of Egypt" (see *m. Pesah*, 9:5). Still, the possibility of local observance of the festival as set out in Exodus 12 both before and after the destruction of the temple cannot be excluded, and even the description of Josiah's reform includes the notice that there were priests who did not eat unleavened bread in Jerusalem but preferred to do so locally (2 Kings 23:9).

1.2. Unleavened Bread. Passover in ancient Israel was the prelude to the Feast of Unleavened Bread. During that feast, first grain of the year, especially barley, was consumed without yeast. The removal of yeast, and its eventual replacement with fresh yeast, carried a practical benefit. Yeast acts as an agent in fermentation, and its effects are passed on; that is, yeasted dough, introduced into new dough, will result in leavened bread. But although the process carries on, after many generations the agency of the yeast is weakened owing, it is now taught, to contamination by other strains of yeast or by other microorganisms. So yearly renewal is beneficial, a fresh start with new yeast of proven quality.

By effecting that removal and renewal at the time of the spring wheat, Israel enjoys its first crop of grain without the usual intervention of leavening. Grain unleavened was the only way

in which cereal could be offered to God in sacrifice (see Lev 2:11; 6:17), and yeast as such was proscribed in connection with direct offering to God (Ex 23:18; 34:25), so the Feast of Unleavened Bread was a period in which Israel consumed grain in the way that God was held to. Just as the lamb of Passover came to be associated with the exodus, so did the unleavened bread. Rabbinic practice (see *m. Pesah*, 1:1-4) emphasizes the removal of leaven within each household in Israel, and that serves to retain the original, domestic sensibility of Passover and Unleavened Bread. What survives within rabbinic practice is nonsacrificial, in that the destruction of the temple makes legitimate cultic offering impossible but trenchantly domestic, and to that extent it is an interesting reversion to the conception of Exodus 12.

1.3. Weeks/Pentecost. Seven weeks after the close of the entire festival of Passover and Unleavened Bread came the feast called Weeks, or Pentecost (in Greek, referring to the period of fifty days that was involved; see Lev 23:15-22; Deut 16:9-12). The waving of the sheaf before the Lord at the close of Passover anticipated the greater harvest, especially of wheat (see Ex 34:22), which was to follow in the summer, and that is just what Weeks celebrates (Lev 23:10-15).

An especially interesting feature of the range of sacrifices involved in the celebration of Weeks is the specific mention of leavened bread (Lev 23:17). Every major festival occasions a large expenditure of celebratory wealth, but why should mention be made of yeast, which had been so rigorously removed just eight weeks before? That reference enables us to see two features of both Unleavened Bread and Weeks that might otherwise have escaped us. First, the removal of leaven early in the spring is symmetrical with its re-introduction early in the summer; taken together, these festal practices make it clear that the removal of yeast was not intended to be definitive but contributes to Israel's usage of yeast through the year. Second and relatedly, the bread that is specified as leavened is for human consumption. Although the context in which it is presented is sacrificial, this bread is not for divine consumption; it is for waving before God, not for assigning to him in the fire. For that reason, the fact of its being leavened does not abrogate the general requirement that cereal given to God should be unleavened (see 1.2 above). One of the major points of sacrifice

generally is that Israel enjoys what is assigned to Israel and that God takes pleasure in what is God's; together, Unleavened Bread and Weeks show us that yeast was Israel's and that the appropriate celebration of the festivals would assure the continuation of that benefit.

The agricultural focus of Weeks was emphatic; there is, as is often noted, no precise connection made within the Bible between that festival and the formation of Israel in a way comparable to Passover and Unleavened Bread. Still, the book of Deuteronomy makes the association between Weeks and remembering that one was a slave in Egypt: that remembrance was to motivate one to observe and perform the statutes (Deut 16:12). By the time of the book of *Jubilees* in the second century B.C., the feast is associated with the covenant and the Torah as mediated by Moses (see *Jub.* 1:1-26), as well as with the covenants with Noah (*Jub.* 6:1, 10-11, 17-19) and Abraham (*Jub.* 15:1-16). At a later stage, certain rabbinic traditions (but by no means all) would make the giving of the law in Exodus 19 the lectionary reading of Weeks (see *b. Meg.* 31a) and would recall that the word of God was split into the seventy languages of the nations (*b. Sabb.* 86b). Although the specific association with the giving of the Torah cannot be established as a controlling sense by the time of the NT, that meaning grew out of the generative connection between Weeks and divine covenant that had been made long before.

1.4. Sukkoth. The last great harvest, and the last of the three great festivals, is Sukkoth, meaning "Booths," or "Tabernacles." The term *sukkah* can also mean "thicket," such as an animal might lurk in; the point is to refer to a rough, natural shelter of plaited branches that would permit the celebrants to lodge in the fields. Grapes and olives were taken in at this time; they require particular care in handling and storage, and sometimes it is prudent to protect the ripened yield. Camping in the fields was a wise practice.

Sukkoth, in its material and social dimensions, was a feast of particular joy and the principal festival of ancient Israel (it may predate Israel; see Judg 9:27). It could be referred to as "Feast of the Lord," without further specification (see Lev 23:39; Judg 21:19), in view of its prominence. As in the cases of Passover and of Weeks, the festival was also associated with the formation of Israel, and the *sukkot* were held to be

reminiscent of the people's period in the wilderness. But that was a later development, reflected from the time of the Priestly source (see Lev 23:39-43), which also specified the greatest amount of sacrifice for Sukkoth among all the festivals (see Num 29). Deuteronomy also would have the three great festivals, Passover, Weeks and Sukkoth, conceived as feasts of pilgrimage (Deut 16:16-17) that involve travel to the central sanctuary in Jerusalem, although they were in origin and probably remained in practice, under various forms, local, festal celebrations.

The success of the Deuteronomic calendar corresponds to the emergence of the canon and results in the agricultural year becoming the covenantal year: the cycle of exodus, Sinai and wilderness was superimposed on the cycle of barley, wheat and grapes, and the temple (the only place where sacrifice could be offered) became the focus of all three festivals. But it is noteworthy that of the three major feasts of Judaism, Sukkoth has survived best in the rabbinic revision of practice that followed the A.D. 70 destruction of the temple. Sacrifice, of course, is not involved, but the construction of the *sukkah* and associated practices of festivity make this the most joyous occasion of the Jewish year (see *m. Sukk.*).

Yet in ancient Israel, whether on the agricultural or the covenantal explanation, sacrifice was central to all the festivals, and sacrifice on a monumental scale. It is not surprising that Sukkoth is marked as the greatest sacrifice in terms of the quantity and value of offerings, because it came at the time of year when the disposable wealth of produce was at its height. The underlying dynamic of sacrifice is that when Israel enjoys the produce of God's land with God, according to the preparation and timing and consumption that God desires, Israel is blessed. Sacrifice is a holy consumption that carries in itself the promise of further enjoyment. Penance may be involved in sacrifice, but most of the sacrifices of Israel—the festival sacrifices above all—are emphatically understood as occasions of communal, festal joy such as developed countries in our time are for the most part ignorant of. For that reason, the temple itself is a house of joy, and its dedication is crucial. In this context, it is vital to note that even before it was associated with the period in the wilderness, Sukkoth was named as the time that the temple was dedicated by Solomon (see 1 Kings 8:2).

Tishri, during which Sukkoth occurs, is the seventh month, and the temple's dedication then made Sukkoth the time when in a sabbath year the Torah would be read (Deut 31:9-13). That is the basis of the later rabbinic celebration of *Simhat Torah* ("joy of the law") that closes Sukkoth. The number seven is basic to the entire calendar that coordinates the feasts, each of which was to last a week. (Although that is not specified in the case of Weeks, both its status as a festal convocation [Lev 23:21] and its name make that probable.) The weeks of the year mark the quarters of the lunar month, and each week ends with the *sabbath, which is itself a regular feast. The timing of each major feast in the middle of its month corresponds to the full moon, as is appropriate for a feast of harvest. The sabbath year and the Jubilee year, a sabbath of sabbaths, fit into the scheme that makes seven a basic unit of measurement. So there is a sense in which Tishri marks the new year, as well as Aviv (later called Nisan), the month of the Passover. When the book of Zechariah envisages the establishment of worship for all the nations in Jerusalem in a new, eschatological dispensation, it is natural that the feast concerned should be Sukkoth (Zech 14:16-21).

1.5. Other Notable Days. During the *Maccabean period, the restoration of worship in the temple was accomplished in the ninth month, and the feast that marks it was known as the Dedication, Hanukkah (see 1 Macc 4:36-61). That seems to have been a popular feast as well as an officially sanctioned festival, but it was not as important as Purim, a spring festival one month before Passover, which celebrated victory over people such as the legendary Haman, described as "the Jews' harasser" (Esther 8:1), when the book of Esther was read dramatically and with the enthusiastic participation of the audience. The term *Purim* derives from Babylonian religion, which appears to have provided much of the practice and background of the feast; there was a strong tendency during the Maccabean period to call it the Day of Mordecai, naming it after Esther's uncle, and to assimilate it to the Day of Nicanor, the commemoration of a military triumph (see 2 Macc 14:12-15:36).

The initial dedication of the temple and of the system of the sabbatical cycle at Booths makes it understandable that the principal occasion of repentance, the Day of Atonement, takes place just prior to Booths (see Lev 16). As in the

case of other occasions of penitence, the sacrifice takes a distinct form: what was usually consumed by people alongside God's consumption is now offered to God alone. But the national range of the Day of Atonement makes this occasion uniquely important as an act of rededicatorial penitence. After the destruction of Solomon's temple, fasts were also developed in the fourth, fifth, seventh and tenth months (see Zech 8:19). These are resisted in the book of Zechariah, but fasting seems to have become an increasingly important aspect of Judaic practice, and it is interesting that what one gives of oneself in penitence (flesh and blood) can be compared with what earlier had been offered on the altar in rabbinic literature (see *b. Ber.* 17a).

2. The Festivals and Holy Days in the New Testament.

The NT does not offer a systematic treatment of the principal festivals and holy days, but it does reflect the deep engagement of the church with the calendar of Judaism. That is easily seen by observing direct references to the festal calendar and other indications of cultic and communal activities associated with that calendar.

2.1. Sukkoth. Jesus' entry into Jerusalem is likely to have occurred at or near the time of Sukkoth, and the leafy branches that were to be used within the procession of Sukkoth are an important symbol within the scene as presented in the Gospels (see Neh 8:14-16 and *m. Sukk.* 3:1-9; 3:12-4:5, together with Mt 21:8; Mk 11:8; Jn 12:13). The focus of Jesus' action on the temple, in his occupation of the outer court as a protest and enactment of the sort of purity he demanded there, comports well with the centrality of the temple at the close of the book of Zechariah. Even his appropriation of property (the foal that he rides into the city; Mt 21:2-3; Mk 11:2-3; Lk 19:30-31) may be seen as an enactment of Zechariah's prophecy, since the book claims that the very horses in Jerusalem will be marked ornamentally with the words "holy to the Lord" (Zech 14:20). All this was to be the case because the identity of the Lord as king was recognized, and in the targum that is taken to refer to the revelation of the kingdom of God (*Tg. Zech.* 14:9; see Mk 11:10; Lk 19:38; Jn 12:13). In all of this, the deep connection to an eschatological understanding of Sukkoth is evident.

2.2. The Dedication and Purim.

2.2.1. The Dedication. The Feast of the Dedi-

cation is explicitly mentioned in the Gospel according to John (Jn 10:22). The reference appears in the midst of an extended controversy (ranging over Jn 10) over Jesus' self-designation as "the gate of the sheep" (Jn 10:7) and God's son (Jn 10:15). The controversy over Jesus as the gate is also reflected in the martyrdom of James as presented by Hegesippus, a writer of the second century. Cited by Eusebius (*Eusebius Hist. Ecll.* 2.23.1-18), Hegesippus characterizes James, Jesus' brother, as the person who exercised immediate control of the church in Jerusalem. Although Peter had initially gathered a group of Jesus' followers in Jerusalem, his interests and activities further afield left the way open for James to become the natural head of the community there. That change and political changes in Jerusalem itself made the temple the effective center of the local community of Jesus' followers. James practiced a careful and idiosyncratic purity in the interests of worship in the temple. He abstained from wine and animal flesh, did not cut his hair or beard, forsook oil and bathing and wore only linen garments. According to Hegesippus, those special practices gave him access even to the sanctuary.

In Hegesippus's account, James is interrogated by the authorities as he stands on a parapet of the temple. Tell us: what is the gate of Jesus? James responds with a strong declaration of Jesus as the Son of Man who will come to judge the world. The authorities then push him from the parapet and have James stoned. He is killed by someone with a club, who beats in his head. James's devotion to the temple and his devotion to his brother were coextensive. In each case, the focus was on the throne of God, of which Jesus was the gate and the temple the court. His court on earth was in Jerusalem, where James continued to offer worship and to insist on that purity throughout Jesus' movement that made that worship possible and acceptable to God. The temple was the threshold to God's throne in heaven, much as in the vision of the prophet in Isaiah 6. And in the vision of James, the Son of Man associated with that throne was none other than Jesus, the gateway to heaven itself. Devotion to him and to the temple together constituted the effective worship of God.

Loyalty to Jesus and loyalty to the temple both demanded rigorous attention to the issue of holiness, of what belongs to God in human

comportment. John 10, together with Hegesippus's portrayal of James and his martyrdom, provide insight into the worship of what was in its time the most influential and public expression of faith in Jesus. Because the Messiah was traditionally expected to restore true worship in the temple (see Chilton 1982, 86-96), the Feast of the Dedication became for followers of the risen Jesus who worshiped in Jerusalem a powerful occasion of christological reflection and christological controversy.

2.2.2. *Purim.* Such is the dominance of Passover within the calendar of Christianity that Purim has little echo. Still, Herod Antipas is pictured in Mark (Mk 6:23) as promising up to half his kingdom to Salome, which is what Ahasuerus repeatedly promises Esther (Esther 5:3, 6; 7:2). Of course, the events concerning John the Baptist's beheading are no Purim but a terrible reversal of the heroism of Esther. Salome's famous dance and its result represent an antithesis of the themes of Purim. The elements of the story in aggregate serve to exculpate Antipas from what only Antipas could be responsible for: John's death. There is an obvious analogy with the treatment of Pilate in the Gospels, where he is made to seem the dupe of the system he was in fact in charge of. In any case, it is notable the Luke's Antipas is more vigorous (see Lk 3:19-20; 9:7-9) and makes his decision quite literally without the song and dance: Salome makes no appearance in Luke.

2.3. *Passover.* The influence of James and his circle is by no means limited to the Feast of the Dedication. The most distinctive appropriation of a Judaic festival within the church was occasioned by Passover. Although the Gospel according to John presents Jesus' death as at the time the paschal lambs were slain (Jn 19:14, 31), the Synoptics' portrayal of the Last Supper evokes a Seder, the meal of Passover (Mt 26:17-20; Mk 14:12-17; Lk 22:7-14). There are several reasons for which this identification is implausible. No mention is made in the account of the supper of the lamb, the bitter herbs, the unleavened bread or the exodus from Egypt, all of which are prescribed in the book of Exodus (Ex 12). Moreover, the cultic authorities are presented as solemnly deciding to act in the case of Jesus before the feast itself (Mt 26:3-5; Mk 14:1-2). It seems clear that Jesus died near the time of Passover (having entered Jerusalem at or near Sukkoth) and that this timing then became coor-

minated with the Passover itself within the practice of the church (see *DJG*, Last Supper).

Again, the later history of the church permits us to understand the development and the theology of this practice (see also DLNTD, Lord's Supper, Love Feast). During the second century, a crisis concerning the calendar divided Christians seriously (see Eusebius *Hist. Eccl.* 5:23-24). Most celebrated Easter on Sunday, the Lord's day, and chose the Sunday following the time of Passover. Others, chiefly in Asia Minor, followed what they said was an ancient tradition and broke the fast prior to Easter only on the fourteenth day of Nisan: the day the lambs of Passover were to be slain and then consumed at evening (the start of the fifteenth day of Nisan). Further, they claimed that this corresponded to the movement of the heavenly bodies, in that Passover fell precisely on the first full moon after the vernal equinox, as Passover was regularly calculated.

Here we have a tradition, according to which Passover was to be kept precisely and that is connected with astronomy. Astronomical and calendrical observance is what Paul attacks in Galatians, as part of the program of the group he considers an artificial judaizing (see Gal 4:9-10; cf. 2:14). Chief among his disputants are followers of James (Gal 2:12). But the principal point of contention between Paul and the Judaizers is the necessity of circumcision (Gal 2:3-10; 5:6-12; 6:12-16). James himself seems not to have required circumcision of all believers; that is, he granted that non-Jews could be baptized and as such were to be acknowledged as saved by Jesus (Acts 15:13-21). But by presenting the last supper as a Seder, James and his circle assured that the leadership of the church would be Judaic in character, because Exodus itself stipulated that only the circumcised, whether Israelites or not, were to eat of the paschal meal (Ex 12:48).

2.4. Weeks/Pentecost. Just as the influence of James and his circle is greatest in connection with Passover, Weeks (Pentecost) is the most notable contribution in calendrical terms of Peter and his circle. The timing of the coming of the Holy Spirit is unequivocal (Acts 2:1-4), and the theme of Moses' dispensing of the Spirit on his elders is reflected (see Num 11:11-29). The association of Weeks with the covenant with Noah may help to explain why the coming of Spirit then was to extend to humanity at large (see

Acts 2:5-11). First fruits were celebrated at Weeks (see Num 28:26), and they express the gift of Spirit and resurrection in Paul's theology (Rom 8:23; 11:16; 1 Cor 15:20, 23). We should expect such connections with the Pentecostal theology of Peter in one of Peter's students (see Gal 1:18), as we should expect him to be especially concerned to keep the Feast of Pentecost (see 1 Cor 16:8; Acts 20:16) despite what he said about calendrical observations in Galatians.

2.5. Destruction of the Temple. As the Feast of Purim finds itself inverted in the presentation of Mark, so the destruction of the temple is treated not as an occasion of mourning but as the culmination of *apocalyptic prophecy in Matthew 24-25; Mark 13; Luke 21. In rabbinic Judaism, the destruction of the temple was remembered on the ninth of Av (the fifth month, corresponding mostly to August), an apparent compromise between the recollection of the destruction of the first temple on the seventh of Av (2 Kings 25:8) and of the Second Temple on the tenth of Av after Jeremiah 52:12 (Josephus *J.W.* 6 §250). The compromise was already well advanced in Josephus's mind, who places both destructions on the tenth of Av. That still does not explain why the ninth triumphed as a day of fasting, and H. Schauss plausibly explains it as an agricultural practice, well prior to harvest (Schauss, 295-96).

The destruction of the temple also had a signal impact on the understanding of the Day of Atonement in both Judaism and Christianity. In the Mishnah, tractate *Yoma* (*m. Yoma* 1:1-5:7) rehearses the meticulous preparations for that great occasion, in anticipation that the temple would function again. In the epistle to the Hebrews (Heb 9:1-12), all the elements of sacrifice, temple and priesthood are understood only to have foreshadowed the perfect offering of Christ, once for all.

The appropriation of the Judaic festal and penitential calendar was not merely a matter of replication. Throughout, from Jesus to the author of Hebrews, the evident conviction is reflected that Israel's time, a time of celebrating divine providence in nature and in history, had become final time, the moment of eschatological fulfillment.

FLORILEGIUM (4Q174)

Twenty-six fragments from *Qumran's Cave 4 have been identified as probably belonging to a manuscript that has become widely known as 4QFlorilegium (4Q174). *Florilegium* is the Latin term that corresponds with the Greek "anthology." Commonly florilegia are collections of quotations from a variety of literary sources, and there are many reasons why such collections were made in antiquity. The contents of the principal fragments of 4Q174 contain not only extracts from literary sources, especially the books of Deuteronomy, 2 Samuel and the Psalms, but also an intricate exegetical commentary on those passages, setting their significance in the last days (see Eschatologies of Late Antiquity). Because of this many commentators prefer to label the composition more precisely on the basis of its content as an "eschatological *midrash." The composition has similarities to several other texts found at Qumran, notably 4QCatena A, but there are no overlaps between them to prove that they are two copies of the same work.

1. Form
2. Genre
3. Content
4. Comparisons with the New Testament

1. Form.

The most extensive analysis of the principal

fragments of this composition (Steudel) has convincingly argued that the fragment containing the extract from Deuteronomy 33 probably preceded those that contain the citations and interpretations of 2 Samuel and the Psalms. Thus it seems as if the scriptural extracts were placed in the order of Law, Prophets and Psalms (cf. 4Q397 14-21 10-11; cf. Lk 24:44), providing the history books were understood to be part of the prophetic corpus at that time. That is then the order that was the basis of the later canonical ordering of the Hebrew Bible.

2. Genre.

The genre of 4Q174 is much debated. Because of the phrase "in the last days" in its several sections, it is widely acknowledged that the selection of passages and their interpretations have been carefully put together thematically. 4Q174 is often cited as a prime example of a thematic *pesher (Carmignac). However, the commentaries in this composition are not all the same. In what survives, only the sequence of quotations from the Psalms are explicitly given commentary that is technically introduced by a formula including the term *pesher*; the remaining sections have commentary of a more general kind. This variation raises the question whether the compiler of 4Q174 considered that the psalms had a different status from the prophetic extracts from the blessing of Levi and from the oracle of Nathan, which are also commented upon in the work, or whether it could be that he used a variety of exegetical sources. In other Qumran compositions *pesher* is used technically for interpreting unfulfilled or partially fulfilled blessings, curses and prophecies (including the Psalms), but not all such texts always receive *pesher* in the community's sectarian works.

The section of 4Q174 that contains the interpretation of the psalms is introduced by the formula "a midrash of" (*mḏrš m*). Although this formal use of the word *midrash* might indicate that what follows is "an interpretation" (cf. 1QS 8:15; L^{am}), it is possible that the term was used somewhat technically. It is very unlikely, however, that the commentary in 4Q174 can be read as a direct precursor of the later *rabbinic midrashim. The term *midrash* has a similar quasi-technical role in the title of another Qumran composition, *Midrash Sepher Moshe* (4Q249), a commentary on the law. The appearance of the terms *midrash* and *pesher* together in just one part

of this complex thematic commentary shows how important it is that great care should be exercised before any particular kind of early Jewish or early Christian interpretation is labeled generically.

3. Content.

3.1. The Temples. 4Q174 describes three temples and assumes the existence of a fourth. The interpretation of 2 Samuel 7 contains a reference to the Solomonic temple that was destroyed. There is also mention of a future ideal temple from which non-Israelites will be banned; this probably corresponds with the divinely constructed temple as mentioned in the **Temple Scroll* (11QTemple 29:9; cf. Heb 9:11). While the commentary seems to assume the existence of the Second *Temple, the focus of the contemporary realization of Nathan's oracle is the divine establishment of a "sanctuary of Adam" (*miqdaš 'ādām*). The phrase is deliberately ambiguous, referring both to the community's aspiration for the restoration of Eden as a sanctuary where the glory of Adam would be restored (CD 3:19-20 [see Damascus Document]; Wise) and to the human composition of this sanctuary. In other words, the community saw itself as an anticipation of the ultimate divinely built temple (Brooke 1985; Dimant). Since the community, at least at the outset, was priestly in makeup and outlook, this substitution of the community for the temple in *Jerusalem is a striking example of how political and other circumstances can force even a traditional and institutionally oriented group to spiritualize the basis of its self-understanding.

3.2. The Eschatological Figures. Nathan's oracle contains a play on words that is visible even in English. God will establish "a house for David"; the term *house* carries the double meaning of temple building and royal house. The quotation of 2 Samuel 7:11-13 cleverly omits the words that speak directly of David's immediate successor, Solomon. This process of abbreviation makes Nathan's oracle have concern only with the eschatological future. At that time, the interpretation comments a "shoot of David" will arise to save *Israel. This "shoot" is referred to in other community compositions (4QpIsa^a frags. 7-10 iii 22; 4QCommentary on Genesis A 5:3-4; 4Q285 frag. 5 3^a 4); the phrase derives from Jeremiah 23:5, part of what is widely understood as a messianic oracle, and Jeremiah

33:15. This explicit Davidic *messianism would seem to reflect the later thinking of the community (second half of first century B.C.), royal messianism in earlier compositions being represented by the more general designation "Messiah of Israel" (e.g., 1QS 9:11). In 4Q174 it is not clear how the Davidic shoot will save Israel.

The Davidic Messiah is accompanied by the Interpreter of the Law (cf. CD 6:7; 7:18). In some Qumran compositions the Messiah of Israel is accompanied by the Messiah of Aaron, and many commentators have justifiably identified 4Q174's Interpreter of the Law with the priestly Messiah. Such an identification is strengthened by the presence in 4Q174 of an interpretation of the blessing of Levi of Deuteronomy 33, a text that in the earlier 4QTestimonia almost certainly refers to the eschatological priest.

3.3. The Community. Although much in 4Q174 is concerned with the future temple and the figures who will appear in the last days, much in 4Q174 concerns the community itself. Not only is the community identified as a proleptic sanctuary, it also features strikingly in the interpretation of Psalm 2. The interpretation occurs at the bottom of a slightly damaged column, but it seems to be the case that the final consonant of *mšyhw* is read as a plural suffix, "his anointed ones." Thus, rather than understanding the Psalm to be referring to the Messiah, the interpreter applies the words to "the elect of Israel in the last days." Given the reference to the Davidic Messiah in the previous section of the composition, this corporate understanding of Psalm 2:2 is all the more striking. As in some sections of the NT the concept of messianism is democratized and extended to the faithful community.

The contents of column 2 of the principal group of fragments refer to the community's expected eschatological suffering, a time of trial for the faithful when *Belial holds dominion (cf. Mt 5:11-12).

4. Comparisons with the New Testament.

4.1. The Acts of the Apostles. Psalm 2:1-2 is cited and given interpretation in Acts 4:25-26, but the closest parallel in Acts with 4Q174 is the use of 2 Samuel 7:11-16 as the source of the vocabulary of much of Acts 13:33-37, in which Psalm 2:7 is cited explicitly. The juxtaposition of 2 Samuel 7 and Psalm 2 in both texts need not suggest dependence on a common written

source. The two scriptural texts have an intertextual affinity that is independently discernible (Brooke 1998).

In Acts 15:16 the textual form of Amos 9:11 is more in agreement with that represented in 4Q174 1-3 i 12 and CD 7:16 than with any other known witness. This shows that scriptural citations in both the scrolls and the NT need to play an ongoing significant role in the study of the transmission of the biblical text.

4.2. 2 Corinthians 6:14—7:1. Several scholars (see Brooke 1985, 211-17) have argued that 2 Corinthians 6:14—7:1 is an interpolation in Paul's letter, possibly introduced by Paul himself to represent the views he was trying to argue against. Several motifs in the passage are echoed in 4Q174, especially the identification of the community with the temple and the appeal to Ezekiel 37 and 2 Samuel 7:14. Perhaps this material indicates that *Essenism in some form was spread in the Jewish *Diaspora as well as throughout Palestine.

4.3. Hebrews. The linked quotation of Psalm 2:7 and 2 Samuel 7:14 in Hebrews might suggest that the combination was known to the author from some written tradition of the exegesis of the passages taken together as in 4Q174. However, since both passages refer to the "son" in a royal context, it is just as likely that as in Acts 13:33-37 the compilers of 4Q174 and of Hebrews had no common source but worked directly with the inherent *intertextuality that the biblical texts suggest for themselves (Brooke 1998).

FREEDMEN. See ROMAN SOCIAL CLASSES.

FRIENDSHIP

Friendship constituted a regular topic of discussion in ancient literature, although specific views on friendship varied in different periods, places and authors. Some of the ideals of friendship impact our understanding of NT passages even where the specific term is unused.

1. Kinds of Friendship in Antiquity
2. Ideals for Friendship in Antiquity
3. Dying for Friends
4. Friendship with God
5. Friendship Contrasted with Servanthood
6. Friendship in the New Testament

1. Kinds of Friendship in Antiquity.

Friendship was a regular ancient topic of discourse (e.g., Epictetus *Disc.* 2.22), the leading subject of numerous essays, for instance, by *Aristotle (*Eth. Eud.* 7.1234b-1246a; *Eth. Nic.* 8—9); Plutarch (*Many Friends, Mor.* 93A-97B); Dio Chrysostom (*Third Discourse on Kingship* 99-100); *Cicero (*De Amic.*); Seneca (*Ep. Lucil.* 3, "On True and False Friendships"; 9, "On Philosophy and Friendship"; see further Sevenster, 172-77); and Theophrastus (according to Aulus Gellius *Noc. Att.* 1.3.10-11). Scholars have produced detailed studies of friendship in *Philo, who develops some *Stoic ideals (see Sterling); on Aristotle (Schroeder, 35-45) and his followers, the Peripatetics (Schroeder, 45-56; for other sources, see especially Fitzgerald 1997b, 7-10). Even before Aristotle, many ideals of friendship circulated that later became pervasive in the Roman world (see Fitzgerald 1997a).

There were a variety of perspectives on and kinds of friendship, not only in the philosophers but also throughout Greco-Roman and Jewish society. Friendship could signify a relationship of dependence or of equality, of imper-

sonal alliances or of personal bonds of affection.

1.1. Political Friendship. We will first survey some political kinds of friendship. The Roman ideal of *amicitia* was less apt to emphasize sentiment and male affection than did the Greek ideal of *philia*; it often represented an alliance of utility characteristic of partisan politics among the Roman elite (Stowers, 29). The claim that Romans "were rather incapable of a heartfelt friendship" (Friedländer, 1:225) is an exaggeration stemming from overdependence on the literature of the elite (and ignoring the abundance of genuine affection, e.g., in Cicero's letters), but it does reflect the recognition of the importance of political connections in urban Roman friendship ideals. But there was considerable interpenetration of Greek and Roman ideals by the early empire (e.g., in Plutarch; see O'Neil), and political uses of friendship did not start with Rome.

Friendship has been said to be largely political in writers such as Cicero (see Fiore) and Dionysius of Halicarnassus (see Balch). One may contrast the older Stoic values of Chrysippus (Diogenes Laertius *Vit.* 7.7.189), but politically based relationships were common even among earlier Greeks. Whereas Aristotle notes friendships based on goodness, pleasure or utility (Aristotle *Eth. Eud.* 7.2.9-13, 1236a; 7.10.10, 1242b; *Eth. Nic.* 8.13.1, 1162ab), he assigns most to utility (Aristotle *Eth. Eud.* 7.2.14, 1236a; for political friendship in Aristotle, see further Schroeder).

One of the most common political uses of "friendship" in our literary sources refers to political dependence on a royal patron. This appears in ancient Israel (e.g., 2 Sam 15:37; 16:16-17; 1 Kings 4:5; 1 Chron 27:33) and applies to tyrants of the classical period (Diogenes Laertius *Vit.* 1.54), to the intimate circle of Alexander of Macedon (Diodorus Siculus *Bib. Hist.* 17.31.6; 17.39.2; 17.100.1) and to those of Cassander (Diodorus Siculus *Bib. Hist.* 18.55.1), to a high office in Hellenistic Syria (Diodorus Siculus *Bib. Hist.* 33.4.4a). This use of royal friendship appears with other rulers as well (Cornelius Nepos *Vir. Illus.* 9, 2.2; 18, 1.6; Chariton *Chaer.* 8.8.10), including in various Jewish sources (1 Macc 10:20; 15:28, 32; 2 Macc 7:24; *Ep. Arist.* 40-41, 44, 190, 208, 225, 228, 318; Josephus *Ant.* 12.366; 13.146, 225; *Life* 131; cf. *Sipr-Deut.* 53.1.3). In the Roman imperial period it applies especially to friendship with Caesar (Epictetus *Disc.* 4.1.45-50; Mar-

tial *Epigr.* 5.19.15-16; Herodianus 4.5.5; inscriptions in Deissmann, 378), although of Jewish tetrarchs and rulers, apparently only King Agrippa I (Acts 12:1-21) felt secure enough to adopt this title on his coins (Meysan). John 19:12 probably refers to this position of honor (see e.g., Sherwin-White, 47); John 15:15 might present friendship with Jesus as friendship with a king.

In one of its most common uses in ancient literature, "friendship" could apply to alliances, cooperation or nonaggression treaties among peoples. Epics could use such language for alliances (Homer *Il.* 3.93, 256; 4.17; 16.282; Virgil *Aen.* 11.321), as might orators (Demosthenes *On the Navy Boards* 5; *On the Embassy* 62; *Letters* 3.27; cf. *Rhet. Ad Herenn.* 3.3.4). It also appears in geographers (Strabo *Geog.* 8.5.5) and apologists (Josephus *Ag. Ap.* 1.109; 2.83b). Naturally, this language predominates in biographers and historians. We can attest it abundantly in biographers such as Arrian (*Alex.* 1.28.1; 4.15.2, 3; 4.21.8; 7.15.4); Plutarch (*Comp. Lyc. Num.* 4.6; *Pel.* 5.1; 29.4; also *Epameinondas* 17 in *Reg. Imp. Apophth., Mor.* 193DE); Cornelius Nepos (*Vir. Illus.* 7.4.7; 7.5.3; 7.7.5; 14.8.5; 23.10.2), and others (Josephus *Life* 30, 124). It is if anything more abundant in the historians, such as Polybius (e.g., *Hist.* 14.1); Dionysius of Halicarnassus (e.g., *Ant. Rom.* 3.28.7; 3.51.1; 5.26.4; 5.50.3); Diodorus Siculus (e.g., *Bib. Hist.* 14.80.4; 14.56.2; 17.39.1); Livy (e.g., *Hist.* 6.2.3; 27.4.6; 43.6.9); and 1 Maccabees (1 Macc 12:1, 3, 8; 14:40).

Ancient writers frequently apply the designation *friendship* to personal or familial relationships undertaken for political expediency (e.g., Achilles *Tatius Leuc.* 4.6.1-3); Plutarch provides abundant examples (e.g., *Plutarch Ages.* 23.6; *Pomp.* 70.4; *Statecraft* 13, *Mor.* 806F-809B; *Philosophers and Men in Power* 1, *Mor.* 776AB; *Whether an Old Man Should Engage in Public Affairs* 6, *Mor.* 787B).

1.2. Patron-Client Friendship. Closely related to other political uses of friendship is the relationship between patrons and clients, often defined as friendship. In the Roman world, people probably often thought of both the royal and the nonroyal political images of friendship in terms of patron-client relationships. Patrons were called the clients' friends (*AE* 1912.171, as cited in Sherk, 235), and even more often clients were called friends of their patron (Martial *Epigr.* 3.36.1-3; 3 Macc 5:26; probably P. Oxy. 2861). This image of dependence could be ap-

plied even to a magician dependent on a spirit (PGM 1.172, 190-91). Although the patron-client relationship involved fundamental inequality, the fact that ancient Greek ideals of friendship involved equality (see §1.3 below) allowed some clients to exploit this language to challenge some inequities in their patrons' understanding of the relationship (see Konstan). This patron-client usage may have influenced the use of "friendship" to describe the relationship between philosopher and disciple (Diogenes Laertius *Vit.* 6.2.36; Stowers, 39).

1.3. Nonhierarchical Friendship. But not all ancient Mediterranean conceptions of friendship reflected this hierarchical sort of relationship, even though friendship normally anticipated reciprocity. In the eastern Mediterranean, societies of friends could include fellow members of one's guild (Horsley, 4:17-18 §3). Although age-group societies may have declined in the Hellenistic and Roman periods, the classical Greek wealthy image of friendship tended to be companionship based on groupings of the same sex and age, which constituted political parties (Stowers, 28-30, 39, 60; cf. Gould, 143-45). One may perhaps compare the relationship of associates in the Jewish *habûrah* (cf. Oesterley, 172). Among the Greek schools, the *Epicureans in particular emphasized friendship, regarding it as a source of pleasure (Diogenes Laertius *Vit.* 10.120; 148.27-28); the view of the Epicurean Lucretius (*De Rerum Natura* 5.1019-23) even sounds like later social contract theories. Plutarch (*Table Talk* 4. introduction, *Mor.* 660A) advocates befriending only the good while showing goodwill toward all.

Although Roman patronal friendship made at best a vague pretense to equality, this traditional Greek image of friendship, even when related to benefaction, demanded at least the idea of equality. Aristotle cited the earlier proverb, "Friendship is equality" (Aristotle *Eth. Eud.* 7.9.1, 1241b), and is said to have "defined friendship as an equality of reciprocal good-will" (Diogenes Laertius *Vit.* 5.31, as translated in LCL 1:478-79). Of course, what Aristotle meant by "equality" differs considerably from our usage of that concept. Any kind of friendship could exist either between equals or with one as a superior (Aristotle *Eth. Eud.* 7.3.2, 1238b; 7.10.10, 1242b; *Eth. Nic.* 8.7.1, 1158b; 8.13.1, 1162ab); Aristotle further defined "equality" more proportionately than quantitatively (Aristotle *Eth. Nic.* 8.7.2-3,

1158b). In the same way, his teacher *Plato stressed both the friendship held by loving equals and that which stemmed from the poor's need for the rich (Plato *Leg.* 8, 897AB).

Nevertheless, equality remained part of the traditional Greek ideal of friendship. As early as Homer a leader could honor a special friend above his other companions, regarding him as equal to himself (Homer *Il.* 18.81-82). Others could speak of a friend as "another I" (Diogenes Laertius *Vit.* 7.1.23); Neo-Pythagorean tradition stressed friendship as equality (see Thom). Alexandrian Jewish writers also picked up on this; in *Epistle of Aristeus* 228, the highest honor is to be shown to parents but the next honor to one's friends, for a friend is the "equal of one's own soul" (Hadas, 189). This view continued to affect popular thought. Thus one letter recommends a friend (*amicum*) by exhorting the receiver to view him "as if he were me" (*P. Oxy.* 92.5-6, 2d cent. A.D.); this ideal may inform the background of Philemon 17-19.

Whether patronal or among peers, friendship was in general conditional. It normally included "obligations and expectations" (Meeks, 30), whether formally or informally. Friendship appears frequently in private letters, where it often refers to friendship among peers. In such letters it appears "usually in the context of performing services for each other," such as watching over one another's families or taking care of the other's debts in his absence until his return (Evans, 202).

2. Ideals for Friendship in Antiquity.

2.1. Friendship Involving Loyalty. Hellenistic ideals of friendship included a strong emphasis on loyalty. Isocrates argued that good men love their friends always, even when far away, but base men honor friends only when they are present (Isocrates *Dem.* 1, *Or.* 1). Others carried on the criticism of those who were merely friends in name and the lamentation that faithfulness in friends was rare (Phaedrus 3.9.1; cf. Prov 20:6). Jewish works such as (probably) the *Sentences of the Syriac Menander* stress loyalty to friends (*Sent. Syr. Men.* 25). The Jewish writer in Sirach 6:7-10, 14-16 and 12:8 also argues that one knows one's friends only in the hard times, when friends' loyalty is tested.

In narratives, the loyalty of a good friend adds to the delight of the story; for instance, in Chariton's novel *Chaereas and Callirhoe*, Poly-

charmus leaves his parents to face danger with his friend (*hetairos*) Chaereas (Chariton *Chaer.* 3.5.7-8), because he was his friend (*philos*; Chariton *Chaer.* 3.3.1); at the end of the book, Polycharmus is rewarded for his faithful friendship with Chaereas's sister in marriage (Chariton *Chaer.* 8.8.12-13; on Polycharmus's role see further Hock, 147-57). Readers would recognize the same sort of relationship in the narratives about David and Jonathan in the OT, where Jonathan proves even more loyal to David than to his father.

2.2. Friendship Involving Intimacy and Shared Confidences. Intimacy frequently appears in discussions of friendship (e.g., Theocritus work 12, *The Beloved*). Isocrates advises a careful testing of friends to see if they are worthy of confidence with secrets (Isocrates *Dem.* 24-25, *Or.* 1). Aristotle notes that true friendship requires confidence (*pistis*) in one's friend, which requires standing the test of time (Aristotle *Eth. Eud.* 7.2.40, 1237b).

That true friends are those who can speak openly (with *parresia*), rather than only praising a person to his face, became a commonplace among Greek and Roman moralists (Isocrates *Ad Nic.* 28, *Or.* 2; Seneca *Dial.* 10.15.2). Plutarch devotes an essay to the contrast between flatterers and friends, an idea that may inform Paul's defense of his open speech to his churches (1 *Thess* 2:4-6).

This ideal of friendship proves common in early Jewish sources. *Josephus, writing about Judaism for a Greco-Roman readership, is eager to point out the similar emphasis in Jewish ethics:

[the Law] allows us to conceal nothing from our friends, for there is no friendship without absolute confidence; in the event of subsequent estrangement, it forbids the disclosure of secrets. (Josephus *Ag. Ap.* 2.28 §207, LCL 1:376-77)

Philo's portrayal of Abraham suggests that friends were recipients of one's confidence and intimacy (Philo *Sobr.* 55). Earlier sages especially expected friends to be able to maintain confidences (Sir 6:9; 22:22; 27:17; cf. 42:1). This kind of intimacy and equality could carry over into talk about God, as in the case of Abraham, with whom God "no longer talked . . . as God with man but as a friend with a familiar" (Philo *Abr.* 273, LCL). It is thus not surprising to read that Jesus shares with his disciples intimate secrets

he would not share with servants (Jn 15:15).

2.3. Friendship and Sharing All Resources. Aristotle defines as a friend any who seeks to do for another what he believes to be to the other's benefit (Aristotle *Rhet.* 1.5.16, 1361b). As Plutarch notes, friends share not only secrets but, ideally, everything they possess (e.g., Plutarch *Flatterer* 24, *Mor.* 65AB). That friends shared all things in common becomes a common phrase in the literature of Greco-Roman antiquity, in satirists (Martial *Epigr.* 2.43.1-16; perhaps 8.18.9-10), historians (Herodianus 3.6.1-2; cf. 1 *Macc* 12:23), biographers (Cornelius Nepos *Vir. Illus.* 15.3.4), and others (perhaps *Pseud.-Phoc.* 30; Euripides *Androm.* 585, but cf. 632-35; Plutarch *Bride* 19, *Mor.* 140D; Longus *Daphn. Chl.* 1.10).

But *Stoics made special use of this idea. Diogenes Laertius describes the Stoic view of friendship: "And by friendship they mean a common use of all that has to do with life, wherein we treat our friends as we should ourselves" (Diogenes Laertius *Vit.* 7.1.124, LCL 2:228-29; cf. Seneca *Ben.* 7.4.1). Although the ideal of friends sharing all things in common was widespread, Cynics and Stoics particularly propagated the syllogism that the wise man was a friend of the gods, the gods owned everything, and therefore everything belongs to the wise man. This reasoning purportedly prevailed as early as Diogenes the Cynic (Diogenes Laertius *Vit.* 6.2.37, 72; cf. Antisthenes in 6.1.11) but became common among Stoics (Diogenes Laertius *Vit.* 7.1.125; cf. Seneca *Dial.* 1.1.5; *Ben.* 7.4.6; Philo *Cher.* 84). Many scholars believe that this reasoning underlies the thought of 1 Corinthians 3:21-23 (e.g., Conzelmann, 80). This may account for the sharing of Jesus' things with the disciples, his friends (Jn 15:15), through the Spirit of truth, just as Jesus had shared the Father's things (Jn 16:14-15), but this context probably emphasizes specifically sharing God's truths (Jn 16:13; 15:15).

3. Dying for Friends.

Loyalty to friends and treating friends as one's own equals, as another self, might require dying for them. Early Jewish sources prohibit sacrificing another to spare one's own life but allowed that one's life takes precedence over another's life (Akiba in Jacobs, 42-44). Nevertheless, though one was not required to love one's neighbor more than oneself, Judaism did praise as heroic those rare persons who would sacrifice

their lives on behalf of their friends (Jacobs, 47).

Courageous, heroic and honorable death was an ancient Mediterranean virtue (e.g., Epameinondas 2 in Plutarch S.K., *Mor.* 192C). Greek tradition viewed as noble Iphigeneia's willingness to die to "save" Greece (Euripides *Iph. Aul.* 1420); Roman military oaths also demanded willingness to die on behalf of the state (*IGRR* 3.137; *OGIS* 532; *ILS* 8781, as cited in Sherk, 31); texts portrayed favorably *slaves willing to die for their masters (Appian *Civ. W.* 4.4.26). Josephus likewise portrays favorably those desiring to die nobly for their nation or for fame (e.g., Josephus *J.W.* 1.5 §§43-44, 58); later rabbis praised a Roman senator (probably fictitious) who died to spare the Jews (*Deut. Rab.* 2:24). Self-sacrifice on behalf of another was voluntary and not expected (Euripides *Alc.* 689-90); nevertheless Greeks regarded it highly (Euripides *Alc.* 12-18; *Herac.* 547-601; *Androm.* 413-15; cf. Hengel, 9). Romans also regarded highly dying on behalf of one's nation (Livy *Hist.* 10.28.12-18; 10.29.1; Lucan *Civ. W.* 2.380-83). Ancients also recognized the occasional value of such sacrifice as "an expiatory sacrifice to assuage the anger of the gods" (Hengel, 19, 27; cf. Euripides *Iph. Aul.* 1394-97, 1553-60; Livy *Hist.* 22.57.6; Plutarch *Greek and Roman Parallel Stories* 35, *Mor.* 314C-D). Thus Greeks or Romans would readily grasp the early Christian concept that Jesus died on their behalf, even if they lacked exposure to atonement in the levitical system.

In the context of such ideas, death on behalf of a friend would provide one of the most concrete expressions of loyalty possible. Perhaps especially because great dangers normally obliterated the closest ties, even those of friendship (Achilles Tatius *Leuc.* 3.3.5), true friends were viewed as those who would share in one's hardships (Isocrates *Dem.* 25, *Or.* 1) and do whatever proved necessary to help one (e.g., P. Oxy. 32.5, 8-14), including in war (Euripides *Or.* 652) or in the law court (Aulus Gellius *Noc. Au.* 1.3.4-8). In this vein, the greatest expression of devoted friendship was regarded as willingness to die for one another (Diodorus Siculus *Bib. Hist.* 10.4.4-6; Epictetus *Disc.* 2.7.3); where this was impossible, they could at least die together (e.g., Euripides *Or.* 1069-74, 1155; *Iph. Taur.* 674-86; Chariton *Chaer.* 4.3.5; 7.1.7; cf. *Sent. Syr. Men.* 406-7; *Syr. Men. Epit.* 22-23).

Yet even in view of this emphasis on such

signs of devotion in ancient literature, they proved infrequent in practice. Thus Epicurus reportedly noted that the wise person would "sometimes" die on a friend's behalf (*hyper philou*; Diogenes Laertius *Vit.* 10.120; cf. Rom 5:7). Lucian seems predisposed to satirize or minimize the traditional ideal (see Pervo). Such self-sacrifice was truly the "greatest" act of love one could bestow (Jn 15:13).

Thus in Jesus' discussion of love (Jn 15:9-17; *phileō* and *agapao* appear roughly interchangeable in this Gospel) he digresses to illustrate his love for his friends by speaking of how he would lay down his life for them (Jn 15:13-15). Likewise, if Jesus' disciple friends (Jn 15:15) love one another as he has loved them (Jn 15:12), they must lay down their lives for one another (Jn 15:13; cf. 1 Jn 3:16). The same Gospel illustrates this principle earlier when Jesus speaks of going to Lazarus, because Lazarus was their "friend" (*philos*, Jn 11:11), whom Jesus "loved" (*phileō*, Jn 11:3) and for whose life Jesus laid down his own (Jn 11:8-16); Thomas literally understands, and the reader symbolically understands, Jesus' "going" in terms of his death (Jn 11:16).

4. Friendship with God.

The supreme example of patronal friendship in ancient sources might be thought to be discovered in passages referring to friendship with God. Surprisingly, however, it is not the patronal but the voluntary, reciprocal elements of the relationship that dominate many of these texts. Some references are too brief for this to be determined, as in some Cynic epistles, where the wise person alone is God's friend (Crates *Ep.* 26, *to the Athenians*; cf. Diogenes *Ep.* 10, *to Metrocles*); one may also compare the fellowship between mortals and deities in the Golden Age (Babrius *Fables prol.* 13).

But *Epictetus addresses the subject more frequently. Heracles had few friends, indeed, no friend closer than God; thus he was an obedient son of God (Epictetus *Disc.* 2.16.44). One who does not care about circumstances is like a free man and can "look up to heaven as a friend of God" (Epictetus *Disc.* 2.17.29, LCL 1:344-45). Loving others is important, but the first responsibility of one who is truly free is to be a friend to the gods (Epictetus *Disc.* 3.24.60). As a free person himself Epictetus was a "friend of God," for he chose to obey him willingly (Epictetus *Disc.* 4.3.9).

Some Diaspora Jewish writers use the phrase in a manner resembling that of Epictetus. In *Wisdom of Solomon, Wisdom enters the righteous, making them God's friends and prophets (Wis 7:27; cf. 7:14; 8:18); in Philo, Virtue makes God a friend of the righteous (Philo *Vit. Cont.* 90, though there is a variant reading here), just as he is a friend to virtue (Philo *Op. Mund.* 81) and to wisdom (Philo *Sobr.* 55). The second-century Tanna Rabbi Meir, whose image of friendship may have been affected by Greco-Roman conceptions to a lesser degree, observed that whoever occupies himself with the Torah for its own sake is called God's friend (*m. 'Abot* 6:1). In *rabbinic parables, Israel is sometimes portrayed as a friend of God the king (e.g., *Sifre Deut.* 53.1.3; *b. Sukk.* 55b). In Justin Martyr's *Dialog with Trypho* 28, God's friend is whoever knows and obeys him; in *Sentences of Sextus* 86ab, self-discipline produces piety, which seeks friendship with God.

Following the OT designation of Abraham as God's friend (Is 41:8; 2 Chron 20:7), early Jewish literature naturally applies the title regularly to Abraham (*Jub.* 19:9), including in Philo (*Abr.* 89, 273; *Sobr.* 55); the rabbis (*Mek. Shir.* 10.54-55; *Gen. Rab.* 65:10; *Ex. Rab.* 27:1; *Lev. Rab.* 11:7); and other early Jewish (*T. Abr.* 1:7; 2:3, 6; 8:2; 9:7; 15:12-14; 16:3A; *Apoc. Abr.* 10:5, no earlier than second century A.D.; see Apocalypse of Abraham; *Apoc. Zeph.* 9:4-5; see Apocalypse of Zephaniah) and Christian (Jas 2:23; *1 Clem.* 10, 17) sources. Writers applied the title only rarely to postbiblical characters (Rabbi Ishmael in *3 Enoch* 1:8; see Enoch, Books of) or biblical characters other than Abraham or *Moses (Levi, in *Jub.* 30:20-21; Isaac and Jacob in CD 3:3-4, see Damascus Document; Jacob in some manuscripts of *Jos. and As.* 23:10; cf. *Gen. Rab.* 69:2). Abraham receives this title especially because of his intimate relationship with God, so that God could take Abraham into his confidence, not treating him as a servant (cf. Jn 15:15): Because wisdom was God's friend rather than servant, God also calls Abraham his friend (Philo *Sobr.* 55). Or, it is because of his obedience to God instead of his own spirit's will (CD 3:2; cf. Jn 15:14). This friendship apparently extends even to sharing secrets (a characteristic of friendship noted in §2.2 above); one might compare God sharing his secrets with Abraham in Genesis 18:17-18 and probably *Testament of Abraham* 9:2, recension A.

In Exodus 33:11, Moses is the friend of God;

this becomes the basis on which he can appeal to God for a revelation of his glory (Ex 33:13-18). Early Jewish texts repeat this designation for Moses (Philo *Sacr.* 190; Pseudo-Philo *Bib. Ant.* 23:9; 24:3; 25:5; *Sifre Num.* 78.1.1; *Ex. Rab.* 45:2; but *Sib. Or.* 2.245 is probably a Christian interpolation); his special closeness to God also appears in Diaspora magical texts (Gager, 140-45). In tannaitic parables, Moses appears as God's friend four times, Israel three times and a few others, including Abraham, once each (Johnston, 591). This is probably a primary background for the "friends of God" image in John 15:15, especially because in John 1:14-18 the disciples are compared with a new Moses to whom God revealed his glory in Jesus, the embodiment of Torah in flesh (cf. 2 Cor 3:6-18).

5. Friendship Contrasted with Servanthood.

The contrast between friends and servants was familiar enough in Mediterranean antiquity; a Roman, for example, could describe conquered people as "slaves" but allies as "friends" (Sallust *Jug.* 102.6). Writers could also draw a contrast between servants and friends of God. Philo declares that God gives priority to his friends in inheriting virtue rather than to his slaves (Philo *Migr. Abr.* 45). Abraham, like Wisdom, is God's friend and not his servant, and those who are his friends are also his only son (Philo *Sobr.* 55).

Thus John supplements his earlier contrast between servants and children (Jn 8:33-35; cf. Gal 4:7) with a contrast between friends and servants in John 15:15. John's contrast between being Jesus' friends and slaves may also help explicate the context, because only friends share all things in common. Under traditional Jewish law, a slave could not inherit, no matter how many goods were left to him, unless the master's will freed the slave or granted him "all" his master's goods (including himself; *m. Pe'ah* 3:8). There would be no point in Jesus promising to share his words or goods with the disciples, unless they were friends and not slaves.

6. Friendship in the New Testament.

The preceding discussion sheds light on many NT passages; we treat here only some of the possible insights the data provide for early Christian texts not already mentioned. Much of the conventional language of friendship, although not our specific term, recurs in Paul's letters, possibly presupposed in Paul's conflict with the

Corinthians (see Marshall, especially 132-33; Mitchell, 230-31), in his *pathos* section in Galatians 4:12-20 (Mitchell, 227-30) and probably important in his letter to the Philippians (Mitchell, 233-36 and the numerous authors he cites).

Luke-Acts employs a great deal of friendship imagery (see Mitchell, 236-57). The matter of reciprocal obligation may inform some of these texts, for example, in the case of the friend at midnight (Lk 11:5-8). The centurion's friends act as his messengers (Lk 7:6), perhaps performing a favor in return for his benefactions (Lk 7:5) or acting as his clients (cf. Acts 10:7-8). The friends in view in Luke 15:6, 9, 29; 21:16 are one's equals; in Luke 14:12 they could be social peers but possibly clients (cf. Lk 14:10), as also in Acts 10:24, where relatives are likely dependents, given the social status of a Roman officer in the provinces (see Family and Household). In Luke 16:9 the friends in the context might be clients in some sense, but the emphasis is on networking with allies bound to one by reciprocal obligation (cf. Lk 16:5-7). Luke 23:12 clearly designates the friendship of political alliance. The accusation in Q that Jesus is friends with sinners (Mt 11:19 par. Lk 7:34) probably stems from Palestinian Jewish ideas about table fellowship (cf. Ps 1:1), but Greco-Roman readers of Luke might recognize how this practice (Lk 5:29; 15:1-2) could be shockingly misinterpreted in terms of a patron endorsing clients or a client sage teaching at banquets of the well-to-do. The Asiarchs may be Paul's patrons in some sense in Acts 19:31.

In Acts 2:44-47, the ancient context of friendship as sharing possessions, as equality and as patronage all provide part of the context. Although Acts 2:44-47 does not employ the term *friendship*, its emphasis on shared possessions would evoke for many Greek readers the ideal of friendship held by various other communities, at the same time challenging the usual expectation of reciprocity in ancient friendship. In contrast to the patronal model of friendship, higher-status members of Luke's audience are to use their possessions to provide benefaction without expecting reciprocation, even in honor (Lk 6:34-35; 14:12-14; Acts 20:35; Mitchell, 297-49; cf. perhaps Acts 27:3). Luke thus pushes the notion of equality in friendship further than traditions of patronage; Paul probably does the same (2 Cor 8:13-14). As in Roman party politics, those who share common allies also share

common enemies (Jas 4:4).

The "friend of the bridegroom" in John 3:29 may represent a custom different from what we have discussed; many commentators relate this to the *shoshbin*, the best man of traditional Jewish weddings (e.g., Abrahams, 2:213; Dodd, 386). At least according to our later sources, the *shoshbins* of bride and groom functioned as witnesses in the wedding (*Deut. Rab.* 3:16), normally contributed financially to the wedding (Safrai, 757) and would be intimately concerned with the success of the wedding; thus, for example, the bride's *shoshbin* might have the evidence of her virginity (*Num. Rab.* 18:12). Some have linked the *shoshbin* with the marriage negotiator (Batey, 16-17). This may have been sometimes the case; agents (*sālūhīm*) often negotiated betrothals (e.g., *t. Yebam.* 4:4; *b. Qidd.* 43a; Romans also negotiated betrothals through intermediaries (Friedländer, 1:234)), and sometimes these agents were probably significant persons who might also fill a role in the wedding, which might fit the image of John the Baptist in this context (Jn 3:27-29) as one sent by God. (Three of the four tannaitic parables regarding a marriage broker present Moses as the intermediary between God and Israel; Johnston, 589.) But such agents were sometimes servants (e.g., *b. Git.* 23a), not likely to become *shoshbins*. When possible, a *shoshbin* of status even higher than that of the groom was preferred (*b. Yebam.* 63a).

We commented on the ideal of friends dying for one another in John 15:13-15 (§3 above), one of the most explicit friendship passages in the NT, and addressed this text in terms of both Greco-Roman and Jewish writers' comments on friendship with God (§4 above). Although the passage may depend partly on the idea of patronal friendship, the ancient ideals of loyalty, intimacy and sharing are more dominant. Jesus intimately shares the secrets of his heart with his disciples, treating them as friends as God treated Abraham and Moses by revealing himself to them. The parallels with John 16:13-15 indicate that the Spirit of truth would continue passing down the revelations from the Father and Jesus to the disciples, just as in Jesus' own ministry (Jn 5:20; 8:26). They are his friends and therefore objects of his self-sacrifice (Jn 15:13), if they do what he commands them (Jn 15:14). The paradoxical image of friends, not slaves, who obey Jesus' commandments is meant to jar the hearer to attention; friendship means not freedom to

disobey but an intimate relationship that continues to recognize distinctions in authority. (Authority distinctions remained in patron-client relationships; at the same time Jesus' complete sharing with his disciples resembles the Greek notion of equality in friendships.) Disciples as Jesus' friends might stem from Jesus' tradition (Lk 12:4, though stylistically a Lukan preference). It may have become a title for believers (9 Jn 15) as in some philosophical groups.

G

GALATIA, GALATIANS

Who are the addressees of Paul's letter to the Galatians and where precisely do they live—in North Galatia, in and around Ankara and Pessinus, or in South Galatia, where Paul and Barnabas are said to have established churches in Pisidian *Antioch, Iconium, Lystra and Derbe on the so-called first missionary journey? This question of NT introduction has been practically unresolvable during the past century, and with some exceptions (Breytenbach, Scott, Strobel), there has been little fresh work on the subject in recent years. As a result, NT scholars tend either to repeat older answers to the question, which have hardened into dogmas, or to deny the significance of the question.

At first sight, the question of the addressees of Galatians may seem of merely antiquarian interest for those who specialize in minutiae. Upon closer examination, however, its answer has potentially significant theological ramifications. For if the South Galatian hypothesis is correct, then Galatians may be the earliest Pauline letter, written perhaps soon after the apostolic council. In that case, the remarkable similarities between Galatians and Romans—possibly the latest Pauline letter—would render the supposition of a major development in Paul's theology improbable. If the North Galatian hypothesis is correct, then the similarity between Galatians and Romans may be explained by their having been written within a relatively short period of time of one another, toward the end of Paul's career.

Traditionally, the question of the Galatian addressees has been discussed almost exclusively from the perspective of historical geography, based on Greco-Roman sources. A possible Jewish background has not been considered, despite the fact that Paul's letter to the Galatians is thoroughly Jewish in its argumentation.

1. Greco-Roman Background

2. Jewish Background

1. Greco-Roman Background.

1.1. Hellenistic Galatia. In 278 B.C., three tribes of Gauls from Europe migrated across the Hellespont and eventually settled in central *Asia Minor in a region that was called Galatia, containing tribal capitals in Pessinus, Ancyra and Tavium. The name *Galatians*, or *Gauls*, (*Galatai*) applied to Celts wherever they happened to live in Europe or Asia Minor.

When Attalus of Pergamum conquered the Galatians in about 250 B.C., they were considered "the most formidable and warlike nation in Asia" (Polybius *Hist.* 18.41.7), known for barbarian lawlessness (Polybius *Hist.* 3.3.5; 21.40.1; *Anth. Gr.* 7.492; *Sib. Or.* 3.599-600). Hence, the Attalids celebrated the containment of the Gauls to central Anatolia as a victory of Hellenic civilization over barbarianism.

Despite this resounding defeat, the Galatians continued to enjoy autonomy and even regained some of their previous formidability in the first century B.C., when they fought on the side of Rome against Mithridates VI of Pontus (95-63). The Romans rewarded the Galatians by adding large tracts of territory to their land (63-36). By the beginning of the *Roman Empire under Augustus (*see* Roman Emperors), the Galatian client king of the Romans, Amyntas, ruled all of central Anatolia, his kingdom reaching even to the Mediterranean.

1.2. Roman Galatia. When Amyntas was killed during a campaign against the Homonades in 25 B.C., most of his kingdom was annexed by Augustus and became the Roman province of Galatia. At this time, the province included not only the original area of Galatian settlement in and around Pessinus, Ancyra and Tavium, but also much of eastern Phrygia, Lycaonia, Isauria, Pi-

sidia and Pamphylia (cf. *TAVO* B V 7). Subsequent additions between 6 B.C. and A.D. 4 included Paphlagonia to the north and the Pontic regions to the northeast.

Regardless of the shifting boundaries of the Roman province, the composite whole was still called Galatia (cf., e.g., *CIG* 3991; *ILS* 9499). It is far less certain, however, whether the name *Galatian* was likewise applied to all inhabitants of the province, including those in South Galatia. That would be a reasonable inference perhaps, but examples of this usage are almost wholly lacking. C. Breytenbach argues, therefore, that the name *Galatian* applies to any and all ethnic Galatians and that documentary evidence shows their presence in the southern portion of the Roman province. On this view, Galatians 3:1 ("you foolish Galatians") is addressed to these ethnic Galatians, despite the fact that such people would have composed only a tiny minority in the mixed population of South Galatia and therefore also only a small part of the churches in Antioch, Iconium, Lystra and Derbe.

We should not be surprised that "Galatian" could be used both in a strict sense and in a more inclusive sense. Recent research on ethnicity has shown the widespread phenomenon of identity switching and situational ethnicity, whereby people can often claim membership in several different ethnic groups according to the relevance of the particular traditions available (cf. Hackstein). This potential variability sometimes leads to difficulties when it comes to describing ethnic groups between the two poles of tribal and state organization.

Future studies of the possible Greco-Roman background of Paul's use of "Galatia" and "Galatians" will also need to consider the vocative in Galatians 3:1 in light of other insults and plural ethnics in the Greek address system (cf. Dickey).

2. Jewish Background.

2.1. Jewish Geography and Ethnography. The fundamental point of departure for Jewish conceptions of *geography and ethnography is Genesis 10 (cf. 1 Chron 1), which gives a list of Noah's descendants who spread abroad on the earth after the flood and established nations (Scott; see *Geographical Perspectives in Late Antiquity*). During the Second Temple period, this tradition was greatly expanded to include, for example, not only a descriptive geography of the world that was divided among the three sons of

Noah (*Jub.* 8:11—9:15), but also the contemporary Greco-Roman equivalents for the biblical nations listed in Genesis 10 (Josephus *Ant.* 1.5 §§120-47). As in later *rabbinic literature, Josephus gives these equivalents in terms of Roman provinces.

2.2. Josephus's Identification of Gomer with the Galatians. In his exposition of the biblical table of nations, Josephus explains that the sons of Japheth originally gave their own names to the nations that they founded but that the Greeks changed the names. He illustrates this point beginning with Gomer, the first son of Japheth (Josephus *Ant.* 1.6.1 §§123, 126): "Thus, those whom the Greeks now call Galatians were named Gomarites, having been founded by Gomar. . . . Gomar had three sons, of whom Aschanaxes founded the Aschanaxians, whom the Greeks now call Rheginians, Riphathes the Riphataeans—the modern Paphlagonians—and Thugrames the Thugramaeans, whom the Greeks thought good to call Phrygians." When Josephus identifies Riphathes (biblical Riphath), the second son of Gomer (Gen 10:3), with the Paphlagonians, he betrays a conception of the extent of Galatia that postdates 6/5 B.C., when Paphlagonia was incorporated into the Roman province. It seems, therefore, that by identifying the Gomerites with the contemporary Galatians (*Galatai*), Josephus refers to all the inhabitants of the Roman province of Galatia as Galatians. If this is correct, then Josephus provides additional support for the South Galatian hypothesis.

GALILEE

We derive the name *Galilee* historically from the Hebrew word for "area" or "region" (*gālīl*). Specifically Galilee is the northernmost mountain region of Canaan and Israel. It displayed dense and lush vegetation in antiquity, including forests of Mt. Tabor oak, styrax, terebinth, carob, hawthorn, wild olive, wild fig, arbutus, bay laurel, myrtle, caper, sumac and lentisk. Wild game abounded in the Galilee, including the fox, hare, boar, roe deer and a species of chukar.

6. Synagogues and Ritual Purity
7. Sepphoris as Chief City of Galilee

1. Topography.

Topographically Galilee includes upper Galilee and lower Galilee, the northern and southern halves of the area. Upper Galilee reaches upward just short of 4,000 feet above sea level, while lower Galilee extends upward to nearly

2,000 feet above sea level. The boundary between upper and lower Galilee reaches westward from Chorazin to Acco-Ptolemais. Upper Galilee receives in excess of 42 inches of rainfall per year, while lower Galilee gets as much as 36 inches of rainfall in the same period, while the parts of lower Galilee on the western shores of the lake seldom receive 20 inches per year. Upper Galilee is formed of a single mountain, called Jebel Jarmaq in Arabic and Har Meron in Hebrew. We do not know its biblical name. A series of east-west valleys cut between low ridges comprise lower Galilee. Two of the best known of these valleys are the Beit Netopha Valley north of ancient Sepphoris and the Tur'an Valley east of the Beit Netopha with the Horns of Hattin, an extinct volcano, at its eastern end. A single, isolated high hill or mountain dominates the southeast corner of lower Galilee near the Sea of Galilee. This is Mt. Tabor, which is 1,929 feet high. This is the traditional site of the transfiguration.

The natural boundaries of the whole of Galilee are the Mediterranean Sea on the west, the Plain of Jezreel on the south and the Sea of Galilee (also known as Lake Tiberias) on the east. There is no natural boundary to the north until the deep gorge of the River Litani in Lebanon. Its political boundary to the north has varied, but in the NT period it included Lake Huleh in the Huleh Valley, avoiding Roman Cadasa (OT Kedesh), then ran south and west to exclude the coastal territory of Phoenicia. Phoenicia included the coastal cities of Tyre, Ecdippa (OT Akhzip), Acco-Ptolemais, Sycamenum (at Mt. Carmel) and Dor. The Sea of Galilee is 8 miles across and 12.8 miles long. It is the largest freshwater lake in the region and a major landmark as well as the focus of Jesus' ministry.

2. History of Galilee from Herod to the End of the Second Century A.D.

Archaeology demonstrates that Galilee was a favorite place of habitation from earliest times because of its climate favorable to the early agriculture and because of its rich grasses for pasturage. Neanderthal skeletons have appeared in early occupation of caves near Nazareth. The great tell or city-mound of Khirbet Kerak on the southwestern shores of the Sea of Galilee exhibits Canaanite occupation as early as 2600 B.C. But it was the so-called Amorite waves of occupation beginning about 2000 B.C.

that brought the main Canaanite occupants to Galilee. Some of the cities of this time in Galilee included Megiddo, Hazor, Kedesh and Acco. Subsequently, in the fifteenth century B.C., when Pharaoh Thut-Mosis II invaded Canaan, he listed fourteen Canaanite cities in Galilee that he subdued.

The Israelite conquest and settlement finds the tribes of Asher, Naphtali, Issachar and Zebulun within the limits of Galilee. Asher occupied the old territory of the Phoenicians. Naphtali to the east included cities such as Kedesh and Chinnereth on the northwest shore of the Sea of Galilee. In the OT more than forty sites of upper and lower Galilee appear in the text. The best-known are Hannathon, Rama, Gath-Hepher and Hazor.

In 788 B.C. Tiglath Pileser III, king of Assyria, conquered all of Judah and Israel, including Galilee. He lists eleven cities of Galilee that he destroyed, including Hazor, Hannathon and finally Megiddo at the western end of the Plain of Jezreel. All of Galilee down to and including the Jezreel Plain became the Assyrian province of Megiddo, named after the city he understood to be the greatest in the district. This almost depopulated province in turn became part of the Babylonian Empire, the successor to the Assyrians.

The sharpest turn for the better came in 539 B.C. when Cyrus, king of Persia, conquered Babylon and took control of the entire Babylonian Empire. According to the Greek historian Herodotus, all of Palestine (*Palaiḗnē*) belonged to the Fifth Satrapy of the Persian Empire (Herodotus *Hist.* 3.86).

We hear little of Galilee until the Maccabean period. Simon Maccabeus moved men and materiel into Galilee in order to fight the Gentiles who were threatening to annihilate the Jewish population (1 Macc 4:15, 5:21; see 1 and 2 Maccabees). He rescued the Jews of Arbata (Narbate) in lower Galilee and brought them to Jerusalem in 163 B.C. Nineteen years later, in 144 B.C., the Jewish king Jonathan Maccabaeus defeated Demetrius I, the Seleucid ruler of Palestine, at Hazor in Galilee. Jonathan chased the Syrian Greek army all the way to Cadasa and captured their camp. Jonathan did not rule over Galilee after this feat, for we only read that John Hyrcanus considered Galilee part of the Jewish kingdom before his death in 135 B.C. (see Hasmoneans). The Jewish king Aristobulus in 104 to 103 B.C. (his one-year reign) added upper

Galilee to the kingdom. His brother Alexander Janneus, who consolidated his hold on the Galilee and on Gaulantis across the Jordan and across the Sea of Galilee, succeeded Aristobulus. This was the Galilee that the Roman forces would know when they entered the land to lay siege to *Jerusalem in 68 B.C.

The boundaries of Roman Galilee or NT Galilee include the Sea of Galilee and Lake Huleh in the east. The boundary extends southwest from Lake Huleh south of Cadasa, then bends back southeast to an east-west line drawn west from just north of Chorazin. This line advances to within 7 miles of the coastline at Acco-Ptolemais, then turns south about 17 miles at a point west of Sepphoris to turn again to the west, crossing Mt. Carmel so as to include Geba in Galilee. The Great Jezreel Plain, called the Esdraelon in Greek, was now separated from Galilee. West of Galilee lay the independent Greek cities of Geba and Acco-Ptolemais, former Phoenician territory.

NT Galilee was 31 miles west to east, including the Sea of Galilee, measuring from the first milestone at the territory of Acco-Ptolemais but not including the latter territory, which was considered to be Phoenician. From north to south Galilee was somewhat larger, extending from the southeastern hills north of Scythopolis-Beth Shean 43 miles to its northernmost point near Cadasa. This oddly shaped region has an area of about 730 square miles.

The Roman administrator Gabinius saw in 55 B.C. that the province of Palestine needed civil administration (see Roman Administration). He set up Galilee, with Sepphoris as its chief city, as one of these districts. Gabinius gave an administrative council or a *synedrion* to Sepphoris (Josephus *Ant.* 14.5.4 §91; *J.W.* 1.8.5 §170). *Herod (later known as Herod the Great), the younger son of the procurator Antipater the Idumean, governed Galilee. Herod fled to *Rome during the Parthian invasion of 40 B.C., returning as the appointee of the Roman senate and of Augustus (see Roman Emperors) to be king of Judea, an appointment conditioned on his successful prosecution of the civil war and the imposition of order.

Galilee became part of the stage for a bitter civil war, waged by Herod against Antigonus, who had accepted appointment as ruler by the Parthians. Herod had adopted Sepphoris as his capital and chief residence in the north, keep-

ing a garrison of soldiers there and an armory for weapons and armor. By 37 B.C. Herod had killed the last rebels at the caves of Arbela north of Tiberias and consolidated his power (Josephus *Ant.* 14.15.4 §414; *J.W.* 1.16.2 §304).

During his long reign Herod administrated the whole of his kingdom in five districts. Galilee was one of these districts. Three or four toparchies formed the civil administration of Galilee under Herod: Tiberias, Tracheae (which was otherwise known as Magdala), Sepphoris and perhaps Araba.

At the death of Herod, Judah ben Hezekiah led some citizens of Sepphoris in revolt, perhaps hoping for independent status after long years as Herod's capital (Josephus *Ant.* 17.10.9 §289; *J.W.* 2.4.1 §56). Instead the Roman governor Varus retaliated with great force, destroying the city and killing the men, selling its women and children as slaves (see Roman Governors of Palestine). Herod Antipas, the new tetrarch, ordered the razed city rebuilt as a Roman city, building it as the "ornament of all Galilee," according to Josephus (*Ant.* 18.2.1 §27). Later, when the city had passed to the hegemony of Herod Antipas, the same Judah ben Hezekiah plundered weapons and money from Sepphoris (Josephus *Ant.* 17.10.5 §271; *J.W.* 2.5.1 §68). Herod Antipas ruled Galilee and Perea, two separated parts of his father's kingdom.

Fewer than ten cities and towns of Galilee figure in the ministry of Jesus. Jesus was reared at Nazareth, according to the Gospels. After his baptism at the hands of John he moved his headquarters to Capernaum on the northwest shores of the Sea of Galilee. From that vantage he visited the cities and towns of Cana, perhaps Gennesaret, Nain (in the Jezreel Valley), Gergesa (or Gadara or Garasa, a town on the east shore of the Sea of Galilee) and Bethsaida of Golanitis (the territory of his half-brother Herod Philip) and apparently Chorazin. Notably absent in this list are Sepphoris and Tiberias. At both these cities Herod Antipas ("that fox," according to Jesus) had palaces built, and it is possible that Jesus was staying away from an unnecessary conflict with Antipas. We know of Magdala only as the city of Mary Magdalene in the Gospels.

Galilee apparently played different roles in the two devastating revolts against Rome, the first in A.D. 66 to 70 and the second in A.D. 135 (see Jewish Wars with Rome). During the first re-

volt Galilee formed one military command under the leadership of the general *Josephus, later known as a historian. Vespasian, the Roman commander sent by the emperor Nero, marched south from Tyre to Acco-Ptolemais and set up a headquarters. From there he routed any Jewish defenders in Galilee on his way eastward to Sepphoris. The city fathers of Sepphoris met him in the field and declared their loyalty to Rome and their abhorrence of the revolt, petitioning Vespasian for a garrison to protect them from their more warlike neighbors (Josephus *J.W.* 3.2.4 §§30-34; *Life* 74 §411). Josephus and the few defenders he could gather entered Jotapata in the mountains about 10 miles north of Sepphoris. Vespasian besieged the city for forty-seven days, then took it in a fearsome slaughter. He discovered Josephus, arrested him and saved him for later. After the surrender of Tiberias and the defeat of the Jewish rebels in a pitched battle on the Sea of Galilee, Vespasian had secured Galilee and needed only to march to Jerusalem to prosecute the siege there and finally at Masada. He accomplished both sieges successfully.

After the first revolt the Romans added Galilee to a new independent province, the governor of whom was of senatorial rank and a former praetor. The authorities also stationed the Tenth Legion, the Fretensis ("Ironsides") on the ruins of Jerusalem. Vespasian gave Sepphoris special status because of its peace stance during the revolt by handing over to Sepphoris the toparchy of Araba. Vespasian thereby doubled its city territory.

Galilee scarcely took part in the Bar Kochba revolt of A.D. 131 to 135. Bar Kochba (see Simon bar Kosiba) tried to involve the Galileans, but perhaps the memories of A.D. 66 to 70 burned too brightly. Galilee seems to have mainly stayed quiet, although tunnels in which Jews hid during the revolt have been discovered. It was after the revolt, perhaps after A.D. 160, that Sepphoris became known by its Greek name, Diocaesarea.

3. Roads.

There was a highly developed, local trade network in Galilee upon which the citizens of Galilee transported goods and services. Lower Galilee was outlined by (1) a major road that traversed lower Galilee from Acco-Ptolemais to Sepphoris and from there to Tiberias. Nine milestones of the second century A.D. and later

are known between Acco-Ptolemais and Tiberias. (2) From Tiberias a Roman road led south on the western shores of the Sea of Galilee and from there to Scythopolis-Beth Shean. Nine milestones are known between Tiberias and Scythopolis-Beth Shean. (3) From Scythopolis-Beth Shean a major road of the second century departs west and a little north to a site called today Khirbet Ladd. At Khirbet Ladd this road turns southwest to Legio-Capercotani in the western Jezreel Valley. This is where the Roman authorities stationed the Sixth Legion in the second century. In this track of about 21 miles there are at least fifteen Roman milestones. (4) A major second-century Roman road leads north and a little west from Legio-Capercotani to Acco-Ptolemais. Seven Roman milestones are known from this road. (5) To the north nearly on the border between upper and lower Galilee there was a Roman road that could be followed from Bethsaida-Julias to Acco-Ptolemais 24 miles to the west.

Other roads inherited from the time of the united monarchy also play their part in Galilean trade. Two of the main roads were on the coast from Jokneam to Acco-Ptolemais, from there to Achzib and Tyre; and in the interior, from Mt. Tabor to Roman Kefar Hittai or a point nearby, then east to the Sea of Galilee, then north via Chinnereth to the north. In upper Galilee one finds seven "local and lateral roads," most of which run east and west. One of these roads runs from Acco-Ptolemais to Tell Keisan and from there southeast to the west end of the Beit Netopha Valley. This happens to be the course of the major Roman road from Acco to Sepphoris. In other words, the Romans used a venerable track to move men and material in this area.

From the west end of the Beit Netopha Valley one walked a road eastward to Rimmon and thence south and east toward the south end of the Sea of Galilee. About 4 miles east of Rimmon the road also forks north to Kefar Hittai and east to the lake. Despite this impressive number of Iron Age roads, Iron Age lower Galilee is traversed by fewer roads on the maps than is upper Galilee.

4. Products of Galilee.

The trade network made it possible for villages to specialize in a single product. The villages of Shikhin, Kefar Hananiah and Nahf (to give their modern names) produced pottery vessels.

This is both a literary and an archaeological fact. Certain villages were wheat production centers: the plain of Arbela and therefore the town of Arbela and Kefar Hittai ("Village of Wheat") about 3 miles west and a little south of Arbela, Hukkok 6 miles west of Capernaum, and Chorazin, which is about 2 miles north and a little west of Capernaum. The *Talmud of Jerusalem speaks of the wheat of Sepphoris and the wheat of Tiberias (*y. B. Qam.* 6D), which suggests that Tiberias and Sepphoris were central markets for wheat.

We find archaeological and literary evidence for agricultural products such as figs, pomegranates, olives and oil pressing, flax, barley, fresh, pickled and dried fish, herbs, greens, cattle, and sheep and goat products, but also for finished products made from agricultural products, such as cloth, clothing, dye stuffs, basketry, furniture, breads and perfumes.

Winepresses are to be found on many hill-tops in lower Galilee. Wine manufacture, storage and shipment is one of the most important industries of the Galilee. We have the names of at least seven villages and cities that were involved in the wine industry in some fashion: Sepphoris, Tiberias, Kefar Sogane, Sallamin, Acchabaron, Beth Shearim and Gennesaret (Josephus *J.W.* 3.3.3 §45; 3.10.8 §519; *m. Menah.* 8:6; *y. Meg.* 72D; *Ecl. Rab.* 3:3, *m. Kil.* 4:4 [Salmin]; *b. 'Abod. Zar.* 30A [Acchabaron]). Furthermore the name of the Valley of Beth Ha-Kerem ("House of the Vineyard") and the village of the same name in that valley implies that wine production was its major industry.

A discovery at Hefzibah in the Beth Shean Valley revealed a set of Greek inscriptions recording the correspondence between Antiochus III the Great (223-187 B.C.), the Seleucid Greek ruler, and a certain Ptolemaios, the strategos or local owner and governor of a huge estate near Beth Shean. Ptolemaios was de facto if not de jure a ruler of his estate, which included villages. Such land ownership also in Galilee may be presupposed in Josephus and in the NT. Note that Herod the Great did not favor owners of large estates.

Archaeological surveys of the Galilee confirm that large farmhouses, presumably of wealthy landowners, dot the landscape, but so do small farmhouses. The survey of Khirbet Buraq in *Samaria, which should be comparable to a town of that size in Galilee, has sug-

gested that seventy families farmed 445 acres, which gives us 6.3 acres per family. It is possible that there may be farmers on small farms so small that those plots will not support a family for a full year. If so, then these farmers were the source for agricultural laborers or skilled workers for at least part of the year.

5. Social Structures and Economics.

It is important to know that *women produced many products in their homes and by their own hands. These products included those produced by weaving, dying, sewing and spinning. These would be clothing and cloth stuffs. The most formidable economic activity was that of villages and cities. We can find literary or archaeological evidence for the following productions: pottery (see above), glass vessels, raw glass production, fish, caravans, shipping (on the Sea of Galilee), drying, pickling and salting of fish and other commodities, weaving, fast-food production in cities at taverns, masonry, carpentry, digging of cisterns and tombs, stone vessel production for ritual purity, and clothing. In addition one found shopkeepers, agricultural workers, bakers, courts with judges, bailiffs and guards, bankers and moneychangers, and coin minting in Sepphoris and Tiberias.

There is reason to believe that the social structure was organized more or less by wealth and by position of birth. At the apex of the social structure were to be found the elites (the "rich," or *plousios*, Mk 12:16-21), many of whom were Herod's retainers. We also find absentee landlords (*kyrios*, Mk 12:1-12 par. Mt 21:33-46), owners of estates (*kyrios*, Mt 25:14-30), major importer/exporters or merchants (*emporos*, Mt 13:45-46), a chief tax collector (*architelōnēs*, Lk 19:1-10) and the judge (*kritēs*, Mt 5:25).

In a much larger middle stratum of society one found the following: the professional scribe (*grammateus*, Mt 2:4), the teacher (*didaskalos*, Mt 8:19), the lawyer (*nomikos*, Mt 22:34-40), the hand worker, mason, carpenter or cooper (*tektōn*, Mt 13:55), the shopkeeper, the family farmer, the banker or moneychanger (*trapezitēs*, Mt 25:27), fisherman (*halieus*, Mt 4:18-22), tax collector (*telōnēs*, Lk 18:9-14), foreman (*epitropos*, Mt 20:1-16; the owner of the vineyard calls his *epitropos*, perhaps related to the *oikonomos* of Lk 16:1-8), the money lender (*daneistēs*, Lk 7:41-43), the master of a household (*oikodespotēs*), the manager of a household or steward (*oikonomos*,

Lk 12:42-46; 16:1-8), the ironsmith, coppersmith, silversmith or goldsmith. To these one may add from other sources, whose status we do not know, the caravaner, peddler, charcoal maker, lime maker, tanner, leather worker, soldier, healer, exorcist, physician, herbalist, and actors and entertainers.

At the bottom of the social structure in terms of wealth and birth, as well as in terms of historical circumstances, one found the following: the tenant farmer (*geōrgos*, Mk 12:1 par. Mt 21:33-41), day worker (*misthios*, literally "wage earner" or "hired worker," Lk 15:11-32 [vv. 17, 19, 21]), agricultural worker, reaper (*theristēs*, Mt 13:24-30 only), guard for a prison (*hyperetēs*, Mt 5:25), shepherd for sheep and goats (*poimēn*, Mt 9:36), slave child (*pais*, Lk 12:35-48, Mt 24:45-51, not used in Mark; see Lk 15:11-32, where the elder brother calls one of these to ask what is going on), slave (*doulos*, e.g., Mt 13:24-30), beggar (*prasaitēs*, Jn 9:8), thief (*klepiēs*, Jn 12:6), the sick (*lepros*, leper), the poor (*ptochos*, jobless [?] Lk 14:16-24; Mt 22:1-14), the prostitute (*pornē*, Mt 21:31-32) and the rebel or bandit (*lēstēs*, Mt 27:38).

6. Synagogues and Ritual Purity.

The old description of Galilee as predominantly Gentile (Is 9:1, "Galilee of the Gentiles") or heterodox Jewish can no longer be sustained. Housing and public structures would resemble those almost anywhere in the empire, but this does not in and of itself imply Gentilization of Galilee. These are owner-built homes of native materials, namely, stone covered with lime and clay plaster.

Public buildings in Sepphoris and Tiberias, not to mention Taricheae-Magdala, stand as metaphors for Roman dominance and the process of *Hellenization. Such buildings would include basilicas, *theaters, amphitheaters or *circuses, hippodromes, city gates, forums or agora, and the like. The Galileans decorated the facades of their buildings in high stone relief with floral and other decorations. The low-relief geometric and floral decorations of the Second Temple did not yet appear in lower Galilee. This bespeaks the Galilean participation in the wider *Roman Empire but does imply that they had become assimilated, to use a modern term, or Hellenized, to use the scholarly term.

As another example, a few buildings in the Galilee have been identified as *synagogues.

These are at Capernaum (beneath the white limestone synagogue) and at Magdala. Outside of Galilee other first-century synagogues are known from Gamala, Masada, Herodium and at Herod's palace at Jericho. In addition there are about twenty synagogue sites in upper and lower Galilee dated from the middle of the third century A.D. These buildings of the first and third centuries have one constant architectural feature, namely, the habit to place a row of columns between the benches against the walls and the central worship space.

Roman custom is to place rows of columns behind the backs of gathered spectators or participants in a *bouleutērion* or in an *ecclesiastērion*, or even in a theater. Perhaps the *synāgogue* buildings reflect the temple forecourts in Jerusalem. Josephus explains that the inner courts of the temple were adorned with colonnades or cloisters. Thus the Court of Women, the Court of Israel and the Court of the Priests would all present this feature. (Josephus *J.W.* 5.5.2 §200). This feature is omitted in Samaritan synagogues and two Judean broadhouses.

Another ritual installation found in Galilee are Jewish ritual baths beneath the floors of houses or nearby at Sepphoris, Jotapata, Khirbet Shema, Meiron, and other Galilean sites. These commonly are dated by the excavators to the first centuries B.C. and A.D. Ritual baths meet the demand for ritual purity.

Another item of the early Roman Jewish world was a class of soft, white stone vessels that appear in no fewer than sixty-five sites all over ancient Palestine. At least fourteen of these sites are in upper and lower Galilee (Gush Halav, Nabratein, Meiron, Kefar Hananya, Capernaum, Yodfat, Ibelin, Kefar Kenna, Sepphoris, Reina, Nazareth, Bethlehem of Galilee, Migdal Ha-Eneq and Tiberias). A site for the manufacture of these vessels has been found at Reina, about 6 kilometers north of Nazareth.

The design of these vessels meets the requirements of the laws of purity. They seem to be distinctively Jewish, as they only superficially resemble the marble vessels well known in the Roman world. They are both handmade and made by turning on a lathe. They include "measuring cups" with one and sometimes two handles, and a square bowl with ledge handles under the rims. Others, which were turned on a lathe, include large, barrel-shaped vessels with a pedestal base and no handles and small cups or

chalices with no handles. The large, lathe-turned vessels play a role in the pericope of the turning of water into wine at Cana of Galilee (Jn 2:6).

Two of the cities of Galilee minted their own *coins, namely, Sepphoris and Tiberias. The city coins of Tiberias honor the emperor Tiberius and feature his portrait nearly from the beginnings of minting coins in that Galilean city. Yet the coins of Herod Antipas, the ethnarch of Galilee and of Perea, and the city coins of Sepphoris and Tiberias minted by Antipas, lack a ruler's portrait on their obverse (Rosenberger, 3:60; Meshorer 1982: 35-41, 242-43, 279, pl. 6; Meshorer 1990-1991: 108, pl. 25).

7. Sepphoris as Chief City of Galilee.

Sepphoris was known as an important walled town from the first year of the reign of Alexander Yannai when Ptolemy Lathrus of Egypt besieged it unsuccessfully on a *sabbath (106 B.C.; Josephus *Ant.* 13.12.5 §338). The fact that Ptolemy made war on a sabbath suggests that he knew the inhabitants were Jewish. Excavation shows that there was an impressive city of the late Hellenistic period at Sepphoris. Housing of the second century B.C. to the first century A.D. reveals ritual baths beneath their floors, attesting to their Jewishness. Fragments of stone vessels (see 6 above) attest to their Jewishness as well. Some of the housing on top of the hill of Sepphoris was in villas, evidently of wealthy landowners or merchants. White mosaic floors appeared in the wealthiest first-century houses.

Excavation in the foundations of the civil basilica on the east side of the city at the intersection of the *Cardo Maximus* and the *Decumanus* show that the basilica was built hurriedly on the foundations of a destroyed building. The excavators believe that they have found evidence for Herod Antipas's orders to rebuild Sepphoris—and in a Roman image.

The theater of Sepphoris is surely first-century, though some scholars believe that its builder was an unknown person of the late first century A.D., not Herod Antipas. It could seat four thousand spectators, the same size as the theater in the capital city of *Caesarea. Likewise there is a fortification near the top of the site that bespeaks fortification of the acropolis in the first century. A network of streets paved with crushed limestone carried information and people around the Hippodamian grid of Sepphoris in the first century. Before 134 the city council

paved the *Cardo* and the *Decumanus* in Roman style, probably in anticipation of the emperor Hadrian.

The water system of Sepphoris is extraordinary, matched only by the one at the city of Abila of the Decapolis across the Jordan. The early Roman aqueduct led water from the spring at the village of Abila of Galilee 3 miles distant. The aqueduct featured a huge underground reservoir and a pool. The pool is typical of Herodian waterworks everywhere. A reference in a late Jewish text speaks of the "wheels of Sepphoris," usually understood to be water wheels (*Ecd. Rab.* 12:6). Even in the first century Sepphoris did not manufacture all its goods. It brought in wine, oil and other agricultural products from its own territory. Some of the farmers of the outlying fields doubtless lived within the walls of Sepphoris.

At the destruction of Jerusalem in A.D. 70 the "priestly family of Jedaiah settled at Sepphoris. Another twenty-three priestly families settled at other Galilean cities and villages, including Nazareth.

Sepphoris minted coins from A.D. 68, before Vespasian was declared emperor. On these coins the city name appears as Irenopolis Neronias Seppho[r]is, or ΕΙΡΗΝΟΠΟΛΙ ΝΕΡΩΝΙΑΣ ΣΕΠΦΩ. The name of Irenopolis ["City of Peace"] reminded one of the city's peace stance beginning in A.D. 68, during the first revolt. The second name, Neronias, declares the city's continued loyalty to the emperor Nero and to Rome.

On coins minted at Sepphoris during the reign of Trajan (A.D. 98-117) the name of the citizens of the city is given in Greek as the Sepphorean (ΣΕΠΦΩΡΗΝΩΝ). Therefore Sepphoris was spelled ΣΕΠΦΩΡΙΣ in Greek, which agrees with the spelling in Josephus. The obverse of the coins declared that Trajan lent one of his titles to the city, namely, Autokratoris, or ΑΥΤΟΚΡΑΤΩΡΙΣ. Herod Antipas called the city Autokratoris, according to Josephus (*Ant.* 18.2.1 §27).

After Hadrian the city was renamed Diocaesarea or ΔΙΟΚΑΙΣΑΡΕΑ, which also appears on milestones. The full name of the city on coins from the emperor Caracalla onward is ΔΙΟΚΑΙΣΑΡΕΑ (Ι)ΕΡΑ ΑΣΥΛ(ΟΣ) ΚΑΙ ΑΥΤΟΝΟΜΟΣ or Diocaesarea the Holy, [City of] Refuge and Autonomous. This naming is likely a political act adopted by the council of the city in honor of Hadrian, who took the title *Divi* or *Zeus*, which appeared on his coins from A.D. 117 onward.

Four other cities share these three titles of Holy City, City of Refuge and Autonomous, namely, the coastal city of Dora, and the three cities of the Decapolis, Abila, Gadara and Capitolias.

Diocaesarea is the name that will appear in Greek literature produced by Romans and by Christians in the later Roman Empire. Interestingly enough it will not survive in the Arabic-language historians, who only know the name Saffuriyeh. This strongly suggests that this local Galilean name among Aramaic speakers continued to be the old name of Sepphoris even when its official name was Diocaesarea.

The Sepphoris of the second century A.D. was a great Jewish intellectual center. It was at Sepphoris that the work of Rab Juda, also known as the Prince, culminated in the compilation of the oral law, or the *Mishnah, at the beginning of the third century of the common era.

GENESIS APOCRYPHON (1QapGen)

Of the first seven scrolls to be retrieved in 1947 from the Dead Sea caves, the most poorly preserved was an Aramaic rewriting of portions of Genesis, known today as the *Genesis Apocryphon* (1QapGen). Only six of the twenty-two surviving columns are preserved to any great extent: in column 2 (now thought to be column 3) Lamech relates events accompanying the birth of Noah (Gen 5:28-29); column 12 (13), though fragmentary, has Noah describe events after the flood (Gen 9:13-21); columns 19-22 (20-23), the best preserved of all, rewrite and embellish the Abram episodes of Genesis 12:8-15:4. The full length of the original scroll cannot now be determined.

1. Date and Language
2. Genre and Literary Relationships
3. New Testament Parallels
4. Early Jewish Biblical Interpretation

1. Date and Language.

Genesis Apocryphon is generally dated to the first century B.C. or A.D., prior to the destruction of the *Qumran settlement (c. A.D. 68). The work

employs a Palestinian dialect of Middle *Aramaic, somewhat later than the Aramaic parts of Daniel and close to *Targum Onqelos* as well as to the Aramaic words preserved in the Greek texts of the NT and *Josephus, making *Genesis Apocryphon* valuable for reconstructing the Aramaic dialect used in Jesus' day. Along with the Qumran targums of Job and Leviticus, *Genesis Apocryphon* confirms that biblical books were already being rendered into Aramaic during the Second Temple period. Biblical citations in *Genesis Apocryphon* witness to a Palestinian text type.

2. Genre and Literary Relationships.

Genesis Apocryphon is commonly classified as a work of *rewritten Bible (along with *Pseudo-Philo's *Biblical Antiquities*, *Josephus's *Antiquities* and *Jubilees) since it is principally concerned with reshaping, expanding and interpreting, though not replacing, the biblical narrative. *Genesis Apocryphon* does not, however, fit neatly into any single generic category. Up until *Genesis Apocryphon* 21:23, the predominant mode is pseudonymous autobiography, like *1 Enoch* (see *Enoch*, Books of), 4Q160 and the testamentary literature. Later portions (1QapGen 21:23-22:34; cf. 20:1-9, 16-20, 23-26) are composed in the third person and follow the biblical precursor much more closely, resembling the style of later targums (see *Rabbinic Literature: Targumim*). Interpretive traditions and hermeneutical strategies have often been compared with later rabbinic midrash (see *Rabbinic Literature: Midrashim*).

Genesis Apocryphon cannot properly be called sectarian; it contains nothing clearly *Essene in nature, nor does it adopt an *apocalyptic or pesher-style hermeneutic (see *Pesharim*). This may suggest the document was acquired rather than composed by the community, although nonlegal narrative expansions such as *Genesis Apocryphon* are far less likely to reveal sectarian distinctives than are halakic (legal) materials (see *Legal Texts at Qumran*).

Numerous parallels with *Jubilees* as well as *1 Enoch* 106-107 suggest substantial literary dependence, although the direction of influence is debated. If *Genesis Apocryphon* is secondary to *Jubilees* (Fitzmyer; Nickelsburg), its author appears to have excised sectarian elements (e.g., *calendrical references); if prior (Avigad and Yadin; Vermes), *Jubilees* has abridged its source,

introduced its own doctrinal materials and cast the memoirs of the patriarchs as revelations made to *Moses.

3. New Testament Parallels.

3.1. Linguistic and Cultural Parallels. *Genesis Apocryphon* 21:13 (cf. Gen 13:16) contains one of the earliest postbiblical Aramaic uses of the phrase "son of man" (*br 'nuš*), a phrase found frequently on the lips of Jesus in the Synoptic Gospels (*ho hyios tou anthrōpou*). Unlike *1 Enoch* 46–48 and 4 Ezra 13 (see Esdras, Books of), which echo Daniel 7:13, the phrase "son of man" in *Genesis Apocryphon* (with negative *l'*) functions like an indefinite pronoun ([no] one, human being). A similar generic usage occurs at 11QigJob 26:3 and probably 9:9. The fact that the phrase could be used in the Palestinian Aramaic of Jesus' day without any technical or titular force is clearly relevant to discussions of the significance of Son of Man language in the Gospels. Other NT words and phrases finding parallels in *Genesis Apocryphon* include "Lord of heaven and earth" (Mt 11:25; Lk 10:21; 1QapGen 22:16); "spirit of sickness" (Lk 13:11; 1QapGen 20:16); "evil spirit" (Lk 7:21; 8:2; 11:26; Mt 12:45; 1QapGen 20:16–17, 28–29); and "rebuke/banish/subjugate" [a demon] (*g'ṛ* in 1QapGen 20:28–29; cf. 1QM 14:10; *epitimaō* in Mk 1:25; 9:25; Lk 4:41).

The account of Abram's dealings with Pharaoh affords several cultural parallels to the world of Jesus. At Abram's request, God sent an evil spirit to afflict Pharaoh's household and his healers with a plague (1QapGen 20:12–20), recalling the NT idea that some illnesses are *demon-induced (Mk 1:32–34; 9:14–29; cf. 1 Sam 16:14). The plague is finally lifted through Abram's *prayer, exorcism and laying on of hands (1QapGen 20:21–22, 28–29; cf. Mk 5:23; 6:5; 7:32; 8:32–35; 16:18; Lk 4:40–41; 13:13; Acts 9:12, 17–18; 28:8). And the scroll appears to portray Abram praying "for his enemy" (1QapGen 20:28; cf. Gen 20:17; Mt 5:44; Rom 12:17).

3.2. Possible Parallels to Matthew's Birth Narrative. A comparison of Jesus' birth narrative in Matthew 1:18–2:23 with the scroll's narration of Noah's birth (cols. 2–5) and Abram's descent into Egypt (cols. 10–20) yields numerous striking similarities, though not enough to suggest a literary relationship between the two compositions (see chart on next page).

4. Early Jewish Biblical Interpretation.

4.1. Interpretive Traditions.

4.1.1. Noah and Enoch. Early Jewish literature expressed considerable interest in and speculation about the figure of Noah, in part because Noah's birth is the occasion for a prophecy (Gen 5:29) and because Noah's story (Gen 6:5–10:32) follows on the heels of the episode of the "fallen angels" in Genesis 6:1–4 (*Jub.* 4–10; *1 Enoch* 106–107; Josephus *Ant.* 1.3.1–2 §§72–76; 4QMess ar). *Genesis Apocryphon* calls Noah "righteous" (1QapGen 6:2; Gen 6:9; cf. Heb 11:7; 2 Pet 2:5; *Jub.* 5:19; Josephus *Ant.* 1.3.2 §75) and may attribute to him an eschatologically symbolic role (1QapGen 2–4; cf. Mt 24:37–39; Lk 17:26–27; 1 Pet 3:18–22; *1 Enoch* 10–11; 106:13–107:1).

Genesis Apocryphon also attaches great importance to Enoch, Noah's great-grandfather (Gen 5:18–24), whose dwelling was with the angels (1QapGen 2:20–21), and who alone could confirm that Noah was not the son of an angelic Watcher (1QapGen 5:3–4; cf. *1 Enoch* 107:2). Popular traditions about Enoch's righteousness, bodily ascent and heavenly existence (Sir 49:14; *Jub.* 4:16–19; 10:17; Josephus *Ant.* 1.3.4 §§85; Heb 11:5; based on Gen 5:22, 24; cf. 2 Kings 2:1) help explain the high regard for *1 Enoch* among the early Christians (cf. Jude 14–15).

4.1.2. Abram and Sarai. The scroll's account of Abram and Sarai in Egypt (1QapGen 19:10–20:33; cf. Gen 12:8–13:1) is heavily embellished: Sarai willingly cooperates with Abram's plan for her to pose as his sister (1QapGen 19:21–23; 20:9–10); Abram is greatly troubled by Sarai's abduction (1QapGen 20:10–16); while in Pharaoh's house Sarai's chastity is preserved (1QapGen 20:15–18; cf. Josephus *Ant.* 1.8.1 §§162–65; Philo *Abr.* 96–98; *Gen. Rab.* 41:2); Pharaoh suffers plagues because of Abram's prayers (1QapGen 20:12–15); Pharaoh first seeks help from his conjurers before summoning Abram (1QapGen 20:18–21); Hagar is among the gifts Pharaoh gave to Sarai (1QapGen 20:32; cf. *Gen. Rab.* 45:1); and it was Lot who informs Pharaoh's house that Sarai was Abram's wife (1QapGen 20:22–23). Sarai is portrayed as a willing but sorrowful heroine who remains pure and undefiled, and Abram as a righteous seer, dreamer and interpreter of dreams, a fervent and effective prayer warrior, and an exorcist/healer. NT portraits of Abraham and Sarah are noticeably less embellished but are similarly

Noah's Birth in Genesis Apocryphon

Lamech observes the unusual appearance of the infant Noah (1QapGen 2:1-2; cf. *1 Enoch* 106:2-4).

Lamech suspects Noah is not his but was conceived by holy ones or Nephilim (1QapGen 2:1-2).

Lamech confronts his wife, Bitenosh (1QapGen 2:3-7), who swears passionately that Lamech, not a "son of heaven," is Noah's father (1QapGen 2:8-18).

Lamech asks father Methuselah to inquire of grandfather Enoch (1QapGen 2:19-25; cf. *1 Enoch* 106:5-12).

Enoch, whose dwelling was among the angels ("holy ones"), confirms that Noah is Lamech's son (1QapGen cols. 3-5; cf. *1 Enoch* 106:13-107:3).

Abram's Descent into Egypt in Genesis Apocryphon. Abram journeys to Egypt because of a famine (1QapGen 19:9-12).

Abram has a symbolic dream at the border of Egypt about two trees and tree cutters, representing Abram, Sarai and the threat to Abram's life (1QapGen 19:13-16).

Abram interprets the dream to mean that his life is in danger (1QapGen 19:17-18) and asks Sarai to say she is his sister (1QapGen 19:19-20).

Jesus' Birth in Matthew

Matthew (Mt 1:18; cf. Lk 1:35) describes the miraculous conception of Jesus.

Joseph discovers Mary is pregnant, knows he is not the father and plans to divorce her secretly (Mt 1:18-19).

No record of dialog between Joseph and Mary. In Luke (Lk 1:26-38), Mary responds to the angelic messenger.

No record of Joseph seeking counsel from anyone.

An angel tells Joseph in a dream not to divorce Mary, because her child was "of the Holy Spirit" (Mt 1:20-21).

Jesus' Descent into Egypt in Matthew.

Joseph and his family flee to Egypt to escape Herod (Mt 2:14).

Joseph has a nonsymbolic dream of an angel warning of Herod's murderous plan and telling them to flee (Mt 2:13).

Joseph's dream requires no interpretation; he immediately obeys, taking Mary and Jesus to Egypt (Mt 2:14).

idealized (Lk 16:22-31; Jn 8:53; Acts 7:2-8; Rom 4:1-25; Gal 3:6-9; 4:22-31; Heb 6:13-15; 7:4-10; 11:8-12, 17-19; Jas 2:21-23; 1 Pet 3:6).

4.1.3. Melchizedek. The story of *Melchizedek (1QapGen 22:12-17; cf. Gen 14:18-20), though relatively unembellished, may be helpfully compared with the midrashic homily of Hebrews 7:1-10. Some interpreters have wondered why the author of Hebrews doesn't fortify his Melchizedekan christology with the biblical phrase "Melchizedek . . . brought out bread and wine" (Gen 14:18); indeed, later interpreters (e.g., Ambrosiaster, Clement of Alexandria, Chrysostom, Jerome) could not resist reading this phrase eucharistically. This reticence of Hebrews, however, accords well with *Genesis Apocryphon* 22:14-15, which describes Melchizedek bringing out "food and drink" (*m'kl umsth*)—simple nourishment for Abram and his men. In

this interpretive tradition, evidently shared by Hebrews (but not by Josephus *Ant.* 1.10.2 §181), the act was clearly distinct from Melchizedek's priestly blessing upon Abram (Gen 14:19-20). Although the Melchizedek of Hebrews 7 enjoys greater status and significance than does his *Genesis Apocryphon* counterpart, neither comes close to the exalted figure portrayed in 11QMelch or 2 *Enoch* 71-72 (see Melchizedek, Traditions of).

4.2. Hermeneutical Strategies.

4.2.1. Narrative Expansion. As a window on early Jewish Palestinian hermeneutics roughly contemporary with the NT, the value of *Genesis Apocryphon* can scarcely be overstated. The principal interpretive strategy is narrative expansion, the practice of filling the gaps in the notoriously laconic Hebrew narrative. Thus, *Genesis Apocry-*

phon 2–4 provides background for Lamech's oracle at Noah's birth (Gen 5:29); a passing reference to Sarai's beauty (Gen 12:15) expands into eloquent poetry (1QapGen 20:1-8; cf. Philo *Abr.* 19 §93; *Gen. Rab.* 40.5); and the silence of Genesis 13:17-18 regarding Abram's movements before settling down is replaced with a detailed travelog (1QapGen 21:15-19a). Compare also *Genesis Apocryphon* 22:3-5 with Genesis 14:13.

4.2.2. *Problem Solving.* Sometimes the tradent rewrites to solve problems in the text. Not only does Abram's decision to present Sarai as his sister (Gen 12:13) appear faithless and self-serving, but also there is no record of divine discipline, and Abram profits from the ruse (Gen 12:16). Unlike *Jubilees* (13:10-15), which ignores the episode, and Josephus (*Ant.* 1.8.2 §162), who offers a purely rational explanation, *Genesis Apocryphon* has God give Abram a dream to warn him of the danger and suggest survival tactics (1QapGen 19:13-19). And Pharaoh offers gifts, not because he acquired Sarai (Gen 12:16) but because Abram lifted the plague (1QapGen 20:31-33; cf. Josephus *Ant.* 1.8.1 §165). *Genesis Apocryphon* 21:32-33 solves another sort of problem—the apparent contradiction between Genesis 14:10 and Genesis 14:17, 21—by having only the king of Gomorrah and not the king of Sodom fall into the pits (cf. *Jub.* 13:22; *Gen. Rab.* 42:7).

4.2.3. *Intertextuality.* A subtle but highly effective interpretive strategy is the appeal to other, ostensibly unrelated biblical passages to shape and explain the primary narrative sequence (see Intertextuality). Abram's reason for venturing to Egypt—"I heard that in Egypt there was grain" (1QapGen 19:9-10)—is almost certainly imported from the Joseph cycle (Gen 42:1; cf. Acts 7:12), fueled by verbal parallels between Genesis 12:10 and Genesis 41:54, 56-57; 43:1 and by thematic links between the two stories: both involve a trek into Egypt because of a famine, a Pharaoh, oppression of God's people, plagues on Egypt and miraculous deliverance. Abram functions as a Joseph figure, who learns of the future in a dream and enjoys the gift of interpretation (1QapGen 19:14-19).

Several other embellishments arise under the influence of Genesis 20, including Hircanos's dream (1QapGen 20:22), Abram's intercession for Pharaoh (1QapGen 20:28) and the timing of Pharaoh's gifts (1QapGen 20:31-33). Likewise, the Salem = Jerusalem equation (1QapGen 22:13; cf. Gen 14:18) is likely in-

debted to Psalm 76:2 (cf. Josephus *Ant.* 1.10.2 §180; *Tg. Neuf.* Gen 14:18; contrast Heb 7:2 and Philo *Leg. All.* 3.25 §79). Some biblical echoes are less readily identified: Abram's dream of the two trees (1QapGen 19:13-16) may be indebted to other texts (Ezek 31, Dan 4, Judg 9 and perhaps Ps 92:13), and the poetic description of Sarai's beauty likely echoes Song of Solomon 7.

GENRES OF THE NEW TESTAMENT

Genre is a term sometimes used to refer to the constituent elements within a larger work, for which the term *form* is also often used, or as the classification of a work in relation to other, similar works. The latter usage is followed in this article, adopting D. E. Aune's definition (1987, 13): "a literary genre may be defined as a group of texts that exhibit a coherent and recurring configuration of literary features involving form (including structure and style), content and function." At the macro level genre is concerned with the identification of the book as a whole, while at the micro level it helps us understand the forms, sometimes referred to as subgenres, used within the whole.

Genres are neither universal nor static. Therefore, to avoid anachronism, it is important that a genre is classified within its era and literary milieu. For the NT books, this means placing them properly within the context of the Greco-Roman world of the first century A.D. Identification of a work's genre helps us understand its place within the literary history of both early Christianity and the Greco-Roman world and aids us in its interpretation. This article will review and assess various recent attempts to identify the genres of NT literature.

1. The Gospels
2. John
3. Acts
4. The Letters
5. Revelation

1. The Gospels.

None of the four accounts of Jesus' ministry originally identified itself as a Gospel (*euangelion*). However, there is good reason to concur with M. Hengel (1985, 64-84) in his judgment that (with "a considerable degree of probability") the titles of the Gospels can be traced back to the time of the origin of the four Gospels as a collection circulating among the Christian communities in the period A.D. 69-100, and that the root of the identification lies in Mark's terminology (Mk 1:1). The noun *gospel* and its cognate verb (*euangelizō*, "to preach the gospel") are used extensively in the NT (e.g., Mk 1:14-15; Rom 1:16), and evidently this use in the earliest communities gave rise to the generic title.

In the NT *euangelion* always occurs in the singular and refers to the content of Christian belief, a pattern generally followed in the Fathers.

Justin Martyr is the earliest extant author to use it, particularly in the plural, in reference to written documents, a practice that became established over time when it was applied to the canonical Gospels but also to the *apocryphal and *Gnostic Gospels. Justin's description of the Gospels as "memoirs" (*apomnēmoneumata*, e.g., Justin Martyr *Apol.* 1 66) paralleled Xenophon's study of Socrates in *Memorabilia*, suggesting that the Gospels are to be understood as historical-biographical writings. This is how they were understood up to the early part of the twentieth century, as is clear in the nineteenth-century writers of lives of Jesus. However, the development of form criticism and its dominance in NT scholarship from the 1920s to 1960s focused on the preliterary Gospel units, denigrating the Evangelists' roles. The Gospels were seen as unsophisticated writings, and the consensus developed of regarding them as *sui generis*, originating in the kerygma of the early church and therefore not fitting into any other literary category (e.g., Kümmel, 37; Gundry 1974; Guthrie, 17-21; see survey by R. Guelich in Stuhlmacher, 186-94).

But this perception changed with the rise of redaction criticism, which rediscovered the Evangelists as theological interpreters of the Jesus tradition (i.e., authors in their own right) and contributors to the literary process (see *DJG*, Gospel [Genre]). Various cultural milieus have been explored in the attempt to discover a genre for the Gospels: Jewish and, more productively, Greco-Roman.

Some scholars have attempted to find parallels to the Gospels in either the OT or *rabbinic literature. M. G. Kline has argued that the longer OT sections that concentrate on one figure offer a close analogy to the Gospels, yet OT historical narratives focus on God's dealings with Israel, not on the teachings of a leader or prophet, which occur within these larger sections. M. D. Goulder believes that the Synoptics were inspired by the OT, specifically the various passages used in synagogue liturgy, thereby accounting for the inherent difficulties of believing that so many details of Jesus' life matched such OT passages by contending that many Gospel stories were midrashically created. Others have attempted to classify the Gospels, particularly Matthew (Gundry 1982), as a form of midrash. Midrash, however, is variously and often imprecisely defined. As a genre, midrash is an

exposition of the Hebrew Scriptures (see Rabbinic Literature: Midrashim), and none of the Gospels is a simple commentary on a significant extended portion of the OT. As an interpretive method, midrash is clearly not applicable as a generic classification of the Gospels, which tell the story of the life, death and resurrection of Jesus. This is not, however, to deny the presence of midrash at certain points within the Gospels.

Rabbinic material in general has not provided a comparable genre to the Gospels, for, while rabbinic parallels can be found for individual Gospel units (Evans, 227-31), there is nothing like the Gospels as whole works, and in any case the rabbinic literature comes from a later period.

While some of the evidence for a correlation between the Gospels and Jewish lectionaries is impressive, critics have pointed out that we do not know what first-century Jews read in their synagogues. Even if these readings could be established with confidence, there are no convincing reasons why Christians who stressed the gospel should have based their worship on lectionaries stressing the law. Further, the lectionary view, which presumes an orderly worship, cannot be reconciled with what we know of the charismatic character of much NT worship. As such, lectionary theories build one hypothesis on another (L. L. Morris in France and Wenham 1983, 148-49). While it is likely that the Gospels were originally intended to be used for reading and teaching within Christian worship and later developed a role in the church's liturgy, this is quite different from locating their origin in the church's liturgy.

Arguments that the Gospels and Acts should be classified as legend, novel or historical fiction have accompanied negative assessments of their historicity. M. Hadas and M. Smith contended that the Gospels are a form of aretalogy, an ancient form of biography recording the teaching and miracles of a divine man (*theios anēr*). This view has now been abandoned because the works that were supposed to represent this genre (e.g., Philo's *Life of Moses* and Philostratus's *Life of Apollonius of Tyana*) are not called aretalogies, and aretalogies themselves vary widely in form, function and content (see DJG, "Divine Man/Theios Anēr"). Some have proposed that Mark's story of Jesus reflects the general structure of Greek tragedy (e.g., Aristotle's *Poetics*), following the pattern of introduction,

rising action, climax/crisis, falling action, catastrophe and denouement (Bilezikian), but most scholars have concluded (Aune 1987, 48-49) that this is coincidental and that Mark follows a pre-Markan Jesus tradition, and in this he was followed by Matthew, Luke and John.
